Plasmatic, Plasmatical, a. Giving form; plastic.

Plassey, or Plas'sy, a former town of British India, which was entirely destroyed by inundation.

Plaster, n. [A. S. and Dan.; Du. *pleister*; Gr. *em-plastron*, from *em-plasso*, to daub over.] (*Arch.*) The name applied to cements manufactured from gypsum or sulphate of lime. When burnt at a low heat, this substance is not decomposed, like limestone, but merely parts with its water of solidification. It is then converted into a white powder, absorbing water greedily, and again solidifying. The powder produced is the common *Plaster of Paris*. Combined with alum during the process of calcination, *Keene's cement* is obtained. It dries more slowly than common plaster, but is much harder, of a less opaque white, and is more durable. Reburnt with borax and other substances, still harder and finer cements are made.—See GYPSUM, and LIME (SULPHATE OF).

(*Med.*) An external application of an adhesive nature, spread on leather, cloth, &c., and applied to a sore, a wound, &c.

—*v. a.* To overlay with plaster, as the partitions of a house, walls, &c.—To cover with a plaster, as a wound.—To conceal, or smooth over the defects of. (*Colloq.*)

Plasterer, n. One whose trade is to overlay walls with plaster.—One who makes figures in plaster.

Plastering, n. The plaster-work of a building; a covering of plaster.

Plasterly, a. Resembling plaster.

Plaster-stone, n. (*Min.*) A term applied to several varieties of gypsum, or hydrated sulphate of lime, and originally to that of the neighborhood of Paris. When heated to about 300°, they lose about 20 per cent. of water, and fall into a white powder, *Plaster of Paris*, which, made into a thin paste with water, soon solidifies, and is largely used for taking casts for busts, figures, and other ornaments; it is also the basis of *stucco* and *scagliola*, or artificial marble.

Plastic, a. [Fr. *plastique*; Gr. *plastikos*, from *plasso*, to form, to mould.] Having the power to give form or fashion to a mass of matter; as, the *plastic* hand of the Creator.—Capable of being moulded, formed, or modelled; as, *plastic* clay.

Plasticity, n. The state or quality of being plastic; capable of being formed, moulded, or modelled.

(*Med.*) Plastic force.

Plastic-Dynamics. (*Mech.*) A recent branch of mechanics, which treats of the movements in the interior of plastic solid bodies.

Plastography, n. [From Gr. *plastos*, formed, and *graphein*, to write.] The art of forming in plaster.

Plastron, n. [Fr.; It. *piastrone*; L. Lat. *plastrum*, a thin plate of metal.] A piece of leather stuffed;—used by fencers, to receive the pushes made at them.

(*Zool.*) The under part of the shell of the crab and the tortoise.

Plat, v. a. To plait; to weave; to form by texture.

—*n.* Work done by plaiting or interweaving.

—[Fr., Dan., and Du., from Gr. *platys*, broad, flat.] A small piece of ground; a portion of flat, even ground; as, a *plat* of rising ground.

Plata, an island of Ecuador, in the Pacific Ocean, abt. 20 m. S.W. of Cape San Lorenzo.

Plata, La. See ARGENTINE REPUBLIC.

Plata, La, a town of the Republic of Colombia, about 62 m. S.S.W. of Neyva.

Plata, (Rio de la), (re-o dai la pta'ta,) a river of S. America, one of the largest in the world. It is, properly speaking, a continuation of the Paraguay, which has its sources about the 13th degree of S. Lat., and, flowing through a flat country, is joined by the Parana, which robs it of its name, and by a variety of smaller streams, the Parana being joined by the Uruguay. They together expand into the sea-like Plata; and it is to this vast estuary that the appellation of the Rio de la Plata properly applies. It flows into the ocean, and is without parallel in the rest of the world for width and magnificence, being 125 m. broad at its mouth, from Maldonado on one side, to Cape St. Anthony on the other; and between Monte Video and the Punta de las Pedras, or Stony Point, which some have considered as its proper limits, 80 m. broad. At Buenos Ayres, 200 m. from the mouth, it is about 30 m. broad, and the shores being but little elevated, the eye can seldom reach from one side to the other. This noble expanse is, notwithstanding its extent, deformed by rocks and sand-banks, and rendered of dangerous navigation, not only by its shoals, but likewise by the impetuous winds which sweep at intervals over the vast plains of the Pampas, to the S.W. of Buenos Ayres, whence they are called *pamperos*, and rush down this wide opening with unequalled fury. The only safe port is that of Monte Video, though those of Maldonado, Barragon, Buenos Ayres, and Colonia, afford different degrees of anchorage and security.

Plataea, an ancient city of Greece, in Boeotia, on the

W. slope of Mount Cithæron, 7 m. S.W. of Thebes. Its neighborhood was the scene of the famous battle with the Persians, in which the Greeks were the victors, B. C. 479.

Platan, Platane, n. (*Bot.*) The plane-tree. See PLATANUS.

Platanaceæ, n. pl. [From Gr. *platanos*, *platus*, broad.]

(*Bot.*) An order of plants, alliance *Urticales*. They are trees or shrubs with a watery juice. Leaves alternate, with deciduous sheathing stipules. Flowers unisexual, monocious, in globular amentiferous heads, achlamydeous; male flowers with one stamen and a 2-celled linear anther; female flowers consisting of a 1-celled ovary and a thick style; ovules 1-2, suspended. Fruits arranged in a compact rounded head, and consisting of clavate nuts, each with a persistent style. Seeds 1-2, pendulous; embryo in very thin albumen, with an inferior radicle. The Planes are chiefly natives of America and the Levant. There is but one genus, namely, *Platanus*. Being large, handsome trees, they are commonly grown in parks and squares. The Ameri-

Fig. 2127. — PLANE-TREE OR SYCAMORE, (*Platanus occidentalis*.)

can Plane-tree, Buttonwood, or Sycamore, *Platanus occidentalis* (Fig. 2127), is by far the largest (though not the loftiest) tree of the American forests. On the margins of the great rivers of the West, trees are found whose trunks measure from 40 to 50 feet in circumference, or more than 13 feet in diameter.

Platanus, n. (*Bot.*) See PLATANACEÆ.

Platband, n. [Fr. *plate-bande*, from *plat*, flat, level, and *bande*, a band.] The border of a flower-garden, or parterre; a border.

(*Arch.*) A plain band or fillet having a small projection.

Plate, n. [Fr. *plat*; Ger. *platte*, from Gr. *platys*, broad, flat.] A flat or extended piece of metal.—Armor, composed of flat, broad pieces of metal.—Gold and silver wrought into articles of household furniture.—A shallow, flattish dish or vessel from which provisions are eaten at table.—An engraving from a plate of metal or wood.—A solid page of metal to print from.

(*Arch.*) A general term applied to almost all horizontal timbers which are laid upon walls, &c., to receive other timber-work.

(*Engraving.*) The impression on paper from an engraved copper- or steel-plate.

(*Printing.*) A page of stereotype, electrotype, or fixed metallic types, for printing from.

(*Sports.*) In horse-racing, the cup, vase, or other article of gold or silver plate, which forms the stake to be run for; as, the Queen's *Plate* at Ascot.

—*v. a.* To cover or overlay with a thin plate or coating of metal, as of silver.—To arm with plate or metal for defense.—To beat into laminae or plates.—To ornament with plating.

Platea, or LOCKPORT, in Pennsylvania, a post-village of Erie co., about 107 m. N.N.W. of Harrisburg.

Plate-armor, n. An armor consisting entirely of plates of metal, which became general in the 15th century. See ARMOR PLATE.

Plateau, (pta-to') n. [Fr.] A plain; particularly, an elevated level surface. See TABLE-LAND.

Plateful, n. Sufficient to fill a plate.

Plate-glass, n. A superior quality of glass, cast in large thick plates, generally used for mirrors, and the best windows.

Platel, n. [Fr.] A small plate or dish.

Plate-layer, n. A laborer who lays down and arranges the iron rails of a railroad.

Plate-mark, n. A special mark or representation stamped on gold or silver plate.

Platen, n. (*Print.*) The flat part of the press whereby the impression is made.

Plate-paper, n. A heavy, spongy paper, manufactured expressly for printing from engraved plates. It receives the most delicate lines freely, and takes the impression of printer's ink readily; but ordinary writing ink will run and blot its surface. It is wetted for printing upon, and holds considerable moisture when used by the printer; but its passage through the press gives it greater density.

Plate-printing, n. See COPPER-PLATE PRINTING.

Plater, n. One who coats metal articles with silver or with gold.

Plate-rack, n. A wooden frame fixed in a scullery to stand plates and dishes in to drain after they are washed.

Plate-warmer, n. A japanned-metal or tinned-case with shelves, for holding plates that are to be warmed before a fire.

Platform, n. [Eng. *plat*, flat, and *form*.] Something having a flat or extended surface; as, the sketch or delineation of the form of a building upon a plane surface; a plot of ground, or broad, smooth, open walk upon the roof of a building, as seen in Oriental houses; a frame-work of timber or boards horizontally connected, so as to form a roof; a frame-work of timber or boards horizontally joined, so as to form an open and conspicuous standing-place.

—Hence, by analogy, the basis whereon any political party rests its political code of principles; declaration of doctrines, tenets, or opinions to which any body, party, or clique of individuals declare their adhesion; as, the Democratic *platform*.

(*Mil.*) An elevation of earth, or a floor of wood or stone, on which heavy guns are mounted.

(*Building.*) A level surface for receiving the foundations of an edifice or superstructure.

(*Naut.*) The orlop. See ORLOP.

Platform-car, n. A railroad-car without a covering, or inclosure.

Platina, n. [Sp.] (*Min.*) Same as PLATINUM, *q. v.*—Twisted silver wire.—An iron plate for glazing stuff.

Platina-yellow, n. A pigment of a pale-yellow color, compounded of earth and an oxide.

Plating, n. The art of covering copper and other metals with silver or gold: it is effected in various ways. Sometimes the silver is attached to and rolled out with the copper by pressure; sometimes the one metal is precipitated from its solutions upon the other; and manufacturers have lately availed themselves of electrochemical decomposition for the purpose. See ELECTRO-PLATING.

Platiniferous, Platinous, a. Containing platinum.

Platinize, v. a. To coat or to combine with platinum.

Platinode, n. (*Galvanism.*) Same as CATHODE, *q. v.*

Platinum, n. [Sp. *platina*, from *plata*, silver.] (*Chem. and Metall.*) This valuable metal is found in nature in small flattened grains, alloyed, more or less, with palladium, rhodium, osmium, ruthenium, and iridium. It occurs chiefly in certain of the alluvial districts of Mexico, Brazil, and the Ural Mountains. The excessive infusibility of platinum renders its purification a very complicated matter. The method generally employed is that devised by Wollaston. The ore is digested in aqua regia until solution takes place; sal ammonia is then added, and the greater part of the *P.* is precipitated, in the form of a yellow double salt, which is sparingly soluble. The mother-liquor still retains a portion of the metal, which is redissolved in aqua regia, after precipitation, by iron, sal-ammonia being added as before. The double salt is washed and heated to redness, to drive off the chlorine and ammonia, and the *P.* is left behind in the metallic state in a spongy mass. This is thoroughly washed and levigated, and afterwards squeezed in a powerful press until it acquires the specific gravity of about 10. It is next exposed to the heat of a powerful wind-furnace, and the ingot is forged by hammering on the ends, the heating and forging being repeated until the mass becomes homogeneous and ductile. *P.*, or platina, as it was formerly called, from a Spanish word signifying little silver, is a white metal possessing properties which render it most valuable in the arts. It is susceptible of a high lustre, and possesses considerable hardness. It is the most ductile of all metals, and is nearly as malleable as gold. It resists heat with great obstinacy, yielding only to the highest temperature obtainable by Beville's oxyhydrogen furnace. At high temperatures it possesses the property of welding. Its power of conducting heat and electricity is inferior to gold and silver. It does not oxidize in air at any temperature, and no single acid has any effect on it. Aqua regia dissolves it slowly. Heated in air with the alkalis, or alkaline earths, it becomes corroded, owing to the formation of a double oxide. Its properties in a minute state of subdivision are interesting. If the protochloride is dissolved in a strong solution of caustic potash, and alcohol added, carbonic acid escapes, and the metal becomes reduced in the form of a fine black powder, known as *platinum-black*. In this finely-divided state it greedily condenses oxygen from the air, absorbing many times its bulk of that gas. If moistened with ether or alcohol, it imparts this oxygen to them, forming new compounds, and glowing with the heat produced. The great infusibility and resistance to ordinary chemical agents possessed by *P.* renders it invaluable to manufacturing and experimental chemists; the advance in chemical science during the last 40 or 50 years being due in no small degree to its introduction as a material for the construction of crucibles, tubes, and retorts. In the purification and concentration of sulphuric acid, large *P.* stills are used. It is used in Russia for coinage. It is easily alloyed with other metals. It combines with carbon, silicon, and the haloids—with oxygen, sulphur, cyanogen, and it is supposed nitrogen, in fulminating *P.* *Equiv.* 194.4; *sp. gr.* 21.5; *symbol* Pt.

Chlorides of P. There are two chlorides of platinum—the protochloride ($PtCl_2$) and the bichloride ($PtCl_4$). To obtain the former, the solution of *P.* in aqua regia is evaporated, and the residue exposed to a heat of 450°

Fahr., until chlorine ceases to be expelled. It is an olive-green powder, insoluble in water, but dissolving easily in caustic potash. It forms double salts with the bichloride of *P.* and with the alkaline chlorides. The bichloride is obtained by evaporating the solution of the metal in aqua regia at a temperature not exceeding 212° Fahr. It is readily soluble in water, ether, and alcohol, forming a deep-orange solution. By careful evaporation, it may be obtained in deliquescent prisms. Heated to 450° Fahr., it gives off half its chlorine, and is converted into the protochloride; and if the temperature be further raised, the whole of the chlorine is eliminated. With the chlorides of the alkalis, both natural and artificial, it forms double salts. With ammonia and its chloride, it forms a multitude of salts, of which Miller enumerates no less than twelve. Bichloride of *P.* is invaluable in organic chemistry in determining the formulae of the artificial alkalies, by the formation of the double chlorides.

Oxides of *P.* There are two oxides of *P.*, the protoxide (PtO), and the binoxide (PtO₂). The protoxide is known only as a hydrate, obtained as a black powder, by decomposing the protochloride with potash. The anhydrous binoxide is obtained as a black powder, by heating the hydrate, which is thrown down by adding excess of potash to bichloride of *P.*, and decomposing the platinate of potash thus formed with acetic acid. The hydrate is a red-brown powder, resembling sesquioxide of iron, and playing the part of an acid and a base. With potash and soda, crystallizable platinate may be formed; while with nitric and sulphuric acids it forms the nitrate and sulphate of the binoxide.

Sulphides of *P.* Platinum forms two sulphides,—the protosulphides (PtS) and the bisulphide (PtS₂) but they are of no practical interest.

Plat'itude, n. [Fr., from *plat*, flat.] Dulness; flatness; insipidity;—hence, that which exhibits dulness or flatness; a trite remark; a vapid truism; a pretentious observation; a weak or empty quotation.

Plato, the great Greek philosopher, was b. at Athens, or in Aegina, in May, B. C. 429, the year in which Pericles died. He was son of Ariston and Perictione, who boasted of their descent from Cadmus and Solon, and he was named Aristocles. The name *Plato* was afterwards applied to him in allusion to his broad brow, broad chest, or fluent speech. Endowed with a highly imaginative and emotional nature, he early began to write poems, but at the same time studied philosophy, and at the age of 20 became the disciple of Socrates. He burnt his poems, remained devotedly attached to Socrates for ten years, attended him on his trial, and was one of the few who listened to the final conversation on the immortality of the soul. After the death of Socrates, he went to Megara, to hear Euclid; thence to Cyrene, and perhaps to Egypt and South Italy. On his return he began to teach at Athens, in the plane-tree grove of the Academia; he taught gratuitously, and had a great number of disciples, many of whom became eminent teachers. Among them was Aristotle, distinguished as the "Mind of the School," and perhaps Demosthenes. Women are said to have attended. In his 40th year, *P.* visited Sicily, but he offended the tyrant Dionysius by the political opinions he uttered, and only escaped death through the influence of his friend, Dion. Two later visits to the court of the younger Dionysius were the only interruptions to his calm life as a teacher and writer at Athens. *P.* never married, had no children, took no active part in public affairs, lived absorbed in the pursuit of truth, and was so marked by gravity and melancholy, that the saying became common, "as sad as Plato." His works have come down to us complete, and are chiefly in the form of dialogues

Fig. 2128. — PLATO,
(From an ancient gem.)

a form of literature in which he is unrivalled. They are singular in their union of the philosophic and poetic spirit—the depth of the philosopher and the rigorous exactitude of the logician with the highest splendor of imagination of the poet. In range of speculation, the dialogues of *P.* are unparalleled. "Out of Plato," says Emerson, "come all things that are still written and debated among men of thought." And, again, "Plato is philosophy, and philosophy Plato." Attempts have been made to classify the dialogues, but without useful result; and attempts to construct a formal system from them have utterly failed. *P.* did not aim at a system; nor did he even aim so much at teaching truths, as at imparting and illustrating the method by which each should seek truth for himself. We owe to him the threefold division of philosophy into *dialectics*, *physics*, and *ethics*; the first sketch of the laws of thought; the doctrine of "ideas," as the eternal archetypes of all visible things; and the first attempt towards a demonstration of the immortality of the soul. And he proclaims the highest and purest doctrines of morality with clearness, courage, and unhesitating authority. It is difficult to say what idea Plato had of the Deity. It seems, however, that his idea of the good and Him were identical; but whether he regarded Him as a personal being it is impossible to say. *P.* distinguishes two components of the

soul—the divine or rational, that which partakes of a divine principle, and participates in the knowledge of the eternal; and the mortal or irrational, that which participates in the motions and changes of the body, and is perishable. The two are united by an intermediate link, which he calls *thumos*, or spirit. He believes in future retribution; exonerates God from responsibility for sin and suffering, and sets forth in elaborate myths the blessedness of the virtuous and the punishments of the vicious. In ethics, the grand idea is the good in its various forms of development. He adopted, as a writer, the method of his great master, who forms also the central figure of the dialogues: and whose opinions and biography are so closely interwoven with them, that we cannot tell whether the light that shines on us comes from this or that side of the twin-star, Socrates and *P.* *P.* died in the act of writing, it is said, in May, 347 B. C. His birthday was long observed as a festival. There is an admirable German translation of *P.* by Schleiermacher, not complete, however; a complete French one by Cousin; and English translations of some of the dialogues by Sydenham; of the whole by Taylor, and of a few by Whewell. Goethe's work, entitled, *Plato and the other Companions of Socrates* (1865), is one of the most important contributions ever made to the study of Greek philosophy.

Plato, a town of the Republic of Colombia, about 12 m. S.S.E. of Tenerife.

Plato, in *Illinois*, a post-village of Iroquois county about 75 miles S. by W. of Chicago.—A township of Kane co.

Plato, in *Minnesota*, a post-village of McLeod co., abt. 50 m. W.S.W. of St. Paul.

Plato, in *Missouri*, a post-village of Texas co., abt. 44 m. S.S.W. of Rolla.

Plato, in *New York*, a village of Cattaraugus co., abt. 40 m. S. by E. of Buffalo.

Platometer, n. Same as PLANIMETER, *q. v.*

Platon'ic, n. One who receives or adopts the views of Plato.

Platon'ic, Platon'ical, a. Pertaining to Plato, or to his philosophy, his school, or his opinions.

Platon'ically, adv. After the manner of the Platonists.

Platon'ic-bodies, n. pl. (*Geom.*) The five regular geometrical solids, so called because they were treated of or described by Plato. They are the *tetrahedron*, the *hexahedron*, the *octahedron*, the *dodecahedron*, and the *icosahedron*. Besides these five, there can be no other solids bounded by like, equal, and regular plane figures, and whose solid angles are all equal.

Platon'ic Love, n. An affection subsisting between two persons of different sex, which is presumed to be unaccompanied by any sensuous emotions, and to be based on moral or intellectual affinities. The expression has originated in the view of Plato, who held that the common sexual love of the race, harassed and afflicted with fleshly longings, is only a subordinate form of that perfect and ideal love of truth which the soul should cultivate.

Platonism, n. The doctrines or philosophy of Plato and his followers.

Platonist, n. One who professes to be a follower of Plato, and to philosophize as he does; a platonizer.

Platonize, v. n. To adopt the opinions of the Platonic school.

—*v. a.* To explain on the principles of the Platonic school, or to accommodate to those principles.

Platonizer, n. A Platonist.

Platoon, n. [Fr. *peloton*, a clue of thread, from *pelote*, a ball; Sp. *pelota*, from Lat. *pila*, a playing ball.] (*Mil.*) Formerly a small body of soldiers or musketeers, drawn out of a battalion of foot when they form a hollow square; in the modern sense, two files forming a subdivision of a company of infantry.

Platte, in *Iowa*, a township of Taylor co.

—A township of Union co.

Platte, in *Missouri*, a W. N.W. co., adjoining Kansas; area, about 410 sq. m. Rivers, Missouri and Platte rivers. Surface, undulating; soil, very fertile, producing on an average more hemp, wheat, butter, and corn than any other county of the same size in the Union. Cap. Platte City. Pop. (1897) 18,480.

—A township of Andrew co.

—A township of Buchanan co.

Platte, in *Nebraska*, an E. co.; area, about 682 sq. m. Rivers, Platte river, Maple creek, and some smaller streams. Surface, undulating; soil, fertile. Cap. Columbus. Pop. (1897) 17,360.

Platte City, in *Missouri*, a post-town, cap. of Platte co., about 200 m. W. N.W. of Jefferson City, on the Chicago, Rock Island & Pacific R.R.

Plattekill, in *New York*, a post-village and township of Ulster county, about 80 miles south by west of Albany.

Plat'ten-See, or Balaton Lake, the largest lake of Hungary, 55 m. S.W. of Pesth. It is 48 m. long from N.E. to S.W., and its greatest breadth 10 m.; area, 420 sq. m. It receives numerous rivers, the principal of which is Szala, and discharges its surplus waters by the Sarviz and Sio, into the Danube. The water is slightly salt.

Plat'ter, n. [From *plat*.] A large, flat, shallow dish for holding the provisions of a table.—One who plats by weaving.

Plat'ter-faced, (-fäst.) a. Broad-faced.

Platte (or NEBRASKA) River, the longest affluent of the Missouri River. It is formed by two branches called North Fork and South Fork of Platte River. The first of these rises among the Wind River Mountains in Wyoming, and flows E.S.E. to Harrison co., Nebraska.

The South Fork of the same river has its rise among the Park Mountains in Colorado, and flowing E.N.E. into Nebraska joins the North Fork in Harrison co., thence pursuing a general E. course through two-thirds of the State, it enters the Missouri River between Sarpy and Cass cos. Total length, including the longest (North) Fork, abt. 1,200 m. Though it is more than 3 m. wide at many places, and contains some large islands, it is for the most part little more than a succession of shallow pools; hence the French name *Platte*, or *shallow*.

Platte River, in *Wisconsin*, flows into the Mississippi River from Grant co.

Platte River, rises by two branches in Iowa, and flowing S. into Missouri, enters Missouri River from Platte co.

Platteville, in *Iowa*, a post-village of Taylor co., about 9 m. E. by S. of Bedford.

Platteville, in *Wisconsin*, a prosperous city of Grant co., about 78 m. W.S.W. of Madison. It owes its importance chiefly to the rich lead mines in the vicinity. Pop. (1895) 3,321.

Plat'ting, n. Slips of cane, straw, &c., woven and plaited for making into hats.

Plattsburg, in *Missouri*, a city, cap. of Clinton co., about 28 m. S.E. of St. Joseph. Pop. (1897) 1,825.

Plattsburg, in *New York*, a post-village and township, port of entry, and the cap. of Clinton co., on the Saranac River and Lake Champlain, abt. 160 m. N. by E. of Albany; Lat. 44° 42' N., Lon. 73° 26' W. Cumberland Bay affords an excellent harbor, and the village has an active trade. Manuf. Flour, machinery, iron-ware, leather, lumber, &c.

Plattsburg, in *Ohio*, a post-village of Clark co., abt. 11 m. E. by S. of Springfield.

Platts mouth, in *Nebraska*, a city, cap. of Cass co., on Missouri river, 21 m. S. of Omaha. Pop. (1897) 10,000.

Platts'ville, in *Connecticut*, a village of New Haven co., abt. 19 m. N.N.E. of New Haven.

Plattsville, in *Ohio*, a post-village of Shelby co., abt. 37 m. N. of Dayton.

Plattville, in *Illinois*, a post-village of Kendall co., abt. 17 m. W. by N. of Joliet.

Plattville, in *Pennsylvania*, a post-village of Cambria co., abt. 24 m. W.N.W. of Altoona.

Platyrus, n. [Gr. *platuros*, broad, and *oura*, a tail.] (*Zool.*) A genus of marine snakes.

Plat'y, a. Resembling, or consisting of plates.

Platyceph'alous, a. [Gr. *platys*, broad, and *kephalē*, head.] Broad-headed.

Plaud'it, n. [From Lat. *plaudere*, to applaud.] A clapping of the hands, in token of approbation, praise, or applause; praise bestowed; shout of acclamation.

Plaud'itory, a. Applauding; praise-bestowing.

Plauen, (plaw'en.) a town of Saxony, circle of Zwickau, on the White Elster, 60 miles S.W. of Leipsic. Manuf. Cotton goods, paper, leather, muslin and cotton-printing. Pop. 16,500.

Plausibility, n. [Fr. *plausibilité*.] State or quality of being plausible; speciousness; superficial appearance of right.

Plausible, a. [Lat. *plausibilis*, from *plaudo*.] That may gain favor or approbation;—hence, superficially pleasing; apparently right; specious; ostensible; colorable; as, a *plausible* excuse, a *plausible* pretext.—Employing specious arguments or discourse; as, a *plausible* speaker.

Plausibilize, v. a. To render plausible. (*r.*)

Plausibleness, n. State or condition of being plausible.

Plausibly, adv. In a plausible manner.

Plausive, a. [Lat. *plaudere*, *plausum*, to applaud.] Giving applause; bestowing or expressing praise.

Plautus, T. Maccius, the most celebrated Roman comic poet, b. in Umbria, probably about B. C. 255. He spent the greater part of his life at Rome, where at one time he is said to have been reduced to the necessity of grinding corn with a handmill for a baker. He began to write plays about 220, and gained immense popularity with his countrymen by his numerous comedies, based, many of them, on Greek models, but made his own by a bold treatment and clever adaptation of them to Roman audiences. Twenty of his comedies are still extant out of the twenty-one pronounced genuine by Varro. One hundred and thirty were current under his name. His plays were still acted in the reign of Domitian, and some of them have been imitated by modern dramatists. There are several English translations of *P.*'s works. Died B. C. 184.

Play, v. n. [A. S. *plegan*, *plegian*, to play.] To use any exercise for pleasure or recreation; to do something not as a task or for profit, but for amusement; to sport; to frolic; to frisk.—To toy; to trifle; to act with levity, or wantonly and thoughtlessly.—To game; to gamble; to contend in a game; as, to *play* double or quits.—To practice a trick or deception.—To perform on a musical instrument; as, to *play* on a flute, violin, pianoforte, &c.—To move, or to move with alternate dilatation and contraction, as the lungs; to operate; to act as a machine; to move one way or another, as a wheel or piston; as, to send for engines to *play* against a fire.—To wanton; to move irregularly.

"He played familiar his hoary locks."—*Pollux*.

—To act a part on the stage; to personate a character; to act in any particular character.

To *play upon*, to deceive by false representation; to mock by deceptive illusion.—To give a fanciful turn; to practice sport or sarcastic merriment.

"How every fool can play upon the world!"—*Shaks*.

—*v. a.* To put into action or motion; as, to *play* cannon, to *play* a fire-engine.—To use, as an instrument of

music; to *play* the bugle, to *play* the organ. — To act, as a part or character; as, to *play* the fool. — To act or perform by representing a character; as, to *play* the part of "Hamlet." — To perform, as one's part in life.

"I seem a saint, when most I *play* the devil." — *Shaks.*

—To perform in contest for amusement or for a prize; as, to *play* a game of billiards.

To *play off*, to display; to exhibit; to put in exercise; as, to *play off* tricks upon one's credulity.

Play, *n.* [A. S. *plega*.] Any exercise or series of actions intended for pleasure, amusement, or diversion; a game, as at base-ball, cricket, quoits, &c. — Amusement; sport; frolic; gambols; as, children's *play*. — Gaming; practice of contending for victory, or for a prize; as, he lost a fortune by high *play*. — Practice in any contest; as, sword-*play*. — Action; use; employment; office; practice; manner of acting in contest or negotiation; as, fair *play*, foul *play*. — A dramatic composition; representation or exhibition of a tragedy or comedy; as, to go to the *play*. — Performance or execution on a musical instrument. — Motion; movement, regular or irregular; as, the *play* of a piston; — hence, also, free and easy action.

"The joints have no *play* between them." — *Moxon.*

—Liberty of action; room for enlargement or exhibition; scope; as, to give full *play* to one's laughter. — State of agitation or ventilation.

"Many ... never heard this question brought in *play*." — *Dryden.*

To *hold in play*, to keep in full occupation or action; as, to *hold the foe in play*. — *Play of colors*, rapid succession of prismatic colors, as in a diamond.

Play-actor, *n.* An actor of stage-plays; a dramatic player.

Play-bill, *n.* A printed announcement of a play, with a programme of the casts assigned to the actors therein.

Play-book, *n.* A book of dramatic compositions.

Play-day, *n.* A day devoted to recreation; a day of exemption from work; a holiday.

Play-debt, (*-dēt*), *n.* A gaming debt; a debt contracted by play.

Player, *n.* [A. S. *plegere*.] One who plays in any game or sport; as, a *player* at cards. — An idler; one who performs anything indifferently.

"You're ... *players* in your housewifery." — *Shaks.*

—An actor or performer of dramatic impersonations. — A mimic. — One who acts a part in a certain manner. — One who performs on a musical instrument. — A gamester; a gambler; as, a high *player*.

Play-fellow, *n.* A playmate; a companion in sports or amusements.

Playful, *a.* Full of play; sportive; given to levity or frivolity; as, a *playful* kitten. — Indulging in sportive expression or illustration; as, a *playful* fancy.

Playfully, *adv.* In a playful manner; sportively.

Playfulness, *n.* State or quality of being playful; sportiveness.

Play-game, *n.* Play of children. (*n.*)

Play-goer, *n.* One who frequents the performances of stage-plays; a theatrical habitué.

Play-house, *n.* A house appropriated to the representation of plays or of dramatic compositions; a theatre.

Playing, *n.* Act of playing, particularly of performing upon an instrument of music.

Playing-card, *n.* One of a set of 52 cards, formed of 4 sets of 13 each, bearing certain painted figures and devices, and used in playing games.

Playless, *a.* Without play.

Play-mate, *n.* A play-fellow; a companion in sports or pastimes.

Playsome, (*plā'sum*), *a.* Playful; sportive; wanton; full of levity.

Play-someness, *n.* Playfulness; sportiveness; wantonness.

Play-thing, *n.* A toy; anything that serves to amuse.

Playwright, (*-rit*), *n.* A maker of plays; a writer for the stage.

Plea, (*plē*), *n.* [O. Fr. *ptait*, suit, plea; Fr. *plaider*, to plead, from L. Lat. *placitare*, from Lat. *placitum*, a determination, from *placere*, to please.] (*Law.*) In equity: A special answer showing or relying upon one or more things as a cause why the suit should be either dismissed, or delayed, or barred. At law: The defendant's answer by matter of fact to the plaintiff's declaration, as distinguished from a demurrer, which is an answer to matter of law. See PLEADING.

Plea of the Crown. (*Old Eng. Law.*) An expression which denoted the divisions of criminal offences generally. The phrase was so used because the sovereign was supposed in law to be the person injured by every wrong done to the community, and therefore was the prosecutor for every such offence.

Pleach, (*plēch*), *v. a.* [Fr. *plisser*, from Lat. *plicare*, to wind together.] To plash; to come together by interweaving, as boughs of trees; as, "the *pleached* bower." — *Shaks.*

Plead, (*plēd*), *v. n.* [Fr. *plaider*.] To argue or reason in support of a claim, or in defence against the claim of another; to urge reasons for or against; to attempt to persuade one by argument or supplication; to beseech with earnestness; to urge; as, to *plead* in a person's favor.

(*Law.*) To carry on a plea or suit; to present an answer to the declaration of a plaintiff; to carry on the allegations of the respective parties in a cause.

—*v. a.* To discuss, defend, and endeavor to maintain by arguments or reasons adduced before the tribunal or person who has the magisterial power of determining; to argue at the bar; as, to *plead* a cause before a judge and jury. — To allege, or adduce in proof, support, or

vindication; to offer in excuse, apology, or extenuation; as, his character *pleads* in his favor. — To allege or offer in a legal plea or defence, or for repelling a demand in law; as, to *plead* a statute of limitations; to *plead* infancy.

Pleadable, *a.* That may be pleaded; that may be alleged in proof, defence, or vindication; as, this privilege is *pleadable* at law.

Plead'er, *n.* [Fr. *plaideur*.] One who pleads or argues in a court of justice; one who forms pleas or pleadings; one who offers reasons for or against; one who attempts to maintain by arguments; as, a special *pleader*.

Plead'ingly, *adv.* By supplication; in a pleading manner.

Plead'ings, *n. pl.* (*Law.*) The mutual altercations between the plaintiff and defendant in a court of law, in support of their respective claims. The first object in an action is to procure the defendant's appearance, in order that he may have an opportunity of being informed of the plaintiff's demand or complaint, and of encountering it in such manner as he may think fit. This is done by a *summons* or *writ*, issued out of the court in which the action is brought, directed to the intended defendant, and commanding him to cause an appearance to be entered for him in that court in an action at the suit of the plaintiff, within eight days after the writ is served upon him. If the defendant fails to appear, the plaintiff obtains judgment by default. If he appears, he is entitled to receive from the plaintiff a detailed statement of the nature of his complaints, which is called the *declaration* (*narratio*). If the declaration be so framed as to prejudice or embarrass the fair trial of the action, the defendant may apply to the court to have it struck out or amended; or if he denies the sufficiency of the facts as cause of action, he may lodge a *demurrer*, and call upon the court to give judgment in his favor upon that state of facts. Otherwise, the defendant's course is to plead or deliver a *plea*, the general object of which is to make answer in point of fact to the declaration. The plea may be either dilatory or peremptory. *Dilatory* pleas are founded on some matter of fact not connected with the merits of the case, and are either to the jurisdiction, showing that the case is not within the jurisdiction of the court, or pleas of suspension, showing some matter of temporary incapacity to proceed with the suit; or in abatement, showing some matter for abating or quashing the declaration. The effect of a dilatory plea is, if successful, to defeat the particular action, leaving the plaintiff at liberty to commence another in a better form. *Peremptory* pleas, or pleas in bar, are founded on some matter tending to impeach the right of action itself, and their effect is to defeat the plaintiff's claim altogether. Pleas in bar are of various kinds. In general issues, there is a denial of the whole matter of the declaration, or at least of the principal fact upon which it is founded; as that the defendant is not guilty, not indebted, did not promise as alleged, &c. All other pleas in bar are distinguished by the name of *special pleas*. Pleas in bar are also distinguished according to their subject-matter; as pleas in justification or excuse, and pleas in discharge; the former tending to show that there never was any right of action, the latter that the cause of action, though once existing, has been barred by matter subsequent. As regards all pleas in bar, it is a fundamental rule that they must either traverse (*i. e.* deny) the matter of fact in the declaration, or confess and avoid it. The plea being delivered, it then has to be met by the plaintiff within the proper period, upon peril that if he fail to do so, the defendant is entitled to judgment by default. In encountering the plea, the plaintiff has the same right to have it struck out or amended, if its frame be objectionable, as the defendant had with regard to the declaration; he may also demur or plead some matter of fact. If the plaintiff pleads, he is said to reply, which he does by delivering a *replication*; and this, also, as the plea, must either traverse the last pleading or confess and avoid it. Upon the same principles are constructed all the subsequent allegations that may occur on either side until the pleading is exhausted. To the replication the defendant may rejoin, or deliver an answer called a *rejoinder*; the plaintiff may answer the rejoinder by a *surrejoinder*; the defendant may, upon that, deliver a *rebuttal*, and this may be followed by a *surrebuttal* on the part of the plaintiff; beyond which pleadings seldom happen to extend, and are not distinguished by any particular names; for it is evident that the parties must at length arrive either at some exception by way of demurrer to the sufficiency of the last pleading, which is an *issue in law*, or at the denial on one side of some matter of fact alleged on the other, which is an *issue in fact*. Issues in law are referred to the decision of the judges of the court; issues in fact are decided by trial and evidence.

Pleasance, (*plēz'ans*), *n.* [Fr. *plaisance*.] State of being pleasant; — hence, gayety; merriment; joyousness. — A pleasure-garden attached to a mansion.

Pleasant, (*plēz'ant*), *a.* [Fr. *plaisant*.] Pleasing; agreeable; gratifying to the mind or senses. — Enlivening; cheerful; affording pleasure or gratification; as, *pleasant* company; gay; humorous; lively; sportive. — Trifling; adapted rather to mirth than use; as, a *pleasant* adventure.

Pleasant, in Illinois, a township of Fulton county.

Pleasant, in Indiana, a township of Allen county. — A township of Grant county. — A township of Johnson county. — A township of La Porte county. — A township of Porter county. — A township of Steuben county. — A post-township of Switzerland county, eleven miles north-west of the

town of Vevay. — A township of Wabash county.

Pleasant, in Iowa, a township of Appanoose county. — A township of Hardin county. — A township of Lucas county. — A township of Monroe county. — A township of Poweshiek county. — A township of Union county. — A township of Wapello county.

— A township of Cass county.

— A township of Winneshiek county.

— A township of Wright county.

Pleasant, in the State of Michigan, a village of Genesee county, about eleven miles southeast of Flint.

Pleasant, in Ohio, a township of Brown county. — A township of Clarke county. — A township of Fairfield county. — A township of Franklin county. — A township of Hancock county. — A township of Hardin county. — A township of Henry county. — A township of Knox county. — A township of Logan county. — A township of Madison county.

— A township of Marion county.

— A township of Putnam county.

— A township of Seneca county.

— A township of Van Wert county.

Pleasant, in Pennsylvania, a township of Warren co.

Pleasant Grove, in Illinois, a township of Coles co.

Pleasant Grove, in Iowa, a post-township of Des Moines county. — A township of Floyd county. — A village of Keokuk county, about 40 miles S.W. of Iowa City. — A township of Mahaska county. — A township of Marion co.

Pleasant Grove, in Louisiana, a locality of De Soto parish, about 3 m. S.W. of Sabine Cross-Roads. Here, April 8, 1864, Gen. W. H. Emory, coming to the assistance of the advance columns of Gen. Banks' army, met those defeated forces in full retreat from the battle-field of SABINE CROSS-ROADS (*q. v.*), with the Confederates in close pursuit. A sanguinary battle of an hour and a half ensued, in which the Nationals, though able to maintain their position until dark, lost heavily, and in the night were compelled to retreat to PLEASANT HILL, (*q. v.*)

Pleasant Grove, in Minnesota, a post-village and township of Olmstead co., abt. 13 m S. by E. of Rochester. This town was devastated by a cyclone in August, 1883, and a large part destroyed.

Pleasant Grove, in New Jersey, a village of Morris co., abt. 21 m. W. of Morristown.

Pleasant Hall, in Pennsylvania, a post-village of Franklin co., abt. 45 m. W.S.W. of Harrisburg.

Pleasant Hill, in Illinois, a post-village and township of Pike co., abt. 80 m. W.S.W. of Springfield.

Pleasant Hill, in Indiana, a post-village of Montgomery co., abt. 58 m. W.N.W. of Indianapolis.

Pleasant Hill, in Louisiana, a post-village of De Soto parish, abt. 50 m. S. of Shreveport. Here, on April 9, 1864, occurred a desperate battle between the Union army under Gen. Banks, and the combined Confederate forces of Gens. Kirby Smith, Taylor, and Green. Gen. Banks, having suffered defeat at Sabine Cross-Roads, and again at Pleasant Grove, retreated to this place; and finding that the enemy was pursuing him in force, he took a strong position and prepared to give battle. The contest lasted nearly all day, and resulted in the defeat of the Confederates. The total Union loss in the engagements of April 7-9 amounted to 3,969. The Confederate loss was never reported.

Pleasant Hill, in Missouri, a post-village of Cass co., abt. 36 m. S.W. of Lexington.

Pleasantly, *adv.* In such a manner as to please or gratify; gaily; merrily; in good humor; lightly; ludicrously.

Pleasantness, *n.* State or quality of being pleasant or agreeable; gayety; cheerfulness; merriment.

Pleasant Mills, in New Jersey, a village of Atlantic co., abt. 15 m. N. of May's Landing.

Pleasanton, in Texas, a post-village, cap. of Atascosa co., abt. 120 m. S.S.W. of Austin.

Pleasant Plain, in Iowa, a post-village of Jefferson co., abt. 45 m. S.S.W. of Iowa City.

Pleasant Plains, in Missouri, a village of Scott co., abt. 30 m. W. of Cairo, Illinois.

Pleasant Plains, in New York, a post-village of Dutchess co., abt. 66 m. S. of Albany.

Pleasant Prairie, in Minnesota, a post-village of Wabasha co., abt. 15 m. N. of Rochester.

Pleasant Prairie, in Missouri, a village of Greene co., abt. 22 m. E.N.E. of Springfield.

Pleasant Prairie, in Wisconsin, a township of Kewaunee co.

Pleasant Ridge, in Illinois, a township of Livingston co.

Pleasant Ridge, in Iowa, a village and township of Lee co., abt. 28 m. N. of Keokuk.

Pleasant River, in Maine, enters the Atlantic Ocean, by a bay of its own name, from Washington co.

Pleasant Run, in Indiana, a township of Lawrence co.

Pleasant Run, in Texas, a creek flowing into Trinity River from Dallas co.

Pleasantry, *n.* [Fr. *plaisanterie*.] Gayety; merriment; that which conduces to pleasure, good-humor, or agreeability. — That which conduces to vivacity or liveliness; — hence, sprightly talk; a humorous saying; gentle raillery.

"The ironical *pleasantry* of a finished man of the world." — *Macaulay.*

Pleasant-tongued, (*-tūngd*), *a.* Agreeable in speech; lively-spoken.

Pleasants, in West Virginia, a N.W. co., adjoining

Ohio; area, about 150 sq. m. *Rivers.* Ohio river and Middle Island creek. *Surface,* hilly; *soil,* generally fertile. *Cap. St. Mary's.* *Pop.* (1897) 8,380.

Pleasant Spring, in Wisconsin, a township of Dane co.

Pleasant Unity, in Pennsylvania, a post-village of Westmoreland county, about 38 miles east south-east of Pittsburgh.

Pleasant Vale, in Illinois, a post-village and township of Pike county, about 90 miles west by south of Springfield. It is watered by the Mississippi river.

Pleasant Valley, in Illinois, a post-township of Jo Daviess co.

Pleasant Valley, in Iowa, a township of Fayette county.—A township of Grundy county.—A township of Johnson county.—A post-township of Scott county.

Pleasant Valley, in Minnesota, a township of Mower co.

Pleasant Valley, in New York, a post-village and township of Dutchess co., abt. 7 m. N.E. of Poughkeepsie.

Pleasant Valley, in Ohio, a post-village of Morgan co., abt. 50 m. S. of Columbus.

Pleasant Valley, in Pennsylvania, a township of Potter co.

Pleasant Valley, in Wisconsin, a township of Eau Claire county.—A township of Pierce county.—A post-township of St. Croix county.

Pleasant View, in Indiana, a village of Shelby co., abt. 15 m. S.E. of Indianapolis.

Pleasantville, in Illinois, a village of Fulton co., abt. 50 m. N.W. of Springfield.

Pleasantville, in Iowa, a post-town of Mariou co., about 100 m. W.S.W. of Iowa City.

Pleasantville, in New York, a post-village of Westchester co., about 34 N. of New York city.

Pleasantville, in Ohio, a post-village of Fairfield co., about 30 m. S.E. of Columbus.

Pleasantville, in Pennsylvania, a post-borough of Venango co., abt. 7 m. E. of Titusville.

Pleaze, (*plēz*), *v. a.* [Fr. *plaire*, pp. *plaisant*, from Lat. *placeo*.] To excite agreeable sensations or emotions in; to gratify; to gladden; as, to *please* one's fancy.—To content; to satisfy; as, her beauty *pleased* the most fastidious taste.

To be *pleased in*, or *with*, to have complacency or satisfaction in.—To be *pleased to do a thing*, to take pleasure in doing it; to have the good will to do it; as, I am *pleased to do you a service*.

v. n. To like; to choose; to prefer; to condescend; to be pleased;—used ceremoniously, or by way of entreaty.

Pleasedly, *adv.* In a pleased or gratified manner.

Pleasedness, *n.* State or condition of being pleased.

Pleaser, *n.* One who pleases or gratifies.

Pleas'ing, *a.* Giving pleasure or gratification; delightful to the senses or to the mind; grateful; acceptable; pleasant; as, a *pleasing* view, *pleasing* manners, a *pleasing* dream.

Pleas'ingly, *adv.* In a pleasing or agreeable manner.

Pleas'ingness, *n.* Quality of affording pleasure.

Pleas'urable, *a.* That can or may please; pleasing; giving pleasure; affording gratification.

Pleasurableness, *n.* State or quality of being pleasurable.

Pleasurably, *adv.* In a pleasurable manner; with gratification of the senses or the mind.

Pleasure, (*plēzh'ur*), *n.* [Fr. *plaisir*.] The gratification of the senses or of the mind; agreeable sensations or emotions; excitement, relish, or gladness produced by the attainment or the anticipation of good.—Enjoyment; delight;—sometimes, sensual or carnal gratification.

"Grief still treads upon the heels of pleasure."—Congreve.

—Approbation; will; choice; preference; selection; purpose; intention; command; arbitrary determination.—That which pleases; a favor; a boon; a service; as, will you do me a *pleasure*?

(NOTE. *Pleasure* is sometimes used in the construction of self-explanatory compounds; as, *pleasure-carriage*, *pleasure-garden*, *pleasure-train*, &c.)

v. a. To impart pleasure; to gratify; to delight; to please. (R.)

"A man in love will cross his own inclinations to *please* them whom he loves."—Tillotson.

v. n. To seek or take pleasure; as, to go *pleasuring*. (R.)

Pleasure-ground, (*plēzh'-*), *n.* Ground adjoining a mansion; laid out in an ornamental manner, and appropriated to amusement.

Pleasurist, (*plēzh'-*), *n.* One who is a slave to worldly pleasures.

Pleat, *v. a.* Same as *PLAIT*, *q. v.*

Plebeian, (*ple-bē'yan*), *a.* [Fr. *plébéien*; Lat. *plebeius*, from *plebs*, *plebis*, the common people.] Pertaining, or having reference to, or consisting of, the common people; vulgar;—opposed to *patrician*; as, a *plebeian* throng, a *plebeian* mind, &c.

n. (*Roman Hist.*) One of the free citizens of Rome who did not come under the class of the patricians or clients. Though personally independent, they had in early times no political power, the government being entirely in the hands of the patricians, who formed the original *populus* (Gr. *πόλις*) or people.—B. c. 494 the plebeians revolted and obtained a decree of the senate to have two of their order elected annually as tribunes. Three plebeians were created decemvirs abt. B. c. 451. Military tribunes were chosen from the plebeians abt. B. c. 441. A plebeian was raised to the consulate abt. B. c. 366. A plebeian was made one of the censors B. c. 351; two plebeians were appointed consuls B. c. 172; and two

censors B. c. 131, thus overthrowing the last of the political barriers existing between them and the patricians.—In modern times, one of the common people or lower classes of men;—so used in countries where there is an aristocracy.

Plebeianism, *n.* The conduct of plebeians.

Plebeianize, (*ple-bē'yan-iz*), *v. a.* To make low, common, or vulgar.

Plebiscite, *n.* [Fr.; Lat. *plebiscitum*, from *plebs*, *plebis*, and *scitum*, decree.] The name given, in the political phraseology of modern France, to a decree of the nation obtained by an appeal to universal suffrage. Thus Louis Napoleon, for example, was chosen president, and subsequently emperor, by a *plebiscite*. In 1870 again, and a few months before his inglorious fall, he had his power enforced by a new *plebiscite*. The word is borrowed from the Latin; but the *plebiscitum* of the Romans properly meant only a law passed at the *Comitia Tributa*, i. e., assembly of the *plebs*, or "commons," as distinguished from the *populus*, or the "nobles;" and although it was ultimately obligatory on both classes of the community, it, of course, could only refer to such matters as it was within the province of the *Comitia Tributa* to legislate upon, and could not fundamentally alter or destroy the constitution.

Plectognathes, Plectognathi, Plectognathus, *n. pl.* [Gr. *plektos*, twisted, and *gnathos*, jaw.] (*Zoöl.*) In the system of Cuvier, and also that of Müller, a small order of osseous fishes, but having the skeleton less perfectly ossified than osseous fishes generally; the skin furnished with ganoid scales or spines; and particularly characterized by having the maxillary and premaxillary bones ankylosed or soldered together.

Plectrophanes, *n.* (*Zoöl.*) The Orotan, Bunting, Black-bonnet, Gird-bunting, &c. A genus of European birds, of the family *Fringillidae*, characterized by having the bill more or less curved or blunted, the wings half longer than the tail, the hind claw much the largest; colors, black and white. No bird whatever has been so highly celebrated in the annals of gastronomy as the Orotan, whether we consider the practices resorted to at the present day to fit them for the tables of the wealthy, or refer to the enormous prices paid for them by the epicures of ancient Rome. They are common in Italy and France, where they are caught and fattened for the table, being fed in a dark place with oats or millet, by which process they become so fat that they will weigh three ounces, and would die from that cause alone, were they not killed for the market; when served up they resemble a mass of delicious marrow.

Plectrum, *n.* [Lat., from Gr. *plessein*, to stroke.] (*Antiq.*) See LYRE.

(*Anat.*) The styloid process of the temporal bone. Also, the uvula, and the tongue.

Pled, *imp. and pp. of PLEAD, q. v.*—Occasionally wrongly used instead of *PLEADED*.

Pledge, (*plēj*), *n.* [O. Fr. *pleige*; L. Lat. *plegium*, surety.] That which fastens or secures in a moral sense; that which is pledged or offered as a warrant or proof of good faith; anything given or considered as a security for the performance of an act.—Something put in pawn; that which is deposited with another as security for the payment of a debt or performance of a contract; a pawn, deposit, or earnest; a gage.—A surety; a hostage.

"I am Grumio's pledge."—Shaks.

(O. Eng. Law.) A hail; one who undertook to become security for another.

"And at thy pledge's peril keep thy day."—Dryden.

—A drinking of health to another.

To hold in *pledge*, to keep by way of security.—To put in *pledge*, to pawn.

v. a. To give as a warrant, earnest, or security of good faith; to deposit in pawn, or as security.—To engage for by promise or declaration.—To drink the health of another; to honor a toast.

"Pledge it merrily, fill your glasses."—Sheridan.

Pledgee, *n.* One to whom anything is pledged.

Pledgeless, *a.* Without a pledge; receiving no pledge.

Pledgeor, *n.* (Law.) One who pledges;—opposed to *pledgee*.

Pledgeor, *n.* A pledgeor; one who warrants or secures.—One who invites another to drink by drinking first; one who drinks to the health of another.

Pledget, (*plēj'et*), *n.* [Prov. Eng., a small plug.] (*Surg.*) A compress or bandage laid over a wound to absorb the pus and keep it clean.

Pleiad, *n.* One of the *PLEIADES, q. v.*

Pleiades, Pleiads, (*plē'ā-deez*), *n. pl.* (*Astron.*) A group of stars in the constellation Taurus, the Bull. The stars are so close together that it is difficult to say how many are seen by the naked eye. "They are called seven," says Higenus, "but no one can see more than six;" and six seems to be the number generally visible, though there are many more in the cluster. There is a supposition that some one of the stars once visible has disappeared, or changed its magnitude. According to mythology, the Pleiades were the seven daughters of Atlas, who, being pursued by Orion, were changed by Jupiter into doves. They were afterwards translated to the heavens, where they formed the assemblage of the Seven Stars in the neck of Taurus.

Pleistocene, (*-sēn*), *a.* [Gr. *pleistos*, most, and *kainos*, new.] (*Geol.*) A term intended to include many of the newest tertiary deposits.

Plenarily, *adv.* In a plenary manner; fully; entirely; completely.

Plenaryness, *n.* State or condition of being plenary.

Plen'arty, *n.* (*Eng. Law.*) The state of a benefice occupied.

Plenary, *a.* [It. *plenario*; L. Lat. *plenarius*, from Lat. *plenus*, full.] Full; entire; complete; as, a *plenary* license or indulgence.

Plenary indulgence. (*Eccl.*) In the Roman Catholic Church, an entire remission of penalties due to all sins.—*Plenary inspiration*, inspiration divested of all admixture of error.

Ple'nicorn, *n.* [Lat. *plenus*, full, and *cornu*, horn.] (*Zoöl.*) A ruminant, solid-horned quadruped, as the deer.

Plenipotence, Plenip'otency, *n.* [Sp. *plenipotencia*.] State or quality of being plenipotent.

Plenipotent, *a.* [Lat. *plenus*, and *potens*, powerful.] Having full power.

Plenipotentiary, (*-tēn'shi-a-ry*), *n.* [Fr. *plenipotentiaire*.] A person invested with full power to transact any business;—usually, an ambassador or envoy to a foreign court furnished with full powers.

a. Containing or invested with full power; as, *plenipotentiary* authority.

Plen'ish, *v. a.* In Scotland, to furnish, as a house; to supply with necessary articles.

Plen'ishing, *n.* In Scotland, the furniture belonging to a house; also, the act of furnishing.

Plen'ist, *n.* [Fr. *pléniste*, from Lat. *plenus*, full.] One who holds the doctrine that all space is full of matter; a plenitudinarian.

Plen'itude, *n.* [Fr.; Lat. *plenitudo*, from *plenus*, full.] Complete competence; abundance; exuberance; completeness; as, *plenitude* of means.—Repletion; animal fullness; plethora; redundancy of blood and humors in the animal body.

"Relaxation from *plenitude* is cured by spare diet."—Arbuthnot.

Plenitudinarian, *n.* Same as *PLENIST, q. v.*

Plenitudin'ary, *a.* Having plenitude; full; complete; entire; thorough.

Plen'teous, *a.* Possessing or affording plenty; abundant; full; copious; ample; yielding abundance; as, a *plenteous* stock of provisions; a *plenteous* harvest.—Possessing in abundance, and ready to bestow liberally.

Plen'teously, *adv.* In a plenteous or abundant manner.

Plen'teousness, *n.* State of being plenteous; abundance.

Plen'tiful, *a.* Containing plenty; copious; ample; abundant; adequate to every purpose; as, a *plentiful* crop; a *plentiful* supply of water; a *plentiful* fortune.—Yielding abundant crops; affording a full supply; as, a *plentiful* year.

Plen'tifully, *adv.* In a plentiful manner; abundantly; with ample or adequate supply.

Plen'tifulness, *n.* State, quality, or condition of being plentiful; abundance; ample quantity; copiousness.

Plen'ty, *n.* [O. Fr. *plenti*, from L. Lat. *plentitas*—*plenus*, full.] Fullness; abundance; copiousness; sufficient or complete supply.—Fruitfulness.—(Used poetically.)

"The teeming clouds descend in gladsome plenty."—Thomson.

a. Plentiful; ample; abundant; copious. (Used chiefly colloquially.)

Plen'um, *n.* [Lat., from *plenus*, full.] Fullness of spatial matter;—the correlative to *vacuum*.

Pleochro'ism, *n.* [Gr. *pleiōn*, more, and *chrōma*, color.] (*Optics.*) The exhibition of several shades of color, as when a mixture of polarized and non-polarized light passes through a double refractory crystal. *Nichol.*

Ple'onasm, *n.* [Gr. *pleonasmos*, from *pleos*, *pleon*, full, filled.] (*Rhet.*) An over-fullness, or redundancy of words in speaking or writing; the use of more words, to express ideas, than are necessary.

Ple'onaste, *n.* [Fr., from Gr. *pleonazein*, to abound.] (*Min.*) A dark or pearly-black variety of iron and magnesia spinel, found at Candy in Ceylon, &c. When cut and polished, *pleonaste* forms a gem of considerable brilliancy.

Ple'onaste, Pleonas'tical, *a.* [Gr. *pleonastikos*.] Pertaining, or having reference to, or partaking of, *pleonasm*; redundant.

Pleonas'tically, *adv.* With redundancy of words.

Pleschen, (*plēsh'en*), a town of Prussia, 54 m. S.E. of Posen. *Manuf.* Woollens and tobacco. *Pop.* 5,300.

Plesiomorphism, *n.* [Gr. *plēsios*, near, and *morphē*, form.] The state of crystallized substances, which, while nearly resembling one another in form, are still essentially different.

Plesiomorphous, *a.* Having close resemblance in form.

Ple'siosaur, *n.* (*Zoöl.*) An animal of the genus *Plesiosaurus*.

Plesiosan'rus, *n.* [Gr. *plesios*, near; *sauros*, a reptile.] (*Pal.*) The name given to a genus of extinct amphibious saurians, principally remarkable for their length of neck. Their remains are found in the formations from the muschel-kalk to the kalk inclusive; but are most common in the lias and Kimmeridge clay-beds. They are closely allied to the *Ichthyosaurus*, and their general appearance have been very hideous. The head was that of a monstrous lizard, furnished with teeth like those of a crocodile; its neck was of enormous length, resembling the body of a serpent; while the trunk and tail had the proportions of an ordinary quadruped, the ribs of a chameleon, and the paddles of a whale. The remains of five or six species of *plesiosaurians* have been found.

Plesis, in New York, a post-village of Jefferson co., abt. 88 m. S.W. by S. of Ogdensburg.

Plestchievo, (*plēst-chē'i-vo*), a small lake of Russia, gov't. of Vladimir, 70 m. N.W. of Vladimir. Length, 5 m., breadth 4 m. Here Peter the Great first essayed to learn the duties of a sailor, to enable him to form a Russian navy.

Pletho'ra, Pletho'ry, n. [O. Fr. *plethore*; Gr. *plēthorē*, from *plēthō*, to be or become full.] Over-fullness; particularly, excess of blood; repletion of animal fluids; — hence, state or condition of being over-full or overloaded in any respect morally or mentally; as, a *plethora* of imagination.

Plethor'ic, a. [O. Fr. *plethorique*.] Affected with plethora; having a full habit of body, or the vessels overcharged with fluids; — also, evincing moral or intellectual plethora; as, *plethoric* fulness of thought.

Plethor'ically, adv. In a plethoric manner.

Pleu'ra, n. [Gr.] (*Anat.*) The membrane which covers the inner surface of the thorax and its viscera. It forms two distinct portions, or bags, which, being applied laterally to each other, form the portions called the *mediastina*.

Pleu'ral, a. Having reference, or belonging to the ribs, or to that side of the body where they lie.

Pleural'gia, n. [Gr. *pleura*, side, and *algos*, pain.] (*Med.*) Pain in the side, or about the ribs.

Pleu'risy, n. [Fr. *pleuresie*, from Gr. *pleuron*, the side.] (*Med.*) Inflammation of the pleura, or investing membrane of the lungs. Among the causes of pleurisy, the more common are exposure to cold, especially after violent exercise, blows on the chest, fracture of the ribs, tubercles in the lungs. It is most prevalent in winter, and next to that, in autumn. Old persons are most subject to it, but it may occur at any period of life. It is usually distinguished as acute and chronic. The former usually commences with chills, rigors, and the ordinary symptoms of inflammatory fever, accompanied or followed by a sense of weight in the chest, which in a few hours becomes acute pain, usually referred to a point directly below the nipple. There is usually a short, dry cough, and the breathing is frequent, short, and anxious; the pain being increased by a deep inspiration or the act of coughing. Sometimes the patient can only lie upon the affected side, sometimes only upon the opposite one; but usually he prefers lying upon his back. The pulse is frequent and hard, skin hot, cheeks flushed, urine scanty and high-colored, and tongue white. These symptoms are not always so well marked, and the pain is sometimes more diffuse and less severe. In most cases, the acute pain, as well as the fever, subsides on the third or fourth day, and the cough and difficulty of breathing abate, though the pleura still continues in a state of inflammation. By means of auscultation and percussion, the nature of this disease can be much more accurately determined than formerly. The respiratory movements and murmur will be found to be diminished, and sounds of friction will accompany the motions of respiration. Dulness on percussion will be first heard in the most depending part of the chest, afterwards gradually extending over the side affected. In the treatment of this disease the object is to produce the local inflammation and prevent effusion. Hence, bloodletting, either local, by means of leeches or cupping, or general, from the arm, followed by doses of tartar emetic, brisk aperients, and strict antiphlogistic treatment, are recommended. In chronic pleuritis the symptoms are usually those of the acute form in a mitigated state. It may succeed the acute, or it may come on gradually without any of the more marked features of that disease. There is usually more or less of fever, an acceleration of the pulse, emaciation, difficulty or hurry of breathing, increased by exertion, more or less of pain or soreness, and inability to lie on the healthy side. The treatment of this form of the disease differs from that of the other, the object being to promote the absorption of the effused matter, and also to support the patient's strength. For promoting the absorption of the effused fluid, as well as for preventing its further secretion, counter-irritants are used, as blisters, eruption liniments, tincture of iodine; the last painted over the part, or exhibited internally, will be found to act very beneficially in removing the effusion. The general health is to be improved by a nutritious, but not heating or stimulating diet, and by the cautious exhibition of such tonics as the strength of the patient is able to bear. Change of air will often be found to act most beneficially in such cases, and is frequently found to be efficacious when most other remedies have failed. When other means fail, recourse is sometimes had to the operation of *paracentesis thoracis* for setting free the effused matter; but the operation is attended with considerable danger, and is rarely productive of more than a temporary relief.

Pleurit'ic, Pleurit'ic'al, a. [Gr. *pleuritikos*.] Pertaining to pleurisy; as, *pleuritic* affections. — Diseased with pleurisy.

Pleurit'is, n. [Gr.] (*Med.*) Same as **PLEURISY**, *q. v.*

Pleuronect'es, n.; *pl.* **PLEURONECTIDÆ.** (*Zoöl.*) A genus and family of Malacopterygians fishes, commonly known by the appellation of *Flat-fish*. They are distinguished not only from all other fishes, but even from all other vertebrated animals, by several peculiarities of structure. Their body is extremely compressed, or flattened at the sides. Both eyes are on one side, and this side always remains uppermost when the animal is swimming. The upper side is in general deeply colored, while the other side is whitish. The two sides of the mouth are not equal, and the pectoral fins are rarely so. The body is depressed, and elevated in the direction of the spinous

Fig. 2129.

PLAICE, (*Pleuronectes platessa*.)

processes; the dorsal extends along the whole back; the anal occupies the lower edge of the body, and the ventrals are sometimes united with it. They have no air-bladder, and they seldom rise far from the bottom; but when disturbed, they will raise themselves into a vertical position, so as to show their white side, and they then dart along with great rapidity; but they soon return to their usual posture, and glide along with a sort of undulating motion near the bottom. They are found along the shores of almost all countries; and are, generally speaking, wholesome and agreeable food. The Sole, Plaice (Fig. 2129), Turbot, Flounder, &c., are examples of *Pleuronectidæ*.

Pleurobra'chia, n. (*Zoöl.*) A genus of aculephs, belonging to the order of *Ctenophoræ* or *Beroïd Medusæ*; distinguished by having the body spherical or slightly elongated and compressed, the locomotive appendages extending from near the margin of the mouth, in eight rows, towards the opposite centre. One of the most beautiful species is represented in our Fig. 15.

Pleuro-peripneu'mony, Pleuro-pneumonia, n. [Gr. *pleuros*, *peri*, around, and *pneumonia*, a lung disease.] (*Med.*) Inflammation of the pleura and lungs.

Plex'iform, n. [Lat. *plexus*, *plectero*, *plexum*, to twist, and *forma*, form.] Complicated after the manner of network.

Plexim'eter, Plexom'eter, n. [Gr. *plessein*, to strike, and *metron*, measure.] (*Med.*) An ivory plate used in examination of the chest by percussion.

Plexure, (plēks'yur, n. Act or process of interweaving; also that which is interwoven.

Plex'us, n. [Lat.] (*Physiol.*) Any network or interlacing of vessels, nerves, or fibres.

Pliability, n. State or quality of being pliable, or of bending or yielding to pressure or force without rupture; flexibility; pliability.

Pliable, a. [Fr., from *plier*.] Easy to bend; that readily yields to pressure without rupture; flexible; supple; pliant; as, India-rubber is a *pliable* substance. — Readily yielding to moral influence, argument, persuasion, or discipline; and, sometimes, in a bad sense, easily adapted to the designs or purposes of another; as, a *pliable* disposition, a *pliable* instrument.

Pliableness, n. Quality of being pliable, or of yielding to force or to moral influence; pliability; flexibility.

Pliably, adv. So as to be pliable.

Pliancy, n. Quality of being pliant; easiness to be bent; readiness to yield to moral influence.

Pliant, a. [Fr., from *plier*.] That may be easily bent; readily yielding to force or pressure without breaking; flexible; pliable; that may be easily formed or moulded to a different shape; lithe; limber; flexible; as, a *pliant* thread. — Easily yielding to moral influence; easy to be persuaded; tractable; docile; not firm.

"The will was then ductile and *pliant* to right reason." — South.

Pliantly, adv. In a pliant or flexible manner.

Pliantness, n. State of being pliant; pliancy.

Plica, n. [Lat., a fold.] (*Med.*) A disease endemic in some parts of N. Europe, so called on account of being characterized by interlacing, twisting, and agglutination or matting of the hair.

Plicate, Plicated, a. [From Lat. *plicare*, to fold.] (*Bot.*) Folded like a fan; as, a *plicate* leaf.

Plicately, adv. In a plicate or folded manner.

Plication, n. [O. Fr., from Lat. *plicare*, to fold.] A fold or folding.

Plicature, n. [From Lat. *plicare*, to fold.] A fold; a doubling.

Plied, (plid, imp. and pp. of **PLY, q. v.**

Pliers, n. pl. [Fr. *pletur*, a folder.] A kind of pincers by which any small thing, as wire, is seized and bent.

Pli'form, a. [From *ply*, a fold, and *form*.] In the form of a fold or doubling.

Plight, (plit, v. a. [A. S. *plihtan*, to pledge, from *pleo*, danger, because a pledge is at the risk of the pledger.] To risk or give as a guarantee or proof of good faith; to give as security for the performance of some act; as, to *plight* one's word, &c.; — never applied to property or goods.

— *n.* [A. S. *pliht*, plight, danger.] State of risk or hazard, like that of a thing pledged; exposed condition; perplexity; predicament.

"He . . . would dwell in peril of like painful *plight*." — Spenser.

— *Gage*; guarantee; security; that which is exposed to risk. — *State*; condition, without risk or exposure implied. — *A network*; a fold; an entanglement; as, "Many a folded *plight*." — Spenser.

Plighter, n. He who, or that which, plights.

Plinlim'mon, n. one of the highest mountains of Wales, cos. of Cardigan and Montgomery, 12 m. W. of Cardigan Bay. Height 2,463 feet.

Plinth, (plinth, n. [Gr. *plinthos*, a brick.] A large square member in the form of a brick, and sometimes called the *slipper*. It is employed at the foot or foundation of columns; being that flat square table under the mouldings of the base and pedestal, at the bottom of the whole order. According to the idea of Vitruvius, the plinth seems to have been originally intended to keep the bottom of the primitive wooden pillars from rotting. The *plinth* of a statue is a base or stand, flat, round, or square, serving to support a statue. The *plinth* of a wall is a term applied to two or three rows of bricks advancing out from the walls; or, in general, from any flat high moulding, serving in a front wall to mark the floors, or to sustain the eaves of a wall and the larder of a chimney.

Pliny, THE ELDER, (Caius Plinius Secundus, n. one of the most celebrated writers of ancient Rome, was B. A. D. 23, at Verona, or at Como, served in the army in

Germany, afterwards became an advocate, and was ultimately procurator in Spain. As an inquirer into the works of nature he was indefatigable, and he lost his life in a last attempt to gratify his thirst for knowledge. Being at Misenum with a fleet, which he commanded, on the 24th of August, A.D. 79, his sister desired him to observe a remarkable cloud that had just appeared. *P.* discovering that it proceeded from Mount Vesuvius, ordered his galleys to sea, to assist the inhabitants on the coast, while he himself steered as near as possible to the foot of the mountain, which now sent forth vast quantities of burning rock and lava. *P.* and his companions landed at Stabia, but were soon obliged to leave the tow for the fields, where the danger, however, was equally great, from the shower of fire which fell upon them. In this state they made the best of their way to the shore, but *P.*, who was very corpulent, fell down dead, suffocated probably by the noxious vapors. The eruption which caused his death was that in which the cities of Herculaneum and Pompeii were destroyed, in the first year of the Emperor Titus. He wrote several works, which have perished, but his name and fame are preserved by his great work entitled *Natural History*, in 37 books, one of the most precious monuments of antiquity extant. Its contents do not answer to its title, but are immensely various in character. It is a laborious compilation, from almost innumerable sources, of facts, observations, and statements on almost all branches of natural science, on the fine arts, on inventions, and other subjects. Unfortunately, *P.* did not observe for himself with the eye of a naturalist, nor make selections of his materials with the judgment of a critic, nor dispose them in any scientific order. It has been translated into most European languages, and even into Arabic, and has been republished a very great number of times.

Pliny, THE YOUNGER, (Caius Plinius Caecilius Secundus, n. nephew of the preceding, was born A. D. 62, at Como.

He studied under Quintilian, and in his 18th year began to plead in the forum. Soon after this he went as military tribune to Syria; from whence he returned, when he had made one or two campaigns, and settled at Rome. He was promoted to the consular dignity by Trajan, in praise of whom he pronounced a famous oration, which is extant. He was afterwards made proconsul of Bithynia, from whence he wrote to Trajan his curious and well-known account of the Christians, and their manner of worship. The *Epistles* of Pliny are agreeably written, and very instructive; they were translated into English by Lord Orrery and Mr. Melmoth.

Fig. 2130.

PLINY, THE YOUNGER.

Pliocene, n. [Gr. *pleion*, more, and *kainos*, new.] (*Geol.*) A name now generally applied to the newer tertiary period, in which more than half of the fossil remains are identical with known living species. The term *Post-pliocene*, *Pleistocene*, or *Post-tertiary* (Fig. 1141), are applied to those more recent groups in which no extinct species of fossil shells are found, but which are below those that contain relics of man.

Pliosau'rus, n. [Gr. *pleion*, greater, and *sauros*, lizard.] (*Pul.*) A genus of fossil Sauropterygian *Reptilia*, allied to *Plesiosaurus*, but differing from that genus in the shorter and more powerful neck, the more massive proportions of the jaws and paddlebones.

Plitt, n. A Russian instrument of punishment, resembling the knot.

Ploc, n. [Fr.] (*Naut.*) A composition of felt and tar for breasting a ship's bottom.

Ploce, (plō'se, n. [Gr. *plōkē*, complication.] (*Rhet.*) A figure of speech, in which a word is repeated, by way of emphasis, in a manner not only to denote the individual thing expressed by it, but also its characteristic attribute or quality.

"In that great victory *Cæsar was Cæsar*, i. e., a mighty conqueror." Phillips.

Plo'ceus, n. (*Zoöl.*) A genus of birds, family *Icteridæ*, comprising the Weavers of Africa and India, celebrated for their curious nests woven of grass. Some species, like the Republican, *Loria socia*, build by hundreds, and construct a roof, beneath which they build their nests, each being separate and entered from below. The nest of others is a suspended sphere, from which, in some cases, there hangs down a long tube, loosely woven of grass.

Plock, n. a city of Poland, on the Vistula, 58 m. W.N.W. of Warsaw. *Manuf.* Principally leather.

Plod, v. n. [O. Sax. *lidhan*, to move, to proceed; Icel. *lidha*, to go, to bear up, to endure.] To move onward steadily; to travel laboriously.

"Th' unlettered Christian *plods* on to heaven." — Dryden.

— *To work slowly, and with continued effort; to toil; to toil; to drudge; to study heavily and continuously.*

"She reasoned without *plodding* long." — Swift.

— *v. a.* To tread with a heavy, laboring step.

"The ploughman homeward *plods* his weary way." — Gray.

Plod'der, *n.* A dull, heavy, laborious person.

"Small have continual plodders ever won." — *Shaks.*

Plod'ding, *a.* Diligent, but slow in contrivance or execution.

—*n.* Slow movement or study, with steadiness or persevering industry.

Plod'dingly, *adv.* With slow and steady progress.

Ploermel, a town of France, dept. of Morbihan, 15 m. W. of Pontivy. *Manuf.* Linen. *Pop.* 8,500.

Plombières, (*plom'be-air*), a town and watering-place of France, dept. Vosges, 14 m. from Epinal. This place is much frequented, on account of its warm saline baths. *Pop.* 2,500.

Plouge, (*plonj*). **Plongee**, (*plon'zhā*), *n.* (*Mil.*) The dip or declension of the superior slope of a parapet.

Plousk, or **Plask**, a town of Poland, on the Plonua, 30 m. E.N.E. of Plock; *pop.* 4,000.

Plot, *n.* (A different orthography of *PLAT*, *q. v.*) A plat or small extent of ground; as, a garden-plot.

(*Surveying*.) A plan or draught of a field or piece of land, works, &c.

—[*Lat. plicare, plicare*: *Gr. plekō*, to twist, weave, enfold.] Any scheme, design, or plan of a complicated nature, for the accomplishment of some purpose, usually a mischievous one. — Share or participation in any stratagem, intrigue, or conspiracy. — A form; a scheme; a plan; as, "a purposed plot of government." — *Spenser.*

(*Lit.*) The knot, intrigue, or story of a play, novel, or romance, comprising a complication of incidents, which reach a final denouement, or unfolding, by unexpected means.

—*v. n.* To form a scheme of mischief against another, or against a government, or those who administer it. — To contrive a plan or design; to scheme.

—*v. a.* To plan; to devise; to contrive. — To make a plan or deliviation of.

"This treatise plotteth down Cornwall, as it now standeth." *Carew.*

Plot'ful, *a.* Fruitful in plots.

Plotidae, *n. pl.* (*Zool.*) The Darter family, comprising Natatores birds characterized by a long, straight bill, long wings and tail, and short tarsi. The Snake-bird, Darter, or Water Turkey, *Plotus anhiinga*, of Linnaeus, is 35 inches long, and the wings 14 inches; its general color is greenish-black. It is found in flocks on the S. coast of the U. States.

Plotinus, the celebrated Greek philosopher, founder of the Neo-Platonic school, was born A. D. 203, at Lycopolis, in Egypt. He was trained in the school of Alexandria, under Ammonius Saccas, then visited the East, and about 244 settled at Rome, where he spent the rest of his life as a teacher and writer, enjoying the esteem of the Emperor Gallienus, and of many leading persons. Porphyry, his most eminent disciple, wrote his life, and arranged and published his works, divided into six sets of nine books each (*Enneads*). *P.* was a profound thinker and a deeply religious man, and his system, a sort of mystical idealism, a combination of Platonic with Oriental notions, has been very attractive to many great thinkers in anc. and modern times. D. in Campania, 270.

Plotter, *n.* One who plots or contrives; a conspirator; a caballer; an intriguer.

Plotting, *n.* (*Surveying*) The art of describing or laying down on paper, &c., the several angles and lines of a tract of ground surveyed by a theodolite, or by the plotting-scale.

Plotting-scale, *n.* (*Surveying*.) A mathematical instrument used in plotting, or setting off the lengths of lines in surveying. It consists of two graduated ivory scales, one of which is perforated nearly its whole length by a dovetail-shaped groove, for the reception of a sliding piece to which the second scale is attached, and with which it moves, the edge of the second being always at right angles to the edge of the first. By this means the rectangular coördinates of a point are measured at once on the scales, or the position of the point laid down on the plan. The same object is more conveniently attained by means of a graduated *offset scale*, which slides along a similarly graduated fixed scale, to which it always remains perpendicular.

Plougasnou, (*ploo-gaz'nou*), a town of France, dept. of Finistère, near the English Channel, 8 m. N.N.E. of Morlaix; *pop.* 4,000.

Plougastel-Daoulas, (*ploo-gas-tell'da-oo-la*), a town of France, department of Finistère, 6 m. E. of Brest, near its harbor; *pop.* 6,065.

Plough, (*plou*), *n.* (Is now almost universally written *Plow*.) [*D. ploeg*; *A.S. and Swed. plog*; *Ger. pflug*; akin to Heb. *pālach*.] The most ancient and most valuable of all agricultural implements for turning up the soil preparatory to receiving the seed. There are traces of the use of the *P.* in the earliest of all written authorities on agriculture; and, judging from its importance in farming operations, it seems scarcely possible that large systems of cultivation could have been carried on without its assistance, in any period or country. Among the ancient Hebrews, it was the practice to plough with two oxen (*Deut.* xxii. 10); their plough had also a coulter and a ploughshare (*1 Sam.* xiii. 20). From other passages, it would appear that they were early aware of the advantages of a winter's fallow. Wheels are a modern invention in comparison with the other parts of a *P.*; but we find representations of ploughs with wheels in early Greek drawings. The Roman *P.* (see Fig. 57) were of very simple form, and closely resembled the *P.* used by the Hindoos and Chinese even at the present day. The ploughs in use in different countries in Europe underwent little change for many centuries, and it is only in late years that any attempt has been made to change their form. In England, the *P.* of the early cultivators were rude and imperfect, for every ploughman made

his own plough. It was a law among the early Britons, that no one should guide a plough till he was able to make one. Among the Saxons it was the custom to fasten the horses to the *P.* by their tails. This barbarous practice was not abolished till the reign of Charles II., at which period it was largely practised in Ireland. The Norman *P.*, like that of the latter Saxons, was furnished with wheels; and for a long period this implement was drawn by oxen only. One of the first representations of a horse employed in a *P.* is given in the Bayeux tapestry (A. D. 1086). The Dutch were among the first to introduce improvements in the shape of the *P.* This improved Dutch *P.* was constructed chiefly of wood; the draught-irons, share, and coulter, with the additional plaiting of iron to the mould-board and sole, being the only parts made of iron. The different parts of a *P.* are now usually cast; so that if any one fails or wears out, it can easily be replaced by removing a few screws or bolts. In modern ploughs the handles should be sufficiently wide apart to permit the ploughman to walk in the furrow, and long enough to give him a full command of the *P.*, so that he can lift or depress it readily, or turn it to the left or right hand at pleasure. The beam should be of such a length that its end, usually called its *head*, shall cut at the point of draught upon a line drawn from that part of the collar to which the traces are fastened to that part of it where it first raises the soil. Much of the steady working of the *P.* at its proper depth depends on the right arrangement of the point of draught. The beam should be curved upwards at the coulter and throat of the plough to clean itself of rubbish. The *ploughshare* is the apex of the sole, as the hind part is called the heel. It varies in shape for different purposes. The upper part over the box of the share forms the first part of the rise of the mould-board. After the coulter and share have made the vertical and horizontal cuts for the depth and width of the furrow, the mould-board turns over the slice and leaves it in its proper position. Much, if not all the beauty of ploughing, depends on the precision with which this part of the plough does its work. The *coulter* is an iron blade or knife inserted into the beam of the

Fig. 2131.— PLOUGH FOR STUBBLE LANDS IN STIFF SOILS.

plough for the purpose of cutting the ground and facilitating the separation of the furrow-slice by the ploughshare. As an example of the modern *P.*, with all its latest improvements, we give (Fig. 2131) the Holbrook's *P.*, which received the gold medal at the trial of ploughs held at Utica by the New York State Agricultural Society. The application of steam-power to the draught of *P.* is of little use except upon well-tilled land, and is especially adapted to the highly cultivated soil of England. The ploughing-machine is, in this case, a frame-work containing three or more ploughs acting nearly abreast, but in succession to one another, so that a number of furrow-slices are turned at once. The whole weight of the machine is carried on large wheels, and there is no pressure on the sole-plate, and none of that consequent hardening of a sub-soil floor upon which, in ordinary ploughing, the furrow-slices lie. This tends to improve the drainage, tilth, and fertility of the soil.

—Figuratively, tillage; husbandry; agriculture; as, "God speed the plough." — A joiner's tool for cutting grooves. — An instrument used by bookbinders, &c., for trimming paper.

Plough, *v. a.* To turn up with the plough, as the soil. — To furrow; to divide; to run through in sailing.

"He plough'd the Tyrrhene seas with sails displayed." — *Addison.*

—To turn up and devastate; to tear up or lay waste.

"Let the Volscians plough Rome and harrow Italy." — *Shaks.*

—To trim, as paper, with a press or other instrument.

To plough in, to cover by ploughing; as, to plough in grain. — To plough on the back, to scourge; to mangle; to worry by persecution. — To plough up or out, to turn out of the ground by ploughing. — To plough with one's heifer, to deal with the wife in order to obtain something from the husband. (*Judges* xiv. 18.)

—*v. n.* To turn up the soil with a plough; to labor with a plough. — To make progress by ploughing, or in spite of obstacles.

Plough'able, *a.* That may be ploughed; arable.

Plough-boy, *n.* A boy who drives or guides a team in ploughing; — hence, a rustic boy.

Plougher, (*plou'er*), *n.* One who ploughs land; a cultivator.

Plough'-foot, *n.* The bottom part of a plough.

Plough'-gang, **Plough'-gate**, *n.* In England, a portion of land comprising about 30 acres.

Plough'-head, *n.* The draught-iron at the head of the beam of a plough.

Plough'ing, *n.* (*Agric.*) The act of turning over the soil by means of the plough. Trench-ploughing is effected by the plough passing twice along the same furrow; the first time for the purpose of throwing the surface-soil into the bottom of the furrow; and the second time for raising a furrow-slice from under that which had been already turned over, and raising it up,

thus turning it upon the first furrow-slice. By means of this process the surface-soil is entirely buried, and a stratum of sub-soil laid over it; thus effecting in the field what trenching with the spade does in the garden.

Plough'-land, *n.* Land that is ploughed, or suitable for tillage.

Plough'uan, *n.* One who ploughs or holds a plough; a cultivator of grain; a husbandman; — hence, a rustic; a countryman.

Plough'-Monday, *n.* In England, the Monday following Twelfth day, formerly selected by farmers as the period for commencing to plough.

Plough'-share, *n.* That part of a plough which cuts the ground at the bottom of the furrow, and raises the soil to the mould-board, which turns it over.

Plough'-shoe, (*plou'-shōo*), *n.* A piece of wood resembling a shoe, placed under a plough so that it may be drawn over the ground without penetrating it.

Plough'-sock, *n.* In Scotland, a ploughshare.

Plough'-staff, *n.* A sort of wooden paddle used for cleaning a plough when it becomes choked up with soil, weeds, &c.

Plough'-tail, *n.* The hinder part of a plough.

Plough'-wright, *n.* One who makes or repairs ploughs.

Plover, *n.* [*Fr. pluvier*, the water-bird.] (*Zool.*) The general name of the Gallinators birds composing the family *Charadriidae*, *q. v.* The genus *Charadrius*, including the European Dotterel, is represented in America by the Golden-*P.* *C. virginicus* (Fig. 566). The genus *Egialitis*, which has the plumage without spots, the neck and head generally with dark bands, is principally represented in this hemisphere by the Kill-deer, *A. vociferus*, of N. and S. America, which takes its popular name from its peculiar note; the King-*P.* or semi-palmated *P.* *A. semipalmatus*, of all temperate N. America; and by the Piping-*P.* *A. melodus*, of our Eastern coast.

Plover, in Wisconsin, a post-village and township of Portage county, about 120 miles north of Madison.

Plow, *n.* See **PLOUGH**.

Ploy, *v. n.* (*Mil.*) To form a column from the line of battle on some specified subdivision.

Pluck, *v. a.* [*A.S. pluccian*; *D. plukken*; *Ger. pflücken*; *W. plician*, to pluck.] To pull off, up, or out; to pull with sudden force or effect, or to pull off, out, or from, with a twitch, as, to pluck hair off the skin; to pluck grapes from the stalk, to pluck one's sleeve. — To strip by plucking; as, to pluck a fowl.

—In the English universities, to reject at an examination as incompetent to receive a testimonial for a degree. — To pluck away, to tear away; to break apart by pulling. — To pluck down, to pull down; to reduce to a lower state. — To pluck off, to pull or tear off; as, to pluck off the skin. — To pluck out, to tear out, or draw out suddenly; as, to pluck out the eyes. — To pluck up, to tear up by the roots; to eradicate; to destroy; as, to pluck up a plant. — To gather up; to summon; as, to pluck up heart or spirit.

—*n.* Act of plucking; also, a sudden and forcible pull. — The heart, liver, and lights of an animal, which the butcher first plucks or tears out after the animal is killed and opened up, and which are reserved for food. — Good heart; spirit; ardor; perseverance under difficulties; indomitable courage; self-reliant bravery; resolution.

"Decay of English spirit, decay of manly pluck." — *Thackeray.*

Pluck'emin, in New Jersey, a post-village of Somerset co., abt. 6 m. N.N.W. of Somerville.

Pluck'er, *n.* One who plucks.

Pluck'ily, *adv.* In a brave, resolute manner.

Pluck'iness, *n.* Quality of pluck; courage; resolution.

Pluck'ing, *n.* In the English universities, failure of a student to pass his preliminary examination for a degree.

Pluck'less, *a.* Without pluck, energy, or courage.

Pluck'y, *a.* (*Comp.* **PLUCKIER**; *superl.* **PLUCKIEST**.) Spirited; resolute; having indomitable courage and perseverance.

Pluff, *n.* A Scotticism for the smoke occasioned by an explosion of gunpowder.

Plug, *n.* [*D. plug*, a bung, a peg; *Ger. pflock*, a plug, a peg.] A stopple: any piece of wood or other substance used to stop a hole; a bung; a peg. — The foil used by a dentist to fill the cavity in a tooth. (*American*.) — A flat, oblong cake of pressed tobacco sweetened with molasses; as, a plug of cavendish. — A man's silk hat; so styled from its cylindrical or chimney-pot form; — used as a vulgar colloquialism. — *Plug-plug*. (*Naut.*) A plug for stopping a hawse-hole. — *Plug-centre-bit*, a centre-bit terminating in a small cylinder in lieu of a point, so as to come after and enlarge a hole previously made, or to form a countersink around it. — *Shot-plug*. (*Naut.*) A plug used to fill up a breach made by a cannon-shot in a ship's side, &c.

—*v. a.* To stop with a plug; to make tight and impervious by stopping a hole; as, to plug a shot-hole.

Plugging, *n.* Act of stopping with a plug; material of which a plug, stopple, or peg is made.

Plug'-rod, *n.* (*Mach.*) The air-pump rod of a Cornish engine. The tappets which give motion to the valve are fixed upon these rods.

Plum, *n.* [*A.S. plume*; *D. pruim*; *Ger. pflaume*; *Fr. prune*, from *Lat. prunum*, a plum.] (*Bot.*) See **PRUNUS**. — A sun-dried grape; a raisin; a prune. — The sum of £100,000 sterling (\$500,000); used as a cant and colloquial expression; as, he is worth a plum.

Plum, in Pennsylvania, a township of Alleghany county.

Plum, in *Pennsylvania*, a post-township of Venango co.

Plum'age, *n.* [Fr., from Lat. *pluma*, a feather.] The feathers or plumes which form the covering of a bird.

Plu'mas, in *California*, a N. co.; area, about 2,720 sq. m. *Rivers*, Susan river and North and South Forks of Feather river. *Surface*, mountainous; *soil*, in some parts fertile. *Min.* Gold, the mining of which forms the principal occupation of the inhabitants. *Cap.* Quincy. *Pop.* (1897) 5,295.

—A vill. of Sutter co., abt. 40 m. N. of Sacramento City.

Plumas'sary, *n.* [Fr.] A collection of plumes or ornamental feathers.

Plumassier, (*plu-más'i-ā*), *n.* One who prepares or deals in ornamental plumes or feathers.

Plumb, (*plum*), *n.* [Fr. *plomb*; from Lat. *plumbum*, lead.] A plummet. See **PLUMB-LINE**.

—*a.* Perpendicular, that is, standing according to a plumb-line; as, a wall is *plumb*.

—*adv.* In a perpendicular direction; in a line perpendicular to the plane of the horizon; right downward; as, "*plumb* down he falls."—*Milton*.

—*v. a.* To adjust by a plumb-line; to set in a perpendicular direction; as, to *plumb* a wall. — To sound with a plummet, as the depth of water. (*R.*) — To gauge; to ascertain the depth, quality, dimensions, &c., of; as, to *plumb* a person's mental capacity.

Plumbagiu'ceæ, *n. pl.* [From Lat. *plumbum*, lead.] (*Bot.*) The Leadwort or Thrift family, an order of plants, alliance *Cortusales*. *DIAG.* Stamens opposite the petals, membranous one-seeded fruit, 5 styles, and a herbaceous stem. — The plants of this order are herbs or under-shrubs, chiefly found growing on the seashore and in salt-marshes, in various parts of the world; but the majority inhabit temperate regions. The roots of several species of the genus *P. Europæa*, the Toothwort, *P. Zeylanica*, and *Scandens*.

Plumbagi'uous, *a.* Resembling, consisting of, or containing plumbago.

Plumbago, *n.* [Lat. *plumbum*, lead.] (*Chem.*) See **GRAPHYTE**.

(*Bot.*) The typical genus of the order **PLUMBAGINACEÆ**, *q. v.*

Plum'bean, **Plum'beous**, *a.* Consisting of, or containing or resembling lead;—hence, dull; heavy; inert; obtuse; stupid.

Plumber, (*plum'ler*), *n.* A worker in lead; specifically, one who prepares lead pipes and other apparatus for the conveyance of water.

Plumber-block, (*plum'ler*), *n.* (Sometimes written *Plummer-block*.) (*Mach.*) A short carriage or support for a shaft to turn in, with a flat base to bolt on a frame.

Plumbery, (*plum'ler-ry*), *n.* Manufactures in lead. — The place where lead is wrought. — The art of casting and working lead, or of making leaden pipes and sheets; the business of a plumber.

Plumbic Acid, *n.* (*Chem.*) Same as binoxide of lead. See **LEAD (OXIDES OF)**.

Plumbiferous, *a.* [Lat. *plumbum*, lead, and *ferre*, to produce.] Lead-bearing; containing lead; as, *plumbiferous* ores.

Plumbing, (*plum'ing*), *n.* The art or process of casting in lead, and using it in building operations. — Specifically, the business of fixing pipes for the conveyance of water. — The operation of sounding or searching among mines. — The lead-piping, &c., taken collectively, employed in conveying water into a building.

Plumb Island, in *Massachusetts*, a long, narrow strip of land in the Atlantic Ocean, off the N.E. coast of Essex co. It is about 8 m. in length, and at the N. end has Newburyport Lights.

Plumb Island, in *New York*, an island and lighthouse at the E. entrance of Long Island Sound. It exhibits a revolving light 63 ft. above sea-level; Lat. 41° 10' 18" N., Lon. 72° 13' 12" W.

Plumb-line, (*plum'-lin*), *n.* A plummet.

(*Arch.*) A line perpendicular to the horizon, made by dropping a plummet.

Plumb-rule, *n.* (*Building*.) A narrow board having a plumb-line suspended from its top, used in determining a perpendicular.

Plum'-cake, *n.* A rich cake containing raisins, currants, candied citron, and other fruit.

Plum Creek, in *Pennsylvania*, a township of Armstrong co.

Plume, *n.* [Fr., from Lat. *pluma*, a small, soft feather.] The feather of a bird, particularly the heavier part of a feather. — A feather, or collection of feathers, worn as an ornament, particularly an ostrich's feather. — A token or symbol of honor, stateliness, prowess, and the like; prize in contest.

(*Bot.*) See **PLUMULE**.

—*v. a.* To pick and adjust, as feathers. — To strip of feathers. — To strip; to pill; to denude. (*R.*) — To embellish with feathers or plumes; as, the *plumed* troops. (*Shaks.*) — To boast; to pride; to esteem; — used reflexively; as, he *plumes* himself on his courage.

Plume-alum, *n.* [Lat. *alumen plumosum*.] Feathery alum.

Plume'less, *a.* Without feathers or plumes.

Plume'let, *n.* A small plume.

Plu'nier, or **PLUM'NER**, in *Pennsylvania*, a post-village of Venango co., abt. 7 m. N.E. of Oil City.

Plu'niery, *n.* Plumes in general. (*R.*)

Plumig'erous, *a.* [Lat. *pluma*, a feather, and *gerere*, to bear.] Plume-bearing; having feathers.

Plumil'iform, *a.* [Lat. *plumula*, a little feather, and *forma*, form.] Plume-shaped; having the form of a feather.

Plum'iped, **Plum'ipede**, *a.* [Lat. *pluma*, feather,

and *pes*, *pedis*, foot.] (*Zoöl.*) Possessing feet covered with feathers.

—*n.* (*Zoöl.*) A feather-footed bird.

Plum'met, *n.* [O. Fr. *plommet*.] A long piece of lead suspended from the end of a line, used in sounding the depth of water. (See **DEEP-SEA LINE**.) — In carpentry, &c., a weight of lead hung on a cord, by which depths are ascertained and perpendicularity discerned;—hence, any weight. — A piece of lead used by school-children to rule their paper preparatory to writing.

Plummet-line. A line with a plummet attached; a sounding-line.

Plum'ting, *n.* (*Mining*.) The operation of finding by a mine-dial the place where to sink an air-shaft or to bring an adit to the work, or to find which way the lode inclines.

Plumose, **Plum'ous**, *a.* [Lat. *plumosus*, from *pluma*, feather.] Feathered or plumed; having the appearance of a plume or plumes.

(*Bot.*) Feathery; plume-like; having hairs arranged along an axis, as the pappus of thistles. &c.

Plumos'ity, *n.* [O. Fr. *plumosité*.] State or quality of being plumose.

Plump, *n.* [Ger. *plump*, clumsy, unwieldy.] Swelled with fat or flesh to the full size; full; fat; enlarged; round; having a full skin; as, a *plump* lass. — Blunt or direct; downright; unreserved; unqualified; as, a *plump* lie, a *plump* answer, a *plump* denial.

—*v. a.* To make plump; to swell; to extend to fulness; to fatten. — To let fall suddenly and heavily. — At English elections, to give a vote to one candidate only, when two or more are to be elected, thus giving him the advantage over his competitors; — opposed to *split*; as, to *plump* for Gladstone.

—*v. n.* To enlarge to fulness; to become swelled. — To plunge or fall like a heavy mass or lump of dead matter; to let fall suddenly and heavily.

—*adv.* Suddenly; heavily; at once, or with a sudden heavy fall; as, he dropped *plump* on the ground.

Plumper, *n.* Something carried in the mouth to puff out or dilate the cheeks; anything intended to enlarge a plump out another thing. — In English politics, an entire vote given at an election for one candidate only; — opposed to *split-vote*. — A full, unreserved lie. (*Colloq.* and vulgar.)

Plum'pie, *n.* A pie made of plums.

Plum'ply, *adv.* Fully; roundly; without reserve or equivocation; as, I asked her *plumply* to be my wife.

Plump'ness, *n.* State of being plump; embonpoint.

Plum'-porridge, (*por-rij*), *n.* Porridge containing plums.

Plum'-pudding, *n.* A good old English pudding, containing raisins, currants, candied fruits, and spices, mixed with other condiments, and served with brandy-sauce; a Christmas pudding.

Plumpy, *a.* Plump; somewhat fat; roundabout; jolly.

Plum Riv'er, in *Illinois*, a post-village of Jo Daviess co., abt. 145 m. W.N.W. of Chicago.

Plumstead, in *New Jersey*, a township of Ocean county.

Plumstead, in *Pennsylvania*, a township of Bucks co.

Plum'-tree, *n.* A tree that produces plums.

Plum'mula, **Plum'mule**, *n.* [Fr. *plumule*, from Lat. *plumula*, dimin. of *pluma*, a feather.] (*Bot.*) The growing point of the embryo, situated at the apex of the radicle and at the base of the cotyledons, by which it is protected when young. It is the rudiment of the future stem of a plant.

Plumulose, *a.* Having hairs branching out laterally, like the parts of a feather.

Plum'ville, in *Pennsylvania*, a post-village of Indiana co., abt. 170 m. E.S.E. of Harrisburg.

Plum'y, *a.* [From *plume*.] Covered with feathers; adorned with plumes; as, a *plumy* crest.

Plun'der, *v. a.* [Ger. *plündern*; L. Lat. *blutare*, to despoil.] To steal from; to rob in a forcible manner; to pillage; to spoil; to strip; as, to *plunder* a town. — To take, as the goods of an enemy by open force.

—*n.* That which is taken by theft, robbery, or fraud. — That which is taken from an enemy by open force; pillage; spoil; booty. — Personal property or effects; baggage; — used in cant language.

Plun'derage, *n.* (*Mar.*) Embezzlement of goods on shipboard.

Plun'derer, *n.* One who plunders; a pillager; a robber.

Plunge, (*plunj*), *v. a.* [Fr. *plonger*, to dip, to plunge; W. *plung*, a plunge, a dip; root Sansk. *plu*, to bathe.] To throw or thrust into water or other fluid substance, or into any substance that is penetrable; to immerse in a fluid; to drive into flesh, &c.; to thrust or drive into a state in which the thing is considered as enveloped or surrounded; as, to *plunge* the feet into water. — To baptize by immersion.

—*v. n.* To thrust or drive one's self into water or a fluid; to dive, or to rush in; to pitch: to take a header. — To fall or rush into distress, or difficulty, or any state or circumstances in which the person or thing is enveloped, inclosed, or overwhelmed; as, to *plunge* into debt, to *plunge* into a war. — To pitch, or throw one's self headlong; to throw the body forward and the hind legs up, as a horse.

—*n.* Act of plunging, or of thrusting into water or any penetrable substance; as, to take a *plunge* in the sea. — Act of being immersed in straits, trials, or difficulties. (*R.*) — Act of pitching or throwing one's self headlong, like an unruly or spirited horse.

Plungeon, (*plunj'on*) *n.* [Fr. *plongeon*.] (*Zoöl.*) The diver, a kind of sea-fowl.

Plun'ger, *n.* One who plunges; a diver. — A long, solid cylinder used as a forcer in pumps. — In England, a cant designation for an officer or trooper belonging to a brigade of heavy cavalry.

Plunger-pole, the pump-rod of a pumping-engine.

Plung'ing, *p. a.* Immersing; diving; pitching headlong.

Plunging bath, or **plunge-bath**, a bath having sufficient space and depth of water to allow persons to dive and swim.

Plunging fire. (*Mil.*) A fire directed against an enemy from some elevated place above.

Plunk'et, *n.* [O. Eng. *plunket*, a light-blue color.] A kind of blue color.

Plunkett's Creek, in *Pennsylvania*, a township of Lycoming co.

Plu'perfect, *a.* [Lat. *plus quam perfectum*.] (*Gram.*) More than perfect;—designating a tense of the verb which denotes that an action or event took place previous to another past action or event.

Plu'ral, *a.* [Fr. *plural*; Lat. *pluralis*, from *plus*, *pluris*, more.] Relating to, or containing more than one; consisting of two or more, or designating two or more; noting the number of a noun which expresses or designates more than one; as, a *plural* word.

—*n.* The number which designates more than one.

Plural'ity, *n.* [Fr. *pluralité*.] State of being plural; a number consisting of two or more of the same kind; as, a *plurality* of worlds. — A greater number; a state of being or having a greater number. — Possession of more than one benefice held by the same clergyman.

Plurality of votes, excess of votes cast for one individual over those cast for any one of several competing candidates.

Plu'ralize, *v. a.* To make plural by employing the termination of the plural number.

Plu'rally, *adv.* In a sense implying or expressing more than one.

Plu'ries, *n.* [Lat., many times.] (*Law*.) A writ issued subsequently to a first and second writ of the same kind, which have proved ineffectual.

Plurifa'rious, *a.* [Lat. *plurifarius*.] Multifarious; of many kinds, sorts, or degrees.

Plurifo'liate, *a.* [Lat. *plus*, more, and *folium*, leaf.] (*Bot.*) Possessing many small leaves.

Plurilit'eral, *a.* [Lat. *plus*, *pluris*, more, and *litera*, a letter.] Having more letters than three.

Plurilo'e'nral, *a.* [Lat. *plus*, more, and *loculus*, a partition.] (*Bot.*) Possessing several seeded divisions, as certain fruits, such as the orange, &c.

Pluripres'ence, *n.* [Lat. *plus*, *pluris*, and *presentia*, presence.] Presence in more places than one. (*R.*)

Plu'riety, *n.* [From Lat. *plus*, *pluris*, more.] Plethora.

Plus. [Lat., more.] (*Math.*) In algebra, a term commonly used for *more*, and denoted by the character +, as 6 + 10 = 16;—in contradistinction to —, or *minus*, less, as 16 — 10 = 6.

Plush, *n.* [Ger. *plüsch*; Fr. *peluche*, from Lat. *pilus*, hair.] A species of shaggy cloth or stuff with a velvet nap on one side, resembling flocculence or small hairs.

Plutarch, (*plu'tark*), the celebrated Greek biographer and moralist, was a native of Chæronea, in Bœotia. In A. D. 66 he was a pupil of the philosopher Ammonius at Delphi. He visited Italy, and spent some time at Rome, lecturing there on philosophy as early as the reign of Domitian; but his name is not mentioned by any of the eminent Roman writers, his contemporaries. He returned to his native town, where he held various magistracies, and was appointed priest of Apollo. He was still living in 120, but the time of his death is not known. His great work is entitled *Parallel Lives*, and consists of biographies of 46 eminent Greeks and Romans, arranged in pairs, each pair accompanied by a comparison of characters. They are written with a moral purpose, and present not orderly narratives of events, but portraits of men, drawn with much graphic power, with great good sense, honesty, and kind-heartedness. Few books of ancient or modern times have been so widely read, so generally admired, as these *Lives*. The English translation by the Langhorne is well known; less known, but more spirited, is that by North, made from Amyot's French version, and published in 1579. A new edition of the translation called Dryden's, revised by Clough, appeared in 1859. Most of P.'s other writings are ethical, and are entitled *Moralia*.

Pluton'ian, **Plu'tonie**, *a.* [Fr. *plutonique*.] Pertaining or having reference to Pluto;—hence, subterranean; belonging to the depths of the earth.

P. Theory. (*Geol.*) If we examine a large portion of a continent, especially if it contain within it a lofty mountain range, we rarely fail to discover two classes of rocks, which we can neither assimilate to deposits such as are now accumulated in lakes or seas, nor to those generated by ordinary volcanic action. The members of both these divisions of rocks agree in being highly crystalline and destitute of organic remains.

Fig. 2132. — PLUTARCH,
(From an ancient gem.)

The rocks of one division have been called *Plutonic*, comprehending all the granites and certain porphyries, which are nearly allied in some of their characters to volcanic formations. The formation of these rocks, according to the Plutonian theory, may be explained as follows:—A passage has been traced from various kinds of granite into different varieties of rocks decidedly volcanic; so that if the latter are of igneous origin, it is scarcely possible to refuse to admit that the granites are so likewise. Secondly, large masses of granite are found to send forth dikes and veins into the contiguous strata, very much in the same way as lava and volcanic matter penetrate aqueous deposits, both the massive granite and the veins causing changes analogous to those which lava and volcanic gases are known to produce. But the Plutonic rocks differ from the volcanic, not only by their more crystalline texture, but also by the absence of tufts and breccias, which are the products of eruptions at the earth's surface. They differ also by the absence of pores or cellular cavities, which the entangled gases give rise to in ordinary lava. From these and other peculiarities it has been inferred that the granites have been formed at great depths in the earth, and have cooled and crystallized slowly under enormous pressure where the contained gases could not expand. The volcanic rocks, on the contrary, although they also have risen up from below, have cooled from a melted state more rapidly upon or near the surface. From this hypothesis of the great depth at which the granites originated, has been derived the name of *Plutonic rocks*, which they have received to distinguish them from the volcanic.

Pluto, (*plō'tō*). (*Myth.*) The son of Saturn and Ops, inherited his father's kingdom with his brothers, Jupiter and Neptune. He received as his share the infernal regions. All the goddesses refused to marry him; but, upon seeing Proserpine, the daughter of Ceres, gathering flowers in the plains of Enna, in Sicily, he became enamored of her, and immediately carried her away. Black victims, and particularly a bull, were the only sacrifices offered to him. The dog Cerberus watched at his feet, the harpies hovered around him, Proserpine sat on his left, and the Parcae occupied his right hand. *P.* is called by some the father of the Eumenides.

Fig. 2133. — PLUTO.

Pluto's, (*plō'tō's*). (*Gr. Myth.*) The god of riches in the Grecian mythology. He was represented as blind, because he distributed riches indiscriminately; he was lame, because he came slowly and gradually; and he had wings, to intimate that he flew away with more velocity than he approached mankind.

Plutonian, **Plutonic**, *a.* One who upholds the doctrine of formations of the granitic rocks by the action of a central fire.

Plutonium, *n.* The PLUTONIC THEORY, *q. v.*

Plutus, (*plō'tus*). (*Gr. Myth.*) The god of riches in the Grecian mythology. He was represented as blind, because he distributed riches indiscriminately; he was lame, because he came slowly and gradually; and he had wings, to intimate that he flew away with more velocity than he approached mankind.

Pluvimeter, **Pluviometer**, *n.* [*Lat. pluvia*, rain.] Same as RAIN-GAUGE, *q. v.*

Pluviose, *n.* See CALENDAR, § 6.

Pluvial, *a.* That relates to rain; rainy; pluvial. (*R.*)

Ply, *v. a.* (*imp. and pp. PLIED*.) [*Fr. plier*, to fold, to bend; *Lat. plicare*, to fold, or lay or wind together.] To bend or turn to; to put to or on with force or repetition; to fold or cover over; to lay on. — To employ with diligence; to apply closely and steadily to; to work at; to keep busy at; as to *ply* a pen, needle, or, &c. — To practise or perform with diligence. — To urge; to press; to solicit with eager importunity.

"He *plies* her hard, and much rain wears the marble."—*Shaks.*

—*v. n.* To work steadily.

"He was obliged to *ply* in the streets as a porter for his livelihood."—*Addison.*

—To busy one's self; to be steadily employed.

"A bird new made . . . she *plies* not far from shore."—*Dryden.*

—To go with alacrity or pertinacity.

"Thither he *plies* undaunted."—*Milton.*

—To run regularly between any two ports, as a packet-boat.

(*Naut.*) To endeavor to make headway against the wind; as, *plying* to windward.

—*n.* [*Fr. pli*.] A fold; a bend; a plait. — Bent; bias; inclination; direction; cast.

"The Czar's mind has taken a strange *ply*."—*Macaulay.*

(NOTE. *Ply* is used in composition to denote folds or thicknesses of web; as, a three-*ply* carpet.)

Ply'er, *n.* The person who, or thing which, plies; as, in the plural, a kind of balance employed in raising and letting down a draw-bridge. — A kind of pincers. See PLIERS.

Plymouth, a seaport-town and naval station of England, co. of Devon, in Lat. 50° 22' N., Lon. 4° 10' 2" W. It

is, on account of its harbor and docks, one of the most important maritime places in the kingdom, and is situated at the head of Plymouth Sound, formed by the rivers Plym and Tamar, at their confluence with the sea. The town stands on the eastern side of a peninsula, inclosed between these two rivers, at the mouth of the Plym; and about a mile and a half to the west, on the Tamar, is Devonport, a separate town, dependent on the docks, and nearly equal to Plymouth in size and population. Between Plymouth and Devonport intervenes the town of Stonehouse, which connects the two, and forms almost a continuous line of buildings from the one to the other. The town is old and irregularly built. The principal public buildings are the Guild Hall, Exchange, Custom-House, and Athenæum. The harbor of Plymouth is very capacious, and capable of containing over 2,000 vessels. It has several divisions, or smaller harbors; Sutton Pool, immediately adjoining the town, Catwater Harbor, formed by the estuary of the Plym, and the Harbor or Bay of Hamoaze, at the mouth of the Tamar. Altogether, there are nine docks, and the one last formed is said to be the largest in Europe. *Manuf.* Sail-cloth, ropes, glass, starch, soap, and sugar-refining.

Plymouth, in *Connecticut*, a post-township of Litchfield co.

Plymouth, in *Illinois*, a post-village of Hancock co., abt. 85 m. N.W. by W. of Springfield.

Plymouth, in *Indiana*, a city, cap. of Marshall co., about 84 m. E.S.E. of Chicago. *Pop.* (1897) 3,120.

Plymouth, in *Iowa*, a W.N.W. co., adjoining South Dakota; area, about 818 sq. m. *Rivers.* Big Sioux and Floyd's rivers, with many smaller streams. *Surface*, generally level; *soil*, fertile. *Cap.* Le Mars. *Pop.* (1895) 21,991.

Plymouth, in *Maine*, a post-village of Penobscot co.

Plymouth, in *Massachusetts*, an E. county, bordering on Cape Cod Bay and the Atlantic Ocean; area, about 720 square miles. *Rivers.* Taunton and North rivers, besides numerous less important streams. Its sea-coast is 30 miles in extent, and has many inlets and bays, which afford some excellent harbors. *Surface*, uneven; *soil*, not fertile. *Minerals.* Iron. *Capital.* Plymouth. — A town and township, port of entry, and the cap. of the above co., on a bay of its own name, abt. 37 m. S. by E. of Boston; Lat. 41° 57' 26" N., Lon. 70° 40' 19" W. The town is well laid out, and though partly built of wood, contains many handsome structures. *Manuf.* Cotton and woollen goods, iron, &c. *P.* is the oldest town in New England, and Plymouth Rock is still to be seen at the end of Hedges' Wharf, where, on Dec. 22, 1620, the Pilgrims landed from the *Mayflower*.

Plymouth, in *Michigan*, a post-village and township of Wayne county, about 20 miles west by north of the City of Detroit.

Plymouth, in *Minnesota*, a post-township of Hennepin co.

Plymouth, in *Mississippi*, a village of Lowndes co., abt. 140 m. N.E. of Jackson.

Plymouth, in *N. Carolina*, a post-village, port of entry, and the cap. of Washington co., abt. 150 m. E. of Raleigh; *pop.* abt. 1,000. On April 20, 1864, it was taken by assault by the Confederates under Gen. R. F. Hoke.

Plymouth, in *New Hampshire*, a post-village and township, semi-cap. of Grafton co., abt. 51 m. N. by W. of Concord.

Plymouth, in *Pennsylvania*, a post-borough and township of Luzerne co., 4 m. W. of Wilkesbarre. *Pop.* (1897) 11,150. — A township of Montgomery co.

Plymouth, in *Wisconsin*, a township of Juneau co. — A township of Rock co.

— A city and township of Sheboygan co., about 14 m. W. of Sheboygan. *Pop.* (1895) 2,213.

Plymouth Brethren, *n. pl.* (*Ecol. Hist.*) A sect which received its name from having originated at Plymouth about 1830. The chief doctrinal peculiarities of the brethren are their professed adherence to the Christianity of the New Testament, and their condemnation both of Established and Nonconformist churches, the former of which they consider too latitudinarian, in desiring to embrace within their pale the whole population of a country; and the latter too sectarian, because they exclude all but the members of their own party. Among their early prominent leaders was John Darby, an Anglican clergyman, after whom the members of the denomination have frequently been called *Darbyites*. They have established themselves in Philadelphia, and some other places of the American Union, but, owing perhaps to their dissensions, their success in this country seems to be quite indifferent.

Plymouth Hollow, in *Connecticut*, a village of Litchfield co., abt. 25 m. S.W. by W. of Hartford.

Plymouth Sound, an inlet of the English Channel, between the cos. of Devon and Cornwall. Length, 3 m.; breadth, 4 m.

Plympton, in *Massachusetts*, a post-village and township of Plymouth county, about thirty miles S.E. of Boston.

Pneumatic, **Pneumatics**, (*nū-māt'ik*). *a.* [*Fr. pneumatique*; *Gr. pneumatikos*, from *pneuma*, wind, air, from *pneō*, to breathe, to draw breath.] Consisting of, or resembling, air; — opposed to *dense* or *solid*. — Pertaining to atmospheric air; having reference to pneumatics; as, *pneumatic* experiments. — Moved or played by means of air; as, a *pneumatic* instrument of music. — Suited to, or employed in, experiments with gases; as, a *pneumatic* cistern. — Adapted to contain air; as, *pneumatic* cells.

Pneumatic Despatch. This mode of conveying mails was suggested in two pamphlets published by

Medhurst early in the 19th century. A company was formed in London, in 1859, for establishing in that metropolis a system of *pneumatic despatch* tubes, adapted for the conveyance of parcels and light goods; and a permanent tube was laid down between the Euston Station and the Post-office in Eversholt Street, for the conveyance of mail-bags, which are *blown* through the tube from the station northward by compressed air, while the return mail-bags are *sucked* through the tubes southward by rarefied air; the compression in the one case, and the rarefaction in the other, being very slight, only a few ounces on the square inch. This tube was opened Feb. 20, 1863. The system is now largely in use for a variety of purposes, more especially in the department stores in the principal cities, and in the post-offices of Philadelphia and elsewhere. See POSTAL SERVICE.

Pneumatic Railway. See RAILROAD.

Pneumatic-tire, *n.* A wheel tire applied about 1889 to bicycle wheels to replace the solid rubber tire previously used. It is a hollow tube of rubber filled with compressed air, which is forced into it by an air-pump. The *P.-t.* has so increased the ease and speed of riding that it has been applied to the wheels of pleasure and other carriages, and, of large size, is being used on automobile wheels. Its serious defect is its liability to become punctured, with loss of air and sudden collapse. Pneumatic rubber horse collars are also coming into use, and are likely to prove a great improvement over the hard leather collars.

Pneumatics, *n. pl.* That branch of physical science which treats of the mechanical properties of elastic fluids, and principally of atmospheric air. To a certain extent the mechanical properties of the air seem to have been known to the ancients. Not only does Aristotle mention that a bladder filled with air weighs more than when it is empty, but Ctesibus, who lived 130 years B. C., appears to have invented a species of forcing-pump for raising water, and of instruments for producing sound by the passage of air through orifices in tubes. — (*Vitruvius*, lib. ix., x.) These inventions are proof that the elastic force of compressed air was then comprehended. For a long time the ascent of water in pumps, upon raising the piston, was ascribed to nature's abhorrence of a vacuum. When, however, it was found that the height of the column of water raised never exceeded a certain quantity—about thirty-four feet—this idea was gradually exploded. The explanation of the true cause of the phenomenon—the vacuum between the piston and the surface of the column, and the pressure of the atmosphere on the external water—was first determined by Corricelli; the same philosopher also calculated the pressure of the atmosphere by the weight of the column of mercury supported in a tube closed at the upper extremity. (See BAROMETER.) The next result of the study of *pneumatics* was the discovery of the thermometer, soon after the commencement of the 17th century. Steam began to be used as a moving power for pumps and other machinery, in the beginning of the 18th century. The law of the resistance of the air to bodies moving in it was first discovered by Sir Isaac Newton; but the intensity of this resistance against military projectiles was first determined for the inferior projectiles by Robins, in 1740. Dr. Hutton afterwards obtained a formula which is sufficiently correct for any velocity. Robins, Euler, and Hutton, by their researches, determined the expansion of fired gunpowder; and that of steam was investigated by Dalton, in England, and Prouy and Arago, in France. — The different forms of pneumatic apparatus will be found described under the articles AIR-PUMP, BAROMETER, PUMP, &c.

Pneumatocoele, (*-sēl*), *n.* [*Gr. pneuma*, air, and *kēlē*, a tumor.] (*Surg.*) A dilatation of the scrotum by means of air.

Pneumatology, *n.* [*Gr. pneuma*, *pneumatōs*, air, spirit, and *logos*, discourse.] The doctrine of spiritual substances, or the science of mind or spirit, treating of the divine mind, the angelic mind, and the human mind.

Pneumogastic, *a.* [*Gr. pneumōn*, a lung, and *gaster*, stomach.] (*Anat.*) Pertaining or having reference to the lungs and stomach, as the *pneumogastric* nerves.

Pneumography, **Pneumology**, *n.* [*Gr. pneumōn*, a lung, and *graphein*, to describe, or *logos*, discourse.] (*Anat.*) A description of the lungs.

Pneumometer, *n.* [*Gr. pneuma*, and *metron*, measure.] A gasometer constructed for the purpose of measuring the quantity of air taken into the lungs, and again given out, at each inspiration and expiration.

Pneumometry, *n.* Art, process, or operation of determining the capacity of the lungs for air.

Pneumonia, **Pneumonitis**, **Pneumony**, *n.* [*Gr. pneumōn*, the lung.] (*Med.*) An inflammation of the substance of the lungs. It may be occasioned by any of the causes which produce inflammation in general—vicissitudes of temperature, the application of cold, violent exercise of the body, exertions of voice, &c. It occurs most frequently in the winter and spring months. It is characterized by fever, difficulty of breathing, cough, dryness of the skin, heat, anxiety, thirst, and a sense of weight and pain in the head, unless the pleura be likewise affected. At first, the cough is frequently dry and without expectoration; but after one or two days matter is brought up, viscid and rusty-colored, and often streaked with blood. In favorable cases, this disease may decline on the third or fourth day, but more frequently it is protracted to ten days or a fortnight. In unfavorable cases the symptoms increase on the third or fourth day, and become more and more aggravated, until at length the patient dies exhausted or asphyxiated. A high degree of fever, attended with delirium, great difficulty of breathing, acute pain and dry cough, denote great danger; while, on the

contrary, an abatement of the febrile symptoms, and of the difficulty of breathing and pain, taking place on the coming on of a free expectoration, or other critical evacuation, promise fair for recovery. The treatment in the early stage of the disease is by free bleeding from the arm, followed by a brisk purgative and tartar emetic, to bring about immediate resolution. When more advanced, local bleeding by cupping or leeches, with counter-irritation, must take the place of general bleeding. During convalescence, or after suppuration, tonic medicines, and a nourishing but not stimulating diet, are necessary to support the strength of the patient.

Pneumonic, *a.* Having reference to the lungs; pulmonary.

—*n.* A medicine for diseases of the lungs.

Phigalian, *n.* [Gr. *phigalíon*.] (*Med.*) Nightmare; incubus.

Phyx, (*míks*). [Gr.] (*Gr. Hist.*) The place of assembly for the Athenian demos, to the west of the Areopagus, on a slope connected with Mount Lycabettus. It was semi-circular in form, and had an area of about 12,000 square yards. On the north side was the Bema, or tribune, cut out of the rock, and commanding a view of the sea from behind, and of the Propylæa and Parthenon in front.

Po, the largest river of Italy, which it traverses from west to east, irrigating, with its affluents, the entire plain of Piedmont and Lombardy. It rises in the Cottian Alps, flows north-east to Turin, and holding an easterly course throughout the whole length of Lombardy, discharges itself by a number of mouths into the Adriatic, about 30 miles from Venice. Its estimated length is abt. 340 m., nearly 300 of which are navigable.

Poa, *n.* [Gr., grass.] (*Bot.*) A genus of plants, order Gramineæ. This species are very numerous, and some of them very abundant in the pasturages of North America. One of the commonest of all weeds is the Annual Spear-Grass, *P. annua*. The Spear-Grass, *P. pratensis*; the Roughish Meadow-Grass, *P. trivialis*; and the Blue-Grass, *P. compressa*, are very excellent and abundant grasses, both for hay and pasturage. The Wood Spear-Grass, *P. nemoralis*, is one of the few grasses which thrive in shady places.

Poach, (*póach*), *v. a.* [Fr. *pocher*, to bruise, to fry, as eggs; allied to Eng. *poke*.] To cook, as eggs, by breaking them into a vessel of boiling water; also, to cook with butter, after breaking into a vessel.—To encroach upon another's grounds, and to steal game, or carry it away privately; to kill or destroy game contrary to law;—hence, to plunder by stealth; to steal.

"They poach Parnassus, and lay claim for praise."—*Garth*.

—*v. n.* In England, to kill or destroy game contrary to law; to trespass on another person's lands, and carry game away privily in a bag.—To be trodden with deep tracks, as soft ground.

—*v. a.* [Fr. *poquer*, to shock.] To pierce or spear; as, to poach salmon. (Eng.)—To tread on soft ground, as cattle, whose feet penetrate the soil or soft substance, and leave deep tracks.

Poachard, *n.* (*Zoöl.*) See POCHARD.

Poacher, *n.* One who steals game.

"Ken, an old poacher after game."—*Yalden*.

Poachiness, *n.* State of being poachy.

Poaching, *n.* Act or employment of a poacher.

Poachy, *a.* Wet and soft; such as the feet of cattle will penetrate to some depth, as land.

Poak, **Poake**, *n.* Refuse from the preparation of skins, such as hair, lime, &c.

Pocahontas, daughter of Powhatan, a powerful Indian chief of Virginia, b. about 1595. She displayed a friendliness towards the British colonists, first at 12 years of age, in saving the life of Capt. John Smith, who had been captured and condemned to death by her father, and on several other occasions making known to the English their danger when about to be attacked. In 1612, while on a visit to a neighboring tribe, she was seized, and held as a hostage by the English, as a safeguard against the hostility of her tribe. While on shipboard she became acquainted with, and married John Rolfe, an Englishman, who took her to England, where, in 1616, she was presented at court. She had one son, from whom numerous wealthy families of Virginia claim descent. D. in England, while preparing to return to America, in 1617.

Pocahontas, in *Arkansas*, a post-village, cap. of Randolph co., abt. 145 m. N. E. of Little Rock.

Pocahontas, in *Illinois*, a post-village of Bend co., abt. 10 m. S. W. of Greenville.

Pocahontas, in *Iowa*, a N. W. central co.; area, abt. 550 sq. m. Rivers. Lizard's River, and many smaller streams. Surface, generally level; soil, fertile. Cap. Pocahontas. Pop. (1895) 12,442.

Pocahontas, in *Tennessee*, a post-town of Hardeman co., about 75 m. E. of Memphis.

Pocahontas, in *West Virginia*, an E. co., adjoining Virginia; area, about 600 sq. m. Rivers. Greenbrier, Elk, and Gauley rivers. Surface, much diversified, the Alleghaues forming the S. E., and the Greenbrier the N. W. boundaries; soil, in some parts fertile. A cave has been discovered in this co., which is said to almost equal the celebrated Weir Cave in size and extent. Cap. Marlinton. Pop. (1897) 7,560.

Pocasset, in *Massachusetts*, a post-village of Barnstable co., abt. 60 m. S. S. E. of Boston.

Pochard, *n.* (*Zoöl.*) The common name of *Fuligula*, a genus of oceanic ducks, family Anatidæ, some species of which are found on the coasts of N. America, migrating southward as far as Louisiana. They have the bill as long, or nearly as long, as the head, broad and very flat, a little dilated towards the tip, the lamellæ of the

upper mandible not projecting beyond the margin, the wings and tail short, the tail rounded.

Pock, *n.* [A. S. *poc*, or *pocc*; Du. *pok*; Ger. *pocke*.] (*Med.*) A pustule raised on the surface of the body in the disease called the small-pox.

Pock'ared, (*-árd*), **Pock'fretten**, *a.* Pitted with the small-pox.

Pock'broken, *a.* Marked or pitted with the small-pox.

Pock'et, *n.* [Fr. *pochette*, from *poché*; allied to A. S. *pocca*, a bag, a pouch.] A small bag or pouch inserted in a garment for carrying small articles.—A small bag or net to receive the balls in the game of billiards.—Half a sack in quantity, or about 168 lbs.;—said of certain articles of trade; as, a pocket of wool, a pocket of hops.—A large bag for holding cowries and the like. (*Mining*.) A small cavity in a rock, &c., containing gold.

(NOTE. *Pocket* is frequently used in the formation of self-explaining compounds; as, *pocket-comb*, *pocket-handkerchief*, *pocket-money*, *pocket-picking*, &c.)—*v. a.* To put, place, or conceal in the pocket; as, to pocket money.—To take in a clandestine manner.

To pocket an affront or insult, to receive an affront or indignity without open resentment; or, at all events, without seeking redress, or demanding satisfaction.

Pock'et-book, *n.* A small, leather-covered book, used for carrying notes, papers, &c., in the pocket.

Pock'etful, *n.* *pl.* POKETFULS. Enough to fill a pocket.

Pock'et-hole, *n.* The orifice of a pocket.

Pock'et-knife, (*-níf*), *n.* A knife with blades folding into the handle, so as to be carried in the pocket.

Pock'et-lid, *n.* The flap over the opening of a pocket.

Pock'et-money, *n.* Money for the pocket, or for petty or occasional expenses.

Pock'et-piece, *n.* A piece of money carried in the pocket for luck, and not to be spent.

Pock'et-pistol, *n.* A pistol to be carried in the pocket. A colloquialism for a pocket-flask of liquor.

Pock'et-picking, *n.* Act of picking the pocket; practice of stealing from the pocket.

Pock'fretten, *n.* Same as POCKARED, *q. v.*

Pock-hole, *n.* The pit or hole made by a pock.

Pock'iness, *n.* State or condition of being pock-marked.

Pock'ish, *a.* Affected with the small-pox.

Pock'mark, *n.* A mark, pit, or scar made by the small-pox.

Pock-pitted, *a.* Pitted by the small-pox.

Pock'y, *a.* Full of pocks; infected with the small-pox.—Vile; rascally; contemptible. (Collog. and vulgar.)

Po'co, *adv.* [It.] (*Mus.*) A little;—principally employed in phrases designating the time or movement; as, *poco largo*, rather slow.

Poco a poco. (*Mus.*) Little by little; by degrees; as, *poco a poco* crescendo, gradually increasing in loudness.

Poco-en-rantism, *n.* [It. *poco*, little, and *curante*, careful, from *curare*, to care.] Indifference; impenetrability to impressions; stato or quality of manifesting little care or interest.

Poco'moke River, in *Maryland*, flows S. S. W. into a bay of its own name, an arm of Chesapeake Bay, between Somerset co., Maryland, and Accomac co., Virginia.

Poco'son, *n.* A Virginian localism for a reclaimed tract of boggy ground.

Pocotaligo, in *W. Virginia*, a small river flowing into the Great Kanawha from Kanawha co.

Poculiform, *n.* [Lat. *poculum*, a cup, and *forma*, form.] Cup-shaped.

Pod, *n.* [A. S., a covering.] (*Bot.*) Same as LEGUME, *q. v.*

Pod'agra, *n.* [Gr., from *pous*, *podos*, the foot, and *agra*, a catching.] (*Med.*) The Gout, *q. v.*

Podag'ric, **Podag'rical**, *a.* Pertaining to, or partaking of, the gout; gouty.—Suffering from, or afflicted with, the gout.

Pod'agrons, *a.* Gouty; podagric; having the gout.

Pod'der, *n.* One who gathers pods.

Podes'ta, *n.* [It., from Lat. *potestas*, magistracy.] One of the chief magistrates of Genoa and Venice.

Podge, (*pój*), *n.* A puddle; a plash.

Podgorit'za, a town of European Turkey, in Albania, 38 m. N. of Scutari; pop. 6,000.

Podgy, (*púj'y*), *a.* Pudgy; fat and stumpy; as, a podgy hand.

Pod'iceps, *n.* (*Zoöl.*) See COLYMBIDÆ.

Po di Primaro, a river of N. Italy, a continuation of the Reno, rising near Pistoja, and after an E. course of 90 m., assumes the name of Traghetto, falling into the Adriatic at Porto di Primaro, 13 m. N. E. of Ravenna.

Po'dium, *n.* [Lat., from Gr. *podion*, dimin. of *pous*, *podos*, foot.] (*Arch.*) In Roman amphitheatres, a massive wall running around the arena. On the top of the P. were the seats assigned to spectators of the highest rank; above these seats rose the moeniana, or radiating seats on the sloping walls of the building.

Podo'lia, or **Po'dolsk**, a govt. of European Russia, between Lat. 47° 30' and 49° 45' N., Lon. 26° 25' and 30° 48' E.; having N. Volhynia, E. Kiev and Kherson, S. Kherson and Bessarabia, W. Galicia and Bessarabia. Area, 15,200 sq. m. The surface is generally level, the soil fertile, and the climate healthy. Rivers. Dneister and Bug. Prod. Corn, hops, hemp, flax, tobacco, and various fruits. The vine and mulberry are cultivated, and numerous cattle are reared. Min. Lime, nitre, and alabaster. Manuf. Woollen cloth, leather, and potash. Trade is wholly in the hands of Jews. Cap. Kaminietz. Pop. 1,868,857, chiefly Poles.

Podophyllum, *n.* [Gr. *pous*, a foot, *phullon*, a leaf—from the shape of its leaf.] (*Bot.*) A genus of plants, order Ranunculaceæ. The May-apple, or Wild Lemon, *P. peltatum*, is a common herb throughout the American

States. Its fruit is a berry, about the size of an egg, of a light-yellow color, and having a pleasant sub-acid taste. The Indians of N. America have employed a decoction of the leaves and stalks for ages, in diseases requiring a cathartic. Latterly, this plant has attracted much attention, in consequence of the discovery of its active resinous principle, which, under the name of *podophyllin*, is now coming into use as a cathartic, and as a therapeutic substitute for mercury.

Pod'osperm, *n.* [Gr. *pous*, *podos*, foot, and *sperma*, seed.] (*Bot.*) The umbilical cord of an ovule.

Podostema'ceæ, *n. pl.* (*Bot.*) The Threadfoot or River-weed family, an order of plants, alliance Rutales. DIAG. Many-seeded fruit, which is finally apocarpous; and apetalous, very imperfect flowers. They are aquatic, herbaceous plants, having much the appearance of mosses and liverworts. There are 21 genera, including about 100 species, principally natives of S. America.

Po'e, *n.* A kind of farinaceous food used by some of the Pacific Islanders.

Poe, EDGAR ALLAN, a young American litterateur, b. at Baltimore in 1811. He had fine natural talent, and received a good education, but threw away all his advantages, and shortened his life by his immoral and drunken habits. D. in an hospital of his native city, after a restless, wandering life, October, 1849. His productions consisted of tales and poems, which were contributed to periodicals, and which display singular power of imagination, a quick sense of the beautiful, and great command of impressive and also musical language. His tales were remarkable for their fantastic character, his poems for the melody of their language.

Po'em, *n.* [Fr. *poème*; Lat. *poema* = Gr. *poiēma*, a composition in verse, from *poiō*, to make.] The work, production, or creation of a poet; specifically, a metrical composition; a composition in which the verses consist of certain measures, whether in blank verse or in rhyme; a piece of poetry; as, the poems of Homer, Dante, or Byron;—correlative to *prose*.—Hence, rarely, an imaginative composition, divested of the peculiar attributes of verse; as, the poems of Ossian.

Poem'atic, *a.* [Gr. *poimatikos*.] Belonging to, or possessing the characteristics of, a poem.

Poenology, *n.* Same as PENOLOGY, *q. v.*

Poes'tenkill, in *New York*, a small river flowing into the Hudson River from Rensselaer co.

—A post-village and township of Rensselaer co., abt. 11 m. E. of Albany.

Po'esy, *n.* [Fr. *poésie*; Lat. *poesis* = Gr. *poiēsis*.] The art or skill of making or composing poems; as, "thy heavenly gift of poesy." (*Dryden*).—Poetry; metrical composition.—A short conceit engraved on a ring or other thing; a posy.

Po'et, *n.* [Fr. *poète*; Lat. *poeta* = Gr. *poiētes*, from *poiō*, to make, create.] The maker, inventor, or creator of a poem; the author or producer of a metrical composition.—One skilled in making poetry, or who has a particular genius for metrical composition; one distinguished for poetic talents.

Po'etaster, *n.* A pitiful rhymester; a writer of doggerel verses; a petty poet.

Po'etast'ry, *n.* Doggerel; mean poetry. (*r.*)

Po'etess, *n.* A female poet.

Poet'ic, **Poet'ical**, *a.* [Fr. *poétique*.] Pertaining or relating to poetry; suitable to poetry; as, poetic genius, poetic taste, poetic license.—Expressed in poetry or measure; as, poetical composition.—Possessing the peculiar attributes or beauties of poetry; sublime; as, a passage highly poetical.

Poet'ically, *adv.* In a poetical manner; with the qualities of poetry; by the art of poetry.

Poet'ics, *n.* The doctrine of poetry.

Po'etize, *v. a.* [Fr. *poétiser*.] To write as a poet; to compose verse.

Po'et-musician, (*-zish'an*), *n.* The bard and lyrist of former times;—so called as uniting the artistic professions of poetry and music.

Po'etry, *n.* [O. Fr. *poëterie*.] Art or practice of composing in verse; prose composition in the language of excited imagination and feeling; poesy.—Poetical or metrical composition or verse; as, epic or heroic poetry, ballad poetry, lyric poetry, dramatic poetry.—Imaginative composition, whether in prose or verse.—The history of poetry is treated in this work in connection with the literature of the principal nations of the world.—See also BALLAD, DRAMA, EPIC POETRY, LYRIC POETRY, &c.

Po'etship, *n.* State, quality, or condition of a poet.

Po'et-sucker, *n.* A half-fledged, immature poet;—used in contempt.

Pog'gy, *n.* See PORGE.

Pog'gy Islands. See NASSAU ISLANDS.

Pogost'e'mon, *n.* [Gr. *pogon*, a beard, and *stemon*, a thread.] (*Bot.*) A genus of plants, order Lamiaceæ, which yields the patchouly scent. The plant itself, called *P. patchouly*, is an unattractive sub-shrubby species, found wild in India and Malacca. The odor, which is peculiar, is highly popular not only in Europe, but in India, where it is one of the commonest perfumes found in the bazaars. The leaves and young tops yield by distillation the volatile oil from which essence of patchouly is prepared. Genuine Indian shawls and Indian ink were formerly distinguished by their odor of patchouly; but since the perfume has become common in Europe the test does not hold good. Ill effects, such as loss of appetite and sleep, nervous attacks, &c., have been ascribed to the excessive employment of patchouly as a perfume. It is called *Pucha-pat* by the Malays.

Poh, (*pō*), *interj.* An exclamation indicating contempt or aversion, equivalent to *pish*, *pshaw*.

Pohat'cong (or **POHAT'CHUNK**) **Creek**, in *New Jersey*, enters the Delaware River from Hunterdon co.

Pocahontas

1595(?)–1617

Edgar Allan Poe

1811-1849

Polo'no, or BRIDAL VEIL FALL, in California, a fall of the Merced River, in the Yosemite Valley, Mariposa co. It is 40 ft. broad, with a perpendicular height of 900 ft.

Poignancy, (*poyn'an-sy*), *n.* Quality of being poignant; sharpness; pungency; power of stimulating the organs of taste; point; keenness; power of irritation; asperity, as of wit or satire; severity; acuteness, as of grief.

Poignant, (*poyn'ant*), *a.* [Fr., from *poindre* = Lat. *pungere*, to puncture, to sting.] Sharp; pungent; pricking; piercing; stimulating the organs of taste;—applied to something tasted.

"No poignant sauce gave relish to her meat."—Dryden.

—Pointed; keen; bitter; irritating; satirical; severe; biting; piercing; very painful or acute; as, *poignant* wit, *poignant* pain or disease.

Poignantly, (*poyn'ant-ly*), *adv.* In a stimulating, piercing, or irritating manner; with keenness or point.

Poikilotic, *a.* See PŒCILITIC.

Pound, *v. a.* To pound; to immure or enclose in a pen or pound; as, to *pound* stray cattle.

Pound'er, *n.* In Scotland, one who distrains cattle for rent.

Poin'dexter, in Georgia, a village of Marion co., abt. 45 m. E. of Columbus.

Poin'dexter's Store, in Virginia, a post-village of Louisa co., abt. 68 m. N.W. of Richmond.

Poin'sett, in Arkansas, a N.E. co.; area, about 1,300 sq. m. Rivers, St. Francis and Anguille rivers, besides many smaller streams. Lake St. Francis washes the N.E. angle of the co. Surface, mostly level and low, large tracts being occupied by swamps; soil, in some parts fertile. Cap. Harrisburg. Pop. (1897) 4,570.

Point, *n.* [Fr., from Lat. *punctum*, a puncture, a small hole.] That which pricks, penetrates, or pierces, as the sharp or acute end of any piercing instrument or body, as of a needle, a pin, an awl, a thorn, a bayonet, &c. — A steel instrument having a sharp point or end, used as engravers' etchers, &c.;—sometimes called, also, *pointer*. — A small cape, headland, or promontory; a tract of land extending into the sea, a lake, or river, beyond the shore-line, and becoming narrow at the end; as, Montauk *Point*. — The mark made by the end of a sharp, piercing instrument like a needle;—hence, a small space; a mere spot actually indicated. — An indivisible part of time; an instant; a moment;—hence, a critical moment; the brink; verge; as, at the *point* of death. — The sting of an epigram; a lively turn of thought or expression that strikes with force and agreeable surprise; the pith or gist of an argument; the conclusion to which a discourse or anecdote is directed; as, to come to the *point*. — Punctilio; nicety; scrupulosity; exactness of ceremony; as, a *point* of honor. — Degree; state of elevation, depression, or extension; condition; rank; whatever serves to mark progress or indicate a transition from one state or position to another; as, a *point* of precedence.

"I have touch'd the highest *point* of all my greatness."—Shaks.

—In punctuation, a character used to mark the divisions of sentences in writing, or the pauses to be observed in reading or speaking, as the comma, &c. — Salient trait or characteristic; peculiarity; that feature or attribute which arrests attention; as, he has some good *points* in his nature, the *points* of a horse, dog, &c. — Aim; end; purpose; thing to be reached, or accomplishment; as, it was the *point* of my ambition.

"True to the kindred *points* of Heaven and Home."—Wordsworth.

—*pl.* Metal tags of an ornamental character, affixed to the ends of the ribands used for tying the different articles of dress upon the person, in the 15th and 16th centuries;—they occupied the place of the modern button.

—Place to which anything is directed, or the direction in which an object is presented to the eye; as, a *point* of light. — Act of aiming or striking. — A single position or assertion; a single part of a complicated question or the whole.

(*Geom.*) That which has position but not magnitude. The extremities of a line are *points*.

(*Navig.*) One of the 32 divisions into which the circumference of the horizon and the mariner's compass are distinguished, each comprehending 11° 15'.

(*Astron.*) A certain place marked in the heavens, or distinguished for its importance in astronomical calculations; as, the equinoctial, solstitial, nodal, and vertical *points*.

(*Mus.*) A dot placed at the right hand of a note, to raise its value or prolong its time by one half.—A note; a tune.

(*Her.*) An ordinary somewhat resembling the *pile*, but issuing from the base of the escutcheon instead of the chief.

—Particular; instance; single thing or subject; as, in *point* of fact, in *point* of time.

"This letter is, in every *point*, an admirable pattern of writing."—Swift.

(*Naut.*) See REEF-POINT.

(*Railroad Eng.*) In England, the switch of a railroad track.

(*NOTE.* The word *point* is used generally in the sciences and arts, either in the geometrical sense, or in that of degree, condition, or change, and with some accompanying qualifying term; as, melting-*point*, freezing-*point*.)

At the *point*, on the *point*, as near as possible; on the brink or verge; as, she was on the *point* of going.—*Nine points of the law*, the greater weight of authority; all but the tenth point of the law.—*Point-no-point*, a manner of proceeding or discussion, which, after much display of action or argument, proves abortive.—*Point of horse*. (*Mining.*) The spot where the vein of ore is

divided into one or more branches.—*Point of intersection*, the point where two lines meet and cross each other.—*Point of sight*. (*Perspec.*) The principal vanishing point, because all horizontal objects that are parallel to the middle visual ray will vanish in that point.—*Point of view*, position from which any object is seen or considered.—To make or to gain a *point*, to accomplish what one had in view; also, to make an advance by a step, grade, or position.—To strain a *point*, to go beyond a fixed limit; to exceed the bounds of strict justice, duty, or propriety; as, he strained a *point* to oblige his friend.—To mark or score a *point*, to note down successful hits, runs, &c., as in cricket, billiards, &c.—*Vowel point*, in some Eastern and ancient languages, a mark placed above or below the consonant, or annexed to it, representing the vowel sound preceding or following the consonant.

Point, *v. a.* To sharpen to a point; to cut, forge, grind, or file to an acute end; to give a point to; as, to *point* a dagger.—To direct toward an object or place, to show its position, or excite attention to it; to direct the eye or notice.—To aim; to direct toward an object; as, to *point* a musket at an enemy.—To indicate application; to show, by way of example.

"Nature seems to *point* us out the way."—Locke.

—To indicate the presence of by a pause in motion and a fixed look, as game.—To punctuate; to mark with characters for the purpose of distinguishing the members of a sentence, and designating the pauses; to mark with vowel-points; as, to *point* a composition.

(*Building.*) To fill the interstices with mortar, and smooth their surface with the point of a trowel; as, to *point* masonry or brick-work.

To *point* a rope, to cause it to taper at the end by taking away a few strands, and, with these, working a mat over it, so that it may readily pass through a hole. To *point* a sail, to affix points through the eyelet-holes of the reefs.—To *point* out, to indicate clearly; to show by direction of the finger or other means.—To *point* a ship's yards, to brace them so that the wind shall strike them obliquely.

—*v. n.* To direct the finger for designating an object, and drawing attention to it; preceding *at*.—To indicate by a fixed and prolonged look, as dogs do to sportsmen.—To show distinctly by any means.

(*Med.*) To head; to approach the surface;—said of an abscess.

To *point* at, to behave to with scorn, derision, or aversion, by directing attention to.

"Now must the world *point* at poor Catherine."—Shaks.

Point, in Illinois, a township of Calhoun county.

Point, in Indiana, a twp. of Posey co.

Point, in Pennsylvania, a township of Northumberland co.

Point à la, (*Bot.*) The pistil of a plant.

Point à la Hache, in Louisiana, a post-village, cap. of Plaquemine parish, abt. 46 m. S.E. of New Orleans.

Point-a-Pitre, (*La*), a town of the island of Guadeloupe, W. Indies, abt. 18 m. N.E. of Basseterre; pop. 12,103.

Point Arena, in California, a post-town of Mendocino co., about 125 m. N.W. of San Francisco.

Pointan Fer, in Louisiana, a headland and lighthouse on the E. side of the entrance to Atchafalaya Bay. It exhibits a fixed light 70 ft. above the sea; Lat. 29° 19' N., Lon. 91° 22' W.

Point-blank, *n.* [Fr. *point-blanc*, white point.] (*Mil.*) The point at which the line of sight intersects the trajectory of a projectile.

Natural point-blank, that when the line of sight is horizontal.

—*a.* Aimed directly toward the mark.—Hence, by analogy, plain; direct; express; as, a *point-blank* denial.

Point-blank range, the range of the apparent right line of a ball discharged.—*Point-blank shot*, the shot of a gun pointed directly at the mark.

—*adv.* In a *point-blank* manner; expressly; plainly.

Point Bluff, in Wisconsin, a post-village of Adams co., abt. 10 m. E. of Mauston.

Point Bonita, in California, a headland forming the S. extremity of Marin co., on the N. side of the Golden Gate, abt. 3½ m. N. of Point Lobos.

Point Commerce, in Indiana, a post-village of Greene co., abt. 80 m. W.S.W. of Indianapolis.

Point-d'appui, (*pwōng'dāp-pwē*), *n.* [Fr.] Basis; pivot; point of support; a fixed point on which troops move, and operations rest.

Point de Galle, a fortified seaport-town of the S.W. of Ceylon, 70 m. S.E. of Colombo; Lat. 6° N., Lon. 80° 15' E.

Point Dong'las, in Minnesota, a post-village of Washington co., abt. 26 m. S.E. of St. Paul.

Pointe Coupée, in Louisiana, a S.E. central co.; area, abt. 600 sq. m. Rivers, Mississippi and Atchafalaya rivers, besides several less important streams. Surface, low and level; soil, generally very fertile. Cap. New Roads. Pop. (1897) 21,100.

—A post-village, former cap. of above co.

Pointed, *p. a.* Having a sharp point; sharp; acuminate; as, a *pointed* stake.—Characterized by keenness, pungency, or epigrammatical smartness; as, *pointed* wit, a *pointed* rebuke.

Pointed Architecture. See MEDIEVAL ARCHITECTURE.

Pointedly, *adv.* In a pointed manner; with lively turns of thought or expression.—With direct assertion; with express reference to a subject; with explicitness; plumply; as, I asked him *pointedly* not to press the matter.

Point'edness, *n.* Quality of being pointed; sharpness; epigrammatical keenness or smartness; as, *point'edness* of expression.

Pointe du Lac, a village of St. Maurice co., prov. of Quebec, about 81 m. N.N.E. of Montreal. Pop. 1,500.

Point'el, *n.* [From *point*.] A writing implement for the tablets used in the Middle Ages.—Chequered-work for paving floors.

Pointer, *n.* He who, or that which points, as the hand of a time-piece.—A graving tool.

(*Zoöl.*) A breed of valuable sporting dogs, the *Canis familiaris avicularis*. They are used in finding feathered game of various sorts, partridges, pheasants, &c. When they scent their game, they suddenly stop, and remain motionless as a statue, until the sportsman comes near enough, and is prepared to take his shot; he then gives the word, and the dog immediately springs the game. So admirably have these dogs been trained,

Fig. 2134. — POINTER.

that their acquired propensities seem almost as inherent as a natural instinct, and appear to be transmitted from parent to progeny: at least, they now require but very little *breaking* to stand at any kind of game. Their scent and sight are equally acute. In all probability Spain is the native country of this valuable dog, which is found there, and also in France, with very slight difference of form; but the English breed is much to be preferred, for good temper, beauty of appearance, docility, patience, and activity.

(*Astron.*) One of the two bright stars in the body of the Great Bear, which point to the pole star, and enable it to be readily singled out.

(*Naut.*) One of the timbers connecting the stern-frame with the after-body of a ship.

Point Gal'inas, a cape of the Republic of Colombia, forming the N. extremity of S. America; Lat. 12° 30' N., Lon. 71° 40' W.

Point'ing, *n.* Art or act of making the divisions of a writing; punctuation.—State of being pointed with marks, or of having points.—Act of placing a gun, so as to give the shot a particular direction.—Act of filling the interstices of a wall, &c., with mortar; or the material wherewith the operation is performed.

Point'ing-stock, *n.* An object of scorn or derision; a laughing-stock.

Point Isa'bel, in Kentucky, a village of Pulaski co., abt. 97 m. S. of Frankfort.

Point Isabel, in Texas, a post-village, and port of entry of Cameron co., abt. 30 m. E.N.E. of Brownsville.

Point Judith, in Rhode Island, a headland and lighthouse on the W. side of Narragansett Bay.

Point Lace, *n.* See LACE.

Point'less, *a.* Having no point; blunt; without keenness or smartness; dull; stupid; obtuse; as, a *pointless* needle, a *pointless* remark.

Point'leted, *a.* (*Bot.*) Apiculate.

Point Lobos, in California, a headland on the S. side of the Golden Gate, abt. 6 m. W. of San Francisco.

Point of Rocks, in Maryland, a post-village of Frederick co., abt. 65 m. N.W. by N. of Annapolis.

Point Pleasant, in Illinois, a township of Warren co.

Point Pleasant, in Iowa, a post-village of Hardin co., abt. 5 m. W. of Eldora.

Point Pleasant, in Missouri, a post-village of New Madrid co., abt. 8 m. S. of New Madrid.

Point Pleasant, in Ohio, a post-village of Clermont co., abt. 25 m. S.E. of Cincinnati. It is the birth-place of Gen. U. S. Grant.

Point Pleasant, in Pennsylvania, a post-village of Bucks co., abt. 120 m. E. of Harrisburg.

Point Pleasant, in West Virginia, a post-town, cap. of Mason co., about 175 m. S.W. of Wheeling.

Points of the Compass. See COMPASS.

Points of the Esentcheon. (*Her.*) See ESCUTCHEON.

Pointville, in New Jersey, a post-village of Burlington co., abt. 11 m. E. of Mount Holly.

Poiré, (*pwōi-rav'*), a town of W. France, dept. of Vendée, 7 m. N.W. of Napoléon Vendée; pop. 4,000.

Poir'no, a town of Italy, prov. of Turin, 14 m. S.E. of Turin; pop. 6,000.

Poise, *v. a.* [Fr. *peser*, from Lat. *pendo*, *pensum*, to cause to hang down.] To balance in weight; to make of equal weight; as, to *poise* the scales of a balance.—To hold or place in equilibrium or equiponderance.—To load with weight for balancing.—To weigh; to examine or determine, as by the balance.—To oppress; to overburden; to weigh down.

"Lest leaden slumber *poise* one down to-morrow."—Shaks.

—*n.* [Fr. *poids*, from *peser*.] Weight; gravity; that which causes a body to descend or gravitate toward the centre.—The weight or mass of metal used in weighing with steelyards, to balance the substance weighed.

Balance; equilibrium; equipoise; equiponderance.—A regulating power; that which balances; as, the *poise* of judgment is often deficient in men of imagination.

Poison, (*poi'zon*), *n.* [Fr.; from low Lat. *poisonare*, from Lat. *poio*, a potion, a draught.] Any substance which, when administered in small quantities, is capable of acting deleteriously on the body. In general language, however, the term is applied to those substances only which destroy life in small doses. In medical jurisprudence it is found very difficult to lay down the exact boundary-line between medicines and poisons. A writer in legal medicine has suggested the following definition: "A poison is a substance which, when taken internally, is capable of destroying life without acting mechanically on the system." The law, however, never regards the manner in which the substance administered acts. If it be capable of destroying life, or injuring the health of an individual, it is of little consequence, so far as the responsibility of a poisoner is concerned, whether the action on the body be of a mechanical or a chemical nature. The words of the statute on poisoning are very general, and embrace all kinds of substances, whether they be popularly or professionally regarded as poisons or not. Thus it is laid down that "whoever shall administer, or cause to be taken by any person, any poison, or other destructive thing, with intent to commit murder, shall be guilty of felony, and being convicted thereof, shall suffer death." Poisons have been divided into three classes, according to their mode of action on the system; namely, *irritants*, *narcotics*, and *narcotico-irritants*. The narcotic and narcotico-irritants may, however, be regarded as one large class.—the *neurotics*—as their special action is to affect directly one or more parts of the nervous system. Narcotic poisons can also be subdivided into *cerebral*, *spinal*, and *cerebro-spinal*, according to whether the substance affects directly the brain, the spinal marrow, or both of these organs. Irritant poisons, when taken in small doses, speedily occasion violent vomiting and purging. These symptoms are either accompanied or followed by intense pain in the abdomen. As their name implies, their action is to irritate and inflame. Many substances belonging to this class of poisons possess corrosive properties; such as the strong mineral acids, caustic alkalies, bromine, corrosive sublimate, and others. Some irritants do not possess any corrosive action; such as arsenic, the poisonous salts of baryta, carbonate of lead, cantharides, &c., which are called pure irritants; they exert no destructive chemical action on the tissues, but simply irritate them.—The cases in which there are antidotes qualified to neutralize chemically the action of the poison are few in number. For the *mineral acids* we must prescribe chalk or magnesia in water, with the view of neutralizing them, after which milk should be given freely. The *alkalies* and their *carbonates* must be neutralized by vinegar and water, or lemon-juice mixed with water, after which milk should be given. For *oxalic acid*, the antidote is chalk or magnesia in water, by which an insoluble oxalate of lime or magnesia is formed. For *arsenic*, the hydrated peroxide of iron has been regarded as an antidote, but its efficacy is doubtful. Vomiting should be excited by the administration of a scruple of sulphate of zinc in warm water, and after the stomach has been well cleared out, demulcent fluids, such as flour and water, or milk, should be given. *Corrosive sublimate* combines with albumen (white of egg), and forms an insoluble inert mass; *nitrate of silver* is neutralized by chloride of sodium (common salt) dissolved in water; *tartarized antimony* is, to a great degree, rendered inert by the administration of a decoction of bark of gall-nuts; and *acetate of lead* is rendered inert by the administration of sulphate of magnesia, which converts it into an insoluble sulphate of lead. In all cases of suspected poisoning, in which the nature of the poison is not known, the safest course is at once to produce vomiting by sulphate of zinc, or in its absence by a dessert-spoonful of flour of mustard suspended in tepid water, and to continue the vomiting till all the contents of the stomach are discharged, after which milk should be given freely. (See **ARSENIC**).—Most of the known gases—except hydrogen, nitrogen, and oxygen—have a poisonous action when inhaled into the lungs; but in these cases death, if it ensues, is popularly said to be due to *suffocation*, although, strictly speaking, a person who dies from the effect of carbonic acid, or sulphuretted hydrogen, or of any other noxious gas, is in reality just as much poisoned as if he had taken oxalic acid or arsenic. The poisons that may affect the body by direct introduction into the circulation, through a puncture or abrasion, may be derived from the mineral, the vegetable, or the animal kingdom; but, with a few exceptions (as, for example, Wourali Poison, *q. v.*), the poisons derived from the mineral and vegetable kingdoms would act as efficiently if introduced into the stomach as if injected into the circulating blood; while the animal poisons act only by direct introduction into the blood, and are inert when introduced into the stomach.

—By implication, anything which deteriorates, taints, impairs, or destroys moral health or purity; as, the *poison* of sin or infidelity.

—*v. a.* To infect with poison or anything fatal to life; as, to *poison* an arrow.—To attack, injure, or kill by *poison*.—To taint; to mar; to impair, as one's enjoyment; to corrupt, as the morals.

"Notions with which the schools had *poisoned* our youth."
Davenant.

Poisonable, *a.* That may be poisoned.

Poisoner, (*poi'zner*), *n.* One who poisons or corrupts; that which taints or corrupts.

Poison-fang, *n.* See **SERPENT**.

Poi'son-gland, *n.* One of those glands which secrete an acid or venomous liquor, conveyed along an instrument capable of inflicting a wound, are so termed. The glands at the sides of the head of poisonous serpents, those at the base of the hollow jaws of the centipede, or at the aculeated tail of the scorpion, and that communicating with the sting of the bee, are examples.

Poi'son-hemlock, *n.* (*Bot.*) See **CONIUM**.

Poi'son-ivy, **Poi'son-oak**, *n.* (*Bot.*) See **RHUS**.

Poi'sonous, *a.* Having the qualities of, or containing poison; venomous; deadly; corrupting; impairing soundness or purity.

Poi'sonous Dar'nel, *n.* (*Bot.*) See **LOLIUM**.

Poi'sonously, *adv.* With poisonous, fatal, or injurious effects.

Poi'sonousness, *n.* Quality of being injurious, or of being fatal or injurious to health, soundness, or purity.

Pois queniques, *n.* (*Bot.*) See **MORINGACEÆ**.

Poissy, (*poi'see'*), a town of France, dept. of Seine-et-Loire, on the Seine, 10 m. N.N.W. of Versailles; *pop.* 4,300.

Poitiers, (*poi'te-ai*), a city of France, cap. of dept. of Vienne, on the Clair, a tributary of the Vienne, 58 m. S.S.E. of Tours. It has several fine squares, the principal of which is the *Place Impériale*. The most prominent public buildings are the cathedral, hall of justice, and public library, containing 25,000 volumes. *Munuf.* Woollen goods, hosiery, lace, hats, &c. It is the scene of the victory of the English, under Edward the Black Prince, over the French, under John I. and his son Philip, both of whom were taken prisoners, in 1356. *Pop.* 31,034.

Poiton, (*poi-too'*), a former prov. of France, now comprising the depts. of Charente, Deux-Sèvres, Indre-et-Loire, Vendée, and Vienne. *Cap.* Fontenay.

Poitrine, (*poi'treen*), *n.* [Fr.] In ancient armor, the breastplate of a knight; also, the overlapping scales or sheets of metal which covered the breast of a war-horse.

Pokag'on, in *Michigan*, a post-village and township of Cass co., abt. 7 m. N.E. of Niles.

Poke, *n.* [A. S. *pocca*; Icel. *poki*, a sack, a bag.] A pocket; a small bag.—A long, wide sleeve, formerly worn.

To buy a pig in a poke (i. e., a bag), to buy a thing without seeing it, or ascertaining its quality or value.

Poke, *v. a.* [D. *poken*, to poke; Icel. *piaka*, to stimulate, to urge on.] To thrust or push against with anything pointed;—hence, to feel or search for with a long instrument.—To thrust at with the horns, as an ox.

To poke fun, to make fun; to joke; to jest; to act the droll.

To poke fun at, to make a butt or laughing-stock of; to jeer; to ridicule. (Colloquially used.)

—*v. n.* To grope, as in the dark, with the hand or hands thrust forward.

To poke at, to make a thrust with the horns.

Poke, *n.* A thrust; a push; as, to give a person a *poke* in the ribs.

—An Americanism for an idle, dawdling, or stupid person.—A yoke to prevent unruly beasts from breaking through fences. (U. S.)

—*v. a.* To harness with a poke; as, to *poke* an ox.

Poke, *n.* (*Bot.*) See **PHYTOLACCÆÆ**.

Poke-bonnet, *n.* A long, straight, projecting bonnet, like those worn by Quakeresses.

Pokegama, in *Wisconsin*, a township of Douglas county.

Pok'er, *n.* He who or that which pokes.—An iron instrument used in poking or stirring a fire.

(*Naut.*) An instrument employed in driving hoops on masts.

Pok'er, *n.* A game at cards played in the U. States.

Pok'er, *n.* [Dan. *pokker*, the devil.] A bugbear; a hobgoblin. (Vulgar.)

Pok'er Flat, or **POCKET FLAT**, in *California*, a village of Sierra co., abt. 60 m. N.E. of Marysville.

Po'kono, in *Pennsylvania*, a creek flowing into Broadhead's Creek from Monroe co.

—A township of Monroe co.

Po'kono Mountain, or **HIGH KNOB**, in *Pennsylvania*, a spur of the Alleghanies in Carbon and Monroe cos.

Pok'erish, *a.* Alleged to awaken fear; abounding in terrifying influences or objects. (American.)

Pok'er-picture, *n.* A sort of picture made by drawing a heated poker over the surface of white-wood, deal, &c.

Poke-weed, *n.* (*Bot.*) See **PHYTOLACCÆÆ**.

Pok'ing, *a.* Drudging; servile; also, prying.

Pok'ing-stick, *n.* A steel rod formerly used in adjusting the plaits of furs.

Pok'y, *a.* Stupid; dull; inane; spiritless.

Pola'ca, **Pola'cre**, *n.* [Fr. *polaque*; Sp. *polacre*; It. *polacca*.] (*Naut.*) A merchant-vessel used in the Mediterranean, having three pole-masts, without tops, caps, or cross-trees, with a bowsprit of one piece. (*Mus.*) See **OLONAISE**.

Poland, [Fr. *Pologne*.] Once a large and important kingdom situated in the N.E. of Europe, but now expunged from all maps as an independent country. *P.* was bounded on the N. by the Baltic, S. by Wallachia, Moldavia, and Hungary, W. by Germany, and E. by Russia. *P.* was the most level country in Europe, the Carpathian mountains on the S. and W., as a boundary from Hungary, being the only mountain-range of any height in the kingdom. The rivers of chief note are the Vistula, Bug, Niemen, Dvina, Dneiper, and Dniester, either flowing into the Baltic or the Euxine. The principal mineral products are iron, lead, gold, and silver, with salt, which last, from the abundance of the yield, and the size and richness of the mines, was considered as the natural wealth of the country. The climate of

P. is extremely cold, humid, and unhealthy; the soil generally fertile, for though agriculture was always neglected, the yield of corn was enormous. Cattle and wheat are still the chief agricultural products. *P.* was anciently divided into twelve provinces, each of which being governed by a chief, called a *Palatine*. The Poles were originally a tribe of Vandals, whose history is quite unknown before the sixth century. About the year 750, the people, oppressed by their petty chiefs, were resolved to shake off the tyranny of their rulers, and elected a chief magistrate to govern them, under the title of Duke. This state of things endured till the year 999, when the reigning duke, Boleslase, having made himself illustrious by his conquests and military genius, was dignified with the title of king by Otto III., Emperor of Germany, from which time the title became established in *P.*; and, though the crown was elective, it often continued in the same family for many years, passing from father to son. From the 13th century, the Poles became the most warlike nation in Europe, and from the time when the Turks first crossed the Hellespont and settled in Greece, *P.* was denominated the shield of Eastern Europe. In 1674, John Sobieski was advanced to the kingly dignity, and under him the Polish arms acquired a glory that eclipsed all other nations of that age. Sobieski formed a league with the Emperor Leopold, and when that monarch had been defeated, and his capital on the point of falling into the hands of the Turks, Sobieski advanced to Vienna, raised the siege, and, defeating the invaders, drove them back in rout to Constantinople. The war of succession that succeeded, between Charles XII. of Sweden and Frederic Augustus of Saxony, almost ruined the kingdom, and hastened its fatal end. Count Poniatowski, who, in 1764, was elected to the throne by the name of Stanislaus Augustus, was the last king of Poland. Under this unfortunate sovereign, the country became the theatre of a long and devastating war; the cities were pillaged, the country deluged by hosts of Cossacks and brutal Muscovite soldiery, and *P.* in the end divided between Catherine of Russia, Joseph II., emperor of Germany, and Frederic of Prussia. This shameful partition of an ancient nation, which drove Stanislaus in exile to France, was perpetrated in 1772. In 1795, a further dismemberment was effected between the three great powers, and the whole of *P.* absorbed, except the ancient city of Cracow, with a few miles of adjacent country, which, elected into a free and independent state, was left to point to future ages where the once warlike nation of *P.* stood on the physical map of Europe. Of the three spoilers of *P.*, Russia possesses the largest share of territory and population. Frequent insurrections have occurred. In 1830, a revolution took place, but ended in the surrender of Warsaw and the dispersion of the Poles. In 1832, what remained of *P.* was declared a part of the Russian empire. In 1846, an attempt was made at Cracow to recover independence, but it ended in the subjugation of the last remnant of the country, which was annexed to Austria. In 1863, the Polish people, under the leadership of Langiewicz, made another abortive attempt to free their country from the Russian yoke. In 1864, the Russian gov. issued an ukase relieving the Polish peasantry from the oppressive demands exacted by the land-proprietors, and the country has, from that time to the present, remained tranquil.

Po'land, (**Kingdom of**), a part of Russian Poland, constituted a kingdom in 1862, under the grand-duke Constantine as viceroy, comprising the chief part of that which, from 1807 to 1813, formed the duchy of Warsaw. It consists of the central provinces of Poland, bounded all along its frontier by the respective acquisitions of Russia, Austria, and Prussia. *Political Divisions.* These comprise six governments—Warsaw, Radom, Lublin, Plock, Augustowa, and the city of Warsaw. *Area*, 49,290 sq. m. *Desc.* A vast plain covered with extensive forests, and well watered. *Prod.* Rye, buckwheat, oats, barley, hemp, flax, and tobacco. *Min.* Bog-iron, zinc, copper, coal, and salt. The commerce of the country is mostly in the hands of the Jews. *Pop.* (1897) 9,212,500. Lat. between 50° 4' and 55° 6' N., Lon. between 17° 40' and 24° 18' E. See **GALICIA**.

Poland, in *Indiana*, a post-village of Clay co., about 25 m. E. of Terre Haute.

Poland, in *Kansas*, a village of Chase co., about 27 m. W. of Emporia.

Poland, in *Maine*, a post-township of Androscoggin co.

Poland, in *New York*, a township of Chautauqua co. *Pop.* (1897) 1,720. It contains the post-village of POLAND CENTER, about 20 m. S.S.E. of Maysville.

—A post-village of Herkimer co., about 15 m. N.E. of Utica.

Poland, in *Ohio*, a post-village and township of Mahoning co., abt. 174 m. N.E. of Columbus.

Poland, in *Wisconsin*, a village of Washington co., abt. 28 m. W.N.W. of Milwaukee.

Pola'nder, *n.* (*Geog.*) A Pole; a native or inhabitant of Poland.

Polar, *a.* [Fr. *polaire*; L. Lat. *polaris*, from *polos* = Gr. *polos*, a pivot or hinge on which anything turns.] Pertaining, or having reference to the pole or the poles of the earth, or of the world, or to the poles of artificial globes; situated near one of the poles; proceeding from one of the regions near the poles; as, *polar* winds, the *polar* regions, *polar* seas.—Pertaining or relating to the magnetic pole, or to the point to which the magnetic needle is directed.

(*Geom.*) Belonging to, reckoned from, or possessing, a common radiating point; as, *polar* coördinates.

Polar axis, that axis of an astronomical instrument, as an equatorial, which is parallel to the earth's axis.

Polar bear. (Zool.) See BEAR.

Polar circles. (Astron. and Geog.) See ARCTIC and ANTARCTIC CIRCLES.

Polar coördinates. (Math.) Coördinates consisting of a radius rector and its angle of inclination to another line, or a line and plane. — **Polar dial,** a dial having its plane parallel to the earth's axis. — **Polar distance.** See MURAL CIRCLE.

Polar currents. (Geog.) Great ocean currents which flow continually from the polar regions towards the equator, caused by the evaporation in the tropical regions, and by the flowing off of the warmer or surface currents. The ice, with the waters in contact with it, being of less specific gravity than that below the surface, the former, as it accumulates, is driven towards the equator by the earth's diurnal motion, in the most direct channel. The current from the Arctic circle flows in two channels, one descending along the coast of Greenland, and the other coming down through Davis' Strait along the coast of Labrador. They unite at the mouth of the straits, and flow in one current S. along the coast of Newfoundland until it meets the Gulf Stream, with which, however, it does not coalesce, but continues its course as an under-current westward, along the American continent, as has been proved by the observations of Lieuts. Maury and Walsh of the U. S. navy, and other experienced navigators.

Polar equation of a line or surface, an equation which demonstrates the relation between the polar coördinates of every point of the line.

Polar projection, the projection of a portion of the surface of a sphere on the plane of one of the polar circles, the eye, or point of projection, being at the centre of the sphere.

Polarchy. *n.* Same as POLYARCHY, *q. v.*

Polaric. *a.* Same as POLAR (*R.*)

Polarimeter. *n.* (Optics.) Same as POLARISCOPE, *q. v.*

Polarimetry. *n.* [Eng. *polar*, and Gr. *metron*, measure.] Act, art, or process of measuring the polarization of light.

Polaris. *n.* [Lat.] (Astron.) The pole-star.

Polariscope. *n.* [Eng. *polar*, and Gr. *skopein*, to view.] (Optics.) An instrument consisting of a polarizer and an analyzer, employed in the polarization of light, and in the analysis of its properties.

Polaristic. *a.* Belonging to or displaying poles; possessing a polar arrangement or disposition; proceeding from, or bearing upon, the presence of poles or polar characteristics; as, *polaristic* attraction or repulsion.

Polarity. *n.* [Fr. *polarité*.] (Phys.) Property of pointing towards the poles of the earth, as that possessed by a magnet; property in certain bodies which causes them to point to given poles.

Polarizable. *a.* Susceptible of polarization.

Polarization. *n.* [Fr. *polarisation*.] The act of giving polarity to a body; state of being polarized, or of having polarity.

P. of light. See LIGHT.

Polarize. *v. a.* [Fr. *polariser*.] To communicate polarity or polarization to.

Polarizer. *n.* That which polarizes.

Polar Regions. the zones which encompass the North and South Poles within the Arctic and Antarctic circles.

Polarity. *a.* Having a tendency or direction to a pole. (*R.*)

Pol-de-Léon. (St.) a town of France, dept. of Finistère, 10 m. N.W. of Morlaix; pop. 6,704.

Polder. *n.* [D. and Low Ger.] In Belgium and the Netherlands, a term applied to a tract of low land reclaimed and embanked from the sea; also a tract of marshy or fenny land.

Pold'way. *n.* A sort of coarse sacking resembling gummy-cloth, and used for coal-bags, &c.

Pole. REGINALD, Cardinal, an eminent statesman, and archbishop of Canterbury in the reign of Queen Mary, was descended from the blood-royal of England, and b. at Stourton Castle, in Staffordshire, in 1500. He was educated at Sheen Monastery and Magdalen College, Oxford; and after obtaining preferment in the church, went to Italy, where he long resided. During his residence there he became the friend of Bembo, Contarini, Caraffa, and Aloysius Priuli, the last named becoming his constant companion. On his return to England he opposed the divorce of Henry VIII. from Catherine of Aragon in such earnest terms, that the king drove him from his presence, and never saw him more. He again left England, was made a cardinal in Dec., 1536, and had the offer of the popedom on the death of Paul III. After he had left England Henry put to death his mother, and other members of his family, for corresponding with him. He found protection at Rome, was employed as nuncio, and was named president of the Council of Trent. When Mary ascended the throne, *P.* returned to England as legate, in which capacity he absolved the parliament from their sin of heresy, and reconciled the nation to the Holy See. The very day after the burning of Cranmer, the cardinal was consecrated archbishop of Canterbury; soon after which he was elected chancellor of both universities, survived the queen but one day, and d. Nov. 18, 1558. He was buried in Canterbury Cathedral, but his tomb has long lain neglected and scarcely distinguishable.

Pole. *n.* [A. S. *pal*, *pol*, *pit*; Ger. *pfahl*; Lat. *palus*, a pale, a stake.] A long staff, or lengthy slender piece of wood like the stem of a small tree divested of its branches; — used with various applications; as, a tall piece of timber erected in a perpendicular position, as, a *May-pole*, a *liberty-pole*, a *hop-pole*, a *bean-pole*, &c. — A *carriage-pole*; that is, a horizontal pole separating two draught or carriage horses attached to a vehicle. — A rod; a perch; a measure of length of $5\frac{1}{2}$ yards; also,

a square measure of $30\frac{1}{4}$ square yards. — An instrument for measuring.

Under bare poles. (Naut.) Having all the sails in and furled, said of a ship; as, to scud *under bare poles*.

— *v. a.* To furnish with poles for support or inclosure; as, to *pole* hops. — To bear, carry, or convey on poles; as, to *pole* straw into a loft. — To impel by poles, as a boat; to push forward by the help of poles.

Pole. *n.* [Fr. *pole*; It. *polo*; Lat. *polus* = Gr. *polos*, a pivot or hinge on which anything turns.] (Physics.) A pivot or axis on which anything turns, particularly, the axis of the sphere. — One of the extremities of the axis on which the celestial sphere revolves. — One of the extremities of the earth's axis; as, the North or South Pole.

(Astron.) The star which is vertical to the North Pole of the earth. See POLE-STAR.

(Magnetism.) One of the two points in a magnet, &c., in which polar force is manifested; a point of maximum intensity of a force which has polarity; as, the *poles* of a battery. See MAGNET.

— Poetically, that part of the heavens about the pole; hence, the firmament; the sky.

"Were I so tall to reach the pole." — Pope.

Pole of maximum cold, one of the points on the terrestrial sphere, where the mean annual temperature is lowest, as compared with that of all other places around it. — **Poles of the earth, or terrestrial poles.** (Geog.) The two opposite points on the earth's surface, forming the extremities of its axis. — **Poles of the heavens, or celestial poles,** the two opposite extremities in the celestial sphere, coincident with the earth's axis, and around which the heavens appear to revolve.

Pole. *n.* (Geog.) A native or inhabitant of Poland; a Poleander.

Pole-axe. *n.* See BATTLE-AXE.

Polecat. *n.* [Supposed an abbreviation of *Polish cat*.] (Zool.) A sub-genus of quadrupeds in the family *Mustelidae*. The *P. putorius vulgaris*, or *putorius alpinus*, is common to all parts of Europe, and is extremely destructive to poultry, and regarded as the most voracious and insatiable of all the weasel tribe, being generally known under the names of the *Foumart*, *Fitchew*, and *Fitchet*. Its great peculiarity is the possession of a series of small glands near the viscus, which secrete an intensely acrid ammoniacal fluid, which the animal has the power of voiding when pursued or under danger of its life, and which, from its intensely offensive odor, no dog, beast, or man can pass without such a delay as will allow time for the escape of the animal.

Fig. 2135. — POLECAT.

Polecat. *n.* [Supposed an abbreviation of *Polish cat*.] (Zool.) A sub-genus of quadrupeds in the family *Mustelidae*. The *P. putorius vulgaris*, or *putorius alpinus*, is common to all parts of Europe, and is extremely destructive to poultry, and regarded as the most voracious and insatiable of all the weasel tribe, being generally known under the names of the *Foumart*, *Fitchew*, and *Fitchet*. Its great peculiarity is the possession of a series of small glands near the viscus, which secrete an intensely acrid ammoniacal fluid, which the animal has the power of voiding when pursued or under danger of its life, and which, from its intensely offensive odor, no dog, beast, or man can pass without such a delay as will allow time for the escape of the animal.

Polecat. *n.* (Parriery.) See POLL-EVIL.

Pole-lathe. *n.* A simple form of lathe, worked by a cord attached to the treadle, and connecting with an oscillating pole above.

Pole-mast. *n.* (Naut.) A mast made of a single tree or spar, as distinguished from one consisting of several pieces.

Polemie, Polemic. *a.* [Fr. *polémique*; Gr. *polemikos*.] Militant; controversial; disputative; intended to maintain an opinion or system in opposition to others; as, a *polemic* book or treatise, *polemic* divinity. — Engaged in supporting an opinion, argument, or system by controversy; given to disputation; as, a *polemic* writer.

Polemie, Polemicist. *n.* A disputant; a controversialist; one who seeks to controvert the opinion or system advocated by another.

Polemicly. *adv.* With controversy, disputation, or contention.

Polemics. *n. sing.* Contest or controversy, especially in matters of religious doctrine.

Polemist. *n.* A polemic. (*R.*)

Polemoniacæ. *n. pl.* (Bot.) The Phlox family, an order of plants, alliance *Solanales*. DIAG. 5 free stamens, axile placentae, and straight plano-convex cotyledons. — They are herbs with opposite or alternate leaves. Calyx 5-parted, persistent, and generally regular. Corolla 5-lobed, with contorted, or occasionally imbricated aestivation. Stamens alternate with the segments of the corolla; pollen usually of a blue color. Ovary 3-celled; styled 1; stigma trifid. Fruit capsular, 3-celled, 3-valved. Seeds few or many; embryo straight, in the axis of copious horny albumen. There are 17 genera, comprising 104 species. They abound in the temperate parts of North and South America. Many species are cultivated in gardens on account of the prettiness of their flowers.

Polemonium. *n.* The genus PHLOX, *q. v.*

Polemoscope. *n.* [Fr., a field-glass, from Gr. *polemos*, war, and *skopein*, to view.] (Optics.) An oblique perspective glass contrived for seeing objects askant to the eye; — sometimes, also, termed *diagonal* or *side opera-glass*.

Polenta. *n.* [It., from Lat. *polenta*, peeled barley.] (Cookery.) An Italian pudding made of Indian meal. In France, a pudding made of chestnut-meal boiled in milk.

Poler. *n.* One who poles.

Pole-star. *n.* (Astron.) The star towards which either end of its axis of rotation happens to be directed at any particular epoch. Thus the earth's axis, prolonged at the present time towards the north, passes by a star in the constellation *Ursa Minor*, which is

thence called the Pole-star, or *Polaris*. Similarly, the axis prolonged southwards passes through the constellation of the *Southern Cross*.

— By analogy, that which serves as a beacon, guide, or director.

Pollanite. *n.* (Min.) A crystallized peroxide of manganese.

Policas'tro. a town of S. Italy, prov. of Calabria Ulteriore II., 19 m. W.N.W. of Cotrone; pop. 4,500.

Policastro. a seaport-town of S. Italy, prov. of Principato Citeriore, on the Gulf of Policastro, 22 m. S. of Diano; pop. 7,000.

Police. (-lēs), *n.* [Fr., from Gr. *politeia*, civil polity, a state, from *polis*, a citizen, from *polis*, a city.] The government of a city or town; the administration of the laws and regulations of a city or incorporated town or borough. — The internal regulation and government of a kingdom or state.

— A body of civil officers, organized for the preservation of public order, and for enforcing the laws applying to the health and sanitary condition of a community.

Police-constable or officer, a functionary intrusted with the execution of the police regulations of a city or county; a policeman. — **Police-inspector,** a superior police officer. — **Police-jury,** in Louisiana, a body of officers, who collectively exercise jurisdiction in certain cases of police, as levying taxes and the like. (Webster.) — **Police-magistrate,** a judicial law-officer who presides over a police-court. — **Police-sergeant,** a superior police officer. — **Police-station,** the place where the police assemble and report for duty, and to which prisoners are temporarily taken for detention previous to their committal or discharge.

Policeman. (-lēs)-*n.*; *pl.* POLICEMEN. A police-constable.

Policial. (-lish)-*a.* Pertaining or relating to the police. (*n.*)

Polity. *n.* [Fr. *police*; Gr. *politeia*.] The art or manner of governing a city, state, or nation; or that system of measures which the sovereign or ruler of a country adopts and pursues, as best adapted to the interests of the nation; the course or management of public affairs, with respect either to foreign affairs or to internal arrangement or management, with regard to the national prosperity. — Hence, the system of management or administrative method of any nation, community, or institution. — Prudence or wisdom in rulers or individuals in the management of public or private concerns; — hence, worldly wisdom; cunning; stratagem. — Dexterity of management or administrative powers. — In Scotland, the pleasure-grounds on a gentleman's demesne.

— [Sp. *poliza*; It. *polizza*, a bill or schedule, corrupted from Lat. *pl. polyptycha*, registers, account-books, from Gr. *polys*, many, and *ptychos*, a fold.] A warrant or voucher for money in the public funds.

(Law.) The writing or instrument by which a contract of indemnity is effected between the insurer and the insured; as, a *policy* of life insurance, a *policy* of marine insurance.

Interest policy, a policy bearing on the face of it a declaration that the assured possesses a real, *bona fide* interest in the matter assured. — **Floating policy,** a policy of insurance extending over an indefinite time, and applicable to various risks and interests. — **Wager policy,** a policy bearing on the face of it a proof that the contract embodied therein is found on an ideal risk without insured interest to the insurer. — A policy is said to be *valued* when the agreed value of the interest involved is declared on the face of it; *open*, when the value of the interest is not so declared.

Policy-book. *n.* A book kept in an insurance office for the registry of policies granted.

Policy-holder. *n.* One to whom a policy of insurance is granted.

Polignano. (pol-teen-ya'no,) a town of S. Italy, prov. of Terra di Bari, 26 m. E.S.E. of Bari; pop. 4,500.

Poligny. (pol-teen-ya,) a town of France, dept. of Jura, 13 m. N.E. of Lons-le-Saulnier; pop. 6,000.

Poling. *n.* Act of poling; as, the *poling* of hops, beans, &c. — Act of impelling with a pole; as, the *poling* of a boat. — One of the planks, boards, or stakes used to uphold the earth while excavating, tunnelling, &c.

(Gardening.) Act or progress of freeing the walks from worm-casts by means of long poles.

Polish. (pōlish), *n.* [From Pole.] (Geog.) Pertaining or relating to Poland or its people.

Polish. (pōlish), *v. a.* (imp. and pp. POLISHED (pōlish't.)) [Fr. *polir*, *polissant*, from Lat. *polio*, to smooth, furbish.] To make smooth and glossy, usually by friction; as, to *polish* marble, metals, &c. — To refine; to wear off rudeness, rusticity, or roughness of manners; to make refined, elegant, and polite; as, *polished* life.

— *v. n.* To become smooth; to receive a gloss; to take a smooth and glossy surface

— *n.* A smooth, glossy surface produced by burnishing or friction; as, to give boots a bright *polish*. — Refinement; politeness; elegance of manners.

Polishable. *a.* Susceptible of polish.

Polishedness. (pōlish't-ness), *n.* State of being polished, or of being refined and elegant.

Polisher. *n.* The person who, or instrument or substance which, polishes.

Polishing-iron. *n.* A smoothing-iron; a flat-iron.

Polishing-slate. *n.* A hone; a whetstone.

Polishing-snake. *n.* A lithographer's tool.

Polist'ina. a town of S. Italy, prov. of Calabria Ulteriore I., 13 m. E.N.E. of Palmi; pop. 6,000.

Polite. *a.* [Lat. *politus*, from *polis*, to polish.] Polished in manners; having elegance or refinement of deportment; courteous; complaisant; urbane; well-bred; civil.

Polite'ly, *adv.* With elegance of manners; courteously; genteelly.

Polite'ness, *n.* Quality of being polite: polish or elegance of manners or deportment; gentility; good-breeding; urbanity; ease and gracefulness of manners, combined with attention to the convenience of others; refinement; complaisance; courtesy; obliging attentions.

"Wit is by politeness keenest set." — Young.

Politesse, (*-tēs*), *n.* [Fr.] Politeness; good-breeding.

Pol'itic, *a.* [Fr. *politique*; Lat. *politicus*.] Of, or belonging to citizens; political; as, the body *politic*. — Belonging, or having reference to, or promoting a policy, particularly, a national policy; well-devised; adapted to its end, right or wrong; — said of measures; as, a *politic* step, a *politic* scheme. — Wise, prudent, and sagacious in devising and pursuing measures adapted to promote the public welfare; ingenious in originating, or promoting, or carrying out any scheme of national or personal aggrandizement, or in adapting means to the end, whether good or evil; — said of persons; as, a *politic* statesman, a *politic* manner.

Pol'itical, *a.* [Lat. *politicus*; Gr. *politikos*, from *politēs*, a citizen.] Having a regular system of government. (R.) — Pertaining or relating to policy, or to civil government and its administration; pertaining to a nation or state, or to nations and states, as distinguished from civil or municipal bodies; as, a *political* writer, a *political* measure, a *political* economy, the *political* state of Europe, &c. — Public; treating of politics or government; derived from office or connection with government; as, *political* power, a *political* character.

Political arithmetic, the art of ratiocination by statistics; application of figures to political economy.

Political economy, that department of social philosophy which treats of the sources and methods of application of national wealth and prosperity. See PHILOSOPHY.

Political geography, that department of geography which treats of the various countries of the earth, or the different nations into which they are divided, and recounts and illustrates their moral and social status, and their political constitution.

Pol'iticalism, *n.* Party spirit in political affairs.

Pol'itically, *adv.* In a political manner; with relation to the government of a nation or state; having relation to politics.

Pol'it'icaster, *n.* A sucking statesman; a petty politician; an empiric in political matters. (R.)

Pol'itician, (*-tish'un*), *n.* [Fr. *politicien*.] One versed in politics, or in the science of government and the art of governing; one devoted to political matters. — A schemer; a man of artful designs and deep contrivances. (R.)

Pol'it'icist, (*-sist*), *n.* A publicist; a political writer. (R.)

Pol'it'ically, *adv.* In a political manner; sagaciously; artfully; diplomatically.

Pol'itics, *n. sing.* [Fr. *politique*, from Gr. *hē politikē*, from *politikos*.] In its widest acceptation, is both the science and the art of government, or the science whose object is the regulation of man in all his relations as the member of a state, and the application of this science; but it is more commonly used to signify the course pursued by the government of a country, particularly in its relations with foreign states. (See DIPLOMACY.) As a state is a body of men united together for mutual benefit, and the better to carry out the ends of life, politics extends to the various means by which these purposes are effected, and includes whatever is the subject of positive laws. It includes the various branches of international law, constitutional law, political economy, diplomacy, police, &c. The political sciences are usually divided into the abstract, or purely philosophical, and the historical and practical.

Pol'ity, *n.* [Gr. *politeia*.] Policy; the form or constitution of civil government of a nation or state; the constitution or general fundamental principles of govt. of any class of citizens, considered in an appropriate character, or as a subordinate state; as, ecclesiastical *polity*.

(NOTE. *Policy* and *polity* were originally of identical meaning. Among the moderns, however, the term *polity* is applied to the administration of political affairs; *polity* to the structure, form, or basis of government.)

Pol'izzi, a town of Italy, in Sicily, 18 m. S.E. of Palermo; pop. 6,000.

POLK, JAMES KNOX, an American statesman, and 11th President of the U. States, b. in Mecklenburg co., N. C., in 1795. After graduating at the University of North Carolina, P. studied law, and was admitted to the bar in 1820. In 1825, he entered Congress as a Democrat, and speedily became one of the foremost adversaries of the government of J. Q. Adams, and, subsequently, a warm supporter of that of General Jackson. In 1835, P. was elected speaker, and re-elected in 1837, presiding over the House for five sessions. In 1839 he was chosen governor of Tennessee, and, in 1844, elected to the Presidency of the Republic. His tenure of office was characterized by the active prosecution of war against Mexico, and the eventual cession of New Mexico and Upper California to the U. States; the settlement of the Oregon boundary question, and the enactment of the tariff of 1846. Retiring from office March 4, 1849, he died three months afterward.

Fig. 2136. — J. K. POLK.

Polk, in Arkansas, a W. co., adjoining the Indian Territory; area, 935 sq. m. Rivers. Washita river, Saline and Cosselose creeks, and Rolling Fork of North Little river. Surface, much diversified; soil, fertile, and adapted to the production of wheat, Indian corn, &c. Min. Iron, lead, and silver are said to be found in some parts. Cap. Dallas. Pop. (1897) 10,100.

— A township of Calhoun co.

— A township of Montgomery co.

— A township of Newton co.

Polk, in Georgia, a N.W. co., adjoining Alabama; area, about 330 sq. m. Rivers. Enharlee creek, and numerous smaller streams. Surface, diversified; soil, fertile. Cap. Cedartown. Pop. (1897) 15,650.

Polk, in Indiana, a township of Huntingdon co.

— A township of Marshall co.

— A township of Monroe co.

— A township of Washington co.

Polk, in Iowa, a central co.; area, about 576 sq. m. Rivers. Des Moines, Skunk, Raccoon, North, South, and Middle rivers. Surface, generally level; soil, extremely fertile. Cap. Des Moines, which is also the seat of the State government. Pop. (1895) 72,888.

— A township of Benton co.

— A township of Bremer co.

— A township of Jefferson co.

— A village of Lucas co.

— A village of Mahaska co.

— A township of Marion co.

— A township of Taylor co.

— A township of Wapello co.

Polk, in Minnesota, a N.W. co., adjoining North Dakota; area, about 3,030 sq. m. Rivers. Red River of the North, Red Lake, Clear Water, and Wild Rice rivers, besides many smaller streams, and almost innumerable lakes, the largest of which latter is Red Lake (35 m. long) on the N. border of the co. Surface, nearly level; soil, in the vicinity of the streams very fertile. Cap. Crookston. Pop. (1895) 39,209.

Polk, in Missouri, a S.W. central co.; area, about 640 sq. m. Rivers. Pomme de Terre river, East Fork of Sac river, and Lindley's creek. Surface, level or gently undulating; soil, fertile. Min. Iron and lead, and also numerous springs of limewater. Cap. Bolivar. Pop. (1897) 21,450.

Polk, in North Carolina, a S.W. co., adjoining South Carolina; area, about 276 sq. m. Rivers. Green and North Paolet rivers. Surface, hilly; soil, in some parts fertile. Cap. Columbus. Pop. (1897) 6,150.

Polk, in Ohio, a post-village of Ashland co., about 25 m. N.E. of Mansfield.

— A township of Crawford co.

Polk, in Oregon, a N.W. co.; area, about 615 sq. m. Rivers. Willamette, Rickreall, and Luckamute rivers, and South Fork of Yam Hill river. Surface, much diversified; soil, moderately fertile, and well adapted to grazing. Cap. Dallas. Pop. (1897) 8,450.

Polk, in Pennsylvania, a prosperous township of Monroe co.

Polk, in Tennessee, an extreme S.E. co., adjoining North Carolina on the E., and Georgia on the S.; area, about 400 sq. m. Rivers. Hiawasee and Amoe rivers. Surface, mountainous; soil, in some parts fertile. Min. Copper in considerable deposits has been discovered. Cap. Benton. Pop. (1897) 8,990.

Polk, in Texas, an E. co.; area, about 1,200 sq. m. Rivers. Trinity and Big Sandy rivers, and East Fork of San Jacinto river. Surface, nearly level; soil, generally very fertile. Cap. Livingston. Pop. (1897) 11,550.

Polk, in Wisconsin, a N.W. co., adjoining Minnesota; area, about 850 sq. m. Rivers. St. Croix and Apple rivers. Surface, hilly and broken; soil, moderately fertile. Cap. Osceola Mills. Pop. (1895) 16,117.

— A township of Washington co.

Pol'ka, *n.* [Bohem. *půlka*, half.] (Dancing.) A modern dance of Polish origin, resembling the mazourka, and danced by two persons; also, the air played to the dance.

Pol'ka-jacket, *n.* A close, knitted jacket worn by females.

Polk City, or **Polk**, in Iowa, a post-village of Polk co., about 16 m. N. by W. of Des Moines.

Polk'ton, in Michigan, a township of Ottawa co.

Polk'ville, in Alabama, a village of Calhoun co., about 15 m. S.W. of Jacksonville.

Polkville, in New Jersey, a post-village of Warren co., about 10 m. N. by E. of Belvidere.

Polkville, in Pennsylvania, a village of Columbia co., about 18 m. N. of Bloomsburg.

POLL, (*pōl*), *n.* [Du. *bol*, a ball, the head; Ger. *bolle*; allied to *ball* and *bowl*.] The head, or the back part of the head. — A registry of heads, that is, of persons. — The entry of the names of electors who vote for civil officers; — hence, an election of civil officers, or the place of election; as, our candidate headed the *poll*. — A fish. See POLLARD.

— *v. a.* To cut off, as the hair of the head: to clip; to lop; to shear closely; to mow; as, to *poll* the boughs of a tree; to *poll* a sheep, to *poll* grass. — To take, as a list or register of heads or persons. — To enter, as names in a list, for taxation. — To insert into a number, as a voter. — To receive or give, as votes; to bring to the poll; as, he *polled* a majority of votes.

(Law.) To cut in a straight line without indentation; as, a *polled* deed.

To *poll* a jury, to make an individual examination of each member of a jury as to his agreement in a verdict which has been given by them collectively.

P'II, *n.* A nickname for a parrot.

— [Gr. *oi polloi*, the many.] At Cambridge University, England, a student who does not compete for honors, but is satisfied to obtain a degree merely.

Polla, a town of S. Italy, prov. of Principato Citeriore, on the Tanagro, 10 m. N.N.W. of Sala. Manuf. Silk thread, woollen cloth, and caps. Pop. 5,000.

Pollack, *n.* (Zoöl.) See MERLANGUS.

Pollard, *n.* [From *poll*.] A tree that is polled, or that has its top lopped off that it may throw out branches; as, a *pollard*-oak. — A clipped coin; — hence, a spurious piece of money. — The club-fish, or poll. — A mixture of bran and meal, used as food for cattle. — A stag that has cast his horns.

— *v. a.* To poll; to lop the tops off, as trees.

Poll'-book, *n.* A register containing the names of citizens entitled to exercise the voting franchise.

Poll'-clerk, *n.* A person who registers the names of voters at elections, when they appear to deliver their vote.

Polled, (*pōld*), *p. a.* Cropped; clipped; shorn; lopped, as trees; brought to the poll, as votes; having cast the horns, as a stag; — hence, without horns; as, *polled* cattle.

Pollen, *n.* [Lat.] A fine bran or flower.

(Bot.) The fertilizing powder contained in the anther. When mature, each pollen-grain is a cellular body, having two membranous coverings, — an internal or *intine*, and an external or *extine*. The *intine* is thin and transparent, and possesses great power of extension; it is uniform in different kinds of pollen. The *extine* is a firm membrane, which defines the figure of the pollen-grain and gives color to it; it is either smooth or covered with numerous projections, granules, points, minute hairs, or crested reticulations; the color is generally yellow, and the surface is often covered with a viscid or oily matter. Within these coverings a granular semi-fluid matter, called the *fovilla*, is contained; this matter is, without doubt, the essential part of the pollen-grain. At the period of fecundation, or, in other words, when the dehiscence of the anthers takes place, the pollen-grains are thrown upon the stigma, which has become moistened by a sticky juice. The effect of the moisture on the pollen-grain is very remarkable; the *intine* protrudes through one or more of the pores or slits of the *extine*, in the form of a delicate tube filled with the *fovilla*, and called the *pollen-tube*; this penetrates through the tissue of the stigma and the style to the ovules. This tube frequently attains the length of several inches.

Pollen'arions, *a.* Consisting of meal or pollen.

Pollenza, (*pol-lain'tha*), a town of the island of Majorca, 28 m. N.E. of Palma. Manuf. Black woollen cloth. Pop. 6,500.

Poll'icitation, (*-lis-i-ta'shun*), *n.* [From Lat. *pollicitari*, to promise.] A promise; a voluntary engagement.

Polliniferous, *n.* [Lat. *pollen*, and *ferre*, to bear.] Pollen-producing.

Pollinose, *a.* Besprent with a mealy powder somewhat like the pollen of flowers.

Poll'iwig, **Poll'iwog**, *n.* A vulgarism for a tadpole.

Pollock, in Pennsylvania, a township of Lawrence co.

Pol'lock-shaws, a town of Scotland, co. of Renfrew, on the White Cart, 2½ m. S.W. of Glasgow. Manuf. Silk and cotton goods. Pop. 6,500.

Pollute, *v. a.* [Lat. *polluo*, *pollutum*, to soil, to defile, from Gr. *pōlos*, clay, earth.] To dirty; to soil; to defile; to make foul or unclean. — To contaminate; to paint or affect with guilt; to defile morally; to corrupt; to vitiate; to infect or impair by mixture of ill, moral, or physical. — To make unclean or impure, in a legal or ceremonial sense. — To violate; to debauch; to abuse; — used in reference to the sexual organs.

— *a.* Defiled; polluted; violated.

Pollut'edly, *adv.* In a state of pollution.

Pollut'edness, *n.* State or quality of being polluted; pollution; defilement.

Polluter, *n.* One who pollutes or profanes; a defiler.

Pollut'ing, *p. a.* Defiling, or having a tendency to pollute.

Pollut'ingly, *adv.* In a manner to pollute or corrupt.

Pollution, (*-lū'shun*), *n.* [Fr., from Lat. *pollutio*.] Act of polluting; state of being polluted; defilement; uncleanness; impurity. — Among the Jews, the state of being legally or ceremonially unclean.

(Med.) Emission of semen without sexual intercourse.

Pollux, (*Myth.*) A celebrated hero of the Grecian mythology, and twin brother of Castor, after whose death he implored Jupiter to render him immortal. His prayer could not be entirely granted, but Jupiter divided immortality between the brothers, each living and dying alternately.

(Astron.) One of the twins forming the constellation Gemini. Also the name of a star of the second magnitude in the same constellation.

(Min.) A hydrated silicate of alumina, potash, and soda, remarkable for containing 34 per cent. of caesium. It is a rare mineral.

Polo, in Illinois, a prosperous city of Ogle co., about 22 m. S. of Freeport. Pop. (1897) 2,150.

POLO, Marco, the celebrated traveller of the 13th cent., was the son of a Venetian merchant, who, with his brother, had penetrated to the court of Kublai, the great khan of the Tartars. This prince, being highly entertained with their account of Europe, made them his ambassadors to the Pope; on which they travelled back to Rome, and, with two missionaries, once more visited Tartary, accompanied by the young Marco, who became a great favorite with the khán. Having acquired the different dialects of Tartary, he was employed on various embassies; and after a residence of 17 years, all the three Venetians returned to their own country in 1295, with immense wealth. Marco afterwards served his country at sea against the Genoese, and, being taken prisoner, remained many years in confinement, the

1795-1849

tedium of which he beguiled by composing the history of his *Travels*. Marco Polo relates many things which appear incredible, but the general truthfulness of his narrative has been established by succeeding travellers. An English translation of the *Travels of Marco Polo* was published by William Marsden, the orientalist, in 1817.

Polonaise, *n.* [Fr., from *Polonais*, Polish.] A robe worn by ladies of Polish origin.

(*Mus.*) A Polish air and dance; — also called *Polacca*. The musical movement is of three crotchets in a bar, with the rhythmic caesura on the last.

Polonese, *n.* The Polish language.

—*a.* Belonging to Poland; Polish.

Polony, *n.* [A corruption of *Bologna* sausage.] A kind of seasoned sausage made of half-cooked meat.

Polotzk, or **Polock**, a town of the Russian Poland, govt. of Vitebsk, at the junction of the Dwina and the Polota, 60 m. W.N.W. of Vitebsk; pop. 11,000.

Pol'ron, *n.* See POWLDRON.

Pol, (*St.*) a town of France, dept. of Pas de Calais, 20 m. W.N.W. of Arras; pop. 7,100.

Polt, *n.* [Lat. *pulture*, to beat.] A blow or stroke.

Poltava, or **Pultowa**, a govt. of S. Russia, between Lat. 48° 25' and 51° 6' N., Lon. 30° 45' and 36° 40' E., having N. Tchernjov, E. Kharkov, S. Ekaterinoslav, and W. the river Dnieper; area, 19,000 sq. m. The surface is level, and the soil fertile. Rivers, Vorskla, Piriol, and Sula. Prod. Corn, hemp, flax, red-pepper, tobacco, and fruits. Numerous cattle are reared. Manuf. Linen, woollen, and cotton fabrics, leather, and candles. Cap. Poltava.

POLTAVA, or **PULTOWA**, cap. of the above govt., on the Vorskla, 70 m. W.S.W. of Kharkov; Lat. 49° 35' 4" N., Lon. 34° 41' 15" E. Here the Swedes, under Charles XII., were defeated by the Russians, under Peter the Great, in 1709.

Poltén, (*St.*) a fortified town of Lower Austria, on the Frasen, 35 m. W. of Vienna. Manuf. Cotton goods, paper, glass, and earthenware. Pop. 6,000.

Poltin, *n.* A Prussian silver coin equivalent to about 38 cents.

Poltron, *n.* [Fr. and Sp. *poltron*; It. *poltrone*, from *poltro*, dastardly, — *poltrire*, to be idle.] A lazy, idle, sluggish, useless fellow; an arrant coward; a dastard; a wretch without spirit or courage.

—*a.* Base; mean; low; vile; contemptible.

Poltronery, *n.* [Fr. *poltronnerie*.] Cowardice; want of manly spirit; baseness of mind; dastardness.

Poltronish, *a.* Cowardly; characterized by baseness or poltronery.

Polverine, *n.* [It. *polverino*, from Lat. *pulvis*, *pulvis*.] Calcined vegetable ashes brought from the Levant, and used in the manufacture of glass.

Poly, **Poley**, *n.* (*Bot.*) See TEUCURIUM.

Poly, a prefix from the Gr. *polys*, used in many compound words, and denoting *many*; as in *polygamy*, a plurality of wives.

Polyacoustic, *a.* [Gr. *polys*, many, and *akoustikos*, acoustic.] Serving to multiply or magnify sound.

—*n.* An instrument to multiply sounds.

Polyacoustics, *n. sing.* Art of multiplying or magnifying sounds.

Polyadelphous, *a.* [Gr. *polys*, many, and *adelphos*, a brother.] (*Bot.*) A term applied to flowers which have the stamens united into several distinct sets.

Polyandria, *n.* [Gr. *polys*, and *andēr*, *andros*, man, male.] (*Bot.*) The thirteenth class in the Linnean system. It includes those plants the flowers of which have hypogynous stamens more than twenty in number.

Polyandry, *n.* [Gr. *polyandria*.] Plurality of husbands. See POLYGYMY.

Polyanthus, *n.* [Gr. *polys*, many, and *anthos*, flower.] (*Bot.*) A genus of plants, order *Liliaceae*. The most familiar species is the Tuberose, met with in our hot-houses, and prized on account of the fragrance of its flowers. It is a perennial, with bulb-tuberous stems, throwing up from the heart of leaves a tall flowering scape, which supports at top a short, many-flowered spike, of creamy-white, highly-fragrant flowers, the double forms of which are greatly prized.

Polyanthus, *n.* (*Bot.*) An umbellate-flowered va-

Polyarchist, (*-ark-*) *n.* An advocate or upholder of polyarchy.

Polyarchy, *n.* [Gr. *polys*, many, and *archos*, rule.] A government by many persons, of whatever order or class.

Polyautography, *n.* [Gr. *polys*, and Eug. *auto-graphy*.] Art or practice of multiplying copies of one's own handwriting, or of manuscripts, by engraving on stone; — a particular species of lithography.

Polybasite, *a.* [Gr. *polys*, many, and *basis*, base.] (*Chem.*) Combined with, or having several bases.

Polybasite, *n.* (*Min.*) A sulphantimonite of silver, in which part of the silver is replaced by copper, and part of the antimony by arsenic. It occurs in short, tabular, six-sided prisms, which are striated parallel to their bases, opaque, and of an iron-black color by reflected light, but cherry-red in thin slices when viewed by transmitted light.

Polybius, the Greek historian, was b. at Megalopolis, probably about B.C. 204. He was the son of Lycortas, who succeeded Philopoemen as general of the Achaean League, and he profited both by the example and instructions of Philopoemen. In the funeral procession of the latter from Messene to Megalopolis, P. bore the urn containing the ashes of his friend. He was one of the thousand Achaeans carried to Italy in 168, on the charge of not having assisted the Romans against Perseus. He lived in the house of Emilius Paulus, and became the intimate friend of his son Scipio; returned with his fellow-exiles to Greece, in 151; accompanied Scipio to the siege of Carthage, whence he hastened back to Greece, and rendered such services as he could to his country, then conquered by the Romans. His great work is a general history of the affairs of Greece and Rome from B.C. 220 to B.C. 146, the epoch of the fall of Corinth, prefaced by a summary view of early Roman history. Five only of its forty books are now extant, with some fragments of the rest, but these are among the most important literary remains of antiquity; for P. spared no pains to ascertain facts, studied and travelled extensively, had practical acquaintance, both with politics and war, and insight into the relations of things. His aim was didactic, and a large part of his history consists of disquisitions. He wrote several other works, but they have perished. He d. at the age of 82.

Polyeanthro, an island of the Grecian Archipelago, 16 m. E. of Milo; area, 20 sq. m. The surface is rugged, but produces corn. Pop. 2,000.

Polyearpous, *a.* (*Bot.*) Having several pistils in one flower; bearing flowers time after time.

Polyearp, (*St.*) one of the apostolical fathers of the church, and a Christian martyr, who, according to tradition, was a disciple of the Apostle John, and by him appointed bishop of Smyrna. He made many converts, enjoyed the friendship of Ignatius, and opposed the heresies of Marcion and Valentinus; but during the persecution of the Christians under Marcus Aurelius, he suffered martyrdom with the most heroic fortitude, A.D. 166. His short *Epistle to the Philippians* is the only one of his writings that has been preserved.

Polychord, (*-kord*) *n.* (*Mus.*) An ancient instrument having ten strings. — An apparatus for coupling two octave notes of a pianoforte or like instrument. *Simmonds*. —*a.* [Gr. *polys*, many, and *chordē*, a cord.] Many-corded; many-stringed.

Polychroite, *n.* [Gr. *polys*, many, and *chroa*, *chroia*, color.] The coloring matter of saffron, so called from the variety of colors which it exhibits when acted upon by various reagents.

Polychromatic Acid, *n.* (*Chem.*) A compound resulting from the action of nitric acid upon aloes. When used as a dye-stuff it yields a variety of colors.

Polychrome, *n.* Executed in the manner or style of polychromy; as, *polychrome* statuary.

Polychrome Printing, *n.* [Gr. *polys*, many, *chroma*, color.] The name sometimes applied to the reproduction of paintings and colored drawings by mechanical means. The effects sought by *polychrome printing* may be obtained both by lithography and wood-cut printing, although the former process is, up to the present time, the one most generally adopted. The imitation of drawings and paintings by means of lithography is usually termed *chromo-lithography*. In this case the fac-simile of the original is produced by means of an almost infinite variety of tints, obtained by numerous impressions. An outline of the subject is first of all obtained, after which a number of stones, each charged with a particular tint, are impressed, until the desired harmonious blending of color is effected. The sequence of these impressions, the charging of the stones with primary or secondary colors, the application of the sharp dark touches, and the final glaze or finishing wash, together make up an operation requiring the nicest eye for artistic effect. Many of the more elaborate designs, — the "Venice," and the "Ulysses deriding Polyphemus," of Turner, for instance — require from thirty to forty stones to produce a finished print. In the printing of wood-cuts, the process, so far as the use of a great variety of impressions, can be taken by the reader and more economical mode by which ordinary printing-types are struck off. Certain broad effects are capable of being produced; but, as yet, the process of polychrome printing, by means of a succession of wood-blocks, is in a very incomplete and crude condition. Nevertheless, a few years back the idea of copying pictures by mechanical means was deemed to be an impossibility. Fortunately, the practice of multiplying designs has now become an art of great importance and utility, acting, as it does, as a pioneer for original works, and spreading a taste for the fine arts among the public generally.

Polychromy, *n.* [Gr. *polys*, many, and *chrōma*, color.] (*Ancient Art.*) The art of coloring statuary to imitate nature; or particular buildings, in harmonious prismatic or compound tints. Both arts were practised by the nations of antiquity to a considerable extent, and from a very early period.

Polyconic, *a.* [Gr. *polys*, many, and *kōnos*, cone.] Pertaining to, or having many cones; as, a *polyconic* projection.

Polycotyledonous, *a.* Having many cotyledons, or more than two lobes, to the seed.

Polyeracy, (*-tik-*) *n.* [Gr. *polys*, and *kratein*, to rule.] Government by many rulers.

Polydipsia, *n.* [Gr. *polys*, and *dipsa*, thirst.] (*Med.*) Incessant thirst, accompanied by a parched mouth, and occasioned by disease.

Polyembryonate, **Polyembryonic**, *a.* [Gr. *polys*, many, and *embryon*, embryo.] (*Bot.*) Having, or consisting of, several embryos.

Polyembryony, *n.* (*Bot.*) The existence of two or more embryos in the same seed.

Polyfol, *n.* [Gr. *polys*, and *folium*, leaf.] (*Arch.*) An ornament formed by a moulding disposed in a number of segments of circles.

Polygala, *n.* [Gr. *polys*, much, and *gala*, milk.] (*Bot.*) The species *P. vulgaris*, the common Milkwort, is an inconspicuous but beautiful plant, with blue, pink, or white flowers, found in dry pastures and peaty fens. This and many other species have bitter properties; they have been used medicinally as tonics, stimulants, diaphoretics, &c. *P. senega*, the Senega snake-root, is a most interesting species. Its root was first introduced into medicine as an antidote to the bites of snakes, but it is now considered useless in such cases. It is, however, a valuable drug, and is official in this country, being used either in large doses as an emetic and cathartic, or in small doses as an expectorant, diaphoretic, diuretic, and emmenagogue. Its principal virtues are due to the presence of a very acrid solid substance, which has been called *senegin*, *polygalin*, and *polygalic acid*. Many other species, American, European, and Asiatic, possess very similar properties, and one species, *P. venenosa*, a native of Java, has the acrid principle in so concentrated a state as to render the whole plant poisonous. An Arabian species, *P. tinctoria*, is used for dyeing.

Polygalaceae, *n. pl.* (*Bot.*) An order of plants, alliance *Sapindales*. DIAG. Complete (irregular), unsymmetrical flowers, naked petals, 1-celled anthers opening by pores, and corunculate seeds. — Some genera of the order are found in almost every part of the globe. The individual genera are, however, generally confined to particular regions, with the exception of the genus *Polygala*, which is very widely distributed, being found in almost every description of station, and in both warm and temperate regions. A few species have edible fruits, but the order generally is characterized by bitterness and acidity. There are 20 genera and nearly 500 species.

Polygamist, *n.* A person who practises polygamy or maintains its lawfulness; a Mormon.

Polygamize, *v. a.* To practise polygamy; to marry several wives.

Polygamous, *a.* Consisting of, or inclined to polygamy; having a plurality of wives.

(*Bot.*) A term employed to designate those plants which produce both unisexual and hermaphrodite flowers, either on the same or different plants. In the Linnean sexual system, these plants formed a class, *Polygamia*, the genera included in which were perhaps more completely disjoined from their natural allies than those of any other class of that system, forming by themselves a very heterogeneous assemblage.

Polygamy, (*-polig'ā-mē*) *n.* [Gr. *polugamia*, from *polus*, many, and *gamos*, marriage.] The state of a man having more wives than one, or a wife having more husbands than one, at the same time. The latter is sometimes, for the sake of distinction, called *polyandry*. This is a condition which seems alike contrary to nature and reason. From the equality that exists in the two sexes, and from God having originally created but one male and one female, the intention of Providence clearly is that one man should only have one woman; "for," says Dr. Daley, "if to one man be allowed an exclusive right to five or more women, four or more men must be deprived of the exclusive possession of any, which could never be the order intended." Among Eastern nations, however, P. has existed from time immemorial. It prevailed before the flood, and was common among the patriarchs. It was tolerated by the laws of Moses, but the custom appears to have died out; for in the New Testament we meet with no trace of it, and the passages which refer to marriage seem to imply that monogamy alone was lawful. The Mohammedan religion allows a man to have four wives; but the permission is rarely used except by the rich, and the Arabs scarcely ever have more than one wife. In Thibet and a few other places polyandry prevails. Among the ancient Greeks, at least of later times, P. was never practised, although in the Homeric age it seems to have prevailed to some extent. In republican Rome it was unknown, but it afterwards was not uncommon; Marc Antony being mentioned as the first who took two wives. Montesquieu, Voltaire, and others, attempt to account for the prevalence of P. in the East on the ground of the premature old age of the female sex in those regions; the former, also, on the ground of the proportion of females being there greater than of males — an assertion which, though supported by the authority of several travellers, is by no means proved; and even if true, is not at all unlikely to be the result of P. The Germans, according to Tacitus, were almost

Fig. 2137. — POLYANTHUS.

riety of Primrose (*Primula vulgaris*), cultivated in gardens for its variously-colored, gay-looking flowers.

the only barbarous people that were content with a single wife. — See MORMONS.

(Law.) See BIGAMY.

Polygast'ric, a. (Zool.) Having many stomachs; as, polygast'ric animalcules.

Polygenet'ic, a. Possessing several distinct sources; originating in various places or times.

Polygenous, (-ij-) a. [Gr. *polys*, and *gēnein*, to produce.] Consisting of many kinds.

Polyglot, a. [Gr. *polys*, and *glōtta*, the tongue.] Many-tongued; having or containing many, or several, languages; as, a polyglot Bible.

— *n.* A person acquainted with several languages. — A book printed in several languages, which are so displayed on its pages as to be seen at one view, for ease of comparison with each other; more especially, the Holy Scriptures so written and arranged.

Polyglot'tous, a. Speaking many languages; as, the polyglottous tribes of America.

Polygon, n. [Gr. *polys*, and *gonia*, angle.] (Geom.) A plane figure of many angles and sides; particularly, one having more than four angles or sides.

Polygon of forces. (Mech.) The name given to a theorem, as follows: If any number of forces act upon a point, and a polygon be taken, one of the sides of which is formed by one of the forces, and the following sides in succession by lines representing the other forces in magnitude, and parallel to their directions, then the line which completes the polygon will represent the resultant of all the forces.

Polygonaceæ, n. pl. (Bot.) An order of plants, alliance *Sileneales*. DIAG: Orthotropical ovule, and a usually triangular nut. — They are herbs with alternate leaves and ocreate stipules. Flowers perfect, or sometimes unisexual. Calyx free, more or less persistent; imbricated. Stamens hypogynous or perigynous; anthers dehiscing longitudinally. Ovary superior, 1-celled; styles and stigmas 2-3; ovule solitary and orthotropous. Fruit usually a triangular nut. Seed solitary, erect; embryo usually with farinaceous albumen, inverted with a superior radicle. There are about 34 genera and 500 species, generally diffused over the globe, but particularly abundant in temperate regions. They are chiefly remarkable for the presence of acid, astringent, and purgative properties. Rhubarb, sorrel, buckwheat, and bistort-root are some of the useful products of this family. See POLYGONUM.

Polygonal, Polygonous, a. Many-angled.

Polygonal numbers. (Arith.) The successive sums of the terms of an arithmetical series beginning with unity.

Polygonatum, n. [Gr. *polys*, many, *gonu*, joints; it has numerous knots.] (Bot.) A genus of plants, order *Liliaceæ*. The rhizomes of *P. officinale* are sold in the herb-shops under the name of *Solomon's seal*, and are employed as a popular application to remove the marks from bruised parts of the body.

Polygonometry, n. [Gr. *polygōnos*, and *metron*, measure.] The doctrine of polygons.

Polygonum, n. (Bot.) The typical genus of the order *Polygonaceæ*. The roots of *P. bistorta*, commonly called Bistort-root, are a powerful astringent. The leaves of *P. hydropiper* are very acrid; — hence, the common name of Water-pepper which is given to this plant. Blue and yellow dyes are obtained from different species.

Polygram, n. [Gr. *polys*, and *gramma*, a line.] A figure consisting of many lines or sides.

Polygraph, n. [Gr. *polys*, and *graphē*, I write.] An instrument for multiplying copies of a writing easily and expeditiously.

(Bibliog.) A collection of different works, either by one or several authors.

Polygraph'ic, Polygraph'ical, a. Belonging to, or employed in, polygraphy; as, a polygraph'ic instrument. — Performed with, or executed by, a polygraph; as, a polygraph'ic writing.

Polygraphy, n. [Gr. *polys*, and *graphē*.] The art of writing in various ciphers, and of deciphering the same.

Polygyn'ia, n. [Gr. *polys*, and *gynē*, woman.] (Bot.) An order of plants in the Linnean system, having many styles.

Polygyny, n. [Gr. *polys*, and *gynē*, woman.] The practice of having a plurality of wives at the same time.

Polyhalite, n. [Gr. *polys*, and *als*, salt.] (Min.) A hydrous sulphate of lime, potash, and magnesia, with muriate of soda.

Polyhed'ral, Polyhed'rical, a. (Geom.) Many-sided, as a solid body.

Polyhedral angle, an angle bounded by three or more plane angles, having a common vertex.

Polyhed'ron, n. [Gr. *polys*, and *hedra*, a side.] (Geom.) A solid bounded by many planes or faces. Each face is bounded by three or more right lines or edges, and three or more faces by their intersections form a corner.

(Optics.) A multiplying glass.

Polyhed'rions, a. Same as POLYHEDRAL, *q. v.*

Polyhist'or, n. [Gr. *polys*, much, and *istor*.] One learned in various branches of knowledge. (*R.*)

Polyhy'drite, n. [Gr. *polys*, and *ydōr*, water.] (Min.) Same as HISINGERITE, *q. v.*

Polyhym'nia, n. [Lat.; Gr. *Polymnia*.] (Myth.) The muse of lyric poetry.

Polymath'ic, a. Belonging to polymathy; having a knowledge of various branches of learning.

Polymathy, n. [Gr. *polys*, much, and *mathein*, to learn.] Knowledge of many arts and sciences; acquaintance with various departments of knowledge.

Polym'erism, n. [Gr. *polys*, and *meros*, part.] (Chem.) A form of isomerism. See ISOMERIC.

Polym'erous, a. (Bot.) With parts in each set. (Chem.) Characterized by polymerism.

Polymig'nite, n. [Gr. *polys*, and *mignimi*, to mix.] (Min.) A titanate of zirconia, which occurs in long, thin, prismatic crystals, with a brilliant sub-metallic lustre.

Polymorphic, Polymorphous, a. Having several different forms.

Polymorphism, n. (Crystallog.) It has been observed that some substances crystallize in two incompatible forms, that is, in forms belonging to two different systems; such forms have been called *dimorphous*, and the phenomenon itself *polymorphism*. It has been noticed by Laurent, and particularly by Pasteur, that the forms of dimorphous crystals almost always occur near the boundary-lines, as it were, of the two systems. The two forms of crystallized sulphur, carbonate of lime, arsenious anhydride, iodide of mercury, &c., are mutually related in this manner. *P.* frequently enables us to recognize an *isomorphism* (*q. v.*) that would otherwise be overlooked. Thus, the salts of potassium and sodium are for the most part isomorphous, but nitrate of potash usually crystallizes in right rhombic prisms, and nitrate of soda in rhomboids. It appears, however, that both salts can crystallize in both systems, and that the corresponding forms are isomorphous. In fact, the two salts are iso-dimorphous, only that nitrate of potash most commonly affects the one form, and nitrate of soda the other. In a similar manner, the carbonates of lead and lime are iso-dimorphous, the ordinary form of the one corresponding to the rare form of the other. A few substances, such as titanate acid, are trimorphous; and, according to Mitscherlich, the sulphates and selenates of zinc are iso-trimorphous.

(Zool.) Power of assuming different forms.

(Bot.) Power of widely-varying forms.

Polyn'e'mus, n. A genus of fishes, allied to the Perch family, including the Mango-fish, which inhabits the Bay of Bengal, and is accounted one of the most delicious fishes of India, and is named from its beautiful yellow color, resembling that of a ripe mango.

Polynesia, (-nē'zha,) n. [Fr. *Polynésie*, from Gr. *polys*, and *nēso*, island.] A term applied to the numerous islands in the Pacific Ocean, E. of Australasia and the Philippine islands, extending 30° on each side of the equator, lon. from 35° E. to 135° W. The islands are distributed into numerous groups; the principal groups N. of the equator are the Pelew, Ladrone or Mariana, Caroline, Radack, Marshall, Gilbert, and Sandwich Islands. Those S. of the equator are the Ellice, the Phoenix, Union, Feejee, Friendly, Navigator's, Cook's or Harvey's, the Society, Marquesas, Dangerous Archipelago, Pitcairn's Island, and Easter Island, *q. v.*

Polynesian, (-nē'zhan,) a. Pertaining or relating to Polynesia.

Polyn'ia, n. The Russian designation of the iceless sea around the North Pole.

Poly'nomial, n. [Gr. *polys*, and *nomos*, name.] (Math.) An algebraical quantity consisting of many terms.

— *a.* Containing many terms or names; multinomial.

Polyon'matous, a. [Gr. *polys*, and *omma*, the eye.] Many-eyed.

Polyon'omous, a. [Gr. *polys*, and *noma*.] Many-named or titled.

Polyon'omy, n. The description of the same object under different names.

Polyop'tron, Polyop'trum, n. [Gr. *polys*, and *opon*, future.] (Optics.) A glass through which objects appear multiplied, but diminished. It consists of a lens, one side of which is plane, while in the other are ground several spherical concavities. Each of these concavities becomes a plano-convex lens, through which an object appears diminished; and when there are a number of them together, the object will be seen through each, and thus multiplied.

Polyora'ma, n. [Gr. *polys*, and *orama*, a view.] A view of many objects.

Polyp', n. (Zool.) See POLYPUS.

Poly'parous, a. [Gr. *polys*, many, and Lat. *parere*, to produce.] Bringing forth many.

Polyp'ary, n. [From Lat. *polypus*.] Coral; — so termed from being formed by polyps.

Polype'au, a. Belonging, or relating to, or consisting of polyps.

Polypet'alous, a. [Gr. *polys*, and *petalon*, leaf.] (Bot.) See PETAL.

Polyphagous, (-lif'a-gus,) a. [Gr. *polys*, and *phagein*, to eat.] Subsisting on many kinds of food.

Polyph'e'mus. (Myth.) The king of all the Cyclops in Sicily, and son of Neptune and Thoosa. He is represented as a monster of immense strength, and with one eye in the middle of the forehead. He fed upon human flesh, and kept his flocks on the coasts of Sicily, when Ulysses, at his return from the Trojan war, was driven there. The Grecian prince and twelve of his companions visited the coast, and were seized by the Cyclops, who daily devoured two of them in his cave, in which they were confined. Ulysses would have shared the same fate, had he not intoxicated the Cyclops, and put out his eye with a fire-brand while asleep. *P.*, awakened by the sudden pain, stopped the entrance of his cave; but Ulysses made his escape by creeping between the legs of the rams of the Cyclops, which had been put up in the cave. *P.* became enamored of Galatea, but his addresses were disregarded, and the nymph shunned his presence. The Cyclops then crushed the head of Acis, his rival, with a piece of broken rock.

Polyphon'ic, Polyphonous, a. Having or consisting of many voices or sounds.

(Mus.) Contrapuntal.

Polyphonism, Polyph'ony, n. [Gr. *polys*, and *phonē*, sound.] Multiplicity of sounds, as in the reverberations of an echo.

(Mus.) Contrapuntal composition.

Polyph'onist, n. A ventriloquist.

(Mus.) A contrapuntist.

Polyphore, n. [Gr. *polys*, and *phorein*, to bear.] (Bot.) A receptacle which bears many ovaries.

Polyph'yllous, a. [Gr. *polys*, and *phyllon*, a leaf.] (Bot.) Many-leaved; as, a polyphyllous calyx.

Polyp'idom, n. [Lat. *polypus*, and *domus*, house.] A hive of polyps.

Polypiferous, a. [Lat. *polypus*, and *ferre*, to bear.] Producing polyps.

Polypite, n. (Pal.) A fossil polypus.

Polyplec'trum, n. [Gr. *polys*, and *plēktron*, an instrument for striking the lyre.] (Mus.) A musical instrument formerly in vogue.

Polypodia'ceæ, n. pl. (Bot.) An order of plants, alliance *Filicales*. It is the most comprehensive of the natural orders under which Ferns are arranged, including nearly all the species which are known. It is distinguished mainly by the presence, in the spore-cases, of an elastic-jointed ring, which nearly surrounds them, and by the contraction of which they seem to burst open when ripe.

Polypo'dium, n. (Bot.) A genus of Ferns, order *Polypodia'ceæ*, characterized by the sporangia being in circular clusters and naked, and by the edge of the frond being flat, not reflexed. There are six species found in the United Kingdom, but most of them are rare plants, except in certain localities dear to the fern-collector. *P. vulgare*, the common Polypody, found on shady banks, walls, and old trees, is a beautiful fern. The fronds are

Fig. 2138. — POLYPODIUM.

1. *P. dryopteris*; 2. *P. vulgare*.

deeply pinnatifid; the lobes linear-oblong, somewhat serrate, all parallel, the upper ones becoming gradually smaller. The rhizomes of some species of this genus are used medicinally in Peru, and are said to possess sudorific, diuretic, febrifugal, and anti-venereal properties.

Poly'poid, n. [Gr. *polypous*, polyp, and *eidos*, form.] Resembling a polypus.

Polypor'ite, n. (Pal.) A fossil plant having many pores.

Polyp'orous, a. [Gr. *polys*, and *poros*, pore.] Having numerous pores or passages.

Poly'porus, n. (Bot.) A genus of Fungales. One species has been named *P. destructor*, from the circumstance that the development of its spores in timber is one of the causes of dry rot. From various species, *Amadon*, or German tinder, is made.

Poly'pous, a. Characterized by many feet or roots; resembling the polypus; as, a *polypous* concretion.

Poly'poton, n. [Lat., from Gr. *polys*, and *plōsis*, case.] (Rhet.) A figure of speech by which a word is repeated in different forms, cases, numbers, and the like.

Polyp'us, Polyp, n. Eng. pl. POLYPUSES, Lat. pl. POLYPI. [Lat. *polypus*; from Gr. *polypous* — *polys*, many and *pous*, a foot.] An individual member of any of the fixed Cœlenterata (*q. v.*). In Greek and Latin works the term polypus or polypus is usually applied to the octopus (whence its name *poulpe*) or some other cuttlefish, and sometimes to the many-footed wood-louse, oniscus. Reaumur and Jussieu first applied it to the zoöphytes, while Lamarck used it in a wider significance. It has been applied to the Polyzoa and Tunica, but has gradually become narrowed in significance to designate only such animals as the hydra, sea-anemone, and related forms. At one time a class of polypi was recognized, but this designation has become obsolete and the word polyp become simply a general term for individual cœlenterates. These animals are distinctly marked from those of the higher classes in there being no distinction between the digestive cavity and body cavity, they being simply sac-like animals, with a single opening that serves the double purpose of mouth and vent, and a single cavity, in which the process of digestion takes place. But folds of the body wall (*septa*) extend into this open space and thus greatly widen the extent of digestive surface. The mouth is surrounded by tentacles varying in size and number. Some of the lowest of these animals, as the hydra, have remarkable powers of self-recuperation,

portions broken from it developing into complete animals, while the mother form regains its full organism. In these low forms of animal life the cryptogamic members of the plant kingdom are often so closely simulated that it was long difficult to discover their true affinities. Their tentacles, by means of which they obtain their food, are the only parts capable of voluntary motion, and for a long time they were called and looked upon as *animal-plants*. The animal nature of coral polyps was first observed by Imperati and Gesner in 1699, and in 1727 Peyssonell first discovered the living inhabitants of the horny or stony coralline mass. These discoveries were afterward confirmed by Trembley, whose treatise on the structure and animal functions of the playtoid *Hydræ* and *Phormatellæ* of fresh water opened a new field of research into the nature and relations of many neglected forms of life. Polyps, as a rule, are attached by the basal portion to submarine rocks or other extraneous objects, the reproduction of these adhesive forms largely depending on the formation of gemmules or reproductive buds, each of which, when releasing its dependence on the parent form, is endowed with active powers of locomotion, and passes a short period in free swimming life, ultimately becoming attached to its future fixed place of residence. When the gemmules first appear on the surface of the parent animal they are in the form of small black spots, which eventually enlarge, become pyriform, and protrude from the sides of the internal canals of the parent, adhering by their narrow ends. When set free they swim by the aid of cilia. In becoming adherent they fix themselves by the narrow end, which soon spreads to form a broad base of attachment. In addition to this method of increase there is true sexual reproduction. In the sea-anemones the sexes are either separate or united, the eggs are fertilized within the body cavity, and the planula-like larvæ issue from the mouth. In the coral polyps the sexes are usually separate, and even distinct colonies may be entirely male or female, while in other cases hermaphroditic forms occur. As is common in sessile passive organisms, vegetative reproduction, or the budding process above described, is a marked feature. The great majority of corals form colonies, yet division of labor is a very rare phenomenon, each acting as an isolated individual. In the hydrozoan coelenterates a very different state of affairs exists, these possessing a marked division of labor to such an extent that four or five separate duties are fulfilled by the different members of the colony, the form being differentiated in accordance with the character of the work to be performed. The *P.* are divided into the *Eutrocha* and the *Ectoprocta*, the former having the vent within and the latter outside of the circle of tentacles. The former are few in number and are all marine; the latter are numerous and largely subdivided. They exist in all geological ages after the Silurian.

(*Surg.*) A tumor of a pyramidal shape, and a species of zoöphite, appertaining as much to the animal as to vegetable life. A polypus is so named from a popular idea that it has a multiplicity of roots or feet. It is a fungous growth that sometimes manifests itself in different parts of the human body,—most frequently, however, in the nose, the uterus, and vagina, the nose being of all others the most frequent locality in which it is found.—Polypi are of two kinds, the inoffensive and the malignant. Of the first, there are three kinds,—the *fleshy* polypus (red, soft, and free from pain, like a piece of flesh hanging down from the part), the *gelatinous* (a soft, semi-transparent tumor, yellow in color), and the third, the *hydatid* polypus (which assumes the form of a cyst, and may burst at any moment, and discharge its contained fluid).—The malignant or cancerous polypus is hard, scirrhous, and painful, and is only, with few exceptions, found in old people, or those somewhat advanced in life. This variety is sometimes called *fungoid* polypus.—The cause of this disease is quite unknown. Theories have been advanced to show that it proceeds from some hereditary taint of the blood or fluids of the body, and that, like cancer, it depends on the presence of fungoid animalculæ in the blood; but as yet no reliable explanation has been advanced to prove on what this fungous growth really depends.—The treatment of polypi, whether in the nostril, vagina, or uterus, consists in simple extirpation, the *speculum* being used in some situations to show their relative positions. A ligature is then thrown round their peduncle, or root, and tied; and when the growth has been thrown off by sloughing, the base or root is cicatrized with nitrate of silver.

Poly'schematist, (-skē-,) *n.* [Gr. *polys*, and *schema*, manner.] Existing in a diversity of forms or fashions.

Poly'scope, *n.* [Gr. *polys*, and *skopein*, to view.] A multiplying glass.

Polysephalons, *a.* [Gr. *polys*, and Eng. *sepal*.] (*Bot.*) Possessing more than one sepal.

Poly'spast, *n.* [Fr. *polyspast*; Gr. *polyspastos*.] A term used by some of the old writers on mechanics, to denote an assemblage of pulleys for raising heavy weights.

Poly'sperms, *a.* [Gr. *polys*, and *sperma*, seed.] (*Bot.*) Many-seeded; as, a *polyspermous* capsule.

Polyspo'rons, *a.* [Gr. *polys*, and *sporos*, spore.] (*Bot.*) Having many spores.

Polysyllab'ic, **Polysyllab'ical**, *a.* [Fr. *polysyllabique*; Gr. *polys*, many, and *syllabē*, syllable.] Consisting of many syllables, or pertaining to a polysyllable.

Poly'syllabic, (-sizm,) **Poly'syllabism**, *n.* State or quality of having many syllables.

Polysyllable, *n.* [Gr. *polys*, and Eng. *syllable*.] A word consisting of more syllables than three.

—*a.* Polysyllabic.

Polysyn'deton, *n.* [Gr. *polys*, many, and *syndetos*, bound together.] (*Rhet.*) A figure of speech by which the copulative is often repeated, as in the sentence, "I came, and saw, and spoke, and conquered."

Polysyn'thetic, *a.* [Gr. *polys*, and *synthesis*, a composition.] Making a multiplied compound.

Polytechnic, **Polytechnical**, (-tēk'nīk,) *a.* [Fr. *polytechnique*; Gr. *polytechnos*—*polys*, and *technē*, an art.] Comprising or embracing many arts;—applied especially to a school in which many branches of science and art are taught, with particular reference to their special application.

Polythalamous, *a.* [Gr. *polys*, and *thalamos*, a chamber.] Many-chambered, as certain cephalopods having multilocular shells.

Polythe'ism, *n.* [Fr. *polythéisme*; Gr. *polys*, many, and *theos*, God.] The doctrine of a plurality of gods; opposed to Monotheism, which maintains the existence only of one. The two extremes of *P.* may be regarded as Dualism, or the belief in two supreme beings—a good and an evil, and Pantheism, which regards all nature as but God. (See **PANTHEISM**.) Some consider Polytheism as having originated in a corruption of Monotheism; others regard it as deification of the powers of nature. *P.* differs from idolatry in not of necessity including the motion of forms, which the latter always does, whether it refers to one god or several.

Polytheist, *n.* A believer in, or one who supports the doctrine of, a plurality of gods.

Polytheis'tic, **Polytheis'tical**, *a.* Pertaining or relating to Polytheism; as, *polytheistic* worship.—Maintaining a belief in a plurality of gods; as, a *polytheistic* writer.

Polytheize, *v. n.* To believe in a plurality of gods; to uphold or disseminate the doctrine of Polytheism.

Polyto'mous, *a.* [Gr. *polys*, many, and *tomē*, an incision.] (*Bot.*) Subdivided into many distinct, subordinate parts, which, owing to want of junction with the petiole, are not perfect leaflets;—said of leaves.

Poly'zoa, *n.* [Gr. *polys*, many, and *zoōn*, an animal.] (*Zoöl.*) See **BRYOZOA**.

Poly'zoan, **Poly'zoon**, *n.* (*Zoöl.*) One of the *Polyzoa*, or *BRYOZOA*, *q. v.*

Pomace, (pūm'as,) **Pom'inage**, *n.* [L. Lat. *pomacium*.] The substance of apples or of similar fruit crushed by grinding.

Poma'ceæ, *n. pl.* [Lat. *pomum*, an apple.] (*Bot.*) That division of the natural order *Rosaceæ* to which the Apple, Pear, Quince, and Medlar belong. It differs from *Rosaceæ* proper in having an inferior ovary.

Poma'ceons, (-shūs,) *a.* [Lat. *pomum*, apple.] Consisting of apples.—Resembling pomace.

Pomade, *n.* [Fr. *pommade*, from Lat. *pomum*, the preparation having been formerly made from apples.] A perfumed unguent;—especially, a fragrant ointment for the hair.

Pomara'pe, (-pa-ra'pa,) a summit of the Andes in Bolivia; Lat. 18° S. S., Lon. 60° S. W.; height, 21,700 ft.

Poma'ria, in *S. Carolina*, a post-village of Newberry dist., abt. 32 m. N.W. of Columbia.

Poma'rico, a town of S. Italy, prov. of Potenza, 10 m. S.S.E. of Matera; pop. 5,000.

Poma'ta, a village of Bolivia, abt. 97 m. W.N.W. of La Paz. It is situated on the S.W. shore of Lake Titicaca, 13,040 feet above sea-level.

Poma'tum, *n.* A perfumed pomade or ointment for the hair.

—*v. a.* To apply pomatum to, as the hair.

Pom'ba, (*Vila da*,) a town of Brazil, abt. 69 m. E.S.E. of Ouro Preto.

Pom'bal, a town of Portugal, prov. of Estremadura, 20 m. N.E. of Leiria; pop. 5,000.

Pom'bal, a town of Brazil, abt. 250 m. W. of Parahiba; pop. 4,000.

Pome, *n.* [Lat. *pomum*.] (*Bot.*) The inferior syncarpous fruit, well known under the forms of apple, pear, quince, medlar, haw, &c. It is indehiscent and fleshy, 2 or more celled, and few-seeded. The *endocarp* (Fig. 940), is papery, cartilaginous, or bony; this is surrounded by a fleshy mass, consisting of *mesocarp* and *epicarp*, which is usually considered to be formed by the cohesion of the general parenchyma of the ovary with the calyx. In the apple, for example, the separable skin is the *epicarp*; the fleshy part, which is eaten, the *mesocarp*; and the core, containing the seeds, is the *endocarp*. According to some botanists, the outer fleshy portion of the *pome* is an enlarged concave receptacle, and the bony or cartilaginous cells are distinct carpels, the walls of which are formed of the three layers of the pericarp, completely united and indistinguishable. The *pome* characterizes the sub-order *Pomeæ*, of the order *Rosaceæ*. (See **FRUIT**.)

Pomegranate, (pūm-grănē't,) *n.* (*Bot.*) See **PUNICA**.—An ornament like a pomegranate, attached to the ephod of the Jewish high-priest.

Pomel', *n.* (*Arch.*) A brass or knob used as an ornamental top of a conical or dome-shaped roof of a turret, &c.

Pomera'nia, a prov. of Prussia, bordering on the S. coast of the Baltic, having on the E., S., and W. West Prussia, Brandenburg, and Mecklenburg; area, 12,000 sq. m. The surface is generally flat, and in parts marshy, and the soil moderately fertile. *Rivers*, Oder, Leba, Stolpe, Rega, Persante, Ucker, Peene, and Ihna. The Iaff is a large inland bay, or rather lake, of an oblong form, which communicates with the Baltic by the mouths of the Oder. *Prod.* Wheat, barley, rye, oats, potatoes, flax, hemp, and tobacco. Great numbers of cattle are reared. *Min.* Iron, alum, and salt. *Manuf.* Linen and woollen stuffs, iron and glass-ware. *Chief towns*, Stettin, Stralsund and Kreslin.

Pomeroon', a river of British Guiana, flowing into the Atlantic Ocean, abt. 40 m. N.W. of the æstuary of the Essequibo.

Pomero'y, in *Ohio*, a city, cap. of Meigs co., about 100 m. S.E. of Columbus. It is well built, conveniently located for trade, and contains numerous manufactories. *P.* owes its rapid growth chiefly to the rich coal mines in the vicinity and the extensive salt manufactories there located. *Pop.* (1897) 5,350.

Pome'roy, **Pomeroy'ai**, *a.* [Fr. *pomme*, and *roi*, king.] The royal apple.

Pom'ey, *n.*; *pl.* **POMERS**. [Fr. *pommé*, like an apple.] (*Her.*) A roundel; the figure of an apple blazoned in green.

Pom'fret, *n.* (*Zoöl.*) The common name of the acanthopterygious fishes comprising the genus *Stromateus*. They have the same compressed form as the Dory (*Zeus*), and the same smooth epidermis; but the muzzle is blunt, and not retractile. They are found in the Mediterranean, the Indian Ocean, and the Pacific.

Fig. 2139. — POMFRET, (*Stromateus niger*.)

Pom'fret, a town of England. See **PONTE-FRACT**.

Pom'fret, in *Connecticut*, a post-village and township of Windham county, about 33 miles north by east of Norwich.

Pomfret, in *New York*, a township of Chautauqua co.

Pomfret, in *Vermont*, a post-township of Windsor co.

Pom'fret-cake, *n.* A licorice-cake.

Pomiferons, *a.* [Fr. *pomifère*; Lat. *pomifer*, from *pomum*, apple.] (*Bot.*) Apple-bearing;—applied to plants of the cactaceæ class, in contradistinction to the *bacciferous* or berry-bearing plants.

Pom'mage, *n.* See **POMACE**.

Pomme de Terre River, in *Missouri*, rises in Greene co., and flowing N. enters the Osage River in Benton co.

Pommée, (pom-ma') *a.* (*Her.*) With the ends terminating in rounded bosses, resembling apples;—said of crosses.

Pommel, (pūm'mel,) *n.* [Fr. *pommeau*, from Lat. *pomum*, an apple.] A knob, ball, or boss; especially, the knob on a sword-hilt; the protuberant part of a saddle-bow; the rounded knob on a chair-frame.—*v. a.* To beat or bruise, as with a *pommel*—that is, with something thick, heavy, or bulky.

Pommellion, (-mēl'yūn,) *n.* [Lat. *pomilio*, pygmy.] (*Ord.*) The cascabel of a cannon. (*R.*)

Pom'melled, (-mēl,) *a.* (*Her.*) Furnished with pommels, as a sword, dagger, and the like.

Pom'melling, *n.* A beating or bruising.

Pomologist, *n.* [Fr. *pomologue*.] A lover of pomology.

Pomology, (-jŷ,) *n.* [Fr. *pomologie*, from Lat. *pomum*, fruit, apple, and Gr. *logos*, discourse.] The sciences of raising fruits.

Pomona, *n.* [Lat. *pomum*, apple.] (*Myth.*) The Italian goddess of fruit-trees.

Pomona, or **MAINLAND**, the largest of the Orkney Islands, and nearly in their centre; area, 150 sq. m. It is generally barren, and in parts covered with marshes, with several fresh-water lakes. Large numbers of swine are raised. *Towns*, Kirkwall and Stromness. *Pop.* 16,141.

Pomona, in *Idaho*, an unimportant village of Boise co., about 33 m. N.E. of Boise City.

Pomon'ic, *a.* [Lat. *pomum*, apple.] Pertaining, or having reference to apples.

Pomp, *n.* [Fr. *pompe*; Lat. *pompa*, from Gr. *pompē*, a solemn procession.] A procession distinguished by ostentatious splendor.—Show of splendor or magnificence; ostentatious parade; pageantry.

—*v. n.* To make an ostentatious display of pomp. (*R.*)

Pompadour, JEANNE ANTOINETTE POISSON, MARCHIONESS DE, (pom'pa-door,) the mistress of Louis XV., in whose affections she succeeded Madame de Chateauroux, was the daughter of a financier, and b. in 1720. At the age of 21 she was married to M. d'Etioles; first attracted the king's notice while he was hunting in the forest of Senart; appeared at court in 1745, under the title of Marchioness de Pompadour; and d. in 1764, aged 44 years. She certainly used her influence with the king in promoting the progress of the fine arts, but her cupidity and extravagance were unbounded; and many of the evils which oppressed France in the succeeding reign have been attributed to the power she possessed of filling the most important offices of the state with her favorites, whose measures were generally inglorious, both at home and abroad.

Pom'pei, a city of Italy, in the plain at the foot of Mount Vesuvius, and about twelve or thirteen miles south-east from Naples. Pompeii seems to have been one of the fashionable provincial cities of the Roman empire at the commencement of the Christian era; but, with the neighboring city of Herculaneum, was entirely destroyed by an eruption of Vesuvius, A.D. 79, being buried under the incessant shower of lava-stones which fell on it without intermission for many hours, entirely altering the physical aspect of the surrounding country, and totally obliterating every vestige of the two contiguous cities. Though the greater number of the inhabitants escaped, many hundreds must have perished in their

houses, as the skeletons of soldiers on guard, priests at their refection, and others found in the excavations unquestionably certify. From the year 79 to 1750,—when the city was exhumed, after nearly seventeen centuries,—this interesting memorial of Roman luxury, greatness, and civilization remained unnoticed and forgotten, beneath the feet of succeeding generations, and at last was only brought to light by an accidental operation of some peasants. It would be impossible in our brief space to attempt even an enumeration of the objects discovered in this now famous city, or to detail the valuable results which have flowed from the work of excavation. Suffice it to say that in all the departments of social life—in the affairs of domestic and of public life, of the worship of the gods, and the shows of the arena—in architecture (see Fig. 231), painting, and sculpture—in flue, in all the appliances of comfort and of luxury in a wealthy community, we have, as it were, a living picture of a city 1,800 years ago.

Pom'pel'mous, or **Pompel'moose**, *n.* (*Bot.*) The fruit of *Citrus pomel'mous*. See CITRUS.

Pom'perung River, in Connecticut, enters the Housatonic River in New Haven co.

Pompey, (CNEIUS POMPEIUS MAGNUS,) (*pon'pe*) son of Pompeius Strabo, a Roman general, was born 106 B. C. He distinguished himself against the enemies of the Roman senate, both within the state and without, and at last fell in the struggle against Caesar for absolute power. The events which mark his career are briefly these:—Like his father, under whom he commenced his military career, serving against Marius, *P.* ranged himself with the aristocratic party of the republic. He was in his twenty-third year only when he raised three complete legions, 60,000 men, at his own expense, and took the field in behalf of Sylla—at that juncture returning from his expedition against Mithridates. By his twenty-sixth year *P.* had defeated the remains of the Marian party in Cisalpine Gaul, Sicily, and Africa, and on his return to Rome, B. C. 83, was hailed *Magnus*—the great—by Sylla; his audacious perseverance also procuring for him the honors of a triumph. On the death of Sylla, in B. C. 78, Pompey went as proconsul to Spain, where the plebeian war was continued by Sertorius, and after a four years' arduous struggle, he remained master of the field, his opponent having been betrayed and assassinated. He returned to Italy in time to give the finishing blow to the similar victories of Crassus, and in B. C. 70 Pompey and Crassus were elected consuls. In possession of this office, he restored the tribunitial power, and afterwards dismissed his army, remaining at Rome as a private citizen. In the beginning of the year B. C. 67, he was intrusted with extraordinary powers, in order to destroy the lawless bands and the piratical adventurers who infested the coasts of the Mediterranean, and having effected this, he was made absolute dictator in the East, and superseded Lucullus in the command against Mithridates. The latter he completely routed in B. C. 66, and soon after becoming master of Asia Minor, pursued his conquests through Syria and Palestine as far as the Red Sea. For these services he obtained a third magnificent triumph at Rome, and in B. C. 60 joined Caesar and Crassus in the *triumvirate*, the former of whom gave him his daughter Julia in marriage. Succeeding events caused *P.* to draw closer to the senatorial party, and with him, as the representative of the patrician republic, went Cato, the honest enemy of the ambition of Caesar. In B. C. 54 Julia died; in the year following, Crassus was slain in Asia; and now the hostility between Caesar and Pompey rapidly developed itself. The former having applied for the consulship, refused to present himself in Rome as a private citizen, and a decree of the senate declared him a public enemy unless he resigned his command. Instead of doing so, Caesar crossed the Rubicon with his troops B. C. 49, and *P.*, accompanied by Cato, Cicero, and the other nobles of Rome, fell back upon Greece, where the great battle of Pharsalia decided his fate. *P.* was advised to seek an asylum in Egypt, then ruled by a sovereign he had protected, Ptolemy XII. He was received with pretended friendship, but treacherously murdered as soon as he had stepped ashore, B. C. 48, and his head being cut off, it was sent to Caesar, who turned away from it and could not restrain his tears. *P.* fell, and with him the republic of Rome, for want of the art of government; the brilliancy of his early victories carried him to power, but the remembrance of his greatness in the field was a poor compensation for the anarchy that prevailed at Rome. CNEIUS, son of *P.*, who endeavored to carry on the war against Caesar, was defeated and killed at Munda, B. C. 45. SEXTUS, the younger brother of Cneius, continued the war for 10 years, and rendered himself formidable as a naval commander; but he was at last defeated and killed by order of Antony, B. C. 35.

Pompey, in New York, a post-township of Onondaga co., containing the post-villages of Pompey Centre and Pompey Hill, about 146 miles west of the city of Albany.

Pompo'leon, *n.* (*Bot.*) Same as POMPELMOUS, *q. v.*

Pompon, *n.* [*Fr.*] (*Mil.*) A tuft or bob of wool worn on the front top of a soldier's shako, in lieu of a feather.

Pompos'ity, *n.* [*Sp.* *pomposidad*.] The state or quality of being pompous; pompousness; ostentation.

Pompo'so, *a.* [*It.*] (*Mus.*) Grand and stately.

Pompous, *a.* [*Fr.* *pompeux*; *Lat.* *pomposus*.] Splendid; magnificent; displaying pomp or showy grandeur.—Ostentatious; boastful; swelling, as with overweening pride or personal consequence; as, a *pompous* individual; *pompous* vanity, &c.

Pom'pously, *adv.* Magnificently; splendidly; ostentatiously; with great parade, show, or display.

Pom'pousness, *n.* State or quality of being pompous; magnificence; splendor.

Pompton, in New Jersey, a small river flowing into the Passaic River, between Passaic and Morris cos.—A post-village and township of Passaic co.; abt. 70 m. N.E. from Trenton.

Pomum Adami. [*Lat.*, Adam's apple.] (*Anat.*) The name given to the sharp protuberance observable in the throat of men, and is formed by the union of the two thyroid cartilages, the external protection of the larynx, or organ of voice. These cartilages being much smaller in females than in males, accounts for the apparent non-existence of the *Pomum Adami* in women.

Ponea, in Nebraska, a city and township, cap. of Dixon co., on the Chic. St. P., Minn. & Omaha R.R., 20 m. W.N.W. of Sioux City, Iowa; in a productive agricultural region. *Pop.* (1897) 1,550.

Poneho, (*pon'tcho*), *n.* [*Sp.*] A kind of blanket-cloak or cape worn by Hispano-Americans, having a slit in the middle for the head to pass through.

Pond, *n.* [*A. S.* *pyndan*, to shut in; *Lat.* *pontus*; *Gr.* *pontos*, the sea.] A circumscribed and stagnant body of fresh water, either natural or artificial, and smaller than a lake; a pool; a mere.

v. a. To form into a pond.

Pond Eddy, in New York, a post-village of Sullivan co., abt. 109 m. N.W. of New York city.

Ponder, *v. a.* [*Fr.* *pondérer*; *Lat.* *ponderare*, from *pondere*, to weigh.] To weigh in the mind; to consider; to examine with deliberate thought.

v. n. To think; to muse; to cogitate; to deliberate;—with *on*.

Ponderability, *n.* [*Fr.* *pondérabilité*.] State or condition of being ponderable.

Ponderable, *a.* [*Fr.*; *Lat.* *ponderabilis*.] Susceptible of being weighed.

Ponderal, *a.* [*Fr.*] Estimated or determined by weight rather than by bulk or number;—distinguished from *numeral*; as a *ponderal* drachma, *ponderal* libra.

Ponderance, *n.* [*Lat.* *ponderans*—*ponderare*, to weigh.] Weight; gravity; heaviness.

Ponderer, *n.* One who thinks, ponders, or deliberates.

Ponderingly, *adv.* With cogitation or deliberation.

Ponderosity, *n.* [*O. Fr.* *ponderosité*.] State of being ponderous; weight; gravity; ponderance.

Ponderous, *a.* [*Lat.* *ponderosus*.] Weighty; very heavy; as, a *ponderous* load.—Important; momentous; as, a *ponderous* undertaking.—Forcible; strong; impulsive; as, a *ponderous* blow; *ponderous* spar.

Ponderously, *adv.* With great weight or ponderosity.

Ponderousness, *n.* Weight; gravity; state of being ponderous.

Pondicherry, a town of Hindostan, the principal French settlement on the coast of Coromandel, 83 m. S.S.W. of Madras; *Lat.* 11° 57' N., *Lon.* 79° 49' E. It is situated on a flat sandy plain near the sea, is regularly built, and is the centre of a large trade with the rest of the Coromandel coast, Sumatra, the Isle de Bourbon, the Mauritius, and Senegal. It was purchased by the French from the Bejapoor sovereign in 1672.

Pond Island, in Maine, an island and lighthouse at the entrance of Kennebec River. It exhibits a fixed light 52 ft. above the sea; *Lat.* 43° 42' N., *Lon.* 69° 44' W.

Pond River, in Kentucky, enters Green River between Hopkins and Muhlenburg cos.

Pond-weed, *n.* (*Bot.*) See POTAMOGETON.

Pone, *n.* A kind of bread, made, particularly in the Southern States, of corn-meal, often with eggs and flour; also called *corn-pone*.

Ponent, *n.* [*Sp.* *poniente*, the west, from *Lat.* *ponens*—*ponere*, to set.] Western; occidental;—opposed to *levant*. (*R.*)

Pongee, (*-jee'*), *n.* An inferior quality of India silk.

Ponghee, (*-ge'*), *n.* In Burmah, one of the higher order of priests.

Pongo, *n.* (*Zoöl.*) This term was used to define the large adult form of the Orang-utang (*Pithecius satyrus*), which was supposed, even in the time of Cuvier, to be a distinct species; the term *pongo*, borrowed from Africa, being applied to denote the great anthropoid ape of the Malay Archipelago.

Poniard, (*pon'yard*), *n.* [*Fr.* *poignard*.] A small, pointed dagger; a stiletto.

Poniatowski, JOSEPH, PRINCE, (*pon'e-a-tow'ske*.) This distinguished Polish general was born at Warsaw, in 1763, and when young entered the Austrian service, but when the Poles rose against Russia he quitted it, and joining his countrymen, fought with them under Kosciusko. Upon the defeat of this general, *P.* sought refuge in Vienna, till the French entered Warsaw in 1806, when he was appointed to the command of the Polish army which was to cooperate with the French against Russia. In 1812 Napoleon gave him the command of the 5th corps of the Grand Army, which consisted almost entirely of Poles. In the subsequent battles he distinguished himself by his skill and bravery, and covered himself with glory in the retreat from Moscow. Napoleon estimated his services so highly, that shortly before the battle of Leipsic he created him a Marshal of France. After this disastrous battle, the French were flying in utter confusion over the Elster; the bridge was blocked up, prisoners were taken by thousands, and many who plunged into the stream perished. The whole of the rear-guard fell into the hands of the allies, together with the King of Saxony and his whole court. Marshal Macdonald with difficulty gained the opposite bank, but the unfortunate *P.* was drowned in the attempt, 1813.

Poniatowski, STANISLAUS, COUNT DE, father of Stan-

islaus Augustus, king of Poland, castellan of Cracovia, and a companion-in-arms of Charles XII., flourished 1678-1762.

Pons, a town of France, dept. of Charente-Inférieure, 12 m. from Saintes; *pop.* 7,000.

Pontac, *n.* [*From Pontac*, a town in the S. of France.] A kind of Constantia wine, brought from the Cape of Good Hope.

Pont-a-Mous'son, a town of France, dept. of Meurthe, on the Moselle, 16 m. N. of Nancy. *Manuf.* Woollen-stuffs, earthenware, printing-type, tobacco-pipes, and beet-root sugar. *Pop.* 8,115.

Pontarlier, (*pon-tar'le-ai*), a town of France, dept. of Doubs, on the Doubs, 40 m. from Besauncon. *Manuf.* Paper and leather. *Pop.* 5,000.

Pontchartrain (Lake), in Louisiana, a considerable sheet of water, abt. 5 m. N. of New Orleans, bordered by the parishes of St. Tammany, Livingston, John Baptist, and Orleans. It covers an area of abt. 950 sq. m., is nearly circular in outline, and has a maximum depth of 20 feet. It communicates with the Gulf of Mexico eastwardly through Lake Borgne, and with the Mississippi River southwardly through St. John's Bayou. It is also connected with Lake Maurepas on the W.

Ponte-Corvo, a town of Italy, prov. of Terra di Lavea, on the Garigliano, 20 m. S.E. of Frosinone, and 37 N.W. of Capua. It gave the title of prince to Bernadotte. *Pop.* 8,871.

Ponte-Delga'do, a seaport, and largest city of the Azores, on the S. side of the island of St. Michael; *Lat.* 37° 45' 10" N., *Lon.* 25° 41' 15" W. It is strongly fortified, and has considerable trade. *Chief exp.* Wheat, maize, and fruits. *Pop.* 22,000.

Pontederaceæ, *n. pl.* (*Bot.*) An order of plants, alliance *Liliales*. *DIAG.* A naked perianth, circinate when withering, anthers turned inward, and nearly albumen. They are unimportant aquatic plants, natives of America, East Indies, and Africa.

Pontee, *n.* [*Fr.* and *Sp.* *pontil*.] An instrument used in the manufacture of glass, for taking the hot glass out of the fusing-pot. (Also written *pontil*, *puntel*, and *puntly*.)

Ponte'fraet, or **Pom'fret**, a town of England. co. of York, near the Aire, 21 m. S.W. of York, and 174 m. N. of London; *pop.* 5,346.

Ponte Lagosen'ro, a town of Italy, prov. of Ferrara, on the Po, 4 m. N. of Ferrara; *pop.* 6,000.

Pontevedra, a town of Spain, prov. of Galicia, on the Crez, 35 m. S. of Santiago; *pop.* 6,630.

Pontia, *n.* (*Zoöl.*) A genus of diurnal *Lepidoptera*, containing many species, among which is *P. brassica*, or Cabbage-butterfly (Fig. 2140). This common and destructive insect makes its appearance in our gardens about the middle of May, and lays its eggs on the under side of cabbage leaves. Both sexes have the upper surface of all the wings white, with the tip of the anterior wings above black, the patch on its inner edge being indented, and the extreme tip being slightly irrorated with white; beneath, the under surface of the anterior wings is yellowish, the base slightly irrorated with dusky, and two transverse spots adorning the disc. The posterior wings are pale-yellowish, rather sprinkled with dusky. The body and antennæ are black above and white beneath. There are, however, several varieties of this butterfly, slightly differing from each other. The caterpillar is bluish-green, with three yellow longitudinal lines, one on the back, the others on the sides; between these are several tubercular spots, each bearing a small hair: the tail is black. They are hatched in a few days, and continue to feed together till the end of June: when they have found a convenient place to attach themselves, they fasten their tail by a web, and carry a strong thread of silk round the upper part of their body: after hanging a few hours the chrysalis (which is greenish, spotted with black, with three yellow stripes,) is perfectly formed; and in about six days the butterfly appears. The eggs laid by the second brood produce caterpillars, which feed during the remainder of the summer, and remain in the pupa state during the winter, to be hatched in the succeeding spring. So prolific is this destructive species, that were it not for the ichneumon fly, which deposits her eggs within the body of the caterpillar, and in the larva state continues to prey on its vitals, the ravages of this insect would be of the most serious consequence to our vegetable productions.

Fig. 2140.
CABBAGE-BUTTERFLY.

Pontiac, in Illinois, a city and township, cap. of Livingston co., 90 m. S.W. of Chicago. *Pop.* (1897) 3,150.

Pontiac, in Michigan, a prosperous city and township, cap. of Oakland co., about 25 m. N.N.W. of Detroit. *Pop.* (1897) 8,450.

Pontiac, in New York, a post-village of Erie co., about 22 m. S. by W. of Buffalo.

Pontiac, in Ohio, a village of Huron co.

Pontianak, (*pon'te-a-nak'*), the principal Dutch settlement on the W. coast of Borneo, on the river Cam-pu-as. It is fortified, and exports gold-dust, pepper, and edible-birds' nests. *Pop.* 20,000.

Pontie, *a.* [*Lat.* *Ponticus*; *Gr.* *Pontikos*.] (*Geog.*) Pertaining to the Euxine or Black Sea, the ancient *Pontus*.

Pontifex Maximus (Pont. Max.). See PONTIFF.

Pontiff, *n.* [*Lat.* *Pontifex*.] (*Roman Hist.*) The highest Roman sacerdotal title. Numa is said to have instituted four pontifices, chosen from the patricians; to which were added, long afterwards, four plebeians. *Sylla*

Alexander Pope

1688-1744

increased their number to fifteen. The chief of the pontifices was called the *pontifex maximus*, and was always created by the people, being generally chosen from those who had borne the first offices in the state. His station was one of great dignity and power, as he not only had supreme authority in religious matters, but, in consequence of the close connection between the civil government and religion of Rome, exercised considerable political influence. The title of *pontifex maximus* being for life, Augustus never assumed it till the death of Lepidus, after which it was always held by himself and his successors to the time of Theodosius. The insignia consisted of the toga prætexta, and a conical woolen cap with a tassel.

(Ecc.) In the Roman Catholic Church, a title assumed by the Pope; he has also the title of *Pontifex Maximus*.—Among the ancient Jews, the chief-priest.

Pontific, *a.* Relating to, or consisting of priests; as, the pontific college. (Milton.)—Belonging, or having reference to the Pope, or to the Roman Catholic Church.

Pontifical, *a.* [Lat. *pontificalis*.] Pertaining to a high-priest; as, pontifical authority;—hence, belonging to the Pope.—Splendid; magnificent; as, “a robe pontifical.”—Shuks.

—*n.* [L. Lat. *pontificale*.] A book containing the formulæ of religious rites and ceremonies.

—*pl.* The vestments and ornaments worn by a priest, or by the Pope; as, “dressed in full pontificals.”—W. Scott.

Pontifically, *adv.* In a pontifical manner.

Pontifical States. See STATES OF THE CHURCH.

Pontificate, *n.* [Lat. *pontificatus*; Fr. *pontificat*.] State, office, or dignity of a high-priest.—Specifically, the papacy; popedom; papal office; as, to be elected to the pontificate.—Reign of a pope; as, the pontificate of Leo X.

Pontine Marshes, (*pon'teen*), an extensive marshy tract of Italy, in the S. part of the Campagna di Roma, extending from Cisterna in the N., to Terracina in the S., a distance of 30 miles, the breadth varying from 4 to 11 m. The region is very fertile, but pestilential. Efforts have been made at different times to drain it, but without effect. It is traversed by the road from Rome to Naples.

Pontivy, (*pon'te-ve*), a town of France, dept. of Morbihan, on the Blavet, 30 m. N.N.W. of Vannes. *Manuf.* Leather, and agricultural implements. *Pop.* 8,000.

Pontlevis, *n.* [Fr., a drawbridge.] (*Man.*) The disorderly action of a horse in resistance to its rider, in which the animal rears up several times, running on his hind legs, so as to be in danger of falling backward.

Pontoise, (*pon-twause*), a town of France, dept. of Seine-et-Oise, at the junction of the Oise and Viosne, 20 m. N. of Versailles. *Manuf.* Watches, jewelry, chemicals, cotton-yarn; also, numerous flour-mills. *Pop.* 7,000.

Ponton, **Pontoon**, *n.* [Fr. *ponton*, from Lat. *pons*, *pontis*, a bridge.] (*Mil.*) A light, portable framework, used in forming a bridge quickly for the passage of troops over a river, &c.

(*Naut.*) A low, flat vessel resembling a barge, and furnished with apparatus for the raising and careening of ships, &c.; a lighter.

Ponton-bridge, a bridge formed with pontoons.

Ponton-train, (*Mil.*) The carriages for transport of pontoons, or of the materials for constructing a ponton-bridge.

Pontonier, **Pontonier**, *n.* [Fr. *pontonier*.] A soldier artificer who constructs ponton-bridges.

Ponttoosuck, in Illinois, a post-village and township of Hancock co., abt. 215 m. N.N.W. of St. Louis, Missouri.

Ponttoosuck, in Massachusetts, a village of Berkshire co., abt. 115 m. W. by S. of Boston.

Pontotoc, in Mississippi, a N.E. co.; area, about 530 sq. m. *Rivers*. Tallahatchee and Loosascoona rivers, besides several creeks. *Surface*, undulating or nearly level; soil, fertile. *Cap.* Pontotoc. *Pop.* (1897) 16,200.

—A thriving post-town, located on the Gulf & Chicago R.R., 50 m. S.S.E. of Holly Springs. *Pop.* (1897) 650.

Pontremoli, (*pon-trai-mo'le*), a fortified town of Italy, prov. of Florence, 23 m. N.W. of Carrara. *Manuf.* Silks and linens. *Pop.* 5,000.

Pontrolant, *n.* [Fr. *pont*, bridge, and *rolant*, flying.] (*Mil.*) A flying bridge, used in sieges for crossing moats, ditches, &c.

Pont-St. Esprit, a town of France, dept. of Gard, on the Rhine, 31 m. N.N.E. of Nîmes; *pop.* 5,500.

Pontus, (*Anc. Geog.*) The N.E. province of Asia Minor, bounded N. by the Euxine Sea, W. by Galatia and Paphlagonia, S. by Cappadocia and part of Armenia, and E. by Colchis. It was originally governed by kings, and was in its most flourishing state under Mithridates the Great, who waged a long and celebrated war with the Romans, but was at length subdued by Pompey; after which Pontus became a province of the Roman empire. The geographer Strabo was born in Amasia, its capital; and one of its principal towns, Trapezus, still flourishes under the name of Trebizond.

Pontypool, (*pon'ti-pool*), a town of England, co. of Monmouth, 15½ m. S.W. of Monmouth, and 182 m. W. of London; *pop.* 4,600.

Pony, **Poney**, *n.*; *pl.* PONIES. [Fr. *poni*.] A small horse.—In England, a slang or sporting-term for £25 sterling; as, I will lay a pony against the field; *i. e.*, to bet in favor of one favorite horse against the remaining horses entered in a race.—In England, a cant university phrase for a translation of some author studied, with the view of quickly conning a lesson.

Pony-engine, in the U. States, a locomotive employed in switching railroad cars from one track to another.

Pood, *n.* [Russ. *puđ*.] A Russian weight, equal to 36 lbs. avoirdupois.

Poodle, *n.* [Ger. *pudel*.] A dog covered with long silky hair; a lap-dog; as, a French poodle.

Pooh, *interj.* Poh; pshaw; pish;—an expression of aversion or contempt.

Pool, *n.* [A. S. *pōl*, *puđ*.] A small, and generally deep, mass of fresh water, occurring in the course of a stream, or supplied by a spring; also, a pound.—A small body of stagnant water; a puddle.

—[Fr. *poule*, from Lat. *pullus*, a pullet.] The stake played for in certain games of cards, billiards, &c.

Pool, in Michigan, a post-village of Midland co., abt. 33 m. W.N.W. of Bay City.

Pool-ball, *n.* One of several ivory balls, used in playing pool, a game at billiards.

Pooler, a seaport-town of England, co. of Dorset, on a peninsula, connected with the mainland by a narrow isthmus, 21 m. E. of Dorchester. It has an excellent harbor and considerable trade. *Pop.* 8,759.

Pool Island, in Maryland, an island and lighthouse in Chesapeake Bay exhibiting a fixed light, abt. 18 m. E. by N. of Baltimore.

Pooler, *n.* A pole or paddle to stir a tan-vat.

Poolesville, in Maryland, a post-village of Montgomery co., abt. 65 m. W.N.W. of Annapolis.

Poolville, in New York, a post-village of Madison co., abt. 95 m. N.W. of Albany.

Poonah, **Poonah**, or **Pn'na**, a city of British India, cap. of a dist. of the same name, in the pres. of Bombay, at the junction of the Moola and Moota, 75 m. S.E. of Bombay; *pop.* 76,000.

Poop, *n.* [Fr. *poupe*; It. *poppa*; Lat. *puppis*.] (*Naut.*) A partial deck extending from about the mizzen-mast close aft, above the complete deck of the vessel. It is rapidly disappearing from modern ships, as a useless cause of leeway and a mark for an enemy's shot.

—*v. a.* (*Naut.*) To strike upon the stern of, as a heavy sea.—To strike in the stern, as one vessel whose stern comes in contact with the stern of another vessel.

—*v. n.* To pop; to make a short, snapping noise; also, to eructate.

Pooped, (*poopt*), *a.* (*Naut.*) Furnished with a poop, as a ship.

Pooping, *n.* (*Naut.*) The blow of a heavy sea on the stern of a vessel, when scudding in a gale of wind;—also, the action of one vessel's stern coming in contact with the stern of another vessel.

Poor, *a.* [Fr. *pauvre*; It. *povero*; Lat. *pauper*.] Destitute of means or property; wanting in material worldly wealth; needy; indigent; necessitous; as, poor people.

(*Law.*) So utterly destitute of property or means of livelihood as to be entitled to maintenance at the public cost.—Hence, lean; deficient in fat, fleshiness, or plumpness; emaciated; meagre; sorry; lank; in bad case; as, a poor horse, ass, &c.—Lacking in strength and corporeal vigor;—applied to health; as, his health is but poor.—Of trifling value, worth, moment, or importance; inferior; insignificant;—said of material things; as, a poor coat, a poor flower.—Barren; sterile; without fecundity or fertility; as, poor land, a poor soil.—Lacking in strength, elegance, or appropriateness;—applied to literary composition; as, a poor treatise, a poor sermon, a poor novel.—Pultry; mean; ill-adapted for an end or occasion; valueless; as, a poor excuse.—Deserving of pity, sympathy, or true appreciation;—used, sometimes, as a word of endearment, and sometimes as a term of mild contempt.

“Poor, little, pretty, flattering thing.”—Prior.

The poor, the indigent; the needy; those who are destitute of worldly means, or property.

“The short and simple annals of the poor.”—Gray.

Poor-box, *n.* A depository for contributions to the poor.

Poorbunder, or **Poor'under**, a fortified seaport-town of Hindostan, prov. of Guzerat; Lat. 21° 39' N., Lon. 69° 48' E.

Poor-house, *n.* A public institution for the support of the destitute poor; a work-house; an almshouse.

Poor'john, *n.* The fish called *hake*. See MERFUSCUS.

Poor-laws, *n. pl.* Laws providing for the support of the destitute poor.

Poorliness, *n.* State or condition of being poorly; feebleness.

Poorly, *adv.* In a poor state, manner, or condition; without wealth or sufficient means: as, to live poorly.—With little or no success; without prosperity or advantage; having deficiency of growth, profit, or plenty; as, they managed poorly.—Meanly; without nerve or spirit.—Without dignity, superiority, or excellence; as, he acted his part poorly.

—*a.* Indisposed; not in ordinary good health; somewhat sick or invalid; as, to feel poorly. (Used colloquially.)

Poor Man's Weather-glass, (*n.*) (*Bot.*) See ANAGALLIS.

Poor'ness, *n.* State or condition of being poor, in any of its senses: want of means or property; poverty; indigence; need; necessitousness; want of success or prosperity; lack of worth, value, or importance; sterility; lack of productiveness; meanness; want; lowness; as, poor'ness of living, poor'ness of laud, poor'ness and degeneracy of spirit, &c.

Poor-rate, *n.* A tax or assessment levied on the public at large for the relief of the poor.

Poor-spirited, *a.* Base; mean of spirit; cowardly; timorous.

Poor-spiritedness, *n.* State or quality of being poor-spirited.

Pop, *n.* [L. Ger. *pup*, a fart.] A small, quick sound or report; as, the pop made by extracting a cork from a bottle of champagne.—The beverage which issues from

the bottle containing it with a pop, or explosive sound;—chiefly used in composition; as, ginger-pop.

—*v. n.* To make a short, sharp, sudden sound.—To enter or issue forth with a sharp, sudden motion.—To dart; to move from place to place suddenly.

—*v. a.* To push or cause to advance suddenly; to bring to notice upon the spur of a moment; as, he popped his head in.—To cause to pop, as corn; to cause to dilate and collapse suddenly with heat.

To pop off. To shift off; to push away.—To pop the question. To ask a woman to be one's wife. (Colloq.)

—*adv.* Suddenly; impromptu; appearing on the spur of the moment.

Popac'ton (or **PERACTON**) **Riv'er**, in New York, flows S.W. into the Delaware River from Delaware co.

Popayan, a city of the Republic of Colombia, cap. of the province of same name, on the Cauca river, Lat. 2° 28' 38" N., Lon. 76° 36' W. *Pop.* (1897) 22,200.

Pop-corn, *n.* Corn or maize suitable for popping.—Corn which has been popped, or caused by heat to burst suddenly, so as to dilate and expose the inner part of the kernel;—generally termed *popped-corn*.

Pope, *n.* [Lat. *papa*, father, bishop; Gr. *pappas*, father.] (*Ecc.*) A title originally applied to all bishops, and still given to all priests of the Greek and Russo-Greek Church, but restricted in the west to the sovereign pontiff of the Roman Catholic Church. According to the Roman Catholic faith, the pope derives his power from being the successor of St. Peter, the rock upon which Christ was to build his Church. He is therefore the visible head of the Church, the invisible head being Jesus Christ. The Roman Catholics maintain that the bishop of Rome has always been recognized as superior to all other Christian bishops, while the Protestant historians state generally his supremacy from the 4th century. The mode of electing popes is noticed under CONCLAVE (*q. v.*); and an account of their temporal power, now vanished, will be given under STATES OF THE CHURCH (*q. v.*). For the history of all the popes from St. Peter down to Leo XIII., see their different names.

Pope, ALEXANDER, a celebrated English poet, b. 1688, in London. His parents being Roman Catholics, he was placed, at 8 years of age, under one Taverner, a priest, who taught him the rudiments of Latin and Greek. At the age of 12, he retired with his parents to Blinfield, in Windsor Forest, where his father had purchased a small estate. Here he wrote his *Ode on Solitude*, which appears as the first-fruits of his poetic genius. It was here, also, that he first met with the works of Waller, Spenser, and Dryden. But on perusing Dryden, he abandoned the rest, and studied him as his model. At the age of 16, he wrote his *Pastorals*, which procured him the friendship of the principal wits of the time. His next performance was the *Essay on Criticism*, published in 1711. The *Messiah* appeared first in the *Spectator*; and this was followed by his *Ode on St. Cecilia's Day*. About this period, also, he produced the *Rape of the Lock*, occasioned by Lord Petre's cutting off a ringlet of Mrs. Arabella Fermore's hair. He next brought out his *Epistle from Eloisa to Abelard*, the *Temple of Fame*, and *Windsor Forest*. Pope now undertook his translation of the *Iliad*, which he published by subscription, and cleared by it above \$25,000, part of which he laid out in the purchase of a house at Twickenham, whither he removed in 1715. After completing the *Iliad*, he undertook the *Odyssey*, for which also he obtained a liberal subscription. He was, however, materially assisted in these works by the learning and abilities of others, particularly Broome, Fenton, and Parnell.

Fig. 2141.—THE RESIDENCE OF POPE.

The reputation he had acquired, by the success as well as the merits of his works, procured him numerous enemies among writers of the minor class, from whom he experienced frequent splenetic attacks. Perhaps it would have been more to his honor had he taken no notice of them; but in 1727 he vented his resentment in a mock-heroic, entitled *The Dunciad*, in which he took more than warrantable revenge, and what was worse, exposed to ridicule many ingenious and respectable persons who had given him no offence. In 1729, by the advice of Lord Bolingbroke he turned his pen to a moral and philosophical subject. The result was his *Essay on Man*, an ethical poem addressed to that statesman, which attracted universal admiration. It was followed by *Imitations of Horace*, accompanied by a *Prologue and Epilogue to the Satires*, and by *Moral Epistles*, which exhibit him as a satirist of the school of Boileau. In 1737, Pope printed his *Letters* by subscription, for which he alleged, as his excuse, that some of his epistles had been surreptitiously published by Edmund Curll. In 1742, at the suggestion of Warburton

ton, he added a fourth book to his *Dunciad*, intended to ridicule useless and frivolous studies, in which he attacked Colly Cibber, then poet-laureate. Cibber retaliated by a pamphlet, which told some ludicrous stories of his antagonist, and so irritated the latter that in a new edition of the *Dunciad* he deposed Theobald, its original hero, and promoted Cibber in his place, who, although a great coxcomb, could scarcely be deemed a dunce. An oppressive asthma began now to indicate a commencing decline; and while he was engaged in preparing a complete edition of his works, he expired, May 30, 1744.

Pope, JOHN, Major-General in the U. S. army, son of Judge Pope of Illinois, born at Kaskaskia, in that State, in March, 1823, entered West Point in 1838, graduated with Rosecranz in 1842, and in Aug., 1846, joined the army under Gen. Taylor, in Mexico. From the termination of that struggle till 1861 he was chiefly engaged in surveying expeditions. When the Civil War broke out, Capt. Pope was appointed Brig.-Gen. of Volunteers, and in Dec., 1861, while surveying under Gen. Halleck, he cleared Central Missouri of the Confederate forces. In March, 1862, he was appointed Major-Gen. of Volunteers, and soon after captured New Madrid, with all its guns and stores. He took part in the siege of Corinth, and after its evacuation he followed up the retreat of the Confederates. In June, 1862, he was appointed to the command of the Army of Virginia, comprising the forces under Fremont, Banks, McDowell, and Sturgis; and, July 14, 1862, was appointed Brig.-Gen. in the U. S. army. Great things were expected from him, as he had acquired high reputation by some daring exploits in minor operations. But these hopes were doomed to be disappointed. Very soon after his appointment to the chief command, a series of disastrous defeats sustained by the army under his orders spread consternation through the Northern States. Gen. Pope withdrew the Army of the Potomac, Aug. 20, to the north side of the Rappahannock, where he was quickly followed by the Confederate forces under Generals Lee and "Stonewall" Jackson, and he retreated towards Warrenton. Gen. Pope's army was thrown into disorder, and his baggage captured by the Confederates, Aug. 25; the troops under Gen. Burnside evacuated Fredericksburg, and retired to Aquia Creek, Aug. 29; and on that and the following day the second battle of Bull Run was fought, which ended in the complete defeat of Gen. Pope, and his withdrawal to Centreville. He was relieved from the command of the Army of the Potomac, and his services were transferred to another field of action—that of checking the predatory incursions of the Indian frontier tribes.

Pope, in *Arkansas*, a N.W. central co.; area, about 795 sq. m. *Rivers*, Arkansas river, and Big Piney and Illinois creeks. *Surface*, diversified; *soil*, generally fertile. *Cap.* Russellville. *Pop.* (1897) 21,250.

Pope, in *Illinois*, a S. by E. co., adjoining Kentucky; area, about 360 sq. m. *Rivers*, Ohio river, and Lusk and Big Bay creeks. *Surface*, undulating; *soil*, generally fertile. *Minerals*, Iron and lead. *Cap.* Golconda. *Pop.* (1897) 15,010.

Pope, in *Minnesota*, a W. central co.; area, about 720 sq. m. *Rivers*, Chippewa and Little Chippewa rivers, with several smaller streams and lakes. *Surface*, nearly level; *soil*, fertile. *Cap.* Glenwood. *Pop.* (1897) 12,200.

Pope's-dom, *n.* [A.S.] The jurisdiction of the Pope; the place, office, or rank of the Pope; papal dignity.

Pope Joan, *n.* (*Games*.) An old English game at cards, played by any number from three to a dozen persons.

Popering'en, a town of Belgium, prov. of W. Flanders, 6 m. W.S.W. of Ypres. *Manuf.* Coarse woollens, lace, and serges. *Pop.* 11,200.

Pop'ery, *n.* (*Ecc.*) The religion of the Roman Catholic Church, comprehending doctrines and practices;—a word used by the Protestants.

Pope's-eye, *n.* The gland encircled with fat in the middle of the thigh.

Pope's-head, *n.* A large round brush, with a long handle, used in dusting ceilings.

Pope's-nose, or **Parson's-nose**, *n.* The protuberance at one end of a roast turkey, goose, &c.;—sometimes considered a tit-bit.

Pop'gun, *n.* A small gun or tube used by children to pop with, or shoot with, and make an explosive report.

Pop'injay, *n.* [*Sp.* *papagayo*.] A parrot; also, a wood-pecker. —A device resembling a parrot, put on a pole as a mark to be shot at.—A fop; a coxcomb; a gay, debonair young fellow.

Pop'ish, *a.* Relating to, or taught by the Pope; pertaining or having reference to the Pope, or to the Roman Catholic Church; as, *Popish* ceremonies.

Pop'ishly, *adv.* In a Popish manner; with an inclination to Popery.

Pop'lar, *n.* [*Fr.* *peuplier*; *It.* *pioppo*.] (*Bot.*) See *POPULUS* and *LIRIODENDRON*.

Poplar Bluff, in *Missouri*, a city, cap. of Butler co., about 130 m. S. of St. Louis. *Pop.* (1897) 2,350.

Poplar Creek, in *Tennessee*, enters Clinch River in Roane co.

Poplar Grove, in *Illinois*, a post-village of Boone co., abt. 16 m. E.N.E. of Rockford.

Poplar Grove, in *Tennessee*, a village of Gibson co., abt. 144 m. W. of Nashville.

Poplar Plains, in *Kentucky*, a post-village of Fleming co., abt. 80 m. E. of Frankfort.

Poplar Ridge, in *New York*, a post-village of Cayuga co., abt. 15 m. S.W. by S. of Auburn.

Poplartown, in *Maryland*, a village of Worcester co., abt. 12 m. N.E. of Snow Hill.

Pop'lin, *n.* [*Fr.* *papeline*.] A cloth-stuff made of silk

and worsted, much used as a material for ladies' dresses; as, *Irish poplins*, brocaded *poplins*, figured *poplins*, watered *poplins*.

Poplit'ic, **Poplit'ical**, *a.* [From *Lat.* *poplitis*, the ham; *Fr.* *poplite*, *poplitique*.] Belonging, or relating to the ham, or under-part of the knee-joint.

Popocatepetl', [Mexican, "smoking mountain,"] an active volcano of Mexico, abt. 35 m. S.W. of La Puebla. *Height*, 20,000 feet. The crater is 1000 feet deep and abt. 3 m. in circumference. This is the highest mountain on the N. American continent.

Po'po Islands, a group in the Eastern Archipelago, between Gilolo and Papua. The principal island is in *Lat.* 1° 15' S., *Lon.* 129° 45' E., with a circum. of 50 m.

Popoli, (*pōp'ole*), a town of S. Italy, prov. of Abruzzo Ulteriore II., on the Pescara, 8 m. N.N.W. of Salmona; *pop.* 4,000.

Pop'pet, *n.* See *PUPPET*.—A term of endearment frequently applied to young children.

—*pl.* (*Naut.*) Perpendicular pieces of timber fixed on the fore and aftermost parts of the bilge-ways, to support a ship while being launched.

Pop'pet-head, *n.* (*Mech.*) That part of a lathe which holds the back-centre, and can be fixed on any part of the bed.

Poppi, (*pōp'pe*), a town of Italy, prov. of Florence, on the Arno, 25 m. E. of Florence; *pop.* 6,000.

Pop'ple, *v. n.* To bob up and down, like a cork dropped on water.

—To bubble up. (An English provincialism.)

—*n.* The poplar. (Used as a localism both in England and the U. States.)

Pop'pose-root, *n.* (*Bot.*) See *LEONTICE*.

Pop'py, *n.* [A.S. *poppe*, *poppe*; *It.* *papavero*; *Fr.* *pavot*; *Lat.* *papaver*.] (*Bot.*) See *PAPAVERACEE*.

Pop'py, **Pop'py-head**, (and sometimes **POOP**), *n.* [*Fr.* *poupée*.] (*Arch.*) A carved ornament at the apex of a standard or open seat in Gothic churches, also carved into an ornamental finial, pomel, crest, &c.

Pop'ulace, **Pop'ulacy**, *n.* [*Fr.*, from *Lat.* *populus*.] The common people; the commonality; the vulgar; the multitude; the mob.

Pop'ular, *a.* [*Fr.* *populaire*.] Pertaining or having reference to the common people.—Suitable to common people; familiar; plain; easy to be comprehended; not critical or abstruse—as, a *popular* edition of a scientific work.—Hence, occasionally, vulgar; common; inferior; as, a *popular* saying.—Beloved by or pleasing to the people; enjoying the favor of the community at large; as, a *popular* sovereign, a *popular* government, a *popular* preacher or author.—Studious of public favor; ambitious.—Prevailing among the people; generally circulated or diffused; as, a *popular* malady, a *popular* delusion, a *popular* prejudice.

Popular action. (*Law*.) An action which gives a penalty to the person that sues for the same.

Pop'ular'ity, *n.* [*Lat.* *popularitas*; *Fr.* *popularité*.] State or quality of being popular; state of possessing the affections and confidence of the people in general; public favor.

—State or quality of being adapted to impress the popular mind;—hence, the condition of being common, inferior, or vulgar.

Pop'ulariza'tion, *n.* Act of making popular among a people.

Pop'ularize, *v. a.* To make popular or suitable to the common mind; to spread or disseminate among the people; as, to *popularize* science or literature.

Pop'ularizer, *n.* One who popularizes.

Pop'ularly, *adv.* In a popular manner; so as to be pleasing or satisfactory to the people.—According to the conceptions of the common people.

Pop'ularness, *n.* State of being popular, or suited to the ideas and tastes of the common people.

Pop'ulate, *v. a.* [From *Lat.* *populus*.] To people; to furnish with inhabitants, whether by natural increase, or by immigration or colonization; as, to *populate* a country.

—*v. n.* To propagate inhabitants.

Population, *n.* [*Fr.*] The act or operation of peopling, or furnishing with inhabitants; multiplication of people in general.

—The whole number of people or inhabitants in a country, or portion of a country.

(*Pol. Economy*.) *P.* is the most important branch of the science, being both the means and the end of national wealth; it is, at the same time, one of the most obscure and difficult subjects to understand, and has given rise to a large amount of discussion. It was formerly a maxim in politics, that a country could not be over-peopled, as it was supposed that the means of subsistence increased in proportion to the increase of the population, and that this could never be a cause of its falling into want and misery. Some states, therefore, as that of ancient Rome, took means to encourage matrimony, by relieving from taxation and preferring to public offices those that married and had children. Others, again, have maintained that it is the policy of states to check the increase of population. Malthus asserts that the increase of the population of a country beyond a certain limit, depending on the means of subsistence, is an evil, which will augment year after year, as the disproportion between the population and the means of subsistence increases. He further asserts that all civilized countries are either at the point, or more or less near it, where as much food is produced from the soil as in any possible way can be obtained from it; and supposing that more could be gained by greater efforts and more industry, it will never be in such proportion as the yearly increase of the *P.*; and thus want and misery are approaching in all civilized countries, against

which there is no other remedy than that the government either check the increase of population, or remove from the country the yearly arising surplus, by means of colonies and other measures conformable to this purpose. Every species of plant or animal which is capable of increase, either by generation or by seed, increases in a geometrical ratio, depending on the average power of reproduction and the average period of existence of the individuals of which it is constituted. He further asserts that population, when unchecked, increases in a geometrical progression of such a nature as to double itself every 25 years; at which rate the inhabitants of every country would, in the course of five centuries, increase to above a million times their present number; which, as regards Western Europe, would not allow the people even standing-room. There are, however, so many elements to be taken into account, which are entirely lost sight of in these arguments, as to deprive them of any weight or importance. A single instance of a state which has suffered in this way cannot be produced, and the resources of nature are so bountiful and manifold as to afford little reasonable fear for such an issue. Nature has provided a thousand ways to prevent the increase of the human race beyond the means necessary for its subsistence. Like a careful mistress, she deals out her bounties with a sparing hand, but ever, as the necessities of her dependents increase, she finds means to supply their wants. Much of the earth still remains uncultivated or untouched by the hand of man, and much of that which is touched is very imperfectly dealt with; for who can say what may be yet done by more improved means of cultivation, by machinery, chemistry, &c.? Finally, the extension of the principles of commerce and free trade will open up to each other the extreme parts of the earth.

Pop'uline, *n.* [*Fr.*, from *Lat.* *populus*, *poplar*.] (*Chem.*) A crystallizable substance separated from the bark of the poplar-tree, *Populus tremula*. *Form* C₄₀H₂₂O₁₆.

Pop'ulous, *a.* [*Fr.* *populeux*; *Lat.* *populosus*.] Abounding in people; full of inhabitants; containing many inhabitants in proportion to the extent of ground or country; as, a *populous* city or region.—Adapted to common people;—hence, inferior; common; vulgar. (*R.*)

Pop'ulously, *adv.* With many inhabitants in proportion to the extent of country.

Pop'ulousness, *n.* State of being populous, or of having many inhabitants in proportion to the extent of country.

Pop'ulus, *n.* [*Lat.*, the poplar.] (*Bot.*) A genus of plants, ord. *Salicacee*. All the species are rapid-growing, soft-wooded timber trees, some of which attain a great size. They have broad, heart-shaped, ovate, triangular, or lozenge-shaped, deciduous leaves, or rather long stalks. The catkins appear long before the leaves, and proceed from distinct lateral buds. Few of the species are of much value for their timber, which is generally white, soft, and light; but from their rapid growth, they are useful as yielding fire-wood, when the scarcity of other fuel renders it necessary to plant trees for this purpose. The Lombardy poplar, *P. fastigiata* or *dilatata*, probably introduced into Europe from Persia, attains a height of 100, or even 150 feet, and is remarkable for its erect form, contracted head, and very rapid growth. (Fig. 2142.) It is often planted as an ornamental tree although not so generally as in the end of last century. The wood is of almost no value. The species commonly

known as Black Italian poplar, *P. monilifera* or *acladesca*, is a native not of Italy, but of N. America, and is more correctly called Canadian poplar, the female catkins of which resemble a string of pearls. It is frequently planted both as an ornamental tree and for the sake of its timber, which is useful for flooring, &c. Its leaves are deltid. It is of very rapid growth, and attains a height of 100-120 feet. The Balsam poplar, or *Tacamahac*, *P. balsamifera*, a very common ornamental tree, is a native both of North

Fig. 2142. — LOMBARDY POPLAR, (*Populus fastigiata*.)

America and of Siberia, and has whitish, ovate-oblong leaves, which in spring are of a delicate yellow tint, and have an agreeable fragrance. The leaf-buds are viscid. The erect, fastigate manner of growth approaches that of the Lombardy poplar. The resinous exudation of the buds (*Tacamahac*) is said to be diuretic and antispasmodic; and an ointment made from the buds is used for tumors, wounds, and burns. The Cotton-wood, *P. canadensis*, of N. America, particularly abundant on the upper parts of the Mississippi and Missouri, is valued as a timber tree. The Ontario poplar, *P. canadensis*, has the same balsamic character as *P. balsamifera*, and is chiefly distinguished from it by its

larger leaves. In size of leaf, no other species equals *P. heterophylla*, a native of the Southern States, the leaves of which are often six inches long.

Porcelain, (*pōrs-lān*), *n.* [Fr. *porcelaine*; Sp. *porcelana*; It. *porcellana*.] (*Manuf.*) *P.*, in its more general sense, includes all kinds of earthenware which are white, semi-transparent, and have some degree of a vitreous texture; but in its more limited sense it denotes only the finer kinds; and as this kind of ware has been, from the earliest times, manufactured most perfectly in China, it has been called Chinese porcelain, or China-ware. The first *P.* seen in Europe was brought from China and Japan, and having excited great admiration by its fineness of texture, transparency, and its beautiful colors, many attempts to imitate it were made by European manufacturers, and were first successful in Saxony. The manufacture was afterwards introduced into France, and successively into England, Germany, and Italy, where it has arrived at various degrees of perfection, but is still inferior to the production of eastern countries. The finest and best *P.* of China is made in a village called King-te-tching, in the province of Kiang-si, which is said to have furnished the emperors of China with *P.* since the year 442 of the Christian era. The chief ingredients which enter into the composition of Chinese *P.* are petuntse and kaolin, two kinds of earth, from the mixture of which the paste is obtained; the petuntse being of a pure white, and, when fully prepared, in the form of an impalpable powder, while the kaolin is intermixed with small shiuing particles. The petuntse originally consists of the fragments of rock dug from certain quarries; the color of the stone which answers the purpose best inclining, according to the Chinese, somewhat to green. It requires many operations to fit it for the purpose of the manufacturer; while the kaolin, on the other hand, is found in nature in a state almost ready for him, in small lumps, in mines, the external strata of which are composed of a kind of red earth. Chinese *P.* owes its fabric and texture to the kaolin, which endows it with the property of resisting the most powerful heat, while its strength and consistency is obtained by fusion with the petuntse, which enables it to resist the action of the more powerful agents. It is said that the Chinese have latterly discovered a substitute for kaolin in a stone called *boa-ché*, which is of a saponaceous quality, and enables them to manufacture *P.* of a much more beautiful kind than formerly; but as it is scarce and dear, it is rarely employed in the fabrication of the body of the *P.*, the workmen being content with making it into a fine size, and immersing the vessel into it, that it may receive a coat before it is painted and glazed. After a piece of *P.* has been properly formed, it passes into the hands of the painters, who divide the labor between them; one tracing out the first colored circle which ornaments the brim of the vessel, another designing the flowers, and a third painting them, and so on. One of the kinds of varnish employed, called *tsou-you*, is procured from white flint, and has the peculiar property of making those pieces of porcelain upon which it is laid appear to be covered with an infinitude of veins in every direction. After the *P.* has received its proper form, its colors and all the intended ornaments, it is transferred from the manufactory to the furnace. The small pieces of *P.*, such as tea-cups, are inclosed in cases about four inches in height; each piece being placed upon a saucer of earth about twice as thick as a crown-piece, and equal in breadth to its bottom. These small cases are also sprinkled over with the dust of the kaolin, and having been placed in the furnace on a bed of coarse sand, half a foot in thickness, are exposed to the action of the fire until the workman observes that all the cases are red hot, and that the colors of the porcelain appear with full lustre, when he judges that it is in a proper state. Manufactories for the fabrication of *P.* are now established in almost all the states of Europe; but in no state have such attempts been made to discover the best method of manufacturing *P.*, or so many manufactories of it been established, as in France. The *P.* of Chantilly, Villersi, and Orleans have a distinguished merit; but the *P.* produced at Sèvres has long held the first rank, from its shining white, its beautiful glazing, its colored grounds, and the regularity and elegance of its forms. In England, but little progress was made in the manufacture of *P.* until towards the end of the last century. At an earlier period there was a manufactory carried on by some Germans at Chelsea, afterwards removed to Derby, of porcelain of a very superior quality; but whence they derived their materials is now uncertain. About the year 1768, however, the discovery in Cornwall of mines of clay and stone, similar to those used in France and Germany, and which are believed to be the kaolin and petuntse of the Chinese, soon enabled English manufacturers to improve their *P.*, by discontinuing the use of frit or glass as a component part of the basis or body of the ware, and substituting a mixture of the fusible and infusible earths as the basis of their *P.*, as had been done at a much earlier period in Germany and France. After all, the most perfect *P.* is nothing else than a fine white stone-ware; and if the earths of which stone-ware is made were free from heterogeneous coloring matters, which prevent their whiteness and semi-transparency; if vessels were properly formed; if all the proper attention were given; and if these vessels were covered over with a fine glazing, they would form as perfect *P.* as that of Japan. There are two kinds of *P.*,—one called hard, the other tender. Hard porcelain is composed of a clay containing silica, which is infusible, and preserves its whiteness in a strong heat, and of a flux consisting of silica and lime. The glaze of this ware is earthy, and admits of

no metallic substance or alkali. Tender *P.* consists of a vitreous frit, which is rendered opaque by the mixture of a calcareous clay. It is glazed with artificial glass, into the composition of which silica, alkalies, and lead enter. The materials of which the glazing is composed are previously prepared by fusing together all the substances of which they consist, and thus forming a vitreous mass. This mass of vitrified matter is then ground in a mill, and the powder thus obtained mixed with a sufficient quantity of water until it becomes of the consistency of cream. The pieces of *P.* are dipped hastily into this liquid and withdrawn; and as they greedily imbibe the water, there remains on the surface a uniform coating of the glazing materials. When they are dry they are replaced in the furnace, and kept there until the glazing is perfectly fused. Unglazed *P.*, said to be in a state of biscuit, has the appearance of white marble; and, for particular purposes, the *P.* is sometimes allowed to remain in this state, and particularly when it is employed in smaller and finer pieces of sculpture, as the fineness of the workmanship and the sharpness of the figures would be greatly injured by a coat of glazing. See POTTERY.

Porcelainous, Porcelanous, *a.* [From Eng. *porcelain*.] Pertaining, or relating to, or resembling, porcelain; as, *porcelainous* shells.

Porcellanite, *n.* [Fr. (*Min.*) Clay altered by heat, so as frequently to resemble jasper;—called, also, *porcelain-jasper*.

Porch, (*pōrch*), *n.* [Fr. *porche*; It. *portico*, from Lat. *porticus*—*porta*, a gate, entrance.] (*Arch.*) A roof supported on pillars before a door; a kind of vestibule supported by columns. Any small portico considerably lower than the main structure to which it is attached may be so termed, in contradistinction from one carried up the height of the building, or as high as the principal cornice. In mediæval architecture porches were almost universal in churches. In France, many splendid porches or portals remain; they are among the most beautiful specimens of mediæval art.

The Porch, (*Antiq.*) A public portico in Athens, where Zeno, the philosopher, taught his disciples. See STOICS.

Porcine, (*-sîn*), *n.* [Lat. *porcinus*, from *porcus*, a swine.] Pertaining or relating to swine; as, the *porcine* species of animals.

Porco, a spur of the Andes in Bolivia, Lat. 19° 45' S., Lon. 65° 30' W. Height, 16,000 ft. From this mountain, it is said, the Incas derived immense quantities of silver. Near it is the town of Porco, cap. of a prov. of the same name, abt. 20 m. S.W. of Potosi.

Porcos, ILHA DOS, a group of islets of Brazil, in the Bay of Flamengos, abt. 16 m. N.E. of the island of São Sebastião.

Porcupine, *n.* [Fr. *porc-épic*; It. *porcospinoso*.] The common name of the *Rodentia*, comprising the genus *Erethizon*, family *Hystriidae*, characterized by a flat cranium, short muzzle, medium-sized tail, and spines which are short and half hidden in the hair. The white haired, or Canada Porcupine, *E. dorsatus*, F. Cuv., of Northern United States and Canada, is about two feet long to the tail, which is seven inches. The tail and

Fig. 2143. — PORCUPINE.

upper parts are covered with a mass of white spines, with dusky and bearded tips. The general color of the fur is dark brown, among which are long hairs with white tips. This animal is extremely sluggish, making but little effort to escape from man or beast; but its formidable armor is an effectual defence. It readily climbs trees, and feeds upon bark, leaves, and tender ears of Indian corn. It lives in hollow trees and in holes among the rocks.

Porcupine-wood, *n.* The hard, outer portion of the trunk of *Cocos nucifera*;—so called, because, when cut horizontally, the fibres of the wood resemble the quills of the porcupine.

Pore, *n.* [Fr.; Lat. *porus*; Gr. *poros*, from *peirō*, to pierce or pass through.] One of the small interstices between the particles or molecules of matter which compose animal, vegetable, and mineral bodies. There are many considerations which prove that all bodies, even the densest, are composed of molecules, not in absolute contact, but separated from each other by intervals, which, though so small as to be inappreciable to the senses, have nevertheless a magnitude considerable in respect of the molecules themselves; and it has been inferred that gold has more pores than solid parts; whence, any substance of the specific gravity of water must have many times more pores than solid parts.

—*v. n.* [Probably from Gr. *ephorōō*, to look upon—*epi*, and *horōō*, to see.] To look with steady, continued, and concentrated attention or application; to examine with unremitting perseverance; sometimes with *on* or *over*.

"The eye grows weary with poring perpetually on the same thing." Dryden.

Por'er, *n.* One who pores or studies without intermission.

Por'gee, Por'gy, PAU'GIE, Poo'gy, *n.* (*Zoöl.*) See SPARIDÆ.

Poriform, *a.* [Fr. *poriforme*, from Lat. *porus*, pore, and *forma*, form.] Resembling a pore; in the form of a small interstice or puncture.

Por'ime, *n.* (*Math.*) A theorem so easy of solution as to be almost self-evident.

Por'iness, *n.* State or condition of having numerous pores.

Por'ism, *n.* [Fr. *porisme*; Gr. *porisma*, something deduced from a previous proposition.] (*Geom.*) A name applied to a proposition affirming the possibility of finding such conditions as will render a certain problem indeterminate, or capable of innumerable solutions. (*Playfair*).—A corollary.

Porismat'ic, Porismat'ic'al, Poris'tic, Poris'tical, *a.* [Fr. *poristique*; Gr. *poristikos*.] Pertaining, or relating to, or having the nature of a porism.

Pork, *n.* [Fr. *porc*; It. *porco*; Lat. *porcus*; O. Gr. *porcos*, a pig; Ir. *porcan*.] (*Etymol. unknown.*) The flesh of swine, fresh or salted, used for food.

(*Hygiene*.) Of all animal fibre taken as aliment, fresh pork takes the longest time to be acted on by the gastric juice and digested;—hence, to the invalid, or person affected with a debilitated stomach, pork is the most improper article of diet he can consume. When smoked and properly dried, as in the form of bacon or ham, it becomes, however, an article not only beneficial as a food, but useful as a medicine, for, when taken at breakfast, it often acts as a direct stimulant to a debilitated stomach.

Pork'er, *n.* A hog.

Pork'et, *n.* A pig; a young hog.

Pork'ling, *n.* A young pig.

Pornog'raphy, *n.* [Gr. *pornē*, a harlot, and *graphein*, to write.] Licentious painting, employed to decorate the walls of rooms sacred to bacchanalian orgies, and of which examples exist in Pompeii.

Po'ror, (anc. *Sphæria*), a small island of Greece, 7 m. S. of Ægina. It is the scene of the conferences which settled the new Greek monarchy of 1828.

Porosity, *n.* [Fr. *porosité*.] State or quality of being porous, or of having small interstices or pores; a property of matter in consequence of which its particles are not in perfect or absolute contact, but are separated by small intervals;—opposed to density.

Porot'ic, *n.* [Gr. *porōs*, callus.] (*Med.*) A remedy supposed capable of assisting the formation of a callus. (*Dunglison*.)

Por'ous, *n.* [Fr. *poroux*.] Having pores or small interstices between the particles which compose a body; as, *porous* wood.

Por'ously, *adv.* In a porous manner; with pores.

Por'ousness, *n.* Porosity; state or quality of having pores.

Porphyritic, (*-fī-rīt'ik*), *a.* Belonging to, resembling, or consisting of, porphyry; as, *porphyritic* mountains.

Por'phyrize, *v. a.* [Gr. *porphyrizein*, to be purplish.] To cause to resemble porphyry.

Porphyrogen'itus, a name borne by the children of the emperors of the East (see CONSTANTINE), either because they were swathed in a robe of purple at their birth, or because they were born in a chamber hung with purple, to which the empresses of the East retired at the period of their accouchement.

Porphyry, (*pōr'fī-rī*), *n.* [Fr. *porphyre*; Gr. *porphyrites*, from *porphura*, purple.] (*Min.*) A term originally confined to an Egyptian rock used in sculpture, and known now as Rosso-antico. It is composed, according to Delesse, of a red felspathic base, in which are disseminated rose-colored crystals of the felspar called *oligoclase*, with some plates of blackish hornblende and grains of oxidized iron ore. The term is not now, however, used to denote any particular rock, but is applied to any rock which, like the Rosso-antico, has a homogeneous earthy or compact base, through which are scattered distinct crystals of one or more minerals of contemporary origin with the base. Thus, gray volcanic trachyte often abounds in crystals of glassy felspar, forming a trachytic porphyry; or crystals of felspar, quartz, or calcareous spar, disseminated through a base of greenstone, form a greenstone porphyry. In the same way, there are pitchstone porphyry, basaltic porphyry, claystone porphyry, &c.

Por'phyr, [Gr. *Porphyrios*, i. e., a bearer of purple.] A Platonic philosopher, born at Tyre, 233, who studied eloquence at Athens under Longinus, and philosophy at Rome under Plotinus, whose life he wrote. His learning was great, and he composed many works, one of which, against the Scriptures, was burned by order of Theodosius the Great. D. at Rome, 304.

Por'poise, *n.* (*Zoöl.*) See DELPHINIDÆ.

Porpo'ra, NICOLO, B. at Naples, 1689, was the celebrated pupil of the no less celebrated Alessandro Scarlatti. In early life he left home, and composed and brought out operas with great success in Vienna, Venice, Dresden, and several other continental cities. He afterwards became one of the principal masters in the conservatory at Venice, and late in life retired to Naples, where he died in great poverty at the age of 82. Porpora was particularly fortunate as a singing-master; and among his most celebrated pupils were Farinelli, Mingotte, and Caffarelli, besides many other dramatic vocalists.

Porporino, (*-rē'*), *n.* [It.] A composition of quick-silver, tin, and sulphur, which produced a yellow metallic powder, that was employed instead of gold by the mediæval artists when they wished to economize.

Porraceous, (-ră'shus,) *a.* [Lat. *porraceus*, from *porrum*, *porrus*, a leek.] Greenish; resembling the color of a leek.

Correct, *a.* [From Lat. *porrigere*, to stretch out.] (Zool.) Stretched or spread out, or extended horizontally.

Porret, *n.* A leek or small onion.

Porridge, (pôr'rij,) *n.* [Perhaps a corruption of *potage*.] A kind of food made by boiling meal or meat in water; broth; hasty-pudding; panada; as, oatmeal-porridge, bean-porridge, milk-porridge, &c.

Porringer, (-jēr,) *n.* [From *porridge*.] A small metal vessel in which children eat porridge or milk.

Porsenna, or **POKSEN'A**, a celebrated leader and king of Etruria, who declared war against the Romans because they refused to restore Tarquin to his throne. At first successful, he would have entered the gates of Rome had not Horatius Cocles stood at the head of a bridge and resisted the fury of the whole Etrurian army, while his companions behind were cutting off the communication with the opposite shore. This act of bravery astonished Porsenna; but when he had seen Mutius Scævola, who had entered his camp with the intention of murdering him, burn his hand without emotion, to convince him of his fortitude, he no longer dared to make head against so brave a people. He made a peace with the Romans, and never after supported the claims of Tarquin. The story of Porsenna's attack upon Rome forms the subject of one of Lord Macaulay's stirring *Lays of Ancient Rome*.

Port, *n.* [Fr.; It., from Lat. *porta*, a gate.] Any bay, cove, inlet, or recess of the sea or of a lake, or the mouth of a river, which ships or vessels may enter, and where they can lie safe from injury by storms.—A gate; an entrance; a passage-way.

(Naut.) An embrasure or opening in the side of a ship-of-war or other vessel, through which the guns are discharged; also, the lid which closes a port-hole;—otherwise written *port-hole*.

(Mach.) A passage leading to a steam-way; an opening through which steam, &c., may pass to the valves of an engine.

[Fr. *port*, from Lat. *portare*, to carry.] Manner of movement or walk; personal bearing; carriage; demeanor; mien; deportment; external appearance.

"And bear the name and port of gentleman."—Shaks.

(Naut.) The larboard or left side of a ship;—opposed to *starboard*; as, the helm is *a-port*.

[From *Oporto*, Portugal.] A dark-purple astringent, full-bodied wine brought from Portugal.

Port-admiral. (Nav.) The admiral having charge of a naval port, station, or rendezvous. This office does not exist in the American navy.—**Port charges**. (Com.) Charges to which a ship is liable while in port, as wharfage, dockage, &c.—**Port of entry**. A port or harbor where a custom-house is established for the legal entry of goods, merchandise, &c.—**Port of the voice**. Mode of management of the voice in singing.—**Steam-port** and **Exhaust-port**. (Mach.) The openings employed for the entrance or exit of the steam, respectively.

—*v. a.* (Naut.) To turn or put to the left or larboard side, as of a ship; as, to *port* the helm.

(Mil.) To hold, as a musket, in a sloping position upward across the body, so that its stock is in front of the right hip, and the barrel in front of the left shoulder; as, to *port arms*.

Portability, *n.* State of being portable; adaptation to be carried.

Portable, *a.* [Lat. *portabilis*, from *porto*, to carry or bear, allied to Lat. *fero*.] That may be carried or borne; that may be carried by the hand or about the person, on horseback, or in a travelling vehicle; not bulky or heavy; that may be easily conveyed from place to place with one's travelling baggage; as, a *portable desk*.—Sufferable; supportable; endurable. (*r.*)

Portachuc de Tucto, a lofty pass of the Andes in Peru, between Tarma and Lima; height, 15,760 feet.

Portadown, a town of Ireland, in Ulster, abt. 10 m. E.N.E. of Armagh; pop. 3,000.

Portaferry, a seaport-town of Ireland, in Ulster, abt. 7 m. E.N.E. of Downpatrick; pop. 2,000.

Portage, *n.* [Fr.] Act of carrying.—Carriage; price of conveyance.

(Naut.) A port-hole.—A narrow neck of land over which goods, &c., are carried between two navigable bodies of water.—A sailor's wages while in port.—The amount of a sailor's wages for a voyage.

Portage, in *Indiana*, a township of Porter county.—A village and township of St. Joseph county, about 150 m. N. of Indianapolis.

Portage, in *Michigan*, a township of Houghton county.—A post-township of Kalamazoo county.

Portage, in *New York*, a township of Livingston county.

Portage, in *Ohio*, a north-east county; area, about 480 square miles. *Rivers*. Cuyahoga and Mahoning rivers. *Surface*, nearly level; *soil*, fertile. *Min.* Bituminous coal. *Cap.* Ravenna. *Pop.* (1897) 28,870.

—A post-village and township of Wood co., about 20 m. south of Perrysburg.

Portage, in *Wisconsin*, a north central county; area, about 800 sq. m. *Rivers*. Wisconsin and Plover rivers. *Surface*, mostly level; *soil*, fertile. *Cap.* Stevens Point. *Pop.* (1895) 28,531.

—A thriving city, cap. of Columbia co., about 35 m. N. of Madison. This city, built on the site of Fort du Quesne, is a place of much business activity, and contains some fine edifices. Steamboats ply regularly between here and Green Bay. It is also on the ship-canal connecting Wisconsin and Fox rivers. *Pop.* (1895) 5,419.

Portage Lake, in *Michigan*, an irregular body of water in Houghton co., extending from Keweenaw Bay nearly across the peninsula.

Portage River, in *Michigan*, rises in Livingston co., and flows S.E. through Portage Lake into Huron River.

Portail, *n.* [It. *portella*; Fr. *portail*.] A little door; a gate or gateway.

(Arch.) The lesser of two gates, when they are of two dimensions, at the entrance to a building; the arch over a door or gateway; the frame-work of a gate.

—*a.* [From Lat. *porta*, gate.] (Anat.) Pertaining, or having reference to the *porta* or gateway of the liver; as, the *portal vein*, the *portal blood*.

Port Alleghe'ny, in *Pennsylvania*, a post-borough of McKean co. *Pop.* (1900) 1,853.

Port Arthur, a naval stronghold at the southern extremity of Liao-tung peninsula, in the extreme south of Manchuria. Used by China as a fortress and naval arsenal, it was captured by Japan in the war of 1894, but given up under threats from Russia, and other powers. Russia leased it from China in 1898, strongly fortified it, and built a few miles northward the commercial town, and Port of Dalny. The siege of Port Arthur by a strong Japanese army and fleet, in the Russo-Japanese war, led to its surrender to Japan on January 2, 1905.

Port au Prince, or **PORT REPUBLICAN**, (port-o-prinss,) a seaport-city, cap. of Hayti, W. Indies, on the Bay of Gonaïves; Lat. 18° 35' N., Lon. 72° 18' W. It is irregularly built, in the midst of a low marshy tract; but the harbor is excellent, however, and commerce is extensive. In Sep., 1883, a fire destroyed a great part of the town, during the fire the mob pillaged the place, the loss sustained was computed to have been several millions worth of property, with the loss of many lives. *Pop.* (1897) 22,750.

Port Austin, in *Mich.*, a p. v. of Huron co.

Port-bar, *n.* (Naut.) A bar to secure the ports of a ship in a gale of wind.—A harbor-boom.—A bar, or shelf of sand or rock, at the entrance of a port or harbor.

Port Barnett, in *Penn.*, a village of Jefferson co.

Port Byron, in *Ill.*, a p. v. of Rock Island co.—In *New York*, a p. v. of Cayuga co.

Port Carbon, in *Pennsylvania*, a post-borough of Schuylkill co., abt. 65 m. N.E. of Harrisburg.

Port Chester, in *New York*, a post-village of Westchester co., abt. 29 m. N.E. of New York city.

Port Clinton, in *Ohio*, a post-village, cap. of Ottawa co., abt. 120 m. N. of Columbus.

Port Clinton, in *Pennsylvania*, a post-borough of Schuylkill co., abt. 12 m. S.E. of Pottsville.

Port Conway, in *Virginia*, a post-village of King George co., abt. 60 m. N. by E. of Richmond.

Port-crayon, *n.* [Fr. *porte-crayon*, from *porter*, to carry, and *crayon*, a crayon.] An implement of brass or steel for holding the chalk or crayon in sketching, to give ease and firmness to the touch, as well as to protect the fingers from the soil of black chalks. It possesses a single, or generally a double clip, wide enough to admit the crayon, a loose ring being drawn up tightly over it to secure it firmly.

Port-en-lis, *n.* [Fr. *porte*, and *coulisse*, groove, from *couler*, to trickle, to slip or slide down, from Lat. *colare*, to strain, filter.] (Port.) A sliding or falling gate, consisting of a strong grating of timber or iron, hung over the gateway of a fortified town or of a castle, to be let down in case of surprise, to prevent the entrance of an enemy.

—An ancient English coin, which had the figure of a *port-cullis* on one side.

Port Deposit, in *Maryland*, a post-village of Cecil co., abt. 37 m. N.E. of Baltimore.

Port Desire, a river of Patagonia, flowing E. into Port Desire Bay, an arm of the Atlantic Ocean; Lat. 47° 45' S., Lon. 65° 55' 30" E. Length, abt. 200 m.

Port Dover, a village and port of entry of Norfolk co., prov. of Ontario, abt. 37 m. S.W. of Hamilton.

Porte, *n.* [Fr., a gate; Lat. *porta*.] The government of the Turkish empire, officially and politically called the *Ottoman Porte*, from the gate (*port*) of the Sultan's palace, where justice was, in former times, administered.

Port Elizabeth, in *New Jersey*, a post-village of Cumberland co., abt. 36 m. E.S.E. of Salem.

Porte-monnaie, (pôr't-mun-nā,) *n.* [Fr., from *porter*, to carry, and *monnaie*, money.] A small wallet or pocket-book for carrying money.

Portend, *v. i.* [Lat. *portendo*—*pro*, and *tendo*, *tensum*, or *tentum*, to stretch.] To point out; to indicate, as something future by previous signs; to foreshow; to foretoken; to forebode; to presage; to threaten.

"A moist and cool summer portendeth a hard winter."—Bacon.

Portent, *n.* [Lat. *portentum*.] An omen of ill; any previous sign or prodigy indicating the approach of evil or calamity.

Portentive, *a.* Foreshadowing; presaging.

Portentous, *a.* [Lat. *portentosus*.] Full of portents; ominous; foreshowing ill.—Hence, strange; monstrous; prodigious; wonderful; as, an animal of *portentous* size.

Portentously, *adv.* Ominously; threateningly; in a portentous manner.

Porter, *n.* [Fr. *portier*, from Lat. *porta*, a gate.] A door- or gate-keeper; one who waits at the door to receive messages.

Por'ter, *n.* [Fr. *porteur*, from *porter*, to carry.] A carrier; a person who carries or conveys burdens for hire.

Porter, *n.* [Originally *porter's beer*.] A liquor brewed from malt, part of which has been more highly dried than that which is used for ale. It is hopped in the same way as ale; and its deep-brown color is finally given to it by roasted or parched malt. Porter was first brewed in 1722.

Porter, DAVID D., an American admiral, b. in Pennsylvania, about 1812, is the youngest son of the late Commodore David Porter, who commanded the frigate *Essex* in the war with Great Britain in 1812-14, and sailed with him while quite a child in his expedition against the W. Indian pirates. After a course of instruction at the Naval School, he entered the service as a midshipman, in Feb., 1829, and served for some time under Commodore Biddle, in the Mediterranean. After passing his examination in July, 1835, he was employed for several years in the coast survey and river explorations, until his promotion, in 1841, to the rank of lieutenant. At the close of 1845 he was placed on special duty at the Observatory at Washington, which position he resigned in 1846 in order to take part in the Mexican war, in the course of which he served with distinction under Commodore Tatnall, especially before Vera Cruz. At the close of the war he was appointed to the command of the surveying schooner *Petrel*, and at the outbreak of the Civil War, in 1861, he was promoted to the rank of commander, and at the beginning of 1862 the mortar-fleet was placed under his orders. During the naval operations on the Mississippi he distinguished himself, especially by his dashing exploit in reducing the forts below New Orleans. After the capture of that city, he proceeded up the great river with his fleet, and was engaged in several affairs, including the unsuccessful siege of Vicksburg, which was raised July 22, 1862. He was appointed in Oct. of that year to the command of the Upper Mississippi squadron, with the rank of Acting Rear-Admiral, and after superintending the construction of that fleet, he sailed down the river, and assisted materially in reopening that great highway to the Gulf. In the summer of 1863, during the second siege of Vicksburg, Admiral Porter bombarded the works from the river side, and Gen. Grant, who commanded the besieging army, was enabled to report the successful occupation of that stronghold, July 4. Admiral Porter was actively employed in several important expeditions, especially in the two combined attacks on Fort Fisher, which commands the approaches to Wilmington, the port so much resorted to by blockade-runners. The first of these attacks, at the close of 1864, miscarried, owing, it was alleged, to the inefficient coöperation of Gen. Butler, who commanded the military forces, but in part to the failure of the scheme to destroy the fort by the explosion of a vast quantity of gunpowder deposited in a vessel towed close to it for that purpose. The second expedition, which comprised a powerful fleet of monitors and other war-ships, aided by a strong military force under Gen. Terry, was completely successful, although the capture of the fort was not effected without considerable loss to the Nationals. On July 25, 1866, P. was promoted to the rank of Vice-Admiral; and Aug., 1870, succeeded Admiral Farragut as admiral of the U. S. navy. Died Feb. 13, 1891.

Porter, in *Indiana*, a N.W. co., bordering on Lake Michigan; area, abt. 400 sq. m. *Rivers*. Kankakee and Calumuck rivers, besides several small unimportant streams. *Surface*, undulating or level; *soil*, generally fertile. *Cap.* Valparaiso.—A township of the above co.

Porter, in *Maine*, a twp. of Oxford co.

Porter, in *Michigan*, a township of Cass county.—A township of Van Buren county.

Porter, in *New York*, a township of Niagara county.

Porter, in *Ohio*, a township of Delaware county.—A village of Gallia county, about 10 miles N.W. of Gallipolis.—A township of Sciota county.

Porter, in *Pennsylvania*, a township of Clarion county.—A township of Clinton county.—A township of Huntingdon county.—A post-township of Jefferson county.—A township of Lycoming county.—A p. o. of Jefferson county.

Porter, in *Wisconsin*, a township of Rock county.

Porterage, *n.* Money charged or paid for the carriage of burdens by a porter.—Business or vocation of a porter or door-keeper.

Porteress, *n.* See **PORTRESS**.

Porterly, *adv.* In the manner of a porter;—hence, rough; coarse; vulgar.

Portersville, in *Connecticut*, a village of New London co., abt. 8 m. N. of New London.

Portersville, in *Indiana*, a post-village of Dubois co., abt. 37 m. E.S.E. of Vincennes.

Portersville, in *Pennsylvania*, a post-borough of Butler co., abt. 220 m. W.N.W. of Harrisburg.

Portersville, in *Tennessee*, a post-village of Tipton co., abt. 25 m. N.E. of Memphis.

Port-Es'sington, a bay of N. Australia, on the E. side of Coburg Peninsula; Lat. 11° 22' 3" S., Lon. 132° 10' 7" E.

Port Etch'es, in *Alaska*, a maritime village or settlement in Prince William's Sound; Lat. 60° 21' 12" N., Lon. 146° 32' W.

Porte-fenille, (pôr't-ful'ye,) *n.* See **PORTFOLIO**.

Port-fire, *n.* (Mil.) In artillery practice, the common *port-fire* consists of a paper-case about 16 inches long, driven with a composition which burns at the rate of rather more than one inch a minute. The *slow port-fire* consists merely of paper impregnated with saltpetre.

and rolled into a solid cylinder about 16 inches long, which will burn from two to three hours:—both these compositions are now generally superseded by the *friction primer*.

Portfolio, *n.* [Fr. *port-feuille*, from *port*, to carry; Lat. *portare*, and *feuille*, a leaf, from Lat. *folium*.] A portable case of the size of a large book, to carry or keep loose papers, engravings, &c., in.

—Hence, a collection of prints, engravings, maps, &c.
—Also, the office or functions of a minister of state; as, to accept the *portfolio* of foreign affairs.

Port Gibson, in *Mississippi*, a post-town, cap. of Claiborne co., about 65 m. S. W. of Jackson.

Port Gibson, in *New York*, a post-village of Ontario co., about 54 m. W. of Syracuse.

Port Henry, an excellent harbor on the W. coast of Patagonia; Lat. 50° S. Lon. 75° 15' W.

Port Henry, in *New York*, a post-village of Essex co., abt. 110 m. N. by E. of Albany.

Port-hole, *n.* (*Naut.*) An embrasure in a ship-of-war. See **PORT**.

Port Hood, or **JES'TICO**, a seaport-town of Inverness co., Nova Scotia, on a bay of its own name, at the W. extremity of Cape Breton.

Port-hook, *n.* A hook driven through a ship's side and clinched, for the purpose of hooking one of the buoys that are fastened to the port-lids.

Port Hope, a town of prov. of Ontario, on Lake Ontario, abt. 63 m. E. by N. of Toronto.

Port Hope, in *Michigan*, a post-village of Huron co., abt. 5 m. N.N.W. of Sand Beach.

Port Howe, on the E. coast of the island of San Salvador, W. Indies. This is supposed to be Columbus' first landing-place in the New World.

Port Hudson, in *Louisiana*, a post-village of East Baton Rouge parish, 25 m. N. by W. of Baton Rouge. In May, 1863, this place, strongly covered by advanced works, and defended by the Confederate Gen. Frank K. Gardner, was invested by Gen. Banks. Three assaults made on May 27, June 11 and 14, having been vigorously repulsed, with a loss of about 3,000 men on the National side, Gen. Banks resolved to continue the siege in the ordinary way, without further attempt at storming the place. On July 7, Gen. Gardner learning the surrender of Vicksburg, entered into a capitulation. Gen. Banks entered the town two days after, taking possession of 2 steamers, 51 pieces of artillery, and a quantity of small arms. The garrison of 6,408 men became prisoners of war.

Port Huron, in *Michigan*, an important city, cap. of St. Clair co., on St. Clair river and Lake Huron, 62 m. N. E. of Detroit. Pop. (1897) 19,800.

Portici, (*por-te'che*), a town of S. Italy, prov. of Terra di Lavoro, at the foot of Mount Vesuvius, near Herculaneum, 4 m. S.E. of Naples. Its environs are delightful, and are dotted with country houses. Pop. 6,500.

Portico, *n.* [Lat. *porticus*.] (*Arch.*) A covered space with a roof supported by columns. It is usually attached to an important building (Fig. 2145), but sometimes detached, as a shady walk. A portico is called *tetrastyle*, *hexastyle*, *octostyle*, and *decastyle*, according as it has four, six, eight, or ten columns in front.

Porticoed, *a.* Having a portico or porticoes.

Portillo, a mountain pass of the Chilean Andes, abt. Lat. 33° 40' S.; height, 14,365 feet.

Portion, (*pôr'shun*), *n.* [Lat. *portio*, akin to *pars*, a part, and *partior*, to divide.] A part; a parcel; a part of anything separated from it.—A part, though not actually divided, but considered by itself.—A part assigned; an allotment; a dividend.—A dower; a wife's fortune.—The part of an estate given to a child or heir, or descending to him by law.

Portion, *v. a.* To distribute in parts; to parcel; to divide.

"The gods who portion out the lots of princes as of private men."—*Rowe*.

—To endow with a fortune, as to *portion* a daughter.

Portioner, *n.* One who portions; one who divides or assigns in shares.

Portionist, *n.* A student at Oxford University, England, who has a certain academical allowance.

(*Ecol.*) The incumbent of a benefice which has more rectors or vicars than one.

Portionless, *a.* Having no portion; dowerless.

Port Jackson, a Bay and English settlement on the E. coast of New South Wales, Australia. The entrance

is between two headlands, 13¼ m. wide; Lat. 33° 51' 45" S., Lon. 151° 11' 49" E. Sidney is on the E. side of this bay.

Port Jackson, in *New York*, a post-village of Montgomery co., abt. 15 m. W.N.W. of Schenectady.

Port Jefferson, in *New York*, a post-village of Suffolk co., abt. 200 m. S.S.E. of Albany.

Port Jefferson, in *Ohio*, a village of Shelby co., abt. 70 m. W. by N. of Columbus.

Port Jervis, in *New York*, a post-village of Orange co., abt. 97 m. N.W. of New York city.

Port Kennedy, in *Pennsylvania*, a post-village of Montgomery co., abt. 4 m. W. of Norristown.

Port Kent, in *New York*, a post-village of Essex co., abt. 150 m. N. of Albany.

Portland, in *Alabama*, a village of Dallas co., abt. 60 m. W.S.W. of Montgomery.

Portland, in *Connecticut*, a post-village and township of Middlesex county, abt. 15 m. S.E. by S. of Hartford.

Portland, in *Illinois*, a post-village of Whitesides co., abt. 140 m. N. by W. of Springfield.

Portland, in *Indiana*, a village of Fountain co., about 7 m. N.E. of Covington.—A city, cap. of Jay co., about 90 m. E. N.E. of Indianapolis. Pop. (1897) 4,015. —A village of Putnam co.

Portland, in *Iowa*, a township of Cerro Gordo co.; pop. 168.—A village of Van Buren co., abt. 72 m. S.S.W. of Iowa City.

Portland, in *Kentucky*, a post-village of Jefferson co., abt. 3 m. W. of Louisville.

Portland, in *Maine*, a city, port of entry, cap. of Cumberland co., and the commercial metropolis of the State, on Casco Bay, abt. 60 m. S.S.W. of Augusta; Lat. 43° 39' 52" N., Lon. 70° 13' 34" W. P. is finely situated on one of the best harbors on the Atlantic coast, the entrance to which is defended by Forts Preble, Scammel, and Gorges. It is generally well built, and contains many fine edifices, among which the City Hall, Custom-House, Athenæum, and Mechanics' Hall, are worthy of mention. There are also many elegant churches. The industry of the inhabitants is chiefly directed to commerce, which is extensive. On July 4, 1866, a fire-cracker thrown by a boy during the celebration of Independence Day, kindled a fire which consumed nearly all the business portion of the city, including 8 churches, the banks, hotels, and newspaper-offices; destroyed property to the value of \$10,000,000; and rendered 2,000 families houseless. Pop. (1897) 38,150.

Portland, in *Michigan*, a post-village and township of Ionia co., abt. 21 m. W.N.W. of Lansing.

Portland, in *Minnesota*, a village of Houston co., abt. 40 m. S. of Winona.—A village of St. Louis co., abt. 7 m. N. of Superior City.

Portland, in *Missouri*, a post-village of Callaway co., abt. 3 m. N.E. of Jefferson City.

Portland, in *New York*, a post-township of Chautauqua co.

Portland, in *Ohio*, a township of Erie county.—A village of Jackson county, about 30 miles north-east of Portsmouth.—A post-village of Meigs county, about 16 miles east of Pomeroy.

Portland, in *Oregon*, a city, cap. of Multnomah co., about 50 m. N. by E. of Salem; Lat. 45° 30' N., Lon. 122° 27' 30" W. P. is the most populous and enterprising town in the State. It is connected with San Francisco by steamboats; has excellent railroad facilities; contains several extensive manufacturing, and does a very large trade. Pop. (1897) 81,000.

Portland, in *Wisconsin*, a township of Dodge co. Pop. about 1,200.—A post-township of Monroe co.

Portland Channel, an inlet of the Pacific Ocean, on the W. coast of N. America, abt. Lat. 55° N., Lon. 130° W.

Portland Head, in *Maine*, a small promontory and lighthouse, on the W. side of the entrance to Portland Harbor. It exhibits a fixed light 85 feet high; Lat. 43° 36' N., Lon. 70° 12' W.

Portland Islands, in the P. Ocean. The N.E. point of the most E. island is in Lat. 2° 26' S., Lon. 147° 18' 45" E.—An island near the E. coast of New Zealand.—An island of the Queen Charlotte group, in the S. Pacific Ocean.

Portland Isle, a small island, or peninsula, of England, co. of Dorset, in the English Channel, opposite Weymouth; Lat. 50° 31' N., Lon. 2° 26' W. It has two lighthouses. Pop. 5,500.

Portland Point, a promontory forming the S. extremity of the island of Jamaica; Lat. 17° 43' N., Lon. 77° 10' W. It is the termination of Portland Ridge, and a few m. to the E. lie Portland Keys.

Portland Stone, (*Min.*) An alkaline sandstone of a dull, whitish color, heavy and moderately hard, and somewhat flat texture, and composed of large rounded grit, cemented together by an earthy spar, and intermixed with numerous glittering particles of pure spar. It comes from the island of Portland, co. of Dorset, England.—A reddish-brown sandstone quarried at Portland, Conn., U. S. See also **PORTLAND CEMENT**.

Portland Vase, or **Barberini Vase**, one of the most valuable antique relics. Was found in the 16th cent. in a sarcophagus in Rome, and was placed in the Barberini Palace. It was purchased in 1770 by Sir W. Hamilton, and placed in the British Museum, in 1810, by the Duke of Portland; it was maliciously broken in 1845, but the pieces were skillfully united. It dates from the 3d cent., and once held the ashes of some of the family of the Emperor Alexander Severus. See Fig. 1165.

Portlandville, in *New York*, a post-village of Otsego co.

Port Lavaca, in *Texas*, a post-town, capital of Calhoun co. Pop. (1897) 760.

Port Leyden, in *N. Y.*, a P.-V. of Lewis co.

Port-lid, *n.* (*Naut.*) A door for closing a ship's ports.

Portliness, *n.* State or quality of being portly; dignity of mien or of personal appearance, consisting in size and symmetry of body, with dignified manners and demeanor; also, corpulence; bulkiness of frame.

Port Louis, (*loo'is*), a fortified seaport-town of France, dept. of Morbihan, at the mouth of the Blavet, 3 m. S. of Lorient; pop. 3,500.

Port Louis, a seaport-town, cap. of the island of Mauritius, Lat. 20° 10' S., Lon. 57° 32' E. The harbor is difficult of access. Pop. 35,000.

Port Louis, a seaport-town of the island of Guadeloupe, W. Indies, abt. 12 m. N. of Point à Pitre.

Port Louisa, in *Iowa*, a post-village and township of Louisa co., abt. 6 m. N.E. of Wapello.

Port Ludlow, in *Washington*, a prosperous town of Jefferson co., on Admiralty Inlet, about 16 m. S. of Port Townsend.

Portly, *a.* [From *port*, carriage, mien, demeanor.] Of a noble port, carriage, or appearance; grand and dignified in mien; stately; of good size or stature.

"A goodly, portly man, of a noble carriage."—*Shaks.*

—Hence, by implication, bulky; corpulent; as, a *portly* habit of body.

Port Madison, in *Washington*, a post-village, the former cap. of Kitsap co., on Admiralty Inlet, about 77 m. N. N.E. of Olympia.

Port Malton, a fortified seaport town, cap. of the island of Minorca; Lat. 39° 52' N., Lon. 4° 21' E. It has an excellent harbor. Pop. 13,000.

Portman, *n.*; pl. **PORTMEN**. A Burgess of the Cinque Ports, England. See **CINQUE PORTS**.

Portmanteau, (*-mân'tō*), *n.*; pl. Eng. **PORTMANTEAUS**; pl. Fr. **PORTEMANTEAUX**, (*-tōz*). [Fr. *port*-manteau, from *porter*, to carry, and *manteau*, a cloak.] A portable cloak-bag; a bag, usually made of leather, for carrying clothes or other things necessary in travelling.

Port Merceer, in *New Jersey*, a village of Mercer co., abt. 4 m. S.W. of Princeton.

Port Metway, or **MILL VILLAGE**, a seaport-town of Queen's co., Nova Scotia, abt. 15 m. S.W. of Halifax.

Port Mitchell, in *Indiana*, a village of Noble co., abt. 125 m. N.N.E. of Indianapolis.

Port Monmouth, in *New Jersey*, a post-village of Monmouth co., abt. 21 m. S. of New York city.

Port Mulgrave, in *Alaska*, a harbor on the E. side of Admiralty Bay; Lat. 59° 35' N., Lon. 149° 43' W.

Port Natal, an inlet of Natal, in E. Africa; Lat. 29° 53' S., Lon. 31° 2' E.

Portneuf, (*-nuŷ*), a central co. of prov. of Quebec, bordering on the St. Lawrence River; area, abt. 10,440 sq. m. It contains several considerable lakes. Cap. Portneuf, on the St. Lawrence River, abt. 30 m. W. by S. of Quebec.

Port Norris, in *New Jersey*, a village of Cumberland co., abt. 80 m. S. by W. of Trenton.

Porto, a city of Portugal. See **OPORTO**.

Porto Alegre, in Brazil, a city on the Lake of Patos, about 160 m. N. N.E. of Rio Grande. Pop. (1897) 31,250, largely Geruans.—A maritime town, situated about 120 m. S.S.W. of Porto Seguro.—A town situated at about 190 m. W. of Natal.

Porto Atacames, a harbor of Ecuador, abt. 100 m. N.W. of Quito.

Porto Bello, a seaport-town of Scotland, co. of Edinburgh, on the Frith of Forth, 3 m. E. of Edinburgh; pop. 4,000.

Porto Bello, a town of Brazil, on a bay of its own name, abt. 25 m. S. of Desterro; Lat. 27° 8' S., Lon. 53° 24' E.

Porto-das-Pedras, a town of Brazil, abt. 47 m. N.E. of Alagoas; pop. 4,000.

Porto-de-Moz, a maritime town of Brazil, abt. 40 m. S.W. of Gurupa.

Porto Feliz, (*fa-leez*), a town of Brazil, abt. 50 m. W.N.W. of São Paulo.

Porto Ferrajo, (*fer-ra'yo*), the cap. town of the island of Elba, on a lofty point of land extending into the bay. It was the residence of Napoleon I. after his first abdication in 1814. Pop. 4,500.

Port-of-Spain, a town, cap. of the island of Trinidad, W. Indies, on the W. coast, near the mouth of Carony River; Lat. 10° 38' 7" N., Lon. 61° 32' W. It is well built, has a good harbor, defended by Fort St. David, and carries on an active trade. Pop. 12,000.

Porto Imperial, or **PORTO REAL**, a town of Brazil, on the Tocantins River, abt. 40 m. N.N.E. of Goyaz.

Portoise, (*pôr'tiz*), *n.* (Also written **PORTLAST**.) (*Naut.*) An old term for a ship's gunwale.

To lower the yards *a-portoise*. (*Naut.*) To lower the yards to the gunwale.—To ride *a-portoise*, to strike the lower yards and topmasts, when at anchor, in a gale of wind;—said of a ship.

Porto Maurizio, a town of Italy, in Piedmont, 2 m. W.S.W. of Oneglia; pop. 6,500.

Port Ontario, in *New York*, a post-village of Oswego co., abt. 170 m. W.N.W. of Albany.

Port Orchard, in *Washington*, a post-village, cap. of Kitsap co., on Admiralty Inlet, about 65 m. N. E. of Olympia. Here is a great government dry dock.

Porto Rico, [Sp. *Puerto Rico*, rich port.] an island of the W. Indies, the fourth in point of size of the Greater Antilles, belonging to the U. S. It lies abt. 60 m. E. of Cape Engano Hayti, between Lat. 17° 56' and 18° 30' N., and Lon. 65° 30' and 67° W., being 90 miles in length from E. to W., with a nearly uniform breadth of 36 m. Area, abt. 3,606 sq. m. Surface, much diversified, a range of mountains traversing the centre of the island from E. to W. averaging 1,500 ft. high, and culminating in a peak 3,678 ft. high. Extensive savannahs succeed

Fig 2145.

TEMPLE OF VESTA, TIVOLI.

the mountainous region, and are bordered by large and fertile tracts, which, besides the usual tropical vegetation, produce large quantities of sugar-cane, *Expt.* Sugar, ginger, hides, rum, molasses, coffee, cotton, tobacco of excellent quality, dye-woods, lignum-vitæ, &c. *Chief towns.* San Juan de Porto Rico (the capital), Mayaguez, Ponce, Guayama. *P. R.* was discovered by Columbus in 1493, and in 1509 it was invaded by a party of Spaniards from Hayti, who soon exterminated the natives. In 1898 it was ceded by Spain to the United States. *Pop.* (1899) 32,048.

Porto San'to, one of the Madeira islands, in the Atlantic Ocean, 26 m. N.E. of Madeira; Lat. 33° 5' N., Lon. 16° 19' W.; *pop.* 6,000.

Porto Seguro, a maritime town of Brazil, on the Atlantic Ocean, at the mouth of the river Buranhem; Lat. 15° 16' 9" S., Lon. 38° 58' W.

Port Penn, in *Delaware*, a post-town of New Castle co., about 30 m. N. of Dover.

Port Penn, in *Pennsylvania*, a village of Lycoming co., abt. 13 m. E. of Williamsport.

Port Perry, in *Missouri*, a village of Perry co., abt. 60 m. S.E. of St. Louis.

Port Perry, in *Pennsylvania*, a post-village of Allegheny co., abt. 11 m. S.E. of Pittsburgh.

Port Phillip, a bay of the S. coast of Australia; Lat. of its entrance 38° 18' S., Lon. 144° 47' 7" E. It receives the waters of the Yarra-Yarra.

Port Plate, (*plata*), a town of Hayti, W. Indies, on the N. coast, abt. 12 m. N.W. of Santiago.

Portrait, *n.* [Fr.] A picture or representation of a person, and especially of a face, drawn from the life.—Figuratively, a description or delineation in words.

Portrait bust, or *statue*, a bust or statue representing the actual features or person of an individual.

Portraiture, *n.* [O. Fr.] A portrait; a painted resemblance.—Hence, that which is copied from some example, specimen, or model.

"He gives us the portraiture of a perfect orator."—*Baker*.

—The drawing of portraits.

Portray, *v. a.* [Fr. *peindre*, from Lat. *pro*, and *trahere*, to draw.] To draw; to delineate; to paint or draw the likeness of anything in colors.—To describe in words.—To adorn with pictures.

Portrayal, *n.* The act of portraying.

Portrayer, *n.* One who portrays; one who describes or draws another to the life.

Port Republic, formerly *GRAVELLY LANDING*, in *New Jersey*, a post-village of Atlantic co., abt. 15 m. E.N.E. of May's Landing.

Port Republic, in *Virginia*, a post-village of Rockingham co., abt. 100 m. W.N.W. of Richmond.

Portress, *Portress*, *n.* A female porter; a janitrix.

Port Richmond, or *Richmond*, in *Iowa*, a post-village of Wapello co., on the Des Moines River, nearly opposite Ottumwa.

Port-rope, *n.* A rope or lashing to draw up a port-lid.

Port Royal, (*Ecll. Hist.*) A celebrated convent of Cistercian nuns, situated near Chevreuse, about five leagues from Paris. It was founded in 1204, and the nuns were of the order of St. Bernard de Citeaux. In 1625 they removed to Paris, where, in the Faubourg St. Jacques, they had a house, known as the Port Royal de Paris, while the house which they left received the name of Port Royal des Champs, and became occupied by a number of pious and learned men, who wished to lead a pious and secluded life, and were known as Les Solitaires de Port Royal. The most distinguished of this company were Claude Lancelot, the grammarian; Antoine Le Maistre, an advocate and one of the most distinguished orators of his time; Simon Lericourt, a distinguished officer; De Sacy, the eminent translator of the Bible; the two Arnoulds; Pierre Nicole, Blaise Pascal, and Nicolas Fontaine. The fame that they acquired for their learning and sanctity aroused the jealousy of the Jesuits, and was the cause of a long contest that prevailed between the two parties, which at length led to the suppression of the Port Royal des Champs, by a bull of Pope Clement XI. in 1708. The special subject of the controversy was the Jansenistic opinions held by the Port Royalists. See *JANSENISTS*.

Port Royal, a fortified town of Jamaica, W. Indies, abt. 3 m. S.W. of Kingston; Lat. 17° 56' N., Lon. 76° 51' W. It has a naval dockyard, hospital, barracks, &c.

Port Royal, in *Indiana*, a village of Morgan co., abt. 16 m. S.S.W. of Indianapolis.

Port Royal, in *Kentucky*, a post-village of Henry co., abt. 50 m. E.N.E. of Louisville.

Port Royal, in *Pennsylvania*, a post-borough of Juniata co., about 3 m. S. of Mifflintown.

Port Roy'al, in *S. Carolina*, a channel connecting Broad River with the Atlantic Ocean, between the islands of Hilton Head and St. Helena, forming an excellent harbor.—Also, the name of an island in the Beaufort dist., containing the town of Beaufort, abt. 10 m. N.N.W. of Port Royal Channel.

Port Royal, in *Virginia*, a post-village of Caroline co., abt. 22 m. S.E. of Fredericksburg.

Port San'ilac, in *Michigan*, a post-village of Sanilac co., abt. 24 m. N. of Lexington.

Port Santa Bar'bara, an inlet of the Pacific Ocean, on the W. coast of Patagonia; Lat. 48° S., Lon. 75° 30' W.

Portsea Island, (*port'see*), lies off the coast of Hampshire co., England, between Portsmouth and Langston harbors. It is 4 m. long, by 3 m. broad. It is level and fertile, and contains the towns of Portsmouth and Portsea.

Port Shel'don, in *Michigan*, a post-village of Ottawa co., abt. 12 m. S. of Grand Haven.

Ports'mouth, a fortified seaport-town and principal naval station of England, co. of Hauts, in the island of

Portsea, 95 m. S.W. of London; Lat. 50° 48' N., Lon. 1° 6' W. It consists of the old town of Portsmouth and the town of Portsea, which has outgrown its limits. The principal public buildings are the church of St. Thomas, the Town Hall, and Custom-House. The harbor is very capacious, deep, and secure, and is defended by several batteries of great strength. The dock-yard, the great naval arsenal of England, extends along the W. shore of the harbor, and includes an area of 293 acres. There are also numerous shipbuilding yards. *P.* dates from a very early period, but became of importance in the reign of Edward IV., by whom it was fortified. *Pop.* (1897) 164,040.

Ports'mouth, in *Illinois*, a village of Carroll co., abt. 180 m. N. by W. of Springfield.

Ports'mouth, in *Michigan*, a village of Allegan co., at the mouth of the Black River.

—A post-village of Bay co., abt. 110 m. N.N.W. of Detroit.

Ports'mouth, in *N. Carolina*, a post-village of Carteret co., abt. 65 m. E. of Newbern.

Ports'mouth, in *New Hampshire*, a city, port of entry, and semi-cap. of Rockingham co., at the mouth of the Piscataqua River, abt. 54 m. N. by E. of Boston; Lat. 43° 4' 35" N., Lon. 70° 45' 50" W. *P.* is defended by Fort McClary and Fort Constitution. It is the only sea-port of the State, and commands an extensive commerce. The U. S. Portsmouth navy yard is on the E. side of the river, on Continental Island, Me. *P.* was the scene of the peace negotiations between Russia and Japan after the war of 1904-05. The treaty of peace was signed Sept. 5, 1905, by the plenipotentiaries of the two Powers, in one of the navy-yard buildings. *Pop.* (1900) 10,637.

Ports'mouth, in *Ohio*, a city, cap. of Scioto co., about 90 m. S. of Columbus. It is generally well built and contains some fine edifices. *Manuf.* Iron, machinery, &c. *Pop.* (1897) 14,900.

Ports'mouth, in *Virginia*, a city of Norfolk co., finely situated on Elizabeth river, opposite Norfolk, and about 160 m. S.E. of Richmond; Lat. 36° 50' N., Lon. 76° 19' W. The river is about one-half mile wide here, and forms a safe and commodious harbor for the largest ships. Gosport, at the S. extremity of the city, is the site of a U. S. navy yard, dry dock, and naval hospital. *Pop.* (1900) 17,427.

Port'soken, *n.* [Eng. *port*, gate, and A. S. *soke*, privilege.] Having the liberties of the gate, that is, being within the city gates in point of privilege, though without it in point of fact. The name is still preserved in Portsoken Ward, London.

Port'soy, a sea-port town of Scotland, co. of Banff, on a point of land projecting into the Moray Frith, 7 m. W. of Banff; Lat. 57° 38' N., Lon. 2° 36' W.; *pop.* 2,300.

Port Stephens, (*steel'spens*), a harbor of New South Wales, co. of Gloucester, 18 m. N.E. of Port Hunter; Lat. of Baroosine Point 32° 40' 7" S., Lon. 152° 4' 2" E. It runs inland 15 m., and has a breadth of 5 m.

Port Tobac'co, in *Maryland*, a post-village, former cap. of Charles co., about 30 m. S. of Washington, D. C.

Port-toil, *n.* (*Law*.) A payment demanded for the privilege of bringing goods into port.

Port Town'send, in *Washington*, a city, cap. of Jefferson co. *Pop.* (1897) 5,350.

Port Tre'vorton, in *Pennsylvania*, a post-village of Snyder co., about 42 m. N. of Harrisburg.

Portugal, the most western kingdom of Europe, forming the W. portion of the Iberian peninsula, is bounded by Spain and the Atlantic; Lat. between 36° 57' and 42° 8' N., Lon. between 6° 15' and 9° 32' W. *Political Divisions.* Six provinces, viz.:—Entre Douro e Minho, Tras-os-Montes, Beira, Estremadura, Alemtejo, and Algarve.—*Desc.* The country generally inclines from N.E. to S.W. Several of the great mountain-chains of Spain intersect it from east to west, and terminate in large promontories in the Atlantic. The most remarkable of these chains is the Serra de Estrella, nearly in the centre of Portugal. This chain is a continuation of the Serra de Gata, and culminates in an elevation of 7,524 feet above the level of the sea. Another chain is the Serra de Monchique, the extremity of which, Cape St. Vincent, is the south-west point, not only of Portugal, but of Europe.—*Rivers.* The principal are the Tagus, the Douro, the Minho, and the Guadiana. These all enter the country from Spain, and with the Mondego and the Sado, which have their sources in Portugal, flow W. to the Atlantic Ocean.—*Lakes.* None.—*Climate.* Healthy, except in the vicinity of salt-marshes and on parts of the banks of the Tagus and Mondego.—*Prod.* Wheat, barley, oats, flax, hemp, vines, and maize in the elevated tracts; rice in the low grounds, with olives, oranges, lemons, citrons, figs, and almonds. Silk is made of very good quality. There are extensive forests of oak in the N., chestnut in the centre, and the sea-pine and cork in the S. Oxen are employed as beasts of draught, and mules and asses as those of burden. Cattle, sheep, goats, and swine are numerous, and fish abound in the rivers and on the coasts.—*Minerals.* Iron-mines are worked, and the mountains abound in fine marble, and contain traces of gold and silver. Of salt, large quantities are formed in bays along the coast, by natural evaporation. There are numerous salt-marshes, and upwards of 200 mineral springs.—*Manuf.* Limited; principally consisting of woollens, silk, and earthenware. Cotton-spinning is followed, and paper, glass, and gunpowder, are made in a few places. For a long time past the import and export trade has been managed chiefly by foreign merchants, particularly British, settled at Lisbon and Oporto.—*Exp.* These consist almost entirely of wine, salt, and wool.—*Imp.* Various; such as corn, flour, fish, woollens, linen, cotton, lace, hardware, hats, shoes, stockings, &c. The higher classes are divided into the *Titulados*, or higher nobility, and

the *Hidalgos*, or gentry. The women in the capital are loose and dissolute; in the country the people are indolent and listless. They are temperate in eating and drinking; and among the national amusements, the predilection for bull-fights is strong. A want of cleanliness is equally complained of in the capital and in the provincial towns.—*Rel.* Roman Catholic; but all others are tolerated.—*Govt.* A limited monarchy. The national assembly is called the Cortes, and consists of a house of Deputies and a house of Peers.—*Army and Navy.* The regular army consists of about 18,000 men. The navy is composed of 3 armored ships, 7 unarmored ships, carrying in all 186 guns, with 23 torpedo boats of the 1st class and 27 of the 2d.—*Hist.* *P.* forms the greater part of the ancient Lusitania. It was subjugated by the Romans, in the time of Augustus, and was constituted into a province. In the fifth century, on the overthrow of the Roman supremacy, Portugal was invaded by the Alans and Visigoths, and suffered with Spain, of which it was then a part, all the troubles and vicissitudes endured by the inhabitants of the peninsula till the eighth century, at which time the Arabs, called indifferently Saracens or Moors, possessed themselves of the whole of Portugal, and kept absolute dominion for nearly 400 years. In the 12th century, Don Alonzo Henriquez, a Spanish prince of Leon and Castile, gained a great victory over the Moors of Portugal, and carried out his military operations with such success that his troops hailed him with one voice as king, a dignity which the people confirmed with the liveliest demonstrations of joy. Don Alonzo had no sooner received the crown, than he set himself to consolidate his power and attend to the administration of law and justice; first, however, he renounced all dependence on Spain, politically separated his new kingdom from all connection or authority with the Spanish crown, and established a free and sovereign state. Under the descendants of Don Alonzo I., especially Dennis I. and Alonzo IV., Portugal, during the next two centuries, rose in political importance and commercial prosperity, the kingdom being respected abroad, and the people rendered happy and prosperous at home. In 1385, the king of Castile having laid claim to the crown of Portugal on the death of Ferdinand, was opposed and defeated by Don John, Ferdinand's brother, and ascending the vacant throne, ruled his subjects with justice and prudence. Under this wise and enlightened sovereign the Portuguese first directed their attention to those maritime adventures which subsequently placed Portugal at the head of all European nations. Under John I. the Portuguese first projected those Atlantic discoveries on the African coast, fraught with such territorial and commercial advantages to the nation; and, under John II. and Emanuel, between 1481 and 1521, Vasques de Gama explored the Indian Ocean; the riches of the east began to pour into Europe; Goa became a prosperous possession, and Brazil was added to the possessions of the crown of Portugal. The latter monarch, Emanuel, has been regarded as the greatest and best man that ever sat on a throne. Under his wise, just, and benevolent reign, distress was banished from the kingdom, and his subjects rendered rich and happy. Sebastian III., fired with a holy zeal to exterminate the infidels from his country, commenced a sanguinary crusade against the Moors, which he carried on through such repeated defeats, that he eventually lost both his crown and his life in the struggle. Henry the Cardinal, his uncle, an old man of 70, ascended the throne, but died without heirs, after a reign of only two years, in 1580. With Henry terminated the male line, after enduring for 460 years. Spain once more laid claim to the vacant throne, and Portugal again became a dependency of the Spanish crown, the nation suffering all the injustice, exactions, and tyranny usually inflicted on a conquered country by its haughty masters. After enduring sixty years of intolerable hardships and exactions, a Portuguese nobleman, named John, Duke of Braganza, pitying his unfortunate countrymen, excited a revolution, which again broke the Spanish fetters, while the people hailed their deliverer as their king, who, being crowned as John IV., 1640, commenced the dynasty of the House of Braganza, a family whose descendants still sway the destinies of Portugal. When Napoleon, in 1807, entered the country, and declared the family of Braganza had ceased to reign, the royal family of *P.*, consisting of Pedro, the old king, and his imbecile wife, Maria Francisca Isabella, queen-regent, the prince-regent, and all the court, set sail from the Tagus to Brazil. After the downfall of Napoleon, the history of *P.* is composed of a long succession of political disturbances, briefly analyzed in this work under the names of PEDRO I. of Brazil; MIGUEL DOM, and MARIA DA GLORIA. At the death of this last queen, her eldest son ascended the throne, in 1853, as Pedro V., who died prematurely in 1861, leaving the throne to Louis I., second son of Dona Maria. B 1838, d. 1889, suc. by his son, Carlos I. *Pop.* (1901) 5,423,132. The colonies of *P.* in Asia are reduced to Goa, Salcete, Damao, and Diu; Macao, and settlements in the Indian Archipelago. In Africa *P.* retains the governments of Angola on the W. coast, Mozambique on the E. coast, and some establishments in Senegambia, with various islands.—*Pop.* W. African provinces, 2,800,000; E. African, 1,500,000; Cape Verde, Princess, and St. Thomas Islands, 131,926; cols. in Asia and E. Indies, 939,320. *Area*, 761,204 sq. miles.

Portuguese (*por'tu-gēez*), *n.* (*Geog.*) A native or inhabitant of Portugal.—*a.* (*Geog.*) Belonging or having reference to Portugal, or to its people.

Portula'cea, *n. pl.* [Lat. *portula*, a little gate. Its leaves resemble little doors.] (*Bot.*) The Purslane family, an order of plants, alliance *Silenales*.—*DIAG.* Calyx and corolla unsymmetrical,—the latter usually

conspicuous; amphitryal ovules; and alternate succulent leaves without stipules.—They are succulent herbs or shrubs, found in waste dry places in various parts of the world, but especially at the Cape of Good Hope and in S. America. There are 12 genera, which comprise 184 species. *Portulaca oleracea* (Purslane) has been used from the earliest times as a pot-herb and in salads. It has cooling and antiscorbutic properties. The fleshy root of *Claytonia tuberosa*, another plant of this order, is edible. Many *P.* have large showy flowers.

Port'ville, in New York, a post-township of Cattaraugus co.

Port Walt'hall, in Virginia, a village of Chesterfield co., abt. 7 m. N.E. of Petersburg.

Port'warden, *n.* A harbor-master; the officer having charge of a port.

Port Washington, in Ohio, a post-village of Tuscarawas co., abt. 90 m. N.E. of Columbus.

Port William, in Missouri, a village of Franklin co., abt. 45 m. W. by S. of St. Louis.

Port William, in Ohio, a post-village of Clinton co., abt. 9 m. N. of Wilmington.

Port'-wine, *n.* See **PORT**.

Por'y, *a.* Full of pores. (*R.*)

Pose, (*pōz*), *n.* The attitude in which a person stands, particularly an attitude formally assumed for the sake of effect; artificial attitude or position; as, *poses plastiques*.—*v. a.* [*Fr. poser*, to set; *Lat. pono, positum*, to put, place, set.] To set, place, or put; to bring to a stand; to put a stop to.

"Learning was posed, philosophy was set."—*Herbert*.

—To puzzle; to gravel; to perplex by asking difficult questions; to interrogate closely, or with a view to scrutiny.

Posé, (*pō-zā'*), *a.* (*Her.*) Standing passively, with all his feet on the ground;—said of the attitude of a lion or other beast.

Posen, (*Grand-duchy of*) a prov. of Prussia, bet. Lat. 51° 30' and 53° 30' N., Lon. 15° 30' and 19° E., having N. Pomerania and E. Prussia, E. Poland, S. Silesia, and W. Brandenburg and Pomerania; *area*, 11,500 sq. m. The surface is level, and in parts marshy, and the soil generally fertile. *Rivers*, Netze, Wartha, Vistula, and Proсна. *Prod.* Hemp, flax, tobacco, and hops. *Manuf.* Woollens, linen, lace, leather, and brandy. *Cap.* Posen.

POSEN, cap. of the above prov., on the Wartha, 126 m. S.E. of Stettin. *Manuf.* Linen, leather, watches, and firearms. It has a considerable trade, mostly carried on by Jews.

Poser, (*pōz'r*) *n.* One who poses or puzzles by asking difficult questions; a close examiner; a scrutiner.—Something, as a question, argument, &c., that puzzles or puts to silence; as, his remark was a *poser*.

Posey, (*no'zee*) in Indiana, an extreme S.W. co., adjoining Kentucky and Illinois; *area*, about 398 sq. m. *Rivers*, Ohio and Wabash rivers. *Surface*, level or gently undulating, a great part being subject to annual inundation; *soil*, extremely fertile. *Minerals*. Coal in abundance. *Capital*, Mt. Vernon. *Pop.* (1897) 23,120.—A twp. of Clay co.—A twp. of Clinton co.—A twp. of Fayette co.—A twp. of Franklin co.—A twp. of Harrison co.—A twp. of Rush co.—A twp. of Switzerland co.

Posseyville, in Indiana, a post-town of Posey co.

Posido'nus, a Greek Stoic philosopher, probably b. abt. 135, B. C., d. abt. 51. He studied at Athens, and removed to Rhodes, where he became the head of the Stoic school; was elected prytanes, and in 86, sent to Rome as ambassador. He was an instructor to Cicero.

Pos'ing, a town of Hungary, 11 m. from Presburg.

Pos'ingly, *adv.* In a manner to pose, perplex, or puzzle.

Pos'it, *v. a.* To assume as real or conceded; to place fixedly.

Position, (*-zish'un*), *n.* [*Fr.*; *Lat. positio*.] A putting, placing, or setting; state of being posited or placed; manner of standing or being placed; attitude; posture; as, an inclined or upright *position*.—Situation; station; spot where a person or thing is placed; as, the *position* of an army.—Principle laid down; proposition; proposition advanced or affirmed as a fixed principle, or stated as the ground of reasoning, or to be proved; as, to be in a false *position*.—Thesis; state; condition.

"Let not the proof of any position depend on the positions that follow."—*Watts*.

—Social rank; relative place or standing in society; as, a person of good *position*.

(*Gram.*) The state of a vowel placed before two consonants, as the first *o* in *pompous*; or before a double consonant, as the *a* in *axle*.

(*Arith.*) A rule, called also the *rule of supposition*, or *rule of false*. It consists in assuming a number, and performing upon it the operation described in the question, and then comparing the result with that given in the question, in order to discover the error of the assumption.

(*Mil.*) A space of ground.

Angle of position. (*Astron.*) The angle made by one or more components of a double or multiple star with the primary, referred to the direction of the diurnal motion.—*Double position.* (*Arith.*) The method of solving problems by proceeding with each of two assumed numbers, according to the conditions of the problem, and by comparing the difference of the results with those of the numbers, deducing the correction to be applied to one of them to obtain the true result.—*Position micrometer.* A micrometer for measuring angles of position, having a single thread or wire, which is carried round the common focus of the object-glass and eye-glass, and in a plane perpendicular to the axis of the telescope the angle being indicated on the gradu-

ated tin of the instrument.—*Single position.* (*Arith.*) The method of solving problems, in which the result obtained by operating with an assumed number is to the true result as the number assumed is to the number required.—*Strategic position.* (*Mil.*) A position taken up by an army, or a large detachment of troops, for the purpose of checking or observing an opposing force.—*Tactical position.* A field of battle.

Pos'itive, *a.* [*Lat. positivus*; *Fr. positif*.] Actual; real; existing in fact;—opposed to *negative*; as, a *positive* good.—Direct; explicit; expressed;—in contradistinction to *implied*; as, a *positive* declaration.—Absolute; not dependent upon changing circumstances or relations;—opposed to *relative*.

P. printing. (*Photog.*) The process by which impressions from a *negative* (q. v.) are produced upon suitably prepared paper, or on glass.—See **PHOTOGRAPHY**.

—*n.* That which is capable of being affirmed; reality.—That which settles by absolute appointment.

(*Gram.*) A word that affirms or asserts existence.

(*Photog.*) A picture corresponding in its lights and shades with the original, instead of being reversed, as a *negative*.

Pos'itively, *adv.* Absolutely; by itself; independent of anything else; not comparatively.—Not negatively; really; in its own nature; directly; inherently.—Certainly; indubitably.—Explicitly; expressly; peremptorily; in strong terms.—With full confidence or assurance.

Pos'itiveness, *n.* Reality of existence; actualness; not mere negation.—Undoubting assurance; full confidence; peremptoriness.

Pos'itivism, or **POSITIVE PHILOSOPHY**, *n.* The name given to the system of philosophy inaugurated by the late Auguste Comte, (q. v.) Humanity, according to him, has three stages of development,—the *theological*, the *metaphysical*, and the *positive*. In the *theological* stage, man is disposed to regard all effects as supernatural, as signs of the pleasure or displeasure of some superior being or beings. In the *metaphysical* stage, the supernatural agents give place to abstract forces supposed to be inherent in the substances themselves, and capable of producing the phenomena. In the *positive* stage, the mind, convinced of the folly of inquiring into causes and essences, applies itself to the discovery of those laws which regulate effects, or those invariable relations of succession and similitude which exist throughout nature. The mission of positivism is said to be "to generalize science and to systematize sociality." "It is a doctrine capable of embracing all that can regulate humanity; not a treatise on physical science, not a treatise on social science, but a system which absorbs all intellectual activity." All sciences, of whatever kind, physical or social, are but branches of one science, to be investigated on one and the same method. The system is not without merits, as well as defects; and it is wrought out with a considerable degree of skill and ingenuity.

Pos'net, *n.* [*W. posned*, a round body, a porringer.] A little basin; a porringer; a skillet.

Posology, *n.* [*Gr. posos*, how much, and *logos*, a discourse.] (*Med.*) Indication of the doses in which the different articles of the materia medica ought to be exhibited.

Pos'se, *n.* [*Lat.*, to be able.] Possibility.

Posse Comitatus, *n.* [*Lat. posse*, and *comitatus*, a county.] (*Law.*) The power of a county which the sheriff is empowered to raise in case of invasion, rebellion, riot, &c., and comprising all able-bodied males within the county between the ages of 15 and 70. All such persons are bound to attend, on being charged by him to do so, under penalty of fine and imprisonment.

Possess', *v. a.* [*Fr. posséder*; *Lat. possideo*, from *pot*, root of *potis*, able, and *sedere*, to be seated.] To occupy; to be master of; to own.—To have the just and legal title, ownership, or property of; to hold the title of, as the rightful proprietor, or to hold both the title and the thing.—To seize; to obtain the occupation of.—To have power over, as an invisible agent or spirit.—To give possession or command of anything;—it has of or with before the thing possessed.

Possession, (*-sesh'un*), *n.* [*Fr.*; *Lat. possessio*.] Act or state of possessing or owning.

(*Law.*) The having, holding, or detention of property in one's power or command; actual seizing or occupancy; ownership.—The thing possessed; estate, land, or goods owned.—The state of being under the power of demons or invisible beings; madness; lunacy. (*International Law.*) A country held by no other title than mere conquest.

Posses'sion, a bold promontory of S. America, on the W. shore of the Strait of Magellan; Lat. 52° 17' S., Lon. 68° 56' 30' W. Height, 360 feet. It forms the S. boundary of an excellent harbor called Possession Bay.

Possessionary, (*pos-sesh'un-a-ry*), *a.* Relating to possession.

Possessive, (*pos-ses'siv*), *a.* [*Fr. possessif*; *Lat. possessivus*.] Pertaining to possession; having possession. *Possessive case.* (*Grammar.*) A case of nouns and pronouns which express possession, answering to the *genitive* in Latin.

Posses'sively, *adv.* So as to denote possession.

Posses'sor, *n.* [*Lat.*] One who has, holds, or enjoys any good or other thing; the owner; proprietor.

Posses'sory, *a.* [*Fr. possessoire*; *Lat. possessorius*.] Relating to, or having possession.

P. action or suit. (*Law.*) In Louisiana, an action by which one claims to be maintained in the possession of an immovable property, or of a right upon or growing out of it, when he has been disturbed.

Pos'set, *n.* [*Fr. posque*, from *Lat. posca*, from *po*, root

of *poto*, to drink.] Milk curdled with wine or other liquor.

—*v. a.* To turn; to curdle; as, milk with acids.

Possibility, *n.* [*Fr. possibilité*; *L. Lat. possibilitas*.] The power of being or existing; the state or quality of being possible.—That which is possible.

(*Law.*) An uncertain thing that may happen.—A contingent interest in real or personal estate.

Poss'ible, *a.* [*Fr.*; *Lat. possibilis*.] That may be or exist; that may be now, or may happen or come to pass; that may be done; practicable; not contrary to the nature of things.—Not impossible though improbable.

Poss'ibly, *adv.* By any power, moral or physical, really existing.

—Without involving impossibility or absurdity; perhaps; peradventure; perchance.

Possneck, (*poss-nek'*) a town of Germany, in Saxemeiningen, 11 m. E.N.E. of Saalfeld. *Manuf.* Leather, cloth, and porcelain. *Pop.* 4,000.

Post, *n.* [*Fr. poste*, from *Lat. postis*, a post, from *positus*, from *pono*, to place.] A piece of timber set upright, and intended to support something else.—A military station; the place where a single soldier or a body of troops are stationed.—A public office or employment; that is, a fixed place, or station, or situation.—A sort of writing-paper; letter-paper.—A messenger; one who carries letters regularly.—Any means employed by government for the public conveyance of letters, &c.; the mail.—See **Post-Office**.

—*v. n.* To travel with post-horses.—To travel with speed.

"And with all speed post with him."—*Shaks.*

—*adv.* Hastily; or as a post.

—*v. a.* To expose to public reproach, by fixing the name to a post; to expose to opprobrium by some public action.—To advertise on a post or in a public place.—To place in the post-office, as letters.—To inform, or make acquainted with;—frequently used with *up*.

(*Book-keeping.*) To carry accounts from the books of original entry, or journal, to the ledger.

Post, [*Lat.*] After; a Latin prefix much used in composition.

Post, in Iowa, a township of Allamakee co.

Post-act, *n.* An after act.

Postage, *n.* Official money charged for conveying letters by post.

Postal, *a.* Relating to the mails or post-office.

Post-bag, *n.* A bag used in the postal service for carrying letters, &c.; a mail-bag.

Post-bill, *n.* A post-office way-bill placed in the mail-bag, or given in charge of the guard or driver.

Post-boy, *n.* A boy who rides post; a courier.

Post-chaise, **Post-coach**, *n.* A carriage for the conveyance of travellers who travel with post-horses.

Post-date, *v. a.* [*Lat. post*, after, and *Eng. date*.] To date after the real time.

—*n.* A date put to a bill of exchange later than the time at which it is drawn.

Post-day, *n.* The day appointed for the arrival or departure of the mails.

Post-dilu'vial, **Post-dilu'vian**, *a.* Posterior to the flood.

Post-dilu'vian, *n.* One who lived since the flood.

Post ea, *n.* [*Lat.*, afterwards.] (*Law.*) The endorsement of the *judicial record* purporting to be the return of the judge before whom a cause is tried, or what has been done in respect to such record.

Post-entry, *n.* (*Law.*) An entry made by a merchant upon the importation of goods, after the goods have been weighed, measured, or gauged, to make up the deficiency of the original or prime entry.

(*Book-keeping.*) An additional or subsequent entry.

Post'er, *n.* One who posts; a courier; one who travels expeditiously.—A bill posted for advertising or other purpose.

Posterior, *a.* [*Lat.*, from *posterus*, coming after.] Later, or subsequent in time.—Later in the order of proceeding or moving; coming after.

Posteriority, *n.* [*Fr. postériorité*.] State of being posterior, or of being later or subsequent.

Poste'riorly, *adv.* Subsequently; afterwards.

Poste'riors, *n. pl.* The hinder parts of an animal's body.

Posterity, *n.* [*Fr. posterité*; *Lat. posteritas*, from *posterus*.] The race that proceeds from a progenitor; succeeding generations; descendants;—opposed to *ancestry*.

Pos'tern, *n.* [*Fr. pôtérne*; *Lat. posterula*.] A private or concealed entrance behind or outside of a castle, tower, or monastery.

—*a.* Back; behind; private.

Post-exist'ence, *n.* Subsequent or future existence; as, the soul's *post-existence*.

Post-exist'ent, *a.* Living or existing after. (*R.*)

Post-fact, *a.* Relating to a fact that takes place subsequent to another.

—*n.* A fact which occurs subsequent to another.

Post-fix, *n.* [*Lat. post*, and *Eng. fix*.] (*Gram.*) A letter, syllable, or word annexed or added to the end of another word; a suffix.

—*v. a.* (*Gram.*) To add or annex, as a letter, syllable, or word to the end of another or principal word.

Post-hack'ney, *n.* A hired post-horse.

Post-haste', *n.* Haste or speed in travelling, like that of a post or courier.

—*adv.* With speed or expedition.

Posthet'omy, *n.* [*Gr. posthē, prepuce*, and *tomē*, to cut.] (*Med.*) Circumcision.

Post-horn, *n.* A trumpet or horn used by a mail-carrier, or driver of a mail-coach, or stage.

Post-horse, *n.* One of a set of horses stationed at certain distances on a road for the rapid conveyance of couriers, passengers, &c.

Post-house, n.; *pl.* POST-HOUSES. Post-office; a house where letters are received and despatched.—A house for the convenience of the post, or for obtaining relays of horses.

Posthumous, a. [From *Lat. postumus*, superl. of *posterus*, coming after.] Born after the death of the father, or taken from the dead body of the mother, as a child.—Published after the death of the author, as works.—Being after one's decease, as fame.

Posthumously, adv. After one's decease.

Posthumus, MARCUS CASSIUS LATIENUS, a Roman general, who was elected emperor in Gaul on the death of Valerian, in 260. He defeated the Germans in several actions, and displayed talents and virtues worthy of his dignity; but, having refused to allow his soldiers to plunder Mayence, they rose against and slew him and his son, in 267.

Postiglione, (pos-teel'ye-o-nai,) a town of S. Italy, prov. of Principato Citeriore, 26 m. S.E. of Salerno; pop. 4,000.

Postilion, n. (Written also *postillion*.) One who rides or guides the first pair of horses in a coach or other carriage; also, one who rides one of the horses.

Postiug-house, n. A post-house.

Postique, (-tek,) *n.* [Fr. *postiche*.] (*Arch.*) An ornament of sculpture when it is superadded after the work itself is done.

Post-man, n.; *pl.* POST-MEN. A post or courier; a letter-carrier.

Post mark, n. The mark or stamp of a post-office on a letter.

—*v. a.* To affix the stamp or mark of the post-office, as to letters, &c.

Post-master, n. The officer who has the superintendence and direction of a post-office.

Post-master-General, n. The chief officer of the Post-office Department of the executive branch of the government of the United States. His duties, in brief, are, among other things, to establish post-offices and appoint postmasters, at convenient places upon the post-roads established by law; to give instructions for conducting the business of the department; to provide for the carriage of the mails; to obtain from the postmasters balances due, with accounts and vouchers of expenses; to pay the expenses of the departments; to prosecute offences, and, generally, to superintend the business of the department in all the duties assigned to it. He is assisted by three assistants and a large corps of clerks,—the three assistants being appointed by the President. He must make five several reports annually to Congress, relating chiefly to the financial management of the department for the ensuing year. He is a member of the Cabinet.

Post-mortem, [Lat., after death.] After death; appearing or made after death.

Post-mortem examination. (Med.) An examination made upon the body of a deceased person.

Post-note, n. (Com.) A kind of bank-note intended to be transmitted at a distance by post, payable to order at a fixed date.

Post-nuptial, (-nup'shal,) *a.* Being, or happening after marriage.

Post Oak, in Missouri, a village and township of Johnson co., abt. 55 m. S.E. of Independence; pop. abt. 2,000.

Post-obit, n. [From *Lat. post*, after, and *obitus*, death.] (*Law.*) A bond, or agreement, by which the obligor borrows a certain sum of money, and promises to repay it with more than the lawful interest upon the death of a person from whom he has expectations, if the obligor is then living.

(*Med.*) Same as POST-MORTEM, *q. v.*

Post-office, n. The forwarding of messages from post to post, or by special riders, has been carried on for more than 2,000 years, but the first approach toward a complete postal system appears to have been that established in the 13th century by the University of Paris. In the 15th century, Louis XI. established, for his own use, mounted messengers, and instituted post-stations at intervals of four French miles on the principal roads of France. During the next century, Charles VIII. extended this institution for the use of the court. The first post was established in Germany by Roger I., in the latter part of the 15th century. A regular postal system was not established in England till the 17th century. In 1635 Charles I. erected a letter-office for England and Scotland; but this proved to be tentative, and it was only in 1649 that a regular post-office for the weekly conveyance of letters to all parts of the kingdom was instituted. In the English colonies of North America a postal-system was established in 1710; and in 1753 Benjamin Franklin was appointed Postmaster-General. In 1760 he arranged a stage-wagon to carry the mail from Philadelphia to Boston, once a week, starting from each city on Monday morning, and reaching its destination by Saturday night. In 1789 the Constitution of the United States conferred upon Congress the exclusive control of postal matters for all the States. In 1790 there were but 75 post-offices in the country, and the whole amount of postage received was \$37,935. At the close of the war, in 1865, there were 20,000 post-offices, 140,000 miles of post routes, and \$14,500,000 of income. In 1895 the number of offices passed the 70,000 mark, and the post routes covered nearly half a million miles, and the revenue was \$77,000,000, while the number of pieces of mail matter handled was about 11,000,000,000, and the salaries received by postmasters over \$16,000,000. In 1839 the mail of Great Britain comprised 76,000,000 pieces, and in 1895 about 3,000,000,000. The United States postal system yielded the government a slight profit up to 1882, since which time there has been an increasing loss each year,

and the department now requires an annual appropriation of about \$10,000,000. The British post-office has always paid the government a profit, of late years £2,500,000 to £3,000,000.

The early post-rates were based more upon the distance carried than the weight of letter. Between 1757 and 1837 the English Parliament several times raised the rates of postage, so that the prices were almost prohibitive. In the latter year an agitation for penny postage was begun, and culminated successfully in 1840. A high-priced system was also maintained in the United States. Until 1816 the rates of postage were: for a single letter (*i. e.* composed of a single piece), under 40 miles, 8 cents; under 90, 10 cents; under 150, 12½ cents; under 300, 17 cents; under 500, 20 cents; over 500, 25 cents. Some modifications were made in 1816, but by Act of Congress, March 3, 1845, the rates fixed were: for a letter not exceeding a half ounce in weight, under 300 miles, 5 cents; over 300, 10 cents; and an additional rate for every additional half ounce or fraction of a half ounce. By a law passed March 3, 1853, the rates on single inland letters were reduced to 3 cents for all distances under 3,000 miles, and 10 cents for all over that distance. In 1863 a level rate of 3 cents was made for all domestic letters of not more than a half ounce weight. The 1-cent postal-card was adopted in 1873, and the 2-cent letter-rate came into effect in 1883, since which time a further reduction has been made by increasing the weight allowed from a half ounce to "one ounce or each fraction thereof." Drop letters, not subject to house delivery, are taken care of for 1 cent. All written or type-written matter is rated as first class, and subject to these rates. Newspapers and periodicals published at least four times a year are rated as second class, and are forwarded at 1 cent a pound, payable in bulk; transient newspapers pay in the same way 1 cent for each 4 ounces. General printed matter goes in the third class, at a rate of 1 cent for each 2 ounces. Merchandise and miscellaneous mailable articles are carried fourth class for 1 cent an ounce, except seeds, roots, etc., which go at half that rate. See POSTAL SERVICE, in SECTION II.

Post-office Order, n. A money-order given by a postmaster on any post-office.

Post-on, in Indiana, a post-village of Ripley co., abt. 56 m. W. of Cincinnati.

Post-paid, a. Having the postage paid, as a letter.

Postpone, v. a. [*Lat. postponere*, from *post*, and *ponere*, to put, to place.] To put off to a future or later time; to adjourn; to defer; to delay.—To set below something else in value or importance.

Postponement, n. Act of postponing or deferring to a future time; temporary delay of business.

Postponer, n. A person who postpones.

Post-position, (-zish'un,) *n.* The state of being put out of the regular order.

(*Mus.*) A retardation of the harmony, effected by placing discords upon the accented parts of a bar not prepared and resolved according to the rule for discords.

Post-positive, a. That is placed after.

Post-prandial, a. [*Lat. post*, and *prandium*, dinner.] Taking place after dinner.

Post-scenium, n. [*Lat. from post*, after, and *scena*, a scene.] (*Arch.*) The after-part of the stage, furnished with conveniences for robing the actors and depositing the machinery.

Postscript, n. [*Lat. post*, after, and *scriptum*, from *scribo*, to write.] A paragraph added to a letter after it is concluded and signed by the writer, or any addition made to a book or composition after it had been supposed to be finished.

Post-scripted, a. That has a postscript. (*R.*)

Post-tertiary, a. (Geol.) The period following the tertiary; pleistocene; quaternary.

Post-town, n. A town in which a post-office is established, or post-horses are kept.

Postulant, n. [*Fr. from Lat. postulans*, from *postulare*, to ask.] A candidate; one who requests or demands.

Postulate, n. [*Lat. postulatum*, from *postulo*, to ask.] (*Logic and Geom.*) A position or supposition required to be granted, or of which the truth is demanded or assumed, for the purpose of future reasoning. Kant's postulate is a proposition whose certainty is incorporated with that of another, so that you must reject that other or admit at the same time what it necessarily supposes. His three postulates of practical reason are *freedom, immortality, and God*. Euclid has constructed his *Elements* on the three following postulates: 1. That a straight line may be drawn from any one point to any other point. 2. That a terminated straight line may be produced to any length in a straight line. 3. That a circle may be described from any centre, at any distance from that centre.

—*v. a.* To assume; to take without positive consent.—To beg or assume without proof.—To entreat; to request.

Postulation, n. The act of supposing without proof; gratuitous assumption.—Solicitation; supplication.

Postulatory, a. Assuming or assumed without proof.

Postumous, a. Posthumous. (*a.*)

Postural, (post'yur-al,) *a.* Relating to posture.

Posture, n. [*Fr.; Lat. positura*, from *pono*, *ponere*, to place.] (*Fine Arts.*) The situation of a figure with regard to the eye, and of the several principal members with regard to each other by which action is expressed.—The situation or disposition of the several parts of the body with respect to each other, or with respect to a particular purpose.—Condition; particular state with regard to something else; disposition; as, "the several postures of his devout soul."—*Atterbury.*

—*v. a.* To put in any particular place or disposition; to dispose the parts of a body for a particular purpose.

Posture-master, n. One who teaches or practises artificial postures of the body.

Postville, in Illinois, a village of Logan co., abt. 30 m. N.E. of Springfield.

Postville, in Iowa, a post-town of Allamakee co., about 105 m. N. of Iowa City.

Postville, in New York, a village of Herkimer co., abt. 20 m. N.N.E. of Utica.

Po'sy, n. [Contracted from *poesy*, *q. v.*] A poetical sentence or expression; a verse or a motto inscribed in a ring, &c.

—A bunch of flowers.

Pot, n. [*Fr. Du., Sw., Goth., and W. pot*, from *Lat. poto*, to drink.] A drinking-cup or mug.

—A vessel more deep than broad, made of earth, iron, or other metal, used for several domestic purposes; a jar.—The curious *P.* represented in Fig. 2146, was found at Cassino, in Etruria, and is in the British Museum. The painting upon it represents the story of Medea boiling an old ram with a view to persuade the daughters of Pelias to put him to death. The pot has a round bottom, and is supported by a tripod, under which is a large fire. The ram, restored to youth, is just in the act of leaping out of the pot.

Fig. 2146. — ETRURIAN POT.

—The quantity contained in a pot; as, a pot of ale.—A sort of paper in small-sized sheets. (Written also *POTT.*)

To go to pot, to be destroyed or devoured. (*Colloq.*)

—*v. a.* To put or place in a pot.—To preserve seasoned in pots; as, "potted toad and fish." (*Dryden.*)—To inclose or cover in pots of earth; as, "potted seeds."

—To put in casks for draining, as sugar.

Po'table, a. [*Fr.; L. Lat. potabilis*, from *Lat. poto*, to drink.] Drinkable; suitable for drinking.

—*n.* Something that may be drunk.

Po'tableness, n. Drinkableness; quality of being drinkable.

Pot'age, n. Same as *POTTAGE*, *q. v.*

Potag'ro, or Potar'go, n. A West Indian pickle.

Potamogeton, n. [*Gr. potamos*, river, and *geton*, near.] (*Bot.*) The Pond-weeds, a genus of plants, order *Naiadaceæ*. They are aquatic and submersed herbs, only the flowers arising above the surface of the water; spadix (or spike) pedunculate, 3-10 flowered; leaves stipulate, parallel-veined; flowers small, greenish. Many species are American.

Potamography, Potamology, n. [*Gr. potamos*, a river, and *graphein*, to describe, or *logos*, a discourse.] A description of rivers.

Po'tance, n. (*Watch-making.*) The stand in which the lower pivot of the verge of a watch is placed.

Potash, Potas'sa, n. [*Eng. pot*, and *ash*, *pl. ashes*; *Fr. potasse*; *Lat. potassa*.] (*Chem.*) Anhydrous *P.* can only be obtained by heating the hydrate, with an equivalent weight of potassium, in an atmosphere free from oxygen. It is a hard, gray solid, fusible at a red heat, and convertible into vapor at a high temperature. When thrown into water, it seizes an equivalent of that substance with such violence as to become red-hot during the process. It has received an important application. Its hydrate, ordinary caustic potash, K_2OH_2O , is a compound of very great importance. It is generally prepared by dissolving one part of the carbonate in ten of water, and adding, from time to time, to the heated solution, small quantities of milk of lime, until the clear liquid ceases to effervesce on the addition of an acid. The mixture is boiled for a quarter of an hour, after which it is allowed to stand until all the solid particles have settled. The clear liquid is then drawn off by decantation, and evaporated to a syrupy consistence in a silver basin, when it is poured on a clean iron plate and allowed to solidify. Hydrate of *P.*, when perfectly pure, is a hard, white solid, generally met with in commerce in the form of cast-sticks. It fuses at a red heat, and rises in vapor if the temperature be raised. The water it contains cannot be separated by heat alone. Thrown into water, it dissolves with disengagement of heat, accompanied by a hissing sound. Exposed to the air, it deliquesces into a syrupy liquid, which gradually absorbs carbonic acid. It is the most powerful alkali known. It forms well-defined salts with all the acids, all of which are soluble in water. Its uses in the laboratory and manufactory are manifold, both in the solid and liquid conditions. The solid hydrate, from having a great affinity for water, is used by the chemists for drying gases, for decomposing silicious compounds, and

various organic substances. It is used in surgery as a caustic, and in manufactures for the production of soft-soaps. Its solution is used in medicine as an autacid, and in analysis as an absorbent of carbonic acid. The solution should be preserved in green glass bottles, glass containing lead being dissolved by it. It should be kept from contact with the air, as it greedily absorbs carbonic acid, passing into the form of carbonate. *Form.* K_2O .—*Bitartrate of P.* This substance consists in considerable quantities in the juice of the grape, and is less as a deposit in wine-casks, forming a crystalline incrustation called *argol*, or *crude tartar*. It is purified by solution and crystallization, which renders it perfectly white. When in fine powder, it is called *cream of tartar*.

Carbonates of P. There are two carbonates of *P.*—the ordinary carbonate and the bicarbonate. The carbonate, K_2CO_3 , exists in the ashes of inland plants, from which it is extracted by lixiviation. The lye thus obtained is evaporated to dryness, and calcined till all the volatile organic matter is burnt off. The mass left is known in commerce as *crude potashes*; and contains about 60 per cent. of alkaline carbonate. Crude *P.* is partially purified by solution in a small quantity of water, filtering and evaporating, the sulphate of *P.* being allowed to crystallize out. Further evaporation produces a crystalline impure carbonate of *P.*, known commercially as *pearlash*. Still further purified, it forms *salt of tartar*. It is employed largely in the manufacture of soap and glass. It is also used as a detergent, and as the source of most salts of potash. In rectifying spirits of wine, it is employed in a fused state to abstract the water. The *bicarbonate of S.*, $KHCO_3$, is prepared by passing carbonic acid through a saturated solution of the monocarbonate, when, being less soluble, it is precipitated. It is occasionally used in medicine. The carbonates of *P.* are both alkaline to test-paper.

Chlorate of P. There are various ways of forming this salt, the best of which is by passing chlorine through a mixture or solution of caustic *P.* and hydrate of lime. If the proportions be properly observed, the whole of the *P.* is converted into chlorate, and the lime into chloride of calcium, — the former salt being easily separated by crystallization. Chlorate of *P.* crystallizes in colorless rhomboidal tables, containing no water of crystallization, and unalterable by exposure to the air. Heated, they decrepitate, fuse, and give off oxygen. They are soluble in 17 parts of cold and $1\frac{1}{2}$ parts of boiling water. This salt possesses powerful oxidizing properties, and is thence used in the manufacture of lucifer-matches, for certain detonating powders in pyrotechny, and in calico-printing. It is occasionally used in medicine as a sudorific and diuretic.

Nitrate of P., or *Nitre*, *Saltpetre*. This useful salt occurs as an incrustation on the surface of the earth in hot climates, more especially in India, Arabia, and S. America. In more temperate countries, especially in those not favorably situated for the importation of this salt, it is obtained by artificial processes. Refuse animal matters, mixed with lime-rubbish, are exposed to the air in heaps, and watered from time to time with stale urine and stable-runnings. At certain intervals, the impure salt is extracted from the top layer of the heap by lixiviation. Various modifications of this process are in use in Prussia and Sweden, in which latter country every landed proprietor is compelled to pay a tax to the government in saltpetre. Full details of the various methods employed will be found in Regnault's *Cours Élémentaire de Chimie*, vol. II. Besides the natural and artificial sources of nitre above mentioned, it also occurs in the juices of certain plants. The theory of natural nitrification is but little understood, although it has been the subject of much investigation and discussion among chemists. The principal use of nitre is in the manufacture of gunpowder. For this purpose, it is necessary that the smallest portion of other salts, with which it is liable to be contaminated, should be removed. The process of nitro-refining is therefore a very important one. The reader will find it fully described in Abel and Bloxam's *Hand-book of Chemistry*. It is also used in salting meat, and in medicine. The fused salt is known in pharmacy as *sal prunelle*. Nitre is a dimorphous salt, crystallizing in colorless hexagonal prisms with dihedral summits, and in flattened rhombohedra, both of which are anhydrous. Water is, however, generally contained in the interstices of the crystals, causing them to decrepitate when heated. If the temperature be raised above 660° Fahr., the salt fuses and gives off oxygen, becoming converted into the nitrite. If the heat be continued, nitrogen and oxygen are both evolved. Nitrate of *P.* has a cool, saline taste; it dissolves in five parts of cold water with considerable depression of temperature, and in less than its own weight of boiling-water. It is but very slightly soluble in alcohol. At high temperatures, it acts as a very powerful oxidizing agent, and is greatly used for this purpose, both in the manufactory and the laboratory. Even silver, gold, and platinum become oxidized under its influence. A mixture of 3 parts of nitre, 2 of dry carbonate of *P.*, and 1 of sulphur, intimately mixed and heated on an iron shovel until fusion takes place, explodes suddenly with a loud report. Nitrate of *P.* was formerly much used in the manufacture of nitric acid; but nitrate of soda, being a much cheaper salt, is gradually superseding it.

Prussiate of P. A term applied in ordinary language to the ferrocyanide of potassium. It is prepared by gently igniting carbonate of *P.* with animal matter, such as horns, hoofs, or dried blood, in iron vessels, by which means cyanide of potassium and some cyanide of iron

are formed. The soluble parts are then washed out with water, and sulphate of iron added until the Prussian blue which is formed ceases to be decomposed by the free *P.* contained in the solution. The ferrocyanide of potassium is then set to crystallize, and separated from sulphate of potash by repeated crystallization. It is then obtained in truncated octohedral crystals, of a semi-transparent yellow color. Prussiate of *P.* obtained in this way is much used in chemistry as a test for the presence of metals, especially of iron, the peroxide of which is precipitated from its solutions in the form of *Prussian blue*. The animal substances used in this manufacture are those which condense the most azotized matter in the smallest bulk; and among all the substances used for the preparation of the lixivium, blood deserves the preference, when it can be got cheap enough. It ought to be evaporated to perfect dryness, reduced to powder and sifted. The substance called *red prussiate of P.* is ferridcyanide of potassium, prepared by passing chlorine gas through a solution of the ferrocyanide of potassium till it ceases to give a precipitate of Prussian blue with a per-salt of iron.

Sulphates of P. There are two sulphates of *P.*—the ordinary sulphate and the acid bisulphate. Sulphate of potash, $KHSO_4$, is an anhydrous salt, crystallizing in six-sided prisms, with pyramidal heads, or in four-sided oblique rhombic prisms. It requires 16 parts of cold water for solution. It forms double salts with the protoxides, which are isomorphous with magnesia, and another series with the sulphates of the sesquioxides, isomorphous with alumine. The latter are the different varieties of alum. Bisulphate of potash, $KOSO_3 + HOSO_3$, is formed on a large scale during the manufacture of nitric acid from saltpetre, and is the *sal enizum* of the older writers. It is sometimes used as a flux in soldering metals. It crystallizes in rhomboidal tables, which deliquesce in the air, and are very soluble in water.

Potassium. *n.* (*Chem.*) This remarkable metal, which is the base of the alkali potash, was discovered in 1807, by Sir Humphrey Davy, and its isolation marks an important era in the progress of philosophical chemistry. Up to this time the alkalies and earths had long been suspected to be compound bodies, but had resisted every endeavor to decompose them. Davy, however, having succeeded in decomposing potash by the voltaic current, the decomposition of the other alkaline bodies followed, as a matter of course. Not only this, but *P.* itself, from its powerful affinity for oxygen, formed a valuable decomposing agent. *P.* is a silver-white metal, with a slight bluish tint; at 32° Fahr. it is brittle, and has a crystalline fracture; at temperatures above freezing-point, it gradually becomes malleable, until it reaches 60° , when it is pasty. Exposed to the air, it becomes covered with a film of oxide almost immediately, and when thrown into water, its affinity for oxygen is

Fig. 2147. — PREPARATION OF POTASSIUM.

so great that sufficient heat is produced to volatilize and fire the metal, which burns with a beautiful rose-colored flame, until the whole is oxidized. *P.* decomposes nearly all the gases which contain oxygen, if heated in contact with them; and at a high temperature it will remove oxygen from all bodies containing it. Hence its use in preparing the metals of the alkaline earths. From its affinity for oxygen, it is necessary to preserve the metal either in hermetically sealed exhausted-tubes, or beneath the surface of some liquid containing only carbon and hydrogen, such as naphtha. The method of procuring the metal by the voltaic current is troublesome and expensive; it is now prepared by decomposing carbonate of potash by charcoal. Acid tartrate of potash is fused in a capacious iron crucible, until it ceases to emit inflammable vapors; a porous mass of carbonate of potash, mixed with finely-divided charcoal, is thus obtained. The mass is broken into lumps, and introduced into an iron retort, connected with a receiver of a peculiar shape. The retort is heated nearly to a white heat, when vapors of potassium rise, and are condensed in the receiver. Fig. 2147 represents the iron retort con-

nected with its copper receiver, surrounded with cold water, and containing petroleum to protect the distilled potassium from oxidation. The lateral tube of the receiver permits the tube of the retort to be cleared, if necessary, during the distillation, by the passage of an iron rod. The *P.* thus obtained is not pure, and requires re-distillation to render it available for chemical purposes. In commercial operations, such as the manufacture of aluminium, metallic sodium is used, being more easily prepared, and having a smaller atomic weight; 23 parts doing as much work as 39 parts of *P.* Potassium forms two compounds with oxygen: the oxide, K_2O , which has been fully described under the head of *potash*, and the peroxide, K_2O_2 , which is formed when the metal is burned in a silver spoon. It is a yellowish-brown mass, fusible at a red heat, and showing a crystalline structure as it cools. The combinations of *P.* with the elements are most important. The uses of hydrate, nitrate, chlorate, and carbonate of potash have already been described. Potash is present in all fertile soils; the great sources of the alkali being in the various clays, which contain 2 or 3 per cent. of it, derived from the disintegration of the felspar. Hence its presence in the ashes of plants. A process has been lately invented for the extraction of potash from felspar, which, if it can be carried out on a large scale, promises to be as important, with regard to potash, as the process of Leblanc for extracting soda from a mineral source. *Equiv.* 39; *sp. gr.* 0.865; *melting-point*, 130° ; *symbol* K.

Bromide of P. This salt is prepared by adding bromine to a solution of caustic potash, until it assumes a slight yellow tinge. Bromide of *P.* and bromate of potash are formed, and the latter salt is decomposed by a current of sulphuretted hydrogen. It crystallizes in cubes, and is very soluble. It is used in photography and pharmacy. *Form.* KBr.

Chloride of P. This salt is largely extracted from kelp, and is used principally as a source of potash in the manufacture of potash-alum. It is remarkable for forming definite compounds with sulphuric acid and chromic acid, which may be represented by the following formulæ: $KCl.2SO_3$ and $KCl.2CrO_3$. They are both decomposed by water.

Iodide of P. This important salt is obtained in two ways. By adding iodine to a solution of potash until the solution begins to assume a brown tint, iodide of *P.* and iodide of potash are formed, the latter salt being converted into the former by gently igniting the residue obtained by evaporation. A better plan is to digest 2 parts of iodine and 1 of pure iron-filings in 10 parts of water in a stoppered vessel. Protoiodide of iron is formed, and carbonate of potash added until carbonate of iron ceases to be thrown down. The filtered liquid by evaporation yields cubical crystals of iodide of potassium. The salt is much used in photography as an iodizing agent, and in medicine as an alterative. For both these purposes it is necessary that it should be free from carbonate and iodate of potash. The former salt may be detected by the solution effervescing on the addition of an acid; the latter, by its turning brown under same treatment. *Form.* KI. See PAINTERS' COLIC.

Sulphides of P. Potassium combines with sulphur in 5 different proportions.— K_2S_1 , K_2S_2 , K_2S_3 , K_2S_4 , and K_2S_5 . The proto-sulphide is formed when hydrogen is passed over sulphate of potash at a red heat, or by heating to bright redness three parts of sulphate of potash and one of finely-divided charcoal intimately mixed. Proto-sulphide of *P.*, when heated in the air, absorbs oxygen, and becomes coated with a film of sulphate of potash. Exposed to the air, at ordinary temperatures, it deliquesces. It dissolves readily in water, forming a colorless caustic solution. Saturated with hydrosulphuric acid, its solution yields a peculiar compound of sulphide of potassium and hydrosulphuric acid, or the hydrosulphate of the sulphide of *P.* This is a definite compound, and may be obtained in deliquescent colorless prisms by evaporating the solution in an atmosphere of sulphuretted hydrogen. The higher sulphides of *P.* may be obtained by fusing the sulphide with the proper proportions of sulphur. *Hepar sulphuris*, or liver of sulphur, was formerly used in medicine, and is now employed as a source of milk of sulphur. It is prepared by fusing equal weights of carbonate of potash and sulphur at a temperature of 500° Fahr. This resulting compound contains protosulphide of potassium and hyposulphite of potash, from which milk of sulphur is precipitated on the addition of an acid.

Pota'tion. *n.* [Lat. *potatio*, from *poto*, *potatus*, to drink.] A drinking or drinking-out. — A draught; a species of drink.

Pota'to. *n.*; *pl.* POTATOES. [Sp. *patata*; Pg. *batata*, from *papa*, the native name.] See SECTION II.

Potato-fly. *n.* (*Zoöl.*) The striped *Cantharis* (*Cantharis vittata*), an insect of the family *Cantharidae*, found in the U. States. It is of a dull, tawny yellow, or light yellowish-red color above, with two black spots on the head and two black stripes on the thorax, and on each side of the wing-covers. The under side of the body, together with the legs and antennæ, are black, and covered with a grayish down. Its length is somewhat more than half an inch. Great depredations are committed by this insect in potato-fields and gardens, where it not only eats up the leaves of the potato, but also those of many other vegetables.

Pot'tatory. *a.* [Lat. *potatorius*.] Pertaining to drinking.

Pot'bellied. *a.* Having a prominent paunch.

Pot'belly. *n.* A prominent belly.

Pot'-boy. *n.* A waiting boy in a tavern; one who carries pots of ale.

Pot'-companion. *n.* A fellow-drinker; a companion at carousals.

Poteau River, (*po-to'*) in Arkansas, rises in Scott co. and flowing a general N.N.W. course, enters the Arkansas River at Fort Smith, in Sebastian co.

Poteen', Potten', *n.* [From *Ir. potaim*, I drink.] A kind of Irish whisky.

Poten'kin, GRIGORI ALEXANDROVITCH, a distinguished Russian general, who was born near Simolensk, in 1736. He entered the cavalry of the Russian guard at an early age, and having attracted the notice of the empress Catherine by his tall and handsome person, she made him minister of war, in which capacity he suggested the idea of taking the Crimea from the Turks. In 1787 he renewed the war against Turkey, and assumed the command of the army. He amassed immense wealth, was appointed field-marshal of Russia, grand-hetman of the Cossacks, and possessed almost uncontrollable power. He was a man of licentious principles, and an inordinate epicure, which produced the disorder of which he died, 1792. His remains were interred with great splendor at Cherson.

Po'tence, *n.* [Fr.] (*Her.*) Same as **POTENT CROSS**, *q. v.*
Po'tency, *n.* [It. *potenza*, from Lat. *potens*, from *possum*, to be able.] Physical power, energy, or efficacy; strength; moral power; influence; authority.

"By what name shall we call such a one, as exceedeth God in potency?"—*Raleigh*.

Poten'gi, or **POTINGI**, sometimes called **RIO GRANDE**, a river of Brazil, rises in the Serra dos Cairins Novos, and flowing N.E. enters the Atlantic Ocean, abt. 20 m. S. of Cape St. Roque.

Potent, *a.* [It. *potente*, from Lat. *potens*, from *possum*, to be able.] Having physical power, energy, or efficacy; as, a *potent* drug.—Having power or efficacy in a moral sense; having great influence.—Having great authority, control, or dominion; as, *potent* monarchs.

P. or P. cross, (*Her.*) A cross crotch-shaped at each extremity. (Fig. 2148.) It is also called a Jerusalem cross, from its occurrence in the insignia of the Christian kingdom of Jerusalem, which are argent, a cross potent between four crosslets or. This coat is remarkable as being a departure from the usual heraldic rule which prohibits the placing of metal upon metal.

Potentate, *n.* [Fr. *potentat*.] (*Fig. 2148.*) — **POTENT**.
It. *potentato*, from Lat. *potens*.] One who possesses great power or sway; a prince; a sovereign; an emperor, king, or monarch.

Potent'ial, *a.* Existing in possibility, not in act.

P. cautery, (*Surg.*) A remedy, such as a caustic alkali, which, although energetic, does not act till some time after its application; so called in contradistinction to the hot iron, which is termed *actual cautery*.

P. mode, (*Gram.*) That form of the verb which is used to express the power, possibility, liberty, or necessity of an action or of being.

—*n.* Anything that may be possible.

Potentiality, (*-shi-ality*), *n.* State or quality of being potential; possibility; not actuality.

Potent'ially, *adv.* In possibility; not in act; not positively; in efficacy; not in actuality.

Potentiate, (*-shi-ate*), *v. a.* To give power to. (*R.*)

Potentilla, *n.* [Lat. *potens*, powerful.] (*Bot.*) A genus of plants, ord. *Rosacea*, differing from *Fragaria* (Strawberry) in the fruit having a dry instead of a succulent receptacle. The species are very numerous, natives chiefly of northern temperate regions, and some of them of the coldest north; most of them perennial herbaceous plants, with yellow, white, red, or purple flowers, and pinnate, digitate, or ternate leaves. They are often called *Cinquefoil* (Fr., five-leaved); and some of the species are favorite garden-flowers.

Po'tently, *adv.* Powerful, with great force or energy; forcibly.

Potentness, *n.* Powerfulness; might; power.

Potenza, (*po-ten'dza*), a town of S. Italy, cap. of the prov. of Potenza, 58 m. E.S.E. of Salerno. *Manuf.* Woollens, serges, cottons, &c. *Pop.* 12,789.

Poterium, *n.* (*Bot.*) A genus of plants, order *Rosacea*. The Burnet, *P. sanguisorba*, said to be native about Lake Huron, is a herbaceous plant with unequally pinnate leaves. It is occasionally cultivated as a salad.

Pot-hanger, *n.* Hook or branch on which the pot is hung over the fire.

Poth'er, Pot'ter, Pud'der, *n.* Bustle; confusion; tumult; fluster.

—*v. n.* To make a stir; to make a blustering ineffectual effort.

—*v. a.* To harass and perplex; to puzzle.

Pot-herb, (*-erb*), *n.* An herb used in cooking.

Po'thier, ROBERT JOSEPH, an eminent French lawyer, b. at Orleans, 1669. He became professor of law in the university of his native city, and d. there in 1772, as much beloved for his virtue as admired for his extensive learning. His treatises on various legal subjects form 17 octavo vols., but his great work is a *Digest of the Pandects of Justinian*, in 3 vols. fol.

Pot-hook, *n.* A hook on which pots and kettles are hung over the fire.

—A letter or character like a pot-hook; a scrawled letter.

Pot-house, *n.* A low drinking-house.

Poti, **POTY**, **PUTI**, or **CARATUEZ**, a river of Brazil, flowing into the Paranaíba in the prov. of Piauí. *Length*, abt. 200 m. At its mouth is a town of the same name, abt. 120 m. N. of Oeiras.

Potichoman'ia, *n.* [Fr. *potichomanie*, from *potiche*, a porcelain vase, and *manie*; Gr. *mania*, mania.] The

art or process of coating the inside of glass vessels with engravings or paintings, so as to give them the appearance of painted ware.

Pot'iphar, (*Script.*) A high officer of Pharaoh, who purchased Joseph of the Midianites, and made him master of his house, but afterwards imprisoned him on a false charge.

Po'tion, *n.* [Lat. *potio*, from *potare*, to drink.] A draught; usually, a liquid medicine; a dose.

Pot-lid, *n.* The cover of a pot

Pot-luck, *n.* Whatever may happen to be provided for a meal.

Pot-man, *n.*; *pl.* **POT-MEN**. A pot-companion.

Pot-metal, *n.* An alloy of copper and lead.

Potomac, a river of the United States, formed by two branches, which rise in the Alleghany Mountains, and unite 20 m. S.E. of Cumberland, Maryland, from which point the river flows in a generally S.E. course, 400 m., and falls into Chesapeake Bay, where it is from 6 to 8 m. broad, and 75 m. from the ocean. Line-of-battle ships ascend to Washington, 120 m. from its mouth, and the tide reaches Georgetown. Between Westport and Washington, 220 m., it falls 1,160 feet. The scenery in this portion of its course is wild and beautiful, especially where it breaks through the Blue Ridge at Harper's Ferry. Its principal affluents are the Shenandoah, Savage, Monocacy, and Aquia Creek. The *P.* forms the greater part of the boundary between Virginia and Maryland. During the Civil War, both the National and Confederate armies crossed the fords of the Upper Potomac several times, and severe actions were fought upon its banks.

Potomac Creek, in Virginia, enters Potomac River from Stafford co.

Potosi, a city of Bolivia, cap. of a dept. of same name, stands in Lat. 19° 35' S., Lon. 65° 25' W., in a narrow glen on the river of the same name, on the mountain which contains the richest silver-mines of S. America, 70 miles from Chuquisaca, in a cold climate, owing to the height of the ground, which is 13,330 feet above sea-level, and in a barren country, the sides of the hills being covered only with moss, and their summits capped with eternal snows.—In 1547 this town was founded, and is entirely supported by the mines. A royal mint was established in 1562; and so rapidly did its population increase, that, in 1611, the town is said to have contained 160,000 inhabitants. Since then, however, the population has continually decreased. It has a mint, convents, minneries, a college, and an hospital. *Pop.* abt. 20,000.

Potosi, in Kansas, a post-township of Linn co.

Potosi, in Missouri, a post-village, cap. of Washington co., abt. 70 m. S.S.W. of St. Louis. Mines of Galena are worked near here.

Potosi, in Wisconsin, a post-village and township, former cap. of Grant county, about 15 miles N. W. of Dubuque, Iowa.

Pot-pie, *n.* A dish composed of meat, potatoes, and dough, baked as a pie, or boiled together.

Pot-pourri, (*po-poor-ee'*) [Fr., from *pot*, pot, and *pourrir*, to boil very much.] (*Cooking.*) A dish of different sorts of viands, and corresponds, in this sense, to the *hotch-potch* of Scotland, and the *olla podrida* of Spain.

(*Mus.*) A selection of favorite pieces strung together without much arrangement, so as to form a sort of medley.

Potsdam, a city, and the second royal residence of Prussia, standing on the Havel, 17 m. from Berlin. *P.* is to Berlin what Versailles is to Paris. It is indebted for its chief improvements to Frederick II. The streets are regular and spacious, and, on the whole, may vie in beauty with any town in Germany. It is surrounded by a wall and ditch, and has 9 gates. The form of the town, exclusive of the suburbs, is compact, and approaches to a square. The palace, situate on the bank of the Havel, is a magnificent structure: connected with it, also, are a theatre, a menagerie, and spacious stables. The town-house was built in 1754, on the plan of that of Amsterdam; and there are extensive barracks, a great hall for exercising the troops in bad weather, and the garrison church, with a tower 400 feet high, contains the statues of Mars and Bellona; also, in this church, is the tomb of Frederick II. The market-place is ornamented by an obelisk, and by statues of the kings of Prussia. There are a gymnasium, various schools, charitable institutions, and an orphan-house on a large scale, for the children of soldiers. The palace of Sans-Souci, the favorite retreat of Frederick II., is in the neighborhood of Potsdam.

Potsdam, in New York, a post-village and township of St. Lawrence co., abt. 11 m. E.N.E. of Canton. The village is well laid out and handsomely built. *Manuf.* Cabinet-ware, machinery, lumber, &c.

Pot'sherd, *n.* [Eng. *pot*, and A.S. *sceard*, a fragment.] A piece or fragment of a broken pot.

Pot'stone, *n.* (*Min.*) A coarsely granular variety of steatite or soapstone, which, on account of its tenacity, infusibility, and the ease with which it may be turned in the lathe, is frequently made into culinary vessels.

Pot'tage, *n.* [Fr. *potage*.] A species of food made of meat boiled to softness in water, usually with some vegetables; broth with vegetables in it.

Pottawatamie [from an Indian tribe of that name, formerly occupying this region], in Iowa, a W. S.W. co., adjoining Nebraska; *area*, about 900 sq. m. *Rivers*, Missouri, West Branch of the Nishnabotona, and Boyer rivers. *Surface*, agreeably diversified; *soil*, fertile, and well adapted to the production of cereals. *Cap.* Council Bluffs. *Pop.* (1895) 46,042.

Pottawat'omie, in Kansas, a N.E. co.; *area*, about

848 sq. m. *Rivers*, Kansas river, and Vermilion and Rock creeks. *Surface*, diversified; *soil*, generally very fertile. *Cap.* Westmoreland. *Pop.* (1895) 16,352.

—A post-township of Coffey county.

—A township of Franklin county.

Pot'ter, *n.* One whose occupation is to make pots or earthen vessels. See **POTTERY**.

—*v. n.* To busy or perplex one's self about trifles; to trifle; to puddle (colloq.)

—*v. a.* To disturb; to perplex; to pother (Local Eng.)

Potter, PAUL, a celebrated Dutch painter, b. at Enkhuysen, 1625; settled at the Hague, and painted cattle and landscapes, but was particularly successful in the former. His coloring is uncommonly brilliant, and for fidelity to nature he is unexcelled; his pictures are consequently held in the highest estimation. One of his most celebrated pictures is the *Bull*, at the Hague. *D.* 1654.

Potter, in New York state, a post-township of Yates county.

Potter, in Pennsylvania, a N. co., adjoining New York; *area*, abt. 1,100 sq. m. *Rivers*, Genesee and Allegheny rivers, and Pine, Oswayo and Kettle creeks. *Surface*, uneven and hilly; *soil*, moderately fertile, and excellently adapted to grazing. *Min.* Iron and coal. *Cap.* Coudersport. *Pop.* (1897) 23,654.

—A township of Center county.

Potter, in Wisconsin, a post-village of Calumet co., abt. 24 m. W. of Manitowoc.

Pot'tern-Ore, *n.* An ore which, for its aptness to vitrify and serve the potters to glaze their earthen vessels, the miners call by this name.

Potter's Hollow, in New York, a post-village of Albany co., abt. 32 m. W. by S. of Albany.

Potter's Mills, in Pennsylvania, a post-village of Centre co., abt. 73 m. N.W. of Harrisburg.

Pottersville, in New Jersey, a post-village of Hunterdon co., abt. 33 m. N. of Trenton.

Pottersville, in New York, a post-village of Warren co., abt. 25 m. N. by W. of Caldwell.

Pot'tery, *n.* [Fr. *potterie*, from *pot*.] The vessels or wares made by potters; earthenware.—The place where earthen vessels are manufactured.

(*Arts and Manuf.*) The art of forming vessels or utensils of any sort of clay, kneaded with water and hardened with fire, is extremely ancient, mention being made of it in the Mosaic writings, and it being known that the ancient Greeks possessed it at a very early period. It is, indeed, one of the arts first cultivated by every nation of the world, and its productions have proved of the highest value as an aid to historical research. Not only may the domestic manners of nations long since passed away be learnt from them, but also the extent of ancient Greece and its colonies, and the limits of the Roman empire. The extent of the Mohammedan empire in the Old World, and the Aztec dominion in this continent, would alike be clearly

pointed out by their *P.* if no other record had been transmitted to us.

Pottery, may be conveniently divided into two classes of baked stoneware:—First, *Porcelain* (*q. v.*), consisting of a fusible earthy mixture, along with an infusible, which, when combined, are susceptible of becoming semi-vitrified and translucent in the kiln; and *pottery*, properly so called, which consists of an infusible mixture of earth, which is refractory in the kiln and continues opaque.—Though the various kinds of pottery and porcelain differ from each other in the details of their manufacture, yet there are certain general principles and processes which are common to them all. The first belongs to the washing of the clay, and consists in dividing and washing it till it acquires the necessary fineness. It is necessary that the clay should be mixed with a certain quantity of silicious earth, the effect of which is to increase its firmness, and render it less liable to shrink and crack on exposure to heat. In common clay there is naturally a sufficient quantity of silica, but in the finer kinds an artificial admixture of silica is necessary. The clay having been reduced to a smooth pulp, and the silica (pounded flints) to a creamy mixture, the two are mixed in proportions varying according to the kind of ware to be made. This mixture is then passed through several sieves of hard-spun silk, and having been thus thoroughly strained and purified, is boiled for the purpose of evaporating the superfluous moisture, and reducing it into a doughy consistence for the use of the potter. The clay being thus brought into the requisite state, is next shaped into articles of earthenware by one of three processes, named *throwing*, *pressing*, and *casting*. Of these, throwing is the most

Fig. 2149.

JUG BELIEVED TO BE ANTERIOR TO THE ETRURIAN AGE.

POTTERY AND HOUSEHOLD GOODS OF ANCIENT ROME.

1. Writing-utensils and parchment rolls. 2. Toilet-accessories. 3. Mirrors from Pompeii. 4. Pins with decorated heads. 5-7. Rings. 8, 9. Cosmetic receptacles. 10. Comb. 11. Bathing articles. 12, 13. Keys. 14. Dice. 15, 16. Ornamented earthen bowls. 17. Small amphora. 18. Ladle. 19. Ornamental mixing-bowl. 20. Branding-iron. 21. Kitchen utensils. 22. Wine-sampler. 23. Spoon. 24-30. Household utensils. 31. Marble vase. 32. Weighing-balance. 33. Scale-weight. 34. Wine-bucket. 35. Lantern. 36. Sickle. 37. Marble table and drinking-cups. 38, 39. Bronze lamps. 40. Candelabrum. 41. Tripod. 42, 43. Roman seats. 44. Fire-hearth. 45. Fire-pan. 46. Stove. 47. Funnel. 48. Earthen tile. 49. Torch.

ancient, and is performed at the potter's wheel or lathe, which consists of an upright shaft, about the height of a common table, on the top of which is fixed a disk of wood, of sufficient diameter to support the largest vessel which is made. The thrower, seated with one foot on each side of the wheel-head, — with his elbows supported on his knees, when his hands require to be kept steady, — takes a lump of clay, dashes it down upon the centre of the revolving disk, and with both hands kept wet by occasional dipping in water, squeezes up the clay into a high conical lump, and again forces it down into a mass, to get rid of any superfluous air-bubbles. With one hand, or finger and thumb, in the mass, he then gives the first rude form to the vessel, and with a piece of horn, shell, or porcelain, which has the profile of the shape of the vessel, he smooths the inner surface, giving it the proper shape, and removing the inequalities left by the fingers. The vessel is now lifted off the wheel, placed on a board, and carried into the open air, or a warm room, where it parts with its moisture sufficiently to allow of the operation of *turning*, which, in the case of earthenware, does not much differ from the turning of wood, ivory, or metal. When the vessel has been wrought to the required thickness by this process, its handle (if it requires one), which has been moulded in a metal tube of the required shape, is affixed to it by a little clay and silicate paste. The processes of pressing and casting are simply processes of moulding. We now come to the process of firing, by which articles of pottery are made to lose their pliability, and acquire solidity and density. The temperature at which they are fired has a great influence on their texture and character, and as the novel effect of the first firing is to convert the article into a hard, sonorous substance, having the appearance of biscuit, by which name it is known, and which is more or less porous, a second firing is necessary to remove the porosity, and to give a durable smooth surface, not very liable to tarnish. When the article has been withdrawn from the kiln, it is either simply glazed, or printed, painted, or ornamented in some way, and then glazed, the glaze, in either case, consisting of the ingredients of some kind of glass, fritted or melted together in a furnace, reduced to a powder, and stirred up in water. When the article in biscuit has been dipped into this, it is passed through the glaze or glass-oven; the powder melts into a glass, and reveals the pattern, which, being a white opaque

Fig. 2150.

SPECIMEN OF ITALIAN MAJOLICA-WARE (17th century), (Upon which is painted the scene in the life of Jesus Christ where he is betrayed to the soldiers of Pilate.)

powder, it had temporarily concealed. The glaze we have mentioned is the one most commonly used; but there are many kinds of glazes, which may be distinguished as transparent, opaque, and colored, and which are severally used, according to the kind of ware to be glazed, and the ingredients of which are very various. The felspars and certain volcanic scoræ are used where the point of fusion is required to be high. A second class of non-metallic glazes includes common salt, potash, boracic acid, phosphate of lime, and sulphate of baryta. A third class of glazes consists of earthy and metallic substances simply mixed together, &c. All articles of pottery which have a variety of colors are ornamented either by the pencil or by impressions taken from copper-plates, both processes taking place while the article is in its biscuit state, and prior to its being glazed. Painting on earthenware and porcelain is performed with a camel's-hair pencil, and with colors such as are used in enamel-painting, being all metallic oxides, and ground up with substances which vitrify by heat; such as glass, nitre, and borax, in certain proportions. Oil of turpentine is the usual vehicle for the color and flux; and while painting, the appearance of the colors is often dingy and displeasing, but when the oil and other matters have been driven off by the heat of the furnace, the colors are revealed in their natural brilliancy. When an article of pottery is to be printed, the printer, having first melted the oily coloring substance

by laying it on a hot iron-plate, transfers it with a leather muller to a copper-plate engraved with the required pattern, also made hot. The superfluous color is carefully cleaned off: the plate is covered with a piece of unsized paper, which has been first brushed over with a little of soft-soap, and then the whole is passed through a press, the heat of the plate drying the paper, and enabling it the more readily to take up the color. The

Fig. 2151. — GERMAN DRINKING-JUG, (Beginning of the 17th century.)

impression thus taken is received by a girl, called the "cutter," who cuts it into the required form, and hands it to the "transferer," who puts it on the biscuit, and rubs the surface till it is completely attached to the clay. The article is then left for a short time to imbibe the coloring matter, after which the paper is washed off with clean water, and the process completed. Of the subsequent operation of glazing, we have already spoken. The most celebrated wares of different times and countries are distinguished by distinctive names; as, Majolica-ware, Sèvres, Chelsea, Palissy, &c.; and of these, the latter — the work of Bernard de Palissy (*q. v.*), who lived in the 16th century — deserves some special attention. Palissy, having resolved to discover a method of enamelling stone-ware, succeeded, after sixteen years' efforts, and proceeded to manufacture *P.* characterized by a peculiar style and many singular qualities. It is not decorated with flat painting, but with figures and ornaments, which are generally pure in form, and are all executed in relief and colored. The most remarkable of the works of Palissy are his "Pieces rustiques," a designation given by him to dishes ornamented with fishes, snakes, frogs, cray-fish, lizards, shells, and plants, admirably true to nature in form and color. Palissy-ware may be distinguished from imitations by the fact that Palissy moulded only the fossil shells, reptiles, and plants of Paris, while his imitators introduced recent shells and other objects of natural history. In 1882, nearly 1000 potteries in the United States produced more than half of the wares annually consumed. The chief centres of this industry are at Trenton, New Jersey, and East Liverpool, Ohio. Near the former are found the coal, kaolin, spar and quartz mines of Penna., Del. and Md., and the fine and white clays of N. J. East Liverpool obtains clays from O., Mo. and Md. The U. S. possesses inexhaustible beds of the richest kaolins, endless stores of pipe, potter's, ball and fire clays, and mines of massive quartz and felspar, mines of lithomarge in Tennessee, and pools or reservoirs of moist brown, black, and almost all colored clays, in Wyoming and other places. The importation of *P.* of all kinds, chiefly from England and France, for the year ending June 30, 1897, amounted, in round numbers, to \$10,000,000. See also CERAMICS; POTTERY INDUSTRY.

Potting, *n.* A drinking; a tipping. — A placing or preserving in a pot. — The placing of sugar in casks for the purpose of draining.

Pottle, *n.* A liquid measure of four pints. — A pot or tankard. — A vessel or small basket for holding fruit.

Pottle-draught, (*-draft*), *n.* The drinking a pottle of liquor at a draught.

Pot'to, *n.* (*Zoöl.*) See KINKAJOU.

Pott's Creek, in *Virginia*, rises in Monroe co., and enters Jackson's River from Alleghany co.

Pott's Grove, in *Pennsylvania*, a post-village and township of Northumberland co., abt. 66 m. N. of Harrisburg.

Potts'town, in *Pennsylvania*, a post-borough of Montgomery co., abt. 37 m. W.N.W. of Philadelphia. It is a place of much business activity, and contains several extensive manufactories.

Potts'ville, in *Pennsylvania*, a post-borough, cap. of Schuylkill co., about 9.5 m. N.W. of Philadelphia. The site is very uneven, but the town is generally well built, and contains some very fine edifices. *P.* is a place of rapid growth, which is chiefly due to the rich iron and coal mines in the vicinity. *Manuf.* Machinery, iron, carpets, woollen goods, &c. *Pop.* (1897) 15,950.

Potulent, *a.* [*Lat. potulentus*, from *potare*, to drink.] Pretty much in liquor; nearly drunk.

— Fit to drink; drinkable.

Pot'-vallant (*-val'iant*), *a.* Heated to courage by strong drink; courageous over the cup.

Pouch, *n.* [*Fr. poche*, a pocket.] A small bag; usually, a leather bag to be carried in the pocket.

— A prominent belly or paunch; — used in ridicule or contempt.

(*Med.*) A cyst or sac containing watery fluid.

(*Bot.*) A silicle or short pod.

(*Zoöl.*) The sac attached to the bill of the pelican and of some other birds. — Also, a marsupium, or sac for the food of the young.

(*Mil.*) A leather case, lined with tin, to carry a soldier's ammunition.

— *v. a.* To pocket; to save. — To swallow; — said of fowls.

Pou'chatoula, or **Pon'chatoula**, in *Louisiana*, a post-village of Tangipahoa parish, on the New Orleans, Jackson & E. Northern R.R. *Pop.* about 150.

— A river which takes its rise in a dense swamp of Tangipahoa parish, and after a S.W. course of about 30 m., empties into Natallany river. It is navigable for large vessels up to Wadesboro, about 18 m. from its mouth.

Pouch'-month, *n.* A month with swollen lips.

Pouchong (*poo-shong'*), *n.* A black and superior species of tea; it being a variety of the Souchong class of Chinese tea.

Poudrette, (*poo-dret'*), *n.* (*Agric.*) A manure composed of night-soil mixed up with clay, dried.

Poughkeepsie, or **POKEEPSIE**, (*po-kep'see*), in *New York*, a city, cap. of Dutchess co., on the Hudson River, abt. 70 m. S. of Albany; *Lat.* 40° 41' N., *Lon.* 73° 55' W. It is regularly laid out, contains many handsome public and private edifices, and is one of the leading cities of the State. *Manuf.* Cotton goods, machinery, carriages, guns, flour, leather, carpets, &c. *Pop.* (1897) 23,450.

Pouillet, CLAUDE-SERVAIS

MATHIAS, a French physicist, member of the Institute, and professor of the Faculty of Sciences of Paris, b. at Cuzance, Doubs, 1791. He has contributed many valuable additions to physical science. *D.* 1865.

Pou'laines, *n. pl.* [*Fr.*]

Long, pointed shoes, with upturned toes (Fig. 2152), generally worn in Europe during the 14th century. They were so long as to be secured to the knee by chains. They were also called *cracows*.

Fig. 2152.

POULAINES OR CRACOWS.

Poule, (*pool*), *n.* See POOL.

Poulp, *n.* Same as PULP, *q. v.*

Poult, *n.* [*From Fr. poulet*, dimin. of *poule*, hen.] A young chicken. (*R.*)

Poulterer, *n.* A dealer in poultry.

Poultice, *n.* [*Lat. puls, pulvis*; *Gr. poltos*.] (*Med.*) A cataplasm; a soft composition to be applied to sores.

— *v. a.* To cover with a poultice; to apply a poultice to.

Poult'ney, in *Iowa*, a village of Delaware co., abt. 33 m. N.W. of Dubuque.

Poultney, in *Vermont*, a post-vill. and township of Rutland co., abt. 65 m. S.W. of Montpelier.

Poulton, (*pou'lon*), a town and parish of England, co. of Lancaster, at the mouth of the river Wyre, 17 m. S.S. W. of Lancaster; *pop.* 8,000.

Poul'try, *n.* [*O. Fr. poultier*; *Fr. poulet*, a chicken; *Lat. pullus*.] Different kinds of birds reared for the production of eggs and feathers, and for the use of their bodies as animal food. The domestic poultry in common use in this country are the common domestic fowls, or cock and hen, the turkey, the duck, and the goose; to which may be added, as occasionally reared, the guinea-fowl and the peacock.

Poul'try-yard, *n.* A yard or place where poultry are kept.

Pounce, *n.* [*Fr. ponce*; *Sp. ponce*; *It. pomice*, from *Lat. pumex, pumicis*, a pumice-stone.] A powder to prevent ink from spreading on paper after erasures. — Colored powder sprinkled over pricked papers in drawing paterus, &c.

— *v. a.* To sprinkle or rub with pounce.

[*Sp. punchar, punzar*, from *Lat. pundo, punctus*, to pierce.] The claw or talon of a bird of prey.

— *v. a.* To pierce; to penetrate; to perforate.

— *v. n.* To fall on and seize with the pounces or talons; to fall on suddenly.

Pounce'-box, *n.* A small box with holes in the lid, used for sprinkling pounce on paper.

Pounced, (*pounst*), *a.* Furnished with claws or talons. — Ornamented with a continuous series of dots over the entire surface.

Poun'-cet-box, *n.* (Written also *pouchet-box*.) A small box perforated, and containing perfume.

Poune'ing, *n.* A hole stamped or worked in cloth by way of ornament.

Pound, *n.* [*A. S. Dan., Sw., and Goth. pund*; *Ger. pfund*; *Lat. pondo*, a pound.] A standard weight, consisting of twelve ounces troy or sixteen ounces avoirdupois. The pound avoirdupois weighs 7,000 grains troy, and the pound troy 5,760 grains. — An English denomination of money of account, consisting of 20 shillings, and of the value, as declared by act of Congress of 1873, of \$4.86 1/2 m.

Pound, *n.* [*A. S. pund*, a fold.] An inclosure, in which cattle or other beasts are shut in or confined when taken in trespassing, or going at large in violation of law.

Pound, *v. a.* [A. S. *pyndan*.] To shut in or confine in a public pound.

—*v. a.* [A. S. *pyndan*, to shut up.] To strike with some heavy instrument.—To comminute and pulverize by beating.

Poundage, *n.* A sum deducted from a pound, or a certain sum paid for each pound.

(*Law.*) The amount allowed to the sheriff, or other officer, for commission on the money made by virtue of an execution. This allowance varies in different States and to different officers.

Pound-breach, *n.* The act or the offence of breaking a pound, for the purpose of taking out the cattle impounded.

Pound-cake, *n.* A rich sweet-cake, in which the principal ingredients—flour, butter, sugar, &c.—are used *pound* for *pound*.

Pounder, *n.* A person or thing that pounds.—A pestle; an instrument used for pounding.—A person or thing denominated from a certain number of pounds; as, a six-pounder, that is, a cannon which carries a ball of six pounds; a person receiving an income of a certain number of pounds.—A large, heavy pear.

Pound-keeper, *n.* One who has the charge of a public pound.

Pound-rate, *n.* (*Law.*) A rate or payment by the pound.

Pound-ridge, in *New York*, a post-village and township of Westchester county, about 120 miles south of Albany.

Poupart's Ligament, *n.* (*Anat.*) A broad, thin ligament, covering the anterior opening in the pelvis, stretching from the *ilium* to the *pubis*, and so named from the anatomist who first showed its importance and uses.

Poupies, *n. pl.* [From Fr. *poupiettes*.] (*Cookery.*) A mess of victuals made of veal-steaks and slices of bacon.

Pour, *v. a.* To let, as a fluid in a stream, either out of a vessel or into it.—To emit; to send forth in a stream or continued succession.—To send forth; to give vent to.

"The devotion of the heart pours itself forth."—*Duppa*.

—To throw in profusion or with overwhelming force.

—*v. n.* To issue forth in a stream, or continued succession of parts; to move or rush, as a current; to rush in a crowd or continued procession.

Pourer, *n.* One who pours.

Pourpoint, *n.* The quilted doublet worn by soldiers and civilians in the 14th and 15th centuries.

Poursuivant, *n.* Same as *PURSUIVANT*, *q. v.*

Poussin, *NICOLAS*, one of the most eminent of the French painters, b. 1594, at Andelys, in Normandy. Having practised the art under different masters at Paris, he went to Rome, and studied the works of Raphael, Domenichino, and Titian, with great attention; but his taste for the antique prevailed, and is observable in all his works. Louis XIII. invited him to France in 1640, and gave him a pension, with apartments in the Louvre; but Poussin was so annoyed by the envy and intrigue of contemporary artists, that he returned to Rome, and remained there during the rest of his life. Died 1665.

Poussin, *GASPAR*, an eminent painter, whose proper name was *DUCHET*, b. at Rome, 1615. His sister married Nicolas Poussin, which circumstance led him to study painting under that great master, whose name he adopted. He particularly excelled in landscapes. His works are composed in general from studies in the campagna of Rome and surrounding country, worked out with the feeling of a mind deeply imbued with classical associations, and tending towards melancholy reflection, by contrasting the glory of the past with the decadence of the present—ideas entirely the opposite of those of Claude, who, trusting to the never-fading beauty of nature, endeavored, from the scenery and architectural remains in Italy, to realize the classic age in all its glory.

Pout, (*poot*), *n.* A sullen look made by thrusting out the lips; a fit of sullenness.

—*v. n.* [O. Fr. *bouter*, to thrust or push forward.] To thrust out the lips, as in sullenness, contempt, or displeasure;—hence, to look sullen.—To shoot out; to be prominent; as, "To pout out with great lips." *Wiseman*.

Pout, *n.* [Fr. *poulet*.] A pullet; a young fowl.

Pouter, *n.* One who pouts.—A kind of pigeon.

Pouting, *n.* Childish sullenness.

Poutingly, *adv.* With pouting; in a pouting or sullen manner.

Pouza, (*poo'dza*), the principal of a group of small islands in the Mediterranean, 30 m. from Terracina; Lat. 40° 53' N., Lon. 12° 57' 5" E. Ext. 4 m. long, and 1 m. broad.

Poverty, *n.* [Fr. *pauvreté*; Lat. *paupertas*, from *pauper*, poor.] Destitution of property, or of convenient means of subsistence; penury; indigence; necessity; want.—Barrenness of sentiment or ornament; defect; insufficiency or defect of words.

Poverty Bar, in *California*, a village of Calaveras co., abt. 32 m. N.E. of Stockton.

Powder, *n.* [Fr. *poudre*; It. *polvere*; Lat. *pulvis*, dust, powder.] Any substance composed of minute particles.—A composition of saltpetre, sulphur, and charcoal, mixed and granulated; gunpowder.—Hair-powder; pulverized starch.

—*v. a.* To reduce to powder or fine particles; to comminute; to pulverize; to pound, grind, or rub into fine particles.—To sprinkle with powder; to sprinkle, as with powder.—To sprinkle with salt; to corn, as meat.

—*v. n.* To fall to dust; to become like powder.

Powder-box, *n.* A box in which powder for the hair is kept.

Powder-cart, *n.* A cart used for conveying powder.

Powder-chest, *n.* On board a ship, a wooden tri-

angular chest, filled with gunpowder, stones, &c., to be ignited and discharged at an enemy attempting to board.

—On board a ship, the chest where gunpowder is kept.

Powdered, *a.* (*Her.*) Applied to a shield when covered all over with the same bearing or charge.

Powdering-tub, *n.* The vessel in which meat is salted.—The place in which an infected leecher is cured.

Powder-magazine, *n.* A magazine for holding powder in fortified places, &c.

Powder-mill, *n.* The mill in which the ingredients for gunpowder are ground and mingled.

Powder-mine, *n.* A cave or hollow in which powder is placed to be fired at a proper time.

Powder-monkey, (*munk'y*), *n.* A boy employed on war-vessels to carry cartridges from the magazine to the guns.

Powder River, in *Oregon*, rises on the E. slope of the Blue Mountains, and flows E. into Lewis Fork of Columbia River.

Powder River, rises near the center of Wyoming, and flowing north by east into Montana, enters the Yellowstone river near Blatchford, and about 45 m. below the old site of Fort Alexander.

Powder Springs, in *Georgia*, a post-village of Cobb co., abt. 12 m. S.W. of Marietta.

Powdery, *a.* Easily crumbled to pieces; friable.—Sprinkled with powder; dusty.—Resembling powder.

Powell, in *Kentucky*, an E. central co.; area, 144 sq. m. River, Red river. Surface, uneven and hilly; soil, in some parts fertile. Cap. Stanton. Pop. (1897) 5,120.

Powell's Creek, in *Ohio*, enters the Auglaize River from Defiance co.

Powell's Creek, in *Pennsylvania*, enters the Susquehanna River from Dauphin co.

Powell's River, rises on the S.E. slope of the Cumberland Mountains, in Wise co., Virginia, and flowing S.W. into Tennessee, joins the Clinch River between Campbell and Union cos.

Power, *n.* [O. Fr. *povaire*; Fr. *pouvoir*; It. *podere*, *potere*, from Lat. *possum*, *posse*, to be able.] Command; authority; dominion.—Influence; prevalence upon; that which may move the mind.

"This man had power with him to draw him forth to his death." *Bacon*.

—Ability; force; might; strength.—The faculty of doing or performing anything; the faculty of moving or producing a change in something; capacity or capability.—Animal or natural strength.—Faculty of the mind, as manifested by a particular mode of operations.—An army or navy; a host; a military force.

(*Math.*) The product arising from the multiplication of a number into itself; as, a cube is the third power.

(*Metaph.*) Power is usually regarded as of two kinds,—an *active power*, or the principle of acting or making any change; and *passive power*, or the principle of bearing or receiving any change. According to Hume, we have no proper notion of power, but merely of the relation which the mind conceives to exist between a thing going before and a thing coming after; all that we observe being merely antecedent and consequent.

(*Mech.*) Power denotes any force, whether of a man, a horse, wind, water, steam, &c., which, being applied to a machine, tends to produce motion. By the term *mechanical power* is signified one of the six simple machines, viz., the lever, the inclined plane, the screw, the wheel and axle, the wedge, and the pulley. In optics, power generally expresses the effect produced by any optical instrument, as *magnifying power*, *illuminating power*, &c.

(*Law.*) An authority which one man gives to another to act for him, and is commonly applied to a reservation made in a conveyance for persons to do certain acts, as to make leases or the like. Powers deriving their effect from the statute of uses are either given to a person who has an estate limited to him by the deed creating the power, or who had an estate in the land at the time of the execution of the deed, or to a stranger to whom no estate is given, and the power is for the benefit of others.

P. Horse. See *HORSE-POWER*.

P. of Attorney. See *ATTORNEY*.

Powerable, *n.* Capable of performing anything; possible.

Powerful, *a.* Having great power; strong; forcible; efficacious.

Powerfully, *adv.* With great power, force, or energy; potently; mightily; with great effect; forcibly.

Powerfulness, *n.* The quality of having or effecting great power; force; power; might.

Powerless, *a.* Destitute of power; weak; impotent.

Powerlessness, *n.* Destitution of power.

Power-loom, *n.* A loom worked by mechanical power, as steam or water.

Power-press, *n.* A printing or other press worked by mechanical power.

Powers, *n. pl.* (*Fine Arts.*) An order of guardian angels, who are usually represented bearing a baton or sergeant's staff in their hands, emblematic of delegated power from a superior.

Powers, *HIRAM*, an eminent modern American sculptor, b. at Woodstock, Vt., 1805, was the son of a small farmer. On the death of his father, being left in poor circumstances, he was compelled to maintain himself by his own resources. After finding employment in a hotel, a provision-store, and a clockmaker's shop, he made the acquaintance of a foreign artist; and having from his youth been an adept at drawing, he quickly learned the art of modelling in plaster from his tutor. He then obtained employment in the Cincinnati Museum as a modeller in wax. While thus engaged, he assiduously cultivated his artistic powers, and with so much success

that in 1835 he was enabled to set himself up at Washington as a modeller of busts. Two years later, he proceeded to Italy, which for a long period had been a cherished ideal. In that land of art, his progress was very rapid. The first work by which he acquired fame as a sculptor was an *Eve* in marble. In 1851, his *Greek Slave* was placed in the Great Exhibition of London, where it became an object of popularity to a most remarkable degree. From that period his fame became European; and he was everywhere admitted to be a highly gifted representative of American art. His other works were a *Fisher-boy*, the *United States* (for the Crystal Palace at Sydenham), *Washington, California*, *La Penitencia*, and a number of portrait-busts of our most distinguished statesmen. One of his latest and best productions, is the bronze statue of Webster erected in the State-house grounds at Boston. D. July 1873.

Powerville, in *New Jersey*, a village of Morris co., abt. 12 m. N.E. by N. of Morristown.

Poweshiek, (*pow'-sheek*), in *Iowa*, a S.E. central co.; area, abt. 576 sq. m. Rivers, English River, and Beaver and Prairie creeks. Surface, nearly level, chiefly prairie; soil, fertile; has large dairying interests. Min. Stone-coal. Cap. Montezuma. Pop. (1895) 18,524.

Powhatan, in *Arkansas*, a post-town, cap. of Lawrence co., about 9 m. N. by E. of Smithville.

Powhatan, in *Iowa*, a township of Pocahontas co.

Powhatan, in *Ohio*, a village of Champaign co., about 38 m. N.E. of Dayton.

Powhatan [after the Indian chief, father of Pocahontas], in *Virginia*, a S.E. central co.; area, about 255 sq. m. Rivers, James and Appomattox rivers. Surface, generally level; soil, in general, not very fertile. Cap. Powhatan, or Powhatan Court House. Pop. (1897) 7,250.

Pow'nal, in *Maine*, a p.-tp. of Cumberland co.

Pow'nal, in *Vt.*, a p.-tp. of Bennington co.

Pow'nal Centre, in *Vt.*, a p. o. of Bennington co.

Pow'ner, *POW'-TER*, *CROPPER*, *n.* (*Zoöl.*) A variety of domestic pigeon, which possess the power of inflating the crop.

Powwow, *n.* Among the American Indians, a kind of conjurer, sorcerer, or diviner.—An incantation preliminary to a grand hunt, a council, a warlike expedition, &c., accompanied with dancing and great noise and confusion.—A noisy meeting. (*Vulgar*, U. S.)

—*v. n.* To practise sorcery; to conjure.

Pox, (*poks*), *n.* [Contracted from *pocks*.] (*Med.*) Pustules or eruptions of any kind: a disease characterized by pocks or pustules; an eruptive distemper.—Syphilis.

—*v. a.* To communicate the venereal disease to.

Poxim, (*po-sheeng'*), a town of Brazil, on a river of its own name, abt. 25 m. S.S.W. of Alagoas; pop. 4,000.

Poy, *n.* [Fr. *appui*, a support, from *apuyer*, to support.] A rope-dancer's pole; a support; a steering, or pushing pole.

Poy'al, *n.* A kind of striped cloth for covering seats.

Po-yang, a large lake of China, prov. of Kiang-se, between Lat. 28° 50' and 30° N., Lon. 116° E. Ext. 80 m. long, and 40 broad.

Poygan, or *POYGAM*, in *Wisconsin*, a post-township of Winnebago co.

Poyner, in *Iowa*, a twp. of Black Hawk co.

Poynette, in *Wisconsin*, a post-village of Columbia co., abt. 21 m. N. of Madison.

Poyou, *n.* (*Zoöl.*) The yellow-footed armadillo, *Dasy-pus encoubert*, common in Paraguay. See *ARMADILLO*.

Poyssippi, in *Wisconsin*, a post-village and township of Waushara co., abt. 12 m. N. of Berlin.

Poze, *v. a.* To puzzle. See *POSE*.

Pozzo-di-Borgo, *CHARLES ANDREAS*, COUNT, (*pot-so-de-bor-go*), a native of Corsica, distinguished as a statesman in the interest of the "Holy Alliance." b. 1764, first became conspicuous as a partisan of the English in the time of Paoli. When Corsica was incorporated with France, P. became a political employé of other govts., and contributed his services—especially as a general and ambassador in the Russian service—to the overthrow of Napoleon. He was a man of great political ability and foresight. After the fall of Napoleon, from 1814 to 1830, he acted as Russian ambassador at Paris, and since then he was living about two years as ambassador in London. D. in Paris, 1842.

Pozzolana, *POZZUOLANA*, (*pot-soc-la-na*), *n.* Fine volcanic ashes, mixed with about one fifth part of oxide of iron and a little lime, form a natural hydraulic cement, which hardens under water and answers the purpose of Roman cement. It has received its name from the fact of its being shipped from Pozzuoli.

Pozzuoli, a town of Italy, on a gulf of the same name, 7 m. S.W. of Naples; pop. 8,500.

Practicability, *n.* State or quality of being practicable; feasibility.

Fig. 252. — POWER.

Practicable, *a.* [Fr., from Lat. *practicus*, active.] That may be done, effected, or performed by human means, or by powers that can be applied; feasible. — That admits of use, or that may be passed or travelled, as a road.

Practicableness, *n.* The quality of being practicable; possibility of being performed.

Practically, *adv.* In a practicable manner; in such a manner as may be performed.

Practical, *a.* [O. Fr. *practique*; Lat. *practicus*; Gr. *praktikos*, fit for performing.] Pertaining to practice, action, or use. — That may be used in practice; that may be applied to use. — That reduces his knowledge or theories to actual use. — Derived from practice or experience.

Practicality, *n.* The quality of being practical; practicalness.

Practically, *adv.* In relation to practice. — By means of practice or use; by experiment. — In practice or use.

Practicalness, *n.* The quality of being practical.

Practice, *n.* [Fr. *pratique*; O. Fr. *practique*; Gr. *praktike*.] Frequent or customary actions; a succession of acts of a similar kind, or in a like employment. — Custom; habit; use; usage. — Dexterity or skill acquired by habit. — Actual performance, distinguished from theory. — Method or art of doing anything. — The exercise of any profession. — Medical treatment of diseases. — Skillful or artful management; dexterity in contrivance or the use of means; stratagem; artifice.

(*Law.*) The form, manner, and order of conducting and carrying on suits or prosecutions in the courts through their various stages, according to the principles of law and the rules laid down by the respective courts. In a popular sense, the business which an attorney or counsellor does; as A B has a good practice.

(*Arith.*) A rule for expeditiously solving questions in proportion; or, rather, for abridging the operation of multiplying quantities expressed in different denominations, as yards, feet, inches, &c.

—*v. a.* (Written also *practise*.) To do or perform frequently, customarily, or habitually. — To use or exercise, as any profession or art. — To do repeatedly, with the view of acquiring skill or dexterity in. — To commit; to perpetrate.

—*v. n.* To perform certain actions frequently, or customarily, either for instruction, profit, or amusement. — To form a habit of acting in any manner. — To try artifices; to use evil arts or stratagems. — To exercise any employment or profession.

Practicer, *n.* One who practices; one who customarily performs certain acts. — One who exercises a profession; one who prescribes medical treatment.

Practician, (*-tish'an*), *n.* One who, from practice, is skilled in anything.

Practitioner, (*prak-tish'un-er*), *n.* One who does anything customarily or habitually. — One who is engaged in the actual use or exercise of any art or profession, particularly in law or medicine. — One who uses any sly or dangerous art.

Pradier, JACQUES, a distinguished French sculptor, was a native of Geneva, and was b. in 1792. He gained the grand prize of the Academy in 1813, and was sent to Rome, where he studied and worked five years, and spent the rest of his life at Paris. The grace and tenderness of Canova were the qualities he chiefly aimed at in his work, but he allowed them frequently to pass in his hands into the voluptuous. He executed numerous Venuses, Bacchantes, Hebes, and other female figures, some portraits, statues, and religious pieces; was admitted to the Institute and the Legion of Honor, and d. 1852.

Prado, a town of Portugal, prov. of Minho, on the Cávado, 3 m. N.W. of Braga; pop. 6,000.

Prado, in Brazil, a town in the prov. of Espírito Santo, abt. 70 m. S. of Porto Seguro. — A town in the prov. of Bahia, abt. 120 m. S. of Porto Seguro. — A town in the prov. of Para, abt. 55 m. W. of Montalegre.

Præcipe, *n.* [Lat. *imp. præcipere*, to give rules, or precepts.] (*Law.*) A slip of paper upon which the particulars of a writ are written. It is lodged in the office out of which the required writ is to issue. — An original writ, of which *præcipe* is the first word, commanding the person to whom it is directed to do a thing, or to show cause why he has not done it. It is as well applied to a writ of right as to other writs of entry and possession.

Præcognita, *n. pl.* [Lat. *præcognitus*, from *præ*, before, and *cognoscere*, to know.] Things previously known in order to understand something else.

Præcordis, *n. pl.* [Lat., from *præ*, before, and *cor*, cordis, the heart.] (*Anat.*) The diaphragm; also, the thoracic viscera and the epigastrium.

Præcordial, *a.* (*Anat.*) Pertaining to the region of the heart.

Præfect, *n.* (*Roman Hist.*) A common name applicable to various functionaries. The most important was the *Præfectus urbi*, or warden of the city, whose office existed at an early period of Roman history, but was revived under Augustus, with new and greatly altered and extended authority, including the whole powers necessary for the maintenance of peace and order in the city, and an extensive jurisdiction civil and criminal. The *Præfectus prætori* was the commander of the troops that guarded the emperor's person.

Prænomen, *n.* See COGNOMEN.

Prætexta, *n.* [Lat.] (*Roman Antiq.*) A long white robe, bordered with purple, worn by the Roman priests and magistrates, and also by boys of the patrician class until the age of seventeen. It was likewise worn by matrons on occasions of religious ceremony, and by girls until they were married.

Prætor, *n.* (*Roman Hist.*) According to Livy, the

office specially distinguished by this name was instituted B. C. 366, when, after the Licinian Rogations, L. Sextius had been elected the first plebeian consul. The patres refused to ratify his election, unless a prætor and two curule ædiles were elected out of their own body. Part of the functions of the prætor was to administer justice between Roman citizens; in B. C. 246 another prætor, called *peregrinus*, was appointed to judge in suits between Roman citizens and foreigners; after which time the former prætor received the epithet *urbanus*. The two prætors determined their offices by lot.

Prætorian Guards. (*Roman Hist.*) A body of troops distinguished from the rest of the army by double pay and superior privileges, and so named because when first instituted they kept watch and ward round the *prætorium*, or general's tent, were formed into nine or ten cohorts, and made body-guards by Augustus (B. C. 27-A. D. 14). Claudius I. having been raised by them to the throne in 41, gave to each a donation of \$600. Their expectations or demands in that respect rose so high, that Hadrian, in 117, complained that the promotion of a Caesar had cost him twelve millions and a half dollars. The emperor Pertinax was murdered by them March 28, 193, after which they openly put the empire up to auction, proclaiming from the ramparts that the Roman world was to be disposed of to the highest bidder, and it was "knocked down" to Didius Julianus. Septimius Severus banished them, on pain of death, 100 miles from the capital, and remodelled the force, establishing the office of prætorian præfect, in 197. During a popular tumult, they were besieged by the citizens in their camp in 238. Diocletian abolished their privileges, and reduced their numbers in 303. Constantine I. suppressed them in 313.

Prætorium, *n.* (*Roman Antiq.*) The place in a camp where the Roman general (*Prætor*) had his tent pitched.

Pra'ga, a town of Russian Poland, govt. of Warsaw, on the Vistula, opposite to Warsaw, with which it communicates by a bridge of boats; pop. 4,000.

Pragmatic, **Pragmatical**, *a.* [Fr. *pragmatique*; Lat. *pragmaticus*, *pragmatikos*, from *pragma*, that which is done, from *prasso*, to do, to act.] Forward to intermeddle; meddling; impertinently busy or officious in the concerns of others without leave or invitation.

P. sanction. (*Hist.*) A solemn decree or ordinance of a monarch or legislature on some matter of importance. The phrase seems to have originated with the Byzantine monarchs, but was early introduced into France, and is now more particularly applied to several of the more important state decrees. The principal of these are — 1. The ordinance of Louis IX. in 1269, by which the liberties of the Gallican Church were established. — 2. That of Charles VII. of France, in 1438, occasioned by the schism in the Church between the Council of Basle and Pope Eugenius IV. It confirmed the decrees of the Council of Basle, and declared its supremacy over the Pope. — 3. The ordinance confirming the decrees of the same Council, adopted in Germany in 1439 by the Diet of Mentz. — 4. The instrument by which Charles VI., emperor of Germany, in 1722, endeavored to secure his dominions, failing male issue, to his daughter, the archduchess Maria Theresa. — 5. The instrument by which Charles III. of Spain, in 1759, settled the right of succession to the throne of the Two Sicilies upon his third son and his descendants.

Pragmatically, *adv.* In a meddling manner; impertinently. — In a manner that displays the connection and causes of occurrences.

Pragmaticalness, *n.* The quality of being pragmatic.

Prag'matism, *n.* State of being pragmatic.

Prag'matist, *n.* One who intermeddles. — One who practices pragmatism.

Pra'guerie, *n.* (*Fr. Hist.*) The French nobles, instigated by the Dukes of Bourbon and Alençon, and the Counts of Vendôme and Dunois, rebelled against Charles VII. in 1440. They quitted the court and retired to Blois, taking with them the Dauphin Louis, then a minor; and the movement received the name of *Pra'guerie* from the Hussite war. The people declared for Charles VII., and the refractory nobles speedily made submission.

Prague, (*praig*), a city of Austria, in Bohemia, on the Moldau, 160 m. N.W. of Vienna, and 75 m. S.E. of Dresden, Lat. 50° 5' 19" N., Lon. 14° 25' 22" E. It is situated on the Moldau, over which is a bridge of sixteen arches, 160 m. from Vienna. The town may be said to be divided into three parts, the whole surrounded by a moat and earthen mound. Prague, long the capital of Bohemia, contains the ruins of what was once the residence of the sovereign. The university is the oldest in Germany, having been founded by Charles IV., in 1348; the other principal buildings are a palace (but less ancient than the university), containing 150 rooms; the cathedral, a fine old Gothic structure; the *Thein-kirche*, containing the tomb of Tycho Brahe; and the church of St. Gallus, standing on the spot where Huss preached. Of public buildings generally, such as churches, convents, schools, and family mansions, Prague contains more than most towns of the same size. The theatre is large; it has a fine hospital, orphan-houses, and a lying-in hospital. The manufactures are linen, cotton, silk goods, hats, paper, brass-ware, jewelry, plated goods, glass, tobacco, mathematical and musical instruments. Prague has several times been exposed to the calamities of war, and was taken by storm in November, 1741, for the Elector of Bavaria, then Emperor. In 1744, the king of Russia bombarded and took it, making the garrison, consisting of 16,000 men, prisoners of war, but he was obliged to abandon it in the same year. In 1757 he again besieged it, but ineffectually;

and again in 1848 it was once more bombarded, and more cruelties of war perpetrated. It is the birthplace of Jerome of Prague.

Pra'han, a town of Australia, near Melbourne; pop. 10,000.

Prairial, (*pra-re'al*), *n.* See CALENDAR, § 6.

Prairie, *n.* [Fr., an extensive meadow.] A large tract of level or rolling land, destitute of trees, and covered with grass, the soil of which is usually very fertile. The term is applied in the U. S. to designate the vast natural meadows or plains which are found principally in the valley of the Mississippi. These prairies or savannahs, as they are also called in the South, are divided by Flint into three classes: — 1. The *heathy* or *bushy* prairies, which have springs, and are covered with small shrubs, bushes, grape-vines, &c.; very common in Indiana, Illinois, and Missouri. — 2. *Dry* or *rolling* prairies, which are destitute of almost all

Fig. 2154.—PRAIRIE.

vegetation, except grass. They are the most common and extensive; the traveller may wander for days in these vast and nearly level plains without wood or water, and see no object rise above the horizon. Great herds of buffaloes formerly frequented these prairies.

— 3. The *alluvial* or *wet* prairies, which form the third and smallest division. They are covered with a rich vegetation of tall rank grass. The soil is deep, black, friable, and fertile, and abounding with pools left by the floodings of the rainy season (Fig. 2154). Numerous animals are found here, including formerly the buffalo and grizzly bear, and at present the wolf, fox, badger, raccoon, porcupine, beaver, squirrel, otter, &c. The prairie region of the West occupies a vast extent of territory, spreading over much of Ohio, nearly the whole of Indiana, Illinois, and Iowa, southern Michigan, Wisconsin, and Minnesota, northern Missouri, and extending across Kansas, Nebraska, and the Dakotas into the arid region at the base of the Rocky Mountains, with a gradual rise from about 300 to 1,500 feet elevation. It also includes a large area in Canada. The treeless condition of the dry prairies is usually ascribed to the periodical burnings formerly practiced by the Indians, which prevented the growth of shrubs or trees. Since civilization has spread over them great numbers of trees have been planted.

Prairie, in Arkansas, an E. central co.; area, about 658 sq. m. *Rivers*. White and Cypress rivers, and Des Arc Bayou. *Surface*, nearly level; *soil*, fertile. *Caps.* Des Arc and Devall's Bluff. *Pop.* (1897) 12,473.

Prairie, in Illinois, a township of Edgar county. — A township of Hancock county. — A township of Shelby county.

Prairie, in Indiana, a towship of Henry county. — A township of Kosciusko county. — A post-township of Tipton county. — A township of Warren county. — A township of White county.

Prairie, in Iowa, a township of Davis county. — A township of Delaware county. — A township of Keokuk county. — A township of Mahaska county.

Prairie, in Missouri, a township of Randolph county.

Prairie, in Ohio, a thriving township of Franklin county. — A flourishing township of Holmes county.

Prairie City, in Illinois, a village of Cumberland county, about 16 miles S.S.E. of Mattoon. — A post-village and township of McDonough county, about 23 miles S.W. of Galesburg.

Prairie City, in Iowa, a post-town of Jasper co. *Pop.* (1897) 810.

Prairie City, or **Prairie**, in Kansas, a village of Douglas co., about 15 m. S. of Lawrence.

Prairie City, in Missouri, a post-village of Bates co., abt. 15 m. S.S.E. of Butler.

PrairieCreek.

in Indiana, enters

West Fork of

White River from

Daviess county. —

A post-township

of Vigo county.

PrairieCreek,

in Iowa, enters

Red Cedar River

from Linn county.

— A township

of Dubuque

county.

Prairie-dog, *n.*

(*Zoöl.*) A small

rodent animal,

the *Cynomys*

ludovicianus, allied

to the Marmot,

and found on the

Fig. 2155.—PRAIRIE-DOG, Copied from "Cenney's Manual of Zoölogy."

prairies west of the Mississippi. It is about 16 inches in length, the tail being abt. $2\frac{3}{4}$ inches. The color of the upper parts of the body is a light, dirty reddish-brown, mingled with gray, and with a few black hairs above, the under parts being a dirty white, the whiskers moderately long and black. It has been named *P.-D.* from the supposed resemblance of its warning cry to that of a small dog; but the resemblance is by no means close. The *P.-D.* does not inhabit the rich grass-covered prairies, but those which, being largely arid from insufficient rain, exhibit a comparatively scanty vegetation; and in these it is to be found in vast numbers, being gregarious in its habits, burrowing in the ground, and throwing up mounds of earth, on the summit of which the little creature often sits as if on watch. The whole extent of a great level prairie is often covered with these hillocks.

Prairie du Chien (*pra'ree du sheen'*), in Wisconsin, a city, cap. of Crawford co., about 100 m. W. of Madison. It is well located, handsomely built, and is a place of much business activity. Pop. (1895) 3,286.

Prairie du Rocher, in Illinois, a post-village of Randolph co., abt. 14 m. N.W. of Kaskaskia.

Prairie du Sac, in Wisconsin, a post-village and township of Sauk county, about 25 miles W.N.W. of Madison.

Prairie Grove, in Arkansas, a locality of Washington, near Boston Mountain, memorable as the scene of a desperate and sanguinary battle during the late Civil War. In Dec., 1862, Gen. Blunt, at the head of abt. 15,000 Union troops, encountered about the same number of Confederates under Gen. Hindman. The conflict waged with obstinate courage upon both sides until night, when the Confederates, under cover of the darkness, withdrew. The National loss was 1,148, of whom 167 were killed and 798 wounded; that of the Confederates was reported to be 1,317, but is estimated much more, as the number of killed alone was over 1,000.

Prairie Ronde, in Michigan, a township of Kalamazoo co.

Prairie Springs, in Iowa, a township of Jackson county.

Prairie-ton, in Indiana, a post-village of Vigo co., abt. 7 m. S.S.W. of Terre Haute.

Prairieville, in Indiana, a village of Clinton co., abt. 12 m. S.W. of Frankfort.

Prairieville, in Michigan, a post-village of Barry co., abt. 58 m. W.S.W. of Lansing.

Prairieville, in Missouri, a post-village of Pike co., abt. 66 m. N.W. of St. Louis.

Praise, *n.* [Ger. *preis*, praise; Fr. *prix*; It. *prezzo*, *pregio*, from Lat. *pretium*, value, price.] Commendation bestowed upon a person; approbation or admiration expressed; encomium.

—A glorifying or extolling; as, *praise to God*.

—The ground, object, or reason of praise.

—*v. a.* To extol; to applaud; to commend; to eulogize.

—To glorify in worship; to magnify.

Praiseless, *a.* Without praise.

Prais'er, *n.* One who praises, commends, or extols; an applauder; a commender.

Praiseworthy, (*praz'wur-thi-ly*), *adv.* In a praiseworthy manner.

Praiseworthiness, (*-wur-*), *n.* Quality of being praiseworthy, or of deserving commendation.

Praise-worthy, *n.* Deserving of praise or applause; commendable; laudable.

Pralls'ville, in New Jersey, a village of Hunterdon co., abt. 5 m. N. of Lambertville.

Pram, *n.* **Prame**, **Praam**, *n.* See **PRAAM** and **PERMA**.

(*Naut.*) A flat-bottomed boat used in the Baltic.

Praunce, *v. n.* To spring or bound, as a horse in high mettle.—To ride with bounding movements; to ride ostentatiously.—To walk or strut about in a showy manner, or with warlike parade.

Prauncer, *n.* A horse that praunces.

Prandial, *a.* [Lat. *prandium*, a repast.] Pertaining to a repast.

Prank', *v. a.* [Ger. *prangen*, to show off; Du. *pronken*.] To adorn in a showy manner; to dress or decorate to ostentation.

—*n.* A ludicrous or merry trick, or a mischievous act, rather for sport than injury; a freak; a frolic.

Prank'er, *n.* One who dresses in a showy manner.

Prank'ish, *a.* Full of pranks.

Prase, *n.* [Gr. *prason*, a green leek.] (*Min.*) A dark leek-green variety of quartz, the color of which is caused by an admixture of hornblende.

Prascolite, *n.* [Gr. *prason*, and *lithos*, stone.] (*Min.*) A green, prismatic variety of iolite.

Pras'inous, *a.* [From Gr. *prason*, a leek.] Having the color of a leek; grass-green.

Pras'ites, *n.* [Gr. *prasites*, from *prasion*, hoarhound.] (*Med.*) Wine in which the leaves of hoarhound have been infused.—*Dunglison*.

Pra'soid, *a.* [Gr. *prason*, and *eidos*, form.] Resembling prase.

Pra'son, *n.* [Gr.] A leek; also, a sea-weed as green as a leek.

Prate', *v. n.* [Du. *praaten*, from *praat*, talk.] To talk much and without weight, or to little purpose; to be loquacious.

—*v. a.* To utter foolishly.

—*n.* Continued talk to little purpose; trifling talk; unmeaning loquacity.

Pra'ter, *n.* One who talks much to little purpose, or on trifling subjects.

Pra'tic, *n.* (*Com.*) Same as **PRATIQUE**, *q. v.*

Pra'tineole, *n.* (*Zool.*) A European species of plover.

Pra'tingly, *adv.* With much idle talk; with loquacity.

Pratique, (*prat'eeek*) *n.* [Fr.; It. *pratica*.] (*Com.*) A

license for the master of a ship to trade in a certain port, or ports, or upon a certificate that the place from whence he came is not annoyed with an infectious disease;—a term used in the south of Europe.

Prato, a town of Italy, prov. of Florence, 9 m. N.W. of Florence. *Manuf.* Silks, woollens, hats, and soap. Pop. 12,500.

Prattle, *v. n.* [Ger. *pratein*.] To talk much and idly, like a child;—to be loquacious on trifling subjects.

—*n.* Trifling talk; loquacity on trivial subjects; prate.

Prattlement, *n.* Prattle; prate.

Prattler, *n.* One who prattles; an idle talker.

Prattsburg, in Georgia, a post-village of Talbot co., abt. 45 m. N.E. of Columbus.

Prattsburg, in New York, a post-village and township of Steuben county, about fifty miles S.S.E. of Rochester.

Pratt's Landing, in Missouri, a village of Perry co., abt. 6 m. S. by E. of St. Louis.

Pratts'ville, or **Prattville**, in Alabama, a post-village, cap. of Autauga co., about 14 m. N. W. of Montgomery. It contains several extensive manufactories.

Prattsville, in Georgia, a village of Monroe co., abt. 16 m. N.W. of Macon.

Prattsville, in Maryland, a village of Alleghany co., abt. 13 m. E. of Cumberland.

Prattsville, in New York, a post-village and township of Greene county, about fifty miles W.N.W. of Albany.

Prav'ity, *n.* [Lat. *pravitas*, from *pravius*, perverse.] Corruption; malignity; depravity; want of rectitude.

Prawn, *n.* (*Zool.*) The *Palæmon serratus*, a crustaceous animal; a species of *Macroura*, or Long-tailed Decapod, well known and esteemed as an agreeable article of food. It is generally about three inches long, and of a pale-red color, which is brightest in the antennæ, and especially in the swimmeret of the tail. Its frontal spine extends beyond the peduncle of the middle antennæ; it is curved upward at the tip, with seven or eight spines above, and five beneath.

Prax'is, *n.* [Gr., from *prassein*, to do.] Use; practice.—An example or form to teach or practice.

Praxiteles, (*prax-il'-e-les*), a celebrated Greek sculptor, b. about 360 B. C., who executed several fine statues, in bronze and marble, of Bacchus, a satyr, Venus, and Apollo. An ancient copy of one of his works, the *Apollo Sauroctonus*, is the only example extant. He excelled by the grace, tenderness, and finish of his works. He was esteemed as second to Phidias only. He executed a series called *The Labor of Hercules*, for the temple erected to that hero at Thebes. Phryne, the celebrated Thespian courtesan, was his mistress, and served as the model for his statues of Venus. Two of his sons acquired fame as sculptors. D. about 280 B. C.

Pray', *v. n.* [Fr. *prier*; It. *pregare*; Lat. *precari*, from *precis*, a prayer.] To implore or to supplicate; to ask with earnestness, or zeal, as for a favor, or for something desirable.—To address the Supreme Being with solemnity and reverence, with adoration, confession of sins; supplication for mercy, and thanksgiving for blessings received.

—*v. a.* To supplicate; to implore; to entreat; to urge.—To ask as a suppliant; to implore; to petition.—To ask or entreat in ceremony or form; to effect or move by prayer;—generally followed by an adverb or preposition.

Prayer, *n.* A suppliant; a person who prays.

Prayer, (*prār*), *n.* Act of asking for a favor, and particularly with earnestness.—A solemn address to the Supreme Being; the practice of supplication.—A formula of church-service, or of worship, public or private.

Passive prayer. A state of mystic contemplation, in which the soul and intellectual faculties, concentrated in the adoration of God, yield only to the impulses of grace.

Prayer-book, (*prār-book*), *n.* A book containing prayers, or the forms of devotion, public or private.

Prayer'ful, *a.* Given to prayer; devotional; using much prayer.

Prayer'fully, *adv.* With much prayer.

Prayer'fulness, *n.* The use of much prayer.

Prayer'less, *a.* Not using prayer; habitually neglecting the duty of prayer to God.

Prayer'lessly, *adv.* In a prayerless manner.

Prayer'lessness, *n.* Total or habitual neglect of prayer.

Prayer'-meeting, *n.* An assemblage or gathering for the purpose of prayer.

Pray'ing, *n.* A form of prayer; a prayer made.

Pray'ingly, *adv.* With supplication or prayer to God.

Pre, [Lat. *præ*.] A particle which, prefixed to words derived from the Latin, marks priority of time, place, or rank.

Preaccusa'tion, *n.* A former or previous accusation.

Preach, (*preech*), *v. n.* [Fr. *prêcher*; Sp. *predicar*; Lat. *predicare*, from *præ*, and *dico*, to cry out, to proclaim.] To pronounce a public discourse on a religious subject, or from a text of Scripture.—To discourse on the gospel way of salvation and exhort to repentance.

—*v. a.* To proclaim; to publish in religious discourses.—To inculcate in public discourse.—To deliver in public, as a discourse.—To inculcate publicly; to teach with earnestness.

Preach'er, *n.* One who preaches or discourses publicly on religious subjects.—One who inculcates anything with earnestness.

Preach'ership, *n.* The office or position of a preacher. (*R.*)

Preach'ing, *n.* The act of preaching; a public religious discourse.

(*Ecccl. Hist.*) The modern system of preaching was unknown in the early Church. The general mode then was for the priest to read portions of the Old or New Testament, and explain or enforce the precepts which they contained. Generally, sermons were delivered whenever the Scriptures were read, and sometimes several, by different persons at the same meeting. Some of Chrysostom's sermons occupied two hours in the delivery, though this was the time generally allotted to the whole service. About the 13th century, the scholastic divines directed their chief attention to the study of the sacred Scriptures, and were hence called Bible divines, and honored with the pompous titles of profound, sublime, wonderful, seraphic, angelic doctors. They introduced a new and artificial mode of preaching called *declaring*. Before this time, the clergy generally adopted postulating, or expounding a large portion of Scripture, sentence by sentence. By the new method, the preacher read a text out of some book and chapter of the Old or New Testament, dividing it into several parts and expounding them; and, generally, the more numerous the divisions and sub-divisions, the better and more highly was he esteemed. The opposition to this textual mode of preaching continued for upwards of a century, but at length it came generally to prevail. The divisions or parts of a modern sermon are usually the introduction, the proposition, the illustration, and the application.

Preach'-man, *n.* One who preaches;—used in contempt.

Preach'ment, *n.* A sermon mentioned in contempt; a discourse affectingly solemn.

Preacquaint', *v. a.* To acquaint beforehand.

Preacquaintance, *n.* A previous acquaintance.

Preact', *v. a.* To perform beforehand.

Preac'tion, *n.* A previous action.

Preadam'ic, **Preadamit'ic**, *a.* Existing before Adam.

Pread'amites, *n. pl.* People supposed to have lived before Adam; or those who advocate the existence of such people.—The legendary traditions of the East speak of nations and empires subsisting before the creation of Adam, and of a line of kings who ruled over them. The subject has been taken up, in modern times, by Isaac La Peyrère, in his work *Preadamitæ*, 1655, wherein he endeavors to show that Adam was the ancestor of the Jews only, the Gentiles being descended from a long anterior creation.

Preadministra'tion, *n.* A previous administration.

Preadmon'ish, *v. a.* To admonish beforehand.

Preadmonition, (*-mo-nish'un*), *n.* Previous admonition or warning.

Pread'vertise, *v. a.* To announce publicly, to advertise beforehand.

Præ'amble, *n.* [Fr. *préambule*, from *præ*, and *ambulo*, *ambulare*, to go about.] An introduction to a discourse or writing; the introductory part of a statute, which states the reasons and intent of the law.

—*v. a.* To preface; to introduce with previous remarks.

—*v. n.* To serve as a preface.

Pream'bular, *a.* [Lat. *præambulus*.] Relating to a preamble; introductory.

Preangel, (*pai-ang'el*), *a.* A Dutch residency of Java, in the S.W. part of the island.

Pre'announce, *v. a.* To announce previously.

Preantepenul'timate, *a.* Applied to the fourth syllable from the end of a word.

Preappoint', *v. a.* To appoint beforehand.

Preappointment, *n.* A prior appointment.

Preapprehen'sion, *n.* An opinion formed before examination.

Preassurance, *n.* A previous assurance.

Preau'dience, *n.* (*Law.*) Precedence or rank at the bar among lawyers; right of previous audience.

Preb'end, *n.* [Fr. *prébende*; L. Lat. *præbenda*, from Lat. *præbeo*, to give.] (*Ecccl.*) Income or other provision assigned for the maintenance of a so-called prebendary, out of the revenue of a cathedral or collegiate church.

After the definite constitution of chapters for the maintenance of the daily religious services in the bishop's church, or in other churches similarly established, endowments were assigned to them, which were to be distributed (*præbendæ*) in fixed proportions among the members. These portions were called *portiones canonicæ* or *præbendæ*. To the prebend was commonly attached a residence. The person enjoying a prebend is called a *prebendary*.—The name *prebend* is also given to an endowment assigned to a cathedral church for the maintenance of a secular priest.

Preb'endary, *n.* He who enjoys the ecclesiastical income known as a prebend (*q. v.*).

Preb'le, in Indiana, a post-township of Adams co. Pop. (1897) 1,080.

Preble, in Minnesota, a post-township of Fillmore co. Pop. (1897) 1,150.

Preble, in New York, a post-village and township of Cortland county, about 130 miles W. of Albany.

Preble, in Ohio, a W.S.W. co., adjoining Indiana; area, abt. 430 sq. m. *Rivers.* Franklin, St. Clair's, and Four Mile creeks. *Surface*, nearly level; *soil*, very fertile. Excellent quarries of limestone exist here, and the co. is well intersected by railroads. Cap. Eaton.

Preble, in Wisconsin, a township of Brown county.

Pre'cant, *n.* [Lat. *precans*, *precantis*.] A person who prays.

Preca'rious, *a.* [Lat. *precarius*, from *precor*, to pray.] Depending on the will or pleasure of another; held by courtesy; liable to be changed or lost at the pleasure of another.—Held by no certain tenure; depending on

unknown or unforeseen causes or events; uncertain; doubtful; dubious.

Preca'riously, *adv.* At the will or pleasure of others; dependently; by an uncertain tenure.

Preca'riousness, *n.* State or quality of being precarious; uncertainty; dependence on the will or pleasure of others, or on unknown events.

Preca'tive, Preca'tory, *a.* [Lat. *precativus, precatorius*, from *precari*, to pray.] Beseeching; supplicating.

Preca'tory words, (*Law*.) Expressions in a will, praying or requesting that a thing shall be done.

Preca'u'tion, *n.* [Fr.; L. Lat. *præcautio*, from *præ*, and *cauto, cautus*, to guard against.] Previous caution or care. — Caution previously employed to prevent mischief or secure good.

—*v. a.* To caution, or warn, or advise beforehand, for preventing mischief or securing good.

Preca'u'tional, *a.* Precautionary.

Preca'u'tionary, *a.* Proceeding from, or containing, previous caution; adapted to prevent mischief or secure good.

Precautions, (*-shus*), *a.* Taking precautions.

Preca'u'tious, *adv.* With precaution.

Precede', *v. a.* [Fr. *précéder*; Lat. *præcedo*, from *præ*, and *cedo*, to go.] To go before in the order of time; to cause to take place in prior time. — To go before in rank or importance.

Precede'nce, or Precede'ncy, *n.* Act or state of going before, with respect to time; antecedence; priority. — State of going or being before in rank or dignity, or the place of honor; the right to a more honorable place; the foremost in ceremony.

Precede'nt, *a.* Going before in time; anterior; antecedent; previous.

—*n.* Something done or said that may serve to be adduced as an example to authorize a subsequent act of the like kind.

(*Law*.) A judicial decision, interlocutory or final, which serves as a rule or authority for future determination in similar or analogous cases.

Precede'nted, *a.* Having a precedent; authorized by an example of a like kind.

Precede'n'tial, *a.* Having the nature of a precedent.

Precede'n'tly, *adv.* Beforehand; antecedently.

Prece'n'tor, *n.* [Fr. *précenteur*, from Lat. *præ*, and *cantor*, a singer.] (*Eccles.*) The leader of a choir. In almost all the old cathedrals of Europe, he was the first dignitary of the chapter, ranking next to the dean, and superintending the choral service and choristers.

Prece'n'torship, *n.* The employment or office of a precentor.

Pre'cept, *n.* [Fr. *précepte*; Lat. *præceptum*, from *præcipio*; from *præ*, and *capio*, to take.] Anything commanded or enjoined as an authoritative rule of action, but applied particularly to commands respecting moral conduct.

(*Law*.) A command in writing.

Precep'tive, *a.* [Lat. *præceptivus*.] Giving precepts or commands for the regulation of moral conduct; containing precepts. — Directing in moral conduct; giving rules or directions; didactic.

Precep'tor, *n.* A teacher; an instructor; the teacher of a school; sometimes the principal teacher of an academy or seminary.

Precep'torial, *a.* Pertaining to a preceptor.

Precep'tory, *a.* Giving precepts.

Precep'tress, *n.* A female teacher.

Precession, (*-sesh'un*), *n.* [Fr., from Lat. *præcedo, præcessus*.] Act of going before.

P. of the Equinoxes, (*Astron.*) A slow retrograde motion of the equinoctial points from E. to W., or contrary to the order of the signs. The poles, the solstices, the equinoxes, and all the other points of the ecliptic have a retrograde motion, and are constantly moving from E. to W., or from the Aries to the Pisces, &c., by means of which the equinoctial points are carried farther and further back at the rate of about $50\frac{1}{4}''$ each year; consequently, as the stars are immovable, and the equinoxes go backward, the stars appear to have an eastward motion with respect to them; for this reason, the longitude and right ascensions of all the stars, which are reckoned from the first point of Aries, or the vernal equinox, are constantly increasing. It is in consequence of this *precession of the equinoxes* that the constellations seem to have changed the positions assigned to them by the ancient astronomers. The equinoctial points, during the time of Aristarchus and the oldest astronomers, were fixed to the first stars of Aries and Libra; but the signs do not answer now to the same points. The stars, also, which were then in conjunction with the sun when he was in the equinox, are now a whole sign, or 30° , to the eastward of it. In consequence of this, the first point of Aries is now in the portion of the ecliptic called Pisces. The constellations are 12 unequal and the signs are 12 equal divisions of the zodiac. Precession causes, as it were, the signs to slide over the constellations from east to west during a period of 25,700 years. The stars, moreover, which rose or set at any particular season of the year in the time of Eudoxus, Hesiod, Virgil, Pliny, &c., do not answer their descriptions at the present day. This apparent motion of the stars was first observed by Hipparchus of Rhodes, about 120 B. C. He noticed that the longitudes of the stars were greater than had been observed by Timoclares, and than they were in the sphere of Eudoxus, who wrote 380 years before Christ.

If the earth were a sphere instead of a spheroid, precession would not exist; the sun would always "cross the line" at the same place. Now, however, it crosses it every year at a new place, about $50\frac{1}{4}''$ west of the

last place of crossing, and will continue to do so forever, completing a revolution around the sky each 25,700 years. It must be remembered that the north celestial pole of the earth's orbit and the north celestial pole of the earth are two different things. Their distance apart in the year 1900 will be $23^\circ 27' 8''$, the former being in Draco, the latter in Ursæ Minor, in which constellation it will continue to be for some 1,000 years yet. At the present time it happens to be about $1\frac{1}{2}^\circ$ from Polaris, which it will pass in about 200 years within $27'$. The earth, by its rotation when in a liquid and plastic condition, accumulated a padding of matter $13\frac{1}{4}$ miles in thickness at the equator, diminishing to nothing at each pole. The earth's equator being inclined to the plane of its orbit (ecliptic) nearly $23\frac{1}{2}^\circ$, the sun and moon seize hold of it by attraction, tending to bring the equator to coincidence with the plane of its orbit, and would have done so ages ago had the earth not rotated. The attractive force to produce precession is for the moon five-sevenths and for the sun two-sevenths. The following familiar illustration will make the subject plain: If a spinning-top be stood on its point upright, it will immediately fall; but if a rapid rotation be given it, the upper end will wobble. The earth wobbles likewise, but it takes nearly 26,000 years to make one wobble. It is the same with the south pole, which the spinning-top does not correctly illustrate, but which it would if the toy could be suspended in the air. The earth's south pole revolves also around the south pole of the ecliptic. The north pole is slowly approaching the pole-star, which remains immovable. In some 1,500 years the pole will pass into Cepheus, when Alderamin (Alpha Cephei) will be the pole-star, Polaris being too far distant to answer the purpose of a pole-star. There will be no pole-star when the pole is about midway between the two stars. The next pole-star after Alderamin will be Delta Cygni, then Alpha Lyra (12,000 years hence), Alpha Draconis, and lastly Polaris again. There is no bright south pole-star; very faint ones fill the role of successive pole-stars. When Alpha Lyra is the pole-star, dog-days will occur in winter instead of summer, as is the case in our age.

Precession in Declination. Precession of the equinoxes also affects the declination and Polar distances of objects. The following rules will guide the reader in computing the place of a star or nebula to any desired epoch in declination. Its annual amount depends on the right ascension of the object only, both as to extent and direction. At VI h. to XVIII h. it is zero. At XII h. it reaches its northern maximum of $20''$, and at XXIV h. its southern limit of $20''$. From XVIII h. to XXIV h., and from XXIV h. to VI h., the precession is north; consequently, additive to stars north of the equator, but subtractive from those south of the equator. From VI h. to XVIII h., the precession being south, it is additive to southern, and subtractive from northern stars. Of course for precession backward, these signs must be reversed.

Preces'sional, *a.* Relating to precession.

Pre'cinct, *n.* [O. Fr. *preincite*; Lat. *præcinctus*, a girding, from *præ*, and *cingo, cinctus*, to gird.] A territorial district or division; the limit, bound, or exterior line encompassing a place. — Bounds of jurisdiction, or the whole territory comprehended within the limits of authority.

Pre'cinct, in Illinois, a village of Boone co., about 80 m. W.N.W. of Chicago.

Precious (*prish'us*), *a.* [Fr. *précieux*; Lat. *pretiosus*, from *pretium*, price.] Of great price or value; costly; as, a precious stone. — Of great value or worth; very valuable; highly valued; much esteemed. — Worthless; contemptible; — used ironically.

Pre'ciously, *adv.* Valuably; to a great price. — Contemptibly; — in irony.

Precious Metals. Gold and silver have been standards of value since the historical era began, and perhaps since long before. Their rarity, hardness, and resistance to oxidation were qualities which appealed even to barbarians, while their peculiar colors and luster made it difficult to imitate and easy to distinguish them. They are fusible and malleable, so that they can be easily moulded and stamped, while their hardness gives them the power of long retaining any impression. They are found in their metallic state, so that they were known before the more plentiful metals, such as iron and lead, which required to be separated from their ores. Their rarity is such that a small quantity sufficed to measure a large quantity of other substances, and enabled a considerable value in gold and silver to be concealed or easily transported from one country to another. These characteristics have from a remote date brought those metals into use as mediums of exchange, and still keep them in use for the same purpose, while the idea of their preciousness is added to from their suitability for articles of ornament, due to their luster, attractive colors, and the value given by their rarity. The quantity of precious metals in use was small in the early days of Athenian enlightenment, but much was produced during the Roman period. In 40 A.D. the total stock in the Roman empire is estimated by Jacobs at \$1,750,000,000. After the fall of the empire it decreased, and the gold in use in Christendom in 1492 is estimated by Jacobs at only \$170,000,000. The wealth found and mined in America augmented the sum again, the amount, in round figures, mined during the 16th century being valued at gold, \$600,000,000; silver, \$950,000,000; 17th century, gold, \$630,000,000; silver, \$1,550,000,000; 18th century, gold, \$1,260,000,000; silver, \$2,460,000,000; 19th century, gold, \$7,000,000,000; silver, \$6,000,000,000. This greatly enhanced production in

the 19th century is due to the discoveries of rich gold deposits in the United States, Australia, and Africa, and equally rich silver deposits in the Western States of the American Union. Much of the gold and silver here enumerated, however, has been used in the arts, much has disappeared through abrasion, shipwreck, and other sources of loss, and the total stock now in the world and used as coin is estimated at approximately \$4,000,000,000 each of gold and silver.

Pre'ciousness, *n.* Quality of being precious; valuable; great value; high price.

Pre'cious Stones. Minerals which are used in jewelry and for other ornamental purposes on account of their rarity and beauty. No very definite and complete list of these can be made on account of their fluctuation in public estimation, some substances being at one time held as precious and at others losing their fictitious value. The same name is also at times applied to quite different substances, on account of some superficial similarity. It may further be said that it is impossible to fix a dividing line between precious and common stones, they merging together at their junction, the beauty and rarity of the one gradually sinking into the plainness and abundance of the other. Yet this hardly applies to certain special substances, which stand notably alone, and during all times have been highly prized as ornaments or gems. Chief among these are the diamond, the ruby, the sapphire, the emerald, and the Oriental amethyst, among minerals, and the pearl among substances of organic origin. The striking beauty of these gems—their luster, brilliancy of color, play of light, and other esteemed properties, together with their great rarity—have always kept them in high esteem, which shows no signs of abating. Below these in value, though occasionally of high esteem, comes a much wider class of substances, of which may be named the balas ruby, or spinel, the Brazilian topaz, the turquoise, the tourmaline, the aquamarine, or pale emerald, the chrysoberyl, or cat's eye, the zircon or jargon, the opal, and such varieties of quartz as rock crystal, agate (especially the moss agate), amethyst, Scotch topaz, or cairngorm, chalcodony, jasper, onyx, sardonyx, and various others. Below this may be given a third list of minerals appreciated for their beauty, though more common in occurrence than the above, and not usually classed as precious stones. These include malachite, lapis lazuli, labradorite, crocidolite, moonstone, aventurin, &c. To the admired substances of organic origin should be added red coral and amber, a fossil resin of some rarity. The most admired of the precious stones usually occur in a condition of superficial dullness, due to long friction with other substances. They are also commonly irregular in form. These defects render necessary the operations of cutting and polishing, the former to reduce them to a regular and attractive shape and get rid of defects, the latter to bring out to the fullest extent their luster, sparkle, and glow of color. This is usually a difficult process, on account of the great hardness of many of these minerals, and the labor necessary to bring out their attraction adds measurably to their value. In the case of the diamond luster and play of light are the chief qualities to enhance, to effect which the surface is cut into numerous plane facets, the two principal forms produced being what are known as the rose and the brilliant. The original form of the stone largely controls the final form of the gem, as it is important to keep it of the largest size compatible with perfection of finish, so that the celebrated large diamonds differ strikingly in shape, each having a well-marked form of its own. In stones whose most admired quality is their depth and richness of color, a different method of cutting is employed. If plane surfaces are desired, the step or table cut may be used—a broad flat top, with receding edges. But such stones—as also translucent and opaque stones—may be cut with curved or rounded surfaces, *en cabochon*, as it is termed. This mode of cutting presents several varieties, single cabochon (resembling a plano-convex lens), high plano-convex double cabochon, and double convex and hollow cabochon, the latter method being often used for large garnets, which when thus cut are called caruncles. The quality of hardness is one of the most constant and valuable of those of precious stones, its importance lying in its resistance to wear and consequent preservation of the surface polish. Among such substances the diamond is the hardest. The following scale of hardness of the more important precious stones has been made, and is of considerable value as a ready means of determining the character of a stone about which doubt is felt: Diamond, 100; sapphire, 90; ruby, 88; chrysoberyl, 85; spinel, 80; topaz, 80; aquamarine, 80; emerald, 78; zircon, 78; tourmaline, 75; amethyst, 70; moonstone, 63; turquoise, 60; opal, 60. No detailed description of the various precious stones is here necessary, as they will be found separately dealt with under their proper names.

Artificial Precious Stones. The production of several of the more admired precious stones by chemical or other means has been frequently attempted, but so far with no encouraging success. Intense heat, pressure, and electrical action have been the most important agencies employed. Small crystals of ruby, sapphire, corundum, &c., were produced by Deville and Caran, in 1858. In the production of corundum the vapors of boracic acid and fluoride of aluminum were made to act upon each other, the result being small crystals with the requisite properties. By adding a little fluoride of chromium the crystals were made to assume the hue of violet-red rubies. A slight increase in the quantity of fluoride yielded the blue color of the sap-

phire, while with a further increase green corundum was produced. Murate crystals of chrysoberyl appeared when boracic acid was made to act on the fluorides of aluminum and glucinum, and the action of silica on these fluorides yielded very hard crystals which bore some resemblance to the emerald. Opals and other silica crystals have been produced by Becquerel from solutions of silicates acted upon by intense electric currents, while Feil, who succeeded in crystallizing alumina, produced, by the addition of coloring matters, sapphires and rubies, with the hardness, but not the brilliancy, of the natural stones. He also produced crystals of spinel. The small size of the crystals thus obtained rendered them valueless except from a scientific point of view, and the same may be said of the artificial diamonds which have been produced by the crystallization of carbon. For the processes employed, see DIAMOND.—*Imitations.* It is possible to imitate precious stones with a close degree of resemblance. In this operation the substance employed is a soft but heavy flint glass known as strass or paste, and colored to the requisite hue. These imitations may be distinguished by their softness and some other peculiarities, but their resemblance to the stone imitated is at times very close. Thin plates of precious minerals have also been cemented over, and sometimes also under, a glass basis, the veneered product passing as a genuine stone of large size and much value, its exposed surface safely bearing the usual tests employed by jewellers. Pearls are imitated by blowing very thin bulbs of glass, and pouring into them a mixture of liquid ammonia and the white matter from the scales of the bleak, which settles on the evaporation of the ammonia in a pearly film on the inside of the glass. In this way what seem the finest Oriental pearls may be produced.

Precipe, *n.* (*Law.*) See PRECISE, and PRECEPT.

Precipice, (*pré-si-pis*), *n.* [*Fr.*; *Lat. precipitium*, from *precipere*.] A steep descent of land; a fall or descent of land perpendicular, or nearly so; a steep descent in general.

Precipient, *a.* Directing or commanding.

Precipitability, *n.* The state or quality of being precipitable.

Precipitable, *a.* That may be precipitated or cast to the bottom, as a substance in solution.

Precipitance, Precipitancy, *n.* The quality of being precipitate; haste in resolving; forming an opinion or executing a purpose without due deliberation; headlong hurry; rash haste.

Precipitant, *a.* [*Fr.*; *Lat. precipitans*.] Falling or rushing headlong; rushing down with velocity.

"Downright into the world's first region throws His flight precipitant."—*Milton*.

—Hasty; urged with violent haste.—Rashly hurried or hasty; as, a precipitant rebellion.—Unexpectedly brought on or hastened.

Precipitantly, *adv.* With great haste; with rash, unadvised haste; with tumultuous hurry.

Precipitanness, *n.* Precipitation; the quality of being precipitant.

Precipitate, *v. a.* [*Fr. précipiter*; *Lat. precipito*, from *præ*, and *caput*, ahead.] To throw headlong.—To urge or press with eagerness or violence; to hasten; to hurry blindly or rashly.

"It may precipitate their designs, and prove dangerous."—*Bacon*.

—To throw to the bottom of a vessel, as a substance in solution.

—*v. n.* To fall headlong.—To hasten without preparation.—To fall to the bottom of a vessel, as a sediment, or any substance in solution.

—*a.* Falling, flowing, or rushing with steep descent.—Headlong; over-hasty; rashly hasty.—Adopted with haste, or without due deliberation.—Terminating speedily in death; hasty; violent.

—*n.* (*Chem.*) Any substance which, having been dissolved in a fluid, is thrown down in a solid form, on the addition of some other substance capable of decomposing the compound. Precipitates are generally in a finely-divided or flocculent state.

Precipitately, *adv.* Headlong; with steep descent.—Hastily; with rash haste; without due caution.

Precipitation, *n.* [*Fr.*; *Lat. precipitatio*.] Act of precipitating or throwing headlong.—A falling, flowing, or rushing down with violence and rapidity.—Great hurry; rash, tumultuous haste; rapid movement.—Act or operation of throwing to the bottom of a vessel any substance held in solution.

Precipitator, *n.* A person who urges on rashly, or with vehemence.

Precipitous, *a.* Very steep.—Headlong; directly or rapidly descending.—Hasty; rash.

Precipitously, *adv.* With steep descent; in violent haste.

Precipitousness, *n.* State or quality of being precipitous; steepness of descent.—Rash haste.

Precis, (*præ-sé*), *n.* [*Fr.*] A precise or abridged statement or view;—hence, an abstract; summary.

Precise, *a.* [*Fr. précis*; *Lat. præcisus*, from *præcideo*, from *præ*, and *cado*, to cut.] Having determinate limitations; not loose, vague, uncertain, or equivocal; exact; definite; accurate.—Characterized by superstitious exactness or excessive nicety in conduct or ceremony; punctilious; formal.

Precisely, *adv.* Exactly; nicely; accurately; in exact conformity to truth or to a model.—With excess of formality; with scrupulous exactness or punctiliousness in behavior or ceremony.

Preciseness, *n.* Quality of being precise; exactness; rigid nicety.—Excessive regard to forms or rules; rigid formality.

Precisian, (*-sish'an*), *n.* One who is precise or rigidly exact in the observance of rules.

Precisianism, (*-sish'an-izm*), *n.* Excessive exactness; superstitious rigor.

Precisianist, *n.* One who is very precise.

Precision, *n.* [*Fr.*; *Lat. præcisio*.] The state or quality of being precise; exact limitation; exactness; accuracy; correctness; definiteness.

Preclude, *v. a.* [*It. precludere*; *Lat. præcludo*, from *præ*, and *claudo*, to shut.] To shut to; to close; to stop. (*R.*)—To prevent from entering by previously shutting the passage, or by any previous measures;—hence, to hinder from access, possession, or enjoyment; to debar; to shut off.

Preclusion, (*-klu'zhun*), *n.* [*Lat. præclusio*.] Act of precluding; act of shutting out or preventing from access or possession; the state of being prevented from entering, possession, or enjoyment.

Preclusive, *a.* Shutting out.—Tending to preclude; hindering by previous obstacles.

Preclusively, *adv.* In a preclusive manner.

Precocious, (*præ-kô'shus*), *a.* [*Fr. précoce*; *Lat. præcox*, from *præ*, and *coqus*, to cook, to ripen.] Ripe before the proper or natural time; early ripe; premature; early. (*L.*)

—Ripe in understanding at an early age; having the mental powers early developed.

Precociously, *adv.* With premature ripeness or forwardness.

Precocity, Precociousness, *n.* [*Fr. précocité*.] The state or quality of being precocious; rapid growth and ripeness before the usual time; prematureness.

(*Physiol.*) A forced or unnatural maturity either of the body or the mind. The annals of science are full of remarkable instances of male and female precocity; it is, however, believed that the premature development of the mind and intellectual faculties forms but a small proportion of the instances of early maturity compared with the development of the corporeal and animal faculties. It has been found that precocity of the mind is generally attained at the sacrifice of the body, and like an over-forced flower, the clever and intellectual boy, if he grows to adult age, becomes a dull and commonplace man, even should he not lapse into idiocy; while the unnatural development of animal passions is still more likely to end in fatuity. Parents, in natural pride of their offspring, too often act most injudiciously, and where a child shows early talent, wit, or shrewdness, not only foster, but force and encourage it by displaying their child's abilities on all occasions, and feeding the already too active frame, instead of checking, or keeping, by prudent restriction, the precocious tendency subdued and under control, by a suspension of the mental, and a development of the physical education of the child; in other words, by keeping back all books and study, and encouraging play, exercise, and open-air recreations.

Precogitate, *v. a.* [*Lat. præcogitare*, from *præ*, and *cogitare*, to think.] To consider or contrive beforehand.

Precogitation, *n.* Forethought; previous consideration.

Precognition, (*-kog-nish'un*), *n.* [*Lat. præcognitio*, from *præcognoscere*, to foreknow.] Previous knowledge; antecedent examination.

Precollec'tion, *n.* A previous collection.

Precon'pose, *v. a.* To compose previously.

Preconceive, *v. a.* To form a conception previously.

Preconception, *n.* Conception or opinion previously formed.

Preconcert, *v. a.* To concert beforehand; to settle by previous agreement.

Precon'cert, Preconcer'tion, *n.* An agreement previously made.

Preconcertedly, *adv.* By previous agreement.

Preconcertedness, *n.* The state or quality of being preconceived, or previously arranged.

Precondemn, (*-kon-denn'*), *v. a.* To condemn beforehand.

Precondemnation, *n.* Condemnation determined or pronounced beforehand.

Precondi'tion, *n.* A previous condition.

Preconformed, *a.* Conformed previously, or in anticipation.

Preconform'ity, *n.* Previous conformity.

Preconquer, *v. a.* To conquer previously, or beforehand.

Preconsent, *n.* Consent previously given.

Preconsign, (*-sîn'*), *v. a.* To make a consignment beforehand.

Preconsolidate, *a.* Previously consolidated.

Preconstitute, *v. a.* To establish beforehand.

Precontract, *n.* A contract previous to another.

—*v. a.* To contract or bargain beforehand.

—*v. n.* To form a previous agreement or contract.

Precontrive, *v. a.* To contrive beforehand.

Precordial, *a.* [*Fr.*; from *Lat. præcordia*, from *præ*, before, and *cordis*, the heart.] (*Med.*) Pertaining to the region of the heart.

Precurs'ive, *a.* Indicating something to follow; precursory.

Precursor, *n.* [*Fr. précurseur*; *Lat. præcursor*, from *præ*, and *curro*, to run.] A forerunner; he or that which precedes an event and indicates its approach; a harbinger.

Precursory, *a.* Preceding as the harbinger; indicating something to follow.

Predacean, *n.* A carnivorous animal.

Predaceous, *a.* [From *Lat. præda*, prey, booty.] Living by prey.

Pred'al, *a.* [*Lat. præda*.] Pertaining to prey, booty, plunder; practicing plunder.

Predate, *v. a.* To date earlier than the actual time.

Predatorily, *adv.* In a predatory manner.

Predatory, *a.* [*Lat. prædatorius*, from *præda*.] Characterized by plundering; practicing rapine.—Hungry; rapacious; ravenous.

Pre'decay, *n.* Premature decay.

Predecease, *v. a.* To die before some other person or event.

—*n.* The decease of one person before another.

Predece'sive, *a.* Preceding.

Predece'sor, *n.* [*Fr. prédécesseur*, from *Lat. præ*, and *decedo*, *decessus*, to depart.] A person who has gone away before, or preceded another in the same office.

Predec'lare, *v. a.* To announce beforehand.

Predec'lare'tion, *n.* A dedication performed beforehand.

Predefine, *v. a.* To define previously.

Prede'liber'ation, *n.* A deliberation previously made.

Prede'linea'tion, *n.* Previous delineation, or representation.

Prede'sign, (*-sîn*), *v. a.* To design or purpose beforehand; to predetermine.

Predestina'rian, *n.* One who believes in the doctrine of predestination.

—*a.* Pertaining to predestination.

Prede'stinate, *v. a.* [*Fr. prédéterminer*; *It. predeterminare*, from *Lat. prædestino*, *prædestinatus*, from *præ*, before, and *destino*, to fix, to determine.] To determine, appoint, or ordain beforehand, by an unchangeable purpose; to predetermine; to preordain.

—*a.* Predetermined; foreordained; decreed.

Predestination, *n.* Act of predestinating, or of decreeing, or foreordaining events.

(*Theol.*) A term applied to the supposed decrees of God, by which he hath, from all eternity, unchangeably appointed whatsoever comes to pass; more especially foreordaining certain individuals of the human race to everlasting happiness, and foreordaining the rest to everlasting misery. According to Article XVII. of the English Church, "Predestination to life is the everlasting purpose of God, whereby (before the foundations of the world were laid) he hath constantly decreed by his counsel, secret to us, to deliver from curse and damnation those whom he hath chosen in Christ out of mankind, and to bring them, by Christ, to everlasting salvation, as vessels made to honor," &c. The Westminster Confession further declares, that "although God knows whatsoever may or can come to pass, upon all supposed conditions, yet hath he not decreed anything because he foresaw it as future, as that which would come to pass upon such conditions." Yet, "neither is God the author of sin, nor is violence offered to the will of the creatures, nor is liberty, or contingency of second causes, taken away, but rather established." This doctrine is not peculiar to Christianity, but is to be found among the Stoics and other ancient sects, and is one of the chief points of Mohammedanism. The controversy concerning it first made its appearance in the Christian Church about the beginning of the 5th century. Pelagius and others, about this time, denied the doctrine of predestination, and were strenuously opposed by Augustine, who was the first to expound and work this doctrine into a system. After the time of Augustine, his opinions were very generally adopted, and were maintained by the whole of the earlier Reformers. The Lutherans, however, afterwards abandoned them; and they are now generally known as Calvinistic doctrines, from John Calvin, of Geneva, who maintained them with great vigor and clearness. The opponents of the doctrine of predestination among the Protestants came subsequently to receive the name of Remonstrants, or Arminians, from James Arminius, professor of theology at Leyden, in 1602. There are two kinds of predestinarians, — the *supralapsarians*, who maintain that God did originally and expressly decree the fall of Adam, in order to display his justice and mercy; and the *sublapsarians*, who maintain that God only permitted the fall of Adam; but the distinction is now little observed. In the Roman Catholic Church, the Jansenists were the great maintainers of the Augustinian doctrine. This is one of the doctrines of Christianity which is beyond the sphere of our finite faculties.

Prede'stinative, *a.* Predestinating; determining previously.

Prede'stinator, *n.* One who predestinates or foreordains.—One who holds to predestination.

Prede'stine, *v. a.* To predestinate; to decree beforehand; to foreordain.

Prede'ter'minable, *a.* That may be predetermined.

Prede'ter'minate, *a.* Determined beforehand.

Prede'ter'mination, *n.* Previous determination; purpose formed beforehand.

(*Theol.*) That concurrence of God which determines men in the performance of their actions, good or evil; called physical determination, or premotion.

Prede'ter'mine, *v. a.* To determine beforehand; to settle in purpose or counsel.

—To doom by previous decree.

—*v. n.* To determine beforehand.

Pred'ial, *a.* [*Sp.*; from *Lat. prædium*, a farm.] Consisting of lands or farms; as, *predial estates*.—Attached to land or farms.—Growing or issuing from land.

Predicability, *n.* The quality of being predicable, or capable of being affirmed of something.

Predic'able, *a.* [*Fr.*; *Lat. prædicabilis*.] That may be affirmed of something; capable of being attributed to.

—*n.* (*Log.*) A term which can be affirmatively predicated of several others. The notions expressed by such term

are said to be formed by the faculty termed *abstraction*, after the particular circumstances characterizing each individual have been withdrawn from it. The predica- bles are commonly said to be five: *genus, species, differ- ence, property*, and *accident* (which are either separable or inseparable).

Predicament, n. [Fr.; Lat. *predicamentum*, from *predico*.] Class or kind described by any definite marks; particular situation or state; — particularly, an unfortunate or trying position.

—*pl.* (*Log.*) Same as CATEGORIES, *q. v.*

Predicamental, a. Pertaining to a predicament.

Predicant, n. A preaching friar; a dominican.

Predicate, v. a. [Lat. *predico, predicatus*, from *præ*, and *dico*, to publish.] To affirm one thing of another.

—*v. n.* To comprise an affirmation.

—*n.* (*Logic.*) *P.* is, of the two terms of a proposition, that which is affirmed or denied of the other.

Predication, n. [Fr.; Lat. *predicatio*.] Affirmation of something, or the act of affirming one thing of another. — The act of preaching, or delivering a sermon.

Predicative, u. Expressive of affirmation.

Predicatory, a. Positive; expressing affirmation.

Predict, v. a. [Lat. *predictus*, from *præ*, and *dico*, to say, to tell.] To tell beforehand, as something that is to happen; to foretell; to prognosticate.

Prediction, n. [Fr.; Lat. *predictio*.] A previous declaration of future events; prophecy; prognostication.

Predictive, a. [Lat. *predictivus*.] Foretelling; prophetic.

Predictively, adv. In the manner of a prediction.

Predictor, n. A foreteller; one who prophesies.

Predigestion, (-di-jest'yun,) n. Digestion too soon performed.

Predict, v. a. To choose or elect previously.

Predilection, n. [Fr.; Lat. *præ*, and *dilectio*, from *diligo, dilectus*, to choose apart.] A prepossession of mind in favor of some person or thing.

Prediscover, v. a. To discover previously.

Prediscovery, n. A discovery made beforehand.

Predisposed, Predisposing, a. That pre- disposes.

Predisponent causes, (Med.,) are those which render the body liable to disease.

—*n.* That which predisposes.

Predispose, v. a. To dispose or incline beforehand; to give a previous disposition to. — To fit or adapt previously.

Predisposition, n. The state of being predisposed; previous inclination or propensity to anything. — Previous fitness or adaptation to any change, impression, or purpose.

Predominance, Predominancy, n. State of being predominant; prevalence over others; superiority in strength, power, influence, or authority; ascendancy.

Predominant, a. Having superiority in strength, influence, or authority; prevalent; superior.

Predominantly, adv. With superior strength, power, or influence.

Predominate, v. n. [Lat. *præ*, before, and *dominari, dominatus*, to rule.] To surpass in strength, influence, or authority; to be superior; to have controlling in- fluence.

—*v. a.* To rule over; to govern.

Predomination, n. [Fr.; Sp. *predominacion*; It. *predominio*.] Predominance.

Predoom, v. a. To doom beforehand.

Predorsal, a. [Lat. *præ*, before, and *dorsum*, the back.] (*Anat.*) In front of the back.

Predy, a. (*Naut.*) Said of a ship, when cleared and ready for an engagement.

Predict, v. a. To choose by previous decision.

Predilection, n. Previous choice or election.

Predimence, n. [Fr. *prééminence*.] State of being preëminent; superiority of excellence; precedence; priority of place; superiority of power or influence.

Preëminent, a. [Fr.; Lat. *præeminens*, from *præ*, before, and *emineo*, to stand out.] Excellent above others; distinguished for something commendable or honorable. — Surpassing others in evil or bad qualities.

Preëminently, adv. In a preëminent degree; with superiority or distinction above others.

Preëmploy, v. a. To employ previously, or before- hand.

Preëmption, (-em'shun,) n. (*International Law.*) The right of a nation to detain the merchandise of strangers passing through her territories or seas, in order to afford to her subjects the preference of pur- chase.

(*Amer. Law.*) The right given to settlers upon the public lands of the U. S. to purchase them at a limited price in preference to others.

Preëmp'tion, n. In *Illinois*, a post-village of Mercer co., abt. 155 m. N.N.W. of Springfield.

Preëmp'tive, a. Implying preëmption.

Preëmp'ter, n. A person who practices preëmption.

Preen, n. [A. S. *preon*, a clasp; Ger. *preu*.] A forked tool with which clothiers dress cloth.

—*v. a.* To clean, as do the birds which use their beak as a *preen* for dressing and oiling their feathers.

Preëngage, v. a. To engage by previous contract; to engage or attach by previous influence.

Preëngagement, n. Prior engagement, as by stipu- lation or promise; any previous attachment binding the will or affections.

Preërect, v. a. To erect beforehand.

Preëstab'lish, v. a. To establish beforehand.

Preëstab'lishment, n. Settlement beforehand.

Preëxamina'tion, n. Previous examination.

Preëxamine, v. a. To examine previously.

Preëxist, v. a. To exist beforehand, or before some- thing else.

Preëxistence, n. Existence previous to something else.

(*Phil.*) The existence of the human soul, in some former condition, before it became connected with the body. See TRANSMIGRATION OF SOULS.

Preëxistent, a. Existing beforehand; preceding in existence.

Preëxpecta'tion, n. Previous expectation.

Preez, (preeds,) a town of Prussia, prov. of Schleswig-Holstein, 8 m. S.S.E. of Kiel; pop. 5,000.

Preface, n. [Fr.; Lat. *præfatio*, from *præ*, before, and *fari, fatus*, to speak.] (*Lit.*) An introduction, or series of preliminary remarks, prefixed to a work or treatise, intended to inform the reader of the manner, design, or, in general, of whatever is necessary to the understand- ing of its plan and peculiarities.

—*v. a.* To introduce by preface or preliminary remarks. — To face; to cover; — used humorously.

—*v. n.* To say something introductory.

Prefacer, n. One who writes a preface.

Prefatory, a. Pertaining to a preface; introductory of a book, essay, or discourse.

Prefect, n. [Fr. *préfet*; Lat. *præfectus*.] (*Antiq.*) See PRÆFECTUS.

(*French Administration.*) An important political functionary who superintends a department of the kingdom, and has the actual direction of the police es- tablishment within that department, together with ex- tensive powers of municipal regulation. The arrondis- sements, or districts into which the departments are subdivided, are under *sous-préfets* appointed by them. The power of the prefect is considerably controlled by the council of the prefecture, which acts in some meas- ure as a court of appeal from the decisions of the prefect.

Prefecture, (préf-ek-tūr,) n. The jurisdiction of a prefect.

Prefer, v. a. [Fr. *préférer*; Lat. *præfero*, from *præ*, and *fero*, to bear.] To regard more than another; to honor or esteem above another. — To advance or pro- mote, as to an office or dignity; to raise; to exalt. — To offer; to present; — said especially of a prayer or request.

Preferable, a. [Fr.] Worthy to be preferred or chosen before something else; more eligible; more de- sirable.

Preferableness, n. Quality or stato of being prefer- able.

Preferably, adv. In preference; in such a manner as to prefer one to another.

Preference, n. [Fr.] Act of preferring one thing before another; estimation of one thing above another; choice. — State of being preferred. — The person or thing preferred.

Preferential, a. Implying preference.

Preferment, n. Advancement to a higher office, dignity, or station; superior place or office. — Prefer- ence; act of preferring. (*R.*)

Preferer, n. One who prefers.

Prefiguration, n. Act of prefiguring, or the state of being prefigured; antecedent representation by sim- ilitude.

Prefigurative, a. Prefiguring.

Prefigure, v. a. [From Lat. *præ*, before, and *figuro, figuratus*, from *figura*, shape, figure.] To exhibit by antecedent representation, or by types and similitude.

Prefigurement, n. Act of prefiguring; prefigura- tion.

Prefix, v. a. [Lat. *præfigo, præfixus*, from *præ*, and *figo*, to fix.] To fix or put before, or at the beginning of another thing.

—*n.* A letter, syllable, or word, put to the beginning of a word, usually to vary its signification.

Prefixion, (-yun,) n. Act of prefixing.

Prefulgency, n. [Lat. *præfulgens*, from *præ*, before, and *fulgere*, to shine.] Superior effulgency or bright- ness.

Pre'gel, a river of E. Prussia, formed by the junction of the Angerap and Pissa, and after a W. course of 120 m., it joins the Frische Haß, below Königsberg. It is navigable 45 m.

Preg'nable, a. [Fr. *prenuble*, from *prendre*, to take; Lat. *prendere, prehendere*.] Capable of being taken by force. (*R.*)

Preg'nancy, n. State of being pregnant or with child. — Fertility; fruitfulness; inventive power.

Preg'nant, a. [Lat. *prægnans*.] Being with young, as a female. — Fruitful; fertile; full of consequence.

Preg'nantly, adv. Fruitfully; in a pregnant man- ner.

Pregus'tant, a. [Lat. *prægustans*.] Tasting before- hand. (*R.*)

Pregusta'tion, n. Foretaste; act of tasting before another.

Prehen'sible, a. [From Lat. *prehendere*, to take.] Capable of being seized.

Prehen'sile, a. [Lat. *prehendo, prehensus*, to lay hold of.] Fitted for seizing or laying hold; as, the *prehen'sile* tails of some monkeys.

Prehen'sion, n. [Fr.; Lat. *prehensio*.] A taking hold of; a seizing, as with the hand or other limb.

Prehen'sory, a. Adapted to take hold or seize.

Prehistor'ic, a. Preceding history; anterior to his- torical times.

Prehnite, (pre'n'ite,) n. (*Min.*) A hydrous silicate of alumina.

Preindispose, v. a. To render indisposed pre- viously.

Preinstruct, v. a. To instruct beforehand.

Preintima'tion, n. Previous suggestion or inti- mation.

Prejudge, v. a. [Fr. *préjuger*; Lat. *præ*, and *judico*, to judge.] To judge in a cause before it is heard, or be- fore the arguments and facts in the case are fully known; — hence, sometimes, to condemn beforehand or un- heard.

Prejudgment, n. Judgment in a case without a hearing or full examination.

"The committee of council hath *prejudged* the whole case by calling the united sense of both houses of Parliament 'a universal clamor.'" — *Swift*.

Prejudicate, v. a. [Lat. *præ*, and *judico, judicatus*.] To determine beforehand to disadvantage.

—*v. n.* To form a judgment without due examination of the facts and arguments in the case.

—*a.* Formed before examination. — Prejudiced; prepos- sessed by opinions.

Prejudicately, adv. In a prejudiced manner.

Prejudica'tion, n. Act of prejudging, or of judging without due examination of facts and evidence.

Prejudica'tive, a. Prejudging; forming a judgment without due examination.

Prejudice, n. [Fr.; Lat. *præjudicium*, from *præ*, be- fore, and *judicium*, judgment.] An opinion or decision of mind formed without due examination of the facts or arguments which are necessary to a just and impartial determination; prepossession; bias. — Injury or wrong of any kind.

—*v. a.* To prepossess with unexamined opinions; to bias the mind of by hasty or incorrect notions, and give it an unreasonable vent to one side or the other of a cause. — To obstruct or injure by prejudices, or by undue pre- vious bias of the mind; to hurt; to damage; to dimini- ish; to impair.

Prejudicial, (-dish'al,) a. [Lat. *præjudicialis*.] Hurt- ful; mischievous; injurious; tending to obstruct or im- pair; detrimental; disadvantageous.

Prejudicially, adv. Hurtfully; injuriously.

Prejudicialness, n. The state of being prejudi- cial; mischievousness.

Preknowledge, (-nol'ej,) n. Previous knowledge.

Prelacy, n. The dignity or office of a prelate. — The order of bishops; bishops taken collectively.

Prelate, n. [Fr. *prélat*, from Lat. *præfero, prælatus*, from *præ*, before, and *fero, ferre*, to bear, to conduct.] A clergyman of superior order having authority over the lower clergy, as an archbishop, bishop, &c.; a digni- tary of the church.

Prelateship, n. The office of a prelate.

Prelatess, n. A female prelate.

Prelatic, Prelatical, u. Relating to prelates, or prelacy.

Prelatically, adv. With reference to prelates.

Prelatist, n. An advocate for prelacy, or the govern- ment of the church by bishops; a high-churchman.

Prelatize, v. a. To bring under the influence of prelacy.

—*v. n.* To encourage prelacy; to perform the functions of a prelate.

Prelature, Prelatureship, n. The state or dignity of a prelate.

Prel'ect, v. a. [Lat. *prælegere*, from *præ*, and *legere*, to read.] To read publicly, as a public discourse or lec- ture. (*R.*)

Prel'ection, n. [Lat. *prælectio*.] A lecture or dis- course read in public, or to a select company.

Prel'ector, n. A reader of discourses; a lecturer.

Prelibation, n. [Lat. *prælibatio*, from *præ*, and *libare*, to taste.] A tasting beforehand. — Effusion pre- vious to tasting.

Preliminarily, adv. Introductorily; previously.

Preliminary, a. [Fr. *préliminaire*; Lat. *præ*, and *limen, liminis*, a threshold.] That precedes the main discourse or business; introductory; preparatory; pre- vious.

—*n.* That which precedes the main discourse, work, de- sign, or business; something previous or preparatory; introduction; preface; prelude.

Prelim'it, v. a. To limit beforehand.

Prelude, v. a. [Fr. *préluder*, from Lat. *præ*, and *ludo*, to play.] To introduce with a previous performance. — To precede, as an introductory piece.

—*v. n.* To serve as an introduction to.

—*n.* A short strain of music, or irregular air, played by a musician before he begins the piece to be played, or before a full concert; something introductory; a pre- face; introduction. — Something which indicates a future event; a forerunner; harbinger.

Prelud'er, n. One who plays a prelude, or introduces by a previous irregular piece of music.

Prelud'ial, a. Relating to a prelude; introductory.

Prelun'bar, a. [From Lat. *præ*, before, and *lumbus*, the loin.] (*Anat.*) Placed before the loins.

Prelusive, a. Previous; introductory; indicating that something of a like kind is to follow.

Prelusively, Prelusorily, adv. Previously; introductorily.

Prelusory, a. Prelusive; introductory.

Premature, a. [Fr.; Lat. *præmaturus*, from *præ*, and *maturus, ripe*.] Mature or ripe before the natural or proper time. — Happening, arriving, performed, or adopted before the proper time. — Arriving or received without due authentication or evidence, as a report or account.

Prematurely, adv. Too soon; too early; before the proper time. — Without due evidence or authentication.

Prematureness, Prematur'ity, n. State of being premature; ripeness before the natural or proper time. — Too great haste; unseasonable earliness.

Premeditate, v. a. [Fr. *préméditer*; Lat. *præmed- itor*, from *præ*, and *meditor*, to meditate.] To think on and revolve in the mind beforehand; to contrive and design previously.

Premeditate, *v. n.* To think, consider, or revolve in the mind beforehand; to deliberate.

Premeditately, *adv.* With previous meditation or deliberation.

Premeditation, *n.* Act of meditating beforehand; previous deliberation.—Previous contrivance or design formed.

Premier, *a.* [Fr., from Lat. *primus*.] First; chief; principal.

(*Her.*) The most ancient, when applied to any peer of any degree by creating.

—*n.* The first minister of state; the prime-minister.

Premise, *v. a.* [Lat. *præmitto*, from *præ*, and *mitto*, to send.] To speak or write before, or as introductory to the main subject; to offer previously, as something to explain or aid in understanding what follows; to lay down, as *premises*, or first propositions, on which rest the subsequent reasonings.—To use or apply previously.

—*v. n.* To state antecedent propositions.

Premise, *n.*; *pl.* PREMISES. [Lat. *præmissum*, from *præ*, and *mitto*, to send.] A proposition antecedently supposed or proved.

(*Logic.*) The first two propositions in a syllogism, from which the inference or conclusion is drawn.

—*pl.* (*Law.*) In equity pleading, the stating part of a bill, containing a narrative of the facts and circumstances of the facts of the plaintiff's case, and the wrongs of which he complains, and the names of the persons by whom done and against whom he seeks redress.

Premium, *n.* [Lat. *præmium*, from *præ*, and *emo*, to take.] A reward or recompense; a prize to be won by competition; the recompense or prize offered for a specific discovery, or for success in an enterprise.—Something offered or given to invite a loan or bargain.

(*Insurance.*) The consideration for a contract of insurance. A policy of insurance always expresses the consideration, called the *premium*, which is a certain amount or a certain rate upon the value at risk, paid wholly in cash, or partly so and partly by promissory note or otherwise.—In life-insurance, the premium is usually payable periodically; and the continuance of the risk is usually made to depend upon the due payment of the premium.

Premontish, *v. a.* [Lat., from *præ*, and *monere*, to admonish.] To warn or admonish beforehand; to forewarn.

Premontishment, *n.* Previous information.

Premontition, (*pre-mo-nish'un*), *n.* Previous warning, notice, or information.

Premontitor, *n.* A person or thing that gives premonition.

Premontitorily, *adv.* By way of premonition.

Premontitory, *a.* Giving previous warning or notice.

Premonstrare, *v. a.* [Lat. *premonstrare*, from *præ*, from, and *monstrare*, to show.] To show beforehand. (*R.*)

Premonstratians, *n. pl.* [Fr. *Prémontrés*.] (*Eccles. Hist.*) A religious order of regular canons instituted in 1120 by St. Norbert (whence they are also called *Norbertines*), at Prémontré (*Premonstratum*), in Picardy, which is said to have derived its name from being pointed out by the Virgin. The canons of this order followed the rule of St. Austin, and were sometimes called White Canons, from the color of their habits.

Premorse, *a.* [From Lat. *præ*, and *mordere*, to bite.] (*Bot. and Zool.*) Terminating in an irregular truncate apex, as if bitten off.

Premosaic, *a.* Previous to the time of Moses.

Premotion, *n.* [Fr. *prémotion*.] Previous motion.

Premunire, *n.* (*Eng. Law.*) The offence of introducing foreign authority into the kingdom.

Premunition, *n.* An anticipation of objection.

Premunitory, *a.* Relating to a premunire.

Prender, *n.* [Fr. *prendre*, from Lat. *prehendere*, to take.] (*Law.*) The right of taking a thing before it is offered;—hence the phrase of law, "it lies in render, but not in prender."

Prenomination, *n.* The privilege of being named first.

Prenote, *v. a.* To designate or mark beforehand.

Prenotion, *n.* [Lat. *prænōtio*, from *præ*, before, and *noscere*, to know.] Foreknowledge; prescience.

Pren'tice, in *Illinois*, a post-village of Morgan co., abt. 12 m. N.E. of Jacksonville.

Pren'tiss, in *Maine*, a post-township of Penobscot co. Pop. (1897) 420.

Prenzlau, (*prens'lou*), a town of Prussia, province of Brandenburg, on the Ucker, 70 m. N.N.E. of Potsdam. Manuf. Linens, woollens, and tobacco. Pop. 13,000.

Preobtain, *v. a.* To obtain previously.

Preoccupancy, *n.* Act or right of taking possession before others.

Preoccupate, *v. a.* [From Lat. *præ*, before, and *occupare*, to occupy.] To anticipate.—To prepossess; to fill with prejudices.

Preoccupat'ion, *n.* Act of preoccupying, or of taking possession before another; prior occupation; anticipation; prepossession.—Anticipation of objections.

Preoccupy, *v. a.* [Fr. *préoccuper*; Lat. *præ*, and *occupo*, to occupy.] To take possession before another.—To prepossess; to occupy by anticipation or prejudices.

Preominate, *v. a.* [Lat. *præ*, and *ominare*, to forebode.] To prognosticate; to show by omens any future event.

Properculum, *n.* [Lat. *præ*, and *operculum*, cover.] (*Bot.*) The forelid or operculum of a moss.

Preopin'ion, *n.* Opinion formed beforehand; prepossession. (*R.*)

Preopt'ion, *n.* Previous choice.

Preordain, *v. a.* To ordain or appoint beforehand; to predetermine.

Preordination, *n.* Antecedent decree; first decree.

Preordination, *n.* Act of preordaining.

Preparable, *a.* That may be prepared.

Preparation, *n.* [Fr.; Lat. *preparatio*.] Act or operation of preparing or fitting for a particular purpose, use, service, or condition; previous measures of adaptation.—That which is prepared, made, or compounded for a particular purpose.—State of being prepared or in readiness.

(*Anat.*) Any part of a body preserved for the use of the anatomist.

(*Med.*) Any medical substance that has to be employed for any purpose.

(*Mus.*) The previous adjustment of two notes by whose introduction a note which is to become a discord is heard in the preceding harmony.

Preparative, *a.* Tending to prepare or make ready; having the power of preparing, qualifying, or fitting for anything; preparatory.

—*n.* That which has the power of preparing or previously fitting for a purpose; that which prepares.—That which is done to prevent evil or secure some good; preparation, as for a journey.

Preparatively, *adv.* By way of preparation.

Preparator, *n.* One who prepares. (*R.*)

Preparatory, *a.* Preparing the way for anything by previous measures of adaptation; antecedent and adapted to what follows; introductory.

Prepare, *v. a.* [Fr. *préparer*; Lat. *præparare*, from *præ*, before, and *paro*, to set in order.] To cause to be fit or apt for any particular purpose; to render suitable for any particular purpose, end, use, service, or state, by any means whatever.—To procure as suitable; to equip; to provide.

—*v. n.* To make all things ready; to put things in suitable order.—To make one's self ready; to take the necessary previous measures.

Preparedly, *adv.* With suitable previous measures.

Preparedness, *n.* State of being prepared, or in readiness.

Preparer, *n.* One who, or that which fits, makes ready, or suitable.

Prepay, *v. a.* To pay in advance or beforehand, as the postage of a letter.

Prepayment, *n.* Payment in advance, as of postage.

Prepense, *a.* [Lat. *præpensus*, from *præ*, and *pendo*, to weigh.] Preconceived; premeditated; alothought.

Prepense'ly, *adv.* Premeditatedly; in a preconceived manner.

Prepollence, **Prepollency**, *n.* State or quality of being prepollent.

Prepollent, *a.* [Lat. *præpollens*, from *præ*, before, and *pollere*, to be strong.] Very powerful; having superior gravity or power; prevailing.

Preponderance, **Preponderancy**, *n.* The state or quality of being preponderant; superiority, force, or power.

(*Gun.*) The excess of weight of the portion of a gun in rear of the trunnions over the part in front.

Preponderant, *a.* Outweighing.

Preponderantly, *adv.* In a preponderant manner.

Preponderate, *v. n.* [Lat. *præpondero*.] To exceed in weight.—To exceed in influence or power analogous to weight; to incline to one side.

—*v. a.* To outweigh; to overpower by weight.—To overpower by stronger influence.

Preponderatingly, *adv.* Preponderantly.

Preponderation, *n.* The act or state of outweighing anything.

Preposition, *n.* [Fr.; Lat. *præ*, before, and *pono*, to place.] (*Gram.*) A word usually put before another to express some relation or quality, action or motion, to or from the thing specified. "The river runs to the sea. The glass stands on the table. The dog lies under the table. He runs round me. She runs from me. The house by the wood. The house in the wood." In all the instances just given, the relation is of one kind—that of place or direction. And this was the original signification of all prepositions. They gradually, however, came to express other relations. Thus: "That depends on you. Subjects are under the sovereign. She got round her father. Vice springs from idleness. Wood is consumed by fire. Your enemy is in your power." The transition from the palpable, physical relation to the more abstruse, mental relation, is, in most cases, obvious. A preposition is distinguished from an adverb by its always requiring an object (a noun or pronoun) after it. In the sentence, "He runs about," *about* is an adverb describing the mode of running; in "He runs about the house," it is a preposition referring to the direction of the running to a particular object.

Prepositional, *a.* Pertaining to a preposition, or to preceding position.

Prepositive, *a.* Put before, or prefixed.

—*n.* A word or particle put before another word.

Prepositor, *n.* A scholar appointed by the master to overlook the rest.

Prepositure, *n.* [Lat. *præpositura*.] A provostship.

Prepossess, *v. a.* To preoccupy, as land or ground; to take previous possession of.—To preoccupy the mind or heart of, so as to preclude other things;—hence, to bias or prejudice.

Prepossess'ing, *a.* Tending to invite favor; having power to secure the possession of favor, esteem, or love.

Prepossess'ingly, *adv.* In a prepossessing manner.

Prepossession, (*-pos-sesh'un*), *n.* Preoccupation; previous possession.—The effect of previous impressions on the mind or heart, in favor of or against any person or thing.

Prepossess'or, *n.* One that prepossesses.

Prepos'terous, *a.* [Lat. *præposterus*, from *præ*, and

posterus, coming after.] Reversed; inverted in order, distorted; having that first which ought to be last.

—Contrary to nature or reason; wrong; absurd.

Prepos'terously, *adv.* In a wrong or inverted order; absurdly; foolishly.

Prepos'terousness, *n.* State or quality of being preposterous; wrong order or method; absurdity; inconsistency with nature or reason.

Preprovide, *v. a.* To provide beforehand.

Prepuce, *n.* [Lat. *præputium*.] (*Anat.*) The loose integument in males known as the foreskin.

Preputial, (*-pu'shal*), *a.* Relating to the prepuce or foreskin.

Pre-Raphaelism, *n.* An English school of painting, which has in recent years sprung into existence, and has been thus named, in accordance with an erroneous idea, that its earliest members were mainly anxious to imitate the mannerisms of the artists who painted before the time of Raphael. The fact was, that they imitated no pictures, and painted from nature only, but accepted the title of *Pre-Raphaelites* because it was their object to oppose that system in art which had grown up since the time of Raphael; one of the main characteristics of which was the pursuit of beauty at the expense of truth; while another was a servile obedience to traditional conventionalism.

Prerog'nant, *n.* The reigning predecessor.

Preremote, *a.* Remote with respect to the antecedent order of time.

Prerequisite, *v. a.* To demand previously.

Prerequisite, (*-rek'i-wi-zit*), *a.* Something previously necessary.

—*n.* A thing previously required, or necessary.

Presbyter, *n.* [Gr. *presbyteros*, elder.] (*Eccles. Hist.*) In the New Testament, one of a body of officers having superintendence of a church. A clergyman in charge of a congregation.—In episcopal churches, a member of the second order of ministers, between the bishop and the deacons.—An elder; a member of presbytery.

Presbyter'al, *a.* Relating to a presbyter or presbytery; presbyterial.

Presbyter'ate, *n.* [Lat. *presbyteratus*.] The office or station of a presbyter; a presbytery.

Presbyter'ated, *a.* Organized presbyterially.

Presbyter'ess, *n.* A female presbyter.

Presbyter'ial, *a.* Pertaining to presbyters or to government by presbyters.

Presbyter'ian, *a.* Pertaining to ecclesiastical government by presbyters; consisting of presbyters.

—*n.* A member of a church governed by presbyters; one who holds to the system represented by Presbyterian Churches.

Presbyterian Church. The name assumed by those associations of Protestant Christians which are organized on the basis of government by presbyters, in distinction, on the one hand, from those organized on the basis of episcopacy, and, on the other, from independent (Congregational) churches which recognize no higher ecclesiastical authority. In a fully organized Presbyterian system, each congregation is governed by a body of presbyters or elders (the session or consistory) composed of ruling elders, who are elected by the people from their own number, and one or more teaching elders (clergymen) who are installed over the congregation by the presbytery and who alone administer the sacraments. The presbytery (also called *classis*), which constitutes the distinctive feature of this polity, consists of all the teaching elders, together with one ruling elder from each congregation within an assigned territory, and is the governing power over all the elders and churches belonging to it. In it all presbyters are of equal rank, except that teaching presbyters alone have the right to actually ordain others by imposition of hands. "The presbytery has power to receive and issue appeals from church sessions and references brought before them in an orderly manner; to examine and license candidates for the holy ministry; to ordain, install, remove, and judge ministers; to examine and approve or censure the records of church sessions; to resolve questions of doctrine or discipline . . . ; to condemn erroneous opinions which injure the purity or peace of the church; to visit particular churches for the purpose of inquiring into their state and redressing the evils that may have arisen in them; to unite or divide congregations, at the request of the people, or to form or receive new congregations, and in general to order whatever pertains to the spiritual welfare of the churches under their care." (*Form of Gov.*, Ch. x.) While the presbytery is thus the unit of the church, it may unite with other presbyteries, occupying other fields, to form a still larger association. If so, higher courts (*synods* or *assemblies*), are established, which possess more or less of the powers of presbytery and which direct the affairs of the whole body. Sometimes the higher courts or judicatories are composed like the presbyteries; sometimes they are composed of representatives elected by the presbyteries from their teaching and ruling elders. Appeals, complaints and references pass from the lower to the higher courts, so that each member of the Church may have his case judged by the whole Church. The system thus unites the entire body under the government of presbyters chosen by the people. It corresponds neither to a monarchy nor to a pure democracy, but to popular self-government through chosen representatives. Presbyterians believe their polity to be Scriptural. They hold that the Apostolic churches were organized on the model of the Jewish synagogues, which were governed by a body of elders, and that each Apostolic "church" consisted of all the Christians of a locality who were under one body of elders, though often forming several congregations. They believe that their polity preserves

the original equality and supremacy of the presbyters, as well as the principle of popular self-government, which they consider involved in the universal priesthood of all believers. But while their name describes their polity, Presbyterian Churches have been also distinguished for their adherence to the type of doctrine which is known as Augustinian or Calvinistic or Reformed, and which is embodied in their historic creeds (1st Helvetic Confession, 1536; Scotch Confessions, 1560, 1580; Belgic Confession, 1561; Heidelberg Catechism, 1563; 2d Helvetic Confession, 1566; Canons of the Synod of Dort, 1619; Westminster Confession and Catechisms, 1647). Though the Presbyterian Churches originally preserved modified liturgies, the Scotch, Irish, and American branches have generally rejected them. Presbyterians have also been honorably distinguished for devotion to free civil government, to education, and, during the last century, to missionary enterprises at home and abroad.

History. Presbyterian polity took shape in modern times in Geneva under Calvin's influence, though united with the civic government and without provision for synodical assemblies. It was developed in Friesland under John à Lasco; was adopted by the Huguenots and by the Reformed churches of the Netherlands, and became, with modifications, the polity of the Protestants of the Rhine provinces, Poland, Bohemia, and Hungary. These continental churches, however, preferred to call themselves "Reformed," indicating their doctrine rather than their polity. It was in Great Britain that the name Presbyterian was adopted, since there the polity and worship of the Church formed, during the religious conflicts of the 16th and 17th centuries, a principal subject of contention. In Scotland, under the leadership of John Knox, the first "book of discipline," by which the Protestants were organized along Presbyterian lines, was adopted in 1561. The system was gradually perfected; and the efforts of the nobility to restore an episcopate, which would be more subservient to their wishes, only increased the devotion of the people to Presbyterianism, so that in 1578, under the lead of Andrew Melville, the second "book of discipline" was adopted, by which the system was completely formulated. In 1584 episcopacy was re-enacted by Parliament; but again, in 1592, Presbyterianism was restored. Strife arose, however, between the Church and the royal authority. The assembly met irregularly and its action was fluctuating. Under Charles I. the quarrel became still more bitter by reason of his renewed attempt to enforce episcopacy. In 1636 the people were required to use Archbishop Laud's book of worship. This extreme measure, however, provoked a popular uprising, and the "National Covenant," which pledged its supporters to uphold the Presbyterian order, was signed by nobles and people. Meanwhile, in England also, Presbyterian principles had been introduced, chiefly by French refugees. They were ably defended (1570) by Thomas Cartwright, professor of Divinity at Cambridge, though they never obtained the same hold in England as in Scotland. Under Elizabeth, English Presbyterianism was vigorously repressed. In many parts of the country, however, it began to be put in operation. But under the strong episcopalian policy of James I., and the yet more stringent rule of Charles I., the Presbyterians were so oppressed that many fled to the Continent. The Long Parliament, however, abolished episcopacy in 1642, and in 1643 the celebrated Westminster Assembly was convened by the Parliament to provide for the reorganization in doctrine and polity of the English Church. In the same year the Parliament also entered into the Solemn League and Covenant with the Scotch Presbyterians to unite in faith and order the churches of the two countries. The Westminster Assembly was composed of several religious parties and represented various shades of opinion; but finally it prepared a Form of Government strictly Presbyterian. The system was adopted by Parliament in 1647, but the triumph of the Independents under Cromwell soon overturned it. The Presbyterians then became advocates of the Restoration. Charles II., however, bitterly disappointed them. They were compelled to conform to episcopacy or suffer outlawry, and, after the Revolution of 1688, passed into the number of tolerated, dissenting sects. The influence of Presbyterianism declined in England. It lapsed during the 18th century into Unitarianism. The present Presbyterian Church of England is a new organization established through Scotch influence in 1836. But, in Scotland, Presbyterianism continued to flourish during the first Stuarts and the Commonwealth. The Westminster Confession, Catechisms, Form of Government, and Directory of Worship were adopted in 1645-8. Under Charles II. the Scotch Presbyterians were fiercely persecuted and episcopacy re-established; but, with the accession of William III., relief came. The "National Covenant," indeed, was not re-enacted; but, in 1689, all acts in favor of episcopacy were repealed; in 1690 the first assembly since 1653 met; and in 1707 Presbyterianism was legally established in Scotland, as Episcopacy was in England. The Westminster symbols were also made the constitution of the Scotch Church. Scotch Presbyterianism, however, has been marked by many internal divisions, sometimes theological, but oftener caused by the relations of the Church to the state and the consequent difference of opinion as to what line of conduct duty required. Thus arose the Cameronians (Covenanters), who abjured fealty to the later Stuarts, and, after the Revolution, still refused to admit the authority of the crown over the Church. In 1733 the "Associate Presbytery" was formed in opposition both to lay patronage and to

latitudinarianism. This body again divided into the Burgher and Anti-burgher parties on the question of the oath required of the burgesses of Edinburgh and elsewhere in support of the established religion. In 1761 the "Relief Presbytery" was formed for reasons similar to those which led to the "Associate Presbytery." Other smaller divisions also have taken place, but in the 19th century the tendency has been toward reunion of these parties. In 1847 the United Secession Church, already formed from the more liberal elements of the Burgher and Anti-burgher bodies, united with the Relief Church to form the present United Presbyterian Church of Scotland. On the contrary, however, in 1843, the old question of lay patronage led to the separation from the established church of a large number of ministers and churches, who formed the Free Church of Scotland. In Ireland Presbyterianism arose among the Scotch settlers in Ulster. It shared the changing political fortunes of its sister churches and perpetuated some of the Scotch divisions; but in 1840 most of the older bodies were formed into the General Assembly of the Presbyterian Church in Ireland.

The Presbyterian churches in the U. S. arose chiefly among the immigrants from Scotland and Ireland, though both England and France contributed to them, and the Reformed Dutch Church was permanently established in 1628. Presbyterian churches indeed were planted during the 16th and 17th centuries at various places from New England to Florida, but the first organization of an American presbytery grew out of the Scotch and Scotch-Irish settlements in the Middle colonies, with which, however, other elements combined. Francis Dougherty, who preached in New York in 1643, and afterward in Maryland and Virginia, and Matt. Hill, who, in 1669, located in Charles co., Md., represented English Presbyterianism. But in 1684 Francis Makemie, from the Presbytery of Laggan, Ireland, organized a church on the eastern shore of Maryland, at Snow Hill, and became mainly instrumental in the establishment of the first presbytery. This was organized in Philadelphia in 1705, and consisted of 7 ministers, who represented several types of training and tradition. The large and rapid immigration into the Middle and North-Southern colonies soon planted other churches, so that in 1716 a synod with 4 presbyteries was erected. With it other congregations, which had been previously independent, also united. In 1729 the synod passed the Adopting Act, whereby the Westminster Symbols were made the constitution of the Church, "as being, in all the essential and necessary articles, good forms of sound words and systems of Christian doctrine," and subscription to them was required of all presbyters. Serious differences of opinion, however, arose in the synod, partly with reference to the attitude which should be taken toward the "revival" movement then passing over the country; partly with reference to the requirements to be exacted of candidates for the ministry; and partly as to the strictness with which subscription to the Confession should be required; so that in 1741 the original synod divided into the Synod of New York (New Side) and the Synod of Philadelphia (Old Side). The "New Side" rapidly increased in numbers, while the "Old Side" diminished. Both, however, prosecuted their work, especially in the matter of providing education for candidates for the ministry. In 1746 the Log College on the Neshaminy, founded by the Tennents, was merged into Nassau Hall, at Elizabethtown, N. J. The new college was removed in 1755 to Princeton. The "Old Side's" academy was at New London, Pa., and was founded in 1741 by Francis Allison. But in 1758 the two synods were happily reunited, on the basis of the original Adopting Act, as the Synod of New York and Philadelphia. Meanwhile other Presbyterian churches had been transplanted from Holland, Germany, Ireland, and Scotland. The Dutch, centering in New York, separated (1747-55) from the church of the mother country, and in 1772 formed a synod, which has continued its independent existence. The German Reformed settled mainly in Pennsylvania, and have also maintained a separate ecclesiastical existence. Irish Presbyterian churches were formed in New England, and in 1775 became a synod, but afterward merged into other bodies. The chief representatives of the dissenting churches of Scotland will be mentioned below. But the main stream of American Presbyterianism flowed from the Synod of New York and Philadelphia. That body, embracing 16 presbyteries, prepared in 1785 to reorganize itself in accordance with the needs of the new nation. A general assembly was formed, with 4 synods. The sections of the Form of Government pertaining to the relations of church and state were revised, and the Westminster Symbols were then readopted, and subscription to the Confession "as containing the system of doctrine taught in the Holy Scriptures" required of presbyters and deacons. The first assembly met in 1789. The church, thus nationalized, made steady progress, but was soon distracted again by controversy. The "plan of union" with the Congregationalists led to the formation of churches irregularly constituted, and to the intrusion of New England theology into the pulpits, both of which effects were resented by the stricter Presbyterians. The acquittal of Lyman Beecher, George Duffield, and Albert Barnes, who had been charged with heresy, combined with other causes to increase the friction. Bitter feeling culminated in the excision by the assembly of 1837 of the synods of Western Reserve, Utica, Geneva, and Genesee, and the dissolution of the Third Presbytery of Philadelphia. The excised synods and their sympathizers formed the "New School" Presbyterian Church,

while the remainder were known as "Old School." Both churches prospered, and by the end of 30 years the reasons for division were felt to have largely disappeared. The Congregational influences had diminished in the "New School" body. The center of doctrinal discussions had changed. Above all, the political agitations before and during the Civil War had drawn the Northern Presbyterians of both schools together. In 1858 the Southern members of the "New School" Church had separated themselves, and in 1861 the Southern wing of the "Old School" did the same. In 1865 the two Southern wings united, and still continue a separate body, with the title "The Presbyterian Church in the United States." Hence, after some debate, the two Northern churches also united in 1869, and bear the title of "The Presbyterian Church in the United States of America." Their reunion was effected on the basis of the Westminster standards "pure and simple." For twenty years after the reunion the church remained in peace, and, sharing the general prosperity of the country, grew rapidly. In 1888 a proposition was submitted to the presbyteries to revise the Confession of Faith. This gave rise to an animated discussion, which revealed the existence of various theological opinions. On its heels came the trial for heresy of Dr. C. A. Briggs, professor of Biblical Theology in Union Seminary, N. Y., which caused no little bitterness of feeling. It resulted, however, in 1894, in his suspension from the ministry, and, amid the excitement and fears created by his teaching and trial, the proposal to revise the Confession was rejected. The Presbyterian Church of the United States of America, as it now exists, includes a large membership, and is prominent in all forms of Christian activity. It has a system of 8 boards of trustees, responsible to the assembly, for the prosecution of its work both at home and abroad; 12 foreign missionary fields; and many institutions of learning of all grades are supported or fostered by it. Theological seminaries have been established at Princeton, in 1812; Auburn, in 1820; Allegheny (Western), in 1826; Cincinnati (Lane), in 1829; Danville, Ky., in 1852; Chicago (McCormick, originally at New Albany), in 1856; San Francisco, in 1870; Omaha, in 1890, as well as Lincoln and Biddle Universities for colored youth, and theological schools for Germans at Dubuque, Ia., and Newark, N. J. Union Seminary, in New York, was founded in 1836, and, though now separated from the assembly in consequence of the Briggs trial, still continues nominally a Presbyterian institution. Many attempts have been made to further unite the different Presbyterian bodies in the U. S., but as yet with small success. An "Alliance of the Reformed Churches holding the Presbyterian System" has, however, been formed, which meets every four years and includes all the Presbyterian churches of the world. It has no judicial or legislative authority. Its first meeting was held in Edinburgh in 1877. The statistics collected at the last meeting of the Alliance in Glasgow, in 1896, exhibited the strength of this portion of Protestant Christendom. They are as follows: Presbyteries, 1,305; congregations, 29,364; ministers, 25,447; ruling elders, 119,465; communicants, 4,627,149; Sunday-school teachers and pupils, 3,519,940. The statistics given for the Presbyterian churches in the United States and Canada are: Presbyteries, 687; congregations, 17,553; ministers, 13,836; ruling elders, 58,100; communicants, 2,004,845; Sunday-school teachers and pupils, 1,875,170. The latest statistics for the Presbyterian Church in the United States of America (Northern) are: Presbyteries, 224; congregations, 7,573; ministers, 6,942; ruling elders, 27,025; communicants, 943,716; Sunday-school teachers and pupils, 1,006,391. The latest statistics for the Presbyterian Church in the United States (Southern) are: Presbyteries, 76; congregations, 2,788; ministers, 1,349; ruling elders, 8,656; communicants, 210,539; Sunday-school teachers and pupils, 157,958.

CUMBERLAND PRESBYTERIANS.—An extraordinary revival, which in the early years of the 19th century visited S. W. Kentucky and the neighboring part of Tennessee (the "Cumberland country"), led to the licensing by presbyteries of that region of men who had not received regular theological training, in order to supply the need of preachers. The warmth of religious feeling, incident to the revival, also led the candidates and their sympathizers to take exception to certain clauses in the Confession of Faith which seemed to them to limit the universal applicability of the Gospel. Objection was specially taken to the doctrine of unconditional election with its correlative, the reprobation of the non-elect; to the doctrine of "limited atonement"; to that of efficacious grace provided only for the elect; and to the alleged teaching of the Confession that some infants, dying in infancy, are lost. Opposition to the new movement arose, and in 1806 the Synod of Kentucky dissolved the Presbytery of Cumberland. In 1810, three of the dissenting ministers organized the independent Cumberland Presbytery. This grew so rapidly that in 1813 a synod, with four presbyteries, was formed. A brief doctrinal platform was adopted, and in 1814 its positions were embodied in a revised Confession. In 1829 the first assembly of the Cumberland Presbyterian Church, with four subordinate synods, was organized. The Cumberland Church has grown steadily and rapidly, its strength being in the Southwestern States. It has maintained the evangelistic spirit out of which it was born. It has foreign missions in Japan and Mexico; a university at Lebanon, Tenn. (originally at Princeton, Ky.); five other colleges, and many schools. It was not divided by the Civil War, though situated on the border; but in 1869 a separate Colored Cumberland

Presbyterian Church was formed. In 1883 the Confession and Catechism were again revised to conform to the theology of the Church, which seeks middle ground between Calvinism and Arminianism. The Cumberland Church reported in 1902 to the "Alliance": Presbyteries, 126; congregations, 2,884; ministers, 1,580; communicants, 193,393; Sunday school membership, 114,147.

UNITED PRESBYTERIANS.—The United Presbyterians Church of the United States is a union of several independent churches which sprang from the dissenting churches of Scotland. In 1774 the "Reformed Presbyterian of America" was constituted near Harrisburg, Pa., by descendants of the Scotch Covenanters (Cameronians) who had refused to accept the "indulgence" of the later Stuarts or to recognize, even after the Revolution of 1688, the supremacy of the crown over the Church. This presbytery united in 1782 with the "Associate Church," which represented in America the Anti-burgher wing of the Scotch seceders who had protested against the latitudinarianism and state patronage of the Scotch Church, and had, in 1736, formed the Associate Presbytery, which in turn had divided into the Burgher and Anti-burgher wings (see above). The title of the new body was the Associate Reformed Church. A number of both bodies, however, refused to accept the union, and a new Associate Church was formed, which became, in 1801, the Associate Synod of North America. The united body—i. e., the Associate Reformed Church—also became a General Synod in 1804, but in 1822 this was dissolved, and the three independent synods, of New York, of the West, and of the South, remained. In 1858, however, the Northern and Western Synods of both the Associate and Associate Reformed Churches came together and constituted the United Presbyterian Church of North America. It represents a strict type of Presbyterian doctrine and polity; uses only the Psalms in public praise; is very active in educational and missionary work, and in temperance and other social reforms. It has theological seminaries at Allegheny, Pa., and Xenia, O. There were reported in 1902: 65 presbyteries; 905 congregations; 933 ministers; and 116,302 communicants. For the United Presbyterian Church of Scotland, see above.

REFORMED PRESBYTERIANS.—This title, with various adjuncts, is adopted by several communions who have not merged into the large Presbyterian denominations. They originally represented phases of Scottish dissent from the established church, but maintain their tenets in America. To the Westminster Synods they add "Declarations and Testimonies," setting forth the reasons for their separate existence. There is the Associate Reformed Presbyterian Church of North America and the Associate Reformed Presbyterian Church of the South (the latter of which separated from the former in 1831 because of its strong anti-slavery declarations), which represent those of the earlier Associate Church which did not unite in the formation of the United Presbyterian Church. They have together a membership of about 12,000, the Southern church being much larger than the Northern. There is also the Reformed Presbyterian Church of the United States, which represents those of the Reformed Presbytery (Covenanters) who did not unite in 1782 to form the Associate Reformed Church and subsequently the United Presbyterian Church. In 1809 they formed a synod. In 1833 they divided on the question of the rightfulness of voting in a country which does not formally acknowledge the kingship of Christ. There thus resulted the Reformed Presbyterian General Synod ("New Light"), who permit voting, and the Reformed Presbyterian Synod ("Old Light"), who forbid it. Both represent the strictest type of Calvinism, use only the Psalms in public praise, and contend particularly for the recognition by the state of Christ as the Ruler of nations, and civil obedience to His laws. They number less than 20,000. Like other Presbyterians, they are active in education and in missionary work.

GEORGE T. PURVES.

Presbyterialism, n. The principles and discipline of the Presbyterian Church.

Presbyterially, adv. In the manner or according to the principles of the Presbyterians.

Presbyterium, n. (Arch.) The part of a church in which the high altar is placed; so called because it is occupied exclusively by those who minister in the services of the altar. The name is often used in a more extended sense to include the whole of the choir.

Presbytership, n. The office or station of a presbyter.

Presbytery, n. [Gr. *presbuterion*, a council of elders.] A body of elders in the Presbyterian Church.—The Presbyterian religion.

(Arch.) Same as PRESBYTERIUM, *q. v.*

Presbytia, n. (Med.) Presbyopia.

Presbytic, a. Presbyopic; affected by presbytia.

Prescience, (pre-shi-ens), n. [Lat. *prescientia*, from *prescio*—*præ*, and *scio*, to know.] Knowledge of events before they take place.

Prescient, a. [Lat. *presciens*.] Having knowledge of events before they take place; foreknowing.

Prescind, v. a. [Lat. *prescindere*.] To cut off; to abstract; to sever. (R.)

Prescindent, a. Abstracting; cutting off. (R.)

Prescious, (pre'shus), a. Having foreknowledge. (R.)

Prescot, a town and parish of England, co. of Lancaster, 8 m. E.N.E. of Liverpool. Manuf. Cotton, sail-cloth, watches, and earthenware. Pop. of town 7,500.

Prescott, WILLIAM HICKLING, an eminent American historian, b. at Salem, Mass., 1796, was the son of a distinguished lawyer and statesman, and grandson of Col. William Prescott, an officer of the Independence War.

He entered Harvard College in 1811, and graduated in 1814. While at college he had the misfortune to lose, by an accident, the sight of one of his eyes, while the other became so weakened as to deter him from any profession or pursuit in which strong eyesight was indispensable. Enabled by the possession of an independent fortune to follow the bent of his inclinations, he spent two years in wandering in England, France, and Italy, and then returned to his native country, where he married and settled down to a life of literary labor, which was rarely interrupted. Having made himself master of the literature of France, Italy, and Spain, he contributed as the first fruits of his careful and various readings some critical papers to the *North American Review*; and at last, in 1827, selected the *Reign of Ferdinand and Isabella* as the subject of a more extensive work. Unable from the weakness of his eyesight to pursue an historical work requiring reference to various Spanish authorities, he had recourse to a reader, whom he taught to pronounce Castilian with accuracy sufficient for his own ear, and with this inadequate assist-

Fig. 2156. — WILLIAM PRESCOTT.

ance he became acquainted with the great authorities on Spanish history whom it was necessary to consult in the prosecution of his arduous labors. In this tedious process of collecting and digesting his materials ten years rolled on, but at length, in 1838, his great work was published, and was received with the utmost enthusiasm both in England and America; while Germany, France, and Spain acknowledged the new historian by transplanting his work into their respective languages; and the Spanish capital elected him a member of her Royal Academy of History. Stimulated by success, and with his skill considerably increased by practice and experience, P. set about the composition of *The Conquest of Mexico*, which he published in 1843, and four years later he gave to the world *The Conquest of Peru*. These elaborate and charmingly written works, like their predecessor, were received in both hemispheres with immense applause. They have frequently been reprinted, and they bid fair to remain the standard histories of some of the most interesting and eventful periods of human action and enterprise. P. was chosen corresponding member of the French Institute; and in 1850 he paid a short visit to Europe, where he was received with the highest distinction. On his return to America he began the composition of what he intended to be the greatest achievement of his latter years, *The History of Philip II.* Of this work two volumes appeared in 1855, and a third in 1859; these volumes bear ample testimony to the undiminished genius of the author, and the world was looking forward to the completion of this work, and many others from the same brilliant pen, when he was suddenly attacked by paralysis, and b. at Preston, 1859.—P. was an elegant scholar and writer, a man of cheerful humor and affectionate character, methodical in his habits, and persevering in his pursuits. He walked five miles regularly every day, composing as he walked. He gave one-tenth of his ample income in charity, and divided his time between his winter mansion in Boston, a summer residence at Nahant, and a farmhouse, where he spent the autumn. In his large library, with the light carefully regulated for his imperfect vision, he wrote with a stylus each day what he had composed, which was then copied, read over, and carefully corrected. His life, by George Ticknor, was published in 1864.

Prescott, an extreme N.E. co. of prov. of Ontario; area, abt. 475 sq. m. Rivers, Ottawa and Nation rivers. Cap. L'Orignal.

Prescott, cap. of co. Grenville, Ontario.

Prescott, in Arizona, a city, cap. of Yavapai co., and formerly the seat of the territorial government, about 500 m. S. of Salt Lake City, Utah; Lat. 34° 7' N., Lon. 112° 20' W. Rich gold and silver mines are worked in the vicinity. Pop. (1897) 2,450.

Prescott, in Indiana, a post-village of Shelby co., abt. 5 m. S.S.W. of Shelbyville.

Prescott, in Massachusetts, a post-township of Hampshire co.

Prescott, in Minnesota, a township of Faribault co.

Prescott, in Wisconsin, a city of Pierce co., on Mississippi river and the Chicago, Burl. & Quincy R.R., 16 m. S. of Hudson. Pop. (1895) 966.

Prescribe, v. a. To set or lay down authoritatively for direction; to direct.

(Med.) To direct, as a remedy.

—*v. n.* To give law; to influence arbitrarily; to dictate. (Med.) To write or give medical directions; to direct what remedies are to be used.

(Law.) To claim a title to a thing on the ground of long or immemorial usage. See **PRESCRIPTION**.

Prescriber, n. One who prescribes.

Prescript, a. [Lat. *prescriptus*.] Directed; accurately laid down in a precept.

—*n.* [Lat. *prescriptum*.] Direction; precept; model prescribed.—A medical order; a prescription.

Prescriptibility, n. Quality of being prescriptible.

Prescriptible, a. That may be prescribed for.

Prescription, n. [Lat. *prescriptio*.] The act of prescribing, or that which is prescribed;—particularly, a medical direction of remedies for a disease, and the manner of using them; a recipe.

(Law.) A title acquired by use and time to incorporeal hereditaments, such as a right of way or of common, and the like. All prescription is either personal, as when it is in a man and his ancestors, or it is in right of a particular estate; which last being in a man, and those whose estate he hath, is called prescription in a *que* estate. It presupposes a lost grant, and can therefore give a title to those things only which can pass by grant. In almost all the States there are express statute provisions regulating the doctrine of prescription. Generally an uninterrupted possession of 20 years is required for the acquisition of real rights. In Massachusetts, Maine, Indiana, and other States, a notification by the owner of the land to the occupant, that his intention is to contest the title, may defeat prescriptive acquisition.

Prescriptive, a. Consisting in, or acquired by prescription; immemorial use and enjoyment; pleading the continuance and authority of custom.

Presence, n. [Fr. *présence*; Lat. *præsentia*.] State of being present; the existence of a person or thing in a certain place.—A being in company near or before the face of another.—Approach face to face, or nearness of a great personage; state of being in view of a superior; a number assembled before a great person; port; mien; air; personal appearance; demeanor; the apartment in which a prince shows himself to his court.—The person of a superior.

"To her the sov'reign presence thus reply'd."—Milton.

—Readiness at need; quickness at expedient.

"Nothing comparable to... ready presence of mind."—L'Estrange.

Presence-chamber, PRESENCE-ROOM, n. The room in which a great person receives company.

Presensation, n. A precedent or previous thought or feeling.

Present, a. [Fr. *présent*; Lat. *præsens*.] Being close at hand or in view; being in a certain place;—opposed to *absent*.—Being before the face or near; being in company.—Being now in view or under consideration.—Non-existing, or being at this time; not past or future.—Ready at hand; quick in emergency.—Favorably attentive; not heedless; propitious.—Not absent of mind; not abstracted; attentive.—A term used in an inscription on a letter, when the letter is written in the place where the person to whom it is addressed resides. (United States.)

At present. At the present time.

Present tense, (Gram.) A tense denoting an action or event as passing at the time in which it is mentioned. It likewise expresses a character, quality, general truth, or customary action, &c.; as, "He is an able man;" "Vice produces misery." Preceded by the words *when*, *before*, *after*, &c., it is sometimes used to point out the relative time of a future action; as, "When he arrives he will hear the news." In animated historical narrations, it is sometimes substituted for the imperfect tense.

Worcester.

Present, n. An offering; that which is presented or given; something given or offered to another gratuitously; a donation; a gift; a benefaction.—The *present* time.

Present, v. a. [Fr. *présenter*; L. Lat. *præsentō*, to offer.] To set, place, or introduce into the presence or before the face of a superior.—To exhibit to view or notice.—To offer; to exhibit; to give; to offer gratuitously for reception; to put into the hands of another in ceremony; to favor with a gift.—To nominate to an ecclesiastical benefice.—To offer openly; to proffer; to lay before a public body for consideration.—To point or direct, as a weapon, particularly some species of firearms.

Presentable, (pre-zent'a-bil), a. [Fr. *présentable*.] That may be presented; that may be exhibited or represented; that may be offered to a church-living.

Presentation, (préz-én-tā'shūn), n. [Fr. *présentation*.] Act of presenting; exhibition; representation; display.

(Ecccl. Law.) Act of offering a clergyman to the bishop or ordinary for institution in a benefice; the right of presenting a clergyman.

P. at court. When English subjects, or inhabitants of other countries, entitled to the privilege by rank and honor, pay a visit to Her Majesty on one of the stated public occasions, they are said to be *presented at court*. At a *levée* the gentlemen alone appear; but at the *drawing-room*, both ladies and gentlemen are presented. At the *levées*, no persons are allowed to remain in the throne-room after having passed Her Majesty, except the ministers, and the great officers of the household upon duty. At the drawing-rooms, those who are allowed to remain are the ladies of the ministers, of the great officers of the household, and of the foreign ministers.

P., Feast of. (Ecccl.) A Roman Catholic feast; otherwise called the Purification of the Blessed Virgin. See **PURIFICATION**.

Present'ative, *a.* That of which presentations may be made.

Presentee', *n.* (*Eccl. Law.*) One presented to a benefice.

Present'er, *n.* One who presents.

Presentient, (*pre-sen'she-ent*), *a.* Which has a previous sensation, or perceives beforehand.

Presentiment, *n.* [*Fr.*, from *Lat. præ*, and *sentio*.] Previous apprehension of something future.

Presentiment'al, *a.* That relates to, or has presentiment.

Presently, (*prez'ent-li*), *adv.* Immediately; directly; speedily; shortly; soon; in a short time after; soon after.

Presentment, (*pre-zent'ment*), *n.* Act of presenting. — Appearance to the view; presentation.

(*Law.*) The notice taken by a grand-jury of any offence from their own knowledge or observation, without any bill of indictment laid before them at the suit of the government; as, the *presentment* of a nuisance or the like. — Also, the writing which contains the accusation so presented by a grand-jury.

(*Com.*) The production of a bill of exchange or promissory note to the party on whom the former is drawn, for his acceptance, or to the person bound to pay either, for payment.

Presentoir, (*prez'ong-twor'*), *n.* [*Fr.*] An ornamental cup, very shallow, and having a tall, enriched stem; it

Fig. 2157. — PRESENTOIR.

was a decorative article of luxury, serving no particular use; but was much fabricated in the 16th century, at which period the one engraved (Fig. 2157) was executed.

Preserv'able, *a.* That may be preserved.

Preservation, (*pre-zer-va'shun*), *n.* [*It. preservazione*; *Sp. preservacion*.] Act of preserving or keeping safe; the act of keeping from injury, destruction, or decay.

Preserv'ative, *a.* [*Fr. préservatif*.] Having the power or quality of preserving, or of keeping safe from injury, destruction, or decay; tending to preserve.

—*n.* That which preserves, or has the power of preserving; a preventive of injury or decay.

Preserv'atory, *n.* That which preserves; preservative.

—Having power to preserve; preservative.

Preserve', *v. a.* [*Fr. préserver*, from *Lat. præ*, and *servo*, to save, to deliver.] To rescue; to save or keep from injury or destruction. — To keep in safety or security; to protect; to shield; to guard; to defend; to spare. — To keep from decay; to keep in a sound state. — To season with sugar or other substances for preservation. — To keep from corruption. — To maintain or keep throughout, as appearances.

—*n.* Something that is preserved; fruit or vegetables seasoned and kept in sugar or syrup; a place for the shelter and preservation of animals intended for sport or food, as game, fish, &c.

Preserver, *n.* The person or thing that preserves; one who saves or defends from destruction or evil.

Preshow', *v. a.* To show beforehand; to foreshow.

Preside', *v. n.* [*Fr. présider*; *Lat. presidere* — *præ*, and *sedeo*, to sit.] To be set over for the exercise of authority; to direct, control, and govern, as the chief officer; — (usually with *over*), to exercise superintendence over; to watch over as inspector.

Pres'idency, *n.* [*Fr. présidence*.] Act of presiding; superintendence; inspection and care; the office of president; the term during which a president holds his office; the jurisdiction of a president.

Pres'ident, *n.* [*Fr.*; *Lat. presidens*.] One who presides; a presiding officer. — An officer elected or appointed to preside over a corporation, company, or assembly of men. — An officer appointed or elected to govern a province or territory, or to administer the government of a nation. — The supreme executive officer of the United States of America is styled *president*. The qualifications required of a person raised to this dignity are, to be a natural-born citizen of the age of 35 years, and to have resided 14 years within the States. The election is by electoral colleges in every State. These colleges contain, in each State, a number of electors equal to all the senators and representatives of that State in Congress. The colleges in each State vote by ballot for a *P.* (and at the same time for a vice-*P.*); and the votes of all the electors, taken in this manner, are counted by the *P.* of the Senate; if in this numeration any person is found to have an absolute majority of votes, he is duly elected; if not, the election is made by

the House of Representatives between the three persons having the highest number; in which case the votes are taken by States, and a majority of all the States is necessary to constitute a choice. On two occasions, of which the last was in 1824, no candidate having had a majority of the whole number of votes, the House of Representatives has proceeded to make the election; and, on the last of these occasions, a majority of States chose a candidate (Adams) who had a smaller number of electoral votes than one of his opponents (Jackson). On one occasion, in 1800, the States balloted 36 times before any candidate could obtain an absolute majority. Should the *P.* die during his term of office, he is succeeded by the vice-*P.* In this manner the ex-*P.*, Andrew Johnson, succeeded to the office on the assassination of Abraham Lincoln. In his legislative capacity, the *P.* has the power of approving bills sent to him after passing both houses of Congress, or of returning them to the house in which they originated with his objections annexed. In the latter case, the bill must be reconsidered by that house; and if, on reconsideration, it obtain a majority of two-thirds in both houses, it passes into a law. In his executive capacity, he is commander-in-chief of the army and navy of the Union, and of the State militias when called into the service of the Union; he has the power of reprieving and pardoning except in cases of impeachment; he has power to make treaties, with the consent of the Senate (by a majority of two-thirds); he nominates ambassadors, consuls, judges of the supreme court, and all other officers of the United States, whose appointments are not vested elsewhere by the Constitution, but all nominations are subjected to the approval of the Senate. The *P.* holds his office for the term of four years, and is eligible for successive terms; but no one has ventured, contrary to public opinion, to be a candidate for a third term. See *ELECTORAL SYSTEM OF THE U. S.*, by McKnight, N. Y., 1878.

Pres'ident, in *Penn.*, a *v.* and *twp.* of Venango co.

Presiden'tial, *a.* Presiding over. — Pertaining to a president.

Pres'identship, *n.* The office or place of president. — The term for which the president holds his office.

Presid'er, *n.* One who presides.

Presid'ial, **Presid'iary**, *a.* [*Lat. presidialis*, from *presidium*, a defence.] That has a garrison, or relates to it.

Presidio de São João Baptista, a town of Brazil, abt. 110 m. E.S.E. of Onro Preto.

Presignification, *n.* [*Lat. presignificatio*.] Previous intimation; act of signifying beforehand.

Presignify, *v. a.* To intimate or signify beforehand; to show previously.

Presque Isle, (*presk'eel*), in *Maine*, a post-village and township of Aroostook co., about 150 m. N.E. of Bangor.

Presque Isle, in *Michigan*, a N.E. co. of the lower peninsula bordering on Lake Huron; area, about 715 sq. m. Surface, nearly level; soil, generally fertile. *Cap. Rogers*. *Pop.* (1894) 5,910.

Press, *v. a.* [*Fr. presser*; *It. pressare*, to urge, to hurry, from *Lat. pressare*, to press.] To urge with force or weight; to apply any power physical or moral to something that is to be moved or affected. — To squeeze; to crush. — To squeeze for making smooth, as cloth or paper. — To drive with violence; to hurry; to urge. — To embrace closely; to hug. — To force into service; to impress. — To urge by authority or necessity; to impose by importunity; to solicit with earnestness or importunity.

—*v. n.* To bear on heavily, or with force; to urge or strain in motion. — To crowd; to throng; to encroach. — To urge by influence or moral force; to urge with vehemence or importunity. — To approach unsensuously or importunately.

—*n.* An instrument or machine by which any body is crushed, squeezed, or forced into a more compact form.

—A machine for printing; a printing-press. See *PRINTING*.

—The art or business of printing and publishing; — hence, the publications issued from the *press*, taken collectively. — A case or closet for the safe-keeping of clothes, &c. — Act of urging or pushing forward. — Urgency; urgent demands of affairs. — A crowd; a throng; a multitude of individuals crowded together. — A commission to force men into the military or naval service; impressment.

Press-bed, *n.* Bed so formed as to be shut up in a case.

Press'er, *n.* One who presses, or that works at a press.

Press-gang, *n.* A term applied in England to a detachment of seamen, who, under the command of a naval officer, were formerly empowered, in time of war, to take any seafaring men, and oblige them to serve on board the king's ships.

Press'ing, *a.* Urgent; importunate; distressing.

Press'ingly, *adv.* In a pressing manner; with force; closely.

Pression, (*presh'un*), *n.* The act of pressing. (*o.*) (*Cartesian Philos.*) An endeavor to move.

Pressirosters, *n. pl.* [*Lat. pressus*, flattened, *rostrum*, a beak.] A tribe of wading birds, including those which have a flattened or compressed beak, as the bustards, plovers, &c.

Press'man, *n.*; *pl.* **PRESSMEN**. (*Print.*) One who manages the press and impresses the sheets in printing. — One who forces another into service; one who forces away.

Press-money, *n.* Money given to a soldier when he is taken or forced into the service.

Press-pack, *v. a.* To compress by a hydraulic or other press.

Press-proof, *n.* (*Printing*.) A good impression of a

sheet, by which it is read over carefully before being printed off.

Pressurage, (*presh'ur-aj*), *n.* [*Fr.*] The juice of the grape extracted by the press. — A fee paid to the owner of a wine-press for its use.

Pressure, (*presh'ur*), *n.* [*Lat. pressura*, from *premo*, *pressus*, to press.] Act of pressing or crushing; act of urging with force. — A constraining force or impulse; that which urges or compels the intellectual or moral faculties. — That which afflicts the body or depresses the spirits; any severe affliction, distress, calamity, or grievance. — Urgency, as the *pressure* of business. — Impression; stamp, character impressed.

(*Mech.*) A force counteracted by another force, so that no motion is produced. Thus, when a heavy body is supported on a table, or the ground, the force of terrestrial gravity, which, if the support were removed, would cause the body to descend towards the centre of the earth, being destroyed at every instant by the resistance of the support, produces pressure. A pressure and a moving force differ from one another only in this respect, that the infinitely small velocities which the pressure tends to produce are incessantly destroyed by the resistance of the obstacle; whereas those that are actually produced at every instant by the moving forces are accumulated in the moving body, and produce a finite velocity after a finite time. The pressures of two different bodies are, therefore, to each other as the masses multiplied by the infinitely small velocities which they tend to produce in the same instant of time, and which they would produce if the bodies were free to move.

Press'work, *n.* (*Printing*.) The operation of taking impressions from types, &c., by means of the press; — distinct from *composing*, which is arranging the types to prepare them for press. — By *fine presswork* is meant work printed with the best paper and ink, and with the utmost care.

Pres'table, *a.* Payable. (*Scot.*)

Pres'ter John, **PRESBYTER**, or **PRIEST JOHN**, a name given in the Middle Ages to a supposed Christian sovereign, said to hold his empire in some central part of Asia (Thibet), though, according to the Portuguese, he was king of Abyssinia. Oungh Khan, Khan of the Khirm Tartars, in the beginning of the 13th century, is, however, regarded as the actual individual mentioned as *Pres'ter John*, that person having taken priest's orders, thereto induced by the missionaries who had penetrated the country through Mesopotamia and Armenia, followers of the Nestorian creed.

Pretezza, (*tit-zah*), [*It.*] (*Mus.*) Quickness; rapidity.

Prestdigitat'ion, *n.* Skill in legerdemain; jugglery.

Prestdigitat'or, *n.* [*Lat. presto*, quickly, and *digitus*, a finger.] One skilled in legerdemain; a juggler.

Prestige, (*pres'tij*), *n.* [*Fr.*; from *Lat. præstigium*.] Illusion; charm; fascination; imposture. — Influence of character or of conduct; moral influence arising from past successes or achievements, regarded as the pledge or promise of future successes.

Prestis'simo, *adv.* [*It. superl. of presto*, quick.] (*Mus.*) With great rapidity.

Pres'to, *adv.* [*It.* and *Sp.*] Immediately; quickly; at once.

(*Mus.*) A direction that a piece should be performed in a rapid, lively manner.

Pres'ton, a town of England, co. of Lancaster, on a gentle elevation above the Ribble, about 15 m. from its confluence with the Irish Sea, 28 m. N.E. of Liverpool. The principal public buildings are the court-house, town-hall, exchange, assembly-rooms, and custom-house. It is the seat of an institution for diffusing useful knowledge, with an extensive library, good museum, and an agricultural society. *Manuf.* Linen and cotton. *Pop.* (1897) 112,750.

Pres'ton, in *California*, a village of Marin co., abt. 30 m. N.W. of San Rafael.

Preston, in *Connecticut*, a post-village, and township of New London county, about 3 miles E. of Norwich.

Preston, in *Georgia*, a village, cap. of Webster co., abt. 45 m. S.S.E. of Columbus.

Preston, in *Illinois*, a post-village of Randolph co., abt. 32 m. S.E. of Belleville. — A township of Richland co.

Preston, in *Kentucky*, a village of Carroll co., on the Kentucky River, opposite Carrollton.

Preston, in *Minnesota*, a post-village, township, and cap. of Fillmore county, abt. 33 m. S.E. of Rochester. *Manuf.* Woollens, flour, beer, and wagons.

Preston, in *Mississippi*, a post-village of Yallobusha co., abt. 15 m. N.N.W. of Grenada.

Preston, in *Missouri*, a village of Jasper co., abt. 65 m. W. of Springfield. — A *twp.* of Platte co.

Preston, in *New York*, a post-township of Chenango co.

Preston, in *Ohio*, a village of Muskingum co., abt. 17 m. N.E. of Zanesville.

Preston, in *Pennsylvania*, a post-village and township of Wayne co., abt. 29 m. N. by W. of Honesdale. The *twp.* contains numerous small lakes and has manufactures of leather.

Preston, in *Texas*, a village of Grayson co., abt. 18 m. N. of Sherman. — A village of Wharton co., abt. 77 m. W. of Galveston.

Preston, in *West Virginia*, a N.E. co., adjoining Pennsylvania and Maryland; area, about 709 sq. m. *River*. Cheat river. *Surface*, diversified; *soil*, moderately fertile, and well adapted to grazing. *Min.* Limestone, slate, and sandstone. *Cap.* Kingwood. *Pop.* (1897) 21,250.

Preston, in *Wisconsin*, a township of Trempealeau county.

Prestonburg, in Kentucky, a post-village, capital of Floyd co., abt. 120 miles E.S.E. of Lexington; pop. abt. 250. This village gives its name to an engagement fought in the vicinity, Jan. 7, 1862, between Col. J. A. Garfield at the head of about 3,000 Nationals, and about 2,500 Confederates under Col. Marshall. The latter, after a desperate resistance, were completely routed.

Preston Hollow, in New York, a post-village of Albany co., abt. 30 m. W.S.W. of Albany.

Prest-sail, *n.* (*Naut.*) All the sails which a ship can carry.

Presumable, *a.* [*Fr.*] That may be supposed to be true, or entitled to belief, without examination or direct evidence, or on probable evidence.

Presumably, *adv.* Without examination.

Presume, *v. a.* [*Fr. présumer*; *Lat. prasumo*, from *præ*, and *sumo*, *sumptus*, to take.] To assume or take beforehand.—To take, or suppose, to be true, or entitled to belief, without examination or positive proof, or on the strength of probability.

—*v. n.* To arrogate; to venture without positive permission.—To act with great confidence, with *on* or *upon* before the ground of confidence; as, he *presumed* on his ability.—To suppose; to affirm without immediate proof; to believe without previous examination.

Presumer, *n.* One who presupposes; an arrogant person.

Presumpting, *adv.* With presumption; confidently.

Presumption, (*pre-zum'shun*), *n.* [*Lat. præsumptio*.] Act of presuming; belief previously formed; supposition of the truth or real existence of something, without direct or positive proof of the fact.—Strong probability; evidence probable but not conclusive.—Blind or headstrong confidence; arrogance; presumptuousness.—A venturing to undertake something without reasonable prospect of success, or against the usual probabilities of safety.

(*Law.*) The assuming the truth of a certain state of facts by the ordinary custom of law. It is either *juris et de jure*, which is a presumption which no evidence to the contrary can be admitted to traverse, as the presumption of incapacity in a minor with guardians to act without their consent; or it is *juris* only, which may be traversed by evidence, as where the property of goods are presumed to be in the hands of the possessor until the contrary is shown.

Presumptive, *a.* [*Fr. présomptif*.] Taken by previous supposition; grounded on probable evidence.—Unreasonably confident; adventuring without reasonable ground to expect success; presumptuous; arrogant.

P. evidence, (*Law.*) Any evidence which is not direct and positive. The proof of facts from which, with more or less certainty, according to the experience of mankind of their more or less universal connection, the existence of other facts can be deduced. The evidence afforded by circumstances, from which, if unexplained, the jury may or may not infer or presume other circumstances or facts.

P. heir. One who, if the ancestor should die immediately, would, under existing circumstances of things, be his heir, but whose right of inheritance may be defeated by the contingency of some nearer heir being born; as, a brother, who is the presumptive heir, may be defeated by the birth of a child to the ancestor.

Presumptively, *adv.* By presumption, or supposition grounded on probability.

Presumptuous, (*pre-zum'tyu-us*), *a.* Bold and confident to excess; adventuring without reasonable ground of success.—Founded on presumption; proceeding from excess of confidence.—Done with bold design, rash confidence, or in the violation of known duty.

Presumptuously, *adv.* With rash confidence; arrogantly; insolently; wilfully.—In bold defiance of conscience or violation of known duty.

Presumptuousness, *n.* Quality of being presumptuous or rashly arrogant; groundless confidence; arrogance; irreverent boldness or forwardness.

Presuppos'al, *n.* Supposal previously formed.

Presuppose, (*pre-sup-oz'*), *v. a.* [*Fr. présupposer*.] To suppose as previous; to imply as antecedent.

Presupposition, (*-zish'un*), *n.* Supposition previously formed.—Act of presupposing.

Presurmise, *n.* A surmise previously formed.

Pretence, *n.* Same as **PRETENSE**, *q. v.*

Pretend, *v. a.* [*Fr. prétendre*; *Lat. pretendo*, from *præ*, and *tendo*, to stretch.] To hold out, as a false appearance; to counterfeit.—To offer, as something feigned instead of that which is real; to assume or profess to feel; to show hypocritically.—To claim.

—*v. n.* To put in a claim truly or falsely; to hold out the appearance of being, possessing, or performing;—usually with *to*.

Pretend'ant, *n.* A pretender; one who lays claim to anything.

Pretend'edly, *adv.* By false appearance or representation.

Pretend'er, *n.* One who pretends or makes a show of something not real.

(*Eng. Hist.*) An epithet applied to the son and grandson of James II., who pretended to the throne of England.

Pretend'ingly, *adv.* Arrogantly; presumptuously.

Pretense, **Pretence**, *n.* [*Lat. pretensus, pretensa*, from *pretendere*.] A holding out or offering to others something false or feigned; a pretending to others a false or hypocritical appearance.—Show; appearance; pretext.—Claim to notice; claim, true or false; assumption.

(*Her.*) An *escutcheon* of *P.* is a small shield placed in the centre of the field of another shield. The husband of an heiress may bear the arms of his wife in an

escutcheon of pretence, instead of impaling them. Feudal arms are also sometimes placed on an escutcheon of pretence, particularly in the insignia of elective sovereigns, who have been in the habit of bearing their own proper arms in surcoat over those of the dominions to which they are entitled.

Pretenseless, *a.* Without pretences, or pretense.

Pretension, (*pre-ten'shun*), *n.* A claim true or false; a holding out the appearance of right or possession of a thing, with a view to make others believe what is not real, or what, if true, is not yet known or admitted.—Claim to something to be obtained, or a desire to obtain something, manifested by words or actions.

Pretentious, (*pre-ten'shus*), *a.* Presuming; claiming more than one's due.

Pretentious, *adv.* In a pretentious manner; with pretention.

Pretentiousness, *n.* The state or quality of being pretentious.

Pre'ter, a particle, from *Lat. prator*, which prefixed to words of Latin origin, signifies *beside*.

Preterhuman, *a.* Superhuman; beyond anything human.

Pre'terient, *a.* Passed through; antecedent; previous.

Preterimperfect, *a.* (*Gram.*) Denoting the tense not perfectly past; designating the tense of the verb which expresses action, or being not perfectly past, more usually called the *imperfect tense*.

Preter'it, *n.* One who has regard to the past.

Preter'it, *a.* (Written also *praterite*, and *preterite*.) [*Lat. prateritus*, from *praterire*, to go or pass by.] (*Gram.*) Past; applied to the tense of a verb which expresses an action or being perfectly past or finished; often that which is just past or completed, but without a specification of time, usually called the *perfect tense*.—The past or perfect tense.

Preterition, (*pre-ter-ish'un*), *n.* [*Lat. prateritio*.] The act of going past; the state of being past.

(*Rhet.*) A figure by which a speaker, in pretending to pass over anything, makes a summary mention of it; as, "I will not mention his pride."

(*Law.*) The omission by a testator of some one of his heirs who is entitled to a portion in the succession.

Preter'itive, *a.* (*Gram.*) Noting verbs chiefly or exclusively used in the past tense.

Preter'lapsed, *a.* [*Lat. praterlapsus*, from *praterlabi*, to flow by.] Past and gone;—as, *preterlapsed* ages.

Preterle'gal, *a.* Not agreeable to law; not legal. (*R.*)

Pretermission, (*-mish'un*), *n.* (*Rhet.*) Same as **PRETERITION**, *q. v.*

Pretermit, *v. a.* [*Lat. pratermitto*, from *prater*, and *mitto*, to send.] To pass by; to omit.

Preternatural, *a.* Beyond or different from what is natural; irregular; abnormal; anomalous.

Preternaturally, *adv.* In a manner beyond or aside from the common order of nature.

Preternaturalness, **Preternatural'ity**, *n.* Manner different from the order of nature.

Preterperfect, *a.* [*Lat. prater and perfectus*, perfect.] (*Gram.*) Designating the tense of verbs which express action, or being absolutely past;—more usually called the *perfect tense*.

Preterplu'perfect, *a.* [*Lat. prater, plus*, more, and *perfectus*.] (*Gram.*) Designating the tense of verbs which express action, or being past at or before another past event or time;—usually called the *pluperfect tense*.

Pretervection, *n.* A carrying past or round.

Pretext, *n.* [*Fr. prétexte*; *Lat. pretextum*, from *præ*, and *texo*, to weave.] Ostensible reason or motive assigned or assumed to conceal or disguise the real reason or motive.

Pre'tor, *n.* (*Roman Antiq.*) See **PRÆTOR**.

Preto'rian, *n.* and *a.* See **PRÆTORIAN**.

Preto'rium, *n.* See **PRÆTORIUM**.

Prettily, (*pritt'i-ly*), *adv.* In a pretty manner; pleasantly; with neatness and taste.

Prettiness, (*pritt'i-ness*), *n.* The state or quality of being pretty; diminutive beauty; a pleasing form, without stateliness or dignity.—Neatness and taste displayed on small objects; decency of manners; pleasing propriety without dignity or elevation.

Pretty, (*pritt'y*), *a.* [*A. S. prate*, adorned; *Dan. pryde*, to adorn; *Ir. breadh*, fine; *W. prid*, beauty.] Having diminutive beauty; of a pleasing form, without the strong lines of beauty, or without gracefulness and dignity.—Neat and appropriate without magnificence or splendor.—Contemptible; mean; as, a *pretty* fellow, indeed.—Foppish; affectedly nice;—used in a bad sense.

—*adv.* In some degree; tolerably; moderately.

Pret'yism, *n.* Affecting prettiness. (*R.*)

Pret'y-spoken, *a.* Prettily spoken.

Pretyp'ify, *v. a.* To prefigure; to exhibit previously in a type.

Prevail, *v. n.* [*Fr. prévaloir*; *Lat. prævaleo*, from *præ*, and *valeo*, to be strong.] To overcome; to gain the victory or superiority; to gain the advantage;—sometimes with *over* or *against*.—To be in force; to have effect, power, or influence; to be predominant;—frequently followed by *with*.—To persuade or induce;—used with *on*, *upon*, or *with*.

Prevail'ing, *a.* Having more influence; superior in power; having efficacy or effect, as prayer.—Most common or general; predominant.

Prevail'ingly, *adv.* So as to prevail or have success.

Prevalence, *n.* [*Lat. prævalencia*.] Superiority; superior strength, influence, or efficacy; most efficacious force in producing an effect.—Most general reception or practice; predominance.—Most general existence or extension; as, the *prevalence* of disease.

Prev'alency, *n.* Same as **PREVALENCE**, *q. v.*

Prev'alent, *a.* Gaining advantage or superiority; efficacious.—Most generally received or current; as, a *prev'alent* opinion.—Most general; extensively existing.

Prev'alently, *adv.* With predominance or superiority; powerfully; forcibly.

Prevaricate, *v. n.* [*Fr. prévariquer*; *Lat. prævaricor*, from *præ*, and *varicus*, with feet spread apart.] To shift or turn from one side to the other, or from the direct course; to swerve from rectitude, uprightness, and truth. (*Civil Law.*) To act with unfaithfulness and want of probity.

Prevarica'tion, *n.* [*Lat. prævaricatio*.] A shuffling or quibbling to evade the truth or the disclosure of truth.

(*Civil Law.*) The acting with unfaithfulness and want of probity.—The term is applied principally to the act of concealing a crime.

Prevarica'tor, *n.* One who prevaricates; a shuffler; a quibbler.

(*Civil Law.*) One who acts with unfaithfulness and want of probity.

Pre've'nience, *n.* Act of going before or anticipating. (*R.*)

Pre've'nient, *a.* Preceding; going before.—Preventive.

Prevent, *v. a.* [*Lat. prævenire*, from *præ*, before, and *venire*, to come.] To stop or intercept, as the approach, access, or the performance of a thing; to hinder; impede; to obstruct.

Preventability, *n.* State or quality of being preventable.

Prevent'able, *a.* That may be prevented or hindered.

Prevent'ative, *n.* A thing which prevents;—sometimes incorrectly used for *preventive*, *q. v.*

Prevent'er, *n.* One who hinders.—Anything that obstructs.

(*Naut.*) An additional rope or spar used as a support.

P. bolts, (*Naut.*) Those which are driven at the lower end of the preventer plates, to assist the strain of the chain-bolts.—**P. plates**. Plates of iron below the links of the chain.

Prevent'ingly, *adv.* In a way to hinder.

Prevention, *n.* Act of hindering; hindrance; obstruction of access or approach.—Prejudice; prepossession. (*A Gallicism*.)

Preventive, *a.* Tending to prevent or hinder; hindering the access of.

—*n.* That which prevents; that which intercepts the access or approach of.

(*Med.*) An antidote previously taken to ward off disease.

Prevent'ively, *adv.* In such a manner as tends to prevent.

Preve'sa, a fortified seaport-town of European Turkey, in Albania, on the Gulf of Arta, 18 m. S.W. of Arta; Lat. 38° 56' N., Lon. 20° 44' E.; pop. 8,000.

Pre'vious, *a.* [*Lat. prævious*, from *præ*, and *via*, the way.] Going before in time; being or happening before something else; antecedent; prior; as, *pre'vious* intimation; *pre'vious* to the storm.

Pre'viously, *adv.* In time preceding; beforehand; antecedently.

Pre'viousness, *n.* Antecedence.

Pre'wise, *v. a.* To foresee. (*R.*)

Prevision, (*-vish'un*), *n.* [*Fr.*, from *Lat. prævidere*.] Foresight; prescience.

Prévost d'Exiles, ANTOINE FRANÇOIS, commonly called L'ABBÉ PRÉVOST, one of the most fertile of French writers, b. at Hesdin, 1697. His works amount to 170 vols., of which the smallest one, *Histoire du Chevalier Desgrieux et de Maron Lescaut*, has immortalized the name of Prévost. D. 1763.

Prévost-Pa'radol, LUCIEN ANATOLE, a French political writer, b. at Paris, 1829. In 1851 he obtained from the Académie Française the prize for eloquence, for his *Eloge de Bernardin de Saint-Pierre*. In 1856 he became one of the editors of the *Journal Des Débats*, and was elected a member of the French Académie in 1865. His literary and political essays are among the soundest, the most acute, the most scholarly, and the most elegant that have proceeded from the French journalists of the empire. We may mention in particular his *Elisabeth et Henri IV.*; *Jonathan Swift* (in Latin); *Revue de l'Histoire Universelle* (1854); *Du Rôle de la Famille dans l'Éducation* (1857); *Nouveaux Essais de Politique et de Littérature* (1862); *Étude sur les Moralistes Français* (1864). In 1870 P.-P. came to this country to represent France as minister-plenipotentiary, and he was at Washington only a few days when he committed suicide.

Prewarn, *v. a.* To warn beforehand; to give previous notice of.

Prey, (*pra*), *n.* [*Fr. proie*; *It. preda*; *Lat. præda*, property taken in war.] Any property taken by force in war; spoil; booty; plunder.—That which is seized, or may be seized, by violence, to be devoured; raven.—Ravage; depredation.

—*v. n.* To rob; to plunder; to pillage.—To feed by violence, or to seize and devour.—To corrode; to waste gradually; to cause to pine.—With *on* or *upon*.

Preyer, (*pra'er*), *n.* A plunderer; a robber; a devourer.

Priam, (*Heroic Hist.*) A king of Phrygia, and the last sovereign of Troy. Soon after his accession, the discovery of a gold mine in his kingdom enabled him to enlarge and beautify his capital, strengthen its defences, and raise a powerful army. Under his reign Troy was regarded as the largest, richest, and most magnificent city, and himself as the most powerful monarch in Lesser Asia. By his first wife he had only one child; but by Hecuba, his second queen, he had a numerous family. The perfidy of his son Paris in eloping with Helen led to the long and fatal war, which, after endur-

ing for ten years, terminated in the entire overthrow of the state, the destruction of Ilium, the death of most of his sons, and his own murder by the ruthless Pyrrhus, the son of Achilles, as, enfeebled by age, he clung to the horns of his domestic altar. Priam's death occurred about 1184 B. C.

Priapean, *n.* [Lat., prose.] A hexameter verse that may be divided into two portions of three feet each, having generally a trochee in the first, and four feet and an amphimacer in the third.

Priapism, *n.* [Fr. *priapisme*, from Gr. *priapos*, the god of procreation.] (Med.) Constant and distressing erection without any exciting cause.

Priapus, (*Myth.*) A type of fecundity, son of Bacchus and Venus, or of Bacchus and a Naiad, or of Adonis and Venus, &c. He was represented in the form of Ilernæ, or a head placed on a quadrangular pillar, painted red. He was placed in gardens and vineyards, with the phallus for an emblem.

Price, *n.* [Fr. *prix*; It. *prezzo*; Lat. *pretium*.] The sum or amount of money at which a thing is valued, or a value which a seller sets on his goods in market; the sum or equivalent given for an article; the current value or rate paid for any species of goods. — Estimation; excellence or worth. — Reward; recompense.

Price-current or **price-list**. A list or enumeration of various articles of merchandise with their present market prices stated.

—*v. a.* To set a price on.

Priceless, *a.* Too valuable to admit of a price; invaluable; inestimable. — Without value; worthless or unsaleable.

Prick, *v. a.* [A. S. *priccian*; Du. *pricken*.] To pierce with a sharp-pointed instrument or substance. — To fix by the point; to hang on a point. — To nominate by a puncture or mark; to denote by pricking. — To spur; to goad; to impel; to incite. — To affect with sharp pain; to sting with remorse. — To form or erect with an acuminated point. — To write a musical composition with the proper notes on a scale; to mark a tune. — To make acid.

(Naut.) To run a middle seam through, as the cloth of a sail; to trace a ship's course on a chart.

—*v. n.* To come upon the spur; to shoot along. — To aim at a point, mark, or place. — To be pierced or punctured. — To turn acid or sour.

—*n.* [A. S. *prica*, *pricca*.] A slender-pointed instrument, or substance which is hard enough to pierce the skin; a goad; a spur. — Sharp, stinging pain; remorse. — A spot or mark at which archers aim; a point; a fixed place. — A puncture or place entered by a point. — The print of a hare on the ground.

(Naut.) A quantity of spun yarn or rope laid close up together; a roll.

—*v. n.* To dress one's self for show.

Prickard, JAMES COWLES, an eminent English ethnologist, who was B. at Ross, 1755, and received his education for the medical profession at Edinburgh. His inaugural thesis, when taking his M. D. degree, was the physical history of mankind, and to that subject his attention continued to be developed till, in 1813, his *Physical History of Mankind* was produced. In that work, not only anatomy and physiology, but also philology, was introduced, to found a systematic history of the races of mankind. This work has been several times reprinted, has been translated into French and German, and is generally admitted to be one of the best works of its class. P. also devoted much attention to the study of nervous and mental diseases, and was appointed visiting physician to the Gloucestershire Lunatic Asylum, and, in 1845, became one of the commissioners of lunacy. He was fellow of the Royal, and president of the Ethnological Society, and, upon the installation of the late Duke of Wellington as chancellor of the University of Oxford, P. was nominated M. D. of that seat of learning. His principal works were, *On the Crania of the Laplanders and Finlanders*; *On the Eastern Origin of the Celtic Language*; *An Analysis of Egyptian Mythology*; *On the Different forms of Insanity in relation to Jurisprudence*; and a *Review of the Doctrines of the Vital Principle*. D. 1848.

Prick'er, *n.* A sharp-pointed instrument, as that used to make a hole for the fusee or match to fire a blast; a prick; a prickie; a bodkin.

(Naut.) A small marine-spike having generally a wooden handle.

Prick'et, *n.* A buck in his second year.

Prick'ing, *n.* Act of piercing with a sharp point. — A sensation of sharp pain, or of being pricked.

(Far.) The driving a nail into a horse's foot so as to cause lameness.

(Hunting.) The tracing of a hare by its footing.

Prick'ing-up, *n.* (Arch.) The first coating of plaster in work of three coats; — so called because the surface is scratched up.

Prickle, (*prik'l*), *n.* [A. S. *priccle*; Du. *prikkel*; Ger. *prickel*.] (Bot.) Strong and hard, elongated and pointed hair. The prickle is connected only with the bark, and not with the wood, in which it essentially differs from the spine or thorn. Prickles are sometimes straight, sometimes curved. They have often a pretty extended base, of some definite shape, by which they are attached to the bark; as, the *prickles* of the rose.

(Zool.) A sharp-pointed process on a fish or other animal.

—A sieve of filberts containing about half a hundred-weight.

—*v. a.* To pierce with a needle, or with any other sharp thing.

Prick'liness, *n.* The state of having many prickles.

Prick'ly, *a.* Full of sharp points or prickles.

Prick'ly-ash, *n.* (Bot.) See XANTHOXYLON.

Prick'ly-pear, *n.* (Bot.) See OPUNTIA.

Prick'ly Pear, in *Montana*, an unimportant village of Jefferson co., about 130 m. N. of Virginia City. Gold is found in the vicinity.

Prick'-madam, *n.* A species of house-leek.

Prick'-post, *n.* (Arch.) A post framed into the breast-summer.

Prick'-punch, *n.* A piece of tempered steel, with a round point at one end to prick a round mark in cold iron, or other metal.

Prick'y, *a.* Stiff and sharp; prickly.

Pride, *n.* [A. S. *pryda*, *pryt*; Dan. *pryde*; Sw. *pryda*, to adorn.] State or quality of being proud; inordinate self-esteem; an unreasonable high opinion of one's own superiority. — A noble self-esteem, springing from a consciousness of worth; generous elevation of heart. — Insolence; rude treatment of others; insolent exultation. — That of which men are proud; that which excites boasting. — Show; ostentation. — Elevation; dignity. — Excitement of the sexual appetite in the female breast. (Zool.) A small species of lamprey.

—*v. a.* To indulge pride; to take pride; to value one's self; to gratify self-esteem. — Used with the reciprocal pronoun.

Prideful, *a.* Full of pride; insolent; scornful.

Pridefully, *adv.* Insolently; scornfully.

Pridefulness, *n.* The state or quality of being prideful; insolence.

Pride of India, *n.* (Bot.) See MELIACEÆ.

Prie-dieu, (*pre-deu*), *n.* A kind of bench or desk at which to kneel while praying.

Priego, (*pre-a-go*), a town of Spain, prov. of Cordova, 35 m. S. E. of Cordova. *Manuf.* Woollens and silk. *Pop.* 13,500.

Priene, (*Anc. Geog.*) a city of Caria, N. of the mouth of the Meander, and at the foot of Mount Mycale. It is one of the twelve confederate towns of the Ionian League. The modern village of Samson-kalesi now occupies its site. Precious unmarble sculptures, results of the explorations of Mr. Chandler at Priene in 1869, were deposited in the British Museum in 1870.

Prier, *n.* One who inquires too narrowly.

Priessnitz, VINCENT, the founder of the hydropathic system, or system of curing diseases by water, B. in Austrian Silesia, 1799; d. 1851.

Priest, (*preest*), *n.* [Fr. *prêtre*, or *prestre*, from Lat. *presbyter*; Gr. *presbuteros*, elder.] One set apart for the performance of religious offices and ceremonies, and, in particular, for the performance of sacrifices. The corresponding word in Latin is *sacerdos*, in Greek *hierereus*. The necessity of a priesthood, or a class of persons set apart for the performance of religious rites and ceremonies, and to stand, as it were, intermediate between the people and Deity, has been believed and acknowledged by almost every people, Pagan as well as Christian. The patriarch of the primitive world was priest as well as king in his own house; and when the state was developed from the family, the royal and priestly offices still continued, for a time, to be united in the same person.

As states enlarged, and the duties of the king's office increased, a separate order for the priesthood grew up, in some countries elective, in others hereditary, and, by the reputation of superior wisdom and secret communion with the gods, inspired the mind with awe, and acquired great honor and influence. The Mosaic law established a special priesthood, consisting of three orders, — the *high-priests*, the *priests*, and the *Levites*; all of them taken from one tribe — that of Levi. The priesthood was made hereditary in the family of Aaron; and the first-born of the oldest branch of that family, if he had no legal blemish, was always high-priest. Among the ancient Greeks there was no general priesthood, but only the priests of the several deities, who slaughtered the victims, and who often secured a powerful influence as interpreters of the will of the deity which they served. Among the Hindoos of India the priestly system is very fully developed — the Brahmins, who preside over sacrifices and divine services, being possessed of great power and influence. In the Christian system, Christ is represented as the one priest, who, for the redemption of the world, offered the one sacrifice, — that of himself. In the primitive church this doctrine was fully adhered to, and the duty of the priest was only to expound the divine word and exercise a paternal care over his people, without the performance of any pompous rites or ceremonies. As the distinctive features of Romanism came to spring up, the character of the priesthood changed, and the mass acquired the character of a propitiatory

Fig. 2158.

AN EGYPTIAN PRIEST OF HAMMON, (Bearing the "leanen breeches or drawers," and the girdle of the Jewish priest.)

sacrifice. The Roman Catholic and the Eastern churches maintain that the sacrifice of the cross was to be continued and kept present in the Church, through appointed representatives and vice-gerents of Christ, who for that purpose continue and partake in the priestly character of Christ and his mediatorial office between God and man. The other Christian denominations deny that there is any other real priest but Christ, and only regard the clergy as the teachers and servants of the Church, who, being divinely called and properly appointed, possess certain ecclesiastical rights, and undertake certain duties, which they derive partly from divine and partly from human law.

Priestcraft, *n.* The arts and management of priests and ecclesiastical persons to gain power; religious fraud or artifice.

Priest'ess, *n.* A female priest; a female among pagans who officiated in sacred things, and uttered oracular responses.

Priest'hood, *n.* The office or character of a priest. — The order of men set apart for sacred offices; the order composed of priests.

Priest'less, *a.* Without a priest.

Priest'liness, *n.* The appearance and manner of a priest.

Priest'ly, *a.* Pertaining to a priest, or to priests; resembling a priest; sacerdotal.

Priest'ley, JOSEPH, an English natural philosopher and theologian, was B. 1733, at Fieldhead, near Leeds. At the age of 22 he became assistant-minister to an Independent congregation at Needham Market, in Suffolk, whence he removed to Nantwich, in Cheshire, and next to Warrington, where the Independents had formed a seminary. While tutor in this institution, he published the *History and Present State of Electricity*, which procured his election into the Royal Society, and the degree of doctor of laws from Edinburgh. It was here also that his political opinions were first manifested, in an *Essay on Government*. Soon after this he left Warrington, and went to Leeds, where he made those important discoveries with regard to the properties of fixed air, for which he received the Copley medal of the Royal Society in 1772. In 1776 he communicated to the same learned body his observations on respiration, in which he first experimentally ascertained that the air parts with its oxygen to the blood as it passes through the lungs. He had already declared himself a believer in the doctrine of philosophical necessity, and expressed some doubts of the immateriality of the soul. The doctrine he supported in his *Disquisitions on Matter and Spirit*, and the obloquy which these works brought on him, producing a coolness in his patron, Lord Shelburne, to whom he was engaged as librarian, the connection was dissolved, the doctor retaining an annuity of £150 per annum, by original agreement. He next removed to Birmingham, where he became once more minister of an Independent congregation, and occupied himself in his *History of the Corruptions of Christianity*, writing, also, in support of the claims of the Dissenters for a repeal of the test acts. But it was the French revolution that afforded him the widest field, and he did not fail to display his warm sympathy with it. This excited the indignation of the High-church party; and in the riots which took place in July, 1791, his house, library, manuscripts, and apparatus were committed to the flames by the mob, and he was exposed to great personal danger. After this he removed to Hackney, where he succeeded Dr. Price; but, in 1794, compelled by incessant persecutions to fly his intolerant country, went to the United States of America, took up his abode at Northumberland, Pa., and d. there, in 1804. His works extend to between 70 and 80 volumes. Besides those before mentioned are: *Experiments and Observations on Air*; *Lectures on General History*, on the *Theory and History of Language*, and on the *Principles of Oratory and Criticism*; *Hartleian Theory of the Human Mind*; *Letters to a Philosophical Unbeliever*; *History of Early Opinions Concerning Jesus Christ*; *General History of the Christian Church*; *Institutes of Natural and Revealed Religion*, &c. As a natural philosopher, his fame principally rests on his pneumatic inquiries.

Priests of the Mission, or **Lazarists**, (*Eccl. Hist.*) A congregation of regular clerks, founded at Paris in 1625, by St. Vincent de Paul, for the purpose of ministering to the spiritual wants of the poor. Their first establishment in Rome was made in 1642. In 1643 they were introduced into the Barbary States, in 1646 into Ireland, and in 1648 into Madagascar. The congregation was established in the U. States in 1817. The priests of the mission devote themselves especially to the laboring classes. They receive no compensation for their ministerial offices. Auxiliary to their personal labors for the poor are their institutions for the education and improvement of the clergy. Very soon after their foundation the direction of a number of ecclesiastical seminaries in France was committed to them, and they have ever since been actively employed in teaching candidates for the priesthood wherever they have been established. They also have houses to which priests may retire from the world for religious exercises, called "spiritual retreats." The priests of the mission take the usual monastic vows of poverty, chastity, and obedience. In 1633 the Fathers, with their founder, established themselves in the so-called priory of St. Lazare, in Paris, where St. Vincent died in 1660. Their name of Lazarists is derived from this place. The order is at present, while not numerous, widely disseminated over the earth, having houses in various countries of Europe, Asia, and America; in Algeria, &c.

Priest'-ridden (*-rid'dn*), *a.* Managed or governed by priests.

Prig, *v. a. and n.* [A. S. *priccian*, to prick, to pick out.] To steal; to filch. (Vulgar.)

—*n.* A pert, conceited, saucy, pragmatical fellow.

Prig'gery, **Prig'gism**, *n.* The manners or ways of a prig.

Prig'gish, *a.* Saucy; conceited.

Prig'gishly, *adv.* In an affected or priggish manner.

Prig'gishness, *n.* The state or quality of being priggish.

Prill, *n.* (Mining.) A solid piece of pure ore or native metal; — the button of an assay.

Prillion, *n.* Tin extracted from the slag of the furnace.

Prim, *a.* Formal; precise; affectedly nice.

—*v. a.* To deck with great nicety; to form with affected preciseness.

—*n.* (Bot.) See **LIGUSTRUM**.

Prim, DON JUAN, Marquis de los Castellejos, Comte de Reus, a Spanish general and statesman, b. at Reus, Catalonia, 1814. His adventurous career began early, commencing when little more than 18 years of age with active service in the civil war which followed the accession of Isabella II. Throwing himself heartily into the arms of the Christina party, he rapidly made his way through the inferior grades, and at the age of 23 was already a full colonel. On the flight of Maria Christina, Prim became one of the leaders of the Progressistas, vehemently opposing Espartero, by whom he was at length expelled from the country in 1842. Escaping to France, he again renewed his allegiance to Maria Christina, and returning to Spain in the following year, on his election to the Cortes by the city of Barcelona, effected a coalition between the Christinos and the Progressistas, and after a struggle of varying fortune, in the course of which he more than once narrowly escaped capture, succeeded in upsetting his great rival Espartero, and was rewarded by Christina with the governorship of Madrid. His triumph, however, like most modern *casas de España*, did not last long. Moved, partly by Prim's own injudicious action, and partly by the ceaseless machinations of the host of intriguers by whom what in Spain passes for politics is carried on, the Queen herself was soon turned against him, and for some years the name of Prim seemed almost to have dropped out of the history of Europe. The Crimean war, however, at length drew him from his retirement, and at Silistria

Fig. 2159. — GENERAL PRIM.

and elsewhere he gave good proof of the talent and courage which, six years later, reflected so much credit on the Spanish arms in the highly successful war with Morocco. His next command, though somewhat less glorious, can hardly be considered less successful. Entrusted with the leadership of the Spanish contingent associated with France and England in the ill-fated expedition to Mexico, Prim was the first to execute a wise, if not perhaps a very chivalrous, retreat. Of this the country no doubt reaped the benefit, but Prim's own star appeared for some time after to be somewhat under a cloud. Three years of incessant intrigue and agitation culminated in 1866 in an abortive insurrection, followed the year after by a failure, if possible, even more complete, and the conqueror of Morocco found himself once more an exile in London, damaged in credit and almost bankrupt in pocket. At the first outbreak of the revolution of Sept., 1868, Prim again appeared on the scene, and, with the other exiled generals, put himself at the head of the insurgents, and largely contributed to the popular victory. Naturally chosen a member of the provisional government, Prim immediately took a preponderant position in the direction of Spanish affairs, and would seem to be the arbiter of the future destiny of his country, from time to time offering the Spanish crown to some foreign prince; but, it is believed, without a very anxious desire of putting an end to the *provisory* by raising any other person above himself. In person he was about the middle height, grave and reserved. Assassinated 1871.

Primacy, *n.* [Fr. *primatie*; Lat. *primatus*.] The chief ecclesiastical station or dignity in a national church; the office or dignity of an archbishop.

Prima-donna, *n.* [It. *primo*, *prima*, the first, and *donna*, lady, mistress.] The first or chief female singer in an opera.

Primâ-facie, (-fa'shi-e.) [Lat.] (Law.) At first sight or appearance of a business; as, the holder of a bill of exchange, indorsed in blank, is *primâ-facie* its owner.

Primâ-facie evidence of a fact is sufficient to establish the fact, unless rebutted.

Primage, *n.* (Com.) A certain allowance paid by the shipper or consignee of goods to the master and sailors of a vessel for loading the same. It varies in different places according to their respective customs.

Primal, *u.* [L. Lat. *primalis*, from *primus*, first.] First; as, the *primal* state.

Primarily, *adv.* In the first place; originally; in the first intention.

Primariness, *n.* The state of being first in act or intention.

Primary, *a.* [Lat. *primarius*, from *primus*, first.] First in order of time; original. — Elementary; radical or original. — First in dignity or importance; chief; principal.

(Geol.) A term formerly improperly applied to rocks underlying the ordinary and recognizable fossiliferous rocks of a district. The names assume that such rocks were formed before those which contain fossils, an assumption not at all safe, since many rocks distinctly igneous and plutonic are comparatively modern. There is no proof whatever that we have any of the primary or primitive rocks of the earth brought to the surface for our examination. Some are certainly very ancient; but they may have been modified from formations yet more ancient. The terms *hypogene*, *crystalline*, and *metamorphic*, express simple facts of observation, and are far more convenient.

—*n.* That which stands first or highest in rank or importance; — opposed to a *secondary*.

(Zool.) One of the largest feathers of the wing of a bird, growing at its extremity.

Primary Assemblies. A name applied to those assemblies in which all the citizens have a right to be present and to speak, as distinguished from *representative parliaments*. Primary assemblies are of necessity practicable only in small states, such as ancient Athens, and seem to require the existence of a dependent class shut out from all political privileges, and perhaps deprived even of personal liberty. On the other hand, they supply to the members a higher political education than that which is available for the generality of citizens in large states governed by representative parliaments.

Primary Colors. (Optics.) The principal colors into which a ray of white solar light may be decomposed or separated. Newton supposed them to be 7, — red, orange, yellow, green, blue, indigo, and violet. Mayer considered some of these to be secondary colors, and that there are only 3 primary colors in the solar spectrum, namely, red, yellow, and blue, certain proportions of which constitute white light and all the other colors. Dr. Young assumes red, green, and violet as the fundamental colors. (Lectures on Nat. Phil., p. 439.) — It is now known that every portion of the spectrum is a primary or pure color, and cannot be resolved by further refraction; consequently, it seems erroneous to assume that some of the prismatic colors are produced by the superposition of others, as green by blue and yellow, orange by red and yellow, &c.

(Painting.) In the theory of painting, the primary colors are blue, yellow, and red; so called because they are those from which all other colors are supposed to be derived; and they cannot of themselves be resolved or decomposed into other colors. When two primary colors are mixed, they form secondaries; thus blue and yellow form green; red and yellow, orange; red and blue, violet. When all three of the primaries are mixed, in equal strength and proportion, they kill each other, and produce black; or, in a state of dilution, gray. If, however, one of the primaries is present in excess, the resulting mixture is a red-gray, or blue-gray, &c., according to which primary predominates. The opposite, or contrasting color of a primary, is composed of the other two primaries in combination; e. g. red is contrasted by green (blue and yellow), blue is contrasted by orange (red and yellow), and so on. The primaries and secondaries only appear in the type of colors — the prism or rainbow. They are the sources from which all other tints and hues are formed.

Primate, *n.* [Fr. *primat*; It. *primato*.] A prelate of superior dignity and power; an archbishop.

Primateship, *n.* The office or dignity of a primate or an archbishop.

Prima'tial, *a.* Relating to a primate.

Prima'tial, *a.* Primate; pertaining to a primate.

Prima'tic'cio, FRANCESCO, an Italian painter, born at Bologna, in 1504, was a pupil of Innocenzo da Imola, and afterwards assistant to Giulio Romano. He was one of the artists employed by Francis I. and Henry II. to decorate the palace of Fontainebleau; was sent to Rome to form a collection of casts of ancient works of art; and was afterwards named superintendent of royal buildings. The numerous large frescoes which he painted at Fontainebleau were destroyed in 1738. P. was made abbot of St. Martien de Troyes in 1544, and died at Paris in 1570.

Prime, *a.* [Lat. *primus*, superl. of *prior*, former.] First in order of time; original; as, *prime* cost. — First in rank, degree, dignity, excellence, value, or importance. — Early; blooming.

(Arith.) Two numbers are said to be *prime* to each other, or one number is said to be *prime* to the other, when the two have no common measure except unity. A *prime number*, frequently termed a *prime*, is one which is not exactly divisible by any other number except itself and unity. — We are not yet in possession of any general method for finding primes, although there are many ways of detecting whether an assigned number is or is not a prime.

—*n.* The first opening of day; the dawn; the morning; the beginning. — The early days; the spring of the year. — The spring of life; youth; — hence, full health, strength, or beauty. — The best part; the utmost perfection.

(Rom. Cath. Church.) The first canonical law, succeeding to lands.

(Fencing.) The point of the chief guards.

(Chem.) Combining proportion; equivalent.

Prime of the Moon. (Astron.) The new moon fo about three days after her change.

—*v. a.* To put powder in the pan of a musket or other firearm, or to lay a train of powder for communicating fire to a charge. — To lay on the first color in paintings.

—*v. n.* To serve for the charge of a gun.

Primely, *adv.* At first; originally; primarily. — Most excellently.

Primeness, *n.* The state of being first. — Excellence.

Primer, *n.* An instrument for priming.

Primer, *n.* [Fr. *primaire*; Lat. *primarius*, from *primus*, first.] Originally, a small prayer-book; also, a work of elementary religious instruction. — An elementary book to learn children and others to read; a reading or spelling-book for beginners.

(Printing.) A kind of type called *Long Primer*, larger than Bourgeois and smaller than Small Pica; also, a kind of type called *Great Primer*, intermediate in size between English and Paragon.

Prime'ro, *n.* [Sp. *primera*, from *primero*, first.] A game at cards.

Prime'val, *a.* [Lat. *primævus*, from *primus*, first, and *ævum*, an age.] Being of the earliest ages or time; original; pristine; primitive; as, *primeval* day, *primeval* innocence.

Primine, *n.* [Fr., from Lat. *primus*, first.] (Bot.) One of the sacs containing an ovule.

Priming, *n.* The powder in the pan of a gun, or laid along the channel of a cannon for conveying fire to the charge.

(Paint.) The first color laid on a canvas or on a building, &c.

(Steam-Eng.) The effect engendered by having too little steam room in the boiler of a steam-engine. Minute particles of water being carried into the cylinder, collect in a body, which obstructs the passage of the piston, and causes a considerable loss of power.

Priming and lagging. The alternate acceleration and retardation of the times of high water, caused by the combined action of the sun and moon.

Priming-tube, *n.* A tube used for the purpose of priming artillery.

Priming-wire, *n.* A pointed wire for penetrating the vent of a gun.

Primitiæ, *n. pl.* [Lat.] The first fruits of any production of the earth, which were uniformly consecrated to the Deity by all the nations of antiquity.

(Med.) The waters discharged before the extrusion of the fetus.

Primitive, *a.* [Fr. *primitif*; Lat. *primitivus*, from *primus*, first.] Pertaining to the beginning or origin, or to early times; original. — Formal; affectedly solemn; imitating the supposed gravity of old times; antiquated; old-fashioned. — Primary; radical; not derived; denoting that from which others are derived; as, in grammar, a *primitive* verb.

Primitive Rocks. (Geol.) See **PRIMARY**.

—*n.* An original word; a word not derived from another.

Prim'itively, *adv.* Originally; at first. — Primarily; not derivatively. — According to the original rule or ancient practice.

Prim'itiveness, *n.* The state of being primitive or original; antiquity; conformity to antiquity.

Prim'ly, *adv.* With primness; precisely.

Prim'ness, *n.* Affected formality or niceness; stiffness; preciseness.

Primo, *n.* [It.] (Mus.) The first.

Primogenial, *a.* [Lat. *primogenius*, from *primus*, first, and *geno*, *gigno*, to beget, to bring forth.] First-born; made or generated; original; primary; constituent; elemental.

Primogen'itive, *a.* Relating to primogeniture. (R.)

Primogen'itor, *n.* [Lat. *primus*, first, and *genitor*, from *geno*, *gigno*, to beget.] The first father or forefather.

Primogen'iture, *n.* [Lat. *primus*, and *genitura*, a begetting.] State of being born first of the same parents; seniority by birth among children.

Primo'genitureship, *n.* The state or privilege of one who is the first-born.

Primor'dial, *a.* [Lat. *primordialis*, from *primordium*, from *primus*, first, and *ordini*, to begin a web.] First in order; original; existing from the beginning.

(Bot.) Earliest formed, as the leaves which appear first after the cotyledons.

—*n.* Origin; first principle or element.

Primor'dially, *adv.* In the beginning; under the first order.

Primor'diate, *a.* [Lat. *primordium*.] Original; existing from the first.

Primp, *v. n.* To be affected or conceited. (Prov. Eng.)

Prim'rose, *n.* [Lat. *prima rosa*, the first rose.] (Bot.) See **PRIMULACEÆ**.

—*a.* Relating to the primrose; flowery.

Prim'rose, in Iowa, a post-village of Lee co., abt. 80 m. S. by W. of Iowa City.

Primrose, in Missouri, former name of a post-village of Lewis co., 27 m. W.N.W. of Quincy, Illinois.

Primrose, in Wisconsin, a post-township of Dane co. Pop. (1897) 910.

Prim'ula, *n.* [Lat. *primus*. See **PRIMROSE**.] (Bot.)

The Primrose, the typical genus of the order *Primulaceæ*. Calyx tubular, 5-cleft; corolla salver-shaped, tube

Fig. 2160. — COMMON PRIMROSE,
(*Primula vulgaris*.)

cylindrical up to the insertion of the stamens; stamens 5, inserted and included in the tube of the corolla; capsules many-seeded, 5-valved, with 10 teeth. Five species of this genus grow wild in Britain: — *P. vulgaris*, the Primrose found in woods and hedges, its rich green leaves and delicate brimstone-yellow flowers being often seen long before nature has lost her wintry aspect. *P. vera*, the Cowslip, found in pastures and meadows; a fragrant and pretty plant, easily distinguished from the primrose by the smallness of its flowers, and by their forming an umbel. *P. elatior*, the Ox-lip, found in clayey woods and meadows in the eastern countries. *P. farinosa*, the Bird's-eye Primrose, a rare plant, found in the north of England and south of Scotland, with flowers usually pale lilac, with yellow centre. *P. scotica*, the Scottish Primrose, a still rarer plant, with bluish-purple flowers, found on the sandy heaths of the extreme north of Scotland. The beautiful garden-flowers called *Polyanthuses* and *Auriculas* have been produced by the cultivation of species of this genus. The flowers of the Cowslip are a sedative and diaphoretic, and are sometimes employed in the manufacture of a soporific wine. See AURICULA, and PRIMULACEÆ.

Primulaceæ, *n.* (*Bot.*) The Primrose family, an order of plants, alliance *Cortusales*. — *DIAG.* Stamens opposite the petals, a capsular many-seeded fruit, 1-styled, and a herbaceous stem. They are annual or perennial herbs, with simple exstipulate leaves and regular perfect flowers, calyx 4-5-cleft, persistent, inferior or partly superior; corolla 4-5-cleft, very rarely absent; stamens equal in number to the segments of the corolla; ovary 1-celled; placenta free, central. Seeds numerous, with fleshy albumen; embryo placed transversely to the hilum. The plants of this order principally inhabit the cold and temperate regions of the N. hemisphere. They are very rare in the tropics, being found only on the sea-shore or in mountainous districts. These plants are of little economic value, but many are cultivated for the modest beauty of their flowers. (See PRIMULA.) The order contains 29 genera, and 215 species.

Prince, *n.* [Fr.; Lat. *principes*, from *primus*, and *capio*, to take.] The first in rank or authority; a chief or supreme ruler; a sovereign.

—One who has the government of a particular state or territory, but holds of a superior to whom he owes certain services.

—The son of a king or emperor, or the issue of a royal family.

—*v. n.* To play the prince; to take state. (*R.*)

Prince'dom, *n.* The jurisdiction, sovereignty, rank, or estate of a prince.

Prince Edward, a S.E. co. of prov. of Ontario, bordering on Lake Ontario; area, abt. 334 sq. m. *Cap.* Picton.

Prince Edward, in Georgia, a village of Gilmer co., abt. 160 m. N.W. of Milledgeville.

Prince Edward, in Virginia, a S. central co.; area, about 348 sq. m. *Rivers*. Appomattox river, and Harris, Briery, Bush, and Sandy creeks. *Surface*, diversified; soil, originally very fertile, but now much exhausted. *Min.* Copper and coal. *Pop.* (1897) 15,330. *Cap.* Farmville (formerly called Prince Edward Court House), a post-village about 75 m. W.S.W. of Richmond.

Prince Edward Island, a province of the Dominion of Canada, in the Gulf of St. Lawrence, separated from Nova Scotia and New Brunswick on its S. and W. sides by Northumberland Strait; Lat. between 46° and 47° N., Lon. between 62° and 64° 30' W. Area, 2,134 sq. m. *Desc.* Generally level or undulating, and well watered. Its shores are indented with numerous inlets, and the soil is fertile. *Prod.* The cerealia and vegetables common to England. Timber is abundant, and the pastures are excellent. *Min.* Coal and sandstone. The trade is mostly with England, and ship-building is carried on to a large extent. The fisheries are important. *Cap.* Charlotte Town. Admitted to the Dom. of Canada, July 1, 1873.

Prince Fredericktown, in Maryland, a p. v., cap. of Calvert co., about 35 m. S. by W. of Annapolis.

Prince George, in Maryland, a S. co., adjoining Virginia and the District of Columbia; area, about 600 sq. m. *Rivers*. Potomac, Pawtuxent, and the West Branch of the Pawtuxent rivers. *Surface*, pleasantly diversified; soil, generally fertile, producing great quantities

of corn and tobacco. *Min.* Iron in large deposits. *Cap.* Upper Marlborough.

Prince George, in Virginia, a S.E. co.; area, abt. 300 sq. m. *Rivers*. James, Appomattox, and Blackwater rivers. *Surface*, somewhat hilly; soil, fertile. *Cap.* Prince George Court-House, abt. 24 m. S.E. of Richmond.

Prince Leopold, an island of British N. America, at the W. end of Barrow Strait; Lat. 74° 5' N., Lon. 90° W.

Prince's Inness, *n.* The state, manner, or dignity of a prince.

Prince'ling, *n.* A small or inferior prince.

Prince'ly, *a.* Resembling a prince; having the appearance of one high-born; stately; dignified.

—Having the rank of princes; becoming a prince; royal; magnificent.

—*adv.* In a prince-like manner.

Prince of Wales Archipelago, in Alaska, a group of islands, abt. 40 miles N. of Queen Charlotte Island, lying between Lat. 54° 25' and 56° 30' N., and Lon. 132° and 134° W.

Prince of Wales' Island. See PENANG.

Prince of Wales' Islands, a group in Torres Strait, at the N.E. extremity of the Gulf of Carpentaria, on the N.E. coast of Australia; Lat. 10° 20' S., Lon. 144° E.

Prince Regent Bay, an inlet of Baffin Bay, on the W. coast of Greenland; Lat. 76° N., Lon. 66° W.

Prince Regent Inlet, connects Barrow Strait with Boothia Gulf, British N. America, between Lat. 72° and 74° N., and Lon. 88° and 95° W.

Prince Rupert's Bay, on the N.W. coast of the Island of Dominica, W. Indies.

Prince's, a north-west county, of Prince Edward Island. *Capital*. Summerside. *Area*, 737 square miles.

Prince's Island, belonging to Portugal, in the Bight of Biafra, Gulf of Guinea, 140 m. S.S.W. of Fernando Po; Lat. 1° 39' N., Lon. 7° 26' E. Length 10 m. from N. to S.; breadth 5 m. *Chief town*. St. Antonio.

Prince's Metal, *n.* (*Metal.*) An alloy of copper, in imitation of silver, in which the proportion of zinc is greater than in brass.

Prin'cess, *n.* A female sovereign, as an empress or queen.—The daughter of a king.—The consort of a prince.

Prin'cess Anne, in Maryland, a post-village, cap. of Somerset co., about 100 m. S.E. of Annapolis.

Princess Anne, in Virginia, an extreme S.E. co., bordering on Chesapeake Bay on the N., the Atlantic Ocean on the E., and N. Carolina on the S.; area, abt. 270 sq. m. *River*. North river. *Surface*, level and low; soil, not fertile. *Cap.* Princess Anne Court House, about 137 m. S.E. of Richmond. *Pop.* (1897) 10,265.

Prin'cessly, *a.* In the manner of a princess. (*n.*)

Prince'ton, in Arkansas, a post-village and township, cap. of Dallas county, about 65 m. S. by W. of Little Rock.

Princeton, in California, a post-village of Colusa co., about 15 m. N. of Colusa.

Princeton, in Illinois, a city, cap. of Bureau co., 109 m. W.S.W. of Chicago. *Pop.* (1897) 4,150.—A village of Cass co., about 30 m. W. by N. of Springfield.

Princeton, in Indiana, a city, cap. of Gibson co., about 25 m. S. of Vincennes. It is finely located, and has excellent business facilities. *Pop.* (1897) 3,450. —A township of White co.

Princeton, in Iowa, a post-village and township of Scott co., abt. 21 m. N.E. of Davenport.

Princeton, in Kansas, a village of Johnson co., abt. 32 m. S. of Leavenworth.

Princeton, in Kentucky, a post-village, cap. of Caldwell co., abt. 230 m. W.S.W. of Frankfort.

Princeton, in Maine, a post-township of Washington co.

Princeton, in Massachusetts, a post-township of Worcester co.

Princeton, in Minnesota, a post-village, cap. of Mille Lacs co., abt. 50 m. N.W. of St. Paul.—A village of Winona co., abt. 10 m. W.N.W. of Winona.

Princeton, in Mississippi, a borough of Washington co., abt. 90 m. N.W. of Jackson.

Princeton, in Missouri, a post-town, cap. of Mercer co., abt. 160 m. N.N.W. of Jefferson City. *Pop.* (1897) 1,550.

Princeton, in New Jersey, a post-borough and township of Mercer co., about 10 m. N.E. of Trenton. It is the seat of Princeton University, one of the most eminent educational institutions in the country. In this vicinity, Jan. 3, 1777, a battle was fought between the American army under General Washington, and the British under Col. Mawhood, in which the Americans were victorious. *Pop.* (1895) 3,488.

Princeton, in Ohio, a post-village of Butler co., abt. 21 m. N. by E. of Cincinnati.—A village of Coshocton co., abt. 34 m. N. W. of Zanesville.

Princeton, in Pennsylvania, a post-village of Lawrence co., abt. 8 m. E.S.E. of New Castle.

Princeton, in West Virginia, a post-village, cap. of Mercer co., abt. 80 m. S.S.E. of Charleston.

Princeton, in Wisconsin, a post-village and township of Green Lake county, about 13 miles south-west of Berlin.

Prince'town, a town of Prince Edward Island. See PRINCES.

Princtown, in New York, a post-township of Schenectady co.

Princtown, in Pennsylvania, a post-village of Berks co., abt. 10 m. N.E. of Reading.

Prin'cet'us, *n.* A worsted fabric, sometimes made with a cotton warp.

Prince'ville, in Illinois, a post-village and township of Peoria co., abt. 20 m. N.N.W. of Peoria.

Prince William, in Virginia, a N.E. co., adjoining

Maryland; area, about 357 sq. m. *Rivers*. Potomac and Occoquan rivers, and Cedar Run, Broad Run, and Quantico creek. *Surface*, hilly; soil, not very fertile. *Cap.* Manassas. *Pop.* (1897) 10,360.

Prince William-Henry's Island, in the Pacific Ocean, Lat. 1° 32' S., Lon. 149° 30' E. Ext. 70 m. in circumference.

Prince William Sound, in Alaska, an inlet of the Pacific Ocean between Lat. 60° and 61° 20' N., and Lon. 146° and 148° W. It contains Montague and other smaller islands.

Prin'cipal, *a.* [Fr.; Lat. *principalis*, from *princeps*, the first.] Highest in rank, character, or respectability; most important or considerable.

—*n.* A chief or head; one who takes the lead; a leader. —The president, governor, or chief in authority. —The proprietor, chief, or head of an academy or seminary of learning. —A capital sum lent on interest, due as a debt, or used as a fund.

(*Law.*) The actor or absolute perpetrator of a crime, or an abettor.

(*Arch.*) A name given to the semblance of timbers that form the support of a roof; — these are commonly known and spoken of as a pair of principals.

(*Mus.*) A metallic stop in an organ; — so called because it forms the standard for tuning the other stops.

Prin'cipality, *n.* [Fr. *principauté*; L. Lat. *principatus*.] Sovereignty; supreme power. —The territory of a prince, or the country which gives title to a prince. —One invested with sovereignty.

Prin'cipally, *adv.* Chiefly; mainly; in the most important respect; above all; particularly.

Prin'cipalness, *n.* The state of being principal; superiority.

Principato Citeriore, or Salerno, prov. of Italy, bordering on the Mediterranean, and the provinces of Terra-di-Lavoro, Principato Ulteriore, and Potenza. *Area*, 2,400 sq. m. The surface is mostly mountainous, and the soil fertile. *Rivers*. Silaro, Sarno Calore, and Negro. *Cap.* Salerno. *Pop.* 528,256.

Principato Ulteriore, or Avellino, a prov. of Italy, bordering on Capitanata, Molise, Principato, Citeriore and Terra-di-Lavoro. *Area*, 1,800 square m. The surface is mountainous. *Rivers*. Calore, Biferno, Tamero, Sabato and Otauto. *Cap.* Avellino. *Pop.* 355,621.

Principle, (*prin'se-pl*), *n.* [Fr. *principe*; Lat. *principium*, from *princeps*, *principis*.] The cause, source, or origin of anything; that from which a thing proceeds; element; constituent part; primordial substance; operative cause. —A fundamental truth; a truth admitted either without proof, or considered as having been before proved; ground; foundation. —That which supports an assertion, an action, or a series of actions or of reasoning. —A general truth; a law comprehending many subordinate truths; tenet or doctrine; that which is believed; a settled law or rule of action or conduct in human beings.

—*v. a.* To establish or fix in any tenet; to impress with any tenet, good or ill. —To establish firmly in the mind.

Prink, (*prink*), *v. n.* To dress for show; to prank. —To assume stately airs.

—*v. a.* To dress ostentatiously, or in a foppish manner.

Prinos, *n.* [Gr. *prio*, to saw; alluding to the serrated leaves.] (*Bot.*) A genus of plants, order *Aquifoliaceæ*.

P. glaba, a beautiful shrub, 3-4 ft. high, found in swamps in the N.E. States, are dried and used as a substitute for tea, under the name of *Appalachian tea*. The bark of *P. verticillatus*, called Black Alder-bark, or Winter Berry, is used in this country, in the form of a decoction, as a tonic and astringent.

Print, *v. a.* [Fr. *empreinte*, impression, stamp, *imprimer*, to print; It. *impronta*, impression, *imprégnare*, to print, imprint, from Lat. *premo*, *pressum*, to press, *q. v.*] —To press upon; to imprint. —To form by impression; to mark by pressure; to stamp. —To impress words or make books, not by the pen, but by the press.

—*v. n.* To use or practice the art of typography, or to take impressions of letters, figures, and the like. —To publish a book.

—*n.* A mark made by impression or pressure; any line, character, figure, or indentation of any form made by the pressure of one body or thing on another. —The impressions of types in general, as to form, size, &c. —That which impresses its form on anything; a stamp. —The representation or figure of anything made by impression. —An engraving or picture taken from an engraved plate. —State of being printed and published. —A single sheet printed for sale; a newspaper.

(*Arch.*) A flat ornament of paper.

In print. Printed and published.

Out of print. No longer published.

Printer, *n.* One who prints books, pamphlets, or papers; one who stains or prints cloths with figures, as calico; one who impresses letters or figures with copperplates. —A telegraphic machine that records messages on a roll of paper.

Printer's Devil. A colloquial term to designate an apprentice in a printing-office.

Printer's Ink. See INK.—In a figurative sense, publicity; advertising.

Fig. 2161. — PRINOS.

Print'ing, n. The art or practice of making impressions of letters, characters, or other figures, with ink, upon paper, or other substance. In a more restricted sense, the art by which any piece of literary composition is converted into a book. The history of the origin of printing is lost in antiquity. It would appear to be certain that the Chinese did the first printing from blocks, in the middle of the 10th century, the art being claimed as the invention of a minister of state, Foong-taon. Block-printing with wood can be traced back in Europe as far as the 13th century. It was first applied to manuals of devotion, consisting of a single page, but in some cases taking the form of a little book of several pages. Printing made little advance until the great discovery of the utility and practicability of employing *movable types* gave to the art a power beyond all previous conceptions. Who was the discoverer of this vast improvement, is a matter of dispute. The claims of 4 men have figured principally in the controversy, namely: John Gutenberg (paternally Gansfleisch), of Strasburg; John Faust, of Mainz; Peter Schoeffer, of Gernsheim, and Lourens Janszoon Coster, of Haarlem. According to the opinion of the most numerous judges, the credit belongs to Gutenberg of having first employed *movable metal types* in the production of books. (See GUTENBERG.) After some first experiments of his invention, 1434-1439, he went to Mainz, where, with the aid of Peter Schoeffer, he first brought the art into practical use. About 1450, Gutenberg allied himself with John Faust, a rich citizen of Mainz, who advanced the capital necessary to prosecute the business of printing. To Schoeffer belongs the merit of inventing *matrices* for casting types, each individual letter having been hitherto cut in wood or metal. In the earliest printed books the character of type employed was the old *Gothic* or *German*. Sweynheim and Pannartz first introduced the *Roman* type, at Rome; and Aldus introduced the *Italic*. William Caxton (*q. v.*) first introduced the art of printing into England, between 1471 and 1474.

In making metal type, the first step is the cutting of a punch in steel, which determines the face of the letter. After this original has been formed by the means of cutting, punching, and filing, it is hardened, and its face being struck into a piece of copper, a *matrix* is formed. This matrix is fitted with the greatest nicety into a carefully-adjusted piece of mechanism, called a *mold*. An alloy, consisting of lead, tin, antimony, and sometimes a little copper or nickel, is used to form the metal from which the letters are cast. Hand-machines have been generally used for casting type, but within a few years automatic machines have been introduced which perform the entire operation of casting and removing the burr, so that the type comes out finished, and may be set up in rows, tied up and stored in packages in proper assortments for sale. The several letters of the alphabet are required in very different proportions. In printing English works they are about as follows: a 8,500, b 1,600, c 3,000, d 4,400, e 12,000, f 2,500, g 1,700, h 6,400, i 8,000, j 400, k 800, l 4,000, m 3,000, n 8,000, o 8,000, p 1,700, q 500, r 6,200, s 8,000, t 9,000, u 3,400, v 1,200, w 2,000, x 400, y 2,000, z 200, fi 400, fl 500, fl 200, fl 150, fl 100, æ 100, œ 60 (these last 7 are called *logotypes*, or types containing 2 or more letters on 1 body), , 4,500, ; 800, : 600, . 2,000. In addition to these there are dotted and accented letters, in quantities from 100 to 250; numerals 0 and 1 to 9, ranging from 1,000 to 1,300 each; brackets, parentheses, marks of reference, &c. The number of capitals in a fount range, for the several letters, from 80 to 800; small capitals, somewhat fewer. *Spaces* are formed like the bodies of letters, but are shorter, and are used for separating the words. They are cast of different thicknesses, three, four, five, and six to the em. This em is the printer's standard for measuring a quantity of type. It is not necessarily equivalent in space to the letter m, from which it originated, but represents the square of the type's body. When typesetting is paid for by the piece, the price is so

Fig. 2162.—HOE SEXTUPLE PRESS.

much per 1,000 ems (about 2,000 to 2,600 letters), which price includes distribution of the type. This distribution is effected by the compositor as follows: Having wet a quantity of type which has been already printed from, he takes up a number of the lines of types; these he rests upon the middle finger of his left hand, and steadies with his thumb; keeping the faces of the letters toward him, he takes up one or two words between the forefinger and thumb of his right hand, and drops the letters each into its proper box. A good compositor will in this way distribute or return to their proper places 2,500 ems per hour, which is three times the speed of hand composition. The types are distributed into a receptacle termed a *case*. Cases are usually in

pairs; the one called the upper-case is divided into 98 boxes, of equal size, in which are contained the capitals, small capitals, accented letters, &c. The lower-case is divided into 53 compartments, of unequal size, in which are deposited the small letters, figures, spaces, &c., the types most in use having the largest boxes assigned to them. The compositor holds in his hand a little metal box called a *composing-stick*, which, having one side movable, is capable of being adjusted to the required width of the page or column. With the copy placed before him, the workman begins to gather his types, letter by letter, until he has formed a word. This word he separates from the next by a space, and so he goes on until he has composed a line. Arrived at the end of his line, he proceeds to *justify* it; that is, he increases or lessens the space between the words until the line is tolerably tight in his composing-stick. In doing this he has to equalize the spacing as much as possible. When he has set up as many lines as his stick will hold, he dexterously takes up the lines as if they were a piece of solid metal, and places them upon a ledged board, termed a *galley*. When in this manner he has composed a whole page, he secures the types by tying a cord round them. A sufficient number of pages having been composed to form a sheet, an impression from them, called a *first proof*, is taken, and submitted to the inspection of a proof-reader. (See PROOF-READING.) When a sufficient number of pages are entirely corrected they are secured, or locked up, in a rectangular frame of iron, called a *chase*. The pages thus wedged up constitute what is called a *form*. Each side of a sheet has its own form, which may be carried about with as much ease as if it were composed of solid plates instead of being made up of forty, fifty, or even a hundred thousand separate and movable pieces. About 1885 typesetting machines began to be used, after a number of years of experimental work, and they are now fast superseding hand-composition. (See TYPESSETTING MACHINES.)

Sizes of type were formerly (and are still to some extent) known by a set of names, as nonpareil, minion, brevier, bourgeois, long primer, small pica, pica, &c., pica being the standard by which very large sizes were indicated, as 5-line pica, 10-line pica, &c. As these sizes were not absolutely fixed, but differed slightly with each type-founder's make, much confusion followed, and about 1890 the *point system* of sizes was generally adopted and the old sizes discarded. The point system is based on metric measurement, 996 points being made equal to 35 centimeters, or one point to .0138 of an inch, so that 12-point now takes the place of pica, and is uniform in size in all foundries, and all the sizes below and above are made in even points.

Type for general reading-matter is known as *body* type. The various display and ornamental types are each individually named according to the fancy of the makers. Certain styles have become standard, as

Gothic. **Rubens (condensed)**
Antique **Old Style.**
Title. **De Vinne.**
German Text. *Script.*
Extended.

An immense variety of styles are manufactured, the larger sizes being made of wood, with the end of the grain up, for a printing surface. These are carved out from dies by automatic pantographic engraving-machines, the faces being finished by pressure. The business of job printing calls for considerable taste in the selection and arrangement of type for effective display. In this class of work the typesetting machines do not compete, being unsuited to the varying demand for faces required.

The actual printing in the trade is termed *presswork*, as distinguished from the strictly typographic part of printing, which is styled *composition*. Presswork has become a distinct branch of the business, and many pressmen do not know how to set type. For fine presswork, as on a cylinder printing-press, considerable *making ready* is required. The form of type, cuts, &c., being properly secured on the press, the inking-rollers in place, and a sheet fed in, the pressman proceeds to take a trial impression. He finds that the form is not absolutely level on the surface, some of the plates forming the illustrations, perhaps, being low. He remedies this by pasting pieces of paper under or back of the form, at the low spots, until he brings it to a reasonably level surface. If it be a cheap job of printing, he may let it go at this, using a somewhat soft *packing*, as the material is called on the surface of the cylinder on which the impression is taken. But if it is a fine piece of work, the pressman's labor has only just begun. He covers his cylinder with the very hardest millboard and paper that he can get, and proceeds to develop the weak parts of the form by means of over-

lays, or bits of paper pasted on a sheet to be inserted in the cylinder packing. He takes a number of trial impressions, and uses varying thicknesses of paper to secure the exact amount of pressure for each spot, until the whole form comes up evenly and sharply, but without indenting the paper. In the case of fine illustrations, he cuts out overlays in tissue paper and shapes them to fit over the dark parts and shadows with the greatest nicety. A large illustration, with considerable light and shade, will often have five more thicknesses on the darkest parts than on the lightest. This work requires considerable experience and an appreciation of artistic effect. In addition to thus securing the proper impression, the pressman has to adjust all his guides so that the form prints exactly in the center of the sheet, or wherever it is desired; and if it is a book form he must see that it backs exactly; that is, prints

Fig. 2163.—BULLOCK'S WEB PRESS OF 1870.—THE FIRST SUCCESSFUL MACHINE OF THIS CLASS.

in such manner that each page is squarely on the back of another, the folios or numbers of the pages serving as guides by which to secure such adjustment. The ink has also to be regulated, so that enough flows to all parts of the form to print plainly with full color, but not enough to rub off easily and cause smut. The inking-rollers must be adjusted so as to press but lightly on the type, being liable to lose their surface if set down too hard. These rollers resemble rubber in consistency, but are made of a composition, of which glue, molasses, and glycerine are the principal ingredients. This composition being mounted on a metal core, forms an inking-roller whose disposition is to take up only a thin coating of ink and to deposit it wherever it touches. Where printing is required in several colors, the common method is to divide the form; all those parts to be printed in one color being run singly, and then the press washed up for another color of ink, and the sheets run through again on the form that is in that color, and so on as many times as there are colors. This is slow, expensive and tedious, and a great many color-printing devices and presses have been patented, but their use is confined to long runs and special work, as it does not pay to employ them for small work.

The printing-press of Gutenberg was a form of screw press. This was gradually improved upon until about 1800, when the prevailing type of press was that known as the hand-press, in which the type was placed on a flat bed, and run under a flat platen, the printing pressure being applied by hand-levers. This form of press admitted of the printing of about 250 sheets an hour, when operated by two men. It was largely supplanted by the Adams press, which worked on

Fig. 3038.—KIDDER FLAT-BED WEB PRESS.

similar principles, but was adapted to rotary power, and could be run by steam. The sheets were fed in by one man and removed by a boy, but later a device called a *fly* removed the sheets, and the press could be run by one man, with power, and turn out some 700 sheets an hour. The cylinder press came next, substituting a metal cylinder for a flat platen, on which to place the paper and take the impression. This was speedier than the Adams press, and various forms soon came into the market, among the earliest being the Hoe, Campbell, Potter, Cottrell & Babcock, &c. The improved and modernized forms of these constitute the standard presses of to-day for general book and job printing. Many of them attain a speed of 2,500 an hour. For fast newspaper work the single cylinder soon proved insufficient, and Hoe brought out a double cylinder, with two feeders, which nearly

This press, the largest in use, has a capacity of 96,000 16-page papers per hour, all inset, folded to half size, pages pasted in, and counted.

DOUBLE OCTUPLE NEWSPAPER PRESS

doubled the product. This was followed by 4-, 6-, 8-, and 10-cylinder presses, got out to meet the demands of the growing circulations of the New York newspapers, and those of other great cities. These machines were in use about the close of the War of the Rebellion, and were enormous and clumsy mechanisms, produced to meet an emergency. The Hoes in New York, Bullock in Pittsburg, and Walters in England, set themselves to work to develop presses printing from the roll, with all rotary motions. The first machine of this sort produced by Hoe had the type mounted on a cylinder. The first time it was tried it threw the type all over the floor, owing to the centrifugal force overcoming the wedging. By ingenious use of the column-rules, the type was finally made to stay in place pretty well, and the press went on the market as a great improvement over the clumsy 10-cylinder machine, which was thrown aside as fast as better presses could be bought. This first web-perfecting press of the Hoes was called type-revolving, and shortly gave way to the plate-cylinder web machines, which were made possible by the invention of methods of producing curved stereotype plates. In these machines no type is used, paper matrices being made from the forms, and plates cast therefrom in curved metal molds, so that they come out in proper shape to be clamped to the plate-cylinder of the press. This principle has maintained, and is in use in all the fast newspaper presses built to-day. Color-cylinders are sometimes added for producing illuminated sheets. The speed of these printing-machines is limited to about 24,000 an hour, but by doubling, quadrupling, and sextupling the machinery, the output is increased in the proportion indicated. Various patterns of these web-perfecting presses are built for printing newspapers and magazines by Cottrell, Hoe, Scott, Potter, Kidder, and others. For commercial printing, many forms of web-feeding presses are built. The Kidder flat-bed web press, shown in the illustration, is Meisel's patent; prints either one or two colors from type forms, and cuts off the web in any desired length. Scott builds a double-cylinder press, printing on one or both sides of the paper, either by hand-feeding or fed automatically from the roll. The Cox duplex press, and the Campbell multipress, each print from flat forms on both sides of the paper, and feed from the roll, delivering the product folded. Presses for small commercial printing are built to run by treadle or power, and have flat beds and platens, printing direct from the type. Among the common forms are the Gordon, which has a double rotating ink-disk; the Liberty, in which the bed and ink-disk oscillate under inking-rollers in fixed bearings; the Universal, in which the distribution is accomplished by means of a cylinder and vibrating rollers; the Peerless, having a goose-neck movement for the platen; the Golding, having wedge mechanism for throw-off of impression; the Colt's Armory, Prouty, &c. Lithographic cylinder presses are built in a form very similar to cylinder presses, but with lithographic stones or zinc plates mounted on the bed in place of the form. Copper-plate printing presses have flat beds, which roll under a cylinder fixed in upright bearings. The quality of printing has been greatly improved within twenty years by the use of half-tone photo-engraved plates for illustration, coated papers, graceful forms of type, hard packing on the platen, and superior ink-distribution on the printing-machines. The cost of press-work has been lessened by the use of more rapid machines, and automatic feeding from the roll, while the cost of composition has been equally reduced by the use of typesetting machines. See PAPER, TYPE, STEREOTYPING, and ENGRAVING.

Printing-press, n. A press with which books, pamphlets, &c., are printed.

Printless, a. That which leaves no impression; as, *printless feet*.

Print-shop, n. A shop where engravings or prints are kept for sale.

Print-works, n. An establishment where cloth is printed.

Prionus, Prionidae, n. pl. (Zool.) A genus and family of coleopterous insects. These insects only fly in the evening or during the night. The family comprises a very great number of species, which, from the variety in the form and size of their mandibles, antennae, thorax, and abdomen, are divisible into many smaller subgenera. Some (chiefly exotic species) have the body elongated, straight, with the thorax much shorter than the abdomen, and greatly curved at the sides, and the mandibles of large size in the males. Others have the body not so oblong, somewhat depressed in front, and with moderate-sized mandibles in both sexes, and the antennae strongly serrated in the males. The one here described is the *Prionus cervicornis*; the larvae live in the wood of the Gossampinus tree, and are eaten by the natives of South America. The largest of the tribe is also a native of South America; it is called *Titanus giganteus*, and well merits the name.

Prior, n. [Fr. *prieur*; It. *priore*; Lat. *priore*.] The

superior of a convent of monks, or one next in dignity to an abbot; one who presides over others in the same churches.

-a. Coming before in the order of time; antecedent; preceding; foregoing.

Prior, MATTHEW, a pleasing English poet, B. at Wimbome-Minster, 1664. He possessed little vigor or originality, but was remarkable for skill in versification, and his gay and easy grace of imagery and diction. D. 1721.

Priorate, n. [Lat. *prioratus*; It. *priorato*.] Government by a prior.

Priores, n. A female superior of a convent of nuns.

Priorily, adv. By way of precedence; antecedently.

Priority, n. [Fr. *priorité*.] State of being prior or antecedent in time, or of preceding something else; as, *priority of birth*.

(Law.) He who has the precedence in time has the advantage in right, is the maxim of the law; not that time, considered barely in itself, can make any such difference, but because the whole power over a thing being secured to one person, this bars all others from obtaining a title to it afterwards. In the payment of debts, the United States is entitled to priority when the debtor is insolvent, or dies and leaves an insolvent estate. The priority was declared to extend to cases in which the insolvent debtor had made a voluntary assignment of all his property, or in which his effects had been attached as an absconding or absent debtor, on which an act of legal bankruptcy had been committed. Among common creditors, he who has the oldest lien has the preference—it being a maxim both of law and equity, *qui prior est tempore potior est jure*.

Priorship, n. The state or office of prior.

Priory, n. A convent of which a prior is the superior; in dignity below an abbey.

Prise, n. See PRIZE.

Prism, n. [Fr. *prisme*; Gr. *prisma*, from *prizo*, or *prio*, to saw.] (Geom.) A polyhedron, two of whose faces are equal, similar, and parallel, while all the rest are parallelograms. Prisms take particular names from the figures of their ends, or opposite equal and parallel sides. When the ends are triangles, as in Fig. 2165, they are called *triangular prisms*; when the ends are square, *square prisms*; when the ends are pentagonal, *pentagonal prisms*; and so on. A *right prism* has its sides perpendicular to its ends; an *oblique prism* is that of which the two sides are oblique to the ends. The solid content of a prism is found by multiplying the area of the base into the perpendicular altitude; hence all prisms are to one another in the ratio compound of their bases and altitudes.

Fig. 2165.

(Optics.) A piece of glass or other diaphanous substance, more or less long, with triangular ends, employed to separate a ray of light into its constituent parts or colors by refraction. The prism is the instrument by means of which many of the remarkable phenomena of light and colors are exhibited. The prisms used for experiments are generally right triangular prisms of glass (Fig. 2165), and their principal section is a triangle (Fig. 2166). In this section the point A is called the *summit* of the prism, and the right line BC is called the *base*; these expressions have reference to the triangle ABC, and not to the prism. When the laws of refraction are known, the passage of rays in a prism is readily determined.

Let O be a luminous point (Fig. 2166) in the same plane as the principal section ABC of a prism, and let OD be an incident ray. This ray is refracted at D, and approaches the normal, because it passes into a more highly refracting medium. At K it experiences a second refraction, but it then deviates from the normal, for it passes into air, which is less refractive than glass. The light is thus refracted twice in the same direction, so that the ray is deflected towards the base, and consequently the eye which receives the emergent ray KH sees the object O at O'; that is, *objects seen through a prism appear deflected towards its summit*. The angle OEO', which the incident and emergent rays form with each other, express the deviation of light caused by the prism, and is called the *angle of deviation*. Besides this, objects seen through a prism appear in all the colors of the rainbow; this phenomenon is described under the name of DISPERSION, q. v. See also CHROMATICS, SIGHT, OPTICS, REFRACTION, DAYLIGHT-PRISM.

Daylight-prism, a form of corrugated glass applied to windows, its effect being to break up the light passing through it, and disperse it to all parts of the room. Its effect is to increase the illumination of rooms, the light being thrown in all directions, thus preventing the formation of shadows. It is much used to light large and long rooms in stores, and rooms with imperfect illumination. It has been somewhat widely introduced, with very beneficial effect.

Prismatic, Prismatical, a. [Fr. *prismatique*.] Resembling a prism.

—Separated or distributed by a prism; formed by a prism.

Prismatic colors. See DISPERSION, PRIMARY COLOR, SPECTRUM.

Prismatically, adv. In the form or manner of a prism.

Prismatoid'al, a. [Gr. *prisma*, *prismatos*, a prism, and *eidos*, form.] Having the form of a prism.

Prismoid, n. [Fr. *prismoide*.] A body approaching to the form of a prism.

Prismoid'al, a. Resembling the prism in form.

Prism'y, a. Relating to, or resembling a prism.

Prison, (priz'n,) n. [Fr.; It. *prigione*, from Lat. *prehensio*, *preusio*, a seizing, from *prendere*, to seize, to take.] A public building for the confinement or safe custody of criminals or debtors; a jail; any place of confinement or restraint. See PENITENTIARY SYSTEM.

—v. a. To shut up in a prison; to imprison.

Prison-base, n. A kind of rustic game, originated in England by the debtors incarcerated in the Queen's Bench prison, hence the name.

Prisoner, n. [Fr. *prisonnier*.] One who is confined in a prison by local arrest or warrant; a person under arrest or in custody of the sheriff, whether in prison or not; a captive; one taken by an enemy in war; one whose liberty is restrained, as a bird in a cage.

Pristina, a town of European Turkey, in Servia, 42 m. N.N.W. of Uskup.

Pristine, (pristin,) a. [Lat. *pristinus*, akin to Sans. *pra*, before.] Former; early; primitive; pertaining to an earlier state or period; original; first; ancient; old.

Prithée, a corruption of pray thee; as, I prithée; but it is generally used without the pronoun, prithée.

Prittle-prattle, n. Tittle-tattle; idle and empty talk.

Privacy, n. A state of being private, or in retirement from the company or observation of others; secrecy; a place of seclusion from company or observation; retreat; solitude; retirement; concealment of what is said or done.

Privas', a town of France, cap. of the dept. of Ardèche, 26 m. S.W. of Valence; pop. 5,300.

Private, a. [It. *privato* = Lat. *privatus*, from *privo*, to separate, deprive of, from *pricus*, separate, peculiar; akin to Sans. *prithak*, separately, *privus* being mutilated from *prith-vus*.] Separate; apart or withdrawn from the state, or from public affairs; not invested with public office or employment; unconnected with others;—hence, peculiar to one's self; belonging to, or concerning an individual only; peculiar to a number in a joint concern, to a company or body politic; sequestered from company or observation; secret; secluded; retired; not publicly known; not open; individual; personal;—in contradistinction from *public*.—A secret message.

Privateer, (pri-vat-er,) n. A ship or vessel of war owned and equipped by a private man, or by individuals, at their own expense, and having a commission from government to seize or plunder the ships of an enemy in war. *P. aro* in naval warfare much the same as volunteer corps are in the land-service. In both cases, the commissions proceeding from the government make those who bear them the instruments and servants of the state.

—v. n. To cruise in a commissioned private ship against an enemy, for seizing their ships or annoying their commerce.

Privateering, (pri-vat-er-ing,) n. The act of plundering the ships of an enemy by means of privateers.

Privateers'man, n. A man belonging to a privateer.

Privately, adv. In a private or secret manner; not publicly; in a manner affecting an individual or company.

Privateness, n. State of being private; secrecy; privacy; retirement; seclusion from company or society; state of an individual not invested with office.

Private-way, n. (Law.) A right of passage over another man's ground.

Privation, n. [Fr.; Lat. *privatio*, from *privo*, *privatus*, to bereave, to deprive of.] A taking away or depriving; state of being deprived; particularly, deprivation or absence of what is necessary for comfort; hardship; act of removing something possessed; the removal or destruction of any thing or quality; absence in general; act of the mind in separating a thing from something appendant.

Privative, (pri-vat-iv,) a. [Fr. *privatif*; late Lat. *privativus*.] Causing privation; consisting in the absence of something; not positive.

—n. That deprives of something; that of which the essence is the absence of something.

—A prefix to a word which changes its signification, and gives it a contrary sense, as *a* in Greek, and *un* and *in* in English.

Privativeness, n. Notation of absence of something that should be present.

Privet, n. (Bot.) See LIGUSTRUM.

Privilege, (-leg,) n. [Fr. *privilege*; Lat. *privilegium*—*privus*, separate, private, peculiar, and *lex, legis*, a law.] A law or ordinance for private or separate individuals; a particular and peculiar benefit or advantage enjoyed by a person, company, or society, beyond the common advantages of other citizens; any peculiar benefit or advantage not common to others of the human race; advantage; favor; benefit; prerogative; immunity; franchise; right; liberty. (Stock Ex., see PUT, p. 2017.)

—v. a. To bestow a privilege upon; to grant some particular right or exemption to; to invest with a peculiar right or immunity; to exempt from something, as taxes.

Privily, adv. [From *privy*.] Privately; secretly.

Privy, n. [Fr. *privauté*.] Privacy; secrecy, private knowledge; joint knowledge with another of a private concern, which is often supposed to imply consent or concurrence; relationship; friendly connection; admitted to participation of knowledge.

Priv'y, a. [Fr. *privé*; Lat. *privus*.] Private; peculiar; particular; pertaining to some person exclusively; assigned to private uses; not public; secret; clandestine; not open or public; appropriate to retirement; not

Fig. 2164.—PRIONUS.

shown; not open for the admission of company; privately knowing; admitted to the participation of knowledge, with another, of a secret transaction; admitted to secrets of state.

P. Council. (*Eng. Hist.*) An assembly of state advisers, unlimited in number, and appointed by the will of the sovereign, on whose nomination alone, after taking the prescribed oath, the appointment is completed. The sole qualification required is that the party to be appointed should be a natural-born subject of Great Britain. The dissolution of the *P. C.*, or the dismissal of any individual member of it, depends upon the will of the sovereign. Its natural duration is for the life of the sovereign, and is continued for six months longer, unless dissolved by the successor. The *P. C.* seems to have been intended, at one time, as a sort of check upon royal authority, and at first it consisted of about twelve members. The number is now unlimited, and it comprises most of the principal officers of state; but the usage is for no member to attend the deliberations of the Council that has not been specially summoned for that purpose. The members of the *P. C.* are entitled to the prefix of *Right-Honorable*, and rank next after the Knights of the Garter.

Privy, n. A partaker; a person having an interest in any action or thing. — A necessary house.

Prize, n. [*Fr. prise*, from *prendre*, to take; *Lat. prendere*.] That which is taken from another. — A reward gained by competitors; that which is obtained or offered as the reward of a contest; a premium; the reward gained by any performance. — Any valuable thing gained. — The money drawn by a lottery-ticket.

(*Law.*) Anything captured in virtue of the rights of war, but more especially captures made at sea. The rights of belligerents to capture the property of their enemies upon the sea is admitted, as well as their right to prevent any frauds or violations of the law of nations on the part of neutrals. The rights, however, are limited, and must be so exercised as not to trench upon the independence or rights of other nations. It is evident that many nice questions must, in such cases, necessarily arise between different states; and hence arises the necessity of having some tribunals to whom they may be referred. Accordingly, it is settled as a part of the law of nations, that every belligerent has a right to establish prize-courts to examine into all maritime captures, and judicially to decide upon their validity. The prize-courts of the captors have exclusive jurisdiction over all matters touching captures made under the authority of their sovereign; and the courts of other nations have no jurisdiction or authority to inquire into or to adjudicate upon them. The final sentence, when pronounced, is deemed the act of the sovereign, and he becomes responsible to all foreign nations for its correctness. — See *LAW OF NATIONS*.

Prize, v. a. To set or estimate the value of; to rate. — To value highly; to estimate to be of great worth; to esteem.

— *n.* A lever; a pry. — See *PRY*.

Prize-fight, n. A public fight for a reward or wager.

Prize-fighter, n. One who fights publicly for a reward or prize; a boxer; a pugilist.

Prize-fighting, n. Fighting or boxing for a wager or reward; pugilism.

Prize-master, n. An officer entrusted with the command of a captured ship.

Prize-medal, n. A medal bestowed as a prize.

Prize-money, n. The proceeds from the capture of a vessel divided among the captors.

Prizer, n. One who prizes, or estimates, or sets the value of a thing.

Prizing, n. (*Naut.*) The use or application of a lever to move any weighty body.

Pro. [*Lat. and Gr.*] For; in defence or behalf of.

Pro and con. [*Lat. pro*, and *con*, abbrev. of *contra*, against.] For and against.

Proa, n. A narrow canoe, about 30 feet long by 3 feet wide, used in the Ladrone Islands. The vessel is steered by a paddle at either end, and moves with great velocity either backwards or forwards, being adapted to a side-

large boats used by the Malays, propelled both by oars and sails.

Probabilism, n. (*Theol.*) A theory professed by some casuistical divines, according to which it is lawful to follow a *probable* opinion in doubtful points, although other opinions may seem to the mind of the inquirer more probable. Those who teach this doctrine are styled *Probabilists*.

Probability, n. [*Fr. probabilité*.] State or quality of being probable; likelihood; appearance of truth. — Anything which has the appearance of reality or truth. — That state of a case or question of fact which results from superior evidence or preponderation of arguments on one side, inclining the mind to receive it as the truth, but leaving some room for doubt.

Theory of Probabilities. (*Math.*) A very extensive and important application of analysis, having for its object the determination of the number of ways in which a future or uncertain event may happen or fail, in order that we may be enabled to judge whether the *chances* of its happening or failing are the greater, and in what proportion. — In this theory, the word *chance* is used to signify the occurrence of an event in a particular way, when there exist two or more ways by which it may take place, and no reason can be assigned for its happening in one way rather than another. In ordinary language, when an event is said to happen by chance, it is merely implied that the cause is unknown, or cannot be certainly appreciated. — In mathematical language, *probability* has a definite signification; and if all chances are considered equal, it is measured by a fraction, the numerator of which expresses the number of chances favorable to the occurrence of the event, and the denominator the whole number of chances favorable and unfavorable. — Every contingent event gives rise to two opposite probabilities, — one that the event will happen, the other that it will not; and the sum of these probabilities, which necessarily amounts to certainty, is always equal to unity. Hence, if *p* denote the probability of the occurrence of an event, the probability that it will not occur is $1 - p$. The probability of the simultaneous occurrence of several independent events is obtained by multiplying together their several probabilities. Thus, let *p* denote the probability of an event *A*, *q* that of an event *B*, *r* that of an event *C*, &c.; then the probability of the joint occurrence of those events is expressed by the continued product $p \cdot q \cdot r$, &c. — The probability of the successive recurrence of the same event, or of different events, is determined in a similar manner.

Probable, a. [*Fr.*; *Lat. probabilis*, from *probo*, to try, to test.] Having more evidence than the contrary; likely; credible. — That renders something likely or credible.

— *n.* That which is likely or probable.

Probably, adv. Likely; in likelihood; with the appearance of truth or reality.

Probang, n. (*Surg.*) A long, slender rod of whalebone, with a piece of sponge at its extremity, intended to push down extraneous bodies, arrested in the œsophagus, into the stomach.

Probate, n. [*Lat. probatus*, from *probare*, to prove.] (*Law.*) The proof before an officer authorized by law that an instrument offered to be proved or recorded is the last will and testament of the deceased person whose testamentary act it is alleged to be. In a trial at common law, or in equity, the probate of a will is not admissible as evidence, but the original will must be produced and proved the same as any other disputed instrument. This rule has been modified by statutes in some of the United States. In New York, the record, when the will is proved by the subscribing witnesses, is *prima-facie* evidence, and provision is made for perpetuating the evidence. In Massachusetts, Connecticut, North Carolina, and Michigan, the probate is conclusive of its validity, and a will cannot be used in evidence till proved. In Pennsylvania, the probate is not conclusive as to lands; and although not allowed by the register's court, it may be read in evidence. In N. Carolina, the will must be proved *de novo* in the court of common pleas, though allowed by the ordinary. In New Jersey, probate is necessary; but it is not conclusive. (See *LETTERS-TESTAMENTARY*.) The *proof* of the will is a judicial proceeding, and the probate a judicial act. The party propounding the instrument is termed the *propounder*, and the party disputing, the *contestant*. In England, proof *ex parte* was called *probate in common form*; and proof on notice to the next of kin, *proof in solemn form*. In the United States, generally speaking, proofs cannot be taken until citation or notice has been issued by the judges to all the parties interested to attend. On the return of the citation, the witnesses are examined, and the trial proceeds before the court. If the judge, when both parties have been heard, decides in favor of the will, he admits it to *probate*; if against the will, he rejects it, and pronounces sentence of *intestacy*.

— *a.* Relating to a probate, or court of probate.

Probation, n. [*Fr.*; *Lat. probatio*, from *probo*, *probatus*, to test.] Any proceeding designed to ascertain truth; moral trial. — The state of a man in the present life, in which he has the opportunity of proving his character and being qualified for a happier state. — Trial for proofs or satisfactory evidence, or the time of trial.

Probational, a. Pertaining to probation.

Probationary, a. Serving for trial.

Probationer, n. One who is on trial, or in a state to give proof of certain qualifications for a place or state; a novice. — In Scotland, a student in divinity who is licensed to preach; a licentiate.

Probativ, a. [*Lat. probativus*.] Serving for trial or proof.

Pro'bator, n. [*Lat.*, from *probare*, to try, to examine.] An examiner; an approver.

Pro'batory, a. [*Fr. probatoire*.] Serving for trial or for proof. — Relating to proof.

Probe, n. [*From Lat. proba*, to test.] (*Surg.*) An instrument, generally made of silver-wire, rounded at one end and pointed at the other, used for the purpose of examining wounds.

— *v. a.* To examine, as a wound, ulcer, or some cavity of the body, by the use of an instrument thrust into the part. — To search to the bottom; to scrutinize; to examine thoroughly into the causes and circumstances of.

Pro'bity, n. [*Fr. probité*; *It. probità*; *Lat. probitas*, from *probus*, good.] Honesty; rectitude; integrity in principle, or strict conformity of actions to the laws of justice.

Problem, n. [*Fr. problème*; *Lat. problema*; *Gr. problema*, from *proballo*, to throw or cast.] (*Log.*) A proposition that appears neither absolutely true nor absolutely false, and consequently may be asserted either affirmatively or negatively; — hence, it has come in general to be applied to any question involving doubt or uncertainty, and requiring further evidence for its solution.

(*Geom.*) A proposition requiring some operation to be performed, or construction to be executed; such as to bisect a line, to describe a circle passing through three given points.

Problematic, Problematical, a. [*Fr. problematique*.] Characterized by doubt or uncertainty; questionable; disputable; doubtful; dubious; uncertain; undetermined.

Problematically, adv. Doubtfully; dubiously; uncertainly.

Proboscitate, a. Having a proboscis or snout.

Proboscideal, a. Supplied with a proboscis.

Probosciform, n. [*Lat. proboscis*, and *forma*, a form.] Of the form, or use of the proboscis.

Proboscis, n. [*Gr.*, from *bosco*, I feed.] (*Entomology.*) The oral instrument of the *leptera* is so called, in which the ordinary trophi are replaced by an exarticulated sheath, terminated by a pair of tumid lobes (*labella*), and containing one or more lancet-shaped instruments (*sca-pella*), covered by a valve (see Fig. 331).

(*Mammalogy.*) The prehensile organ formed by a prolongation of the nose, of which the trunk of the elephant is an example.

Proboscis Monk'ey, n. (*Zoöl.*) See *KAHAW*.

Pro'bus, MARCUS AURELIUS VALERIUS, a native of Pannonia, who served in the Roman army, and became emperor after the death of Tacitus, 276. He distinguished himself by several victories over the barbarians in Gaul, and was killed by his mutinous soldiers, 282.

Procatartie, a. [*Gr. procatarticos*, previous, from *pro*, before, and *catartein*, to begin.] (*Med.*) Beginning or commencing; applied to causes which produce disease. By some these are employed synonymously with *predisponent* or *remote causes*; by others with *occasional* or *exciting causes*.

Procatart'is, n. [*Gr.*] (*Med.*) The preëxisting cause of a disease; which coöperates with others that are subsequent, whether internal or external.

Procedendo, n. [*Lat.*] (*Law.*) A writ which lies where an action has been removed from an inferior to a superior jurisdiction on insufficient grounds, to send the cause back to the inferior court for further proceeding.

Proced'ure, n. [*Fr. procédure*, from *Lat. procedo*.] Act of proceeding or moving forward; proceeding; process; progress; operation; a series of actions; manner of proceeding; course; conduct; management; action.

Proceed, v. i. [*Fr. procède*; *Lat. procedo* — *pro*, and *cedo*, to go.] (See *CEDE*.) To go forth or forward; to advance; to make progress; to move or pass forward from one place to another. — To pass from one point, stage, or topic, to another. — To issue; to arise; to emanate; to be produced; to come, as from a source or fountain; to come from a person or place; to prosecute any design. — To begin and carry on a series of actions or measures; to conduct; to act methodically; to have a course.

(*Law.*) To commence and carry on a judicial process. — To take effect; to have its course.

Proceed'er, n. One who goes forward; one who makes a progress.

Proceed'ing, n. A going forth or forward; process or movement from one thing to another; a measure or step taken in business; transaction; in the *pl.*, a course of measures or conduct; course of dealing with others.

Proceedings of a society, the published record of its action, or what takes place at its meetings.

Pro'ceeds, n. pl. (*Law.*) Money or articles of value arising or obtained from the sale of property. Goods purchased with money arising from the sale of other goods, or obtained on their credit, are *proceeds* of such goods. — The sum, amount, or value of goods sold, or converted into money.

Procel'smat'ic, a. [*Gr. procel'smaticos*, from *pro*, before, and *keleuma*, to incite.] Encouraging; inciting; urging.

(*Pros.*) Noting a foot of four short syllables.

Procel'laridæ, n. pl. (*Zoöl.*) The Petrel family, order *Natatores*, comprising swimming birds which have the bill more or less lengthened, compressed, deeply grooved, and appearing as if formed of several distinct parts; and nostrils opening from distinct tubes. They are all oceanic.

Pro'cess, n. [*Fr. procès*; *Lat. processus*, from *procedo*.] A going or coming forward; advance; progressive course; tendency; proceedings; gradual progress; course. — Operation; experiment; series of actions or experiments; series of motions or changes in growth.

Fig. 2167. — PROA.

wind in running between two places. The sail is lateen, with a boom upon one mast. — *Proa* is also the name for

decay, &c.: continual flux or passage, as of time; methodical arrangement; series of measures or proceedings. (*Law.*) In its original and most comprehensive sense, the whole of the proceedings in any action, civil or criminal, real or personal, from the beginning to the end. In its more ordinary and limited sense, the writs which issue out of any court for the purpose of compelling the parties to a suit, or others, to do some act connected with the progress of the suit.

(*Anat.*) Any sharp, blunt, irregular, or flat projection from a bone, or any smooth and peculiar surface appertaining to a bone. The best and most familiar examples of a process are the angular projections from the spinal column, each bone having 2 or 3, the *spinous*, *transverse*, *oblique*, and *articulating* processes. The bones which have the greatest number of processes are the *ethmoid*, *sphenoid*, and *temporal*. Processes in general serve the purpose of affording attachment to strong muscles.

Procession, (*sess'yun*.) *n.* [*Fr.*; *Lat. processio*.] A marching forward; act of proceeding or issuing.—A train of persons walking, or riding on horseback, or in vehicles, in a formal march, or moving with ceremonious solemnity.

—*v. n.* To go in procession. (*r.*)

Processional, (*-sess'yun-al*.) *a.* [*Fr. processional*; *Lat. processionalis*.] Pertaining to a procession; consisting in a procession.

Processionalist, *n.* A person who takes part in a procession. (*r.*)

Processionary, *a.* [*Lat. processionarius*.] Consisting in procession; as, *processionary service*.

Processioning, *n.* (*Law.*) A term used in Tennessee and N. Carolina to denote the manner of ascertaining the boundaries of land, as provided for by the laws of those States.

Processive, *a.* Going forward; advancing.

Process-verbal, (*pros'a-var-bal*.) [*Fr.*] (*Fr. Law.*) A memorandum or instrument drawn up and attested by officers of justice, containing a detailed statement of the circumstances which have taken place upon the execution of a commission, upon an arrest, upon a recognition or preliminary examination of a party accused, or in the course of other legal investigations, and set forth in the order in which they have occurred.

Prochein, *a.* [*Fr. prochain*, from *Lat. proxemus*, the next.] Next; nearest.

Prochein ami. (*Law.*) The nearest friend or next of kin to a child in his nonage, who in that respect is allowed to act for him, and be his guardian, &c.

Procida, GIOVANNI DA, (*pro-che'da*), the great Sicilian patriot and chief promoter of the conspiracy known as the "Sicilian Vespers," was b. at Palermo, about 1225. He was educated as a physician, became the trusted friend of the great emperor, Frederick II., and of his sons, Conrad IV. and Manfred. He took part in Conrad's unsuccessful attempt to recover his dominions from Charles of Anjou, and his estates were confiscated. The court of Aragon then received him, and conferred on him wealth and honors, but he did not forget his country and its oppressions. In 1279 he visited Sicily, and began preparing the people for the insurrection he meditated; obtained the aid of the emperor, Michael Paleologus, and the sanction of the Pope, Nicholas III.; and returned to Sicily in 1281. The insurrection broke out in March, 1282, and was completely successful. P., it is said, took no direct part in the massacre of the French. He continued to be the counsellor of the succeeding sovereigns, and d. abt. 1303.

Procida, (*pro-che'da*), a small island of S. Italy, at the N.W. extremity of the bay of Naples, separated from the mainland by a narrow channel $1\frac{1}{2}$ m. wide; *Lat.* $40^{\circ} 45'$ N., *Lon.* $95^{\circ} 5'$ E. *Ext.* 3 m. long, and $1\frac{1}{2}$ m. broad. *Pop.* 15,000.

Prociduous, *a.* [*Lat. prociduus*.] Falling from its natural place.

Proclaim, *v. a.* [*Fr. proclamer*; *Lat. proclamo*, from *pro*, and *clamo*, to call.] To promulgate; to announce; to publish; to give official notice of; to utter openly; to publish.—To publicly denounce.

Proclaim'er, *n.* One who proclaims or publishes by authority; one who announces or makes known.

Proclamation, *n.* [*Fr.*; *Lat. proclamatio*, from *proclamo*, *proclamatum*.] Act of proclaiming; a publication by authority; an official notice given to the public; a declaration of the sovereign's will, or of any supreme magistrate, openly published; an edict; a decree.—The paper containing an official notice to a people.

Proclivity, *n.* [*Fr. proclivité*; *Lat. proclivitas*.] Inclination; propensity; proneness; tendency.—Readiness; facility of learning.

Procelian, *a.* [*Gr. pro*, before, and *koilos*, hollow.] (*Anat. and Zool.*) Those vertebræ are so called which have a cavity or eup at the fore part of the body, and a ball at the back part. The term is also applied to a group of animals—*e. g.*, a certain family of reptiles which manifest this vertebral character. It is found in most existing Saurians, but not in any extinct terrestrial species of earlier date than the Wealden period. The oölitic pterodactyls were *procelian*.

Proconsul, *n.* (*Roman Hist.*) Originally an officer invested with consular command without the office. Thus, a consul sometimes had his command prolonged to him after his year of magistracy had ceased, with the title of *proconsul*. The provinces which at first were governed by prætors were, for the most part, subsequently put under *proconsuls* and *proprators*. The office was properly annual; but it might be prolonged, as was done in the case of Cæsar. In the time of the republic the *proconsul* held the military command as well as the civil jurisdiction of his province; but Augustus, on assuming the chief power in the state, remodelled

the system by a new partition of the provinces, and by separating the civil jurisdiction, which was left to the *proconsul*, from the military command.

Proconsular, **Proconsulary**, *a.* Pertaining to a *proconsul*.—Under the government of a *proconsul*.

Proconsulate, **Proconsulship**, *n.* The office of a *proconsul*, or the term of his office.

Procrastinate, *v. a.* [*Lat. procrastino*, *procrastinatum*—*pro*, and *crastinus*, of to-morrow.] To put off till to-morrow, or from day to day, or to a future time; to postpone; to defer; to delay; to retard; to protract; to prolong.

—*v. n.* To delay; to be dilatory.

Procrastination, *n.* [*Lat. procrastinatio*.] A putting off or deterring till to-morrow, or to a future time; delay; dilatoriness.

Procrastinator, *n.* One who defers the performance of anything to a future time.

Procrastinatory, *a.* Relating to procrastination.

Procreant, *a.* [*Lat. procreans*, from *procreare*, to procreate.] Productive; pregnant. (*r.*)

Procreate, *v. t.* [*Fr. procréer*; *Lat. procreo*, *procreatus*—*pro*, and *creo*, to make, bring forth, beget, produce.] To bring forth; to beget; to generate and produce; to engender; to propagate; to produce.

Procreation, *n.* [*Fr.*; *Lat. procreatio*.] Act of begetting; generation and production of young.

Procreative, *a.* Generative; productive.

Procreativeness, *n.* Power of generation.

Procreator, *n.* [*Lat.*] One who begets; a generator; a father or sire.

Procrustes, [*Gr. prokroustes*, the stretcher.] (*Myth.*) A surname for the robber Polypemon, or Damastes, who placed his victims on a bed which was either too small or too large, and to the size of which he adapted their limbs by force. He was slain by Theseus.

Proctocoele, *n.* [*Gr. proktos*, anus, and *kēlē*, tumor.] Inversion and prolapse of the mucous coat of the rectum, from relaxation of the sphincter, with more or less swelling.

Proctor, *n.* [Contracted from *Lat. procurator*—*pro*, and *curo*, *curatus*, to take care of.] One who takes care of anything for another; one who is employed to manage the affairs of another; a person authorized to manage another's cause in certain courts in England, especially the ecclesiastical; an officer who attends to the morals of the students in the English universities, and enforces obedience to the college regulations.

—*v. a.* To manage. (*A cant word.*)

Proctorage, *n.* The management of affairs as conducted by a proctor; superintendence;—used in contempt.

Proctorial, *a.* Relating to a proctor.

Proctorship, *n.* The office or dignity of a proctor of a university.

Proctorsville, in *Indiana*, a village of Crawford co., abt. 110 m. S. by W. of Indianapolis.

Proctorsville, in *Vermont*, a post-village of Windsor co., abt. 75 m. E. of Montpelier.

Procombent, *a.* [*Sp. procumbente*; *Lat. procumbens*, from *procumbo*, to lean or bend forward.] Lying down on the face; prone.

(*Bot.*) Trailing on the ground.

Procurable, *a.* That may be procured; obtainable.

Procuracy, *n.* [*Lat. procuratio*.] The management of anything; the duty of a proctor.

Procuratio, *n.* [*Fr.*; *Lat. procuratio*.] Act of procuring; procurement.—The management of another's affairs.—The instrument by which a person is empowered to transact the affairs of another.

Procuratio money. (*Law.*) Money for procuring a loan.

Procurator, *n.* [*Lat.*] (*Roman Hist.*) A Roman provincial magistrate, whose office it was to manage affairs of the revenue, and exercise a judicial authority in matters pertaining to it. Sometimes the procurator discharged the office of governor, especially in a small province, as did Pontius Pilate in Judæa; in which case, but not otherwise, he had the power of inflicting capital punishment. This magistracy did not exist under the republic, its duties being comprised under those of the prætor *proconsul*.

(*Law.*) One who undertakes the care of any legal proceeding for another, and stands in his place by virtue of a power of *procuratio* from him. A *mandatory* is said to differ from a *procurator* in that the latter acts only by virtue of an express written instrument. A *proctor*, an agent; an attorney.

Procuratorial, *a.* Relating to a proctor; made by a proctor.

Procuratorship, *n.* The office of a procurator.

Procuratory, *a.* Tending to procuration.

Procure, *v. a.* [*Fr. procurer*; *It. procurare*; *Lat. procuro*, from *pro*, and *curo*, to care for.] To get; to gain; to acquire; to obtain; as, by care, effort, labor, request, loan, or purchase.—To bring about; to effect; to contrive.

—*v. n.* To pimp; to lawd.

Procurement, *n.* Act of procuring or obtaining; attainment; a causing to be effected.

Procure'r, *n.* One who procures or obtains; that which brings on or causes to be done.—A pimp; a pander.

Procure'ss, *n.* A female procurer; a bawd.

Procyon, *n.* [*Lat. and Ger.*, from *pro*, before, and *cyon*, a dog.] (*Astron.*) The brightest star in the constellation of *Canis Minor*.

(*Zoöl.*) See *Raccoon*.

Prodigal, *a.* [*Fr. prodigue*; *Lat. prodigus*, from *prodigo*, to drive forth or away.] Squandering; given to extravagant expenditures; expending money or other things without necessity; profuse; lavish; wasteful; not frugal or economical.—Expended to excess or without necessity; profusely liberal.

—*n.* One who expends money extravagantly or without necessity; one who is profuse or lavish; a waster; a spendthrift.

Prodigality, *n.* [*Fr. prodigalité*.] State or quality of being prodigal; extravagance in the expenditure of what one possesses, particularly of money; profusion; waste; excessive or profuse liberality.

Prodigally, *adv.* With profusion of expense; extravagantly; lavishly; wastefully; with liberal abundance; profusely.

Prodigious, *a.* [*Fr. prodigieux*; *Lat. prodigiosus*.] Partaking of the nature of a prodigy; such as may seem a prodigy; very great in size, quantity, extent, &c.; adapted to excite wonder; huge; enormous; monstrous; portentous; amazing; astonishing; wonderful; extraordinary.

Prodigiously, *adv.* Enormously; wonderfully; astonishingly.—Very much; extremely.

Prodigiousness, *n.* Enormousness; portentousness; amazing qualities.

Prodigy, *n.* [*Fr. prodige*; *It. prodigio*; *Lat. prodigium*.] In ordinary modern language, a surprising though natural event;—in contradistinction to *miracle*, which denotes something out of the course of nature. Among the Romans, however, any extraordinary event or appearance, to which, from insufficient acquaintance with natural history, they could not assign a cause, was termed a *prodigy*, and regarded as indicating the dispositions of their gods. Hence the number of recorded prodigies which occur in Roman history. See *OMENS*.

Produce, *v. a.* [*Lat. produco*—*pro*, and *duco*, to lead, bring.] To lead or bring forth; to bring before or forward; to bring or offer to view or notice; to exhibit to the public.—To bring forth; to bear; to yield; to generate and bring forth, as young.—To impart; to furnish; to supply.—To cause; to effect; to beget; to give rise to; to occasion; to create; to make.—To draw out in length; to lengthen.

(*Geom.*) To extend, as a line.

—*v. n.* To yield offspring; to bring about proper results, effects, &c.

—*n.* That which is produced, brought forth, or yielded; product.

Produce'r, *n.* One who produces; one who generates.

Produce'ble, *a.* That may be produced or brought into being; that may be generated or made; that may be brought into view or notice; that may be exhibited.

Produce'bleness, *n.* The state or quality of being produce'ble.

Product, *n.* [*Fr. produit*; *It. prodotto*, from *Lat. productus*, brought or led forth, from *produco*. See *PRODUCE*.] That which is produced by nature, as fruits, grain, metals; produce.—That which is made, formed, or produced by mental application; composition; production; performance; work.—Effect; result; issue; something consequential.

(*Math.*) The result of, or quantity produced by, the multiplication of one number by another, or a quantity of any kind by a number.

Producta, *n.* [*Lat.*] (*Pal.*) An extinct genus of fossil bivalve shells, closely allied to the living genus *Terebratula*. They only occur in the older secondary rocks.

Productible, *a.* [*Fr.*] That may be produced; produce'ble.

Productile, *a.* [*Lat. productilis*, from *producere*, to extend.] That may be produced or drawn out at length.

Production, *n.* [*Fr.*; *Lat. productio*.] Act or process of producing or bringing forth, or exhibiting to view.—That which is produced or made; product; produce; fruit; work; performance; composition.

—A prolongation; as, "the mesentery is the *production* of the peritoneum."

Productive, *a.* [*Fr. productif*; *It. produttivo*.] Having the quality or power of producing.—Fertile; fruitful; producing good crops; prolific.—Bringing into being; causing to exist; efficient.

Productively, *adv.* By production; with abundant produce.

Productiveness, *n.* The quality of being productive.

Productivity, *n.* Productiveness; state or quality of being productive.

Productress, *n.* A female who produces.

Proeguminal, *a.* [*Fr. proegumene*; *Gr. proegoumenos*, from *proegeisthai*, to go first.] (*Med.*) Predisponent; as, *proeguminal causes*.—*Dunghison*.

Proem, *n.* [*Old Fr. proeme*; *Gr. proöimion*—*pro*, and *oimas*, way, course, path.] That which goes before a song; a prelude.—Preface; introduction; preliminary observations to a book or writing.

Proemial, *a.* Introductory; prefatory; preliminary. (*r.*)

Proemptosis, *n.* [*Gr. præpemptein*, from *pro*, before, and *emiptein*, to fall in.] (*Chron.*) The term applied to the lunar equation or addition of a day to prevent the new moon happening too soon; this must be done every 330 years, and another day must be added every 2,400 years. The opposite term is *metemptionsis*, which is used to signify the solar equation necessary to prevent the new moon from falling a day too late, or the suppression of the Bissexile every 134 years.

Prof, Abbreviation of *Professor*.

Profanation, *n.* [*Fr.*; *Low Lat. profanatio*.] Act of profaning or of violating sacred things, or of treating them with contempt or irreverence; desecration.—The act of treating with abuse or disrespect.

Profane, *a.* [*Fr.*; *Lat. profanus*, from *pro*, before, and *fanum*, a temple.] Unholy; not sacred;—hence, secular; relating to secular things.—Polluted; not pure; unhallowed; unholy.—Irreverent of sacred things or names;—hence, blasphemous; obscene; given to swearing.

Profane', v. a. [Lat. *profano*.] To render profane or unholy; to desecrate; to violate, as anything sacred, or treat with abuse, irreverence, obloquy, or contempt; to pollute; to defile. — To apply to temporal uses; to use as base or common.

Profane'ly, adv. With irreverence to sacred things or names; with abuse or contempt for anything venerable.

Profane'ness, n. Quality of being profane; irreverence of sacred things; particularly, the use of language which implies irreverence towards God; the taking of God's name in vain.

Profan'er, n. One who profanes; one who, by words or actions, treats sacred things with irreverence; one who uses profane language; a polluter; a defiler.

Profan'ity, n. Profaneness, *q. v.*

Profeti'tious, a. [Lat. *profetitus*, from *proficisci*, to set out.] Derived, or proceeding, as from an ancestor. (R.)

Profert in curia. [Lat., he produces in court.] (Law.) In pleading, a declaration on the record that a party produces the deed under which he makes title in court.

Profess', v. a. [Fr. *professer*, from Lat. *profiteor*, from *pro*, before, and *futeor*, to confess.] To declare in strong terms; to make public or explicit declaration or profession of. — To declare publicly one's skill in, for inviting employment. — To lay claim to.

— *v. n.* To enter into a state of life, secular or religious, by public declaration.

Profess'edly, adv. By profession; by open declaration or avowal.

Profession, n. [Fr.; Lat. *professio*.] Act of professing; open declaration of one's sentiments or belief; avowal; acknowledgment. — The business which one professes to understand and to follow for subsistence; calling; vocation; employment; avocation. — A declaration; a claim. — The collective body of persons engaged in a calling. — The entering into a religious order.

Profession'al, a. Pertaining to a profession, or to a calling.

Profession'alist, n. A person who practices in some profession. (R.)

Profession'ally, adv. By profession, or avowal. — By calling or vocation; as, a person engaged *professionally*.

Profes'sor, n. [Lat.; Fr. *professeur*.] One who professes; one who makes open declaration of his sentiments or opinions; — particularly, one who has professed religion by joining himself to a church of Christ. — One who publicly teaches any science or branch of learning; — particularly, an officer in a university, college, or other seminary, whose business is to read lectures or instruct students in a particular branch of knowledge. — One who is visibly or professedly religious.

Professo'rial, a. [Fr. *professoral*.] Pertaining to a professor.

Professo'rialism, n. The characteristics, manners, &c., of a professor. (R.)

Professo'riate, Profes'sorship, n. The office of a professor or public teacher of the arts or sciences.

Proffer, v. a. [Fr. *proferer*, to utter, to deliver; Lat. *profero* — *pro*, and *fero*, to bring, bear, carry. See BEAR.] To propose; to offer for acceptance; to tender. — To essay or attempt of one's own accord.

— *n.* An offer made; something proposed for acceptance by another. — Essay; attempt. (R.)

Profferer, n. One who offers anything for acceptance.

Prof'iciency, Profi'ciency, n. [From Lat. *proficiens*, from *proficio* — *pro*, and *facio*, to make, to perform.] Advance in the acquisition of any art, science, or knowledge; improvement; progression in knowledge.

Prof'icient, a. [Lat. *proficiens*.] Making progress or advancement; becoming an adept; well-qualified; competent; skilful.

— *n.* One who has made considerable advances in any business, art, science, or branch of learning.

Prof'iciently, adv. By proficiency.

Pro'file, n. [Fr. *profil*; It. *profilo*, from *pro*, and *filum*, a thread.] (*Fine Arts*.) The outline of a section through a cornice or other series of mouldings. — The outline of a capital when drawn geometrically. — The outline of the human face in a section through the median line, &c.

(*Fort.*) A vertical section through a work, perpendicular to the face of the work.

Pro'filist, n. One who takes profiles.

Profit, n. [Fr.; It. *profitto*, from Lat. *profectus*, progress, increase, from *proficio* — *pro*, and *facio*, to make.] Advance; progress; increase; growth; improvement; benefit; gain; emolument. — The advance in the price of goods sold beyond the cost of purchase; any pecuniary advantage; any benefit. — Any accession of good from labor or exertion.

— *v. a.* [Fr. *profiter*; It. *profitare*.] To be profitable or advantageous; to benefit; to advantage; to improve; to advance.

— *v. n.* To gain profit or advantage in pecuniary interest; to make improvements; to improve; to grow wiser or better; to advance in anything useful. — To be of use or advantage; to bring good to.

Profitable, a. [Fr.] Yielding or bringing profit or gain; yielding benefit or advantage; gainful; lucrative; productive; advantageous; beneficial; serviceable.

Profitableness, n. Quality of being profitable; gainfulness; usefulness; advantageousness.

Profitably, adv. With profit or gain; gainfully; usefully; advantageously; with improvement.

Profiting, n. Profit; accession of good.

Prof'itless, a. Void of profit, gain, or advantage.

Profligacy, n. A profligate course of life; a state of being abandoned in moral principles and in vice.

Profligate, n. [Lat. *profligatus*, from *profligo* — *pro*,

and *fligo*, to strike.] Vile; lost to principle, virtue, or decency; shameless in wickedness or vice; abandoned; dissolute; depraved; vicious; wicked.

— *n.* An abandoned man; a wretch who has lost all regard to good principles, virtue, or decency.

Profligately, adv. Shamelessly; in a profligate manner.

Profligateness, n. The quality of being profligate. — Profligacy.

Profluent, a. [Lat. *profluens*.] Flowing forward; as, a "profluent stream." — Milton.

Profound, a. [Fr. *profond*; Lat. *profundus*, from *pro*, and *fundus*, bottom, foundation.] Deep; descending far below the surface; low, with respect to neighboring places. — Lowly; humble; submissive; as, *profound* reverence. — Intellectually deep; not obvious to the mind; not easily fathomed by the mind; as, a *profound* treatise. — That enters deeply into the subject; strongly impressed; as, a *profound* impression. — Having profound or hidden qualities; as, a *profound* thinker. — Bending lowly; humble; as, a *profound* bow.

— *n.* The deep; the abyss. — The sea; the ocean.

Profound'ly, adv. Deeply; with deep concern; with deep penetration into science or learning; with deep knowledge or insight.

Profoundness, n. State or quality of being profound; depth of place, depth of knowledge or of science.

Profund'ity, n. [L. Lat. *profunditas*.] Depth of place, of knowledge, or of science; profoundness.

Profuse, a. [Lat. *profusus*, from *profundo* — *pro*, and *fundo*, to pour, pour out.] Lavish; liberal to excess; prodigal; extravagant. — Overabounding; exuberant.

Profuse'ly, adv. Lavishly; prodigally; with exuberance; with great abundance.

Profuse'ness, n. State or quality of being profuse; lavishness; prodigality; extravagant expenditure; great abundance; profusion.

Profusion, n. [Fr.; Lat. *profusio*.] State or quality of being profuse; lavishness; prodigality; extravagance of expenditure; lavish effusion; rich abundance; exuberant plenty.

Prog, v. n. [Du. *pragchen*; Ger. *prachen*.] To rob; to steal. — To shift meanly for provisions; to seek food in a beggary manner. (Low.)

— *n.* Victuals; provisions of any kind. (Low.) — A person seeking food by begging.

Progen'itor, n. [Lat., from *progigno*, *progenitus* — *pro*, and *gigno*, to beget, bear, bring forth, produce.] A forefather; the founder of a family; an ancestor in the direct line.

Progen'iture, n. [Fr.] Progeny; offspring.

Progen'y, n. [Lat. *progenies*.] Offspring; race; children; descendants of the human kind, or offspring of other animals.

Prognathism, n. A proloungation or forward extension of the jaws.

Prognathous, a. [Gr. *pro*, before, and *gnathos*, the jaw.] (*Anat.*) Having a projecting jaw.

Prognosis, n. [Gr., from *pro*, before, and *gignoskein*, to know.] (*Med.*) The judgment formed by a physician regarding the future progress and termination of any disease.

Prognostic, a. [Sp. *pronastico*; Gr. *prognastikos* — *pro*, and *gignascō*, to know, to perceive. See KNOW.] Knowing or perceiving beforehand; foreshowing; indicating something future by signs or symptoms.

— *n.* That which foreshows; a sign; omen; presage; token; indication.

(*Med.*) A foreknowledge; a prognosticating.

Prognosticable, a. Such as may be foreknown or foretold.

Prognosticate, v. a. [It. *prognosticare*; Sp. *prognosticar*.] To indicate, as a future course or event by present signs; to foretell; to predict.

Prognostication, n. [Sp. *pronosticacion*.] Act of prognosticating, or of foreshowing a future course or event by present signs; the act of foretelling a course or event by present signs. — A foretoken; previous sign.

Prognosticator, n. [Sp. *pronosticador*.] One who prognosticates; a foreknower or foreteller of a future course or event by present signs.

Pro'gram, n. Same as PROGRAMME, *q. v.* (R.)

Pro'gramme, n. [Fr.; Gr. *programma* — *pro*, and *graphō*, to write. See GRAPHIC.] A public notice or order in writing; a brief outline or explanation of the order to be pursued, or the subjects embraced, in any public exercise, performance, entertainment, or series of exercises.

Pro'gress, n. [Fr. *progrès*; Lat. *progressus*, from *progreor* — *pro*, and *gradior*, to take steps, to step, to walk. See GRADE.] A moving or going forward by steps; a proceeding onward; advancement; a moving forward in growth; increase; advance in business of any kind; advance in knowledge; intellectual or moral improvement; proficiency; removal; passage from place to place; a journey of state; a circuit.

— *v. i.* To move forward in space; to pass; to proceed; to continue onward in course; to advance; to make improvement.

Pro'gress, in New Jersey, a post-village of Burlington co., abt. 11 m. N.E. of Camden.

Progression, (-gresh'un), n. [Lat. *progressio*.] Act of moving forward; a proceeding in a course; motion onward. — Course; passage.

(*Math.*) Regular or proportional advance in increase or decrease of numbers or magnitudes; continued proportion, arithmetical, geometrical, or harmonical.

P. Arithmetical. See ARITHMETICAL PROGRESSION.

P. Geometrical. A series in which each term is derived from the preceding one by multiplying it by a constant quantity, called the *ratio* of the progression.

If the ratio is greater than unity, the progression is *increasing*; if the ratio is less than unity, the progression is *decreasing*.

P. Harmonical. The conditions of the *H. P.* of a series are frequently stated as follow: *three numbers are in H. P., when the first has to the third the same ratio that the excess of the first over the second has to the excess of the second over the third*, i. e., *a, b, c* are in *H. P.* when $a : c :: a - b : b - c$; but a much simpler conception of it is obtained by means of one of its properties, viz., that if the terms of a harmonical series be inverted, they form a series in arithmetical progression; thus, 1, 2, 3, 4, 5, 6, &c., is an arithmetical progression; and 1, $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{5}$, $\frac{1}{6}$, &c., is a *H. P.*; 1, $\frac{1}{2}$, 0, $-\frac{1}{2}$, -1 , &c., is an arithmetical progression; and 1, 2, ∞ (infinity), -2 , -1 , &c., is a *H. P.* This series is principally important in connection with the theory of music, in determining the length of the strings of instruments.

(*Mus.*) The succession of chords or movements of the parts in harmony.

Progres'sional, a. Such as are in a state of increase or advance. — Improving.

Progres'sionist, n. One who makes or advocates progress.

Progres'sist, n. A progressionist.

Progres'sive, a. [Fr. *progressif*.] Moving forward; proceeding onward; advancing. — Improving.

Progres'sively, adv. By motion onward; by gradual steps or regular course; with progress.

Progres'siveness, n. The state of advancing.

Prohib'it, v. a. [Lat. *prohibeo*, from *pro*, and *habeo*, to have, to hold.] To forbid; to interdict by authority. — To debar; to hinder; to prevent.

Prohib'iter, n. One who forbids or interdicts.

Prohibition, (-bish'un), n. [Fr.; Lat. *prohibitio*.] Act of forbidding or interdicting; a declaration to hinder some action; an interdict.

Writ of prohibition. (*Law.*) A writ issued by a superior court, directed to the judge and parties of a suit in an inferior court, commanding them to cease from the prosecution of the same, upon a suggestion that the cause originally, or some collateral matter arising therein, does not belong to that jurisdiction, but to the cognizance of some other court. The writ of prohibition may also be issued when, having jurisdiction, the court has attempted to proceed by rules differing from those which ought to be observed; or when, by the exercise of its jurisdiction, the inferior court would defeat a legal right.

Project', v. a. [Lat. *projicio*, *projectus* — *pro*, and *jacio*, to throw or cast.] To throw forth; to cast or shoot forward. — To cast forward in the mind; to scheme; to contrive; to devise, as something to be done. — To draw or exhibit, as the form of anything; to delineate.

— *v. i.* To shoot forward; to extend beyond something else; to jut; to be prominent. — To plan; to scheme. (R.)

— *n.* [Fr. *projet*.] Something cast forward in the mind; a scheme; a design; a plan; something intended or devised; contrivance. — An idle scheme; a design not practicable.

Project'ed, pp. or a. Cast forward; schemed; devised; delineated.

Project'ile, a. [Fr.] Throwing or impelling forward. — Given by impulse; impelled forward.

— *n.* (*Mech.*) A heavy body which is thrown or driven by an impelling force from the surface of the earth, and acted on by gravity and the resistance of the air. Examples of projectiles are a stone thrown from the hand, a bullet from a gun, &c. The theory of projectiles is a part of high mechanics, and very important in the study of the science of gunnery. Projectiles may move either perpendicularly, horizontally, or obliquely, and, as stated above, are acted upon by the force of projection and the force of gravity. The path which they describe must therefore depend upon the ratio of these forces. The resistance of the air must also be taken into account. When the direction of the impelling force is perpendicular, the path of the projectile is a straight line. Gravity causes the motion to be accelerated when the direction is downward; but when the direction is upward, the motion is retarded and finally destroyed, at which point the projectile falls by its gravity alone. When a projectile passes in a horizontal or oblique path, so that the direction of the projecting force forms an angle with the force of gravity, a curvilinear motion is the result; and according to Galileo's discovery of the laws of falling bodies, the path of the projectile, setting aside the resistance of the air, is a parabola. The theory of the parabolic motion of projectiles, in which they are supposed to move in a non-resisting medium, is based upon principles deduced from the law of Galileo. The resistance of the air is, however, of great importance; and the problem to determine its effect was first solved by the Prussian general Georg Friedrich von Tempelhoff. — See AERODYNAMICS, GUNNERY, &c.

Projection, (-jek'shun), n. [Fr.; Lat. *projectio*.] Act of projecting, or of throwing or shooting forward. — A part jutting out, as of a building; an extension beyond something else. — Act of scheming; plan; scheme; design of something to be executed; delineation. — The representation of something.

(*Math.*) The theory of projections is general in its application, and has been employed within the last few years to generalize the ancient geometry, and as a powerful aid to algebra. Its basis is the investigation and determination of those properties which, being true of a figure, are also true of its projections, such properties being necessarily dependent not on the "magnitude," but on the "position" of the lines and angles belonging to the figure. These properties are generally denomi-

ated projective properties. For instance, the three conic sections, the *parabola*, *ellipse*, and *hyperbola* are merely various projections of a circle on a plane; and all "positional" properties of the circle are at once, by this theory, connected with similar properties of the three conic sections. The theory is also largely employed in demonstrative mechanics.

(*Geog.*) *Projections of the sphere.* See *MAP*.

Project'or, n. [Fr. *projecteur*.] One who projects or forms a scheme or design.—One who forms wild and impracticable schemes.

Project'ure, n. [Lat. *projectura*.] (*Arch.*) The out-jutting or prominence which the moulding and members have beyond the plane of a wall or column.

Projet, (prô-zhâ') n. [Fr., a project, a plan.] (*International Law*.) The draft of a proposed treaty or convention.

Prolapse', v. n. [Lat. *prolapsus*, from *pro*, and *labi*, to glide, to fall.] To fall down or out of place.

Prolapse', Prolaps'ion, Prolap'tion, n. *Prolapsus*, *q. v.*

Prolapsus, n. (Med.) A genus of disease, distinguished by the falling down of a part through the orifice with which it is naturally connected.

Pro'late, a. [Lat. *prolatus*, from *proferre*, to bring forth.] Extended; lengthened; extended beyond the line of an exact sphere.

Prolate spheroid. (Math.) A spheroid produced by the revolution of an ellipse around its major axis;—so called in opposition to the *oblate* spheroid, which is produced by the revolution of the ellipse about its minor axis.

Pro'leg, n. [Lat. *pro*, for, and Eng. *leg*.] (*Zoöl.*) One of the fleshy, exarticulate, pediform, often retractile organs, which assist various larvae in walking and other motions, but which disappear in the perfect insect.

Prolegomena, n. pl. [Gr.] (*Lit.*) Preliminary observations prefixed to a book or treatise, serving as an introduction, and with the view of enabling the reader the better to understand the book, or to enter deeper into the science.

Prolegomenary, a. Containing introductory observations; introductory.

Prolegomenon, n.; pl. PROLEGOMENA. [Gr., from *prolegōin*, to say beforehand, from *pro*, before, and *legein*, to say.] Previous discourse; introductory observations.

Prolep'sis, n. [Gr., from *prolembanō*, *prolepsomai*, from *pro*, and *lambanō*, to take.] (*Rhet.*) A figure by which objections are anticipated or prevented.—An error in chronology, when an event is dated before the actual time.

Prolep'tic, Prolep'tical, a. [Gr. *proleptikos*.] Pertaining to prolepsis or anticipation.—Antecedent; previous.

(*Med.*) Said of a periodical phenomenon which anticipates the usual time, *i. e.*, which recurs at progressively shorter intervals.

Prolep'tically, adv. By way of anticipation.

Prolep'tics, n. sing. (Med.) The art and science of predicting in medicine.

Proletaire', n. [Fr.] One of that class of the community who depend solely upon physical labor for support; the laboring class.

Proletarian, a. [Lat. *proletarius*, from *proles*, offspring.] Mean; wretched; vile; vulgar. (*R.*)

Proletariat, n. The laboring class.

Proletary, n. [Lat. *proletarius*; Fr. *proletaire*.] (*Roman Antiq.*) A citizen of the lowest class, who served the State with his children. The laboring class; those depending solely upon physical labor.

Prolicide, n. [Lat. *proles*, offspring, and *cædere*, to kill.] (*Medical Jurisprudence*.) The destruction of human offspring. Jurists divide the subject into *fœticide*, or the destruction of the fetus in the uterus, or *infanticide*, or the slaying of the new-born infant.

Proliferous, a. [Lat. *proles*, offspring, and *fero*, to bear.] (*Bot.*) Applied to a branch or a cluster of flowers from another root.

Prolific, a. [Fr. *prolifique*; from Lat. *proles*, offspring, and *ferre*, to bear.] Having the quality of generating; producing young or fruit; fruitful; generative.—Productive of results; as, *prolific* controversies or disputes.

(*Bot.*) Same as *PROLIFEROUS*, *q. v.*

Prolificacy, n. Prolificity.

Prolifical, a. Prolific.

Prolifically, adv. Fruitfully; pregnantly.

Prolificat'ion, n. [Fr.] The act of generating or producing young or fruit.

(*Bot.*) The act of producing offspring; the generation of young.

Prolificity, n. The state of being prolific.

Prolix', a. [Lat. *prolixus*—*pro*, and *laxus*, wide, loose, open, roomy. See *LAX*.] Stretched far out; extended to a great length; long; diffuse; protracted; said of a discourse.—Minute in narration or argument; tedious; tiresome; prosy;—applied to a writer or speaker.

Prolix'ity, n. [Late Lat. *prolixitas*.] State or quality of being prolix; great length; minute detail.

Prolix'ly, adv. At great length; tediously.

Prolix'ness, n. Tediousness.

Prolu'centor, n. [Lat., from *proloqui*, from *pro*, for, and *loqui*, to speak.] One who speaks for or before others.—The speaker or chairman of a convocation.

Prolu'centorship, n. The office or dignity of a prolocutor.

Prolu'gizer, n. One who prefaces or introduces a discourse or performance; one who delivers a prologue.

Prologue, (pro'log,) n. [Gr., from *pro*, before, and *logos*, discourse.] (*Dramatic Lit.*) A short poem or address, sometimes prefixed to plays, explaining the subject of the piece, and not unfrequently apologizing

for the shortcomings of the author. Among the ancients the player who delivered this address was called the *prologus*.

Prolong', v. a. [Fr. *prolonger*; Lat. *pro*, and *longus*, long.] To lengthen in time; to extend the duration of; to protract; to delay; to draw out in time by delay; to continue.—To put off to a distant time; to postpone.—To extend in space or length.

Prolong'able, a. That may be prolonged.

Prolon'gate, v. a. [Low Lat. *prolongare*.] To lengthen in space.—To extend or delay in time. (*R.*)

Prolonga'tion, n. [Fr.; L. Lat. *prolongatio*.] Act of prolonging or lengthening in time or space.—Extension of time by delay or postponement.

Prolonge, (-long,) n. [Fr.] (Mil.) A rope used to drag a gun-carriage without the limber, when it is required to retire firing through a street of a village, or any narrow defile.

Prolonger, n. The person or thing that lengthens in time or space.

Prolong'ment, n. Prolongation.

Prolu'sion, n. [Lat. *prolusio*, from *pro*, and *ludere*, to play.] A prelude, or trial before the principal performance; a performance for diversion.

Prome, or Prone, a city of Burnah, India, on the Irrawaddy, 24 m. N.N.W. of Rangoon; Lgt. 18° 50' N., Lon. 95° 5' E.; pop. 30,000.

Promenade', n. [Fr., from *promener*, from late Lat. *prominare*, to drive forward or along—*pro*, and *minare*, to drive with threats.] A walk for amusement, show, or exercise.—A place for walking.

—*v. i.* To walk for amusement or exercise.

Promenad'er, n. A person who promenades.

Promerops, Promerop'idæ, n. [Gr. *pro*, before, and *merops*, a bee-eater.] (*Zoöl.*) A genus and family of tenuirostral birds, order *Insectores*, many of which are remarkable for the beauty of their plumage, and its singular arrangement. They have an extensible tongue, and feed upon insects, soft fruits, and the saccharine juices of plants. They are mostly natives of Africa.

Promethean, a. [Lat. *Prometheus*.] Relating to Prometheus.

Promethens. (Myth.) The son of the Titan Japetus, was brother to Atlas and Epimetheus, and surpassed all mankind in cunning. He ridiculed the gods, and deceived Jupiter himself. To punish *P.* and the rest of mankind, Jupiter took fire away from the earth; but *P.* climbed to the heavens, by the assistance of Minerva, and stole fire from the chariot of the sun. This provoked Jupiter, who ordered Vulcan to make a woman of clay, and, after he had given her life, he sent her to *P.*, with a box of the most valuable presents. (See *PANDORA*.) *P.*, suspecting the snare, took no notice of Pandora, but induced his brother to marry her, when the god, still more irritated, caused this wily mortal to be tied to a rock on Mount Caucasus, where, for 30,000 years, a vulture was to feed upon his liver, which was never to be diminished. He was delivered from this punishment 30 years afterwards, by Hercules.

Prominence, Prominency, n. [Lat. *prominentia*; Fr. *prominence*.] A standing out from the surface of anything; conspicuousness.—That which juts out; a protuberance.

Prominent, a. [Fr.; Lat. *prominens*.] Jutting out; protuberant; in high relief; full; large, as eyes.—Eminent; distinguished above others; principal.—Most visible or striking to the eye; conspicuous.

Prominently, adv. In a prominent manner; so as to stand out beyond the other parts; eminently; in a striking manner; conspicuously.

Promiscu'ity, n. The state or quality of being promiscuous.

Promiscuous, a. [Sp. *promiscuo*; Lat. *promiscuus*, from *promisco*—*pro*, and *misceo*, to mix or mingle.] Mixed; mingled; consisting of individuals united in a body or mass without order; confused; undistinguished.—Common; indiscriminate; not restricted to an individual.

Promiscuously, adv. In a crowd or mass without order; with confused mixture; indiscriminately; without distinction of kinds.

Promiscuousness, n. A state of being promiscuous or mixed without order or distinction.

Prom'ise, n. [Fr. *promesse*; Lat. *promissum*, from *promitto*—*pro*, and *mitto*, to send, to let go.] An assurance of a benefit; word pledged; a declaration or engagement, verbal or written, made by one person to another, which binds the person who makes it to do or forbear a certain act specified.—A binding declaration of something to be done or given for another's benefit.—Hopes; expectation, or that which affords expectation of future distinction.—That which is promised; fulfilment or grant of what is promised.

Promise of marriage. (Law.) A contract mutually entered into by a man and a woman that they will marry each other. Every marriage is necessarily preceded by an express or implied contract of this description, as a wedding cannot be agreed upon and celebrated at one and the same instant. If the man or the woman be an infant, or labor under any other legal disability, he or she will not be bound by a promise of marriage; but if one of the parties be an infant and the other an adult, the promise will be binding upon the latter. If the communications between the parties are verbal, the only questions which usually arise relates to evidence and proof. The very words, or time, or manner of the promise need not be proved, but it may be inferred from the conduct of the parties, and from the circumstances which usually attend an engagement to marry; as, visiting, the understanding of friends and

relations, preparations for marriage, and the reception of the man by the woman's family as a suitor. When the parties are at a distance from each other, and the offer is made by letter, it will be presumed to continue for a reasonable time for the consideration of the party addressed; and if accepted within a reasonable time, and before it is expressly revoked, the contract is then complete. If no time be fixed and agreed upon for the performance of the contract, it is, in contemplation of law, a contract to marry within a reasonable period after request, and either party may call upon the other to fulfil the engagement, and in case of a default, may bring an action for damages. The common opinion that an agreement to marry between persons incapable of forming a valid marriage is necessarily void, is erroneous. If the disability pertains only to one of the parties, and the other party was ignorant of it at the time of the engagement, it will constitute no defence for the former. Thus, if a man who already has a wife living makes a promise of marriage to another woman who is ignorant of the former marriage, he will be liable in damages for a breach of his promise, although a performance is impossible. When an action for breach of promise of marriage is brought by a woman, it seems that she may prove, in aggravation of damages, that the defendant, under color of a promise of marriage, has seduced her.

Prom'ise, v. a. To make a declaration to do or to forbear some act.—To afford reason to expect.—To make declaration or give assurance of some benefit to be conferred; to pledge or engage; to bestow.

—*v. n.* To assure one by a promise or binding declaration.—To afford hopes or expectations; to give good reason to expect good.

Prom'ise-breaker, n. Violation of promise.

Prom'ise-breaker, n. A violator of promises.

Prom'ise City, in Iowa, a post-village of Wayne co., abt. 10 m. E. of Corydon.

Prom'isee, n. One to whom a promise is made.

Prom'iser, n. One who makes a promise.

Prom'isingly, adv. In a promising manner.

Prom'isor, n. (Law.) One who promises.

Prom'issive, a. That makes, or employs a promise.

Prom'issorily, adv. By way of promise.

Prom'issory, a. [It. *promissorio*.] Containing a promise or binding declaration of something to be done or forborne.

Promissory note. (Law.) A promise, in writing, made by one person to pay another, absolutely and unconditionally, a certain sum of money at a time specified. It is rarely made payable only to the person named therein, but also to order or bearer, by which it becomes negotiable. The person who grants the note is called the *maker*; the person to whom it is payable, the *payee*, who becomes the *indorser*, when he negotiates it by *indorsement*; and the person to whom it is transferred is the *indorsee*.

Prom'ontory, n. [Fr. *promontoire*; Lat. *promontorium*—*pro*, and *mons*, *montis*, a mountain.] (*Geog.*) A part of a mountain, or a high point of land or rock, projecting into the sea beyond the line of the coast; a headland; a high cape.

Promote', v. a. [Lat. *promotus*, from *promoveo*, from *pro*, and *moveo*, to move.] To advance; to forward; to further; to help; to contribute to the growth, enlargement, or excellence of, as of anything valuable, or to the increase of, as of anything evil.—To raise to higher rank or honor; to exalt; to elevate; to dignify.

Promoter, n. One who or that which forwards, advances, or promotes; an encourager.—One who excites or promotes; as, a *promoter* of rebellion.

Promo'tion, n. [Fr.; Lat. *promotio*.] Act of promoting; advancement; encouragement.—Exaltation in rank or honor; preferment.

Promo'tive, a. That tends to promote; apt to forward; advancing.

Prompt, a. [Fr.; Lat. *promptus*, from *promio*, from *pro*, and *emo*, to take.] Ready and quick to act as occasion demands; acting with cheerful alacrity;—said of persons.—Quick; ready; without hesitation; as, *prompt* obedience.

—*n.* (*Com.*) A limit of time given for payment of an account for goods purchased.

—*v. a.* To move or excite to action or exertion; to instigate; to incite.

—To assist, as a speaker when at a loss, by pronouncing the words forgotten or next in order.—To dictate; to suggest to the mind of.

Prompt-book, n. The book made use of for the purpose of prompting.

Prompt'er, n. One who prompts; one who admonishes or excites to action.—One whose business is to assist an actor or speaker when at a loss, by uttering the first words of a sentence, or words forgotten.

Prompt'itude, n. [Fr.; from Lat. *promptus*.] State or quality of being prompt; quickness of decision and action when occasion demands.—Readiness of will; cheerful alacrity.

Prompt'ly, adv. Readily; quickly; expeditiously; cheerfully.

Prompt'ness, n. Promptitude.—Readiness; quickness; alacrity.

Prompt-note, n. (Com.) A note given to a purchaser at the time of sale, reminding him of the time of payment, &c.

Prompt'on, in Pennsylvania, a post-borough of Wayne co., abt. 4 m. N.W. of Honesdale.

Prom'ptuary, a. Relating to, or assisting in preparation. (*R.*)

—*n.* [Lat. *promptuarium*.] A storehouse; a repository; a magazine.

Prompture, *n.* Suggestion; motion given by another; instigation. (R.)

Promulgate, *v. a.* [Lat. *promulgo*, *promulgatus*.] To expose to public view; to publish; to proclaim; to make known by open declaration.

Promulgating, *ppr.* Publishing.

Promulgation, *n.* [Fr.; Lat. *promulgatio*.] Act of promulgating; publication; open declaration.

Promulgator, *n.* A publisher; one who makes known, or teaches publicly, what was before unknown.

Promulge, (*pro-mulj*), *v. a.* [Fr. *promulguer*, from Lat. *promulgare*.] To promulgate; to publish; to teach openly. (R.)

Promulger, *n.* A publisher; a promulgator.

Promus'cis, *n.* [Lat.] (Zool.) The name of the succorians organs of the hemipterous, formed by the union of the two jaws (maxillæ) to the lower lip, which they embrace; thus forming a jointed organ, containing four long capillary lancets and a short tongue.

Pronaos, *n.* [Gr., from *pro*, before, and *naos*, a temple.] (Arch.) The front porch of a temple.

Pronation, *n.* [Fr.; from Lat. *pronare*, to bend forward.] (Anat.) The motion by which the inferior extremity of the radius passes before the ulna, and thus causes the hand to execute a kind of rotation from without inwards.

Prone, *a.* [Lat. *pronus*, probably akin to Gr. *proneuō*, to stoop forward—*pro*, before, and *neuō*, to nod; Lat. *nūo*, found in *annūo*, to nod to; Sans. *pravāna*, prone. See *NOB*.] Turned or leaning forward; bending forward; inclined; not erect; lying with the face downward; headlong; precipitous; inclining in descent; sloping; declivous; inclining; propense; disposed.

Prong-horn. (Zool.) See *ANTELOPEÆ*.

Pronominally, *adv.* With the effect, or after the manner, of a pronoun.

Pronoun, *n.* [Lat. *pro*, for, and *nomen*, a name.] (Gram.) The name given to a class of words which are used as substitutes for the names of persons and things. Pronouns are of several kinds: *personal*, *relative*, *demonstrative*, &c. Personal pronouns indicate directly a person or thing—as, *I, thou, it*; demonstrative pronouns relate to a present subject, as, *this, that*; relative refer to some subject previously mentioned, as, *who, which, that*; interrogative ask a question, as, *who? which? what?*; possessive indicate possession, as, *mine, thine, his*.

Pronounce, *v. a.* [Fr. *prononcer*; Lat. *pronuntio*, *pronuntius*—*pro*, to announce, declare, make known.] To make publicly known; to proclaim; to announce; to speak; to utter articulately; to articulate.—To utter formally, officially, or solemnly.—To speak or utter rhetorically; to deliver; to utter, in almost any manner.—To declare or affirm.

—*v. n.* To make declaration; to speak; to utter an opinion. (R.)

Pronounceable, *a.* That may be pronounced or uttered.

Pronouncer, *n.* One who pronounces; one who utters or declares.

Pronouncing, *a.* Teaching pronunciation; as, a *pronouncing dictionary*.

Pronsk, a town of Russia, govt. of Riazan, on the Prona, 30 m. S. of Riazan; pop. 1,700.

Proun'bial, *a.* [Lat. *pronuba*, bridesmaid, from *pro*, and *nuba*, bride.] That presides over marriages.

Proun'cial, *a.* Expressing pronunciation.

Pronunciamento, (*-noon-the-a-*) [Sp. *pronunciamento*.] A proclamation; formal public announcement.

Pronunciation, (*-shi-a'shun*), *n.* [Fr.; Lat. *pronuntiatio*.] Act of pronouncing or uttering; utterance.—The mode of uttering words or sentences.

Pronunciative, *a.* [Lat. *pronunciativus*.] Relating to pronunciation.

Pronunciator, *n.* A pronouncer. (R.)

Pronunciatory, *adv.* Expressing pronunciation.

Proof, *n.* [Fr. *preuve*.] Something which proves, or tends to prove; test; trial; essay; experiment; any effort, process, or operation that ascertains truth or fact.—That which convinces the mind of the certainty of truth or fact, and produces belief; evidence; testimony; reason; argument; demonstration.—Firmness or hardness that resists impression, or yields not to force; impenetrability of physical bodies.—Firmness of mind; stability; unshaken adhesion.

(Law.) See *EVIDENCE*.

(Math.) A verification of a rule or a result.

(Engraving.) An impression taken from an engraving to prove the state of it during the progress of executing it; also one taken before the letters are engraved on the plate.

(Printing.) An impression on paper taken for examination or correction. (*pl.* PROOFS.)

—*a.* Able to resist something; impenetrable.

Proof-arm, *v. a.* To arm securely, or with power to resist.

Proofless, *a.* Unproved; wanting evidence.

Prooflessly, *adv.* Without evidence or proof.

Proof-sheet, *n.* (Printing.) A proof.

Proof-spirit, *n.* A mixture of equal weights of absolute alcohol and water; the specific gravity of such a mixture is 0.917; but that of the proof-spirit of commerce is 0.920 at 60°. The term *proof* appears to be derived from the gunpowder test. Spirit was poured over gunpowder and the vapor inflamed; if it fired the gunpowder, it was *over proof*; if it burnt without igniting the powder, owing to the residuary water rendering the powder damp, it was said to be *under proof*. The weakest spirit capable of firing gunpowder was the proof-spirit of pharmacy, specific gravity 0.920.

Proof-text, *n.* A text of Scripture believed to prove a particular doctrine.

Prop, *v. a.* [L. Ger., and Du. *proppen*; Belg. *proppe*, a prop, support.] To support or prevent from falling by placing something under or against; to support by standing under or against.

—To support or sustain.

—*n.* That which supports or sustains an incumbent weight; that on which anything rests for support; a support; a stay.

Propædætic, **Propædætical**, *a.* Giving preliminary instruction; teaching beforehand.

Propædætics, *n. sing.* [From Gr. *pro*, before, and *paideîn*, to bring up a child.] Preliminary learning, connected with any art or science.

Propagable, *a.* That may be continued or multiplied by natural generation or production.—That may be spread, or extended by any means, as tenets, doctrines or principles.

Propaganda, *n.* [Lat. *propagare*; Fr. *propagande*.] (Ecccl. Hist.) A designation given to those institutions by which Christianity is propagated in heathen countries; but is more particularly applied to certain institutions established by the Papacy for the extension of its religion and power throughout the world. The Propaganda, strictly so called, or *Congregatio de propaganda Fide* (Congregation for propagating the Faith), was founded at Rome in 1622, by Gregory XV., having for its object the extension of Catholic faith and the extirpation of heretics. It consists of a board of cardinals, and has a secretary, who is generally a bishop or archbishop, and a number of priests, advisers, and under-secretaries, who meet for consultation weekly. The cardinal-prefect of the Propaganda is the Pope's representative in all matters relating to foreign missions. In 1627, Pope Urban VIII. added to the congregation a college for the education of priests for the missionary work; and here young men from all parts of the world (except Catholic countries) are educated. Connected with the Propaganda is a printing establishment, celebrated for the number of works in different languages which it has sent out.

Propagandism, *n.* [Fr. *propagandisme*.] The propagating of certain tenets or principles.

Propagandist, *n.* One who devotes himself to propagating certain tenets or principles.

Propagate, *v. a.* [Lat. *propagare*, *propagatum*.] To give continuance or greater number to the kind of by generation or successive production; to multiply.

—To extend; to impel forward in space, as sound.

—To cause to go from person to person; to diffuse; to disseminate; to spread.

—To promote; to increase; to carry from place to place.

—To generate; to produce.

—*v. n.* To have young or issue; to be produced or multiplied by generation, or by new shoots or plants.

Propagation, *n.* [Fr.; Lat. *propagatio*.] Act of propagating; the continuance or multiplication of the kind by generation or successive production.

—The spreading or extension of anything; forwarding or promotion.

Propagative, *a.* Producing by generation.

Propagator, *n.* One who propagates; one who continues or multiplies his own species by generation; one who continues or multiplies any species of animals or plants; one who spreads or causes to circulate, as a report; one who plants, originates, or extends; one who promotes.

Propel, *v. a.* [Lat. *propello*, *propulsus*, from *pro*, and *pello*, to drive, thrust, push. See *COMP.*] To drive forward; to urge or press onward by force.

Propeller, *n.* [Lat. *pro*, forward, *pello*, to drive.] (Mech.) An arrangement by which motion is given to a carriage bearing a portion of the working gears required to traverse regularly in a horizontal direction.

The term is also very generally applied to a peculiar mechanism set in motion by some mechanical power in vessels or ships, which causes them to advance by the resistance of the water itself. Oars and sails were the only propellers used before the steam-engine was applied to purposes of navigation. The uses of wheels bearing floats, working in the water by the side of the boats to which they were attached, had been known for a very long period; but it was not till the steam-engine was applied as a motive power to them that they became generally used as propellers. When paddle-wheels are used they are placed upon a horizontal shaft or axis, and in front of the center of gravity of the vessel. There does not, however, seem to be any uniformity among steamboat builders as to the exact position of these parts of the machinery. The screw propeller has occasionally been used for many years, and now has come largely into use, not only for deep-sea traffic, but to some extent on canals and narrow rivers. For war vessels, the sheltered position of the screw and of the engines gives that description of propeller an incomparable advantage over the exposed engines and wheels of those vessels which are propelled by paddles. The large passenger steamers and naval vessels of to-day have often two or more screws, a method of value not only for propulsion, but for steering, and of the greatest utility in case of an accident to one of the screws. Other propelling agents have of late years been experimented with, the most promising being jets of water driven by steam power backward into the sea, whose resistance forces the vessel forward. See *JET PROPULSION*; *PROPELLER*, in SECTION II.

Propend'ency, *n.* Inclination or tendency to desire anything.—Attentive deliberation. (R.)

Propense, *a.* [Lat. *propensus*, from *propendeo*, from

pro, and *pendeo*, to hang.] Leaning toward, in a moral sense; inclined; disposed; prone.

Propense'ly, *adv.* After a propense manner.

Propense'ness, *n.* The state or quality of being propense; inclination. (R.)

Propension, **Propensity**, *n.* [Lat. *propensio*; Fr. and Sp. *propension*.] Bent of mind, natural or acquired; natural tendency; disposition; bias; inclination.

Proper, *a.* [Fr. *propre*; Lat. *proprius*.] One's own; special.—Peculiar; naturally or essentially belonging to a person or thing; not common.

—Particularly suited to; noting an individual.—Pertaining to one of a species, but not common to the whole.—Fit; adapted; accommodated; suitable; qualified.—Exact; precise; just.

(Her.) Applied to a charge which is borne of its natural color.

Properly, *adv.* Fitly; suitably; in a proper manner.—In a strict sense.

Proper'tius, **SEXTUS AURELIUS**, a Roman poet, was B. at Melvania, about B. C. 52. Nothing more of his life is known than that, after the end of the civil war, he found a patron at Rome, in Mæcenæ, through whom he obtained the favor of the emperor. He appears to have been the bosom friend of Ovid, and was also on terms of intimacy with other eminent contemporaries. His life appears to have been a series of amours, and his "elegies" are, for the most part, expressions of his passion.

Property, *n.* [Fr. *propriété*; Lat. *proprietas*, from *proprius*, proper.] A peculiar quality or attribute of anything; that which is inherent in a subject, or naturally essential to it; characteristic.—An acquired or artificial quality; that which is given by art or bestowed by man.

—The exclusive right of possessing, enjoying, and disposing of a thing; ownership.—Possession held in one's own right.—The thing owned; that to which a person has the legal title, whether in his possession or not.—An estate, whether in lands, goods, or money.—Nearness or right; as, "Propinquity and property of blood."—*Shaks.*

—A portion of land, with buildings, &c., attached.

(Logic.) A predicable which denotes something essentially conjoined to the essence of the species. There are enumerated in books on logic four kinds of *P*, which are termed *universal*, but not *peculiar*; *peculiar*, but not *universal*; *universal and peculiar*; *universal and peculiar*, but not at every time. The last kind is more properly designated as *accident*.

(Law.) All things are not the subject of *P*; the sea, the air, and the like, cannot be appropriated; every one may enjoy them, but he has no exclusive right in them. When things are fully our own, or when all others are excluded from meddling with them, or from interfering about them, it is plain that no person beside the proprietor, who has this exclusive right, can have any claim either to use them, or to hinder him from disposing of them as he pleases; so that *P*, considered as an exclusive right to things, contains not only a right to use those things, but a right to dispose of them, either by exchanging them for other things, or by giving them away to any other person without any consideration, or even throwing them away. *P* is divided into *PERSONAL PROPERTY*, and *REAL PROPERTY*. *q. v.*

Property-man, *n.* A person who has charge of the properties of a theatre.

Proph'asis, *n.* [Gr., from *prophaineîn*, from *pro*, and *phaineîn*, to bring to light.] (Med.) A cause, especially a remote cause, of a disease; prognosis.

Prophecy, (*prof'e-se*), *n.* [Gr. *propheteia*, from *prophēti*, to predict.] Prophecy is defined to be "a knowledge and manifestation of secret things which a man knows not from his own sagacity, nor from the relation of others, but by an extraordinary revelation of God from heaven." It is thus generally and properly restricted to those predictions which are to be met with in the sacred Scriptures. In Hebrew, the word translated *prophet* properly signifies inspired; and a prophet was, therefore, one who spoke by Divine inspiration. The principal function of the prophets of the Old Testament was to keep up the intercourse between God and his people; and hence their prophecies are frequently called the words of Jehovah. They announced the will of God towards his people, directed them on the right path, reproved their iniquities, and pointed out to them the future consequences of their transgressions. The language in which they predicted future events is necessarily in general obscure; for their object was not to gratify human curiosity with respect to the future, but rather to give weight to their teaching, so that when the time of their fulfilment came, people might know that their inspirations were of God. The ways by which the Deity made known his will were various,—as by dreams, visions, angels, symbolic representations, impulses on the mind. Many writers, especially within the last hundred years, have attempted to explain away the divine character of the prophecies, by attributing them to a high degree of religious enthusiasm and ecstasy, or a kind of spiritual clairvoyance. Others, again, as Dr. Williams in the *Oxford Essays and Reviews*, deny their prophetic character, and maintain that the very few cases that can claim to be strictly prophetic "tend to melt, if they have not already melted, in the crucible of free inquiry," leaving only certain "deep truths and great ideas." These views, however, are rejected by the great majority of theologians, who maintain that it is contrary to the plain intent of the Old Testament, and opposed by the testimony of Christ and his Apostles in the New. "The very course of history," says Tholuck, "has impressed upon these declarations the stamp and confirmation of an objective and

supernatural inspiration. The great prophetic era extends from the time of Samuel to the Babylonian captivity, during which time hardly an important event happened in which they do not appear as performing a leading part. Schools of the prophets are mentioned as existing in various places, and Samuel, Elijah, and Elisha, as principals of such institutions; their pupils being frequently designated the "sons of the prophets." About a hundred years after the return from the Babylonian captivity, the prophetic profession ceased, and Haggai, Zechariah, and Malachi, are uniformly mentioned by Jewish tradition as the last of the prophets. The New Testament mentions the power of prophecy as one of the gifts of the Holy Spirit, and the Book of Revelation bears a marked prophetic character.

Proph'esier, n. One who prophesies or predicts events.

Proph'esy, v. a. [Sp. *profetizar*; Fr. *prophétiser*; Gr. *prophēteuō*, to be an interpreter of the gods.] To foretell; to predict. — To foreshow. (R.)

— **v. n.** To utter prophecies or predictions; to make declarations of events to come; to preach.

(*Script.*) To instruct in religious doctrines; to interpret or explain Scripture or religious subjects; to exhort.

Prophet, (prō'fēt,) n. [Fr. *prophète*; Sp. *profeta*; Gr. *prophētēs* — *pro*, before, and *phēmī* (belonging to the root *phōō*, to bring to light), to make known.] One who foretells future events; a predictor; a foreteller. — A person inspired or instructed by God to announce future events, and to instruct the people. — An interpreter.

Books of the Prophets. (Script.) They form an important part of the Old Testament. The Jews included in this class the books of Joshua, Judges, Samuel, and Kings, but excluded the book of Daniel, as he did not strictly belong to the class of the prophets. Modern biblical critics, however, exclude these four books, and include that of Daniel. They are divided into the four great and twelve minor prophets: the former being Isaiah, Jeremiah, Ezekiel, and Daniel; the latter Hosea, Joel, Amos, Obadiah, Jonah, Micah, Nahum, Habakkuk, Haggai, Zechariah, Zephaniah, and Malachi.

Prophetess, n. A female prophet.

Proph'etic, Proph'etical, a. [Fr. *prophétique*.] Containing prophecy; foretelling future events; unfolding that which is to come.

Proph'eticality, n. The state or quality of being prophetic.

Proph'etically, adv. By way of prediction; in the manner of prophecy.

Proph'eticalness, n. Propheticity.

Proph'etize, v. n. [Fr. *prophétiser*; Lat. *prophetizare*; Gr. *prophetizein*.] To make predictions. (U.)

Proph'etstown, n. In Illinois, a post-village of Whitesides co., abt. 20 m. S.W. of Fulton.

Prophylactic, Prophylactical, a. [Gr. *phylaktikos*, from *pro*, and *phylassein*, to guard.] (Med.) Preventive; preservative.

Prophylactic, n. A medicine or agent intended to prevent or preserve from disease.

Propinquity, (prō-pīn'kwī-ty,) n. [Lat. *propinquitās*, from *propinquus*, from *prope*, near.] Nearness in place; neighborhood. — Approximation in time. — Nearness of kindred.

Propit'ecus, n. (Zool.) A genus of quadrupeds allied to the Lemurs, but distinguished from them by its shorter muzzle and its rounded ears, as well as by the marked disproportion in length between the hinder and anterior extremities, the greater length of its hands, and the shortness of its anterior thumb. They inhabit Madagascar.

Propitiable, a. That may be propitiated, or that may be made propitious.

Propitiate, v. a. [Lat. *propitio*, *propitiatus*.] To make propitious; to render favorable; to conciliate; to appease and render favorable, as one offended; to reconcile; to make propitious.

— **v. n.** To make propitiation or atonement.

Propitiation, n. [Fr.; L. Lat. *propitiatio*.] The act of propitiating, or of appeasing wrath and conciliating the favor of an offended person; the act of making propitious.

(*Theol.*) The atonement, or atoning sacrifice which removes the obstacle to man's salvation.

Propitiator, n. [L. Lat.] One who propitiates.

Propitiatorily, adv. By way of propitiation.

Propitiatory, a. [Fr. *propitiatoire*.] Having the power to make propitious; conciliatory.

— **n.** (*Jewish Hist.*) The mercy-seat; the covering of the ark in the Jewish temple.

Propitious, a. [It. *propizio*; Lat. *propitius*, from *prope*, near.] Kind; favorable; — said of men. — Disposed to be gracious or merciful; ready to forgive sins and bestow blessings; — applied to God. — Favorable; as, *propitious* weather.

Propitiously, adv. Favorably; kindly.

Propitiousness, n. Kindness; disposition to treat another kindly; disposition to forgive. — Favorableness; as, the *propitiousness* of a climate.

Proplasm, n. [Lat. *proplasma*; Gr. *proplasma*, from *pro*, before, and *plasma*, a thing formed or moulded.] A mould; a matrix. (R.)

Proplastic, a. Belonging to a mould or cast.

Proplastice, n. The art of making moulds for castings.

Propolis, n. [Lat. and Gr., from *pro*, before, and *polis*, a city.] A name applied to the substance employed by bees in closing up crevices in their hives, and in strengthening the margins of the cells of the comb. It is a glutinous resin, of a reddish-brown color and an aromatic odor, and in time acquires a firm consistence. It is collected from the wild poplar and other trees.

Propo'nent, n. [Lat. *proponens*, from *proponere*, to

propose.] One who makes a proposal or lays down a proposition.

— **a.** Proposing.

Proportion, (-pōr'shun,) n. [Fr.; Lat. *proportio*, from *pro*, for, and *portio*, *portionis*, a share.] The comparative relation of parts, portions, or shares, or the comparative relation of one thing to another in respect of size, quantity, or degree. — Suitable adaptation of one part or thing to another; equal or just shares. — The relation between unequal things of the same kind, by which their several parts correspond to each other with an equal augmentation and diminution.

(*Math.*) The equality of two ratios. There are two methods by which the comparison of two magnitudes may be effected. First, it may be determined by how many units one is greater than the other (*difference*); secondly, one magnitude may be taken as the measure of the other, and it may be determined how many times it is contained in it (*quotient*). The former relation is called an *arithmetical P.* In the arithmetical *P.*, the difference, and in the geometrical, the quotient, are called the *ratio* of the *P.* Each *P.* consists of four terms, — two *extremes* and two *means*. In every arithmetical *P.* the sum of the extremes is equal to the sum of the means. Thus in an arithmetical *P.* either extreme or mean can be found by subtracting the given extreme or mean from the sum of the given means or extremes; and in a geometrical *P.* by dividing the product of the means or extremes by the given extreme or mean.

(*Chem.*) See AFFINITY, and ATOMIC THEORY.

(*Fine Arts.*) The proper relation of the measure of parts to each other and to the whole. In many instances *proportion* may be considered almost synonymous with *fitness*, though there is a distinction between them, since every form susceptible of proportion may be considered either with respect to its whole as connected with the end designed, or with respect to the relation of the several parts to the end. In the first case, fitness is the thing considered; in the second, proportion. Fitness, therefore, expresses the general relation of means to an end, and proportion the proper relation of parts to an end. It is hence needless to dwell on the intimate connection that exists between beauty and proportion, in all complex forms.

Proportion, v. a. To adjust the comparative relation of, as of one thing, or one part with another. — To form with symmetry or harmoniousness, as the parts of the body.

Proportionable, a. That may be proportioned, or made proportional.

Proportionableness, n. The state or quality of being proportionable.

Proportionably, adv. According to proportion or comparative relation.

Proportional, a. [Lat. *proportionalis*.] Having a due proportion or comparative relation; being in suitable proportion or degree. — Relating to proportion. — Having a proper relation to.

(*Math.*) Having the same ratio.

— **n.** (*Math.*) One of the terms of a proportion.

(*Chem.*) An equivalent. See ATOMIC THEORY.

Proportionality, n. [Fr. *proportionnalité*.] The quality of being proportional.

Proportionally, adv. In proportion; in due degree; with suitable comparative relation.

Proportionate, a. [L. Lat. *proportionatus*.] Proportional; — adjusted to something else according to a certain rate or comparative relation.

— **v. a.** To proportion; to make proportional; to adjust according to a settled rate or to due comparative relation.

Proportionately, adv. With due proportion; according to a settled or suitable ratio or degree.

Proportionateness, n. The state or quality of being adjusted according to a settled rate or comparative relation.

Proportionless, a. Without proper proportions.

Proportionment, n. The act of making proportional.

Propo'sal, n. That which is offered or propounded for consideration or acceptance; a scheme or design; terms or conditions proposed.

Propose, v. a. [Fr. *proposer*; Lat. *propono*, *propositus*, from *pro*, and *pono*, to place, put.] To bring forward or offer for consideration, discussion, or acceptance; to propose or offer for consideration. — To intend or purpose. (R.)

— **v. n.** To purpose; to lay schemes. — To offer one's self in marriage.

Propo'ser, n. One who proposes or offers anything for consideration or adoption.

Proposition, n. [Fr.; Lat. *propositio*.] That which is proposed; that which is offered for consideration, acceptance, or adoption; a proposal; offer of terms.

(*Math.*) A statement in terms either of a truth to be demonstrated, or of an operation to be performed.

(*Rhet.*) Anything stated or affirmed for discussion or illustration.

(*Logic.*) A part of an argument in which some quality, either negative or positive, is attributed to a subject. It consists of two terms: the one, that of which we affirm or deny, called the *subject*; the other, the thing affirmed or denied, called the *attribute*, or *predicate*. These two are either joined or separated by the intervention of some copula or disjunctive. Thus, in the proposition, God is just, *God* is the subject, *just* the attribute, and *is* the copulative. A syllogism consists of three propositions, — *major*, *minor*, and *conclusion*.

Propositional, a. Pertaining to a proposition; considered as a proposition.

Propound, v. a. [Lat. *propono*.] To offer for consideration; to propose; to exhibit.

(*Eccl. Law.*) To present or offer.

Propound'er, n. One who proposes, or offers for consideration.

Propræ'tor, n. (*Roman Hist.*) A magistrate bearing to the prætor the relation which the proconsul bore to the consul.

Proprietary, n. [Lat. *proprietary*.] In its strict sense, this word signifies one who is master of his actions, and who has the free disposition of his property. During the colonial government of Pennsylvania, William Penn was called the *proprietary*.

— **a.** Belonging to a proprietor, or proprietors.

Proprietor, n. [Fr. *propriétaire*.] A proprietary.

Proprietorial, a. Proprietary.

Proprietorship, n. State of being proprietor.

Proprietress, n. A female proprietor; a female who has the exclusive legal right to anything.

Propriety, n. [Fr. *propriété*; Lat. *proprietas*, from *proprius*.] Suitableness; appropriateness; consonance with established principles, rules, or customs; justness; accuracy.

Prorector, n. (*Eng. Universities.*) An assistant of a proctor.

Propt, part. of PROP. Propped.

Proptug'er, n. A defender.

Propulsion, n. [Sp. *propulsa*; Lat. *propulsus*, from *propello*, to propel.] Act of propelling or of driving forward.

Propulsive, a. Tending or having power to propel.

Propylæum, n.; pl. PROPYLÆA. [Lat.; Gr. *propylaion*, from *pro*, before, and *pulē*, a gate.] (*Anc. Arch.*) The open court of a temple in advance of the building itself; the vestibule of a house of the higher class.

Propylon, n. (*Anc. Arch.*) A propylæum.

Pro Ra'ta. [Lat., according to the rate.] (*Com.*) In proportion.

Prorate, v. a. [From Lat. *pro rata*, according to the rate.] (*Com.*) To divide proportionally.

Prore, n. [Lat.; Gr. *prora*.] (*Poet.*) The prow; the fore part of a ship. (R.)

Prorector, n. (*German Universities.*) An officer who presides in the academic court.

Prorectorate, n. The office of a prorector.

Proreption, n. [Lat. *prorepere*, to creep forward.] A creeping forward.

Prorogation, n. [Lat. *prorogatio*.] The continuance of Parliament from one session to another; adjournment. (*Eng.*)

Prorogate, v. a. To prorogue.

Prorogue, (prō-ro'g,) v. a. [Fr. *proroger*; Lat. *prorogo*, from *pro*, and *rogo*, to ask.] To protract; to prolong. — To put off; to delay. — To continue, as the parliament from one session to another.

Prorup'tion, n. [Lat. *proruptio*, from *prorumpo*, to burst forth.] Act of bursting forth.

Prosaic, Prosaical, (prō-zā'ik,) a. [Fr. *prosaïque*; Lat. *prosaicus*.] Pertaining to prose; resembling prose; not restricted by numbers. — Dull; uninteresting.

Prosaically, adv. In a prosaic or dull manner.

Prosaicalness, n. The state or quality of being prosaic.

Prosaicism, n. Prosaicalness; prosaic style or manner.

Prosa'ism, n. Being in the form of prose.

Prosa'ist, n. One who writes prose.

Proscenium, n. [Lat.; Gr. *proskēnion*, from *pro*, before, and *skēnē*, a tent.] The stage of a Greek or Roman theatre, or the space included in the front of the drop-scene; in contradistinction to the *postscenium*, or space behind the drop-scene. In the modern theatre it is improperly used to designate the ornamental framework from which the curtain hangs when performances are not going on, and thus divides the spectator from all engaged on the stage.

Proscribe, v. a. [Sp. *proscribir*; Lat. *proscribo*, from *pro*, and *scribo*, to write.] To put out of the protection of the law; to exile; to outlaw. — To denounce and condemn as dangerous; to interdict; to exclude.

Proscriber, n. One who proscribes; one who dooms to destruction; one who denounces as dangerous, or as utterly unworthy of reception.

Pro'script, n. One who is proscribed. — An interdict.

Proscription, n. [Fr.; Sp. *proscripción*; Lat. *proscriptio*.] Act of proscribing or dooming to death; a putting out of the protection of the law; condemning to exile. — State of being proscribed.

(*Hist.*) The most vindictive species of proscription was that introduced by Sylla when he wrested Rome from the hands of the Marian faction. It consisted in making out a list of persons supposed to be obnoxious to the state, and getting a sentence of condemnation passed, which made it unlawful to harbor them. By these measures thousands of citizens perished in the civil wars of Rome. The most celebrated proscription was that of the triumvirs, Octavius, Antony, and Lepidus, in which Cicero was slain.

Proscriptional, a. Proscriptive.

Proscriptionist, n. A person who proscribes.

Proscriptive, a. Pertaining to, or consisting in proscription.

Prose, n. [Fr.; It. and Sp. *prosa*, from Lat. *prosa* (*oratio*, discourse being understood), from *pro*, and *versus*, from *vertere*, to turn.] The natural or common language of men. All literary composition belongs to one or other of the two great classes of *prose* or *poetry*. As to what constitutes the distinction between the two, writers are by no means agreed. Many contend that the difference lies in the form, and that metre is essential to poetry; others, that it is in the character; and that in poetry the imagination and feelings prevail, while prose is mainly addressed to the understanding. The distinguish-

ing feature of poetry is not the metre, but the character or style. Poetry may be said to deal with the emotions, prose with the reason and understanding.

(*Rom. Cath. Church.*) A part of the mass in Latin verse.

—*a.* Relating to prose; prosaic; not poetical.

—*v. a.* To write in prose.—To make a tedious relation of.

—*v. n.* To write prose.—To talk or write in a dull, tedious manner.

Prosecutor, *n.* [Lat., from *prosecare*, from *pro*, and *secare*, to cut.] A practical anatomist; one who prepares the parts for the anatomical lecture.

Prosecutable, *a.* Capable of prosecution, or of being prosecuted.

Prosecute, *v. a.* To follow or pursue with a view to reach, execute, or accomplish; to commence or continue, as endeavors to obtain or complete; to persist in or continue, as efforts already begun.—To seek to obtain by legal process.

(*Law.*) To accuse of some crime or breach of law, or to pursue for redress or punishment before a legal tribunal.

—*v. n.* To carry on a legal prosecution; as, to prosecute for public offences.

Prosecution, *n.* [L. Lat. *prosecutio*.] Act or process of endeavoring to gain or accomplish something; pursuit by efforts of body or mind.

(*Law.*) The institution and carrying on of a suit in a court of law or equity.—The institution, or commencement and continuance of a criminal suit. The law of England and America differs from that of other countries in having no office analogous to what is termed in France *ministère public* for the prosecution of offences. At common law, therefore, and in the great majority of cases, the so-called *prosecutor* is merely the person injured by an offence, who in the first instance obtains a summons or warrant against the accused. In case of injury to the public, however, the Attorney-General is the recognized public prosecutor; and sometimes govt. originates proceedings in private cases of great importance or scandal: while informations for misdemeanors, in many statutable cases, are *prosecuted* by the informer.

Prosecutor, *n.* [Lat.] One who prosecutes, or who pursues or carries on any purpose, plan, or business.

(*Law.*) The person who institutes or carries on a criminal suit before a legal tribunal.

Prosecutrix, *n.* A female who prosecutes.

Proselyte, *n.* [Fr.; Gr. *proselytos*, from *proserchesthai*, to come to, from *pro*, and *erchesthai*, to come.] One who changes his religion—giving up one and adopting another. The term is not classic Greek, but it occurs in the New Testament and in the Septuagint, and was used almost exclusively among the Jews. They distinguished two kinds of proselytes, — the proselytes of the gate, and the proselytes of justice or righteousness. The former feared and worshipped the true God, without adopting circumcision or any of the other ceremonies of the law. They were allowed to dwell in the land of Israel, and through holiness might have hope of eternal life. The latter received circumcision and observed the whole law of Moses, and were admitted to all the prerogatives of the people of God.

—*v. a.* To make convert, as to a religion.

Proselytism, *n.* [Fr. *proselysisme*.] The making of converts to a religion or religious sect, or to any opinion, system, or party; conversion to a system or creed.

Proselytize, *v. a.* To proselyte. (*R.*)

—*v. n.* To make proselytes.

Proser, *n.* A writer of prose.—One who dwells with tedious minuteness on uninteresting matters; a tedious, dull writer or narrator; a bore.

Proserpine, [Gr. *Persephone*.] (*Myth.*) A daughter of Ceres and Jupiter, of extreme innocence and beauty, and who, while gathering flowers in the lovely vale of Tempe, or the Mysian Plain, was seen and carried off by the god of the infernal regions, Pluto. The prayers and intercessions of her mother ultimately prevailed on Pluto to permit her to spend half of each year on earth, to gratify and gladden the heart and eyes of her devoted parents, the other half being passed with her infernal lord in the realms below.

Prosimy, *adv.* In a dull, prosy manner.

Prosimetrical, *a.* That consists of both prose and verse.

Prossiness, *n.* Quality of being prosy or dull; tediousness in writing or relation.

Pro-slavery, *a.* Favorable to slavery.

Prosodically, *adv.* In a prosodial manner.

Prosodial, **Prosodical**, **Prosodical**, *a.* [Fr. *prosodique*; Lat. *prosodiacus*.] Pertaining to prosody, or the quantity and accents of syllables; according to the rules of prosody.

Prosodian, *n.* One skilled in prosody, or in the rules of pronunciation and metrical composition.

Prosodist, *n.* One who is versed in prosody.

Prosody, *n.* [Fr. *prosodie*; Sp. *prosodio*; Lat., from Ger. *prosodia*, a song sung to or with; the tone or accent of a syllable, differing from its metrical quantity; from *pros*, denoting that which is suitable, and *ōdē*, a song.] That part of grammar which treats of the quantity of syllables, of accents, and of the laws of versification. If we take the first words of the sentence here written, count the syllables, and note those that are accented, we find that there is no regularity in the recurrence of the accent; while if we take the same course with the following line,

"The way was long, the wind was cold,"

we find that every second syllable is accented. Now, the extract where there was no regularity in the recurrence of the accent is *prose*; and the line in which the accent recurred at regular intervals is *metrical*;

metre being a general term for the recurrence, within certain intervals, of syllables similarly affected. The syllables in the before-quoted line are similarly affected, being similarly accented. At the same time, accent is not the only quality of a syllable which, by its periodic return, can constitute metre, the classical grammarians determining the character of their metre not by accent, but by *quantity*. The metres wherein quantity plays its chief part are those of the Latin and Greek languages; and to define what quantity was in languages, the proprietors of which have long since passed away, is somewhat difficult, from the fact that not only were there 15 vowel sounds represented by six letters, but that each of these was again susceptible of one of the three accents,—the *acute*, the *grave*, or the *circumflex*. The matter may be thus briefly explained:—There is a difference between the length of *vowels* and the length of *syllables*. The vowel in the syllable *see* is long; and long it remains, whether it stand as it is or be followed by a consonant, as in *seen*; or by a vowel, as in *see-ing*. The vowel in the word *sit* is short. Followed by a second consonant, it still retains its shortness; e. g. *sits*. Whatever the comparative length of the syllables *see* and *seen*, *sit* and *sits* may be, the length of their respective vowels is the same. Now, if we determine the character of the syllable by the character of the vowel, all syllables are short wherein there is a short vowel, and all are long wherein there is a long one. Measured by the quantity of the vowel, the word *sits* is short, and the syllable *see* in *seeing* is long. But in the eyes of a classical scholar, the *see* (in *seeing*) is short, and in the word *sits* the *i* is long; for he measures his quantity not by the length of the vowel, but by the length of the syllable taken altogether. To a Roman, the word *monument* consists of two short syllables and one long one; to an Englishman, it contains three short syllables. Another subject which comes within the consideration of prosody is *rhyme*,—unknown or neglected by the ancients,—which is the correspondence of sounds in the terminating words or syllables of two verses, one of which succeeds the other immediately, or at no great distance. A full and perfect rhyme consists in the recurrence of one or more final syllables equally and absolutely accented, wherein the vowels and the parts following the vowel shall be identical, while the parts preceding the vowel shall be articulately different. Rhymes may consist of a single syllable, as *told*, *bold*; of two syllables, as *water*, *daughter*; of three, as *cheerily*, *wearily*. The rhyme begins where dissimilarity of parts, immediately before the main vowel begins. Then follows the vowel, and lastly, the parts after the vowel, the latter of which must be absolutely identical. Syllables may be similar in their sound, and yet fail in furnishing full, true, and perfect rhymes, as in the case of *eye* and *I*; while, on the other hand, there may be rhymes only to the eye—in the case of words where the letters coincide, but the sounds differ; as in the case of *cease* and *ease* (*enze*). If, however, the sounds coincide, the difference of the letters is unimportant; and thus, according to the laws of prosody, *rules* is a good rhyme to *fools*.—*Rhythm* and *metre* are also subject to the rules of prosody, and each may be thus defined or explained. *Metre* is an arrangement of syllables and feet according to certain rules, and, in this abstract and general sense, comprehends indiscriminately either an entire verse, a part of a verse, or any number of verses. But a metre, in a specific sense, means a combination of two feet, and sometimes only one foot (a foot in poetry signifying a certain number of syllables constituting a portion of a line of poetry.) Rhythm, however, respects the *time* only, and is a general name, expressing the proportion that subsists between the parts of time employed in the pronunciation of different feet, the least division of which is that which is employed in the pronunciation of a short syllable. Finally, we may observe that *blank* verse is poetry without rhyme; that *heroic* verse usually consists of ten syllables, or five feet, containing each an accented syllable, and one or two unaccented ones; and that *alliterative* verse is a kind of verse in which two successive lines usually commence with the same initial letter, or in which two words in the first line of each couplet, and one in the second, begins with the same letter; this kind of verse being an especial characteristic of Anglo-Saxon and Scandinavian poetry.

Prosopis, *n.* [Gr. *prosopon*, a mask.] (*Bot.*) A genus of plants, order *Fabaceæ*, sub-order *Mimosææ*. The legumes of *P. pallida* and some other South American species are remarkable for their astringency, and have been successfully employed for tanning. In commerce they are known under the name of *algaroba* and *algarobilla*. From the fruit of *P. algaroba* a drink called *chica* is prepared. The name *chica* was first given to a fermented drink prepared from maize; but it is now used in South America as a common term for several kinds of intoxicating liquor.

Prosopolepsy, *n.* [Gr. *prosopolepsia*, from *prosopon*, a face, and *lambanein*, to take, *lepsis*, a taking.] Prejudice from the first view of a person; personal partiality.

Prosopopœia, (-pe-yä), *n.* [Gr. *prosōpopoia*, from *prosopon*, a face, and *poieo*, to make.] (*Rhet.*) A figure by which inanimate objects or abstract ideas are personified, and addressed or represented by the poet or orator as if endowed with human shape or sentiments; a personification. Milton's famous digression of Sin and Death, in the *Paradise Lost*, is at once a *prosopopœia* and an allegory.

Prospect, *n.* [Lat. *prospectus*, from *prospicere*, to look forward to, from *pro*, and *spicere*, to look.] View of things within the reach of the eye; a distant view.—View of things to come; intellectual sight.—Expectation; ground of anticipation.—A scene or landscape;

the place and the objects seen; object of view.—A view delineated or painted; a picturesque representation of a landscape.—Position of the front of a building.

—*v. a.* To look forward.

—*v. n.* To search for metals. (Local U. S.)

Prospect, in *Connecticut*, a post-township of New Haven co.

Prospect, in *Indiana*, former name of a post-village of Madison co., about 44 m. N.E. of Indianapolis.

Prospect, in *Maine*, a post-town and township of Waldo co.

Prospect, in *New York*, a post-village of Oneida co., about 100 m. W.N.W. of Albany.

Prospect, in *Ohio*, a post-township of Marion co.

Prospect, in *Pennsylvania*, a post-borough of Butler co., about 200 m. W. by N. of Harrisburg.

—A post-village of York co., about 13 m. E. of York. Now called EAST PROSPECT.

Prospect, in *Virginia*, a post-village of Prince Edward co., about 80 m. S.W. of Richmond.

Prospect Hill, in *Iowa*, a village of Linn co., about 25 m. N.N.E. of Iowa City.

Prospect Hill, in *Missouri*, an unimportant village of Clay co.

Prospect Hill, in *Wisconsin*, a post-village of Waukesha co., about 70 m. S.E. of Madison.

Prospect Station, in *Tennessee*, a post-village of Giles co., about 90 m. S. of Nashville.

Prospection, *n.* The act of looking forward, or of providing for future wants.

Prospective, *a.* [Lat. *prospectivus*.] Looking forward in time; acting with foresight;—opposed to *retrospective*.—Regarding the future.—Pertaining to, or furnishing a prospect; viewing at a distance.

Prospectively, *adv.* With reference to the future.

Prospectiveness, *n.* State or quality of being prospective.

Prospectus, *n.* [Lat., from *prospicio*.] In its most extended sense, this word is applied to the outline of any plan or proposal submitted for public approbation; but it is most usually confined to literary undertakings, in which it signifies an outline or sketch, or the plan or design of a work, together with such other circumstances connected with the publication, &c., as it may be thought desirable to enlarge upon or make known.

Prosper, *v. a.* [Fr. *prosperer*; Lat. *prospero*, from *pro*, and *spéro*, hope.] To render fortunate or happy; to favor; to render successful.

—*v. a.* To be successful; to succeed.

Prosperity, *n.* [Fr. *prosperité*; Lat. *prosperitas*.] Advance or gain in anything good or desirable; successful progress in any business or enterprise; attainment of the object desired; success; good fortune.

Prosperous, *a.* [Lat. *prosperus*, from *pro*, and *spéro*, hope.] Agreeable to one's wishes; successful; flourishing; fortunate; thriving; making gain or increase; characterized by success.—Promising success; favorable; auspicious.

Prosperously, *adv.* With gain or increase; successfully.

Prosperousness, *n.* State of being prosperous or successful; prosperity.

Prosper, (*St.*) a learned theologian and historian of the 5th century, known by his opposition to the Pelagians. He was a native of Aquitaine, and survived Augustine, to whom he wrote in 427.

Prosphysis, *n.* [Gr. *proshysis*, from *pros*, and *phuein*, to grow.] (*Med.*) Adherence; connection; in a more limited sense, the morbid adhesion of the eyelids, either between themselves, or with the globe of the eye.

Prossnitz, a town of Austria in Moravia, on the Rumza, 12 m. S.W. of Olmutz. *Manuf.* Woollen, linen, and cotton goods, and brandy. *Pop.* 11,500.

Prostate, or **PROSTATE GLAND**, *n.* [Gr. *prostatoe*, to stand before.] (*Anat.*) A gland situated in front of the neck of the bladder in men, and the *vesiculæ seminales*. The gland itself is about the size of a chestnut, is traversed by the urethra, and is often enlarged in youth and middle age by scrofulous disease, but is more frequently the seat of disease in men advanced in life. In a healthy state of the body, this gland seems to be almost insensible and passive; hence its proneness to chronic mischief rather than acute, when any disease overtakes it. A swelling of this gland may depend either upon a common inflammation of the organ, the formation of an abscess, the deposition of calculi in its substance—chiefly composed of the phosphate of lime,—a varicose enlargement of the veins, or a chronic inflammation, degenerating into a scirrhus induration of the gland. Though occasionally liable to acute or phlegmonous inflammation, the prostate, from the reason advanced, is far more prone to chronic than acute disease. The most frequent disease encountered here by the surgeon is scirrhus enlargement, a condition that requires leeches to the part, cold applications, and the internal use of iodide of potassium. The retention of urine, which is the most distressing symptom of disease of the prostate, is caused by the distended gland pressing above and on all sides of the tube of the urethra, as it passes directly through the gland.

Prostatie, *a.* (*Anat.*) Of, or pertaining to the prostate.

Prosthesis, *n.* [Lat.; Gr., from *prostithenai*, to put, to place.] (*Surg.*) The addition to the human body of some artificial part, in place of one that may be wanting, as a wooden leg, an artificial eye, &c. Sometimes written *Prothesis*.

(*Gram.*) A figure of grammar, by which one or more letters are prefixed to a word; as, in the common English participles, *beloved*, *bereft*, &c. See *METAPLASM*.

Prosthetic, *a.* Belonging to prosthesis.

Prostitute, *v. a.* [Lat. *prostituere*, from *pro*, before, and *statuere*, to put, to place.] To expose publicly for lewd purposes; to give up to any vile or infamous purpose. — To devote to anything base; to sell to wickedness; to offer or expose upon vile terms, or to unworthy persons.

—*a.* Openly devoted to lewdness; sold to wickedness or to infamous purposes.

—*n.* A female given to indiscriminate lewdness; a strumpet. — A hireling; a mercenary; one who offers himself to infamous employment for hire.

Prostitution, *n.* [Lat. *prostitutio*.] The act or practice of offering the female body to an indiscriminate intercourse with men; common lewdness of a female. — Act of setting one's self to sale, or of devoting to infamous purposes what is in one's power; as, the *prostitution* of the law, the *prostitution* of justice by a corrupt judge.

(*Law*.) The common lewdness of a woman for gain. The act of permitting a common and indiscriminate sexual intercourse for hire. In all well-regulated communities this has been considered a heinous offence, for which the woman may be punished; and the keeper of a house of prostitution may be indicted for keeping a common nuisance. So much does the law abhor this offence, that a landlord cannot recover for the use and occupation of a house let for the purpose of prostitution.

Prostitutor, *n.* [Lat.] A person who prostitutes.

Prostrate, *a.* [Lat. *prostratus*.] Lying at length or with the body extended on the ground or other surface. — Lying at mercy, as a suppliant; prone in the posture of humility or adoration.

(*Bot.*) Lying flat on the ground.

—*v. a.* [Lat. *prosterno*, *prostratus*, from *pro*, and *sterno*, to spread out.] To lay flat; to throw down. — To overthrow; to demolish; to ruin. — To bow in humble reverence. — To sink totally; to reduce; to exhaust; to depress, as one's vital powers.

Prostration, *n.* [Fr.; Lat. *prostratio*.] Act of prostrating, or of throwing down or lying flat; act of falling down, or the act of bowing in humility or adoration. — Great mortal depression; dejection.

(*Med.*) Great depression of natural strength and vigor; that state of the body in disease in which there is almost a total loss of power over the muscles of locomotion.

Prostyle, *n.* [Fr.; Gr. *prostylon*, from *pro*, and *stylos*, a pillar.] (*Arch.*) A temple with a portico in front. When it had a portico at both ends, it was termed *amphi-prostyle*.

Prosy, *a.* Like prose. — Dull and tedious in discourse or writing.

Prosylogism, *n.* (*Logic*.) Two or more syllogisms so connected that the conclusion of the former is the major or the minor of the following.

Protea, *n.* [After the Greek divinity *Proteus*.] (*Bot.*) The Protea family, an order of plants, alliance *Daphnales*. — *Diag.* Apetalous flowers, anthers bursting lengthwise; erect ovules; and a valvate calyx. — They are shrubs or small trees, chiefly natives of Australia and the Cape of Good Hope, and are generally remarkable for the beauty or singularity of their flowers, and their rich evergreen foliage. The wood of *Protea grandiflora* is used at the Cape for wagon-wheels; — hence, the plant is called by the Dutch settlers *Wagenboom*. The order contains 44 genera and 650 species.

Protagonist, *n.* [Gr. *protos*, first, and *agonistes*, an actor.] A chief actor in a theatre.

Protagoras, *a* Greek sophist, b. at Abdera, B. c. 480, was taught by Democritus, and became a teacher at Athens; travelled through the chief cities of Greece, teaching for pay, and again went to Athens, from which city he was banished on the charge of atheism. He then went to Epirus, where he resided several years, and d. probably about 411. Plato has illustrated the doctrines and the fame of this sophist in the dialogue named after him. None of the writings of *P.* are extant.

Protasis, *n.* [Lat.; Gr., from *proteinein*, from *pro*, before, and *teinin*, to stretch.] A maxim or proposition. (*x.*)

(*Anc. Drama*.) The first part of a comedy or tragedy, that explains the argument of the piece.

(*Gram. and Rhet.*) The first part of a properly constructed period, the second being called *apodosis*.

Protean, *a.* Relating to Proteus; capable of assuming different shapes.

Proteanly, *adv.* Like Proteus, or such as easily assumes different shapes.

Protect, *v. a.* [Lat. *protectus*, from *pro*, and *tego*, to cover.] To cover from danger or injury; to throw a shelter over; to keep in safety; to shield; to defend; to preserve; to save.

Protectingly, *adv.* By protection; in the way of protection.

Protection, *n.* [Lat. *protectio*.] Act of protecting or preserving from evil, loss, injury, or annoyance. — The state of being protected. — That which protects or preserves from injury. — A safe-conduct; a passport or other writing which secures from molestation.

Protectionist, *n.* (*Eng. Pol.*) A name popularly given to those who maintain the principle of protection to native industry against that of free-trade.

Protective, *a.* Affording protection; sheltering; defensive.

Protector, *n.* [Lat., a defender; Fr. *protecteur*.] One who defends or shields from injury, evil, or oppression; a guardian.

(*Eng. Hist.*) This title has been three times borne by daring statesmen. 1. Richard, duke of York, in 1453, was appointed, by Parliament, Protector during pleasure. 2. The Duke of Somerset, being constituted one of the

16 executors of Henry VIII., obtained a patent from the young king, Edward VI., in 1548, constituting him Lord-Protector, with the assistance of the other 15 as councillors; but he enjoyed this dignity only a few months; and his loss of it was soon followed by his death. 3. Cromwell took the title of *Lord-Protector of the Commonwealth of England, Scotland, and Ireland*, on Dec. 12, 1653, when the *Barebones Parliament* resigned its authority into his hands. His son Richard succeeded him in his title and authority, but was never formally installed Protector.

Protectoral, **Protectorial**, *a.* Relating to a protector.

Protectorate, *n.* [Fr. *protectorat*.] The government of a protector. — The authority assumed by a superior power over an inferior or dependent one.

Protectress, *a.* Without a protector.

Protectorship, *n.* The office of a protector or regent.

Protectress, **Protectrix**, *n.* A woman who protects.

Protégé, (*pro-ta-zha'*) *n.* [Fr., from *protéger*, to protect.] One under the care and protection of another.

Protégée, *n.* [Fr.] A female under the protection of another.

Proteids, *n. pl.* [Gr. *protenein*, to be the first.] (*Chem.*) An important class of substances, chiefly animal in origin, though not unknown in the vegetable kingdom. Of the proteids, egg albumen may be offered as a good example. The various members of this class are closely related chemically, and together make up most of the animal organism. Analysis shows that they all contain nearly the same proportions of their constituent elements, they being made up of about 53.5 per cent. of carbon, 7 of hydrogen, 15.5 of nitrogen, 22.5 of oxygen, and from 0.9 to 1.6 of sulphur. Mulder believed that a substance which he obtained from albumen by the action of caustic potash, and named *proteine*, was the basic molecule of all the proteids. This theory is now obsolete, but the name *proteids* has proved very convenient to designate the class of substances above referred to. The majority of the proteids present two modifications, the one soluble, the other insoluble in water. The insoluble form can be produced by the addition of alcohol, ether, or various acids or salts to the aqueous solution. Heat also has usually the same effect, as in the coagulation of egg albumen in boiling water. The *P.* are all soluble in phosphoric acid, a strong solution of acetic acid and alkalis. By the action of the gastric juice, of pepsin and dilute hydrochloric acid, and of other ferments, the *P.* are converted into peptones, which are soluble in water and not coagulated by heating.

Proteinaeous, **Proteinous**, *a.* Belonging to protein.

Proteles, *n.* (*Zoöl.*) Same as AARD-WOLF, *q. v.*

Proteranthous, *a.* [Gr., from *protos*, first, and *anthos*, a flower.] (*Bot.*) Applied to plants whose leaves appear before their flowers.

Protest, *v. n.* [L. Lat. *protestor*, from *pro*, and *testor*, from *testis*, a witness.] To affirm with solemnity; to make a solemn declaration of a fact or opinion; to testify; to declare; to avow.

— To make a solemn declaration expressive of opposition, used with *against*; to make a formal declaration in writing against a public law or measure.

—*v. a.* To make a solemn declaration or affirmation of, as one's innocence. — To call as a witness. — To declare formally against for non-payment.

To *protest a bill or note*. (*Law*.) To cause an act of protest to be done. (See below, the noun.)

—*n.* A solemn declaration of opinion, commonly against some act; a formal and solemn declaration made in writing by a minority of a deliberative body, to testify their dissent from the proceedings of the majority.

(*Law*.) A formal statement, made in writing by a public notary, under seal, that a bill or note was, on a certain day, presented for acceptance or payment, and that such acceptance or payment was refused, thereby making a claim against the parties for the loss or damage which may arise to the holder. Protest for non-acceptance or non-payment, when duly made and accompanied by notice to all the parties to the bill or note, has the effect of making all of them responsible to the holder for the amount of the bill or note, together with damages, &c.

(*Maritime Law*.) A writing, attested by a justice of the peace, a notary public, or consul, made and verified by the master of a vessel, stating the severity of a voyage by which a ship has suffered, and showing that it was not owing to the neglect or misconduct of the master. — The protest is not, in general, evidence for the master of the vessel or his owners in the English or American courts; yet it is often proper evidence against them.

Protestancy, *n.* Protestantism. (*R.*)

Protestant, *n.* (*Ecl. Hist.*) A member of one of the various denominations of Christians which have sprung from the adoption of the principles of the Reformation in the sixteenth century. The term was assumed, in the first instance, by the reformers of North Germany, who, in the year 1529, formally protested against a decree of the Imperial Diet held at Spire, which ordained that the question between the parties should remain unsettled, some restrictions being laid upon the progress of the new opinions, until the calling of a general council, the time of which was left uncertain. The Protestants accordingly asserted that the decree was unfavorable and unjust to their party, and claimed the immediate summons of a lawful council, which they knew it was the interest of the Papacy, under the circumstances, to delay. In the early period of the Reformation, the principal Reformed Churches were two, those

of the followers of Luther and of Calvin, the partizans of Zwingli having become nearly identified with the latter. Since that time the number of subdivisions upon every point of doctrine and discipline has been infinite. The general bond of union, however, among all, continues to this day to be the assertion of private judgment, and the rejection of any infallible head of the church, or ultimate authority in Pope or Council.

—*a.* Pertaining to Protestants or Protestantism. **Protestant Episcopal Church.** This Christian denomination in the U. States is directly descended from the Church of England, which doctrinally claims to be based on the Holy Scriptures, as interpreted in the Apostles and other ancient creeds of the Church that have been universally received, and to have kept herself aloof from all the modern systems of faith, whether of Calvin, or Luther, or Arminius, leaving her members free to enjoy their own opinions on all points not represented in the Scriptures as necessary to the soul's health, and refusing to be narrowed down to any other creed or creeds than those of the Apostles and the Primitive Church. She claims also to have retained all that is essential to church organization in her episcopate, and in her liturgy to have not only a wise and judicious compend of doctrine and devotion, but also one of the most effectual of all possible conservative safeguards for the faith once delivered to the saints. The characteristic tenets of the Church of England, besides the fundamental doctrines of the Trinity and redemption through the all-sufficient atonement once made for all by the death of Christ on the cross, are a regeneration or spiritual birth in baptism, in which the baptized becomes a member of the Church, and a growth in grace by the use of the sacraments and ministrations of the Church duly administered and duly received, made efficacious by the word of divine truth and the gracious influences of the Holy Ghost, freely given to all who duly seek and faithfully use them. The condition of man after the fall is such that he can do nothing acceptable to God without preventing grace; good works, though pleasing to heaven, have no power to put away sin; works of supererogation, over and above God's commandments, cannot be taught without arrogance and impiety. The Church has power to decree rites or ceremonies, and to decide matters of faith; the Roman Catholic doctrines of purgatory, invocation of saints, and respect to relics and images, are rejected; clergymen are allowed to marry; and communion is to be given in both kinds. The number of sacraments is two—*baptism* and the *Lord's Supper*. Three clerical orders are recognized,—*bishops*, *priests*, and *deacons*,—the first deriving their office in direct succession from the apostles by episcopal consecration, and the others receiving ordination at the hands of a bishop. Those of the second order are entitled *archdeacons*, *deans*, *rectors*, *vicars*, or *curates*, according to their functions. A *reader* is a layman licensed by the bishop to read in a church or chapel where there is no clergyman. *Parson* signifies a clergyman in possession of a parochial church.—From the time of the first congregations of the Church of England in America, in 1607, to the close of the Revolution, all the clergy in the colonies were regarded as under the supervision of the Bishop of London. The first American bishop was Rev. Samuel Seabury, who, in 1783, was consecrated in Scotland as Bishop of Connecticut. All Protestant Episcopal churches in the United States are associated in one national body, called the *General Convention*, which meets triennially. This body is composed of two houses—the House of Bishops, including the bishops of all the dioceses in the country, and the House of Clerical and Lay Deputies. The clergy and laity, composing the House of Deputies, meet and deliberate together; but, when required, vote separately, and sometimes by dioceses. The General Convention directs the manner in which the qualifications of candidates for orders shall be estimated and determined; regulates the particulars in regard to the election and ordination of the orders of the ministry; defines the nature of ecclesiastical offences, and decrees the punishment thereof; settles the particular form and orders of its common prayer, and publishes authorized editions of the Book of Common Prayer; and directs the mode and manner of its intercourse with foreign churches. In all cases, the House of Bishops has a negative upon the House of Deputies; but when exercised, must be communicated within a limited time to that house. No law or canon can be enacted without the concurrence of both clergy and laity; no man can be introduced into the sacred office without testimonials from both orders; no clergyman be sent to minister where he may not choose to go; no parish be required to receive or continue a clergyman obnoxious to a majority of the parishioners; no man be punished for any offence not clearly defined by the laws of the Church, nor in any manner but in that prescribed by the same, and never without an opportunity of a trial by his peers. The salaries of the clergy are determined by the mutual agreement of minister and people. In 1902 there were in the United States 6,639 churches, 4,927 ministers, and 741,697 members or communicants.

Protestantism, *n.* [Fr. *protestantisme*.] The principles and religion of Protestants.

Protestation, *n.* [Fr.; Lat. *protestatio*.] A solemn declaration of a fact, opinion, or resolution; a solemn declaration of dissent, a protest.

(*Law*.) An oblique allegation or denial of some fact, protesting that it does or does not exist, and at the same time avoiding a direct affirmative or denial.

Protestator, **Protestor**, *n.* One who protests; one who utters a solemn declaration.

Protestingly, *adv.* By way of protesting.

Pro'teus, n. (*Myth.*) A sea deity, who received the gift of prophecy from Neptune. He generally resided in the Carpathian Sea, and reposed himself on the shore. He was difficult of access, and, when consulted, he refused to give answers, by immediately assuming different shapes and eluding the grasp. Aristæus was in the number of those who consulted him, as also Hercules.

(*Zoöl.*) A genus of tailed batrachians, peculiar to certain subterranean waters, or underground lakes, of the Tyrol. It is very eel-like in its appearance and movements, but has four short limbs. The waters in which it dwells are sometimes dried up; and when this happens it buries itself in the mud. They retain their ex-

Fig. 2168. — PROTEUS ANGUINUS.

ternal gills through life, the lungs not being developed sufficiently to maintain respiration by themselves. — The name *Proteus* is also given by many naturalists to certain animalcules remarkable for changefulness of form; on which account, also, as the name *P.* has been otherwise appropriated in science, they now receive the generic name *Amœba*. They are *Protozoa*, and ranked among the *Rhizopoda*.

Prothe'sis, n. [From *Gr. pro*, before, and *tithenai*, to place.] (*Eccles.*) A CREDESCENCE, *q. v.*

(*Surg.*) Same as PROSTHESIS, *q. v.*

Prothonotary, n. [*Fr. protonotaire.*] A title originally of the Byzantine empire. The apostolical prothonotaries of the Papal courts are officers having precedence of the other notaries or secretaries of the Roman chancery; the Papal notaries participate rank after bishops, but before abbots. — In some of the United States, an officer who officiates as principal clerk of some courts.

Prothonotaryship, n. The office of a prothonotary.

Prothorax, n. [*Gr.* from *pro*, before, and *thorax*, breast-plate.] (*Zoöl.*) The first segment of the thorax in insects.

Pro'to. [*Gr. protos*, first.] A prefix expressing priorities.

(*Chem.*) See CHEMICAL NOMENCLATURE.

Pro'tocol, n. [*Fr. protocole*; *L. Lat. protocollum*, a register of public acts, from *Gr. protos*, first, and *kolla*, glue.] A diplomatic term, signifying the original copy of any despatch, treaty, or other document.

—*v. a.* To form a protocol of.

—*v. n.* To make or write protocols.

Pro'tocolist, n. One who writes or forms a protocol; a clerk or register.

Pro'togenes, an eminent Greek painter, who flourished about 330 B. C., was a native of Caunus, in Caria, a city subject to Rhodes. A considerable part of his life was passed in obscurity, but he was at length brought into notice by Apelles giving a large price for his pictures. On the siege of Rhodes by Demetrius Poliorcetes, Pro'togenes is said to have continued tranquilly working at his house in the suburbs, and Demetrius spared that part of the city for the sake of the famous artist and his precious works.

Pro'togine, n. [*Fr. protogène*; *Gr. protos*, first, and *gineshai*, to be born.] (*Min.*) A porphyritic rock in which mica is replaced by talc or steatite.

Pro'tomartyr, (-mar'tur), n. [*Fr.*; *Gr.* from *protos*, first, and *martyr*.] The first martyr; — applied to St. Stephen, the first Christian martyr. — The first who suffers, or is sacrificed in any cause.

Protomorph'ic, a. [*Gr. protos*, and *morphê*, shape.] (*Physiol.*) Applied to the first stage of organized beings intervening between the fecundation of the germ and the first appearance of the typical or characteristic organization of the species.

Pro'toplasm, n. [*Gr. protos*, first, and *plasma*, form, from *plassein*, to mould.] (*Physiol.*) A term applied to matter deposited over the inside walls of a plant-cell subsequent to the formation of the cell itself, according to Prof. Huxley. *P.* is a complex body, consisting almost entirely of carbon, hydrogen, oxygen, and nitrogen, which plays an important part in the formation of vegetable and animal life.

Pro'toplast, n. [*Gr. protoplastos*, from *protos*, and *plastos*, formed, from *plassein*, to form.] The thing first formed as a copy to be followed, or imitated afterwards; a prototype.

Pro'toplas'tic, a. First formed.

Pro'topope, n. [From *Gr. protos*, first, and *Eng. pope*.] (*Gr. Church.*) The chief pope, or the imperial confessor; an officer of the supreme spiritual court of the Greek Church in Russia.

Pro'tosalt, n. [From *Gr. protos*, and *Eng. salt*.] (*Chem.*) An oxy-salt whose base is a protoxide. — Also, an haloid and analogous salt containing only one equivalent of its electro-negative element or component, as protochloride of tin.

Pro'totype, n. [*Fr.*; *Gr. prototypus*, from *protos*, first, and *typos*, a model, a type.] An original type or model after which anything is formed; the pattern of anything to be engraved, cast, &c.; exemplar; archetype.

Protox'ide, n. (*Chem.*) See CHEMICAL NOMENCLATURE.

Protozo'a, n. pl. [*Gr. protos*, and *zōon*, animal.]

(*Zoöl.*) The lowest branch of the animal kingdom, including a large variety of forms of a very simple type of organization, they being each composed of a single cell, in contrast with the many-celled organization of the Metazoa. In some few instances there are groups of protozoans, acting together as a single animal, but in nearly all cases each protozoan is a separate individual cell, complete as a living being in itself. They vary, however, very considerably in organization, some being simply masses of largely homogeneous animal jelly, others having parts and organs, and to some extent simulating the higher animals. Among the lowest forms are minute creatures, now amoeboid, now encysted and dividing into germs, now possessed of rapidly moving cilia. The Rhizopods embrace the Amœba, a class destitute of organs, moving by parts protruded and withdrawn in succession, and obtaining nutriment by surrounding and engulfing food substance. To this class belong also the Foramenifera, Heliozoa, and Radiolaria. The Gregarines form a sluggish more or less elongated class. Highest of all are the Infusoria, active, ciliated animals, possessing a mouth and some trace of internal organs, and even in some cases indications of eye spots. The *P.* reproduce both by division or cleavage, and by union of two individuals, followed by encystment and germ production. See INFUSORIA, ROTIFERA, RHIZOPODA, &c.

Protozo'ic, n. (*Geol.*) A term applied to the lowest system of rocks in which the traces of any organic structure have been discovered.

Protract', v. a. [*Lat. protraho*, *protractus*, from *pro*, and *traho*, to draw.] To draw out or lengthen in time; to continue; to prolong. — To delay; to retard; to defer; to put off to a distant time.

(*Surveying.*) To plot, lay down, or draw to a scale.

Protracted-meeting, a religious revival, or prayer-meeting, continued for many successive days. (*U. S.*)

Protract'edly, adv. With protraction; tediously.

Protract'er, n. One who protracts or lengthens in time.

Protract'ion, n. [*Lat. protractio.*] Act of drawing out or continuing in time; act of delaying the termination of a thing.

(*Surveying.*) The act or process of plotting, or laying down the dimensions taken in the field.

Protract'ive, a. Drawing out or lengthening in time; prolonging; continuing; delaying.

Protractor, n. One who, or that which protracts.

(*Surveying.*) An instrument used in drawing and plotting, or laying down and measuring angles on paper.

(*Surg.*) An instrument used to draw foreign bodies from a wound.

Protrude', v. a. [*Lat. protrudo*, *protrusus*, from *pro*, and *trudo*, to thrust.] To thrust forward; to drive or force along. (*R.*) — To thrust out, as from confinement. —*v. n.* To be thrust forward; to shoot forward.

Protru'sile, a. That may be protruded and withdrawn.

Protrusion, (-tru'zhun), n. Act of protruding, or of thrusting forward or beyond the usual limit. — The state of being protruded.

Protru'sive, a. Thrusting or impelling forward.

Protru'berance, n. [*Fr.*] A swelling or tumor on the body; a prominence; a bunch or knob.

Protru'berancy, n. The state or quality of being protuberant.

Protru'berant, a. [*L. Lat. protuberans.*] Prominent beyond the surrounding surface.

Protru'berantly, adv. In a protuberant manner.

Protu'berate, v. n. [*Lat. protuberare*, from *pro*, and *tuber*, a hump.] To swell or be prominent beyond the adjacent surface; to bulge out.

Protuberation, n. The act of swelling beyond the adjacent surface.

Proud, a. [*A. S. prut*; *Dan. prud.*] Having inordinate self-esteem; possessing a high or unreasonable conceit of one's own excellence, either of body or mind; conceited. — Splendid; magnificent; ostentatious; exhibiting grandeur and distinction. — Salacious; eager for the male; — applied particularly to the female of some animals.

Proud flesh. (*Med.*) A fungous excrescence of flesh which arises in wounds or ulcers.

Proud'hon, PIERRE JOSEPH, a celebrated French publicist, was b. at Besançon, in 1809. Occupied with rustic labors in his earliest years, he received gratuitous instruction at the college of his native town, and at 19 became a compositor. He was employed in various printing-offices till 1837, but had found time to think and study, and make considerable acquisitions. The sense of the inequality of conditions among men, and of the social stigma attached to poverty, early weighed on his mind, and gave permanent direction to his speculations and endeavors. In 1840, after several small works, appeared his famous memoir, entitled, *Qu'est-ce que la Propriété?* his answer to this question, *La Propriété c'est le Vol*, being almost all that is popularly known of him. A second memoir on the same subject exposed him to a prosecution, but he was acquitted. After the Revolution of February, 1848, *P.* became editor of *Le Représentant du Peuple*, and attracted great attention and popularity by his articles; so that, in June, he was chosen member of the Constituent Assembly for the department of the Seine. But he found no hearing at the tribune, and therefore started a newspaper under the title of *Le Peuple*, which was suppressed, and reappeared three times. In 1849, he founded his *People's Bank*, but being soon after sentenced, under the press laws, to three years' imprisonment and a fine, he left France, and the bank was closed by the government.

Returning a few months later, he submitted to his sentence, and was only liberated in 1852. D. 1865.

Proud'ish, a. Somewhat proud. (*R.*)

Proud'ly, adv. With an arrogant self-esteem; in a proud manner; haughtily; ostentatiously; with lofty airs or mien.

Proud'ness, n. State or quality of being proud.

Provable, (proof'a-bl), a. That may be proved.

Prov'ableness, n. The state of being proved.

Prov'ably, adv. In a provable manner.

Prove, (proof), v. a. [*A. S. profian*; *Ger. prufen*, *proben*; *Fr. prouver*, to prove, *éprouver*, to try; *Lat. probare*, to try, test.] To ascertain, as some unknown quality or truth, by an experiment, or by a test or standard. — To ascertain or render certain, as truth, reality, or fact, by testimony or other evidence; to bring to the test; to bring out the truth, as by argument, induction, or reasoning. — To endure by suffering or encountering; to experience. — To ascertain the genuineness or validity of, as a will or testament.

—*v. n.* To make trial or essay. — To be found, or to have its qualities ascertained by experience or trial. — To be ascertained by the event, or something subsequent; to be found true or correct by the result.

Provedit'or, n. [*It. proveditore.*] One who undertakes to procure supplies for an army; a purveyor.

Pro'ven, part. of PROVE, q. v. (R.)

Pro'ven, a town on the W. coast of Greenland, abt. 50 m. S. of Upernivik.

Provençal, (pro-vong'sal), a. [*Fr.*] (*Geog.*) Relating to Provence.

—*n.* A native of Provence.

Provençal Language. The language of the *Troubadours* — one of the romance dialects which sprang up on the decline of the literary Latin.

Proven'cal Island, lies in the Mediterranean, off the S. coast of Asia Minor; Lat. 36° 10' N., Lon. 33° 47' E.

Provence, (pro'vance), an old prov. of the S.E. of France, now forming the depts. of Bouches-du-Rhône, Var, Basses-Alpes, and the E. part of Vaucluse.

Provence-rose, n. A variety of the common rose; the cabbage-rose.

Pro'vender, n. [*Fr. provende*; *It. provenda*, from *Lat. providere*, to foresee, to provide for.] Dry food for beasts, usually oats, or a mixture of meal and cut-straw or hay. — Provisions; meat; food. (*R.*)

Prover, (proof'er), n. One who proves or tries; that which proves.

Proverb, n. [*Fr. proverbe*; *Lat. proverbium*, from *pro*, and *verbum*, a word.] A familiar saying, which has been variously defined. In point of form, there are two species of proverbs; one containing a maxim directly expressed in a concise and familiar style; the other, in which a maxim is expressed metaphorically, e. g. *honesty is the best policy*, or rather allegorically, e. g. *strike while the iron is hot*. In point of substance, proverbs are for the most part rules of moral, or, still more properly, of prudential conduct. — An enigma; a charade; a paradoxical assertion. — A bye-word; — in a contemptuous sense.

Proverb'ial, a. [*Fr.*; *L. Lat. proverbialis.*] Mentioned or comprised in a proverb; used, or current as a proverb.

—Pertaining to proverbs; resembling or suitable to a proverb.

Proverb'ialism, n. A proverbial phrase.

Proverb'ialist, n. One who speaks proverbs.

Proverb'ially, adv. In a proverb; so as to be a proverb.

Proverbs of Solomon. (Script.) One of the sacred books of the Old Testament ascribed to Solomon. The Hebrew term translated *proverbs* means literally a similitude or comparison of two objects, and this is the form that most of them take. Solomon, we are told, uttered 3,000 proverbs; but it has been doubted whether he ever made any collection of them in writing; and it is expressly stated that the latter part of the book, beginning with chapter xxv., was written and added by order of King Hezekiah. The title shows the author rather than the compiler. It has hardly ever been contended that a large share in the composition of the book is to be ascribed to the Wise King; and the divine authority of the book is sufficiently proved by the quotations made from it in the New Testament. In all ages this book has been regarded as a great storehouse of practical wisdom. It naturally divides itself into several parts. The first seven verses of the first chapter may be regarded as a heading to the rest of the book. Then begins the first part, which constitutes a sort of poem or exordium, and closes with the end of the ninth chapter. It may be described as a series of connected admonitions in a sententious form, written in the highest style of poetry, and adorned with apt, beautiful, and striking illustrations. Wisdom is here personified with indescribable majesty and grace, and love is here inculcated, and her rewards set forth, together with the pernicious consequences that follow her rejection. The second part, which constitutes the chief portion of the book, and is the strictly proverbial portion, extends from chap. x. to xxii. 16. The proverbs, about 400 in number, contain moral precepts and rules of life for every age and class of men in a clear, sententious form. Generally, one proverb is comprised in one short verse of two members or clauses, forming a parallel opposition to each other. Except in a few cases, the grouping appears to be accidental. "They may be compared to so many jewels, put together without any visible order or connection, but each shining with its own peculiar beauty; a beauty which is increased rather than obscured by this apparently accidental association of one with another." With chap. xxii. 17, a kind of appendix

begins, introduced by a separate heading. The proverbs of this section generally consist of two verses, and sometimes of three, are constructed with less regularity, and often without any parallelism. A second appendix begins at chap. xxiv. 23, denoted by the heading, "These things also belong to the wise." The second main collection begins with chap. xxv., introduced with the heading, "These are also proverbs of Solomon, which the men of Hezekiah, king of Judah, copied out." The proverbs here, as in the former part, generally consist of one verse of two parallel opposing members; but they are less plain and intelligible, and frequently obscure. They extend over five chapters. The thirtieth chapter contains the words of *Agur*, and the thirty-first the counsels addressed to King Lemuel by his mother. Who these persons were is not known. That Lemuel is another name for Solomon is conjecture that has little of probability to support it.

Provide', v. a. [Lat. *providere*, from *pro*, and *videre*, to see.] To procure beforehand; to get; to collect or make ready for future use; to prepare.

—To furnish; to supply; followed by *with*. —To afford.

—*v. n.* To procure supplies or means of defence, or to take measures for contracting or escaping an evil. —To stipulate previously; to make a previous conditional stipulation.

Provided, conj. Upon these terms; this stipulation being made; stipulated as a condition: — followed by *that*; — as, "provided that you do no outrage." — *Shaks.*

Providence, n. [Fr.; It. *providenza*; Lat. *providentia*.] Timely care, provision, or preparation. — The care and superintendence which God exercises over his creatures; — hence, also, God viewed in this relation. — Prudence; frugality; reasonable and moderate care of expense.

(*Theol.*) *P.* denotes not merely foresight, but rather the superintending care with which God watches over his whole creation, more particularly the human race. This universe constantly depends upon the Deity for its conservation, as it did at first for its creation. The arguments, therefore, for a providence are similar to those for the existence of the Deity, and are derived from the order which we find to prevail in all parts of the material universe, and the adaptation of means to ends. Providence also interposes in human affairs in a manner which is quite unintelligible to us. Various divisions of providence are adopted, as *general*, *common*, or *ordinary*; that by which God governs and sustains the world; *special*, which regards the church; *particular*, which is exercised for the benefit of individuals.

Providence, in British N. America, a lake abt. Lat. 65° N., Lon. 113° W. — A fort of British N. America, on the N. shore of Great Slave Lake; Lat. 62° 30' N., Lon. 114° W.

Providence, in Illinois, a post-village of Bureau co., abt. 42 m. N. of Peoria.

Providence, in Indiana, a village of Clarke co., abt. 18 m. N.N.W. of New Albany.

Providence, in Iowa, a twp. of Hardin co.

Providence, in Kentucky, a village of Fayette co., about 7 m. S. W. of Lexington. — A post-village of Webster co., 56 m. E. N. E. of Paducah.

Providence, or Lake Providence, in Louisiana, a post-town, cap. of East Carroll parish, about 430 m. N. by W. of New Orleans.

Providence, in Missouri, a post-village of Boone co., about 27 m. N. W. of Jefferson City.

Providence, in New York, a township of Saratoga co. Pop. (1897) 922.

Providence, in North Carolina, a post-village and township of Mecklenburg co.

Providence, in Ohio, a village and township of Lucas co., about 25 m. S. W. of Toledo.

Providence, in Pennsylvania, a township of Lancaster co. Pop. (1897) 1,920. — A borough of Lackawanna co., about 20 m. N. E. of Wilkesbarre.

Providence, in Rhode Island, a N. co., adjoining Massachusetts on the N. and E., and Connecticut on the W.; area, about 440 sq. m. *Rivers*. Blackstone and Pawtuxet rivers. *Surface*, uneven and broken; *soil*, generally fertile, producing corn and potatoes in abundance. *Cap. Providence*. Pop. (1895) 286,776.

— A city, port of entry, seat of justice of the above co., and semi-cap. of the State, on Providence River, an arm of Narragansett Bay, at the head of navigation, 35 m. from the Atlantic Ocean and 43 m. S.S.W. of Boston; Lat. 41° 49' 22" N., Lon. 71° 24' 48" W. The city stands on elevated ground, on both sides of the river, which is here crossed by several substantial bridges. The site is very uneven, and the streets are mostly built without regularity, but there are numerous fine edifices, and the city presents altogether a very handsome, substantial appearance. It is the second city of New England in point of population, wealth and commerce. Among the numerous public buildings are the City Hall, erected at a cost of \$1,000,000, the High School building, Brown's University buildings, &c. The Athenæum has a library of over 50,000 volumes. *P.* has over 100 church edifices, some of considerable architectural beauty. *P.* contains many benevolent, literary, and educational institutions, eminent for the improved and liberal manner with which they are conducted. Roger Williams' park, of over 100 a., was bequeathed to the city in 1871, by a descendant of Roger Williams. The manufactures of *P.* are various and extensive, consisting chiefly of jewelry, plated ware, machinery, fire-arms, cotton, and woollen goods, steam-engines, locomotives, hollow-ware, edge tools, carriages, boots, shoes, &c. The Providence River, with the numerous railroads centring here, afforded almost unlimited facilities for commerce, which was formerly very extensive, but has of late years given way considerably to

inland traffic and manufactures. *P.* was settled by Roger Williams in 1636, and in 1649 was incorporated as a town. During King Philip's War it suffered severely, was nearly destroyed by fire, and at one time was almost depopulated. After the close of the Revolution it began to improve, and has continued to increase with remarkable rapidity. Pop. (1900) 175,597.

Provident, a. [Lat. *providens*.] Foreseeing wants and making provision to supply them; exercising prudence in preparing for future exigencies; forecasting; careful; frugal; economical.

Providential, a. [Sp. *providencial*.] Effected by the providence of God; referable to divine providence; proceeding from divine direction or superintendence.

Providentially, adv. By means of God's providence.

Providently, adv. With prudent foresight; with wise precaution in preparing for the future.

Providentness, n. The state or quality of being provident; prudence.

Provider, n. One who provides, furnishes, or supplies; one who procures what is wanted.

Province, (prov'ins), n. [Fr., from Lat. *provincia*, usually supposed to be formed from *pro*, and *vinco*, to conquer.] (*Geog.*) A division of a kingdom or state, comprising several cities, towns, and districts, all under the same government, and usually distinguished by the extent either of the civil or ecclesiastical jurisdiction. A province, among the anc. Romans, was a district of conquered country, governed by a proconsul or proprætor, and called, therefore, *provincia consularis*, or *prætoria*. But this name was only applied to lands lying beyond the boundaries of Italy. In the time of Augustus, they were divided into the *provinciæ senatoriæ* or *populares* (the people's provinces), and the *provinciæ imperatoris* (the emperor's provinces). The latter comprise those that were most exposed to hostile inroads, and the administration of which was left entirely to the emperor. In modern times, the term has been applied to colonies, or to dependent countries at a distance from the metropolis, or to the different divisions of the kingdom itself. Thus the Low Countries belonging to Austria and Spain were styled provinces; and the different governments into which France was divided previously to the Revolution were also called provinces. — Used in reference to ecclesiastical affairs, the Anglican Church distinguishes its provinces by archbishoprics; and in this sense England is divided into two provinces, namely, Canterbury and York.

— In a figurative sense, the proper office or business of a person; jurisdiction; power; authority.

Provincetown, in Massachusetts, a post-township of Barnstable co.

Provincial, a. [Fr.; Lat. *provincialis*.] Pertaining to a province, or relating to it. — Appendant to the principal kingdom or state. — Not polished; rude, as accent. — Pertaining to an ecclesiastical province, or to the jurisdiction of an archbishop; not oecumenical.

— *n.* A person belonging to a province.

(*Rom. Cath. Church.*) A monastic superior, who, under the general of his order, has the direction of all religious houses of the same fraternity in a given district, called a *province of the order*.

Provincialism, n. [Fr. *provincialisme*.] A peculiar word, or manner of speaking, in a province or district of country remote from the principal country, or from the metropolis.

Provincialist, n. One who lives in a province.

Provinciality, (-shi-al'i-ty), n. Peculiarity of language, manners, &c., in a province.

Provincialize, v. a. To render provincial.

Provine', v. n. [Fr. *provigner*.] To lay a branch of a vine, or of any tree, in the ground for propagation.

Provins, (prov'once), a town of France, dept. of the Seine-et-Marne, 29 m. E. of Melun. *Manuf.* Woollens. Pop. 7,500.

Provision, (-vish'un), n. [Lat. *provisio*, from *providere*, *provisus*.] Act of providing, or of making previous preparation. — Things provided; preparation; measures taken beforehand, either for security, defence, or attack, or for the supply of wants. — Stores provided; stock; victuals; food; fare; all manner of eatables for man and beast. — Previous stipulation; terms or agreement made, or measures taken for a future exigency.

(*Law.*) The property which a drawer of a bill of exchange places in the hands of a drawee; as, for example, by remittances, or when the drawer is indebted to the drawee when the bill becomes due, *provision* is said to have been made.

— *v. a.* To supply with provisions, or with victuals or food.

Provisional, (-vish'un-al), a. [Fr. *provisionnel*.] Provided for present need, or for the occasion; temporarily established; temporary.

Provisionally, adv. By way of provision; temporarily; for the present exigency.

Provisionary, a. Provisional.

Proviso, n.; pl. PROVISOS. [From Lat. *provisus*, from *providere*.] An article or clause in any statute, agreement, contract, grant, or other writing, by which a condition is introduced; a conditional provision or stipulation. It usually commences with the words, *provided that*.

Proviso, in Illinois, a post-township of Cook county.

Provis'or, n. [Lat.; Fr. *proviseur*.] A provider. — A steward of a religious house.

Provis'orily, adv. In a provisory manner.

Provis'orship, n. The office or occupation of a provisor.

Provisory, a. [Fr. *provisoire*.] Making temporary provision: temporary. — Containing a proviso or condition; conditional.

Provoca'tion, n. [Fr.; Lat. *provocatio*, from *provoco*.] Act of provoking or exciting anger. — Anything that excites anger; the cause of resentment.

Provo'cative, a. [It. *provocativo*.] Exciting; stimulating; tending to awaken or incite appetite or passion. — *n.* Anything that provokes; anything that tends to excite appetite or passion; a stimulant.

Provo'cativeness, n. The quality of being provocative.

Provo'catory, a. Provocative; tending to incite or provoke.

Pro'vo City, in Utah, a city, cap. of Utah co., about 45 m. S. S. E. of Salt Lake. Pop. (1895) 5,992.

Provok'able, a. That may be provoked.

Provoke', v. a. [Fr. *provoquer*; Lat. *provoco*, from *pro*, and *voco*, to call.] To call forth or bring into action; to excite; to stimulate; to arouse. — To make angry; to incense; to exasperate; to enrage.

Provok'er, n. One who provokes, or excites to anger. — That which causes, or promotes.

Provok'ing, a. Having the power or quality of exciting resentment; tending to awaken passion.

Provok'ingly, adv. In such a manner as to excite anger.

Provost, (prov'ust), n. [O. Fr.; A. S. *profost*; Fr. *prévôt*; Lat. *præpositus*, from *præ*, and *pono*, to put, to place.] A person who is appointed to superintend or preside over something; a principal; a chief ruler; a president; the executioner of an army; in Scotland, the chief magistrate of a royal burgh or city.

Provost-marshal. (Mil.) An officer appointed in camp to preserve good order and discipline, to take charge of prisoners, and prevent crime. He is intrusted with authority to inflict summary punishment on any soldier or individual connected with the army, whom he may detect in the actual commission of any offence against order and discipline.

Provostship, n. The office of a provost.

Prow, n. [Fr. *proue*; It. *prua* and *proda*; Sp. *proa*; Lat. and Gr. *prora*.] The fore part of a ship. — The beak or pointed cut-water of a xebec or galley.

Prowess, (prou'es), n. [Fr. *prouesse*; It. *prodezza*, from *prode*, valiant, from Lat. *prodest*, he is able; from *pro*, and *sum, esse*, to be.] Bravery; particularly, military bravery; gallantry; intrepidity in war; fearlessness of danger.

Prowl, (proul), v. a. [Fr. *prouir*; from Lat. *prædari*, to plunder.] To rove over or about.

— *v. n.* To rove or wander, particularly for prey, as a wild beast. — To rove and plunder; to prey.

— *n.* A roving for prey. (Colloq.)

Prowler, n. One who roves about for prey.

Prox, n. A word applied in Rhode Island to a ticket, or list of candidates at elections, presented to the people for their votes.

Prox'imal, a. Nearest; next; proximate; — more usually applied to the nearest extremity of a bone.

Prox'imate, a. [Lat. *proximus*, superl. *propier*, near, from *prepe*, near.] Nearest; next; immediate; having most intimate relation or connection.

P. analysis. (Chem.) See ANALYSIS.

P. principles. (Chem.) These are distinct compounds which exist ready formed in animals and vegetables, such as albumen, gelatin, fat, &c., in the former; and sugar, gum, starch, resins, &c., in the latter, which are so called without reference to their ultimate composition.

Prox'imately, adv. Immediately; by immediate relation to, or effect on.

Proxim'ity, n. [Fr. *proximité*; Lat. *proximitas*.] State of being next; immediate nearness, either in place, blood, or alliance.

Prox'imo, n. [Lat.] A day of the month next following.

Prox'y, n. [Contracted from O. Eng. *procuracy*, from L. Lat. *procuratia*.] The agency of another who acts as a substitute for his principal; agency of a substitute. — The person who is substituted or deputed to act for another. — A writing by which one person authorizes another to vote in his place.

(*Eng. Law.*) Every peer, spiritual or temporal, can constitute another lord of parliament, of the same order with himself, his proxy, to vote for him in his absence; but proxies cannot be used when the house is in committee, nor in any judicial cause.

— *v. n.* To vote or act by proxy, or by the agency of another. (R.) — In certain States, as in Connecticut, an election or election-day.

Prox'yship, n. The agency or office of a proxy.

Prude, n. [Fr.; Lat. *prudens*, from *providens*, from *providere*, to foresee.] A woman of affected or over-sensitive modesty or reserve; one who is over-scrupulous or sensitive.

— A woman affectedly or excessively prudent; a woman of great reserve, coyness, affected stiffness of manners, or scrupulous nicety.

Prudence, n. [Fr.; It. *prudenza*; Lat. *prudencia*.] The quality of being prudent; providence; the habit of at all times acting with deliberation, judgment, and forethought; wisdom applied to practice; caution; discretion.

Prudent, a. [Lat. *prudens*, contracted from *providens*.] Provident; dictated or directed by prudence; practically wise. — Careful of the consequences of enterprises, measures, and actions; careful not to act when the end is of doubtful utility, or probably impracticable; judicious; discreet. — Practising economy or frugality.

Prudent'ial, a. Proceeding from prudence; dictated or prescribed by prudence. — Exercising prudence; politic.

— *n.* Whatever pertains to, or requires the exercise of prudence; — generally used in the plural. — A maxim of prudence and practical wisdom.

Pruden'tialist, *n.* One who is actuated by prudential motives. (R.)

Pruden'tially, *adv.* In conformity with prudence; prudently.

Prudentius, AURELIUS CLEMENTIUS, (*pru-den'shi-us*), a Latin poet, who was successively an advocate, a magistrate, and a soldier, and distinguished himself in all these professions. His Latin poems were printed by Elzevir in 1667, with the notes of Heinsius. Flourished in the 4th century.

Pru'dently, *adv.* With prudence; with due caution or circumspection; discreetly; wisely; with frugality; economically.

Prud'ery, *n.* [*Fr. pruderie*.] Affected prudence or scrupulousness; excessive nicety in conduct; affected reserve or gravity; coyness.

Prud'homme, *n.* [*Fr.*, from *Lat. homo prudens*, prudent man.] (*Fr. Com. Law.*) A council was established in 1452, by King René, to decide disputes between the fishermen of Marseilles. Louis XI. allowed the citizens of Lyons to appoint a *prud'homme* to settle questions that might arise between merchants attending the Fair in 1464. Napoleon I., by a decree dated March 18, 1809, established a council of 9 members at Lyons to arbitrate between workmen and employers, masters and apprentices. A council of *prud'hommes* was established at Paris in 1844, three more in 1847; and several have since been formed in various parts of France.

Prud'ish, *a.* Partaking of prudery; affectedly grave; very formal, precise, or reserved.

Prud'ishly, *adv.* In a prudish manner.

Prui'na, *n.* [*Lat.*] Hoarfrost.

Pruin'ose, **Pruin'ous**, *a.* Frosty.

Prune, *v. a.* [*Fr. provigner*, to lay branches of vine in the ground to take root.] To lop or cut off, as the superfluous branches of trees, to make them bear better fruit, or grow higher, or to give them a more handsome and regular appearance.—To clear from anything superfluous; to dress; to trim.

—v. n. To dress; to trim;—used in contempt or ridicule.

—n. The dried fruit of the plum-tree (*Prunus domestica*). The very fine kind, which are sold in highly ornamental boxes, are called *French Plums*, or *Table Plums*. These are a larger and very sweet variety, called *Catherina*. They are carefully prepared, being gathered by hand and separately dried.

Prunella, *n.* [Probably from *Ger. bräune*, quinsy, croup.] (*Bot.*) A genus of plants, order *Labiaceæ*. Only one species is found in N. America, *P. vulgaris*, popularly known as Blue-curls or Self-heal, a plant very frequent in moist and barren pastures in Illinois and Indiana. It has oblong-ovate stalked leaves, and violet-blue flowers, very densely whorled, so as to form an imbricated oblong spike. It was at one time in considerable repute as a febrifuge. It is mildly aromatic and slightly astringent.

(*Anat.*) The pupil of the eye.

Prunella-salt. Fused vitre, moulded into cakes or balls, used for chemical purposes.

Prunel'la, **PRUNEL'LO**, *n.* [*Fr. prunelle*; *L. Lat. bruneta*, cloth made of dyed wool.] A smooth woollen stuff, generally black, used for making shoes or garments.

Prunel'lo, *n.* [*Fr. prunelle*, dimin. of *prune*.] A kind of plum.

Pruner, *n.* One who prunes or removes what is superfluous.

Prune-tree, *n.* (*Bot.*) The *Prunus domestica*. See PRUNUS.

Pruniferous, *a.* [*Lat. prunum*, a plum, and *ferre*, to bear.] Plum-bearing.

Pruning, *n.* (*Arboriculture*.) The art of cutting off parts of plants, and more especially of trees and shrubs, in order to strengthen those which remain, or to bring the tree or plant into some particular form calculated to increase particular products. Pruning, therefore, varies according to the kind of plant or tree to be pruned, and according to the object in view.

Pruning-hook. **PRUN'ING-KNIFE**, *n.* A hook or knife used in lopping or pruning trees.

Pruning-shears, *n. pl.* Shears used for pruning trees, &c.

Prun'us, *n.* (*Bot.*) The Plum, a genus of plants, order *Rosacæ*, sub-order *Amygdaleæ* or *Drapacæ*. The common Plum, *P. domestica*, and other varieties, produce the well-known fruits called Plums, Green-gages, and Damsons. The stone of the fruit is sharp-pointed at each end, with a longitudinal furrow passing all round, and a smooth surface. The fruit is covered with a fine bloom, and the young leaves rolled up. Cultivated plums vary greatly in the size, form, color, and flavor of the fruit. The fruit of some varieties, as the *White magnumbonum*, is 2 inches long, while others, as *P. myrobalana* (Fig. 2170), are not quite 1 inch; and a single fruit of the one is equal to at least eight or ten of the other. The best varieties of *P.* are among the most delicious dessert fruits. Among these, the *Green-gage* (*Reine Claude* of the French), is unsurpassed, both in sweetness and flavor. The inferior varieties are used in pies, preserves, and sweetmeats. Some of them are very austere. In moderate quantity, plums are wholesome enough; but excess in the use of them is very apt to produce colic, diarrhœa, and cholera. The danger is greater if they are eaten before being perfectly ripe. A very pleasant wine is made from plums; and in some parts of Europe a strong spirit is distilled from them after fermentation; but for this purpose they are mixed in the S. of France with honey and flour, and in Hungary with apples.—The dried fruit, variously known as Dried Plum or French Plum, and *Prune (q. v.)*, is much used for dessert; and the somewhat austere fruit of the St. Julien Plum, cultivated in the south of

France, becomes, when dried, the Medicinal Plum, used as a mild laxative.—*P. spinosa*, the Black Thorn or Sloe, is a thorny shrub, 12-15 feet high, native of Europe, but found in Pennsylvania in hedgerows and cul-

Fig. 2170. — PRUNUS MYROBALANA.

tivated grounds. The Wild Bullace-tree, *P. insititia*, also a native of Europe, naturalized in some parts of Massachusetts, has a black fruit, covered with a yellow bloom.—*P. Armeniaca*, the Apricot, a native of Armenia, is a middle-sized tree of 15-20, or even 30 feet high, with ovate, acuminate, and cordate, smooth, doubly-toothed leaves on long stalks; solitary; sessile; white flowers, which appear before the leaves; and fruit resembling the peach—roundish, downy, yellow, and ruddy on the side next the sun, with yellow and juicy flesh. The apricot was brought into Europe in the time of Alexander the Great, and since the days of the Romans has been diffused over all its western countries. In this country, it is but occasionally cultivated in gardens.

Prur'ience, **Prur'ieney**, *n.* An itching, longing desire or appetite for anything.

Prur'ient, *a.* [*Lat. pruriens*, from *prurire*, to itch.] Itching; uneasy with desire.

Prurigin'ous, *a.* [*Lat. pruriginosus*.] Tending to prurigo.

Pruri'go, *n.* [*Lat.*, an itching, from *prurire*, to itch.] (*Med.*) A genus of cutaneous diseases, the characteristic symptoms of which are a severe itching, accompanied by an eruption of papule of nearly the same color as the adjoining cuticle. The term is also carelessly applied to irritation of various parts of the body from other causes, as from vermin, worms, &c.

Prussia, (*prush'ah*), the largest and most powerful state of the German Empire, occupying a northern central portion of the European continent. *P.*, situated between the 49th and 56th parallels of N. Lat., and the 6th and 23d deg. E. Lon., is bounded N. by the Baltic and Denmark, E. by Russia and Poland, S. by Bohemia, Bavaria, Wurtemberg, and Baden, W. by Belgium and the Netherlands.—*Pol. Div.* *P.* is administratively divided into 12 provinces, which are again subdivided into 35 government districts, with the principality of Hohenzollern, the cradle of the royal family:

The principal part of the Prussian dominions lies continuously along the S. shore of the Baltic, between Russia and Mecklenburg, comprising the N. part of what was formerly Poland, and most part of the N. of

Germany. The inland frontier of this part of the monarchy on the E. and S. is sufficiently connected; but on the W. side it is very rugged, some small independent states being almost entirely surrounded by Prussian territory. But, exclusive of this major portion of the kingdom, there is an extensive outlying belt of country on both sides of the Rhine, divided into the provs. of Westphalia and the Rhine. Some detached territories in Saxony, the principalities of Hohenzollern in Wurtemberg, and the united duchies of Schleswig-Holstein and Lauenburg, forming the lower portion of the Danish peninsula between the North and Baltic seas, also form component parts of this extensive monarchy. From the extreme E. frontier of *P.* to Aix-la-Chapelle, in an E.N.E. and W.S.W. direction, the distance is about 775 m., and from the promontory on the Baltic above Stralsund, to the extreme S. frontier of Silesia, in a N.E. and S.W. direction, the distance is 404 m. The Duchy of Lauenburg belongs to the king of Prussia, but not consolidated with it. The length of coast line of *P.* is aht. on the North Sea 250 m., on the Baltic 750 m.—*Gen. Desc.* The surface of the Prussian states is generally flat. With the exception indeed of part of the *Harzgebirge* (or Hartz Mountains), in the prov. of Saxony, the *Teutoburgerwald*, and some other ranges in Westphalia and Saxony, the volcanic district in it and the Lower Rhine, and the *Riesengebirge* (Giants' Mountains), on the S.W. confines of Silesia, there is no other tract that is more than hilly. *P.* is, in fact, a country of vast plains, and in most parts so very level, that many marshes and small lakes have been formed by the inundations of the rivers. The E., or principal, division of the monarchy slopes imperceptibly from the S. frontier towards the Baltic, the shores of which are low and sandy. *Soil.* The quality of the soil is very various. In Brandenburg and Pomerania it is generally poor; in many parts, indeed, it consists of tracts of loose barren sand, diversified with extensive heaths and moors; but, in other parts, particularly along the rivers and lakes, there is a good deal of meadow, marsh, and other comparatively rich land. In Ducal *P.* and Prussian Poland, including the prov. of Posen, the soil consists generally of black earth and sand, and is, in many parts, very superior. But Silesia, and the Saxon and Rhenish provs., are naturally, perhaps, the most productive. The plain of Magdeburg, on the left bank of the Elbe is, perhaps, the most fertile and best cultivated district of the kingdom.—*Rivers, Lakes, &c.* *P.* is extremely well watered. The Rhenish provs. are traversed by the Rhine, while the E. frontier is partly formed by the Weser. The Elbe intersects the Saxon provs.; the Oder, which is almost entirely a Prussian river, runs through the whole extent of the monarchy, from the S. frontier of Silesia to the Isle of Usedom, where it falls into the Baltic. Polish Prussia (or Posen) is watered by the Wartha; W. Prussia by the Vistula; and Ducal, or E. Prussia, by the Pregel and Niemen. And, besides the above, there are many other large streams, as the Ems, Moselle, Spree, Havel, Netze, &c. Owing to the flatness of the country through which they flow, none of the great rivers are interrupted by cataracts, and they are all navigable—the Rhine, Elbe, and Vistula, throughout their whole course in the Prussian dominions; the Oder is navigable for barges as far as Ratibor in S. Silesia, and the Regal and Niemen to a considerable distance inland. The establishment of steam-packets on these rivers, and the freeing of the navigation of the Rhine and the Elbe from the oppressive tolls and regulations by which it was formerly obstructed, have already been, and will no doubt continue to be, of vast service to the country. Canals have also been constructed connecting the Elbe, the Oder, and the Vistula; so that goods shipped at Hamburg may be conveyed by water to Dantzic and conversely. Lakes are exceedingly numerous, particularly in E. Prussia and Pomerania. There are also along the coast several large bays, or rather lagoons, communicating with the sea by narrow mouths, and possessing more of the character of fresh-water lakes than of arms of the sea. They are denominated *haffs*, the principal being the Curische Haff and the Frische Haff, on the coast of Ducal Prussia, and the haff at the mouth of the Oder. Prussia has 4 naval ports, at Kiel, Dantzic, Stralsund, and Jahde on the N. Sea (purchased from Oldenburg in 1854). Besides these she possesses the commercial seaports of Memel, Königsberg, Pillau, Stettin, and Swinemunde; also those of Hamburg and Altona, both of which may be said to belong to the monarchy.—*Clim.* The climate of *P.* is not less various than the soil. Along the Baltic it is moist, and in E. Prussia, especially, the winter is long and severe. It is also harsh in the S. parts of Silesia, contiguous to the Carpathian Mountains. In N. Silesia, Brandenburg, and the Saxon and Rhenish provs., it is comparatively mild.—*Min.* The mineralogical products of *P.* are rich and various. Iron is the ore most generally diffused; it is very extensively wrought in Silesia, principally on account of the crown, but also by private individuals. The trade and industry of the kingdom is much fostered by its wealth in coal, which is sufficient not only to supply its own wants, but serves as an important article of export into all parts of S. Germany, as well as to France and Switzerland. The greatest coal-mines are on the river Ruhr, on the Lower Rhine, and next in importance are those on the river Sarr, and in Upper Silesia. The total annual production of this mineral is estimated at 28,000,000 tons. Salt, which is a government monopoly, is produced principally in the Saxon provs., which also yield considerable quantities of copper, and some silver. Silesia furnishes annually large quantities of zinc, lead, and tin. Amber has been long known as a product, principally formed along the low narrow tongue of land between the

Carische Haff and the sea.—*Zöhl.* Wolves and wild boars continue to exist in considerable numbers in some parts of the Prussian states.—*Agric.* Wheat, rye, buckwheat, oats, barley, potatoes, with flax and hemp, form the chief products of Prussian farm husbandry. About 700,000 eimers of very fair wine are annually grown in the Rhenish provs. Rye used to be in P. an article of universal consumption, occupying the same place there that Indian corn occupies in the U. States, wheat in England, and potatoes in Ireland. But of late years it has been, to a great extent, superseded by the potato, the culture of which has increased with a rapidity to which there is no parallel. It now, in fact, forms the principal dependence of a large proportion of the population. The usual agricultural course is to fallow every third year, taking either first a crop of rye, and then wheat, or conversely. Flax and hemp are cultivated for domestic use, and also for sale, in all parts of the monarchy, but especially in Silesia. The best flax is made from foreign seed, the seed produced at home being used to make oil-cake. Tobacco, hops, madder, and other plants used in dyeing, are also raised. Chicory is largely cultivated. Beet-root plantations are very extensive, and have recently made great progress, especially in Saxony and Silesia. Except on the crown estates there are few farms. Most considerable landed proprietors are accustomed to manage their estates by stewards; and the smaller occupiers of lands are, in most cases, all proprietors. Horses, cattle, and sheep are raised everywhere throughout the monarchy. The breed of the latter has been of late years an object of much attention, particularly in Brandenburg, Saxony, and Silesia, and some other provs., and has become superior even to that of Spain. Wool now constitutes in point of fact the principal article of export from Germany. P. contains, in round numbers, 1,600,000 horses, 8,000 asses and mules, 5,500,000 oxen, 15,400,000 sheep, 670,000 goats, and 2,600,000 swine. *Manuf.* Though more of an agricultural than a manufacturing country, P. has greatly distinguished herself, particularly of late years, in various branches of manufacture. The Rhenish provs., and Saxony and Silesia, are the districts most prominent in this dept. Linens and coarse woollens for domestic consumption are made in every village, and, indeed, in most cottages throughout the kingdom. The total value of the linen stuffs annually fabricated is estimated at from 50,000,000 to 60,000,000 rix-dollars, of which a fourth part is exported. Large quantities of silk and cotton

Königsberg, Danzig, Stettin, Stralsund, &c. There are many interior commercial towns, and annual fairs are held at Breslau, Magdeburg, and Frankfort-on-the-Oder.—*Const. and Govt.* The present constitution of the kingdom, granted by Frederick William IV. in 1850, has since been considerably modified. Its fundamental laws vest the execution and part of the legislative authority in a king of the house of Hohenzollern, who attains his majority upon accomplishing his 18th

Fig. 2172. — GEN. VON MOLTKE.

year. The crown is hereditary in the male line only, according to the rights of primogeniture. In the exercise of the govt., the king is assisted by a council of ministers, appointed and dismissed by royal decree. The legislative authority the king shares with a representative assembly, composed of two Chambers, the first called the *Herrenhaus*, or House of Lords, and the second the *Abgeordnetenhaus*, or Chamber of Deputies. The assent of the king and both chambers is requisite for all laws. Financial projects and estimates must first be submitted to the Lower Chamber, and be either accepted or rejected "*en bloc*" by the Upper House. The right of proposing laws is vested in the king and in both chambers. Projects of law rejected by either chamber, or by the king, cannot be reproduced during the same session. The first chamber is composed of, first, the princes of the royal family who are of age, including the scions of the formerly sovereign families of Hohenzollern-Hechingen and Hohenzollern-Sigmaringen; secondly, the chiefs of the mediatised princely houses, recognized by the Congress of Vienna, to the number of sixteen in Prussia; thirdly, the heads of the territorial nobility formed by the king, and numbering some 50 members; fourthly, a number of life peers, chosen by the king among the class of rich landowners, great manufacturers, and national celebrities; fifthly, 8 titled noblemen elected in the 8 original provs. of P., by the resident landowners of all degrees; sixthly, the representatives of the universities, the heads of "chapters," and the burgomasters of towns with above 50,000 inhabitants; and seventhly, an unlimited number of members nominated by the king for life, or for a more or less limited period. The second chamber consists of 432 members—350 for the old kingdom, and the rest added in 1867 to represent the newly-annexed provs. Every Prussian who has attained his 25th year, and is qualified to vote for the municipal elections of his place of domicile, is eligible to vote as indirect elector. Persons who are entitled to vote for municipal elections in several parishes, can only exercise the right of indirect elector, or *urwähler*, in one. One direct elector, or *wahlmann*, is elected for every complete number of 250 souls. The indirect electors are divided into 3 classes, according to the respective amount of direct taxes paid by each; arranged in such manner, that each category pays one-third of the whole amount of direct taxes levied on the whole. The first category consists of all electors who pay the highest taxes to the amount of one third of the whole. The second, of those who pay the next highest amount down to the limits of the second third. The third, of all the lowest taxed, who, together, complete the last class. Each class may be divided into several electoral circles, none of which must, however, exceed 500 "*urwähler*." Direct electors may be nominated in each division of the circle from the number of persons entitled to vote indirectly, without regard to special divisions. The representatives are chosen by the direct electors. The legislative period of the second chamber is limited to 3 years. Every Prussian is eligible to be a member of the second chamber who has accomplished his 30th year, who has not forfeited the enjoyment of full civic rights through judicial sentence, and who has paid taxes during 3 years to the state. The chamber must be reelected within 6 months of the expiration of their legislative period, or after being dissolved. In either case former members are re-eligible. The chambers are to be regularly convoked by the king during the month of Nov.; and in extraordinary session, as often as circumstances may require. The opening and closing of the chambers must take place by the king in person, or by a minister appointed by him. Both chambers are to be convoked, opened, adjourned, and prorogued simultaneously. Each chamber has to prove the qualification of its members, and

to decide thereon. Both chambers regulate their order of business and discipline, and elect their own presidents, vice-presidents, and secretaries. Functionaries do not require leave of absence to sit in the chamber. When a member accepts paid functions, or a higher office connected with increased salary, he vacates his seat and vote in the chamber, and can only recover the same by a new election. No one can be a member of both chambers. The sittings of both chambers are public. Members of the second chamber receive travelling expenses and diet money from the state, according to a scale fixed by law, amounting to 3 thalers per day. Refusal of the same is not allowed. The executive govt. is carried on, under the king, by an irresponsible *Staatsrath*, or Council of State, and a nominally responsible council of ministers. The former consists of all the princes of the royal family who are above 18 years of age, and of an unlimited number of servants of the state, appointed by the sovereign. The Cabinet or Council of Ministers is divided into 10 depts., viz.:—1. Foreign Affairs; 2. Finance; 3. Royal Household; 4. War; 5. Marine; 6. Interior; 7. Justice; 8. Public Instruction and Ecclesiastical Affairs; 9. Agriculture; 10. Commerce and Public Works. Each of the provs. of the kingdom is placed under the superintendence of an *oberpräsident*, or governor, who has a salary of 6,000 thalers, or \$4,285. Each prov. has also a military commandant, a superior court of justice, a director of taxes, and a consistory, all appointed by the king. The last is divided into 3 sections—one having the superintendence of schools, another of ecclesiastical affairs, and another of the public health. The provs. are subdivided into *regierungsbezirke*, or counties, and these again into *kreise*, or circles, and the latter into *gemeinden*, or parishes. Each co. has a president and an administrative board or council; and the further subdivisions have also their local authorities. The municipal organization of the towns is more complicated than that of the communes. The principal functionaries are all elective; but the elections must be confirmed by the king or the authorities. The system of law principally in force in the E. states of the monarchy is embodied in a well digested code, entitled, *Landrecht für die Preussischen Staaten*, which received the royal sanction in 1791, and became law in 1794; but it is occasionally modified by custom, and Polish, Swedish, and German laws are still in force in certain parts of the monarchy. The Rhenish provs. follow, with some exceptions, the rules laid down in the Code Napoleon. The judges are independent of the government. Juries are employed in the Rhenish provinces, but not in the other parts of the monarchy.—*Finances.* The budget of 1890 exhibited receipts estimated at 1,591,673,912 marks, just balanced by the expenditures. The expenditure for the army and navy is not entered in the budget of P., but forms part of the budget of the empire. The public debt of the kingdom was in 1890, according to the official report laid before the House of Deputies, 5,204,724,261 marks (about equivalent to \$1,301,680,000), or about \$45.75 per head of the population, it being double that of the remainder of Germany. The direct taxes consist of an income-tax, land-tax, house-tax, class-tax, and trading-tax, the total being about \$1.37 per head. The income-tax yields about 35 cts. per head of the population.—*Military—Army.* The obligation of Prussian military service is universal; every man (no substitutes being accepted) is obliged to serve in the army of the line and the *landwehr* (militia), between the ages of 20 and 38. Every Prussian subject is enrolled as a soldier as soon as he has completed his 20th year. He has to serve in the army during seven years, three years of which must be passed in the regular army, and the rest among the troops of the reserve. At the end of this term the soldier enters the *landwehr* for nine years, with liability to be called upon for annual practice, and to be incorporated with the regular army in time of war. Leaving the *landwehr*, the soldier is finally enrolled in the *landsturm*, or *levy en masse*, which consists of all the men not in the army, or the *landwehr* up to the age of 50, and of young men between 17 and 20. This force is only called out in case of invasion. There are various exemptions from this law of military service, in favor of the nobility, clergy, and some other classes of the population. A certain amount of education and fortune con-

Fig. 2173. — PRUSSIAN INFANTRY OF THE LINE.

Fig. 2171. — CASTLE OF RHEINFELS (RHENISH PRUSSIA).

goods, and linens, are produced in Elberfeld, and other towns of the Rhine provinces. Very superior broad-cloth is largely manufactured at Eupen, Malmedy, Berlin, and Aix-la-Chapelle. P. occupies a respectable rank as a producer of the useful metals, more especially pig and bar iron. The articles of hardware made at Berlin, Iserlohn, Hagen, Solingen, Olpe, and Essen enjoy a high reputation, the last-named place being the seat of the famous Krupp steel and gun works. Porcelain, jewelry, watches, and carriages are also manufactured in the latter city on a most extensive scale. Vast numbers of books annually issue from the presses of Berlin and Halle. Beer and spirits are very extensively produced.—*Com.* The exports from P. consist principally of grain, wool, timber, Westphalian hams, zinc, flax, bristles, salted provisions, and other articles of raw produce; with linens and woollens, cloths, silks, wares, iron, hardware, jewelry, watches, and wooden clocks, Prussian-blue, spirits, and beer. The imports consist chiefly of sugar, coffee, and other colonial products, raw cotton and cotton-twist and stuffs, indigo and other dye-stuffs, spices, French and other wines, coals for the use of the ports of the Baltic, &c. The commercial statistics of the country are not separated from those of Germany. About one-half of the population of P. are engaged in agriculture, as sole or chief occupation, while nearly 5,000,000 possess landed property.—*Railroads.* P. has a very large and complete system of railways, with a total length of over 15,000 m., much the larger portion of which belong to the State. In 1878 three-fourths of the total railway system were held and operated by private companies, but since then there has been a steady process of State absorption, and the period is not distant when all the railroads of P. will be national property, this being evidently the policy of the government. This length of railway, the public roads (40,500 m. in length), a network of river and canal navigation, and 1,000 m. of coast line, together with her central European situation, greatly facilitate the commerce of P., which is steadily developing. In 1890 the mercantile marine of this country numbered over 2,250 vessels, of about 360,000 tons, while a large fleet of foreign vessels annually enter her many ports, among which may be mentioned Memel, Pillau,

stitutes also a partial exemption, inasmuch as young men of 20, who pay for their own equipment, and can pass a light examination, have to serve only one year in the regular army. This does not exempt them, however, from the legal service in the reserve, the landwehr, and the landsturm; the army consisting of about 450,000 men of all arms. On a war footing, the numbers can be raised to 1,000,000 men, exclusive of the landsturm.—*Religion and Education.* The royal family belongs to the Reformed or Protestant faith, but all denominations of Christians enjoy the same privileges, and are equally eligible to places of trust or emolument. The Protestants predominate very decidedly in Brandenburg, Pomerania, Saxony, Hanover, and Ducal Prussia; while the Catholics are in the majority in the Rhine provs. and Westphalia, in the regency of Oppeln, in Silesia, and in Posen. The Protestant Church is governed by *consistories*, or boards appointed by govt., one for each prov. There are also synods in most circles and provs., but no general synod has yet been held. The constitution of the Catholic Church differs in the various provs. In the Rhenish provs., it is fixed by the Concordat entered into between the govt. and Pius VII. But in every other part of the monarchy, the crown has reserved to itself a control over the election of bishops and priests. The incomes of the clergy differ greatly; those of the parochial clergy, of both sects, mostly arise from endowments. In general, the government does not guarantee the stipend of either Protestant or Catholic clergymen; but in some parishes the clergy enjoy a public provision from the state. This is peculiarly the case in the Rhenish provs., in virtue of the Concordat with Rome. Proselytism, whether by force or persuasion, is prohibited by law. The system of public education in force in P. is held to be a more perfect one than any other of Europe. The main feature of it is that attendance at school is enforced by law. Every child, whether male or female, must attend a public school from the age of 5 years complete, till such time as the clergyman of the parish affirms that the child has acquired all the education prescribed by law for an individual in its station; generally speaking, the school time extends from 6 to 14 years complete. Should a child not attend, its parents or guardians must satisfy the public authorities that it is receiving an appropriate education either at home or in a private seminary. The school-fees are exceedingly moderate; and the children of poor persons who are unable to pay them are instructed gratuitously at the public expense. Exclusive of the gymnasia and superior schools, P. has 6 universities, those of Berlin, Breslau, Bonn, Halle, Königsberg, and Greifswalde, and the two semi-universities of Münster and Braunsberg.—*Hist.* The rise of the Prussian power has been rapid and extraordinary. The kings of P. trace their origin to Count Thasso of Zollern, one of the generals of Charlemagne. His successor, Count Friedrich I., built the family-castle of Hohenzollern, near the Danube, in the year 980. A subsequent Zollern, or Hohenzollern, Friedrich III., was elevated to the rank of a prince of the Holy Roman Empire, in 1273, and received the burgraviat of Nuremberg in fief; and his great-grandson Friedrich VI. was invested by the Emperor Sigismund, in 1411, with the prov. of Brandenburg, and obtained the rank of Elector in 1417. A century after, in 1511, the Teutonic Knights, owners of the large prov. of Prussia, on the Baltic, elected the Margrave Albert, a younger son of the family of Hohenzollern, to the post of Grand-Master, and he, after a while, declared himself hereditary prince. The early extinction of Albert's line brought the prov. of Prussia to the Electors of Brandenburg, whose own territories meanwhile had been greatly extended by the valor and wisdom of Friedrich Wilhelm, "the Great Elector," under whose fostering care arose the first standing-army in central Europe. The Great Elector, dying in 1688, left a country of 1,500,000 people, a vast treasure, and 38,000 well-drilled troops, to his son Friedrich I., who put the kingly crown on his head at Königsberg, June 18, 1701. Pomerania was soon after added to Prussia. But, notwithstanding these acquisitions, when Frederick the Great ascended the throne in 1740, his disjointed dominions did not contain 2,500,000 inhabitants, who had made but little progress in the arts, or in the accumulation of wealth. But this extraordinary man, with no extrinsic assistance, and by mere dint of superior talent and energy, wrested, in the early part of his reign, the valuable and extensive prov. of Silesia from the house of Austria. He afterwards defended himself, during the Seven Years' War, against the combined efforts of Austria, Russia, and France, and forced those powers to conclude a treaty by which Silesia was solemnly guaranteed to P. In the latter part of his reign, in conjunction with Russia and Austria, Frederick planned, and partly carried into effect, the partition of Poland, acquiring as his share the W. parts of Prussia, and secured, in addition to the increase of territory, an unrestricted communication between the great divisions of the kingdom. By these different acquisitions, P., at the death of Frederick, in 1786, had been increased in size nearly a half; while, owing to the superior fertility of the conjoined provs., and the improvement effected in every part of his dominions, after the peace of 1763, the population had increased to about 6,000,000. P. acquired, by the subsequent partition of Poland in 1792, and its final dismemberment in 1795, a great extension of territory, including the important city of Dantzic, and upwards of 2,000,000 inhabitants. In addition to this she acquired the bishopric of Paderborn and the principalities of Bayreuth and Anspach, with several lesser dists. in Germany; so that, in 1805, the kingdom contained nearly 5,000 geog. sq. m. of terri-

tory, and a pop. of 9,640,000. Her disastrous contest with France in 1806 lowered P. for a while; but the spirit of the people was not subdued; and after Napoleon's Russian campaign, the people rose "en masse," and literally drove the French out of Germany. At the general peace of 1815, P. became more powerful than ever. She recovered all her former possessions, except a portion of her Polish dominions assigned to the kingdom of Poland; but this was more than compensated by valuable acquisitions in Saxony, Pomerania, and the Rhenish provs. After the accession, in 1862, of King William I., popular representation proved powerless to counteract the will of the executive govt. presided over by Count von Bismarck (q. v.), which made laws, and even decreed budget-estimates, without the concurrence of the chambers. In 1864, P., conjointly with Austria, sent an army to occupy the duchy of Schleswig-Holstein. A war with Denmark followed, which resulted in the annexation of that duchy to P. In 1866, the military prestige of the monarchy was further maintained in the occupation of Hanover and Saxony by the Prussian troops, and a consequent war with those kingdoms and with Austria, in which, after a brilliant campaign of two weeks, the latter power was obliged to sue for peace, and relinquish her claims as a German power. In addition, Saxony was left a mere nominal sovereignty under the control of P., while Hanover, Hesse-Cassel, Nassau, and the former free city of Frankfurt-on-the-Main became absorbed into the Prussian monarchy. In August, 1870, Napoleon III. declared war against P., and French armies marched toward the Rhine. An alliance having been entered into between P. and the S. German powers of Bavaria, Wurtemberg, and Baden, their combined forces crossed the Rhine into France. The part of P. in the Franco-German war is inextricably involved with that of the whole German nation. The conflict seemed to precipitate the solution of the question which had always been the aim of the king and Bismarck: German unity under Prussian leadership. On Jan. 18, 1871, King William was crowned at Versailles as emperor of Germany, and on March 21, the first German Reichstag assembled at Berlin. The history of P. since is that of Germany.

Prussian (*prush'an*), *a.* Relating to Prussia.

—*n.* A native or an inhabitant of Prussia.

Prussian-blue, *n.* (*Painting*.) A pigment largely consumed in decorative arts, and in dyeing and calico-printing; it is used in making some of the varieties of what is called *stone-blue*, and is sometimes added to starch, though for this purpose, as well as for covering the yellow tint of paper, smalt or cobalt-blue is preferable. *P.-B.* is prepared for different degrees of purity by precipitating solutions of peroxide of iron by ferrocyanide of potassium, various additions being made according to the purposes for which it is required. Pure *P.-B.* is obtained by adding a solution of ferrocyanide of potassium to persulphate of iron, thoroughly washing the precipitate, first with water slightly acidulated by sulphuric acid, and then with pure water, and ultimately drying it in a warm place. *P.-B.* is of a peculiarly rich and intense blue, with a copper tint upon its surface; it is insipid, inodorous, insoluble in water, in alcohol, and in dilute acids, and is not poisonous. The alkalies decompose it into soluble ferrocyanides and oxide of iron; hence, as a dyeing material, it does not resist the action of soap. According to Chevreul, *P.-B.* becomes white in the direct rays of the sun, but regains its blue color in the dark. It is occasionally used in the composition of writing fluids. *P.-B.* is a true chemical compound of iron and cyanogen—the base of prussic acid—whence the name of the pigment. Mixed with white, it forms numerous useful tints, although inferior to cobalt and ultramarine on account of its green hue. It is more used in water-color painting than in oil, and especially for coloring flowers. When burned with access of air, it yields a rich warm brown, provided the pigment contains sufficient alumina; but when burned in a covered crucible, it yields a fine blue-black pigment, which dries quickly, like the brown. Commercial *P.-B.* is generally contaminated with alumina, and often with chalk, plaster of Paris, and starch.

Prussian-brown, *n.* (*Painting*.) A color obtained by adding a solution of the yellow prussiate of potash to a solution of sulphate of copper, which throws down a precipitate of deep brown; this, when washed and dried, is equal to madder, and possesses a greater permanency.

Prussia Proper, an important division of the kingdom of Prussia, bounded on the S.W. by Pomerania and the Baltic Sea, and on the E. and S. by Russia and Poland; area, 24,880 sq. m. It is administratively divided into two provinces—East and West Prussia. About two-thirds of the soil consists of good land, the remainder being chiefly sandy. Agriculture is by far the most important branch of industry, manufactures being confined to such articles as supply merely local wants. *Chief Towns.* Königsberg, Dantzic, Elbing, Tilsit, and Marienwerder.

Prussiate, *n.* (*Chem.*) See HYDROCYANATE.

Prussic Acid, *n.* (*Chem.*) See HYDROCYANIC ACID.

Pruth, an affluent of the Danube, rises in the S.E. of the Austrian crown-land of Galicia, on the N.E. side of

the Carpathian mountains, and near the base of Mount Rusky in that range. It flows in a deep valley eastward past Kolomea and Czernowitz, and, forming the boundary between Moldavia and the Russian territories from Bojana, passes Liptchany, then flows S.S.E. to Katamori; after which its course lies S. through Moldavia to the Danube, which it enters at Reni, about 12 m. below Galatz. Total length abt. 500 m.

Pry, *v. n.* [Probably from the verb *to eye*, with the prefix *per*; to eye through or all over.] To peep narrowly; to inspect closely; to attempt to discover something with scrutinizing curiosity, whether impertinent or not. —*n.* Narrow inspection; impertinent peeping. —*A lever.* (U. S.)

—*v. a.* To raise or lift up with a lever; to prize. (U. S.)

Prying, *a.* Inspecting closely; looking into with curiosity.

Pryingly, *adv.* With close inspection or impertinent curiosity.

Prytanæum. [Gr. *Prytaneion*.] (*Gr. Hist.*) The place of assembly of the Prytanes. In a Greek city the P. was the home of the community, and answered to the private homes of individual citizens. Hence a fire was always kept burning in the P. as on the hearths of private houses. In this building were entertained those citizens who, by virtue of their office, or for merit, received the privilege of having their meals at public cost. At Athens this was among the highest honors which could be conferred on any one.

Prytanes. [Gr. *Prytaneis*.] The Athenian senate, consisted of 500 persons, fifty being elected from each of the ten tribes; each of these fifties took it by turn to preside over the council and the assemblies, with the title of P., having one-tenth of the year assigned to it; or, more accurately speaking, 34 days were allotted to each of the first four tribes, and 35 to the last six; the Attic year consisting of 354 days.

Prytany, *n.* [Gr. *prytaneia*.] The period of office of the prytanes of one section.

Przemysl, (*pzhem'isl*), a town of Austrian Galicia, on the San, 51 miles W. of Lemberg. *Manuf.* Linen and leather. *Pop.* 9,000.

Przibram, (*prib'ram*), a town of Bohemia, 21 m. S.S. of Beraun. *Manuf.* Woollen cloth, paper, and potash. *Pop.* 5,300.

Psalm, (*sahm*), *n.* [Fr. *psaume*; Lat. *psalmus*; Gr. *psalmos*, from *psallo*, to play a stringed instrument.] A sacred song or hymn; a song composed on a divine subject, and in praise of God.

Book of Psalms. (*Script.*) One of the canonical books of the Old Testament, comprising a copious collection of sacred songs. They are usually styled the "Psalms of David;" and though he was doubtless the largest and most eminent contributor, there are many that were clearly composed by different hands, and at very different periods. To David are ascribed 73 Psalms in the Hebrew text, and at least 11 others in the Septuagint. There can be little doubt, however, that some, even of those that bear his name, belong to a later date; and on the other hand, the contents and style of some that do not bear his name show him to have been the author. The other authors, to whom certain of the Psalms are ascribed, are Asaph, one of David's chief musicians, 12; the sons of Korah, another family of choristers, 11; Heman and Ethan, two of the chief singers, 1 each; Solomon, 2; Moses 1. Some of these, however, evidently do not belong to the time at which their reputed author lived. David's compositions are generally distinguished by sweetness, softness, and grace, and his prevailing style is plaintive. The date of the Psalms ranged from the time of Moses to that of the captivity, a period of nearly 1,000 years; and the collection as it at present stands was probably formed by Ezra and his contemporaries. Particular collections, however, must have existed as early as the time of David, and the singers who were appointed by David for the service of the sanctuary sang psalms. In the time of Hezekiah, the Psalms of David and Asaph were sung at religious solemnities; and the same is recorded to have taken place in the second temple after the captivity. The Book of Psalms is, according to the analogy of the Pentateuch, divided in Hebrew into five books, each of which closes with a doxology. Various classifications, more or less arbitrary, have been proposed of the Psalms. According to De Wette, they may be arranged as follows: 1. Hymns in praise of God, as the Creator, Preserver, and Governor of the world, and, in particular, as the Protector of his chosen people. — 2. National psalms, referring to the history of the people, and the many favors which, in former times, they had received from Jehovah, especially in the time of Moses. — 3. Psalms of Zion and of the temple. — 4. Psalms relating to the king, in which he is held up as the representative of Jehovah, and the assistance of God invoked for him. — 5. Psalms containing the supplications and complaints of the pious in distress. — 6. Religious and moral psalms. This division, however, is too complex and indefinite for practical purposes. Tholuck divides them, according to their subject-matter, into songs of praise, of thanksgiving, of complaint, and of instruction. The inspiration and canonical authority of the Psalms are established by the most abundant and convincing evidence, and in every age of the church they have been extolled for their excellence and their use for pious purposes. On account of its beauty and significance, this book has called forth a greater number of commentaries than any other. In particular, is the theological literature of Germany rich in works of this class; among which we may mention De Wette, Hitzig, Hirzel, Ewald, Hengstenberg, Delitzsch, and Hupfeld.

Psalmist, (*sahm'ist*), *n.* [Fr. *psalmiste*.] A writer or

composer of psalms or sacred songs; a title particularly applied to David, and the other authors of scriptural psalms.

(Rom. Cath. Church.) A clerk, precentor, or leader of music in the church.

Psalmistry, (*sahm'ist-ry*), *n.* The using of psalms or sacred hymns.

Psalmodic, **Psalmod'ical**, *a.* Relating to psalmody.

Psalmodist, *n.* One who sings holy songs.

Psalmodize, *v. n.* To practice psalmody.

Psalmody, (*sal'mo-dy*), *n.* [Fr. *psalmodie*; Gr. *psalmodia*, from *psalmos*, and *ode*, a song.] This word, in its widest sense, is applied to sacred hymns or psalms set to music and sung; but is commonly restricted to the metrical versions of the Psalms of David.

Psalmograph, **Psalmog'rapher**, **Psalmog'raphist**, *n.* [From Gr. *psalmos*, and *graphein*, to write.] A writer of psalms, or sacred hymns.

Psalmography, *n.* [Fr. *psalmographie*, from Gr. *psalmos*, a psalm, and *graphein*, to write.] The act of writing psalms, or sacred hymns.

Psalm-singing, *n.* The act or practice of singing psalms.

Psalter, (*sawt'ler*), *n.* [Fr. *psautier*; It. *salterio*, from Gr. *psalterion*.] The Book of Psalms; often applied to a book containing the Psalms separately printed.

(Roman Catholic Church.) A series of 150 devout sentences or aspirations, in honor of certain mysteries, as of the sufferings of Christ:—a large chaplet or rosary, consisting of 150 beads.

Psaltery, (*sawt'ler-y*), *n.* [Lat. *psalterium*; Gr. *psalterion*.] (*Mus.*) A stringed instrument used by the Hebrews. Fig. 2174 represents a mediæval psaltery, from a wooden sculpture of the 15th century.

Psamma, *n.* [Gr. *psamos*, sand.] (*Bot.*) A genus of plants, order *Graminaceæ*. The Mat-Grass, *P. arenaria*, has a creeping root; stem erect, rigid, 2-4 feet high; leaves involute, smooth and glaucous, pungently acute. It is found on sandy sea-coasts, from Canada to N. J. It is extensively manufactured into paper at Dorchester, Mass.

Psammite, (*sam'mit*), *n.* [From Gr. *psammites*, sandy.] (*Min.*) A variety of micaceous sandstone.

Pseudepig'raphy, *n.* [Gr. *pseudes*, false, and *epigraphe*, an inscription.] The ascription of false names of authors to works.

Pseudo, (*su'do*). [Gr. *pseudes*, false, from *pseudein*, to belie.] A prefix which, being put before words, signifies false or counterfeit; as, *pseudo-apostle*, a false or counterfeit apostle.

Pseudo-blep'sia, *n.* [Gr. *pseudes*, false, and *blepein*, to see.] (*Med.*) A perversion of sight; false-sight; visual hallucination.

Pseudobulb, *n.* (*Bot.*) An enlarged aerial stem, resembling a tuber, from which it scarcely differs, except in being formed above ground in the epidermis, being often extremely hard, and in retaining upon its surface the scars of leaves that it once bore.

Pseudodip'teral, *a.* [Gr. *pseudo*, *dis*, twice, and *pteron*, a wing.] (*Arch.*) Noting a temple which has a single range of columns in the flanks, at the same distance from the walls of the cella as though the temple had been dipteral.

Pseudo-gale'na, *n.* (*Min.*) False galena, or black-jack.

Pseudograph, **Pseudog'raphy**, *n.* [Gr. *pseudes*, false, and *graphein*, to write.] False writing.

Pseudologist, (*su-dol'o-jist*), *n.* One who utters falsehoods.

Pseudology, *n.* [Gr. *pseudes*, false, and *logos*, speech.] Falsehood of speech.

Pseudo-metal'lic, *a.* (*Min.*) Exhibiting lustre only when held to the light.

Pseudomorphous, *a.* [Gr. *pseudes*, and *morphe*, form.] (*Min.*) Said of minerals which deviate from the form of crystallization peculiar to that species.

Pseudonym, (*su'do-nim*), *n.* [Fr. *pseudonyme*; Gr. *pseudonymos*, falsely named.] (*Lit.*) A false or imaginary name assumed by a writer; more strictly, however, the former; a nom-de-plume.

Pseudonyms, *a.* Applied to an author who publishes a work under a false or feigned name, and also to the work itself, in the same way as *anonymous* is applied to one who publishes a work without any name, or to the book so published.

Pseudosau'ria, *n.* (*Zoöl.*) A family of tailed batrachians, which are said to be destitute of gills at all periods of their existence, and which breathe by means of exposed spiracles or branchial orifices at the sides of the neck. According to Holbrook, they undergo no metamorphosis after they are hatched, but at once appear in the forms which they are permanently to retain. To this family belong the Congo snake, *Amphiuma means*, of the Southern States, which lives in muddy waters. It has an eel-shaped body, and imperfectly developed legs.

Pseudo'scope, *n.* [Gr. *pseudos*, and *skopes*, I view.] (*Optics.*) A kind of stereoscope employed to produce converse figures differing from the normal figure in this circumstance, that those points which appear most dis-

tant in the latter are the nearest in the former, and *vice versa*. The *P.* consists of two reflecting prisms placed in a frame, with adjustments, so that when applied to the eyes, each eye may separately see the reflected image of the projection which usually falls on that eye. The instrument being directed to an object, and so adjusted that the object shall appear of its proper size, and at its usual distance, the distances of all other objects are inverted; all nearer objects appear more distant, and all more distant objects nearer, and this constitutes what is called *conversion of relief*. The inside of a tea-cup appears a solid convex body. A china vase ornamented with colored flowers in relief, appears to be a vertical section of the interior of the vase, with painted hollow impressions of the flowers. A framed picture hung against a wall appears as if imbedded in a cavity made in the wall.

Pseudo-sper'mic, *a.* [Gr. *pseudes*, and *sperma*, a seed.] (*Bot.*) Noting fruits whose pericarp is so closely attached to the seed that it cannot readily be distinguished from one of its integuments.

Pseudo-volc'no, *n.* A volcano emitting smoke and sometimes flame, but never lava.—A burning mine of coal.

Pshaw, (*shaw*), *interj.* An expression of contempt, disdain, or dislike. (Written also *psha*.)

Psidium, (*sid'e-um*), *n.* (*Bot.*) A genus of plants, order *Myrtaceæ*. Various species yield excellent dessert fruits, much used in tropical countries, and known as *guavas*. The more important are *P. pyriferum*, *pomiferum*, *cattleyanum*, *albidum*, and *pygmaeum*. The first of these bears fruit the size of a hen's egg, yellowish, with a peculiar smell. The rind is brittle, the pulp full of bony seeds, flesh-colored, sweet, and aromatic. It is commonly eaten raw in the West Indies in the dessert, and also preserved with sugar. *P. cattleyanum* is considered to be one of the best of the guavas; the fruit is of a fine deep claret-color, and the pulp in consistence and flavor bears some resemblance to the strawberry. Guava jelly is imported into this country, and is much prized as a confection. Guava pulp is employed in the preparation of some of the Indian chutnies.

Psilan'thropist, *n.* [Gr. *psilos*, and *anthropos*, man.] One who believes that Jesus Christ was an ordinary man, and the son of Mary and Joseph. (*R.*)

Psilom'elane, *n.* [Gr. *psilos*, bare, and *melas*, black.] (*Min.*) A common ore of manganese, of very variable composition, probably only a mixture of the proto-peroxide, Mn_2O_4 , with pyrolusite, Mn_4 , and usually a little potash, baryta, and water.

Psilothron, (*sil'o-thron*), *n.* [Gr., from *psiloun*, to make bare, from *psilos*, bare.] (*Med.*) Depilatory; a medicine which causes the loss of the hair.

Psioi, (*pse-ol'*), a river of Prussia, which, after a S.S.W. course of 300 m., joins the Dnieper, 10 m. E.S.E. of Kremenchug.

Psittac'idæ, *n. pl.* (*Zoöl.*) The Parrot family, a numerous and splendid family of birds, ord. *Scansores*, subdivided, chiefly according to the form of the bill and tail,

Fig. 2175. — RED-WINGED HEN-PARROTS.

into several groups; as the Macaws, Cockatoos, Lories, Paroquets, &c., which are each inserted in their alphabetical order. The *True Parrots*, which we are now to consider, have the upper mandible toothed, and longer than it is high; and the tail is short, or even and rounded at the end. They unite great beauty with great docility; and their faculty of imitating the human voice is superior to that of any other bird. The luxuriant tracts of the torrid zone seem to be the favorite residence of these richly-plumaged tribes: they are not, however, con-

fined to that zone, as Buffon imagined, but are found in latitudes as far as forty or forty-five degrees on each side the equator.

The tongue is fleshy, obtuse, and entire; their feet are formed for climbing, in which they assist themselves with their bill; they feed on the seeds and fruits of various plants, and often attain to a very great age. The only species found native in the U. States is the Carolina or Illinois parrot (Fig. 2176), which is resident from the Gulf of Mexico to the neighborhood of Lake Michigan, and on the east of the Alleghanies to Maryland. Their favorite food is the seeds of the cockle-bur, which grows in great abundance along the shores of the Mississippi and the Ohio, where they are seen in large flocks, screaming round the salt-licks. They are very sociable in their dispositions, extremely fond of each other, and showing the greatest grief for the loss of their companions. The plumage is very beautiful, the general color being a bright-yellowish silky-green, with light-blue reflections.

Pskov, or **Pskoff**, a govt. of European Russia, between Lat. 56° and 58° N., Lon. 27° 15' and 32° E. having N. the govts. of St. Petersburg and Novgorod, E. Novgorod, Tver, and Smolensk, S. Vitebsk, and W. Vitebsk and Livonia; area, 17,318 sq. m. The surface is flat, well watered, but generally unfertile. *Principal towns*. Pskov, the cap., Torspetz, and Velikee-Looki. Pop. 718,907.

Pskov, cap. of the above govt., on the Velikeia, near its mouth, in Lake Pskov, 160 m. S.W. of St. Petersburg. *Manuf.* Woollen, silk, and cotton fabrics, and leather. Pop. 10,200.

Pso'as Muscles, *n.* [Gr. *psoi*, the muscles of the loins.] (*Anat.*) Two muscles upon the fore part and sides of the lumbar vertebrae. They bend the thigh forward, and assist in turning it outward.

Psora, (*so'ra*), *n.* [Lat.; Fr.; Gr., from *psoein*, *psaein*, to rub.] (*Med.*) A contagious eruption of very minute pimples, pustular, vesicular, papular, intermixed, and alternating, itching intolerably, and terminating in scabs.

Psora'lea, *n.* (*Bot.*) A genus of plants, order *Fabaceæ*, consisting of small shrubby or perennial herbs, usually having pinnate leaves, and spicate or racemose flowers. *P. esculenta*, a native of our Western States, produces tuberous roots, known as Bread-root, Indian or Prairie turnips, which are eaten by the Indians, but when boiled are rather insipid.

Psoriasis, (*so-ri'a-sis*), *n.* [Gr., from *psora*.] (*Med.*) A cutaneous affection, consisting of patches, or rough, amorphous scales, either continuous or of indeterminate outline.

Psychal, **Psychical**, (*si'kal*, *si'ke-kal*), *a.* [Gr. *psychikos*, *psyche*, the mind, the soul.] Psychological.

Psyche, (*si'ke*). [Gr., breath or soul.] (*Myth.*) In the later Greek writings the word *psyche* occurs as a personification of the human soul, and it is manifestly of this personification that Apuleius relates the following allegory: By her surpassing beauty *P.*, the daughter of a king, excited the anger and jealousy of Venus, who sent Amor (Love) to inspire her with a passion for the most contemptible of mortals. But *P.* so charmed Amor that he fell in love with her himself, and taking her to some secret cave, visited her nightly, leaving her always before the dawn. *P.* had been warned by Amor against all attempts to find out who he was; but her jealous sisters told her that her lover was a hideous monster, and *P.* determined to learn the truth. Taking a lamp, she gazed at her lover while he slept, and saw before her the most beautiful of the gods. Amor, waked up by a drop of oil which fell from the lamp, rebuked her for her mistrust, and vanished. Then began the sorrows and wanderings of *P.*, who sought Amor in every temple till she came to that of Venus, who put her to a series of toilsome and degrading tasks, under which she must have died but for the love of Amor, who, though invisible, still consoled and cheered her. By his help she at last pacified the wrath of Venus, and, becoming immortal, was united with her lover forever.

Psychiater, (*si-ki'a-ter*), *n.* (*Med.*) One who treats diseases of the mind.

Psychiatri'a, **Psychi'atry**, *n.* [Gr. *psyche*, the mind, and *iatreia*, to heal.] (*Med.*) Treatment of diseases of the mind.

Psychism, (*si'kizm*), *n.* [Fr. *psychisme*, from Gr. *psyche*, the soul, the mind.] (*Philos.*) The doctrine of Quænes, that there is a fluid diffused throughout all nature, animating equally all living and organized beings, and that the difference in their actions is owing to their particular organization.

Psycholog'ic, **Psycholog'ical**, *a.* Pertaining to psychology, or to a treatise on the soul, or to the science of man's spiritual nature.

Psycholog'ically, *adv.* In a psychological manner.

Psychologist, *n.* One who is conversant with psychology.

Psychology, (*si-kol'o-je*), *n.* [Gr. *psyche*, the soul, and *logos*, discourse.] The science of the soul or spiritual principle in man. It deals with the laws and relations of the various changes and phenomena which

take place in the mind during the intellectual operations, and traces the causes of these phenomena, in order to discover the nature of mind, and its relations to the universe; or, in short, to treat the mind either as it manifests itself, or as it is in itself. Investigations of the latter class, which have for their object that which cannot be discovered by observation, constitutes rational or transcendental *P.*, while those of the former class, in which the various manifestations of the soul are subjects of observation, constitute empirical or experimental *P.* Empirical *P.* may, therefore, be defined to be the scientifically conducted observation of the operations and changes of the human soul. As a science, it includes all the phenomena of the intellectual activity, taking for granted the distinction of the spiritual part of man from the body as a matter of consciousness, and, therefore, not attempting to explain it.

Psychomachy, (*si-kom'a-ky*), *n.* [From Gr. *psyche*, the soul, and *mache*, fight.] A conflict of the soul with the body.

Psychopannichism, (*si-ko-pan'n-kizm*), *n.* [Gr. *psyche*, the soul, *pas*, *pan*, all, and *nux*, night.] (*Theol.*) The doctrine of the sleep of the soul from the moment of death till the resurrection of the body.

Psychrometry, *n.* [Gr. *psychros*, cold, and *metron*, measure.] Same as *HYGROMETRY*, *q. v.*

Psychrophobia, *a.* [Gr. *psychros*, and *phobos*, fear.] (*Med.*) Dread of cold, especially of cold water.

Psychtic, (*sik'tik*), *n.* [From Gr. *psychtikos*, cooling.] (*Med.*) A refrigerant or cooling medicine.

Ptarmic, (*tar'mik*), *n.* [Gr. *ptarmikos*, *ptairein*, to sneeze.] (*Med.*) A remedy which excites sneezing.

Ptarmigan, (*tar'mi-gan*), *n.* [Gael. *tarmachan*.] (*Zoöl.*) The White Grouse, a bird of the genus *Lagopus*. It is about 15 inches long;

the bill is black; orbits bright-red; the upper parts of the body pale-brown or ash, mottled with small, dusky spots and bars; the head and neck with broad bars of black, rust-color, and white; the under parts are white, as are also the wings, excepting the shafts of the quills, which are black. In winter this plumage is changed to a pure white, except that in the male there is a black line between the bill and the eye. This bird is found in lofty situations in most of the northern parts of Europe. It is rare in the U. States.

Fig. 2177. — PTARMIGAN, (*Lagopus mutus*.)

Ptelia, *n.* (*Bot.*) A genus of plants, order *Zanthoxylaceæ*. The Shubby Trefoil, *P. trifoliata*, is an ornamental shrub, 6-8 feet high, leaves 3-foliate, cymes apocorymbous, flowers white, odorous. It is common in the Western, but rare in the Eastern States.

Pterilegistic, *a.* [Gr. *pteron*, a wing, and *plassein*, to strike.] Belonging to fowling, or shooting birds.

Pteris, *n.* [Gr. *pteron*, a wing, from the resemblance of its leaves.] (*Bot.*) The Brakes, a genus of Ferns. *P. aquilina* is the common branched fern of our woods and heaths. The fronds are tripartite, annual, 1-5 feet high, very much divided, with spreading branches. The capsules (*sori*) are attached to the marginal vein, lying upon a fine membrane, and covered by the membranous continuation of the epidermis.

Pterocarpus, *n.* [Gr. *pteron*, and *karpos*, fruit.] (*Bot.*) A genus of plants, order *Fabaceæ*, sub-order *Papilionaceæ*. The species *P. draco* is one of the plants that yield the dragon's blood of commerce. This is a red resin, much used for coloring varnishes and for staining marble. *P. dalbergioides* is said to furnish the valuable dye-stuff called *Andaman red-wood*. *P. santalinus* yields the *Red Sandal*, or *Sander's wood*, which contains a peculiar coloring matter called *santalin*, and is used in medicine as a coloring agent, and by the dyer for red and scarlet dyes. The bark of *P. flavus* is used in China to produce a yellow dye. *P. marsupium* is the source of the official *kino* of our pharmacopœias, which is known under the names of *Gum kino*, *East Indian*, *Amboyna*, and *Malabar kino*. It is one of the most powerful vegetable astringents known. *P. erinaccus*, a native of West Africa, yields a similar astringent substance called *African kino*.

Pterodactyl, *n.* [Gr. *pteron*, a feather, and *dactylos*, a digit.] (*Pal.*) A genus of extinct reptiles, in which the second digit of the hand is of extreme length, and is considered to have supported an aliform expansion of the skin. It is peculiar to the secondary strata.

Pteromys, *n.* (*Zoöl.*) The Flying Squirrels, a genus of Rodentia, family *Scuridae*. They are characterized by a densely furred membrane extending laterally from the sides between the fore and hind feet, by means of which the animal is enabled to glide from one tree to another, supported as by a parachute. There are long, bony appendages to the feet, which support a part of this lateral membrane. Four North American species have been described. The common Flying Squirrel, *P. volucella*, of the U. S. east of the Missouri, is about 5 inches long to the tail, the fur very soft and silky, the color light yellowish-brown above, and creamy-white beneath.

Pteropoda, **Pteropods**, *n. pl.* [Gr. *pteron*, and *pous*, a foot.] (*Zoöl.*) An order of Molluscs, comprehending those which have a natatory, wing-shaped expansion on each side of the head and neck. — See *CLIOPELIDÆ*, *HYALIDÆ*, *LIMACINIDÆ*.

Pteropodous, *a.* Pertaining to, or resembling, pteropods.

Pterygoid, *a.* [Gr. *pteryx*, *pterigos*, a wing, and *eidos*, a shape.] Wing-shaped.

Ptisan, (*tiz'an*), *n.* [Gr. *ptisane*, peeled barley, from *ptisain* to peel.] (*Med.*) Tisane; an aqueous medicine containing but little, if any, medicinal agent; formerly, a decoction of barley.

Ptolemaic System, *n.* (*Astron.*) See *PTOLEMY*.

Ptolemais, (*anc. Geog.*) See *ACRE*.

Ptolemy I., (*töl-e'my*), (*PTOLEMÆUS*), surnamed *SOTER*, founder of the Græco-Egyptian dynasty of the Lagides, was a Macedonian, supposed to be a natural son of Philip II., and became a favorite general of Alexander the Great, whom he accompanied on his expedition to Asia. On the death of his master, in B. C. 323, *P.* obtained Egypt for his province. For twenty years he was almost constantly engaged in war. He defeated his rival Perdicas, acquired Phœnicia and Cœlo-Syria; joined the league against Antigonus; was defeated by Demetrius in 306, and lost the Island of Cyprus, and soon after took the title of king. He saved Rhodes when besieged by Demetrius, and received the title of *Soter* (saviour); and after the fall of Antigonus he applied himself to the promotion of commerce, literature, science, and the arts in his own dominions. Philosophers, poets, and painters gathered to his court, and the foundations were laid of the famous Alexandrian Library and Museum. In 285, *P.* resigned his crown to his son, surnamed *Philadelphus*, and D. 283.

PTOLEMY II., surnamed *Philadelphus* (lover of his brother), B. in Cos, B. C. 311, was the youngest son of the preceding by his favorite wife, Berenice. He became king on the abdication of his father in 285, and had a long, and for the most part peaceful, reign. He had been carefully educated, and he entered heartily into his father's plans for promoting the prosperity of his kingdom, completing the Alexandrian Library and Museum, patronizing learning and learned men, founding colonies, and increasing his army and his revenue. He made a treaty of alliance with the Romans, and encouraged the resort of Jews to Egypt. According to tradition, it was by his order that the Septuagint version of the Old Testament was made. *P.* was twice married; his second wife being his sister Arsinoë, widow of Lysimachus. D. 247.

PTOLEMY V., surnamed *Epiphanes*, son of Ptolemy Philopator, and great-grandson of Philadelphus, was born B. C. 210, and at five years of age succeeded his father. The aid of the Romans was obtained against the kings of Macedonia and Syria, who threatened to dismember his dominions. The young king was declared of age at 14, and crowned at Memphis; and three years later he married Cleopatra, daughter of Antiochus of Syria. He had an able and upright minister in Aristomenes, but, notwithstanding his great service, had him put to death. Most of the foreign possessions were lost to Egypt during this reign. Ptolemy was poisoned, B. C. 181.

PTOLEMY, surnamed *Philometor*, son of the preceding, succeeded his father B. C. 181, under the regency at first of his mother, Cleopatra, and then of feeble and corrupt ministers, who involved the kingdom in a disastrous war. Egypt was invaded, and the young king taken prisoner by Antiochus Epiphanes; a younger Ptolemy was set up as king, and the two brothers tried to reign jointly, supported by the Romans; but they quarrelled, and Philometor was driven away. He was restored by the Romans, and his brother (Energetes II., or Physcon,) was made king of Cyrene. Philometor was killed in a battle near Antioch, B. C. 146.

PTOLEMY XII., (*Dionysius*), son of Ptolemy Auletes, succeeded to the throne conjointly with his sister Cleopatra, under the protection of Pompey, 52. He became a partizan of Cæsar in the civil wars, and after the battle of Pharsalia caused Pompey to be assassinated, who sought refuge in his states, 48. Aspiring to be sole king, he then took arms against Cæsar, who had decided that Cleopatra should continue to reign with him, and was drowned in the Nile while flying from the field of battle, B. C. 47.

PTOLEMY XIII., younger brother of the preceding, was eleven years of age when Cleopatra was left sole mistress of Egypt by his death. She was compelled to marry him by Cæsar, and he reigned with her till his death, 44 or 43 B. C.

PTOLEMY XIV., (*Cesarion*), an illegitimate son of Cæsar and Cleopatra, and the last of the Lagides, obtained the title of king from the Roman triumvirs, B. C. 42. He was killed by order of Augustus at the age of 18, B. C. 30.

Ptolemy, **CLAUDIUS**, a celebrated astronomer and geographer, who flourished at Alexandria, about A. D. 140-160. He is considered the first astronomer of antiquity. Through him the observations and principal discoveries of the ancients were preserved and handed down. He corrected Hipparchus' catalogue of the fixed stars, and formed tables by which the motions of the sun, moon, and planets might be calculated and regulated. He was the first who collected the scattered and detached observations made by the ancients, and digested them into a system; this he called the *Megale Suntaxis*, or Great Construction, divided into thirteen books. In this work he adopts and exhibits the ancient system of the world, which placed the earth in the centre of the universe; and this has been called from him the *Ptolemaic System*, to distinguish it from those of Copernicus and Tycho Brahe. The *Megale Suntaxis* was translated by the Arabians into their language about 827, and from this translation, which bears the title of *Almagest*, a Latin verse was made by command of the emperor Frederick II., in 1230. Of this principal work of the great astronomer of the ancients, it may in gen-

eral be observed, that the work is founded on the hypothesis of the earth's being at rest in the centre of the universe, and that the heavenly bodies, the stars and planets, all move round it in solid orbs, whose motions are all directed by one, which Ptolemy called the *Primum Mobile*, or first mover, of which he discourses at large. This great work of Ptolemy will always be valuable on account of the observations he gives of the places of the stars and planets in former times, and according to ancient astronomers that were then extant; but principally on account of the large and curious catalogue of the stars, which, being compared with modern catalogues, enables astronomers to deduce the true quantity of their apparent slow progressive motion according to the order of the signs, or of the precession of the equinoxes.

Pto'sis, *n.* [From Gr. *pipto*, to fall.] (*Med.*) A kind of paralysis of the upper eyelid, causing the lid to fall at any moment over the vision, the patient having no power to draw it up again. It may arise either from debility, in which case it may be removed by tonics; or from congestion of the brain, when it is usually accompanied with giddiness, headache, &c., and should be treated by bleeding, purgatives, and low diet; or from organic disease of the brain, in which case remedies are of little use. If it occurs without any apparent cause, and resists medical treatment, it may be removed by a surgical operation, by which the eyelid is brought under the action of the occipito-frontal muscle, which receives its nervous power from another source.

Pty'aline, *n.* (*Chem.*) An organic principle obtained from saliva. It is insoluble in alcohol, said to be analogous to the vegetable substance termed *diastase*, and to convert starch into dentine and glucose.

Ptyalism, (*ti'a-lizm*), *n.* [Gr. *ptyalismos*, from *ptyalizein*, to spit much.] (*Med.*) Salivation; a superabundant secretion of saliva.

Ptyalagogue, **Ptysmagogue**, (*tiz'ma-gog*), *n.* [Gr. *ptisma*, spittle, and *agein*, to drive.] (*Med.*) Sialagogue.

Pu'beral, *a.* Relating to puberty.

Pu'berly, *n.* [Lat. *pubertas*, from *puber*, *pubes*, grown up.] The age of supposed virility in males, and of womanhood in females. The word is derived from the name of a part of the body, and the first appearance of hair on the face. The exact age of puberty differs in different countries, and even in individuals, being earlier in warm climates than it is in cold ones. In the greater part of this country, from 14 to 16 is the general age at which puberty commences in males, and from 12 to 14 in girls. It is a critical period with either sex, and care should be taken that at such an age no vices are contracted which may lay the seeds of after mischief.

Pu'berulent, *a.* (*Bot.*) Covered with fine, short, almost imperceptible down; pulverulent.

Pu'bes, *n.* (*Anat.*) The middle part of the hypogastric region; so called, because it is covered with hair in both sexes, at the period of puberty. — The hair itself. (*Bot.*) A downy substance growing on some plants.

Pubes'cence, *n.* [Fr.] The state of a youth who has arrived at puberty, or the state of puberty. (*Bot.*) Down closely pressed to the surface.

Pubes'cencey, *n.* Pubescence. (*R.*)

Pubes'cent, *a.* [Lat. *pubescens*, from *pubescere*, to reach the age of puberty.] Arriving at puberty. (*Bot. and Zoöl.*) Covered with very fine short hairs.

Pu'bic, *a.* (*Anat.*) That which belongs to, or concerns the pubis.

Pu'bis, *n.* [Lat.] (*Anat.*) The anterior part of the os *innominatum*; so called because it corresponds to the genital organs.

Public, *a.* [Fr.; Lat. *publicus*, contracted from *populicus*, changed to *poplicus*, from *populus*, the people.] Of, or belonging to the people, the community, or to the multitude; pertaining to a nation, state or community; — opposed to *private*. — Common to many; common to a nation, state, city, or to mankind at large; open to all; directed to the interest of a nation, state, or community. — Open for general entertainment; open for general use; as, a *public house*.

— *n.* The general body of mankind, or of a nation, state, or community; the people indefinitely.

In public. Before the people at large.

Publican, *n.* [Lat. *publicanus*, from *publicus*.] (*Rom. Hist.*) The farmers of the public revenue of Rome. They formed two distinct classes; the farmers-general of the revenues, who were regarded as belonging to one of the most honorable grades of citizens; and deputies, or under publicans of an inferior caste, whose reputation was very questionable. Hence, in the New Testament, the *telōvut*, or *publicans*, are almost always placed in juxtaposition with sinners.

— The keeper of an inn or public-house; one licensed to retail beer, spirits, or wine.

Publication, *n.* [Fr.; Lat. *publicatio*.] Act of publishing or offering to public notice; notification to the people at large, either by words, writing, or printing; proclamation; divulgation; promulgation. — Act of offering a book or writing to the public by sale or by gratuitous distribution. — A work printed and published; any pamphlet or book offered for sale, or to public notice.

Public-house, *n.* An ordinary inn or house of public entertainment.

Publicist, *n.* [Fr. *publiciste*.] A writer on the laws and rights of nature and nations.

Publicity, *n.* [Fr. *publicité*.] State of being public or open to the knowledge of a community; notoriety.

Publicly, *adv.* With exposure to public view or notice; without concealment. — In the name of the community.

Public-mind'ed, *a.* Disposed to advance the interests of the public. (R.)

Public-mind'edness, *n.* A disposition to advance the public interests. (R.)

Publicness, *n.* State of belonging to the community. — The state of being generally known, or public; publicity.

Publico'la. See VALERIUS PUBLIUS.

Public-spir'ited, *a.* Having or exercising a disposition to advance the interests of the community; disposed to make private sacrifices for the public good. — Dictated by a regard to public good.

Public-spir'itedly, *adv.* With public spirit.

Public-spir'itedness, *n.* A disposition to advance the public good, or a willingness to make sacrifices of private interest to promote the common weal.

Publish, *v. a.* [Fr. *publier*; Lat. *publico*, from *publicus*.] To make known to mankind, or to people in general, what before was private or unknown; to proclaim; to announce; to divulge. — To make known by posting or by reading in a church; as, to *publish* the banns of marriage. — To put forth or issue to the public, as a book, or an engraving; to print and offer for sale.

Publishable, *a.* That may be published; fit to be published.

Publisher, *n.* One who publishes or makes known what was before private or unknown. — One who publishes books; one who sends a book or writing into the world for common use; one who offers a book, pamphlet, &c., for sale.

Publication, *n.* Act of publishing; publicity. (R.) — An official notice of an intended marriage. (Local U. S.)

Puccin'ia, *n.* (Bot.) A genus of *Fungi*. The only noteworthy species is *P. graminis*, which produces the mildew of wheat. To prevent the growth of this and other parasitic fungi, wheat is often steeped in some poisonous solution before it is sown. A solution of sulphate of copper (blue vitriol) has been specially recommended for this purpose.

Puccoon, *n.* (Bot.) See LITHOSPERMUM.

Puce, *a.* [Fr., from *puce*, a flea.] Of a dark-brown or brownish-purple color.

Pucelage, *n.* [Fr., from *pucelle*, a maid.] A state of virginity.

Pucelle, *n.* [Fr.] A maid; a virgin.

Pucelle, (La.) See JOAN OF ARC.

Puceron, *n.* (Zool.) See APHIS.

Puchapas, *n.* (Bot.) See POGOSTEMON.

Puck, *n.* [Scot. *puck*; Icel. *puki*, a wicked sprite; Ir. *púca*.] (Medieval Myth.) The "merry wanderer of the night," whose character and attributes are depicted in Shakespeare's *Midsummer Night's Dream*. This celebrated fairy is known by a variety of names, as *Robin Goodfellow* and *Priar Rush* in England, and in Germany as *Knecht Ruprecht*; but it is by his designation of *Puck* that he is most generally known in England, Germany, and the more northern nations. He was the chief of the domestic tribe of fairies, or *brownies*, as they are called in Scotland; and innumerable stories are told of his nocturnal exploits, among which drawing the wine and cleaning the kitchen while the family were asleep are the most prominent.

Puck'awa, or **Pacawa Lake**, in Wisconsin, an expansion of Fox river in Green Lake co.

Puck'-ball, *n.* (Bot.) A Puff-ball, *q. v.*

Puck'er, *v. a.* [O. Eng. *poke*, a bag or pocket; Fr. *poche*.] To gather into small folds or wrinkles; to contract into ridges or furrows; to corrugate.

n. A fold or wrinkle; a collection of folds.

Puck'erer, *n.* The person or thing that puckers.

Puck'ery, *a.* Producing puckers. — Inclined to pucker.

Puck'-ist, *n.* A puff-ball; — used as a term of contempt.

Pudd'ening, *n.* (Naut.) A thick wreath or circle of cordage fastened about a mast, between the trusses, to prevent the yards from falling down when the ropes by which they are suspended are shot away.

Pud'der, *n.* A tumult; a bustle. (Low.)

v. n. To make a tumult; to cause a bustle.

v. a. To perplex; to disturb; to confound.

Pudd'ing, *n.* [Ger. and Dan. *pudding*; Fr. *boudin*; W. *poten*, a pudding.] A species of food of a soft or moderately hard consistence, variously made, but usually a compound of flour or meal of maize, with milk and eggs, sometimes enriched with raisins. *P.* of all kinds constitute an important part of the food in this country; but the *plum-pudding* is nowhere so extensively used as in Great Britain. It is the glory of an English dinner-table, and regarded as an essential on all festive occasions.

— Anything resembling a pudding.

(Naut.) Same as PUDDING.

Pudd'ing-headed, *a.* Dull; sluggish; stupid.

Pudd'ing-pie, *n.* A pudding with meat baked in it.

Pudd'ing-stone, *n.* A name sometimes given to a peculiar variety of conglomerate, consisting of pebbles, rounded by the action of water, cemented together with a large quantity of silicious paste. The pebbles within them bear a fanciful resemblance to the raisins in a plum-pudding; but the stones are generally much larger than raisins.

Pudd'ing-time, *n.* The time of dinner; the time at which pudding, formerly the first dish, is set upon the table.

Pud'dle, *n.* [L. Ger. *peudel*; Ir. *boidhlia*.] A muddy splash; a small pool of dirty water. — A mixture of clay and sand worked together until they are impervious to water.

v. a. To make foul or muddy; to pollute with dirt. — To make thick or close with clay, so as to render impervious to water; to convert iron by puddling.

Pud'dle, *v. n.* To make a dirty stir.

Pud'dler, *n.* One who puddles iron.

Pud'dle-rolls, *n. pl.* A pair of large, heavy rollers, with grooved surfaces, for flattening iron into bars.

Pud'dling, *n.* (Metal.) See IRON (MANUF. OF). (Civil Engin.) The process by which wells, ponds, canals, &c., are lined with clay or loam impervious to water.

Pud'dly, *a.* Muddy; dirty; unry.

Pud'dock, *n.* A small inclosure. (Prov. Eng.)

Puden'cy, *n.* [Lat. *prudens*, from *prudere*, to be ashamed.] Modesty; shamefacedness.

Puden'da, *n. pl.* [Lat., from *prudendus*, from *prudere*, to be ashamed.] The genital organs.

Puden'dal, *a.* Relating or appertaining to the pudenda.

Pu'die, **Pu'dical**, *a.* [Lat. *prudicus*, bashful, from *prudere*, to be ashamed.] Relating to the pudenda.

Pudicity, *n.* [Fr. *prudicité*; Lat. *prudicitia*.] Modesty; chastity.

Pud'sey, a township of England, co. of York, from Bradford. *Manuf.* Woolen goods.

Puebla, or **LA PUEBLA**, a S. E. state of Mexico, between Lat. 16° 20' and 20° 15' N., and Lon. 97° and 99° 15' W.; area, 12,042 sq. m. *River*. Nasca River. *Surface*, mostly elevated, the central portion occupying a part of the Anahuac table-land. Popocatepetl, an active volcano and the highest mountain in Mexico, is within this state. *Chief towns*. La Puebla, the capital, Cholula, and Tehuacan. *Pop.* 997,788.

PUEBLA, (LA.) or **LA PUEBLA DE LOS ANGELES**. [Sp., "City of the Angels," from its delightful situation.] A city of Mexico, cap. of the above state, abt. 76 m. E. S. E. of the City of Mexico. It is regularly and handsomely built, and contains many elegant (chiefly religious) edifices. *Manuf.* Soap, glass, earthenware, &c. This town was besieged and taken by the French in 1863, after a long and glorious defence by the Mexicans under General Ortega. *Pop.* 75,000.

Puebla Peaks, in New Mexico, summits of the Sierra Madre, in Santa Aña co.; Lat. 36° 25' N., Lon. 105° 40' W.

Pueblo (*puéb'lo*), in Colorado, a S. E. central co.; area, about 2,400 sq. m. *Rivers*. Arkansas river, and Squirrel creek. *Surface*, somewhat diversified; soil, generally fertile. Iron, steel, and lead are largely mined, smelted, manufactured, and exported. *Cap.* Pueblo. *Pop.* (1897) 41,500.

Pueb'lo, or **PUEBLO NUEVO**, a town of Mexico. See TAMPICO.

Pueb'los Indians. The name of several semi-civilized tribes, residing in the W. part of New Mexico, receiving their name from residing in *pueblos*, or villages. They differ in many characteristics from the nomadic tribes, devoting their attention principally to the cultivation of the soil, and in raising large herds of cattle, horses, sheep, &c. They live in houses built of stone, or sun-dried brick, some of which are several stories in height, and they spin and weave cotton and wool, making blankets and other textile fabrics for domestic use. Their civilization dates back to a period anterior to the arrival of the Spaniards, and they still retain their ancient language, and many of their customs and superstitions, owing to their isolated position and manner of living. The earliest account we have of them is from Alvarado Nuñez (*q. v.*), who visited them on his journey from Florida to the Pacific between 1529 and 1538. He was followed by Marco de Niza in 1539, and by Coronado and Fernando Alarcon in 1540, all of whom speak of their advanced stages of civilization. They have now 20 pueblos, or villages, Zuni is the principal. Total p. 20,000. Recent explorations among their ruined towns, carved by the old cliff-dwellers out of the rocks for miles along the face of the cliffs, have brought to light one at least, which must have been the abode of 100,000 souls.

Pueblo Viejo, (*veed'ho*) [Sp., Old Town.] A seaport-town of Mexico, abt. 6 m. S. E. of Tampico.

Pu'er, *n.* [Lat.] (*Law*.) In its enlarged sense, this word signifies a child of either sex; though in its restrained meaning, it is applied to a boy only — BOUVIER. — A dog's dung, used as an alkaline steep for removing the lime from the pores, and destroying the grease in the skin, in order to fit it for receiving the tannin.

Puerco, (*puer'ko*), in N. Mex., a river rising in Santa Aña co., flowing S. enters Rio Grande 15 m. ab. Socorro.

Pu'erile, *a.* [Fr. *puéril*; Lat. *puerilis*, from *puer*, a boy.] Characterized by puerility; boyish; trifling; childish.

Pu'erilely, *adv.* Triflingly; childishly.

Pu'erileness, **Pu'erility**, *n.* [Fr. *puérilité*; Lat. *puerilitas*.] The manners or actions of a boy; that which is trifling; a thought or expression which is flat, insipid, or childish. — Boyishness; childishness.

Pu'erperal, *a.* [Fr. *puerpérale*; Lat. *puerperalis*, from *puerpera*, from *puer*, a child, and *parere*, to bear.] Relating to parturition and its consequences.

P. Fever. (*Med.*) A fever attended by peritoneal inflammation, which comes on about the third day after delivery. The usual febrile symptoms are attended with great tenderness and tenderness of the abdomen; the milk disappears, and the bowels are usually affected by diarrhoea. It is most common in the autumn, and appears to be contagious. It is an alarming disease, and requires great promptitude and judgment in its treatment. It must be regarded as the result of contamination of the blood by animal poison generated in the system, and not as a local affection. This poison is probably produced by the decomposition of coagula or other material retained in the uterus. Bleeding, modified according to the circumstances of the case, calomel, saline sudorifics, and occasionally opium, to quiet pain and induce rest, are among the remedial means; but it

often happens that great irritability of the stomach and bowels, or even incessant purging and vomiting, are predominant symptoms, and the fever assumes a typhoid character, in which case the system requires support from cordials.

Puerperous, *a.* Parturient; bringing forth, about to bring forth, or having recently brought forth young.

Puer'to Bello, a seaport-town of the United States of Colombia, abt. 40 m. N. N. W. of Panama.

Puer'to Cabello, a seaport-town of Venezuela, abt. 20 m. N. W. of Valencia.

Puer'to del Padre, a harbor on the N. E. coast of Cuba; Lat. 21° 17' N., Lon. 76° 42' W.

Puer'to de Santa Mari'a, a seaport-town of Spain, prov. of Cadiz, at the mouth of the River Guadalete, 6 miles N. E. of Cadiz. *Manuf.* Linen and printed cottons. It is the entrepôt for the Xeres (sherry) wine. *Pop.* 18,000.

Puer'to Naran'jo, a harbor on the N. E. coast of Cuba, abt. 50 m. E. of Puerto del Padre.

Puer'to Principe, PORTO PRINCIPE, or SANTA MARIA DE PUERTO PRINCIPE, a city of Cuba, W. Indies, abt. 36 m. S. S. W. of Las Nuevitas, its port; *pop.* 54,000.

Puer'to Real, (*puer'to ra-al'*), a seaport-town of Spain, prov. of Cadiz, on the Bay of Cadiz, 6 m. E. of the city of Cadiz. *Manuf.* Leather. *Pop.* 4,000.

Puer'to Rico. See PORTO RICO.

Puer'to Viejo, a town of Ecuador, abt. 85 m. N. N. W. of Guayaquil.

Puff, *n.* [Ger. and Dan. *puff*; Du. *pof*.] A sudden and single emission of breath from the mouth; a quick, forcible blast; a whiff. — Anything light and porous, or something swelled and light — a fungous ball filled with dust. — A tumid or exaggerated commendation.

v. n. [Ger. *puffen*; Du. *poffen*.] To drive air from the mouth in a single and quick blast; to swell the cheeks with air. — To blow, as an expression of scorn or contempt. — To breathe with vehemence, as after violent exertion. — To swell with air; to inflate or dilate. — To do or move with hurry, agitation, and a tumid, bustling appearance.

v. a. To drive with a blast of wind or air. — To swell; to inflate, as with pride. — To dilate with air; to blow up. — To drive with a blast in scorn or contempt. — To praise or commend extravagantly, or with exaggeration. — *a.* Puffed up; proud; vain. (R.)

Puff-ball, *n.* A genus of fungi, which, when burst, emits dust-like seeds or spores.

Puff'-bird, *n.* (Zool.) The BARBET, *q. v.*

Puffer, *n.* One who puffs; one who praises with noisy commendation. — One who attends a sale by auction for the purpose of raising the price and exciting the eagerness of bidders.

(Zool.) The Balloon-fish. See DIPODON.

Puffery, *n.* Act of puffing; extravagant praise.

Puffin, *n.* [Fr.] (Zool.) The common name of the bird comprising the genus *Mormon*, of the Auk family. Four species or more belong to N. America. The Arctic Puffin, *M. arctica*, has a very large, singular looking bill, which has the appearance of a sheath slipped over both mandibles; it is curved towards the point, compressed vertically, and transversely furrowed on the sides; the chin and cheeks are white, bordered with gray, the latter much puffed up with feathers, which make the head look large and round. The crown of the head and upper part of the plumage are black, and a collar of the same color encircles the neck; the under parts are white, and the legs are orange. The Puffin can fly with great rapidity when once upon the wing. In tempestuous weather it takes shelter in the holes of caverns and rocks, or in those made by the rabbit on the beach, where it sits dozing, in snug security, till the return of calm weather; for they are unable to brave the storm. They live chiefly upon small crustaceans, sea-weed, &c., as it is said; but it is evident, from the structure and great strength of their bill, that they are able to crush and pluck out other kinds of shell-fish. The female deposits her single whitish-colored egg in a hole dug out and formed in the ground by her mate and herself. The *P.* are gregarious and migratory.

Puffiness, *n.* State or quality of being puffy or turgid.

Puffingly, *adv.* Tumidly; with swell; with vehement breathing or shortness of breath.

Puffy, *a.* Swelled with air or any soft matter; tumid with a soft substance. — Turgid; bombastic.

Pug, *n.* (Contracted from *puck*.) A monkey, from his amusingly mischievous tricks. (Colloq.) — A little dog, with a face and nose like a monkey.

Puget, PIERRE, a celebrated French sculptor, painter, and architect, was b. in 1622, at Marseilles; resided for a considerable time at Genoa, but was recalled to France by Colbert; and d. there, in 1694. Many of his finest productions are at Genoa, but his colossal statue of Milo, and his Andromeda, are at Versailles.

Puget Sound, in Washington, an irregularly shaped inlet extending from the Strait of Juan de Fuca, with which it is connected by Admiralty Inlet, far into the interior. It is everywhere navigable for the largest vessels, which can lie close to the shores without need of docks.

Pug'ging, *n.* [Prov. Ger. *puken*, *pocker*, *peiken*, to

Fig. 2178. — ARCTIC PUFFIN.

steal.] (*Arch.*) The coat of lime and hair, or chopped straw, laid upon the sound boarding, in order to resist the transmission of sound between one story and another.

Pugh, (*po,*) *interj.* A word used in contempt or disdain.

Pugh'town, in *Pennsylvania*, a post-village of Chester co., abt. 68 m. E.S.E. of Harrisburg.

Pu'gil, *n.* [*Lat. pugillus, pugillum*, a handful; *dim. of pugnus*, a fist.] What is taken between the thumb and first two fingers.

Pugilism, (*pū'gil-ism,*) *n.* [*Lat. pugil*, a pugilist, from *pugnus*, the fist.] The practice of boxing or fighting with the fists. In the schools and by amateurs, it is practised with the gloves; in the prize-ring with the naked fists. Man being instinctively a pugnacious animal, and the fist being the simplest and most natural weapon, it may be taken for granted that pugilism, as a mode of settling differences, is coeval with man himself. It formed one of the earliest of the athletic games of the Greeks; and we find the Greek poets describing their heroes and gods as excelling in the *pugne*. Boxing for men was introduced in the Olympic games in the 23d Olympiad, and for boys in the 37th Olympiad. With the exception of a girdle about the loins, the ancient pugilists fought nude, precisely after the manner of the annexed illustration, copied from the antique, and showing the fashion in which they "settled their differences." There was one feature, however, which bore no analogy to the pugilism of modern days; this consisted in the use of *cæstus*, a weapon formed of thongs or bands of raw ox-hide tied round the hands, and frequently as high as the elbows, of the boxers. Even in its simplest and most primitive forms, it was a fearful weapon enough; but when "improvements" crept in, in the shape of knobs of lead or iron, and, still later, when it assumed the form of a disc of bronze, it came to be a murderous piece of mechanism, fraught with despair and death to the less skilful fighter. Both forms of the *cæstus* are shown in Fig. 2180. The original of the *cæstus* was found at Herculæum. As the head was exposed to great danger through the use of the *cæstus*, *amphotides*, or armor for the head, by which the temporal bones, arteries, and ears were protected, were invented; altogether, they were not unlike helmets. Properly speaking, the ancient boxing appears to have had three distinct æras. In the first, practised during the heroic age, the head and hands were both naked; in the second, the hands were armed with bands of leather, while the head was left uncovered; in the third æra, the head was clothed with the *amphotide*, while the hands battled with the most deadly form of the *cæstus*. During the first and second periods, — the *amphotides* being apparently never used in the great public games of the Greeks, — the boxers stood before each other unflinchingly — he who possessed the greater skill standing on the defensive, and seeking to wear out his adversary; and the boxer who purchased victory without any wounds was held to be the better pugilist and the conqueror. Both ancient Greeks and Romans used the right arm chiefly in attacking, the left being reserved as a protection for the head and upper portions of the body. Owing to the employments of the bronze *cæstus* during the third æra of ancient boxing, blows were dealt with such force as to dash out teeth, break bones, and often to cause death. It was the weapon rather than the skill of the combatants that did this; anyhow, the disfigurements the ancient boxers underwent were such that frequently they were damaged beyond recognition by their friends, a fact which excited some rather grim raillery at the expense of the boxers on the part of the poets Lucian and Lucilius. But it is more than doubtful whether any ancient athlete could, with all his pugilistic paraphernalia, deliver so telling a blow as can a modern professor of the art with his naked hand, — clean, quick, effective, from the shoulder. Like all the other athletic games of the Greeks, boxing was regulated by certain rules; the principal of these was that the pugilist was bound to fight until wounds, fatigue, or despair compelled him to desist. Although the natives of the British Islands are said to be inherently prone to batter each other's per-

Fig. 2179. — ANCIENT MODE OF BOXING.

son with the fist, as a mode of settling their private quarrels, still it was not until a century ago that pugilism came to be in a manner appropriated by the English. During the reigns of Elizabeth and James, and perhaps during the Restoration, we hear nothing of boxing, either as a national sport or as a national mode of defence. "Clubs," the rallying-word of the "flat-caps," or apprentices, were the weapons of the English artisan, mechanic, or peasant; the sword, of those whose rank entitled them to wear that distinctive feature of dress. Pugilism was, however, finally established in that country during the reign of the first monarchs of the house of Brunswick. Henceforth we find it the usual mode of deciding all disputes with the middle and lower classes, while noblemen and gentlemen practised it as the best system of gymnastics, as the best means of attack and defence, and as the best mode of making the body pliant, flexible, and firm. In America, as in England, the art has been brought down to the present day, through a succession of pugilistic champions, although now it is no longer universally admired and patronized as it was in the beginning of this century. Society now sets its face against the active and practical part of boxing, and occasionally magistrates imprison the pugilists and their "seconds" for a breach of the public peace. Boxing is brutal and debasing in the eyes of a majority of the modern community. Nevertheless, those who are the defenders of pugilism, and they are still numerous, allege that the prize-ring is guided by certain rules, to transgress which is regarded as infamous — as to strike below the waist, to strike a man when he is down, to bite, kick, or inflict any injury except with the shut hand; that it encourages individual, and consequently national, courage; that it conduces to a general sense and sentiment of fair play and honor; that it discourages and renders odious the use of the knife, stiletto, or of deadly weapons, setting aside those unmanly, barbarous, and savage practices which passion and motives of revenge might otherwise suggest; and lastly, that as it is not in the nature of man to submit tamely to injury, and as quarrels must arise between man and man which cannot be decided by law, the best way is to fight it out fairly, and then shake hands and become better friends than ever. Such are the views and arguments of those who advocate the use of the human hand as a weapon of defence or attack. In one thing we may all safely agree with the pugilist, — we may all learn from him with advantage the use of our hands, clothed after the manner termed "gloved." Boxing, as practised under a scientific teacher, and with the gloves on, ranks second to no other as a gymnastic exercise. It invigorates the frame by expanding the chest, and gives confidence and a quick eye to those who are of natural courage.

Pu'gilist, *n.* A boxer; one who fights with the fist.

Pu'gilis'ti, *a.* Pertaining to boxing, or fighting with the fist.

Pugin, AUGUSTUS WELBY NORTHMORE, an English architect, b. 1811, whose works on the Gothic architecture of the Middle Ages have had a powerful influence in promoting the last revival in the taste for Gothic form. D. 1852.

Pug'lia. (*Anc. Geog.*) See APULIA.

Pug'mill, *n.* A mill used by brickmakers for the purpose of thoroughly blending the materials. It is an upright cylinder, in the axis of which a shaft revolves having several knives projecting from it, arranged spirally round the arbor, so as effectually to knead and mix the mass of clay, which is finally forced through a hole in the bottom of the cylinder.

Pugnacious, (*-na'sh-us,*) *a.* [*Lat. pugnax, pugnacis*, from *pugnare*, to fight.] Disposed to fight; inclined to fighting; quarrelsome.

Pugna'ciously, *adv.* In a pugnacious manner.

Pugna'city, *n.* [*Lat. pugnacitas*; *Fr. pugnacité.*] Inclination to fighting; quarrelsomeness.

Pug'nose, *n.* A short and thick nose; a snub-nose.

Puh, *interj.* Same as PUGH, *q. v.*

Puisse, Puisny, (*pu'ny,*) *a.* [*Fr. puis*, since; *Lat. post*, and *Fr. né*, born.] (Law.) Small petty; inconsiderable; puny.

Puisse, *n.* One of an inferior rank. — An inferior judge.

Puisseance, *n.* [*Fr.* from *pouvoir*; *Lat. possum, posse*, to be able.] Power; strength; might; force.

Pu'issant, *a.* [*Fr.*] Powerful; strong; mighty; forcible.

Pu'issantly, *adv.* In a puissant manner; powerfully; with great strength.

Pu'issantness, *n.* The state or quality of being puissant.

Puke, *v. n.* [*Allied to Scot. bok, bock.*] To vomit; to eject from the stomach.

— *v. a.* To vomit; to throw up.

— *n.* A vomit; a medicine which excites vomiting.

— *a.* [*Lat. picinus*, from *pix, picis*, pitch.] Of a color between black and russet, now called puce.

Puk'er, *n.* One who vomits or pukes. — Medicine causing a vomit.

Pulas'ki, CASIMIR, [*Pol. Kazimierz Pulawski,*] COUNT, a Polish patriot, and brigadier-general, who participated in the war of the American Revolution, b. in 1747. His father, a Polish nobleman, was the organizer of the celebrated Confederation of Bar, in hostility to Russia, and for the liberation of his country, in which Casimir eagerly joined, carrying on a desultory warfare with varied success, until the coalition of Russia, Austria, and Prussia completed the conquest of Poland. His father and brothers being killed, Casimir escaped with difficulty into Turkey, whence he proceeded by way of France to join the Americans, then fighting for independence, bearing recommendations from Franklin to Washington, whom he joined in 1777. Entering as a

volunteer, he so distinguished himself at the battle of Brandywine as to be promoted by Congress to a cavalry command, with the rank of brigadier-general, which command, however, he resigned 5 months after, in 1778. He afterwards organized an independent corps of cavalry and light infantry, with which he rendered effectual service under General Lincoln, in South Carolina, in 1779, and in the siege of Savannah, Ga., where, in an assault upon the latter place, he was mortally wounded. D. in 1779.

Pulas'ki, in *Arkansas*, a central co.; area, abt. 1,200 sq. m. *Rivers.* Arkansas River, Big Mammelle Creek, Fourche Bayou, and Meto Bayou. *Surface,* pleasantly diversified; *soil,* fertile. *Min.* Silver, lead, granite, and slate. *Cap.* Little Rock (also the seat of State government).

Pulaski, in *Georgia*, a S. central co.; area, about 540 sq. m. *Rivers.* Ocmulgee river, and Cedar, Cypress, and Reedy creeks. *Surface,* level or undulating; *soil,* not very fertile. *Products.* Corn and cotton. *Cap.* Hawkinsville. *Pop.* (1897) 17,420.

Pulaski, in *Illinois*, a S. co., adjoining Kentucky; area, about 190 sq. m. *Rivers.* Ohio and Cache rivers. *Surface,* generally level; *soil,* in some parts very fertile. *Cap.* Mound City. *Pop.* (1897) 12,150.

— A village of Hancock co., located about 85 m. N.W. of Springfield.

Pulaski, in *Indiana*, a N.W. co.; area, about 430 sq. m. *River.* Tippecanoe river. *Surface,* generally level; *soil,* fertile. *Cap.* Winamac. *Pop.* (1897) 12,890.

Pulaski, in *Iowa*, a post-village of Davis co., abt. 8 m. S. E. of Bloomfield.

Pulaski, in *Kentucky*, a S. E. co.; area, abt. 650 sq. m. *Rivers.* Cumberland and Rock Castle rivers. *Surface,* hilly or mountainous; *soil,* fertile. *Min.* Iron, lead, and coal, all of superior qualities, and in great abundance. *Cap.* Somerset.

Pulaski, in *Michigan*, a post-township of Jackson county.

Pulaski, in *Missouri*, a S. central co.; area, abt. 500 sq. m. *Rivers.* Gasconade River, Robidoux Fork, Big Piney Fork, and Little Piney Creek. *Surface,* hilly; *soil,* generally fertile. *Cap.* Waynesville.

Pulaski, in *New York*, a post-village of Oswego co., abt. 150 m. W. N. W. of Albany.

Pulaski, in *Ohio*, a post-township of Williams co.

Pulaski, in *Pennsylvania*, a post-village and township of Lawrence county, abt. 10 miles northwest of New-castle.

Pulaski, in *Tennessee*, a post-town, cap. of Giles co., about 75 m. S. of Nashville.

Pulaski, in *Virginia*, a S. W. co.; area, abt. 250 sq. m. *Rivers.* Kanawha, or New, and Little rivers. *Surface,* much diversified, being bounded N.W. and S. E. by ridges of the Alleghenies and Blue Ridge respectively; *soil,* generally fertile. *Min.* Iron in abundance. *Cap.* New-bern.

Pulaski, in *Wisconsin*, a village and township of Iowa co., abt. 28 m. N.N.W. of Mineral Point.

Pulaski Creek, in *Georgia*, enters the Ocmulgee River from Pulaski co.

Pulcheria, (*St.*) *ÆLIA*, (*pul-kee'-ri-a*), empress of Constantinople, was daughter of Arcadius and Eudoxia. She was born at Constantinople, 399, and governed the empire under the name of her brother, Theodosius, from the age of fifteen to the year 447, when she was disgraced. After the death of Theodosius, in 450, she was proclaimed empress, and ruled with Marcianus, whom she married, till her death, in 453. She was a woman of exemplary conduct, and has the credit of assembling the Council of Chalcedon in 451.

Pul'chritude, *n.* [*Lat. pulchritudo*, from *pulcher*, beautiful.] Beauty; grace; handsomeness; quality opposite to deformity. — Moral beauty or worth.

Pule, *v. n.* [*Fr. piauler*; *Lat. pipilo*, to chirp, from *pipio, pipio*, to pip.] To cry like a chicken; to chirp. — To cry as a complaining child; to whimper.

Pul'er, *n.* One who pules; one who complains.

Pu'lex, *n.* [*Lat.*] (*Zoöl.*) See APHANIPTERA, and FLÆA.

Pu'licene, *a.* [*From Lat. puler, pulicis*, a flea.] Relating to, or abounding with fleas.

Pu'ling, *n.* A cry, as of a chicken; a whining.

Pu'lingly, *adv.* With whining or complaint.

Pulk'ha, *n.* A Laplander's travelling-sledge, made somewhat in the form of a boat. As it is very liable to upset, the traveller is strapped to it.

Pull, *v. a.* [*A. S. pullian, apullian*, to pull.] To draw violently toward one; — opposed to *push*, which is to drive from one.

— To tear; to rend. — To pluck; to gather.

Pulled and hauled, drawn here and there. — *To pull down*, to subvert; to demolish; to degrade; to bring down; as, *to pull down* the proud. — *To pull up*, to extirpate; to eradicate; as, "*pulling up* the old foundations of knowledge." (*Locke.*) — *To pull off*, to remove; to separate by pulling; as, *to pull off* a coat. — *To pull out*, to draw out.

— *v. n.* To give a pull; to draw; to tug.

To pull apart, to separate by pulling. — *To pull up*. To stop; to halt.

— *n.* Act of pulling or drawing with force; an effort to move by drawing toward one. — A contest; a struggle.

Pull'back, *n.* One who, or that which, keeps back; a drawback.

Pull'er, *n.* One who pulls.

Pu'let, *n.* [*Fr. poulet*, diminutive of *poule*, a hen, from *Lat. pullus*.] A young hen, or female of the domestic fowl.

Pu'ley, *n.*; *pl.* PULLEYS. [*Fr. poulie*; *Lat. polus*; *Gr. polos*, a pivot, a hinge, from *polo*, to turn, to go about.] (*Mech.*) One of the six mechanical powers. The pulley

is a small wheel turning on an axis, with a rope or chain passing over it. The circumference is generally grooved to receive the rope, which is attached on the one end to the moving power, and on the other to the resisting force. Pulleys are of two kinds—fixed, and movable. The fixed pulley (Fig. 2181), gives no mechanical advantage, but is of great utility in altering the direction in which it may be applied. The movable, on the contrary (Fig. 2182), doubles the power, which may be increased in any ratio by adding to the number of pulleys. So, in the system of pulleys (Fig. 2183), one end of each cord is fastened to a fixed support above; each cord descends, passes round a pulley (to the lowest of which the weight, W, is fastened), and is fastened to the block of the next pulley, with the exception of the last cord, which passes round a fixed pulley above, and is attached to the counterpoise, P. The tension of a string being the same in all its parts, the tension of every part of the string marked 1 is that which is produced by the weight of P, consequently, as the last movable pulley is supported on both sides by a string having a tension P, the tension applied in its support is 2P. The tension of the string marked 2 is therefore 2P, and the second movable pulley is supported by a force equal to 4P. It may similarly be shown that the force applied by the strings marked 4 in support of the last pulley (which is attached to W), is 8P. Hence we see, that according to this arrangement, 1 lb. can support 4 lbs., if two movable pulleys are used; 8 lbs., if there are 3 movable pulleys; 16 lbs., if there are 4 movable pulleys; and if there are n movable pulleys, 1 lb. can support 2^n lbs. It must be noticed, however, that in practice, the weight of the chords, and of the pulleys, and the friction of the chord on the pulleys, must be allowed for; and the fact, that in this system all of these resist the action of the power P, and that to a large extent, has rendered it of little use in practice. The system of pulleys, of which two prevalent forms are represented in Figs. 2184, 2185, is much inferior in producing a mechanical advantage, but it is found to be much more convenient in practice, and is modified according to the purpose for which it is to be used. In this system, one string passes round all the pulleys, and as the tension in every part of it is that produced by the weight of P, the whole force applied to elevate the lower block, with its attached weight, W, is the weight P multiplied by the number of strings attached to the lower block; in Fig. 2184 $W = 4P$, and in Fig. 2185 $W = 6P$, the pulleys in the upper block being only of use in changing the direction of the pulling force. This system is the one in common use in architecture, in dockyards, and on board of ship, and various modifications of it—such as White's pulley, Smeaton's pulley, &c., have been introduced; but the simpler forms shown above have been found to answer best.

Pulley, *v. a.* To raise with a pulley.

Pul'leat, **Pul'licate**, *n.* A kind of silk handkerchief.

Pul'lulate, *v. n.* [Lat. *pullulare*, from *pullulus*, a young animal; Fr. *pulluler*.] To germinate; to bud. (R.)

Pullulation, *n.* [Fr.] The first shooting of a bud.

Pul'mogrades, *n. pl.* [Lat. *pulmo*, the lung, and *gradi*, to walk.] (Zool.) A tribe of Acalephs, including those gelatinous species which swim by the contracting of the vascular margin of the disc-shaped body, when respiration also probably takes place.

Pulmonaria, *n.* (Bot.) A genus of plants, order *Boraginaceæ*. They are perennial herbs, remarkable for the spotted leaves of some of the species, from which cause, and some reputed but wholly imaginary value in lung diseases, it was called Lungwort. It is also called Jerusalem Cowslip. The *Pulmonaria* are generally natives of Europe; but some species, as *Pulmonaria angustifolia* (Fig. 391), are cultivated in our gardens.

Pul'monary, *a.* [Fr. *pulmonaire*; Lat. *pulmonarius*, from *pulmo*, *pulmonis*, a lung.] Pertaining to the lungs; affecting the lungs.

Fig. 2181.

Fig. 2182.

Fig. 2183.

Fig. 2184.

Fig. 2185.

Pul'monary, *n.* (Bot.) The English name of the genus *PULMONARIA*, *q. v.*

Pul'monates, **Pulmonibranchiata**, **Pul'moufera**, *n.* (Zool.) A group of gastropodous Molluscs, including those which breathe air, to which the blood is exposed while circulating through a vascular network lining the internal surface of the bronchial cavity.

Pulmon'ic, *a.* [Fr. *pulmonique*.] Pertaining to the lungs; affecting the lungs.

—*n.* A medicine for diseases of the lungs. — One affected by a disease of the lungs.

Pulmoniferous, *a.* (Zool.) Having or producing lungs.

Pulp, *n.* [Fr. *pulpe*; Lat. *pulpa*, solid flesh, pulp of fruit; the pith of wood.] Any soft mass. — The soft substance within a bone; the marrow.

(Bot.) The juicy tissue found in the interior of plants. The term is applied in an especial sense to such tissue in fruits.

Pulp, **Poulpe**, *n.* (Zool.) The common name of the genus *Octopus*, including cephalopodous Molluscs, having eight feet or arms, nearly equal, united at the base by a membrane, and very long in proportion to the body. There is no shell, but it is represented by two small grains of horny substance imbedded in the back, one on each side. The arms are used for swimming in water, creeping on land, and seizing prey. *P.* swim by contractions of the muscular web of the body, which extends upon the arms. They creep on shore in a spider-like manner, with sprawling arms. Like other cephalopods, when alarmed or annoyed, they discharge an inky fluid. One species, *O. vulgaris* (Fig. 1829), common in the Mediterranean, is the *Polypus* of the ancients. Its arms are six times as long as its body, and each furnished with 120 pairs of suckers. In warmer seas, very large species occur; and although the stories related of their laying hold of and swamping boats, seizing and killing swimmers, &c., may probably be fabulous, yet it is certain that some of them have arms at least 30 feet long, and there is reason to believe that still larger ones exist, which are powerful and dangerous creatures. A *P.*, with its eyes fixed on its adversary, and its beak threatening to approach, undoubtedly has a very formidable aspect.

Pulp'iness, *n.* The state of being pulpy.

Pulpit, *n.* [It. and Sp. *pulpito*; Lat. *pulpitum*, a platform of boards.] (Arch.) The raised part in a public building from which an oration is delivered; — especially in churches, an elevated stage or desk from which sermons are delivered (Fig. 2186). In ancient theatres, it was the higher part of the stage, on which the musicians stood.

—*a.* Relating to a pulpit; as, *pulpit eloquence*.

Pulpit'er, *n.* A preacher; — in contempt.

Pul'pit-el-o-quence, **Pul'pit-oratory**, *n.* The eloquence or oratory of preachers.

Pulpit'ical, *a.* Suited to the pulpit. (R.)

Pulpit'ish, *a.* Like the pulpit.

Pulp'ous, *a.* Consisting of pulp, or resembling it; soft, like pap.

Pulp'ous-ness, *n.* The quality of being pulpy.

Pulpy, *a.* Like pulp; soft; fleshy; succulent.

Pulqué, (*pool'ka*), *n.* [Sp.] See AGAVE.

Pul'sate, *v. n.* [Lat. *pulso*, *pulsatus*, from *pello*, *pulsus*, to push, to strike.] To beat or throb.

Pul'satile, *a.* [It.; L. Lat. *pulsatilis*.] That is or may be struck or beaten; played by beating, as a drum.

Pul'sation, *n.* [Lat. *pulsatio*, from *pulso*.] A throb or beat. — The beating or throbbing of the heart, or of an artery in the process of carrying on the circulation of the blood. — A stroke by which some medium is affected, as in sound, &c.

Pul'sative, *a.* [Fr. *pulsatif*.] Beating; throbbing.

Pul'satory, *a.* Beating; throbbing, as the heart.

Pulse, *n.* [Fr. *pouls*; Sp. *poulso*; Lat. *pulsus*, a beating, from *pello*, *pulsus*, to strike.] (Physiol.) The beating of the arteries, produced by the afflux of the blood propelled by the heart in its contractions. The pulse is usually felt by pressing the radial artery at the

Fig. 2186.

PULPIT IN THE CHURCH OF FOTHERINGHAY, England, (16th century.)

wrist; and the rapidity, regularity, and force of the circulation thus ascertained furnish an important criterion of the phenomena and progress of disease. The range of the pulse, as to frequency, in a healthy adult, is usually between 60 and 80; but there are persons whose pulses rarely beat 60 times in a minute, and others, not out of health, in whom the frequency exceeds 80. The pulse, in short, is extremely capricious; and before any correct inference can be drawn from it, the peculiarities of each individual require to be carefully considered. Slight mental afflictions, indigestion, irritability, and many other causes producing modifications of the pulse, do not admit of any general description. The terms *hard*, *full*, *soft*, and *wiry* pulse are used to indicate other obvious modifications independent of the number of pulsations. The average rate of the pulse of a healthy infant is, for the first year, from about 120 to 108; for the second year, from 108 to 90; for the third, from 100 to 80. From the seventh to the twelfth year the pulsations are about 70. When the pulse exceeds 140 beats in a minute, it is not easy to count it precisely; and to this it attains in some febrile diseases.

—The stroke by which a medium is affected, as in the motion of light, sound, &c.; oscillation; vibration.

To feel one's pulse. To try to know one's mind arfully.

—*v. n.* To beat, as the pulse.

—*n.* [Lat. *puls*, *pultis*; Gr. *pollos*, a thick pap of pottage.] Leguminous plants, or their seeds, as beans, peas, &c., which are contained in a case or pod.

Pulse'-glass, *n.* A tube of about a quarter of an inch diameter, and five or six inches long, with a bulb at each end, and about half filled with spirit of wine, care having been taken to expel the whole of the air before sealing the tube. When held in an inclined position, one of the bulbs being grasped in the hand, the ebullition of the included liquid causes the latter to rise and fall in the tube, or to pulsate.

Pulseless, *a.* Having no pulsation.

Pulselessness, *n.* The state or quality of being pulseless.

Pulsific, *a.* [Lat. *pulsus*, pulse, and *facere*, to make.] Causing pulsation, or exciting the pulse.

—*n.* (Med.) Any medical substance or agency which causes or excites pulsation.

Pulsim'eter, *n.* [Lat. *pulsus*, pulse, and *metrum*, measure.] (Med.) An instrument for measuring the quickness or force of the pulse.

Pulsion, (*pul'shun*), *n.* [Lat. *pulsio*, from *pellere*, *pulsus*, to beat, strike.] The act of driving or of forcing forward; — in opposition to suction or traction. (R.)

Pultaceous, (*-ta'shus*), *a.* [From Gr. *pollos*, porridge.] Macerated; softened; pappy.

Pult'ney, in New York, a post-township of Steuben co.

Pultney, in Ohio, a flourishing township of Belmont county.

Pultneyville, in New York, a post-village of Wayne co., abt. 28 m. E.N.E. of Rochester.

Pultusk, or **Pultowsk**, (*pool-toosk'*), a town of Russian Poland, on an island formed by the Narew, 60 m. E.N.E. of Plock; pop. abt. 5,000.

Pu'lu, *n.* A kind of brown thistle-down, imported from the Sandwich Islands, to mix with silk in the manufacture of hats.

Pul'verable, *a.* Capable of being reduced to dust.

Pul'vera'ceous, *a.* (Bot.) Pulverulent.

Pul'verine, *n.* [Fr. *pulvéris*, from Lat. *pulvis*, *pulveris*, dust.] The ashes of barilla.

Pul'verizable, *a.* Capable of being pulverized.

Pul'veriza'tion, *n.* [Fr.] Act of pulverizing, or of reducing to dust or powder.

Pul'verize, *v. a.* [Fr. *pulvériser*, from Lat. *pulvis*, *pulveris*, dust.] To reduce to dust or fine powder, as by beating, grinding, &c.

—*v. n.* To become powder; to fall to dust.

Pul'verous, *a.* [Lat. *pulverus*.] Consisting of dust or powder; like powder.

Pul'verulence, *n.* Dustiness; abundance of dust.

Pul'verulent, *a.* Dusty; consisting of dust or fine powder.

Pulvillio, **Pulvil'lo**, *n.* [Lat. *pulvillus*.] A small bag or cushion stuffed with perfumes.

Pulvilli, *n. pl.* [Lat.] (Zool.) The cushions of short hairs very closely set, or a membrane capable of being inflated, or very soft and concave plates, which cover the underside, or their apex, of the four first joints of the manus or tarsus, and sometimes even of the ends of the movable spines situated at the apex of the tibia, which act so as to produce a vacuum, and enable the insect to suspend itself, or walk against gravity.

Pulvinate, **Pulvinat**, *a.* [Lat. *pulvinatus*, from *pulvinus*, vine.] (Arch.) A frieze whose face is convex instead of plain is said to be *pulvinated*, from its supposed resemblance to the side of a cushion, which swells out when pressed upon.

Pum'ia, *n.* (Zool.) See PANTHER

Pum'iate, *v. a.* To smooth or polish with pumice. (R.)

Pumice, (*pum'is*), *n.* [Lat. *pumex*, *pumicis*; It. *pómice*; Sp. *pomez*.] (Min.) A porous substance found in volcanic districts. It is a light spongy lava, of a whitish-gray color, and consists of silica and alumina, with certain percentages of potash and soda. It is so light that it will float upon water. It is used by painters to smooth the surface of their work; it is also employed, in a powdered state, as a polishing material in different branches of trade.

Pumiceous, (*-mish'us*), *a.* [Lat. *pumiceus*, from *pumex*.] Pertaining to pumice; consisting of pumice or resembling it.

Pum'ice-stone, *n.* Same as PUMICE, *q. v.*

Pum'mace, *n.* Same as POMACE, *q. v.*

Pum'mel, *n.* and *v. a.* Same as POMMEL, *q. v.*

Pump, *n.* [Fr. *pompe*; It. *pompa*; Ger. *pumpe*; Du. *pomp*.] (*Hydraul.*) In the ordinary acceptation of the term, a machine either for raising water or for forcing it through pipes. Occasionally pumps are used for dealing similarly with other aqueous fluids, their construction being slightly modified. Three kinds of pumps are used for raising water, the simplest of which is the suction- or household-pump. The *suction-pump* consists of a hollow cylinder of wood or metal, which contains a piston stuffed so as to move up and down in the cylinder easily, and yet be air-tight. A rod is attached to this piston, which reaches to the top of the cylinder at least, when the piston is at the bottom. There is a valve opening upwards in the piston, and another valve, also opening upwards, at the bottom of the cylinder; this valve covers the opening of a tube fixed in the bottom of the cylinder, and reaching to the well or reservoir from which the water has to be raised. Supposing the piston to be at the bottom, there can be very little air between it and the valves of the cylinder; for as the piston was pushed down, the valve in it would allow the air to escape. On raising the piston again, the pressure of the air causes the valve to remain closed; hence a vacuum is formed within the cylinder when the piston is raised to the top. By this means the pressure on the valve in the cylinder is very much less than that of the atmosphere on the surface of the water in the reservoir; therefore the water will be pressed up the pump to a height not exceeding 32 or 33 feet. On lowering the piston again, the valve in the cylinder is closed, so that the water is prevented from returning; and the same operation being repeated, the water may be raised in any quantity to any height not exceeding 32 or 33 feet, the height of a column of water equal to the pressure of the atmosphere. The *lifting-pump*, like the suction-pump, has a piston and two valves, both opening upwards; but the valve in the cylinder is placed in the body of it, and at the height where the water is intended to be delivered, instead of at the bottom of the cylinder. The bottom of the pump is placed a considerable way into the well, and, supposing the piston to be at the bottom, as the valve opens upwards, there is no obstruction to the water rising in the cylinder to the height which it is in the well, since water always rises to its level. On raising the piston, the valve in it closes, and the water in the cylinder then opens, and the water passes through, and cannot return, as the valve opens outward. By another stroke of the piston the process is repeated, and the water is raised from the well. In the case of the lifting-pump, the height is not limited to 32 or 33 feet. The *forcing-pump* is unlike the two pumps just described. The piston has no valve, but there is a valve opening upwards at the bottom of the cylinder. Immediately above this valve, in the side of the cylinder, there is another valve opening outwards into a tube which is bent upwards to the height at which the water is to be delivered. On raising the piston, the valve in the bottom of the pump opens, and the water is pressed up into the cylinder, on the principle of the suction-pump. On pressing down the piston, the lower valve closes and the upper one opens, and the water is forced up the tube. When the piston is raised again, the upper valve shuts, retaining the water, and the lower valve opens. The same process is repeated, and the water is thrown out at every descent of the piston. In Fig. 2187, we have these two pumps combined. The air is pumped out through the valves *S* and *O*, and the water is forced up into the cylinder through the pipe below, and the valve *S*, just as it was in the lifting-pump; and the water is then forced through the valve *O* and the pipe *D*, as in the force-pump, just described. In both these forms of force-pump, the water is driven out of the pipe *D* only when the piston is going down; but the discharge of water may be made continuous by the adjustment of an *air-vessel* or *air-chamber* fixed to the top of the eduction pipe, as may be seen in Fig. 2188. In this and other varieties of pumps, an *air-vessel* is frequently fixed to the top of the eduction pipe, in order that the discharge of water may be continuous. This *air-vessel* consists of a box, in the bottom of which there is a valve opening upwards. This valve covers the top of the eduction pipe. A tube is fastened to the top of the box, which reaches nearly to the bottom; it rises out of the box, and is furnished with a stop-cock. When the water has been forced into the vessel by the action of the pump till it reaches the end of the tube, all communication is cut off from the external atmosphere, and every additional quantity of water forced into the vessel tends more and more to compress the air within it, which, pressing on the surface of the water, forces it upwards through the tube in a continuous stream. Large *air-vessels* are now employed in blowing-engines. The principle of the suction- and forcing-pump is applied in the case of the hydraulic press, and also of the fire-engine. The fire-engine differs from the models described, in the fact that the barrels dip into the water which is to be raised. Fig. 2188 represents a section of this machine. There are two solid

pistons, *P* and *P'*, the rods of which are worked by a lever not shown in the figure. When the piston *P'* is raised the valve *d'* opens, and water enters the barrel. When it is forced down, the valve *d'* closes, and water is forced through the valve *c'* into the larger air-chamber *A*. One end of the tube *a b* is near the bottom of the air-chamber, while the other fits into the roof, and

Fig. 2188. — FIRE-ENGINE.

on the outside of the roof there is a tube, *b b'*, to which the hose is attached. By means of the pressure which the compressed air in the chamber exerts on the water, a strong jet is forced through the delivery-tube, and can be sent in any direction. Both pistons are so fastened to the lever that when one is forced down the other rises, consequently water is being forced into the air-chamber without cessation. — The *chain-pumps* used in the navy consist of a continuous chain, to which are attached a series of pistons or buckets, for raising the water in a continual stream. Chain-pumps are used when a large quantity of water is to be raised, and must be worked rapidly. Pumps of various other descriptions are now in use, both in the navy and the merchant service. Besides the pumps mentioned, there are several other descriptions of machines used for raising water; such as *Archimedean screws*, *scoops*, *bucket-wheels*, *Persian-wheels*, *flush-wheels*, *rotary pumps*, &c. Rotary or centrifugal pumps are those in which a rectilinear vertical motion is given to the water to be raised, by means of a wheel rotating with great velocity in a close drum, and receiving its supply through the apertures in the side of the drum close to the axis. — See ARCHIMEDES' SCREW, AIR PUMP, &c.

— *A shoe with a thin sole and low heel; a dancing-slipper.*

— *v. a.* To raise with a pump, as water. — To draw out by artful interrogatories. — To examine by artful questions, for the purpose of drawing out secrets.

— *v. n.* To work a pump; to raise water with a pump.

Pump-brake, *n.* The handle of a pump.

Pump-dale, *n.* (*Naut.*) A tube, or trough, for carrying off water.

Pumper, *n.* The person or the instrument that pumps.

Pumpet-ball, *n.* (*Printing.*) A printer's ball for distributing ink on types; a pompet.

Pump-hood, *n.* (*Naut.*) A short, semi-cylindrical frame of wood, for covering the upper wheel of a chain-pump.

Pump'kin, **Pump'ion**, *n.* (*Bot.*) See CUCURBITA. **Pu'na**, or **Pu'no**, an island of Ecuador, in the Pacific Ocean, abt. 40 m. S.W. of Guayaquil; area, abt. 300 sq. m. The village of Puna, on the north shore, has a good harbor.

Pump'spear, *n.* The bar to which the upper box of a pump is fastened, and which is attached to the pumping handle.

Pump-stock, *n.* The body of a pump.

Pun, *n.* A play on words that agree or resemble in sound, but differ in meaning; an expression in which two different applications of a word present an odd or ludicrous idea; a kind of quibble or equivocation, that will be best understood by the two following examples: A Massachusetts lady complaining to a friend that her husband (whose business had taken him to the far West), constantly sent her letters filled with expressions of endearment, but no money, was told, by way of comfort, that he was giving her a proof of his *unremitting* affection. — Two persons looking at a heggar-boy with an extraordinary large head — "What a tower!" cried the first. "Say, rather," replied the second, "what a *fort o' lice* (fortalice)." — *v. n.* To play on words; to quibble; to use the same word at once in different senses.

— *v. a.* To persuade by a pun.

Punch, *n.* [Fr.; It. *punzione*; Sp. *punzon*; Fr. *poinçon*.] A pointed instrument of iron and steel used for piercing or perforating holes in plates of metal or other substances, and so contrived as to stamp out a piece. — A horse that is well set and well knit, having a short back and thin shoulders, with a broad neck, and well lined with flesh; as, a Suffolk *punch*. — A short, fat fellow; — used in contempt or ridicule. — A blow or thrust. (Colloq.)

— [Fr.; Ger. *punsch*; Sans. *panchan*, or *ponchon*, five.] A beverage introduced from India through Europe, and so called from being usually made of five ingredients — arrack, tea, sugar, water, and lemon-juice. As now prepared, punch may be described as a drink, the basis of which is alcohol, of one or more kinds, diluted with water, flavored with lemon or lime-juice and

spices, and sweetened with sugar; sometimes other ingredients are added, according to taste, especially wine, ale, and tea. The mixture is usually compounded in a large china bowl made for the purpose, and is served out in glasses by means of a ladle. It is much more rarely seen now than formerly, which is not to be regretted, for a more unwholesome or intoxicating beverage could hardly be compounded.

— [Contracted from *Punchinello*; It. *pulcinella*; Fr. *polichinelle*.] One of the principal characters in a well-known puppet-show; one very popular in Europe, and still exhibited about the streets in England. According to Galiani, the name is a corruption of *Puccio d'Aniello*, a vintager, characterized by a very large nose and grotesque appearance, and remarkable for his wit and drollery. He subsequently went on the stage, and became extremely popular, and was personated all over the country. On being transported into Britain, the name became *Punchinello*, and for shortness *Punch*. The English puppet-show of "Punch and Judy" embodies a domestic tragedy, treated in a broadly farcical manner. Punch himself is represented as a short, obese personage, with an enormous hump on his back, a wide mouth, long chin, and hooked nose; and his wife *Judy* is in most respects his counterpart, while his dog *Toby* is an important character in the performance.

(*Lit.*) The title of a celebrated illustrated humorous periodical, published in London.

— *v. a.* To pierce or perforate with an iron instrument, either pointed or not. — To hit with the fist; to thrust against; as, to *punch* a man's head.

Punch-bowl, *n.* A bowl in which punch is made, or from which it is drunk.

Puncheon, (*punch'un*), *n.* [Fr. *poinçon*.] An iron or steel instrument, used for cutting, piercing, or stamping a body.

— A measure of liquids, or a cask containing sometimes 84, sometimes 120 gallons.

(*Arch.*) A short post; also the small quarters of a partition, above the head of a door.

Punch'er, *n.* One who punches. — A punch or perforating instrument.

Punchinello, *n.* See PUNCH.

Punch'ing, *n.* The process of producing a hole in a piece of metal by direct pressure. This process can be applied only to the malleable metals, such as lead, zinc, copper, iron, &c., cast-iron or bronze being liable to break, or to produce a ragged edge, if so treated. — The action of piercing the plates by means of a drill must not be confounded with *punching*.

Punching-machine. The operation of punching holes through thick metal plates requires machinery of a very massive description, on account of the violent strains to which it is subjected; and the power of these machines being exerted only at intervals, it is necessary to apply some means of rendering the motion tolerably uniform, and thereby diminishing as much as possible the violence of the strain. This is effected by setting in motion a heavy fly-wheel, so that the power expended in giving a certain velocity to the wheel shall be stored up till the operation of punching commences, which tends to retard the motion; the accumulated power in the wheel will then tend to maintain the speed, and thus an approximation to uniform motion is obtained. The machine consists of a strong frame, at the front of which is a broad slide, moved vertically up and down by an eccentric fixed on the end of a shaft passing lengthwise through the frame; on this shaft there is a large wheel, which receives motion from a pinion on another shaft carrying the fly-wheel and driving pulleys. The punches, the number of which varies according to the size of the holes, are fixed in the lower end of the vertical sliding-piece, and immediately under them is fixed a piece of steel, called the *die*, which has holes in it to correspond with the punches. The plate in which holes are to be punched is fastened upon a travelling table in front of the machine; and the slide being up, and the surface of the table level with that of the dies, the part where the holes are to be punched is placed between the punches and the dies, so that when the machine is set in motion, the punches are forced through the plate by the action of the eccentric, and the pieces driven out fall through the holes in the dies: after the punches have risen above the surface of the plate, the travelling table is set forward to the required distance by self-acting apparatus, and the operation is repeated by the machine till the required number of holes has been punched.

Punch'y, *a.* Short and fat, or stout.

Punc'tate, **Punc'tated**, *a.* [From Lat. *punctum*, point.] (*Zoöl.*) Applied to a part which is beset with many points or minute impressions, which do not perforate the surface.

(*Bot.*) Being dotted with real or apparent minute holes, or with minute projecting dots.

Punc'tiform, *a.* [Lat. *punctum*, point, and *forma*, form.] (*Bot.*) That has the form of a point.

Punctilio, (*till'yo*), *n.* [It. *puntiglio*, from Lat. *punctum*, a point.] A nice point of exactness in conduct, ceremony, or proceeding; particularity or exactness in forms.

Punctilious, (*-till'yus*), *a.* [It. *puntiglioso*; Fr. *punctilleux*.] Very nice or exact in the forms of behavior, ceremony, or mutual intercourse; very exact in the observance of rules prescribed by law or custom; sometimes, exact to excess.

Punctiliously, *adv.* With exactness or great nicety. **Punctiliousness**, *n.* Nicety; exactness of behavior; ceremoniousness.

Punc'tion, *n.* [Lat. *punctio*, from *pungere*, to prick.] (*Surg.*) A puncture.

Punc'to, *n.* [It. and Sp. *punto*.] A nice point of ceremony.—The point in fencing.

Punctual, (*punk'ty-u-ál*), *a.* [Lat. *punctus*, a point; Sp. *punctual*; Fr. *punctuel*.] Consisting in a point. (R.)—Exact; observant of nice points.—Punctilious, particularly in observing time, appointments, or promises.—Accurate; minutely correct; done at the exact time.

Punctualist, *n.* A person who is very exact in regard to forms and ceremonies.

Punctuality, *n.* [Fr. *punctualité*.] State or quality of being punctual; nicety; scrupulous exactness.

Punctually, *adv.* In a punctual manner; nicely; exactly; with scrupulous regard to time, appointments, promises, or rules.

Punctualness, *n.* Exactness; nicety.

Punctuate, (*punk'ty-u-át*), *v. a.* [Fr. *punctuer*, from Lat. *punctus*.] To mark with points; to designate sentences, clauses, or other divisions of a writing by points, which mark the proper pauses.

Punctuation, *n.* [Fr. *punctuation*; Sp. *puntuación*.] The act or art of pointing a writing or discourse; the art of dividing words and sentences by means of marks or points. *P.* is not, as some assert, a modern art, but was, in some measure at least, known and practised by the ancients. There is reason to believe that some system of punctuation was known to the Greeks in the time of Aristotle; and Jerome, in his translation of the sacred Scriptures, in the 4th century, made use of signs, which he called *commata* and *cola*. The invention of the modern system of punctuation has been attributed to Aristophanes, a grammarian of Alexandria; but it did not come into general use until after the invention of printing, the celebrated Venetian printers, Manutius, about the close of the 15th century, being the first to adopt it systematically. The principal points used in English composition are the comma (,), semicolon (;), colon (:), period (.), note of interrogation (?), note of exclamation or admiration (!), dash (—), and parenthesis (). Of these, the first four are marks of punctuation, strictly so called, regulating the length and character of the pauses to be made in reading; the others are chiefly rhetorical or syntactical aids, regulating the modulation of the voice. The comma marks the smallest division of a sentence, separating nouns, pronouns, verbs from verbs, and such other parts as are not necessarily joined together. The pause here is very short, and it may be remarked that sometimes the construction requires a comma where no pause is necessary in the reading, and *vice versa*; as, "He was a man patient, sober, honest, and industrious," where, in reading, the pause ought to be after "man," but where the construction requires that there be no comma. The semicolon is used when a longer pause is required than at a comma, the disjoined parts being less closely connected; while with the colon the pause is still greater, being used when a member of a sentence is complete in itself, but is followed by some additional remark or illustration of the subject. A period, or full stop, is placed at the end of a sentence, to close up the sense and construction, and to release the voice. It is also used after every abbreviated word, after headings, titles of books, &c., and generally after Roman numerals. The note of interrogation, as its name implies, is placed at the end of every question; and in Spanish it is also put in an inverted form at the beginning of a question. The note of exclamation, or admiration, is placed at the end of such words or clauses as express any strong passion or emotion of the mind. The dash is used where the sentence breaks off abruptly, and the subject is changed, or where the sense is suspended, and is continued after a short interruption. The parenthesis incloses a word or phrase introduced into the body of a sentence with which it has no grammatical connection. Other marks in frequent use, and generally treated under the head of punctuation, though not strictly included in it, are the apostrophe ('), used to indicate the omission of a letter or letters, and also as a sign of the possessive case; the hyphen (-), placed between the constituent parts of a compound word, and at the end of a line where a word is divided; marks of quotation (" "), placed at the beginning and end of extracted passages and speeches, &c.; brackets or crotchets [], generally inclosing an explanatory phrase or passage inserted by one writer in a quotation from another; and the various marks of reference, as asterisk or (*), dagger (†), double-dagger (‡), section (§), parallel (||), and paragraph (¶), or figures or letters smaller than those of the text, pointing to notes correspondingly marked at the foot or margin of the page, or at the end of the book.

Punctuative, *a.* Pertaining to punctuation.

Punctuator, *n.* A person who punctuates.

Punctuist, *n.* One who understands punctuation.

Punctum, *n.* [Lat.] A point.

Punctum cæcum. [Lat., blind point.] (*Med.*) A dark spot in the centre of the optic nerve, where the central artery enters the eye, and the corresponding vein passes out, and which receives no impression from the rays of light falling upon it.

Puncturation, *n.* The act of punctuating.

Puncture, (*punk'tyur*), *n.* [Lat. *punctura*, from *pungere*, to pierce.] Act of perforating with a pointed instrument.—A small hole made by a point.

—*v. a.* To prick; to pierce with a small pointed instrument. **Punderpoh**, a town of India, prov. of Bejapore, on the Beemali, 89 m. E. of Sattara; Lat. 17° 42' N., Lon. 75° 26' E.; pop. 25,000.

Pundit, *PAN'DIT*, *n.* [Pers. *pand*, learning.] A name nearly equivalent to our word *doctor*, applied in Hindostan to a Brahmin who consecrates his life to the study of religion and science.

Pungence, *n.* Sharpness; pungency. (R.)

Pungency, *n.* The power of piercing or pricking; sharpness; acridness; power to pierce the mind, or to excite keen reflections or remorse, as of a sermon.

Pungent, *a.* [Lat. *pungens*, from *pungere*, to pierce.] Pricking; piercing; affecting the organs of sense, particularly those of taste or smell, with a pricking sensation, like that produced by vinegar or snuff.—Power to pierce the mind with a correspondent pricking sensation; keen; biting; stinging; as, a pungent retort. (*Bot.*) Stinging or pricking.

Pungently, *adv.* In a pungent manner; acrimoniously.

Pungled, *a.* Shrivelled or shrunken, as grain which has been deprived of its juices by the insect called *Thrips cerealeum*.

Pungoteague, (*pung-go-teeg'*) in Virginia, a post-village of Accomac co., abt. 12 m. S.W. of Accomac Court-house.

Punic, *a.* [Lat. *punicus*; *Pœni*, the Carthaginians, who were descended from the *Phœnicians*.] Pertaining to the Carthaginians.—Faithless; treacherous; deceitful;—referring to vices that the Carthaginians were accused of practising.

Punic wars. (*Anc. Hist.*) The name given to the celebrated contests in which the Romans and Carthaginians were engaged for more than three centuries, and which finally terminated in the destruction of Carthage. The first commenced A. C. 264, and ended A. C. 241; the second lasted from A. C. 218 to A. C. 202; the third from A. C. 149 to A. C. 147, ending with the destruction of Carthage.

—*n.* The language of the ancient Carthaginians. It was a Phœnician dialect, and substantially the same as the Hebrew.

Punica, *n.* (*Bot.*) A genus of plants, order *Myrtaceæ*. The Pomegranate (*P. granatum*) is the *Rimmon* of the Bible. It is repeatedly mentioned in the sacred writings. The fruit is peculiar, being composed of 2 whorls of carpels placed one above the other. It is the produce of a tree growing in N. Africa and W. Asia, and varying from 15 to 25 feet in height. The flowers are usually scarlet, and yield a red dye. The fruit is greatly valued in warm countries on account of its cooling and refreshing pulp. Many varieties are grown, some being sweet and vinous, and others acid, or of a bitter, astringent taste. It is generally about the size of the fist, and has a tough, leathery rind, of a beautiful deep golden color, tinged with red. The rind, especially that of the bitter kind, contains a large quantity of tannin, and is used for tanning the celebrated Morocco leather. Some double-flowered varieties are very beautiful garden shrubs. A peculiar principle, having the appearance of an oleo-resin, is obtained from the root of *Punica granatum*, and is called *Punicine*, or *Balaustine*.

Puniness, *n.* Littleliness; pettiness; smallness, with feebleness.

Punish, *v. a.* [Fr. *punir*, from Lat. *punire*, to punish, from *pœna*, punishment.] To afflict with pain, suffering, loss, or calamity, as a penalty for a crime or fault.—To afflict with pain, &c., with a view to amendment; to chasten.—To reward with pain or suffering, inflicted on the offender, for an offence.

Punishable, *a.* [Fr. *punissable*.] Worthy of punishment.—Liable to punishment; capable of being punished by law or right.

Punishableness, *n.* The quality of deserving or of admitting punishment.

Punisher, *n.* One who punishes; one who inflicts pain, loss, or other evil for a crime or offence.

Punishment, *n.* [Lat. *punire*, to punish.] Act of punishing.—Any pain or suffering inflicted on a person for a crime or offence by the authority to which the offender is subject, either by the constitution of God or of civil society.

(*Pol. Econ.*) The original idea of punishment was the infliction of pain on the offender corresponding to the amount of pain or suffering which he had inflicted upon others, in consequence of his offence. Hence arose the *lex talionis*, or retaliatory principle of punishment, which demanded an eye for an eye, a tooth for a tooth, &c. With the spread of Christianity, it came to be seen that the infliction of pain as satisfaction for an offence was a vindictive proceeding, contrary to the spirit of Christianity, and that the proper end of punishment is not to avenge the past, but to prevent future offences. All punishment is an evil; and a penal system ought to aim at economizing pain by diffusing the largest amount of salutary terror at the smallest expense of actual punishment. The real objects of punishment may be classed as follows:—1. The interest of society, which must be subdivided into (i) its security from the injury to person or property occasioned by the crime, (ii) its moral and religious improvement. 2. The reformation of the offender. This is admitted as one of the ends of punishment by all writers; but Beutham and his followers regard it as such only so far as it conduces to the security of society by preventing the repetition of the offence. Those who embrace the other view regard it as an end, both on this account and also as the fulfilment of the duty of the state towards the offender himself. Considered in either view, it is clearly a secondary object only, the good of society being the first.—The security of society is attained by punishment in four ways: 1. By forcibly preventing the offender from repeating the offence, as by death, mutilation, or perpetual imprisonment. 2. By reforming the habits of the offender, and thereby taking away the desire to offend. 3. By deterring the offender from repetition by the fear of fresh punishment. 4. By deterring others through example. And this last is clearly the chief practical end of all

legal inflictions.—On the subject of capital punishment, opinions have of late years undergone considerable modification. The argument which based the infliction of such punishment on an alleged divine command, supposed to be contained in Genesis, has been tacitly, if not avowedly, abandoned; and the argument from expediency has been more prominently brought forward in its stead. The gradual change of opinion on this subject is illustrated in Earl Russell's *Treatise on the English Government and Constitution*. In the first edition, published in 1825, Lord John Russell, while declaring that "there cannot be many offences to which capital punishment ought to be attached," asserted that "all wilful acts tending directly to inflict death ought to be punished with death"; and added that "murder, stabbing, shooting at, burning of dwelling-houses or buildings contiguous to dwelling-houses, and setting fire to the clothes of a person, are crimes of this description." In the introduction to the second edition, published in 1865, Earl Russell, while he still doubts not the right of a community to inflict such punishment, or the expediency of exercising that right in certain states of society, adds: "When I turn from that abstract right and that abstract expediency to our own state of society; when I consider how difficult it is for any judge to separate the case which requires inflexible justice from that which admits the force of mitigatory circumstances; how invidious the task of the secretary of state in dispensing the mercy of the crown; how critical the comments made by the public; how soon the object of general horror becomes the theme of sympathy and pity; how narrow and how limited the example given by this condign and awful punishment; how brutal the scene of the execution: I come to the conclusion that nothing would be lost to justice, nothing lost in the preservation of innocent life, if the punishment of death were altogether abolished."

Punitive, *a.* Awarding or inflicting punishment.

Punitory, *a.* Punishing; tending to punish.

Punjab, or **Punjab**, an extensive region in the N.W. of Hindostan, comprising the country traversed by the "five great rivers," of which the Indus is the most westerly, and the Sutlej the most easterly; area, 78,000 sq. m. The surface is generally level and barren, though fertile along the river banks, and the climate tropical. *Rivers*. Indus, Chenab, Jhilum, Beas, Ravee, and Sutlej. *Prod.* Grain of all kinds, with opium, indigo, and tobacco and fruits. *Min.* Rock-salt, alum, sulphur, nitre, coal, and gypsum. *Manuf.* Silk and cotton fabrics, carpets, shawls, and arms. *Chief towns*. Lahore, the cap., Umritsur, Serinagur, Mooltan, Peshawur, Jullinder, and Jelalpoor. *P.* derives its name from two Persian words, signifying the "five rivers." It was the scene of the exploits of Alexander the Great over Porus. It became an independent kingdom, under Runjeet Singh, in 1791. It was annexed to the British possessions in 1849. Area, 107,010 sq. m. Pop. (census of 1891) 20,866,847.

Punjab, **Punjab**, in Mo. a p. v. of St. Genevieve co. **Punk**, *n.* A kind of fungus or decayed wood, used as a tinder.

—A prostitute; a strumpet.

Punk'ah, *n.* [Hind., *pankha*.] A fan held in the hand, or suspended from the ceiling. (India.)

Pun'ner, *n.* A punster; a quibbler.

Pun'net, *n.* A small, round, and shallow basket for fruit.—*Simmonds*.

Puno, a S.E. dept. of Peru, adjoining Bolivia, between Lat. 14° and 18° S., and Lon. 69° and 72° W.; area, abt. 21,540 sq. miles. Lake Titicaca, formerly famous for its rich silver mines, occupies the E. portion of the dept. *Chief towns*. Chuquito, Asangaro, Lampa, and Puno, the cap. The latter is a handsome city, situated 12,870 feet above the sea, abt. 130 m. E.N.E. of Arequipa. Pop. of town 10,000; of the dept. 300,000.

Pun'ster, *n.* One who puns, or is skilled in punning; a quibbler; a low wit.

Punt, *v. n.* [Fr. *pontier*; It. *pontare*, from Lat. *punctum*, point.] To play at basset, faro, or ombre.

—*n.* [Sp. *pontón*; Lat. *ponto*, from *pons*, *pontis*.] (*Naut.*) A flat-bottomed boat used in calking and repairing ships, or in fishing.

Punta de Piedra, a seaport-town of Venezuela, abt. 70 m. E. of Cumana.

Punta Esпада, a headland at the E. end of the island of Hayti, W. Indies, Lat. 12° 4' N., Lon. 71° 10' W.

Punta Ma'la, a cape of the Republic of Colombia, forming the W. boundary of the Bay of Panama.

Puntas Arenas, ("Points of sand,") a seaport-town of Costa Rica, Central America, on the Gulf of Nicoya, abt. 40 m. N.N.W. of San Jose.

Punter, *n.* [Fr. *ponteur*, *ponte*.] One who plays at faro or basset, with the keeper of a faro bank.

Pun'to, *n.* [It., from Lat. *punctum*, a point.] (*Fencing*.) A point.—*Punto dritto*, a direct stroke.—*Punto reverso*, a back-handed stroke.

Pun'ty, *n.* Same as *PONTEE*, *q. v.*

Punxutaw'ney, in Pennsylvania, a post-borough of Jefferson co., on 2 R.R.s., 45 m. N. W. of Altoona.

Puny, *a.* [Contracted from Fr. *puisé*.] Inferior; petty; of an under rate; small and feeble.

Pup, *v. n.* [Ger. *puppe*, a doll; Fr. *poupon*, a pretty, plump child; Lat. *pupus*, a boy.] To bring forth whelps or young, as the female of the canine species.

—*n.* A puppy; as, a bull-pup.

Pu'pa, *n.*; *pl.* *PUPÆ*. (*Zool.*) Same as *CHRYSLIS*, *q. v.*—Also, a genus of land-snails, so called from the resemblance of the shell to the pupa of an insect.

Pupe, *n.* Same as *PUPA*, *q. v.*

Pupe'lo, *n.* Cider brandy. (Local U. S.)

Pupil, *n.* [Fr. *pupille*; Lat. *pupilla*.] (*Anat.*) The

aperture of the iris, through which the rays of light pass that have to impress the image of an object on the retina.—See **EYE**.

Pin-hole pupil. (*Med.*) A condition of the pupil in typhus, in which it is so contracted as to resemble a pin-hole.

—*n.* [*Lat. pupillus*, from *pupus*, a child.] A youth or scholar of either sex under the care of an instructor or tutor.

—A ward; a youth or person under the care of a guardian.

Pupilage. *n.* State of being a pupil or ward; state of being a scholar, or under the care of an instructor for education and discipline; wardship; minority.

Pupillary. *a.* [*Fr. pupillaire*; *Lat. pupillaris*.] Pertaining to a pupil or ward.

(*Anat.*) That which belongs to the pupil.

Pupiparous. *a.* (*Zoöl.*) Applied to insects which produce their young in the condition of a pupa or nymph.

Pupivorous. *a.* [*Lat. pupa*, and *vorare*, to devour.] (*Zoöl.*) Applied to insects of which the larvæ live parasitically in the interior of the larvæ and pupæ of other insects.

Puppet. *n.* [*Fr. poupée*; *Lat. pupulus*, from *pupus*, a boy.] A doll; a small image in the human form.—A small figure in the human form, moved by a wire in a mock drama; a fantoccini figure.

—A word of contempt, used of a person who is under the control of another; a tool.

(*Mech.*) Same as **POPPET-HEAD**, *q. v.*

Puppetish. *a.* Resembling a puppet.

Puppet-man, Puppet-master. *n.* The master of a puppet-show.

Puppet-play. *n.* A puppet-show.

Puppet-player. *n.* The person who manages the puppets in a show.

Puppetry. *n.* An action resembling that of a puppet; pretended emotion or affection; form; display.

Puppet-show. *n.* A mock drama, performed by puppets moved by wires.

Puppy. *n.* [*Fr. pupée*, a doll.] A whelp; one of the young progeny of a bitch, or female of the canine species.—Applied to persons, a name expressing extreme contempt, commonly used of one who is conceited.

—*v. n.* To bring forth pups or whelps.

Puppyism. *n.* Extreme meanness; extreme affectation or conceit; snobbery.

Pur. *v. n.* To utter a low, murmuring, continued sound, as a cat.

—*v. a.* To signify by purring.

—*n.* The low, murmuring, continued sound of a cat. (Written also *purr*.)

Puracé, a volcanic mountain-peak of the Andes in the Republic of Colombia, about *Lat.* 2° 20' N. *Height*, 17,034 feet. The village of Puracé, or Pusambio, situated about 12 m. E.S.E. of Popayan, was almost totally destroyed by an eruption in 1827.

Purāna. *n.*; *pl.* **PURĀNAS.** [*Sans.*, a poem.] The sacred books of India which contain the explanation of the *Shaster*. There are eighteen books of the *Purānas*, chiefly filled with legends of the inferior gods and the heroes of Hindostan. Much doubt is entertained as to the great antiquity of the *Purānas*.

Purbeck Beds. *n. pl.* (*Zoöl.*) A compact shelly limestone or imperfect marble, alternating with clay and fossil limestones, resting on the Portland beds, and forming the uppermost group of the great series of the oolites in England.

Purblind. *a.* Dim-sighted, so as to require to look near and steadily at an object in order to see it properly; near-sighted; seeing obscurely.

Purblindly. *adv.* In a purblind manner.

Purblindness. *n.* Shortness of sight.

Purcell. an island in the Pacific Ocean, off the W. coast of Patagonia; *Lat.* 46° 55' 20" S., *Lon.* 74° 39' 55" W.

Purchasable. *a.* That may be purchased, bought, or obtained for a consideration.

Purchase. *v. a.* [*Fr. pourchasser*; *It. proccidere*, to get.] To obtain, as the object of pursuit; to gain, obtain, or acquire.—To buy; to obtain, as property, by paying an equivalent in money.—To obtain by an expense of labor, danger, or other sacrifice.

(*Law.*) The acquisition of lands or tenements by any other means than descent; as by devise, gift, or contract.

—*v. n.* To gain some mechanical advantage; to raise or move heavy bodies by means of mechanical powers.

—*n.* Act of purchasing anything.—Act of obtaining or acquiring the title to anything by rendering an equivalent in money.

(*Law.*) Act of obtaining or acquiring the title to lands and tenements by money, deed, gift, or any means except by descent.—Anything of which the property is obtained by giving an equivalent price in money.—Any mechanical hold, advantage, power, or force, applied to the raising or removing of heavy bodies.

Purchaser. *n.* One who obtains or acquires property, or anything, by paying an equivalent in money.

(*Law.*) A person who takes or comes into an estate in any other manner than by inheritance.

Purdy. in Tennessee, a post-town, former cap. of McNairy co., about 138 m. W.S.W. of Nashville.

Purdy Creek, in New York, a post-village of Steuben co., abt. 22 m. W.S.W. of Bath.

Purdy's Station, in New York, a post-village of Westchester co., abt. 50 m. N.N.E. of New York.

Pure. *a.* [*Fr. pur*; *Sp. and It. puro*; *Lat. purus*.] Clear; free from all heterogeneous or extraneous matter.—Free from all moral defilements; not sullied or tarnished by moral turpitude; unspotted; uncontaminated; innocent; virtuous; chaste; guiltless.—*Mere*; absolute; that, and that only; unconnected with anything else; sheer.

Purée. (*pu-ra'*) *n.* [*Fr.*, from *pur*, pure; the pure liquid soup, with no solid part.] A soup made of peas, &c., or other leguminous plants.

Purely. *adv.* In a pure manner; entirely separated from heterogeneous or foul matter; innocently.—*Merely*; absolutely; without connection with anything else.

—*Nicely*; prettily. (*Colloq.*)

Pureness. *n.* State or quality of being pure; clearness; separation or freedom from any heterogeneous or foreign matter; freedom from moral turpitude and guilt.

Purified. *p. a.* [*O. Fr. pourfiter*, from *pour*, for, and *fil*, a thread.] Embroidered.—(*Arch.*) Richly sculptured.—(*Her.*) A term used with reference to the lining, bordering, or garnishing of robes, or ornamentation of armor.

Purification. *n.* [*Lat. purgatio*, from *purgo*, to cleanse.] Act or operation of purging, or of clearing, cleansing, or purifying, by separating and carrying off impurities, or whatever is superfluous.

(*Law.*) The clearing of one's self of an offence charged, by denying the guilt on oath or affirmation.

Purgative. *a.* [*Lat. purgativus*.] Having the power of purging or of cleansing; cathartic.

—*n.* (*Med.*) A medicine which operates more powerfully on the bowels than a laxative, stimulating the muscular, and exciting increased secretion from the mucous coat.

Purgatively. *adv.* In a purgative manner; cleansingly.

Purgatorial, Purgatorialian. *a.* Pertaining to purgatory.

Purgatorialian. *n.* One who believes in the doctrine of purgatory.

Purgatory. *a.* Tending to purge or cleanse; cleansing; expiatory.

—*n.* [*L. Lat. purgatorium*, from *Lat. purgatorius*.] (*Eccl.*) The name given in the Roman Catholic and in the Greek churches to a place of purification, in which, according to their religious system, souls after death

either are purified from venial sins (*peccata venalia*), or undergo the temporal punishment which, after the guilt of mortal sin (*peccata mortalia*) has been remitted, still remains to be endured by the sinner. The ultimate eternal happiness of their souls is supposed to be secured; but they are detained for a time in a state of purgation, in order to be fitted to appear in that Presence into which nothing imperfect can enter. As there is some obscurity and much misunderstanding on this subject, we shall briefly explain the doctrine of Catholics as collected from authentic sources, distinguishing those things which are held by them as "of faith" from the opinions which are freely discussed in their schools. Catholics hold as articles of their faith (1) that there is a purgatory in the sense explained above, and (2) that the souls there detained derive relief from the prayers of the faithful and from the sacrifice of the mass. The scriptural grounds alleged by them in support of this view are 2d Macc. xii. 43-46 (on which they rely, not merely on the supposition of its being inspired, but even as a simple historical testimony), Matt. xii. 32, 1 Cor. iii. 11-15, 1 Cor. xv. 29; as well as on certain less decisive indications contained in the language of some of the Psalms—as xxxvii. (in *Auth. Vers.* xxxviii.) 1, and lxx. 12. And in all these passages they argue not alone from the words themselves, but from the interpretation of them by the Fathers, as containing the doctrine of a purgatory.

Purgatory River, in State of Colorado, rises in the S.W. angle of Huerfano co., and flowing N.W. enters Arkansas River a few m. above Fort Lyon.

Purge. (*purj*) *v. a.* [*Fr. purger*; *Lat. purgo*, from *purum* ago, to make clear.] To cleanse or purify by separating and carrying off whatever is impure, heterogeneous, foreign, or superfluous.—To clear from guilt or moral defilement.—To remove, as that which is offensive; to sweep away, as impurities;—frequently followed by *away*.—To clarify, as liquors.

(*Law.*) To clear from accusation, or the charge of a crime, as in ordeal.

—*v. n.* To become pure by clarification.—To have frequent or preternatural evacuations from the intestines by means of a cathartic.

—*n.* A medicine that purges or evacuates the intestines; a cathartic.—Act of purging.

Purger. *n.* The person or thing that purges;—particularly a cathartic medicine.

Purging. *n.* A diarrhoea or dysentery; preternatural evacuation of the intestines; looseness of the bowels.

Purging-flax. *n.* (*Bot.*) The *Linum catharticum*, a species of flax, so called from its being used as a cathartic medicine.

Purification. a town of Mexico, abt. 95 m. W.N.W. of Colima.

Purification. a town of the Republic of Colombia, about 72 m. S.W. of Bogota.

Purification. *n.* [*Fr.*; *Lat. purificatio*.] The act of purifying; act or operation of separating and removing from anything that which is heterogeneous or foreign to it.—Act or operation of cleansing ceremonially, by removing any pollution or defilement.—A cleansing from guilt or the pollution of sin; the extinction of sinful desires, appetites, and inclinations.

(*Eccl.*) An observance enjoined on the Jews upon occasion of certain accidental defilements, which are scrupulously recorded in the Levitical code. The *P.* was generally by water; and in the case of women, who were considered impure after childbirth for the space of forty days, if delivered of a male, and eighty, if of a female, the offering of a lamb or some other sacrifice was required.—The *P.* of the Virgin Mary is a festival in the Roman calendar, and is observed on Feb. 2d, being forty days after Christmas. This festival is variously

termed in the ecclesiastical antiquities by the names of *Festum Candelarum*, *Candlemas*, and the *Presentation*. The processions of this day were instituted by Gregory the Great.

Purification. *n.* A purifier; one who cleanses or purifies.

Purificatory. *a.* Purificative; having the power or tendency to make pure.

Purifier. *n.* A cleanser; a refiner.

Puriform. *a.* [*From Lat. pus, puris, and forma, a form.*] (*Med.*) Having the appearance of pus.

Purify. *v. a.* [*Fr. purifier*; *Lat. purificare*, from *purus*, pure, and *facere*, to make.] To make pure or clear; to free from extraneous admixture.—To free from pollution ceremonially; to remove, as whatever renders unclean and unfit for sacred services.—To free from guilt or the defilement of sin.—To free from improprieties or barbarisms.

—*v. n.* To grow or become pure or clear.

Purim. *n.* [*Heb. pur*, *pl. purim*, a lot, a Persian word.] (*Judaism.*) The name of the solemn festival among the Jews, in which they commemorate their deliverance from the wiles and stratagems of Haman, as recorded in the book of Esther. The observance of this festival has been religiously maintained by all the Hebrew race down to the present time. It is a movable feast.

Purism. *n.* [*Fr. purisme*.] Practice or affectation of rigid purity; niceness in the use of words; asceticism in taste.

Purist. *n.* One excessively nice in the use of words, &c.

Puritan. *n.* (*Eccl. Hist.*) The name by which the dissenters from the Church of England were generally known in the reign of Elizabeth and the first two Stuarts. The term was applied to them from the fact that they professed to follow the word of God alone, purified from all human inventions, of which they believed the English Church to retain a considerable share, notwithstanding its alleged reformation. According to Fuller, the use of the name commenced about 1564.

—One who pretends to eminent purity of religion;—used in contempt, or reproachfully.—A sympathizer with the early Puritans.

—*a.* Pertaining to the Puritans, or early dissenters from the Church of England.

Puritanic, Puritanical. *a.* Pertaining to the Puritans, or their doctrines and practices; as a term of reproach,—exact, rigid.

Puritanically. *adv.* In a puritanical manner; with the exact or rigid notions or manners of the Puritans.

Puritanism. *a.* The notions or practices of Puritans.

Puritanize. *v. n.* To agree with or accept the notions of Puritans.

Purity. *n.* [*Lat. puritas*, from *purus*, pure; *Fr. pureté*.] State or quality of being pure; freedom from foreign admixture or heterogeneous matter.—Cleanliness; freedom from foulness or dirt.—Freedom from guilt or the defilement of sin; innocence; chastity.—Freedom from any sinister or improper views.—Freedom from foreign idioms, or from barbarous or improper words or phrases.

Purl. *n.* An embroidered and puckered border.—Malt liquor medicated with wormwood or aromatic herbs;—probably so named from its foaming like water running through stones.—A gentle, continued murmur of a small stream of rippling water.—A ripple; a circle made in a fluid.

—*v. n.* To murmur, as a small stream flowing among stones or other obstructions, which occasion a continued series of broken sounds.—To flow or run with a murmuring sound.

—*v. a.* To decorate with fringe or embroidery.

Purlieu. (*pur'lu*) *n.* [*Fr. pur*, pure, and *lieu*, place.] Originally, a place or piece of land bordering on a forest, which was made pure or free from the laws of the forest.—A border; a limit; a certain limited extent or district; environs.

Purline, Purline. *n.* (*Arch.*) One of the horizontal pieces of timber which rest on the principals, or main rafters of a roof, and support the common rafters. See **Roof**.

Purling. *n.* A gentle murmuring, as of a stream.

Purloin. *v. a.* [*Fr. pour*; *Lat. pro*, for, and *Fr. éloigner*, to remove.] To remove for one's self; to steal; to take by theft.—To take by plagiarism; to steal from books or manuscripts.

—*v. n.* To practice theft.

Purloiner. *n.* A thief; a plagiarist.

Purneah, a town of British India, presidency of Bengal, on the Ganges, 230 m. N.W. of Calcutta; *Lat.* 25° 45' N., *Lon.* 88° 23' E.

Purparty, Pourparty. *n.* [*O. Fr. pourpartie*, from *pour*, for, and *partie*, a part.] (*Law.*) A part or portion of an estate allotted to a coparcener by partition.

Purple. (*pur'pl*) *n.* [*Fr. pourpre*; *Lat. purpura*, from *Gr. porphura*, the purple-fish.] The third and last of the secondary colors, is composed of red and blue, in the proportions of five of the former to eight of the latter, which constitutes a perfect purple. The color was in such high estimation among the ancients, particularly the Romans, that it became the badge of their highest offices, and at length was confined to the imperial use, and used to denote sovereignty. The celebrated Tyrian purple was obtained from an animal juice found in a shell-fish called *murex*, or *conchylium*, the quality of which, however, varied with the different coasts on which it was caught. See **MUREX**.

—*pl.* (*Med.*) Circular, livid spots on the skin, of different sizes, often in stripes or patches, irregularly scattered over the thighs, arms, and trunk, with occasional hemorrhage from the mouth, nostrils, or viscera, and great debility and depression of spirits.—*Dunghison*.

Purple of Cassius. (*Chem.*) A precipitate obtained by adding the protochloride of tin to a dilute solution of gold; by dipping rods of tin in a solution of gold in dilute chlorohydric acid.

—a. Designating a much-admired color composed of red and blue blended. — Red or livid; dyed with blood. — Regal; imperial; — from being worn by the Roman emperors and those in authority.

—v. a. [*Lat. purpurare.*] To make purple, or to dye of a red color.

Purple Sea Snail. *n.* (*Zoöl.*) See *JANTHINIDÆ*.

Purple-wood. *n.* (*Bot.*) The wood of the *Copaiba pubiflora* of Guiana; extensively used for making the ramrods of muskets.

Purplish. *a.* Somewhat purple.

Purport. *n.* [*Fr. pour, for, and porter, to carry.*] Design or tendency; tenor; meaning; import; signification.

—v. u. To intend to show; to intend; to mean; to signify.

Purportless. *a.* Without meaning or design.

Purpose. *n.* [*Fr. propos; Lat. propositum, from propono, from pro, before and pono, positum, to place.*] That which one sets before himself as an object to be reached or accomplished; the end or aim to which the view is directed in any plan, measure, or exertion; intention; design.

—v. a. To intend; to design; to resolve.

—v. n. To have an intention; to have a design; to determine on some end or object to be accomplished.

Purposedly. *adv.* With intention, purpose, or design.

Purposeless. *a.* Without aim, intent, or purpose.

Purposely. *adv.* By design; intentionally; with predetermination.

Purposer. *n.* One who intends or purposes.

Purposive. *a.* Intended for an end.

Purpresture, Pourpres'ture. *n.* [*From Lat. porprehendere, to invade.*] (*Law.*) An inclosure of, or encroachment upon, any public domain, thoroughfare, or right of holding.

Purprise. (*-priz*), *n.* [*L. Lat. purprisum.*] An inclosed domain.

Purpura. *n.* [*Lat., purple.*] (*Med.*) An eruption of small purple specks and patches, caused by extravasation of blood under the cuticle; it is attended by constitutional debility, and sometimes by fever. Aperient medicines, and occasional purgatives, carried to a greater or less extent, followed by mild topics, and in some cases by wine, bark, and acids, are the principal remedies; but, in the treatment, much will depend upon the concomitant symptoms.

(*Zoöl.*) A generic name of the univalve gasteropod which secretes the purple fluid forming the base of the Tyrian dye. — See *MUREX*.

Purpure. *n.* (*Her.*) One of the colors or tinctures used in blazonry. It is equivalent to amethyst among precious stones, and to Mercury among planets. In engraving, it is represented by diagonal lines from the sinister to the dexter side of the escutcheon.

Purpureal. *a.* Of a purple color; purplish; as, "purpureal gleams."

Purpuric Acid. *n.* (*Chem.*) A substance resulting from the action of nitric acid upon uric acid; it forms deep-red or purple compounds with most bases.

Purpurine. *n.* (*Chem.*) One of the coloring matters of madder, closely allied to alizarin.

Purr. *n.* and *pp.* Same as *PUR*, *q. v.*

Purre. (*pur*), *n.* The expressed liquor of crushed apples.

Purree. *n.* (*Paint.*) See *INDIAN YELLOW*.

Purrock. *n.* Same as *PUDDOCK*, *q. v.*

Purse. *n.* [*Fr. bourse, a purse, from Lat. = Gr. bursa.*] A small bag in which money is contained or carried in the pocket. — Hence, by analogy, a treasury; as, taxes are paid into the public purse. — A sum of money offered as the prize of winning in a horse-race; as, the Ladies' Purse; — also, a sum of money collected as a gratuity or gift; as, to make up a purse. — In Turkey, the sum of 500 piastres, or about \$24. — In Persia, the sum of 50 toman, or about \$121.

Light or empty purse, deficiency of cash or money resources.

Long or heavy purse, wealth; opulence; cash in plenty. *Sword and purse,* a figurative expression, typifying national military power and wealth.

—v. a. To put in a purse.

"I will go and *purse* the ducats." — *Shaks.*

—To pucker, or draw together, as the mouth of a purse when tied; to contract into folds or wrinkles; — preceding *up*; as, she *pursed up* her mouth.

Purse'ful. *n.*; *pl.* *PURSE'FULS.* Sufficient to fill a purse.

Purse-loom. *n.* A machine for netting purses.

Purse-net. *n.* A net with a mouth which can be drawn together like a purse.

Purse-pride. *n.* Pride or insolence springing from possession of wealth.

Purse-proud. *a.* Puffed up with the possession of wealth; vain or ostentatious of one's affluence of money.

Purser. *n.* (*Naut.*) A commissioned officer in the naval and merchant services, who keeps the accounts of the ship to which he belongs, and has charge of the money, stores, provisions, &c.

(*Mining.*) The paymaster of the works.

Purser-ship. *n.* Office of a purser.

Purset. *n.* A small purse.

Pur'siness. *n.* [*From pursy.*] State or condition of being swelled, bloated, or inflated; — hence, shortness of breath.

Purs'lain, Purs'lane. *n.* [*It. porcellana; Lat. portulaca.*] (*Bot.*) See *PORTULACÆ*.

Pursu'able. *a.* That may be followed or pursued.

Pursu'ance. *n.* Act of pursuing or following out. —

Pursuit; prosecution, process, or continued exertion to reach or accomplish something.

In pursuance of, in fulfillment of, or accordance with.

Pursu'ant. *a.* [*Fr. poursuivant.*] Performed in consequence or prosecution of anything; — hence, agreeable to; conformable to; — before *to*; as, *pursuant to law*.

Pursu'ant, Pursu'antly. *adv.* Conformably; in agreement with.

Pursue. *v. a.* [*Fr. poursuivre; Lat. prosequor — pro, and sequor, secutus, to follow.*] To follow forth, or to a distance; to go or proceed after, or in a like direction; to follow with a view to overtake; to chase; as, *to pursue an enemy*. — To seek; to endeavor, or adopt measures, to obtain.

"We happiness *pursue*, we fly from pain." — *Prior.*

—To prosecute; to continue. — To follow, with a view to some end or object; as, *to pursue a trail through the wilderness*. — To imitate; to follow as an example; to endeavor to attain to. — To persecute; to strive to reach or bring to account; as, he is *pursued* by the law.

—v. u. To proceed, as in argument or narration. (*A gallicism.*)

"I have, *pursues* Carneades, wondered." — *Boyle.*

(*Law.*) To prosecute a matter by judicial process, as a complainant.

Pursuer. *n.* One who pursues, follows, or chases; one who follows in haste, with a view to overtake.

(*Scots Law.*) A plaintiff in a suit.

Pursuit. (*-süt*), *n.* [*Fr. poursuite.*] Act of pursuing or following with a view to overtake; a following with haste, either for sport or in hostility; as, to go in *pursuit* of game, to follow in close *pursuit* of the enemy. — A following with a view to reach, accomplish, or obtain; endeavor to attain to or to gain; quest; proceeding. — "The pursuit of knowledge under difficulties." — *Lord Brougham.*

— Course of occupation, business, or avocation; continued employment with a view to some definite aim or purpose; as, a man of literary *pursuits*. — Prosecution; protraction or continuance of intent or endeavor.

Pursuivant. (*-swe*), *n.* [*Fr. poursuivant, from poursuivre, to pursue.*] A state messenger; an attendant on the heralds.

"The *pursuivants* each his scutcheon bore." — *Dryden.*

(*Her.*) In England, a subordinate officer in the Herald's College; as, a *pursuivant-at-arms*.

Pursy. *a.* [*Fr. poussif, broken-winded, from pousser, to thrust or push, from Lat. pulsare, to push, beat, frequent of pello, pulsum, to push or strike.*] Swollen; inflated; distended; — hence, short, thick, and corpulent.

"A dowager grown fat and *pursy*." — *Hudibras.*

— Hence, by implication, short-winded.

Purulence, Pur'ulency. *n.* [*Lat. purulentia.*] (*Med.*) Pus; the generation of pus or matter.

Purulent. *a.* [*Lat. purulentus, from pus, puris.*] (*Med.*) Consisting, or characterized by the presence of pus or matter; as, a *purulent* ulcer.

Pur'ulently. *adv.* In a purulent manner.

Purvey. (*-vā*), *v. a.* [*Fr. pourvoir; Lat. providere, to foresee — pro, and video, to see.*] To furnish, supply, or provide with necessities, provisions, &c. — To get; to obtain; to procure.

"*Purvey'd* for him each tributary life." — *Thomson.*

—v. n. To provide; to purchase or stock with provisions.

Purveyance. (*-vā'uns*), *n.* [*O. Fr. purveance, providence.*] Act of purveying; procurement of provisions or victuals. — Provisions; victuals or food provided.

Purveyor. (*-vā'ur*), *n.* [*Fr. pourvoyeur.*] A caterer; a victualler; one whose business is to supply provision for the table. — A procurer; a pimp; a bawd; a go-between.

Purview. (*-vū*), *n.* [*O. Fr. pourvere.*] (*Law.*) The body of a legal statute, in contradistinction from the *preamble*. — Hence, scope, limit, or extent of a statute. — Full stretch, scope, or extent of authority.

Purus. *PURU*, or *CUCUVARA*, a river of S. America, rises in Peru, and flowing a general N.E. course into Brazil, joins the Amazons in Lat. 4° S., Lon 61° W. It traverses an almost unexplored region, and at its mouth is almost equal in size to the main stream. *Length*, estimated at 500 m.

Pus. *n.* [*Lat. (Med. and Chem.)*] A bland, yellowish fluid, somewhat like cream, found in abscesses, and formed upon the surface of what are termed *healthy sores*; it is heavier than water, and when viewed under the microscope appears composed of translucent globules floating in a colorless serum. The globules contain fatty matter and cholesterolin. An albuminoid substance has also been found in *P.* called *pyin*, soluble in water, but precipitated by acetic acid and by a solution of alum. Boedecker has announced the presence of leucin and of a peculiar crystallizable acid in *P.*, which he calls *chloridic acid*, and Forbes has obtained a blue compound (*pyocyunin*) from certain purulent secretions which are occasionally met with, and which leave a blue stain on linen.

Pusey, EDWARD BOUVERIE, (*pu'se*), an English divine, born 1800, one of the chief promoters of the High-Church movement in the Church of England, which movement was also called the *Anglo-Catholic* and the *Puseyite* movement. He was educated at Oxford, where, about 1822, he was elected Fellow of Oriel College. In 1833 he commenced the publication of the *Oxford Tracts for the Times*. These tracts, together with his sermons and letters, evinced a desire for the reestablishment of ceremonies and forms which had not been in use in the English Church since the Reformation. He incurred the displeasure of most of his ecclesiastical superiors; but, on the other hand, succeeded in finding a band of strong partisans among the clergy of England. Dr Pusey has written several volumes of sermons, adapted some

R. C. devotional works for the use of the Established Church, and edited the *Anglo-Catholic Library*. D. 1882

Puseyism. (*pū'sy-izm*), *n.* (*Theol.*) See *PUSEY*.

Puseyist *ic*, *a.* Pertaining or relating to Puseyism or Ritualism.

Puseyite. *n.* One who upholds or practices the doctrines or ceremonies of Puseyism; a High-Churchman; a Ritualist. (England.)

Push. *v. a.* [*Fr. pousser, to push, from Lat. pulsare, to push, beat, batter; frequent of pello, pulsum, to push or strike.*] To press against with force; to drive or impel by pressure; or, to endeavor to drive by steady pressure without striking; — antithetical to *draw*. — To butt; to strike with the end of the horns; to thrust the points of horns against. — To importune; to tease; to urge with solicitation. — To press; to drive to a conclusion; as, he *pushed* the question home to him. — To urge; to enforce; to press forward.

To push down, to overturn by force or impulsion.

—v. n. To make a thrust, as with a sword.

"Lambs . . . *push* with their foreheads." — *Addison.*

—To make an effort; as, he is pushing business. — To make an assault or attack. — To burst out, as a bud or shoot.

To push on, to urge forward; to advance with haste.

"The work being *pushed on* by many hands, must go forward." — *Dryden.*

—n. A thrust or prod with a pointed instrument, or with the end of anything. — Impulse, force, or pressure applied. — An attack or assault; a forcible onset; a strong effort.

"One vigorous *push* will force the enemy to cry quarter." — *Addison.*

— Exigency; sudden emergency, trial, or extremity; as, they will fight when matters come to the *push*. — A small pustule, pimple, or eruption.

Push'er. *n.* One who pushes or urges forward.

Push'e'ta, in Ohio, a township of Auglaize co.; *pop.* abt. 1,800.

Push'ing. *a.* Pressing forward in business; enterprising; energetic; active; as, a *pushing* tradesman; — also, officious; intrusive; impudent; forward.

Push'ingly. *adv.* In a vigorous, driving manner.

Push'pin. *n.* A child's play, in which pins are pushed alternately.

Pusillanim'ity. *n.* [*Fr. pusillanimité.*] State or quantity of being pusillanimous; want of that firmness and strength of mind which constitutes courage or fortitude; absence or deficiency of spirit; cowardice; fear; timidity.

Pusillan'imous. *a.* [*Fr. pusillanime, from Lat. pusillus, very little, and animus, the mind.*] Mean-spirited; faint-hearted; timid; cowardly; destitute of that strength and firmness of mind which constitutes courage, bravery, and fortitude; — expressed of persons; as, a *pusillanimous* leader. — Proceeding from weakness of mind or want of courage; as, "fearful and *pusillanimous* counsels." — *Bacon.*

Pusillan'imously. *adv.* In a cowardly or pusillanimous manner.

Pusillan'imousness. *n.* Pusillanimity.

Pus'kin. ALEXANDER SERGEEVITCH, a Russian poet, surnamed the *Russian Byron*, b. in St Petersburg, 1799. While a student, he neglected his studies for poetry, and immediately after quitting the academy he began to exercise his talents in writing verses to liberty; but these political views were unsuited to Russia, and the poet was compelled to accept an appointment at Odessa. Siberia would doubtless have been his destination, had he not brought out, at the same time, a patriotic poem relative to Vladimir, the Charlemagne of his country. In 1822 he produced his *Prisoner of the Caucasus*, which was not as successful as his later works: such as *The Gipsies*, *Onegin*, and *Poltava*. The great popularity of these latter poems led to his recall. He secured the favor of the emperor Nicholas, who appointed him historiographer, with a pension of 6,000 roubles. After this his opinions underwent an almost total change. His last efforts were almost entirely confined to prose composition; but his labors were brought to a sudden and unfortunate termination by his being shot in a duel with an officer. The emperor bestowed a pension upon his widow and family, and ordered a fine edition of the poet's works to be produced at his own expense. D. 1837.

Puss. *n.* [*Ir. and Gael pus, a cat.*] The pet name of a cat — The sportsman's name for a hare.

Pussy. *n.* A diminutive of *puss*, employed as a fondling name for a cat.

Pus'tular. *a.* (*Bot.*) Covered with pustules, or pustule-like prominences.

Pus'tulate. *v. a.* [*From Lat. pustula, a blister, a pimple, a pustule, from pus, pus.*] To form into pustules or blisters.

Pus'tulate, Pus'tulated. *a.* Pustular; covered with pustule-like prominences.

Pustule. (*püst'yul*), *n.* [*Fr.; Lat. pustula, from pus.*] (*Med.*) A small blister, or a small elevation of the cuticle, containing pus. Pustulous eruptions are characteristic of several cutaneous diseases. The most familiar examples of the pustule are seen in small-pox and cow-pox.

Pus'tulous. *a.* [*Lat. pustulosus.*] Pustular; full of pustules; covered with pustules.

Put. *v. a.* (*imp and pp. PUT*) [*Dan. pulte; Sw. and Goth. pytta, to put; perhaps akin to Lat. pono, positum, to put; to place.*] To set, lay, place, bring, or cause to be in any state, condition, station, or situation. — To cause to exist in a given or specified relation; — said of a thing, or of an attribute; to bring to a certain moral or mental condition; as, to *put* in fear; to *put* out of temper; to *put* in mind. — To apply; to set to action or employment; as, to *put* one's hands to work. — To thro-

or introduce suddenly, as a word.—To propose; to offer; to advance; to present; to state; to offer for consideration; as, to *put* a question, to *put* a case.—To urge, to push into action; to incite; to investigate.

"This caution will *put* them upon considering."—Locke.

—To force, to constrain; to compel; to oblige; as, to *put* an adversary to flight.—To cast with the hand raised over the head; as, to *put* the stone. (A Scotticism.)

To *put about*, (Naut.) To change the course of a ship.—To *put away*, to discard; to renounce; as, to *put away* fear; to divorce; as, to *put away* a wife.—To *put back*, to hinder; to obstruct; to delay; to return to the original or starting place; as, to *put a ship back* to port; to set, as the hands of a clock to an earlier hour.—To *put by*, to lay or set aside.—To *put down*, to deposit; to lay down. To *baffle*; to repress; to crush.—To *degrade*; to extinguish; to suppress; to confute.

"Mark, now, how a plain tale shall *put* you down."—Shaks.

To *put forth*, to thrust out; to extend; as, to *put forth* one's hand.—To exert; to bring into action; as, he *put forth* all his strength.—To propose; to suggest; as, to *put forth* a question.—To bring out; to publish; as, to *put forth* a book.

To *put forward*, to promote; to advance to a superior or prominent position. To aid; to assist; to facilitate the progress of. To set, as the hands of a clock, to a later hour.—To *put in*, to interpose; to insert; to cause to intervene among others; as, to *put in* a word in conversation. To take into a port or harbor; as, a ship in distress. (Law.) To lodge among the archives of a court; as, to *put in* a bill of exceptions.—To *put off*, to divert one of; to lay aside; to discard; as, to *put off* clothes, to *put off* ambition.—To delay; to defer; to procrastinate; to postpone; as, to *put off* settling day. To defeat; to thwart; to frustrate; to disappoint; to baffle; as, to *put a person off* with excuses.—To push from shore; as, to *put off* a boat.—To get rid of artfully or fraudulently; as, to *put off* a forged document.—To *put on* or *upon*, to invest one's self with; as, to *put on* clothes. To assume; to take; as, to *put on* airs.

"The duke hath *put on* a religious life."—Shaks.

—To impute to; to charge upon; as, he *put* the blame upon me.—To impose; to inflict; to make amenable for.

"That which thou *puttest* on me, will I bear."—2 Kings xviii. 14.

(Law.) To rest upon; to make submission to; as, a defendant *puts* himself on the country.—To *put out*, to eject; to expel; to drive from; as, to *put out* an interloper. To shoot; to emit, as the shoots of a plant. To extinguish; as, to *put out* a light. To place at interest; as, to *put out* money. To disconcert; to interrupt; to confuse; as, to *put one out* when speaking. To wantonly provoke; to displease. To stretch forth; to extend; to protrude; as, to *put out* the hand. To make public; to cause to circulate abroad; as, to *put out* a manifesto.—(Law.) To open; as, to *put out* lights. (Med.) To dislocate; as, to *put out* the hip-joint.—To *put over*, to prefer; to set in place or authority; as, to *put a guard over* prisoners. To refer; to send.

"I *put* you o'er to heav'n and to my mother."—Shaks.

—To defer; to postpone; as, to *put a case over* for trial.—To *put the hand to*, to take hold of; as, to *put one's hand to* the pen. To take feloniously; as, to *put the hand to* stealing.—To *put to*, to add; as, to *put this money to* that. To refer to; to expose.

"Who dares not *put* it to the touch."—Marquis of Montrose.

To *put to a stand*, to arrest or check by obstacles or differences.—To *put to death*, to kill; to slay.—To *put together*, to unite; to connect; to accumulate into one sum or mass.—To *put to it*, to press hard; to perplex; to distress.—To *put to the sword*, to slay by means of the sword.—To *put to trial* or *on trial*, to try; to bring to a test or crucial experiment.—To *put trust in*, to repose confidence in.—To *put up*, to allow to pass unnoticed or unavenged.

"National injuries are not to be *put up*."—Addison.

—To emit; to cause to germinate, as plants. To expose publicly; as, to *put up* goods for open sale. To hoard; as, to *put up* rent. To preserve, pack, or store for subsequent use; as, to *put up* meat. To incite; to instigate;—preceding to.

Put, v. a. To steer; to conduct; to direct; as, to *put* to sea.—To *put about*, (Naut.) To tack;—said of a ship.—To *put forth*, to germinate; to bud; to shoot, as a plant. To leave a port or harbor, as a ship.—To *put in*, to sail into port; to enter a haven.—To *put in for*, to set forward a claim; as, he *put in for* a moiety of the spoil.—To *put in for*, to stand as a candidate for.—To *put off*, to leave the shore, as a ship or boat.—To *put on*, to accelerate motion; as, to *put on* a full head of steam.—To *put over*, to sail over or across.

"Sir Francis Drake *put over* to Carthage, and took it."—Abbot.

To *put to sea*, to set sail; to commence a voyage.—To *put up*, to take lodgings; to seek entertainment; as, I *put up* at a hotel. To bring one's self forward as a candidate; as, he *put up* for London at the last election.—To *put up with*, to allow to pass without resentment or punishment; as, to *put up with* an affront. To accept without opposition or open remonstrance; as, to *put up with* bad cooking.

Put, n. An action of distress.

"The stag's was a forced *put*."—L'Estrange.

[Lat. *putus*, a boy.] A rustic; a bumpkin; a clown; as, a country *put*.—A game of cards, played in some parts of England.

Put'age, n. [O. Fr.] (Law.) Female prostitution.

Put'ah Creek, in California, rises in Lake Co., and flowing S.E. enters the Sacramento River between Solano and Yolo cos.

Put'a'men, n. [Lat.] (Bot.) The shell of a nut; the stone of a drupe fruit; an eudocarpium.

Put'anism, n. [It *puttana*, a prostitute.] Habitual prostitution on the part of a female.

Put'a River, in California, rises in Napa co., and flowing E. through Berryssa Valley, loses its waters in the Tule Marshes.

Put'a'tive, a [Fr. *putatif*; late Lat. *putativus*, from Lat. *puto*, to deem.] Reputed; supposed; presumed; commonly thought or deemed; as, the *putative* father of a child.

Put'chock, **Put'chuck**, **Put'chuk**, n. An aromatic Indian root, used in China for burning, as incense.

Put'eal, n. [From Lat. *puteas*, well.] (Arch.) The inclosure surrounding the opening of a well, to protect persons from falling into it.

Put'iol, (*put'iol*), a town of European Russia, gov't. of Kursk, on the Sem. 100 m. W.S.W. of Kursk; pop. 10,000.

Put'log, n. (Arch.) A piece of timber about 7 feet long, used in building scaffolds, lying at right angles to the walls, with one of its ends resting upon it, and the other upon the poles which lie parallel to the side of the wall of the building.

Putlog holes, small holes left in walls for the use of the workmen in erecting scaffolding.

Put'nam, ISRAEL, an American general in the Revolutionary War, b. at Danvers (then part of Salem), Mass., 1718. He was destined to the occupation of a farmer, and continued in that avocation till the French and Indian war broke out, when, at the age of 36, he took service in the English army, and from his known courage and energy, received the command of a company of light troops, or "rangers," at the head of which he performed prodigies of valor during ten years. When the dispute between his country and England commenced, he was following the quiet life of a farmer and tavern-keeper; but the first blood that was shed roused all his fiery energy. He was created major-general by Congress; and at Bunker's Hill, New York, and during Washington's retreat through New Jersey, he showed himself one of the bravest and most devoted of the patriot leaders. But in 1779 he was stricken with paralysis, and was prevented from participating in the final triumphs of the national cause. His character is well depicted by the inscription upon his tomb: "He dared to lead where any dared to follow." D. 1790.

Put'nam, RUFUS, an American brigadier-general, b. in Sutton, Mass., 1738, was one of the pioneer settlers of the State of Ohio, and in 1788 founded the city of Marietta, the first permanent settlement made in Ohio. D. 1824.

Put'nam, in Connecticut, a post-village and township of Windham county, about 34 miles north-east of Norwich.

Putnam, in Florida, a N.E. co.; area, about 776 sq. m. Rivers, St. John and Ocklawha rivers. Surface, low and level, consisting chiefly of marshy plains; soil, not fertile. Cap. Palatka. Pop. (1897) 11,530.

Putnam, in Georgia, a S. central co.; area, about 335 sq. m. Rivers, Oconee and Little rivers, and Indian and Choctaw creeks. Surface, diversified; soil, not very fertile. Min. Copper and iron. Cap. Eatonton. Pop. (1897) 15,240.

Putnam, in Illinois, a N. central co.; area, about 170 sq. m. River, Illinois river. Surface, nearly level; soil, very fertile. Min. Stone-coal. Cap. Hennepin. Pop. (1897) 5,250.

Putnam, in Indiana, a W. central co.; area, about 490 sq. m. River, El river. Surface, level or gently undulating; soil, very fertile, and well adapted to grass or cereals. Large quantities of wool are annually produced. Min. Limestone of superior quality. Cap. Greencastle. Pop. (1897) 24,010.

Putnam, in Iowa, a village and township of Fayette co., about 35 m. N. of Independence.

Putnam, in Kansas, a township of Anderson co.

Putnam, in Michigan, a township of Livingston co.

Putnam, in Missouri, a N. co., adjoining Iowa; area, about 542 sq. m. Rivers, Chariton river, East Fork of Grand river, and Locust and Shoal creeks. Surface, mostly level; soil, fertile. Cap. Unionville. Pop. (1897) 16,485.

Putnam, in New York, a S.E. co., adjoining Connecticut; area, about 241 sq. m. Rivers, Hudson and Croton rivers, and Peekskill creek. Surface, uneven and hilly; soil, generally fertile. Min. Iron ore of good quality, also plumbago, sulphur and iron pyrites. Cap. Carmel. Pop. (1897) 15,330.

—A post-township of Washington co.

Putnam, in Ohio, a N.W. co.; area, about 480 sq. m. Rivers, Anglaize and Ottawa rivers, and Blanchard's Fork. Surface, mostly level, consisting for a large portion in the Black Swamp; soil, generally very fertile. Cap. Ottawa. Pop. (1897) 33,330.

Putnam, in Tennessee, a N.E. central co.; area, about 430 sq. m. Rivers, Several affluents of the Cumberland river. Surface, uneven; soil, generally fertile. Cap. Cookeville. Pop. (1897) 16,550.

Putnam, in West Virginia, a W. co.; area, about 350 sq. m. River, Kanawha river. Surface, diversified;

soil, generally fertile. Cap. Winfield. Pop. (1897) 15,100.

Put'nam Valley, in New York, a post-town and township of Putnam co.

Put'namville, in Indiana, a post-town of Putnam co., about 40 m. W.S.W. of Indianapolis.

Putnamville, in Missouri, a village of Putnam co., about 150 m. N.N.W. of Jefferson City.

Put'ney, in Vermont, a post-township of Windham co. It has slate quarries.

Put'off, n. An evasion; a shift for avoidance or delay.

Putred'inous, a. [From Lat. *putredo*, rottenness.] Stinking; partaking of the qualities of putrefaction.

Putrefac'tion, n. [Fr., from Lat. *putrefactio*.] (Chem.) All organic bodies when life ceases, if no effort to preserve them be made, begin to decompose with a rapidity that varies with the quantity of nitrogen they contain; P., as this process is called, being accompanied by an offensive smell, and attended by the formation of ammonia or of ammoniacal compounds. Carburetted hydrogen and various other compounds also appear. The process of P. can be checked by means of cold, salt, sugar, spices, &c., and by other methods. P. was long supposed to be due to ordinary chemical change arising from the instability and affinity for oxygen of the organic matter. It is now known to be a result of the vital processes of certain very minute plants called Bacteria (q. v.), to which is due also Fermentation (q. v.). These plants are almost everywhere present, and attack all organic matter not preserved by its vital activity. They can be killed, however, by boiling an organic infusion, and if this be then kept in an airtight vessel, or if the bacterial spores or germs be kept out by a plug of cotton-wool, the substance will remain unchanged for years. A low temperature stops the action of the bacteria though it does not kill them, and there are various acids which check their growth. Drying soon kills the developed plant, but the spores will live long in a dried condition.

Putrefac'tive, a. [Sp. *putrefactivo*.] Pertaining to, or causing, or tending to promote putrefaction.

Putrefac'tiveness, n. State or quality of being putrefactive; rottenness.

Put'refy, v. a. [Fr. *putrifier*; Lat. *putrefacio*—*puter*, *putris*, rotten (from the root of *pus*), and *facio*, to make.] To render putrid; to cause to be decomposed; to cause to rot, or to become rotten; to disorganize and cause to pass into a state in which the constituent elements are newly arranged, forming new compounds, as animal or vegetable bodies.—To *putrefy*, to corrupt; to make foul or stinking.—To make morbid, carious, or gangrenous; as, to *putrefy* a wound.

—v. n. To become rotten or putrid; to dissolve by spontaneous decomposition; to have the constituent elements newly arranged, forming new compounds; to rot.

Putrescence, (-es'sens,) n. The state of becoming putrescent or rotten; a putrid state.

Putrescent, (-es'sent,) a. [Lat. *putrescens*—*putresco*—*putreo*, to rot, from *puter*, *putris*, rotten.] Growing rotten or putrid; passing from an organized state into another state, in which the elements are newly arranged.—Pertaining or having reference to the process of putrefaction as, a *putrescent* smell.

Putrescible, (-es'si-bl,) a. Liable to become putrid or rotten.

—n. A nitrogenized body, susceptible of decomposition in certain temperatures, when exposed to air or moisture.

Put'rid, a. [Fr. *putride*; It. *putrido*; Lat. *putridus*, from *putreo*, to rot.] Rotten; decayed; corrupt; stinking; decomposed; indicating a state of dissolution; tending to disorganize the substances composing the body;—said of animal and vegetable matter; as, *putrid* flesh.—Proceeding from, or pertaining to, putrefaction; as, a *putrid* scent.

P. Fever. (Med.) Typhus or spotted fever. See TYPHUS.

Putrid'ity, **Putrid'ness**, n. [Fr. *putridité*.] State or quality of being putrid; corruption; rottenness.

Putrification, n. State or condition of being or becoming putrified.

Put'rilage, n. (Med.) The slough formed in ulcers and thrown off.

Put'ter, n. One who puts, sets, or places.—One who pushes the wagons used in coal-mines.

Put'ter, v. n. Same as POTTER, q. v.

Put'ter-on, n. An inciter; an instigator; a prompter.

"You are abus'd, and by some *putter-on*."—Shaks.

Put'ting, n. The casting of a heavy stone, with the hand raised above the head;—a favorite diversion among the Scots Highlanders.

Put'ting-stone, n. In Scotland, a heavy stone used in the game of putting.

Put'tock, n. An English provincialism for the common buzzard.

Puttun, (*putt-toon*), a town of India, territory of Baroda Manuf. Silks, cottons, pottery, swords, &c. Pop. 30,000.

Put'ty, n. [Fr. *potée*, perhaps from Gr. *spodos*, wood-ashes.] A kind of paste or cement, compounded originally of wood-ashes, now of whiting and linseed oil, beaten or kneaded to the consistence of dough, used in fastening glass in sashes, and in stopping crevices.

Putty powder. An oxide of lead and tin reduced to powder, and used in polishing glass, stones, metals, &c.—v. a. To cement with putty; to fill up with putty.

Put'ty-faced, n. White-faced;—used contemptuously or derisively.

Put'ty-root, n. (Bot.) See ADAM-AND-EVE.

Putuma'yo, or Iça, a river of S. America, rises in the North-Eastern Andes, in the U. States of Colombia, and flowing a general E.S.E. course through Ecuador into Brazil, joins the Amazons at San Antonio.

Puy-de-Dôme, a dept. in the S.E. of France, com-

Fig. 2189. — GEN. I. PUTNAM.

Israel Putnam

1718-1790

prising part of the anc. prov. of Auvergne, and having N. Allier, E. Loire, S. Cantal and Haute-Loire, and W. Corrèze and Creuse; area, 3,070 sq. m. The surface is generally mountainous, and the soil dry and stony, except in the fertile valley of Limagne. Rivers, Allier, Dore, Sioule, Couze, Durelle, and Dordogne. Prod. Grain, hemp, fruit, and wine. Cattle and sheep are extensively raised. Min. Silver, lead, coal, alum, antimony, and marble. Manuf. Linens, woollens, and paper. Cap. Clermont-Ferrand. Pop. 571,690.

Pyralaurens, (*pyre-lo-rang*), a town of France, dept. of Tarn, 13 m. S.E. of Lavaur; pop. 6,200.

Puy, (*luy*), a town of France, cap. of the dept. of Haute-Loire, on the Loire, 65 m. S.W. of Lyons. It is built on the S. slope of Mount Anis, surmounted by the rock called *De Cornille*. Manuf. Blankets, linen, lace, silk, and stoneware.

Puzzle, *pū'z'l*, *v. a.*, (dimin. of *pose*.) To pose; to non-plus; to embarrass; to bewilder; to perplex; to involve in perplexity; to put to a stand; to gravel. — To entangle; to make intricate or complex.

"Puzzled in mazes, and perplex'd with error." — Addison.

—*v. n.* To be bewildered; to be awkward; as, "a puzzling fool." — *L'Estrange*.

—*n.* State or condition of being puzzled; perplexity; embarrassment; as, his mind is in a puzzle. — A toy or contrivance adapted to task or test the ingenuity.

Puzzle-headed, *a.* Having the brain full of complicated, hazy, or confused notions.

Puzzler, *n.* He who, or that which, puzzles or perplexes.

Puzzlingly, *adv.* In a puzzling, intricate manner; with perplexity.

Puzzolan, **Puzzolana**, *n.* See POZZOLANA.

Puzzuoli, or **Pozzuoli**, (*pot-soo-o'lee*), (anc. *Puteoli*), a town of Italy, on the Bay of Pozzuoli, 7 m. S.W. of Naples. It was in ancient times a town of great importance, and a favorite resort for the wealthy Romans. Near it are the Solfatara, Lake Avernus, and the Grotto del Cane. Near it also are the ruins of a temple of Jupiter Serapis (Fig. 2190) which affords to geologists a

Fig. 2190. — TEMPLE OF JUPITER SERAPIS AT PUZZUOLI.

striking example of the frequent changes of level on the earth's surface. The three columns that are now standing bear evidence that they were once for a considerable time submerged to half their height. The lower twelve feet are smooth; for nine feet above this they are penetrated by lithodomons or boring shells, and remains of the shells (a species now living in the Mediterranean) were found in the holes. The columns, when submerged, were consequently buried in the mud of the bottom for twelve feet, and were then in water nine feet deep. The pavement of the temple is now submerged; but it has been recently stated that for some time previous to 1845 a slow sinking had been going on, and since then there has been as gradual a rising.

Pycnite, *n.* [Gr. *pyknos*, dense.] (*Min.*) Schorlons topaz, a dull variety of topaz, which is translucent, and of a dull-yellowish or red-lash-white color. It is a silicate of alumina, with 1-7th of the oxygen replaced by fluorine.

Pycnodontes, *n. pl.* [Gr. *pyknos*, and *odontos*, tooth.] (*Pis.*) A family of lepidogeanoid fishes, found from the carboniferous to the earlier tertiary periods.

Pycnostyle, *n.* [Fr. from Gr. *pyknos*, thick, close, and *stylos*, pillar.] (*Arch.*) That arrangement of Greek or Roman columns, in which the intercolumniations are equal to one diameter and a half of the lower part of the shaft.

Pygargy, **Pygar'gus**, *n.* [Gr. *pygō*, the rump, and *argos*, white.] A quadruped with white buttocks. *Deut.* xiv. 5.

Pygmean, **Pyg'my**, *n.* Pertaining to, or resembling a pygmy; dwarfish; elfish.

Pygmy, **Pig'my**, *n.* [Fr. *pygmée*; Lat. *pygmaeus*.] (*Myth.*) A fabulous race of dwarfish human beings, who, according to Homer, were dwelling somewhere near the shores of the ocean stream, and maintained perpetual wars with the cranes.

—Hence, a very small, insignificant person; a dwarf.

(*Zoöl.*) The chimpanzee, *Simia troglodytes*.

Pyla'des, (*Ancient Greek*.) The son of King Strophius, and nephew of Agameunon, celebrated as the friend of Orestes, and married his sister Electra. See IPHIGENIA.

Pyloric, *a.* [Fr. *pylorique*.] (*Anat.*) Belonging, or relating to the pylorus; as, the pyloric artery.

Pylorus, *n.*; *pl.* PYLORI. (Gr. *pyloros*, from *pyle*, a gate.) (*Anat.*) The lower orifice of the stomach, or the gatekeeper, as it is called (Fig. 218). That aperture by which the digested food or chyme, passes from the stomach into the duodenum.

Pyogen'ic, *a.* [Gr. *pyon*, pus, and *gencin*, to produce.] Producing pus.

Pyoid, *a.* [Gr. *pyon*, pus, and *eidos*, form.] (*Med.*) Pertaining to, or resembling pus.

Pyralis, *n.*; *pl.* PYRALIDÆ. (*Zoöl.*) A genus and family of lepidopterous insects, comprising those called Delta-moths, because of their triangular form when the wings are closed (Fig. 538). The typical genus, *Pyralis*, contains the Meal-moth, *P. farinalis*, which expands about one inch, the fore-wings light-brown, crossed by two curved, white lines, and there is a dark, chocolate-brown spot on the base and tip. The caterpillar is found in old flour-barrels.

Pyralolite, *n.* [Gr. *pyr*, fire, *allos*, other, and *lithos*, stone.] (*Min.*) An altered form of augite, in which magnesia takes the place of lime.

Pyrame, (*pē-ram'*) *n.* [Fr.] A small kind of water-spaniel.

Pyramid, *n.* [Fr. *pyramide*; Lat. *pyramis*; Gr. *pyramis*, *pyramidos*, derived by the ancients from Gr. *pyr*, fire, but probably an Egyptian word.] A solid body, standing on a triangular square or polygonal base, and terminating in a point at the top.

(*Geom.*) A solid body whose base is a polygon, and whose sides are plane triangles, their several points meeting in one common vertex.

(*Arch.*) A term applied to elevated mounds of stone or brickwork, corresponding in form to the geometrical definition of the solid. The most remarkable structures of this kind are the colossal *P.* erected by the ancient Egyptians in the plain of Gizeh. In the opinion of Herodotus, the pyramidal form was looked upon by the Egyptian people as emblematical of human life. The beginning was signified by the broad base, and its termination by the point, or the end of our earthly existence. The exact derivation of the name is hid in considerable obscurity. *P.* are to be found among the Egyptians, Babylonians, Indians, and Mexicans. The Egyptian *P.* are sloped or symmetrical mounds placed over the graves or sepulchres of the monarchs and other great personages of the earliest Egyptian dynasties. After the twelve dynasties, the use of *P.* was discontinued. The *P.* are situated in the vast plain or cemetery lying between Dagshoor, and extending by Saklara and Memphis, almost to 30° N. Lat.; they are supposed to be sixty-nine in number altogether. As before stated, the most remarkable of these are the *P.* of Gizeh, not far from Cairo. The largest of these is said by Herodotus to have been built by Cheops (Fig. 2191). He also states that another *P.*, close by, covers the remains of Cyphrenes, his brother. According to that ancient writer, 100,000 men labored, without interruption, for 20 years in building this enormous mound. The sides of its base, which are in a line with the four cardinal points, measure at the foundation 7634 feet; so that it occupies a space of more than 13 acres. Its perpendicular height is 480 feet, being, consequently, 43 feet higher than St. Peter's at Rome, and 136 feet higher than St. Paul's. Supposing this pyramid to be entirely solid, its contents would exceed three millions of cubic yards, and the mass of stone contained in it would be six times as great as that contained in the Delaware breakwater! This huge fabric consists of successive tiers of vast blocks of calcareous stones, rising above each other in the form of steps. The thickness of the stones, which is identical with the height of the steps, decreases as the

Fig. 2191. — PYRAMID OF CHEOPS.

altitude of the *P.* increases, the greatest height being 4,628 feet, and the least 1,686 feet. The mean breadth of the steps is about 1 foot 9 inches. The best authorities agree in estimating the number of steps or tiers of stone at 203. It is generally agreed that the pyramids of the Gizeh group are all of the age of the fourth dynasty, that is, older than 2000 B. C. All the Egyptian *P.* are constructed in a uniform manner. A rectangular sepulchral chamber was first hollowed in the rock, with a passage sufficiently large to admit the sarcophagus, communicating with the surface. A cubical course of masonry was erected over this, which served as a

nucleus for the *P.* If the king died during the year, the masonry was covered with a polished casing in the shape of a small *P.*; if the king survived a year, another course of masonry was added to the height of the nucleus, and the length of the base increased by courses of stones on each side. As long as the king lived, additions on the same plan were made every year. When the king died, this ceased; the edifice was closed by filling up the angles of the masonry with smaller stones, placing oblong blocks one upon the other, so as to make a series of steps from the base to the top. A smooth surface was then given to each side of the *P.*, rendering it a perfect triangle, while, owing to each stone overlapping the other, no vertical joint was left. Among the principal groups of *P.*, besides those at Gizeh, are others of less magnitude at Abousir, Saklara, and Dashour. In Mexico there are some singular monuments of the ancient inhabitants of a pyramidal form; they are called *Teocallis*. (See MEXICAN ANTIQUITIES.) Near Benares, and other places in the E. Indies, there are temples of a pyramidal form. They are said to be copies of the sacred Mount Meru, and are called *Meru Sringas*, or "Peaks of Meru." Pyramidal temples have also been found in Java.

Altitude of a pyramid, the perpendicular distance from the vertex to the plane of the base. — **Axis of a pyramid**, (*Geom.*) A straight line drawn from the vertex to the centre of the base. — **Right pyramid**, a pyramid whose axis is perpendicular to the base.

Pyramidal, *a.* [Fr. *pyramidal*.] Formed like a pyramid; relating to a pyramid; tapering to a point; as, a pyramidal obelisk. — Relating or pertaining to the Pyramids.

Pyramidally, *adv.* Like a pyramid; in the form of a pyramid.

Pyramid'ic, **Pyramid'ical**, *a.* Having the form of, or relating to, a pyramid; as, a pyramidal rock.

Pyramidic'ally, *adv.* In a pyramidal manner.

Pyramid'icalness, *n.* State or condition of being pyramidal.

Pyramid Lake, in Nevada, a considerable sheet of water in Washoe co. It covers an area of abt. 420 sq. m., and receives its name from a pyramidal-shaped rock 600 feet high, which forms an island near its N. shore.

Pyramidoid, **Pyramid'**, *n.* [Gr. *pyramis*, and *eidos*, form.] A solid having the form of a pyramid.

Pyramus, (*Myth.*) A Babylonian youth, who became enamored of Thisbe, a beautiful virgin. Their affection was mutual, and the lovers, whom their parents forbade to marry, regularly interchanged sentiments through the chink of a wall which separated their houses. They both agreed to elude the vigilance of their friends, and to meet at the tomb of Ninus, under a white mulberry-tree, outside the walls of Babylon. Thisbe came first to the appointed place; but the sudden arrival of a lioness frightened her away, and, as she fled, she dropped her veil, which the lioness found and covered with blood. *P.* soon arrived, and finding Thisbe's veil bloody, concluded that she had been torn to pieces by wild beasts, and stabbed himself. Thisbe, when her fears had vanished, returned from the cave, and at the sight of the dying *P.*, fell upon the sword still reeking with his blood. The tree, as the poets mention, was stained with the blood of the lovers, and ever after bore fruit, but of the color of blood.

Pyragillite, *n.* [Gr. *pyr*, fire, and *argillos*, clay.] A hydrated silicate of alumina, protoxide of iron, magnesia, soda, and potash, found in granite at Helsingfors, in Finland.

Pyre, (*pīr*), *n.* [Lat. *pyra*, from Gr. *pyr*, fire.] A funeral pile; a pile for burning.

Pyrena, *n.* [Gr. *pyrēn*, *pyrēnos*, the stone of fruit.] (*Bot.*) A seed-like nutlet, or stone of a small drupe.

Pyrenean, *a.* [Lat. *pyrenæi*, from Gr. *pyrēnē*.] (*Geog.*) Pertaining, or having reference to the Pyrénées, a range of mountains dividing France from Spain.

Pyrénées, (*pīr'e-nees*), an extensive mountain range in the S. of Europe, dividing France from Spain, and extending almost in a straight line from St. Sebastian, on the Bay of Biscay, to Cape Crenx, on the Mediterranean. Ext. 270 m., with a breadth from 50 to 100 m. From them proceed, under various names, inferior ramifications of mountains along the French territory on the N., and that of Spain on the S. The acclivity of the *P.*, on the side of Spain, is often extremely steep, presenting a continued succession of rugged cliffs, abrupt precipices, and huge masses of naked rock; on that of France, the ascent is generally gradual, and the mountains are more accessible, and of more pleasant aspect; they have a mean altitude of nearly 8,000 feet, which is also the limit of the snow-line. The principal summits are Mount Perdut, which has an elevation of 10,994 feet; the Vignemale, 10,820 feet; and the Peak of Nethon, 11,168 feet. They contain glaciers, as in the Alps; but these masses of permanent ice are much less extensive. In an extent of 250 m., there are necessarily many passes: the total number, including paths for pedestrians, exceeds 50; but the carriage-roads hardly exceed 5; and of these, the most frequented are from Jonquera to Perpignan on the E., and from St. Sebastian to St. Jean de Luz on the W., and at some distance inland, from Pampeluna to St. Jean Pied de Port. The passes in the interior are over very high ground; thus that of Pineda is 8,248 feet above the sea; Gavarnie, 7,654; Lavareze, 7,350; and Tourmalet, 7,143. The principal rivers rising in the Pyrénées are the Adour, Garonne, and Aude, flowing N., and the Slobregat, and numerous affluents of the Ebro, flowing S.

Pyrenees, (*Australian*), a mountain-range of Australia, colony of Victoria, between the Australian Alps and the Grampians.

Pyrénées, (*Basses*), a dept. of the S.W. of France,

comprising the anc. provs. of Bearn and Navarre, having N. the dept. of Landes; E. Pyrénées Hautes; S. the Pyrenees; and W. the Pyrenees and the Bay of Biscay. Area, 3,000 sq. m. The surface is diversified, and the soil very fertile in the valleys. Rivers. Bidouze, Nivelle, the Gave d'Oloron, and the Gave de Pau. Prod. Rye, oats, barley, millet, hemp, and flax; numerous cattle, horses and sheep are raised, and large quantities of excellent wines. Min. Copper, iron, sulphur, marble, alabaster, &c. Mineral springs are numerous, the most important of which are Biarritz, Cambo, Eaux-Bonnes, and Eaux-Chaudes. Chief town. Pau. Pop. 435,486.

Pyrénées, (Hautes), a dept. in the S.W. of France, comprises a part of the former prov. of Gascony, having N. Gers; E. Haute Garonne; S. the Pyrenees; and W. Pyrénées Basses. Area, 1,800 sq. m. The surface is mountainous, and the soil indifferent, though very fertile in the valleys. Rivers. Garonne, Larros, Neste, Baise, Save, and Gers. Prod. Principally wine; also cereals and fruit. Min. Copper, iron, zinc, antimony, lead, granite, &c. Chief town. Tarbes. Pop. 240,252.

Pyrénées Orientales, a maritime dept. in the S. of France, comprising the former provs. of Roussillon, Cerdagne, and part of Languedoc, and having N. the depts. Aude and Ariège; E. the Mediterranean; and S. and W. the Pyrenees. Area, 1,583 sq. m. The surface is diversified, the soil generally fertile, and the climate mild. Rivers. Tet, Gly, and Techs. Prod. The usual cerealia, and fruits. Wines constitute its principal wealth. Chief town. Perpignan. Pop. 189,490.

Pyrethrum, n. [Gr. *pyrethron*, feverfew.] (Bot.) A genus of plants, order *Asteraceæ*. The popular species is *P. parthenium*, the Feverfew, so called from being a domestic remedy in slight fevers. It possesses bitter tonic properties. Several varieties, notwithstanding their strong and not very agreeable odor, are cultivated, and are in great favor with many florists, on account of their fine pyramidal form, surmounted with a corymb of pure white, double flowers, which retain their beauty for several weeks.

Pyretics, n. sing. [Fr. *pyretique*, from Gr. *pyretos*, burning heat.] (Med.) A remedy for fever.

Pyretology, n. [Gr. *pyretos*, fever, and *logos*, treatise.] (Med.) A treatise on the doctrine and cure of fevers.

Pyrexia, n.; pl. PYREXIÆ. [Fr. *pyrexie*, from Gr. *pyretos*, fever.] (Med.) The febrile condition.

Pyrexial, Pyrexical, a. Feverish; relating or pertaining to fever.

Pyrgom, (pîr'gom,) n. [From Gr. *pyrgos*, a tower.] (Min.) A dingy-green variety of sahliite.

Pyrheliometer, n. [Gr. *pyr*, fire, *helios*, sun, and *metron*, measure.] Same as ACTINOMETER, *q. v.*

Pyriform, a. [Lat. *pyrum*, a pear, and *forma*, form.] Pear-shaped.

Pyriticous, (pîr'î-tā-shus,) a. Belonging or relating to pyrites.

Pyrites, (pîr'î-tēz,) n. [Gr. *pyrites*, from *pyr*, fire.] (Min.) The sulphides of iron, copper, cobalt, &c., are termed by mineralogists *pyrites*, from emitting fire when struck forcibly, or from decomposing spontaneously with the production of heat. Used alone, the term is generally applied to the sulphide of iron, or iron pyrites.

Pyritic, Pyritical, Pyritous, a. Pertaining to, consisting of, or resembling pyrites.

Pyritiferous, a. [Lat. *pyrites*, and *ferre*, to bear.] Containing or producing pyrites; as, *pyritiferous ore*.

Pyritize, v. a. [Fr. *pyritiser*.] To convert into pyrites.

Pyritohedron, Pyritoid, n. [Gr. *pyrites*, *eidōs*, form, and *hedra*, base.] The pentagonal dodecahedron, a common form of pyrites.

Pyritology, n. [Gr. *pyrites*, and *logos*, treatise.] A treatise on pyrites.

Pyro, n. [Gr. *pyr*, fire.] (Chem.) The word *pyro* prefixed to any substance signifies that its composition has been altered by the application of heat: thus we have *pyrogallic*, *pyrophosphoric*, *pyromucic*, and an infinite number of other acids produced from the original acids by submitting them to the action of an elevated temperature.

Pyritz, (pe'ritz,) a town of Prussia, in Pomerania, 24 m. S.E. of Stettin. Manuf. Woollen cloth and leather. Pop. 5,500.

Pyrmont, in Ohio, a post-village of Montgomery co., abt. 16 m. W. of Dayton.

Pyroacetic, (-sē'tik,) a. [Fr. *pyroacétique*.] (Chem.) Relating, or pertaining to, or obtained from, acetic acid, when subjected to certain conditions of heat; as, *pyroacetic spirit*.

Pyroacid, (-ās'id,) n. (Chem.) An acid procured by the subjection of another acid to the action of heat.

Pyrochlore, (-klōr,) n. [Gr. *pyr*, fire, and *chlōinos*, greenish-yellow.] (Min.) A compound of columbic and titanitic acid with lanthanum, lime, potash, soda, zirconia, yttria, &c.

Pyrocitric, (-sit'rik,) a. [Fr. *pyrocitrique*.] (Chem.) Belonging to, or obtained from, citric acid, under the application of a certain degree of heat.

Pyrogallic Acid, n. (Chem. and Phot.) An important acid, formed from gallic acid by the action of heat. Gallic acid, or any vegetable extract containing it, is placed in a shallow iron pan, and covered with a cap of bibulous paper, over which a cover of writing-paper is fixed. Heat is applied to the vessel containing the gallic acid, care being taken not to exceed a temperature of 420° Fahr. The pyrogallic acid sublimes, passing through the bibulous paper cap, and condensing on the outside, being prevented from passing away by the writing-paper cover. *P. A.* has but feebly acid properties. — In fact, it is supposed by some chemists to

be a neutral body. It forms, when sublimed, brilliant plates, which are freely soluble in water, alcohol, and ether. The solution has a bitter taste, but does not redden litmus paper. The solution speedily becomes brown from absorbing oxygen from the air, a property so much increased by the addition of free alkali, that a mixture of pyrogallic acid and caustic potash is used for eudiometrical purposes. The principal use of *P. A.* is in photography, as a developing agent in the collodion process.

Pyrogen, n. Electricity. (æ.)

Pyrogenous, (-ōj-,) a. [Fr. *pyrogene*, from Gr. *pyr*, fire, and *gennēin*, to produce.] Igneous; derived from, or produced by, fire.

Pyrola, n. (Bot.) The typical genus of the order *Pyrolaceæ*, *q. v.*

Pyrolacæ, n. (Bot.) The Winter-green family, an order of plants, alliance *Ericales*. DIAG. Half mousetailed flowers, the stamens free and all perfect, loose-skinned seeds, and an embryo at the base of the albumen. They are herbs, or rarely under-shrubs, natives of N. America, Europe, and the N. parts of Asia. They are chiefly remarkable for their tonic, astringent, and diuretic properties. The *Chimaphila umbellata*, the Prince's Pine or Pipsissewa, is found in dry woods in the Northern States. Its fresh leaves are acid, and when applied to the skin act as a rubefacient. The order includes 5 genera and 20 species.

Pyrolatry, n. [Gr. *pyr*, fire, and *latreia*, worship.] Fire-worship.

Pyroelectric, (-lêk'trik,) n. Thermo-electric.

—*a.* Receiving electric polarity when heated.

Pyroelectricity, (-lêk'trîs'tî,) n. Thermo-electricity.

Pyroligneous, Pyroligneous, Pyroligneic, a. [Gr. *pyr*, fire, and Lat. *lignum*, wood.] Generated by the distillation of wood.

Pyroligneous acid, (Chem.) A name formerly given to acetic acid, produced by the dry distillation of wood.

Pyroligneous ether, (Chem.) A name sometimes used for methylic ether.

Pyrologist, n. One learned in pyrology. — An experimenter in the laws of heat.

Pyrology, n. [Fr. *pyrologie*, from Gr. *pyr*, fire, and *logos*, treatise.] A treatise on the natural history or doctrine of heat.

Pyrolsite, n. [Gr. *pyr*, fire, and *lonsein*, to wash.] (Min.) The common black ore of manganese. See MANGANESE.

Pyromancy, n. [Gr. *pyr*, and *manteia*, prophecy.] Divination by fire.

Pyromantic, a. Having reference to pyromancy.

—*n.* A diviner by the agency of fire.

Pyrometer, n. [Gr. *pyr*, fire, and *metron*, measure.] (Chem.) A name given to instruments for measuring temperatures so high that mercurial thermometers could not be used. The older contrivances for this purpose, — Wedgewood's, Daniell's, Brongniart's, Ericsson's etc., — are almost gone out of use. None of them give an exact measure of temperature. The arrangements now are either based on the expansion of gases and vapors, or on the electrical properties of bodies.

Pyrometric, Pyrometrical, a. Pertaining to, or obtained by means of, a pyrometer.

Pyrometry, n. Act, art, or process of determining the expansion of bodies by heat.

Pyromorphite, (-fîl,) n. [Gr. *pyr*, fire, and *morphê*, shape.] (Min.) A native chloro-phosphate of lead. When heated before the blowpipe, it fuses into a globule, and the name has reference to the polyhedral crystalline form which such a globule assumes in cooling.

Pyromorphous, (-môr'fus,) a. (Min.) Possessing the property of crystallization by the action of fire.

Pyromonics, n. sing. The science of heat.

Pyrope, n. [Fr.; Lat. *pyropus*; Gr. *pyr*, pyros, fire, and *ops*, the eye.] (Min.) Precious Garnet. A dark variety of garnet seldom found crystallized, but generally in rounded or angular grains. This stone, which is of a full crimson-red color, approaching to that of a ripe mulberry, is much used in jewelry. Sometimes it is called *fire-garnet*, from the resemblance of its hue, when held between the eye and the light, to that of a burning coal. It is procured chiefly from Bohemia, Saxony, and Ceylon.

Pyrophane, n. (Min.) A variety of semi-opal which becomes transparent on being heated.

Pyrophaneous, (-rôf'a-nus,) a. [Gr. *pyr*, and *phanōs*, bright.] Made diaphanous by heat.

Pyrophoric, Pyrophorous, a. [Gr. *pyr*, and *phoros*, bearing.] Pertaining or relating to, or having the characteristics of pyrophorus.

Pyrophorus, (pî-rôf'o-rus,) n. [Lat., from Gr. *pyr*, and *phero*, I bear.] (Chem.) A substance which spontaneously takes fire when exposed to air. An excellent *P.* is afforded by heating tartrate of lead red-hot in a glass tube, in which it may afterwards be hermetically sealed. When the tube is broken, and the black powder within it shaken out through the air, it burns with the emission of a dense smoke of oxide of lead. The spontaneous inflammability of this *P.* is probably due to minutely divided lead.

Pyrophyllite, (-rôf'il-lîl,) n. [Gr. *pyr*, pyros, fire, and *phyllon*, leaf.] (Min.) A hydrated silicate of alumina, of a white or a pale-green color.

Pyrrhotite, n. (Min.) An impure orthite containing bitumen.

Pyroscope, n. [Fr., from Gr. *pyr*, fire, and *skopein*, to view.] An instrument for measuring the intensity of heat radiating from a fire, being a kind of differential thermometer.

Pyrosis, n. [Gr., an inflammation.] (Med.) The WATER-BRASH, *q. v.*

Pyrosmalite, n. [Gr. *pyr*, pyros, fire, and *osmê*, odor.] (Min.) A native silicate of iron, with chloride of iron, which when heated exhales the odor of chlorine.

Pyrotechnian, (-lêk'-,) n. A pyrotechnist.

Pyrotechnic, Pyrotechnical, (-lêk'nîk,) a. [Fr. *pyrotechnique*; Gr. *pyr*, and *technê*, an art.] Pertaining to pyrotechny, or the art of making fireworks.

Pyrotechnician, (-lêk-nîsh'an,) n. One skilled in the making of fireworks.

Pyrotechnics, n. sing. The art of making fireworks; pyrotechny.

Pyrotechnist, n. One skilled in pyrotechny; a manufacturer of fireworks; a pyrotechnician.

Pyrotechny, (pî-ro-têk'ne,) n. [Gr. *pyr*, fire, *technê*, art.] In its proper sense, this term signifies the science which teaches the management and application of fires. In its more popular sense, however, the word chiefly refers to the art of making fireworks. The principal ingredients used are purified saltpetre, sulphur, and charcoal. Gunpowder is also used in the composition of fireworks. For this purpose it is first ground, or, as it is technically termed, *mealed*. In different fireworks the proportions of the materials differ very much: and great care and precaution are necessary in mixing and working them into a proper state for use. Camphor, alcohol, antimony, and other substances are employed when it is required to produce colored stars. When gold or silver rain is required, brass-dust, steel-dust, sawdust, &c., are used. Steel-filings and cast-iron borings contain carbon, and give a brilliant fire with wavy radiations. Copper-filings give a greenish tint, zinc a fine blue, sulphide of antimony a greenish-blue, with much smoke. Amber affords a yellow fire with colophony and common salt; but the last must be very dry. All the salts of copper tinge the flames green; those of strontian, red; those of caryta, a peculiar green. Lycopodium burns with a magnificent rose-colored flame. It is principally used in theatres to represent lightning. All fireworks are divided into three classes. — those which are let off upon the ground (as *jets of fire* and *revolving wheels*), those which are shot up into the air (as *sky-rockets* and *Roman candles*), and lastly, those which act upon or under water.

Pyrothionide, n. [Gr. *pyr*, pyros, fire, and *othonê*, linen.] (Med.) An oil produced by the combustion of textures of hemp, linen, or cotton in a copper vessel.

Pyrotic, a. [Gr. *pyrōtikos*.] Caustic.

—*n.* A caustic medicine.

Pyroxene, n. [Gr., from *pyr*, fire, and *xenos*, a stranger.] (Min.) Same as AUGITE, *q. v.*

Pyroxenic, a. Containing, or consisting of, pyroxene.

Pyroxyle, n. (Chem.) See PYROXYLINE.

Pyroxylic, (-lîk,) a. [Gr. *pyr*, pyros, fire, and *xylon*, wood.] (Chem.) Obtained from the complete distillation of wood; as, *pyroxylic spirit*.

Pyroxylene, Pyroxyle, n. (Chem.) A substitute compound of explosive character, discovered by Schönbein, and which may be prepared on a small scale as follows: — Dry 1,000 grains of pure nitre at a very moderate heat, place it in a dry retort (Fig. 2192), pour upon it 10 drachms (by measure) of strong sulphuric acid, and distil until 6 drachms of nitric acid have passed over into the receiver. Dry some pure cotton-wool, and weigh out 30 grains of it. Mix 2½ measured drachms of the nitric acid with an equal volume of strong sulphuric acid in a small beaker. Allow the mixture to cool; immerse the cotton wool, pressing it down with

Fig. 2192.

a glass rod; cover the beaker with a glass plate, and set it aside for 15 minutes. Lift the cotton out with a glass rod; throw it into a pint of water, and wash it thoroughly in a stream of water till it no longer tastes acid or reddens blue litmus paper. Dry the cotton by exposure to air at a very moderate heat. No apparent change of form takes place; but a very remarkable chemical alteration ensues. A certain number of equivalents of hydrogen are abstracted, and their place supplied by an equal number of equivalents of peroxide of nitrogen. In fact, $C_{12}H_{20}O_4$ becomes $C_{12}H_{14}O_4(NO_3)_2$. In undergoing this change, the fibre is increased in weight 82 per cent., and acquires new properties. Pyroxylene is specially characterized by its explosibility and solubility in a mixture of ether and alcohol. The former property has caused it to be used in blasting operations, under the name of *gun-cotton*; the latter has rendered it one of the most important materials used by the photographer. Dissolved in a mixture of ether and alcohol, and mixed with a certain proportion of some soluble iodide, it forms ordinary photographic collodion. The preparation of this important material requires attention to so many minute details, which could not be given here, that the reader is referred to Hardwick's *Photographic Manipulation* for a full account of the precautions to be used. Collodion is also

used in surgery to form an artificial skin to excoriated surfaces. For this purpose the following process may be employed:—Take of fuming nitric acid and sulphuric acid, of each 4 fluid ounces. Thoroughly saturate half an ounce of clean carded cotton in the mixed acids, having first allowed them to become cool. Macerate for 12 hours, and then wash the cotton in a stream of running water. This quantity of pyroxyline should be dissolved in 3 parts of ether, to which about 2 ounces of alcohol have been added. If the film formed is too contractile, a few drops of castor-oil should be added.

Pyrrhic, (*pir'rik*), *n.* A military dance of the ancients, performed to the music of the flute.

(*Pros.*) A foot composed of two short syllables.

—*a.* Pertaining or having reference to a military dance of the ancients, named after Pyrrhichus.

(*Pros.*) Belonging to, or consisting of, pyrrhics; as, a pyrrhic verse.

Pyrrhicist, (*pir'ri-sist*), *n.* Among the ancients, a performer of the pyrrhic dance.

Pyrrhite, *n.* [*Gr. pyrrhos*, flame-colored.] (*Min.*) A mineral occurring in minute octahedrons of an orange-yellow color, at Alabaskka in Siberia, and the Azores. It is probably columbate of zirconia, colored by the oxides of iron, uranium, and manganese.

Pyrrho, a celebrated philosopher of Elis, and founder of the sect called Sceptics, or Pyrrhonists, flourished about B. C. 340. He was originally a painter, but afterwards became a disciple of Anaxarchus, whom he accompanied to India in the train of Alexander the Great, and while there obtained a knowledge of the doctrines of the Brahmins, Gymnosophists, Magi, and other eastern sages. On the return of *P.* to Greece, the inhabitants of Elea made him their high-priest, and the Athenians gave him the rights of citizenship. D. B. C. 288. — *P.*'s scepticism was by no means of the thorough-going kind that is usually associated with his name, which is synonymous with absolute and unlimited infidelity. He certainly disbelieved in the possibility of acquiring a scientific knowledge of things; but, like Kant, he appears to have tenaciously maintained the reality of virtue, and the obligations of morality.

Pyrrho'nean, **Pyrrho'nic**, *a.* Belonging or having reference to Pyrrhonism.

Pyrrhonism, (*pir'ro-nizm*), *n.* Perfect scepticism; doubt of everything.

Pyrrhonist, *n.* A universal sceptic.

Pyrrhotine, *n.* (*Min.*) Magnetic iron pyrites. A sulphide of iron composed of 60.5 per cent. of iron and 39.5 sulphur. It generally occurs massive and amorphous, but sometimes crystallized, in irregular and variously modified six-sided prisms. The color, which is bronze-yellow, reddish, or brownish, is liable to become speedily tarnished on exposure to the air.

Pyrrhus, king of Epirus, being obliged, on the murder of his father, to seek safety by flight, found a home, parent, and tutor in Glaucus, king of Illyria, where he remained for several years, till old enough to maintain his own right, and ascended his father's throne, 295 B. C.

Fig. 2193. — PYRRHUS,
(From an ancient bust.)

Having attempted to possess himself of Macedonia, he was defeated in a great battle, and compelled to relinquish his ambitious design. In 281 B. C. he made war on the Romans, having been called to the assistance of the Samnites, and, in a desperate battle fought on the banks of the Syris, in Calabria, totally defeated the Roman army; yet, so dearly was this glory bought, that Pyrrhus exclaimed, "Another such victory will ruin me." After several signal advantages, the Romans at length triumphed, and Pyrrhus, sustaining many disasters, returned to Greece, and, in a subsequent war with the Argives, was killed, by a tile thrown on his head from the roof of a house, as he entered Argos. 273 B. C. Pyrrhus was one of the most illustrious generals of the age in which he lived. The Romans entertained the highest opinion of his military skill, and from him, in fact, they learned much of the art of war. He was fond of glory, and personally brave, even to rashness; but his faults of ambition were counterbalanced by acts of courtesy and benevolence.

Pyrus, *n.* [*Lat.*, a pear-tree.] (*Bot.*) A gen. of trees and shrubs, ord. *Rosaceae*, sub-ord. *Pomaceae*, having a 5-celled fruit, with a cartilaginous endocarp and 2 seeds in each cell. It includes species differing very much in appearance, in foliage, and in almost everything except the characters of the flower and fruit. Our principal orchard-trees belong to this genus. *P. malus* and its varieties produce the different kinds of apples. (See **APPLE**.) *P. communis* (Fig. 2194) and its varieties produce the different kinds of pears. The Romans cultivated thirty-six varieties of pears, and at the present time there are many hundreds. The Jargonelles, Bergamots, Chaumontelles, and other choice sorts, are delicious dessert-

fruits. The varieties of pear differ much in hardness and in fitness for particular soils; although a deep, moderately strong, dry loamy soil is the best for this fruit. Pears succeed well as espaliers. They are generally grafted on seedling stocks of the wild pear, but sometimes on the rowan, and sometimes on the quince.

Fig. 2194. — PEAR, (*Pyrus communis*.)

Pears grafted on quince stocks are the best for shallow soils. The flowers and fruit of the pear are mostly produced on spurs, which spring from branches of more than one year old. Various modes of training and pruning are practised for pear-trees. Among the varieties of pears are some which ripen early in autumn, and some which do not ripen till the beginning of winter, and which even require to be mellowed by keeping for a short time; while some of the kinds cannot easily be kept for more than a few days. In general, pears cannot be kept so long nor so easily as apples. Pears are sometimes made into a preserve with syrup, and sometimes cut into pieces, and dried in the sun or in an oven, to be afterwards used in pies, a practice very prevalent in France. A very agreeable fermented liquor, called *Perry*, is made from pears in the same manner as cider from apples. The wood of the pear-tree is often used instead of boxwood for the coarser wood-engravings. *P. aucuparia* is the Mountain-ash, or Rowan-tree; *P. aria* is the Beam-tree, the timber of which is used for axletrees and other purposes; *P. domestica* is the Service-tree, and *P. torminalis* the Wild Service-tree.

Pyrrula, *n.* (*Zoöl.*) A common and numerous gen. of Mollusca, family *Muricidae*, chiefly found in the Indian Ocean, Red Sea, and Atlantic Ocean. The shell (Fig. 2195) is large, and pear- or fig-shaped; the spire short, and sometimes flattened; aperture wide, terminating in a long, open canal; outer lip thin; columella smooth; operculum horny.

Pyrrularia, *n.* (*Bot.*)

A genus of plants, order *Santalaceae*, including the Oil-nut, *P. oleifera*, a shrub 4-6 feet high, found in the Middle States, on the margins of mountain streams.

Pythagoras, the celebrated Greek philosopher, was B. in Samos, probably about B. C. 580-570. So many legends have gathered about his history, that it is almost impossible to trace its details. He was the son of Mnesarchus, and, perhaps, a disciple of Pherecydes. He is said to have travelled extensively, especially in Egypt, and to have been initiated in the most ancient Greek mysteries. He attached great importance to mathematical studies, and is believed to have made several important discoveries in geometry, music, and astronomy. Aversion to the tyranny of Polycrates, in Samos, is said to have been the cause of his quitting that island after his return from the East; and he ultimately settled, between B. C. 540-530, at Crotona, one of the Greek cities of South Italy. There he set himself to carry out the purpose, probably formed long before, of instituting a society through which he might, to some extent, give embodiment and practical shape to his ideas. It was, says Thirlwall, at once a philosophical school, a religious brotherhood, and a political association, and was composed of young men of the noblest families, not exceeding 300 in number. *P.* himself was the chief, or general, of the order. The doctrines he taught, the discipline and observance he established, and the ultimate objects of the society, are wrapped in mystery. Similar societies were founded in other cities of Italy, and

through all of them *P.* exerted a considerable influence on political affairs, and especially in opposition to democratic and revolutionary movements. This became at length the occasion of a popular rising against the Pythagoreans at Crotona, B. C. 504, — the house in which they were assembled was burned, many perished, and the rest were exiled. Similar tumults, with similar results, took place in other cities, and *P.* himself is believed to have D. soon after, at Metapontum. Among the doctrines of this extraordinary man are the following: that numbers are the principles of all things; that the universe is a harmonious whole (*kosmos*), the heavenly bodies by their motion causing sounds (*music of the spheres*); that the soul is immortal, and passes successively into many bodies (*metempsychosis*); and that the highest aim and blessedness of man is likeness to the Deity. He was regarded with the highest veneration as a superhuman being, and a favorite of heaven, and he probably encouraged such belief. And so far as respects his aim to train his followers to a wise, noble, rational, and religious life, it is evident that he was successful, and his influence on some of the greatest philosophers of later times was very great. He left no written account of his doctrines; they were first committed to writing by Philolaus. *P.* is said to have been the first who took the title of *philosopher*, and the first who applied the term *kosmos* to the universe. He shares with Thales and Xenophanes the high distinction of starting the problem of physical science; the study and interpretation of nature as an object governed by unchanging laws, instead of a variety of personal agencies, as conceived by the religious faith of earlier generations.

Pythagorean, *n.* A follower of Pythagoras, *q. v.*

—*a.* Belonging to the philosophy indoctrinated by Pythagoras.

Pythagoric, **Pythagorical**, *a.* Same as **PYTHAGOREAN**.

Pythagorism, *n.* The doctrines of the school of Pythagoras.

Pythagorize, *v. a.* [*Gr. pythagorizein*.] To speculate after the philosophical manner of Pythagoras.

Pythia, *n.* The name of a priestess of the Delphic oracle of Apollo.

Pythiad, *n.* (*Gr. Hist.*) The intervening period between one celebration of the Pythian games and the next.

Pythian Games, (*Greek Antiq.*) One of the four great national festivals of Greece, celebrated every fifth year in honor of Apollo, near Delphi. The contests were the same as those at Olympia, and the victors were rewarded with apples and garlands of laurel.

Pythias, (**Knights of**), *n. pl.* A secret society largely ramified throughout the U. States, and bearing some resemblance to the Odd-Fellows.

Pythion, (*Myth.*) The name of the dragon slain by Apollo.

(*Zoöl.*) A genus of serpents of the family *Boidae*, *q. v.*, differing from the true boas in having the plates on the under surface of the tail double. The tip of the muzzle is plated; the lips are grooved. The species are all natives of the Old World. They are all large; some of

Fig. 2196.

PYTHON, OR ROCK-SNAKE, (*Hortulia natalensis*.)

them very large, and rivalled in size by no serpents except the boas of America. This name is given to some species which belong to the genus or sub-genus *Hortulia*, one of which, the Natal Rock-Snake, *H. natalensis* (Fig. 2196), is said to attain so large a size that its body is as thick as that of a man.

Pythones, *n.* [From *Gr. pythōn*, older form of *pythō*, also the oldest name of Delphi.] The priestess of Apollo who gave oracular answers at Delphi, in Greece. — Hence, by analogy, any female supposed to possess a spirit of divination.

Pythonic, *a.* [*Gr. pythonikos*.] Pretending to divination of future events.

Pythouism, *n.* The art of prognosticating future events by sorcery or divination.

Pythouist, *n.* A conjurer; a necromancer.

Pyx, (*piks*), *n.* [*Lat. pyxis*.] (*Ecol.*) In the Roman Catholic Church, the name given to the box in which the host is kept.

(*Naut.*) The box or binnacle in which a ship's compass is suspended.

(*Anat.*) See **PYXIS**.

—A box used in the English mint as the depository of coin awaiting test.

—*v. a.* To test as to weight and purity, as the coins deposited in the pyx.

Pyxidium, *n.*; *pl.* **PYXIDIA**. (*Bot.*) See **CIRCUMSCISSILE**.

Pyxis, *n.* [*Lat.*] A pyx. — (*Bot.*) Same as **PYXIDIUM**.

(*Anat.*) The cavity of the hip-joint; acetabulum.

Pyxis Nautica, *n.* (*Astron.*) A constellation of the south hemisphere, formed by Lacaille.

P.-SECTION II.

PACK

PAHL

Pach-, Pachy-. An initial compounding element, derived from the Greek *pachys*, thick; as *pachyderm*, having a thick skin.

Pacific Grove, in California, a post-town of Monterey co., on Monterey Bay, 2 m. from Monterey. Pop. (1897) 1,450.

Pacific Ocean, The. A vast expanse of water, extending between Asia and America (formerly, but improperly, called the SOUTH SEA), and covering a large portion of the surface of the globe. Its extreme southern limit is the Antarctic circle, from which it stretches north through 132 degrees of latitude to Bering Strait, which separates it from the Arctic Ocean. Its greatest breadth from east to west, measured along the equator, is about 10,000 miles. In some parts, especially off the coast of Japan, and southeast of Australia, it is very deep, but its bottom has not been so systematically surveyed as that of the Atlantic. Its shape is very irregular; but it becomes gradually narrower as it extends north, till at length the Sea of Kamchatka has a breadth of only 170 miles. The American coast is pretty uniform, though high and bold, presenting the long Cordillera of the Andes in South America, and the variously named continuations of it forming a series of coast ranges in Mexico, and extending to the end of the half submerged Aleutian peninsula. Its indentations are the Gulfs of California and Panama; besides which, at the north and south extremities, it is broken and rugged, forming numerous islands and fiords, similar to those of other high latitudes. The Asiatic coast-line, on the contrary, is extremely irregular, formed into deep bays and subdivided by groups of islands into separate gulfs or seas, as the Sea of Okhotsk and the Yellow Sea; besides which numerous straits are formed between the islands of the Asiatic Archipelago. The vast expanse south of the equator is studded with groups of coralline and volcanic islands, which constitute a distinct portion of the world, called POLYNESIA (*q. v.*). North of the equator the islands are fewer, the Ladrone, Caroline, Marshall and Hawaiian groups being most important. These form MICRONESIA (*q. v.*); also HAWAII.

The general motion of the waters of the Pacific Ocean is from the coast of America to that of Asia; and this motion is very powerful in the vast and uninterrupted extent of its waters. The northeast trade-wind prevails uninterruptedly between Lat. 5° and 23° north, and, with the currents, enable ships to sail from America to Asia with great rapidity, and almost without changing the sails. The southeast trade-wind, which is not met with near the American coast, varies in its extent at different seasons; but it commonly prevails between the equator and 26° south, so that the region of calms in the Pacific Ocean extends over only 5° of latitude, or somewhat less than in the Atlantic. In Lat. 40°, on both sides of the equator, tempests and variable winds prevail; but it may be remarked generally that north of Lat. 40° north, winds from west and northwest are more prevalent than any others, whereas in the regions south of the trade-winds the prevailing winds are from southwest, and often extremely violent. Winds from the south, however, are found along the coast of Peru, and may be attributed, in some measure at least, to the strength of the Polar current (*q. v.*) in the southern hemisphere. They are generally light, though steady. Navigators traversing the ocean between North America and Asia sail west from Mexico, touching at the Sandwich Islands, and entering the Chinese Sea between the islands of Luzon and Formosa. The voyage from Asia to America is effected by seeking the region of the variable winds north of Lat. 30°, and making the coast of California. This ocean, which received its name, Pacific, from Magellan, in consequence of the propitious weather which he met while navigating its surface, was not known to the ancients, nor was the existence of so vast an ocean at all suspected by Europeans till Sept. 25, 1513, Vasco Núñez de Balboa beheld it from the summit of a mountain near the Isthmus of Panama. Magellan traversed it from America to Asia in 1521.

Pacific University. (*Educ.*) A Congregational co-educational institution, at Forest Grove, Oregon, 21 m. W. of Portland. Founded in 1848, it had, in 1896, 13 instructors, 200 students, and 7,500 volumes in its library. It has some productive funds, and its total income in 1896 was \$20,000.

Packard, ALPHEUS SPRING, naturalist, was born in Brunswick, Maine, Feb. 19, 1839, son of Dr. A. S. Packard.

(1798-1884), president of Bowdoin College; graduated at Bowdoin (1861), and at Maine Medical College (1864); was an army surgeon (1864-65); State entomologist of Massachusetts (1871-73); director of the Peabody Museum, at Salem, Mass. (1868-76); professor of Zoology and Geology at Brown University (1878). He was a member of the United States Entomological Commission, and has written largely on insects.

Pad'dock, BENJAMIN HENRY, S. T. D., clergyman, was born at Norwich, Conn., Feb. 29, 1828. He was bishop of the Protestant Episcopal Church after 1873. Died March 9, 1891.

Paderewski (*păd-ēr-iff-ski*), IGNACE JAN, pianist, was born in Podolia, Poland, Nov. 6, 1860. He began to play on the piano at 3 years of age. In 1872, he went to Warsaw, as a pupil of Roguski, and later studied under Frederick Kiel at Berlin. In 1878 he became professor of Music in the Conservatory at Warsaw, and in 1884 was made professor at the Conservatory of Strasburg. He soon after determined to become a piano virtuoso; studied three years with Leschitzki at Vienna; made his debut in 1887, with instant success; toured through Germany, and went to Paris in 1889, and to London in 1890. His first American tour was in 1891, when he created a furor; he returned in 1893, visiting the World's Fair, and giving piano recitals, his tour bringing him \$150,000. In 1896 he again visited the United States, this time realizing \$187,000. He donated a sum of \$10,000, the interest of which is to be devoted to the encouragement of American composers by the award of three triennial prizes. He also dedicated to his American admirers a *Menuet Moderne*, in contradistinction to the *Menuet à l'Antique*, which has been so popular in this country. He has composed over eighty vocal works, besides his instrumental compositions. His *Polish Phantasie* was produced at the Norwich festival in 1893. P. married at the age of 19; later his wife died, but a son survived her.

Padina, n. (*Bot.*) A beautiful genus of dark-spored *Algae*, of which *P. pavonia*, Turkey-leather Laver, or Peacock's Tail (*Fig. 3017*), is one of the most remarkable species; it is common in tropical countries.

Fig. 3017.—PADINA PAVONIA.

Padrone (*pa-drō-nā*), *n.* [*It. master.*] A house-proprietor, or an employer of labor; especially a contractor for street musicians and laborers.—The commander of a small vessel engaged in the Mediterranean trade.

Pædogensis, n. (*Biol.*) An acceleration in the life-history of certain animals, as, for instance, the Mexican axolotl and certain flies (*Cecidomyiidae*), in which the larvæ are capable of reproduction. In the latter forms, the larvæ produce other larvæ, which feed upon the parent and eventually escape from the body by its complete destruction.

Pæonin, n. [*Lat. Pæonia.*] (*Chem.*) A red resinous coloring matter, obtained by heating phenylic alcohol with sulphuric and oxalic acids. It is used in printing cotton, silk, and wool a yellow or red-orange color.

Pæz (*pă-ăth*), JOSÉ ANTONIO, soldier and politician, was born in the province of Barinas, Venezuela, June 19, 1790. He joined the patriots in 1810, and was thereafter constantly active in the military and civil affairs of Venezuela. He was military and civil commandant at various points until he was made President for four years (1831); commanded the army from 1835 to 1839, and was again President from Feb. 1, 1839, to Jan. 28, 1843. In Jan., 1848, he led against Monagas, but was defeated in 1849, and imprisoned for ten months, and then banished for a term of years. In 1860 he was minister to the U. S. In August of that year, on the deposition of Gaul, he was proclaimed dictator by the army. Three years of civil war followed, ending disastrously for P. After May, 1863, he left Venezuela, and resided for the remainder of his life in New York city, where he died, May 7, 1873.

Page, DAVID PERKINS, educator, was born at Epping, N. H., July 4, 1810. For his education he spent two

terms at Hampton Academy; he then taught school; was recognized as possessing, in a rare degree, the qualities of a great teacher; received (1845) the appointment as principal of the newly established Albany Normal School, which post he filled until his death, Jan. 1, 1848. He was the author of the well-known *Page's Theory and Practice of Teaching*.

Page, THOMAS NELSON, author, was born in Oakland, Va., on April 23, 1853; educated at Washington and Lee University; practiced law in Richmond; received the degree of LL.D. from his university in 1887. His first story, *Uncle Gab's White Folks*, appeared in *Scribner's Magazine* in 1877; his next, *Marse Chan*, appeared in the *Century Magazine* during 1884. Since that time he has written many other stories and sketches, several volumes of which have been issued, one of the latest being *Unc' Edinburgh* (1895). In his "author's readings," Mr. Page has given inimitable interpretation to his dialect stories, especially *Marse Chan*.

Page, WILLIAM, portrait-painter, was born in Albany, N. Y., on Jan. 23, 1811; studied painting under Samuel T. B. Morse, and at the National Academy of Design. Besides his notable success in portraits, he showed skill in classic and historical figure-painting. Of these works, his *Venus*, painted at Rome (where he resided much of the time from 1849 to 1860), is considered his finest canvas. He was a full member of the National Academy from 1836. Died Oct. 1, 1885.

Paget (*pă-jet*), RT. HON. SIR AUGUSTUS BERKELEY, diplomatist, was born in 1823. His diplomatic career began in 1846, when he was attaché to the embassy of Paris; became secretary of legation at Athens (1852); filled various diplomatic offices in Egypt, Holland, and elsewhere, and was on several occasions *chargé d'affaires* at Lisbon; was ambassador successively to Saxony, Sweden, Denmark, Portugal, Italy, and Austria; retired on a pension July 1, 1893. Died July 11, 1896.

Paget, SIR JAMES, physician, was born in Yarmouth, England, on Jan. 11, 1814; studied at St. Bartholomew's Hospital, London; in 1836 became a member, and in 1843 a fellow, of the Royal College of Surgeons; was a member of the council (1865), and president of the college (1875). He is sergeant-surgeon to the Queen, surgeon to the Prince of Wales, and consulting surgeon to St. Bartholomew's Hospital. He was created a baronet in 1871, and the same year received the degree of LL. D. from the University of Edinburgh. His *Lectures on Surgical Pathology*, first published in 1853, has passed through many editions, and is a standard text-book. He was Croonian lecturer in 1857, his subject being the causes of the rhythmic action of the heart; delivered the Hunterian oration (1877); the Bradshawe lectures, on some rare and new diseases (1882); and the Morton lecture, on cancer (1887). He was vice-chancellor of the University of London, and a member of the Institute of France.

Paget, VIOLET (pseudonym, VERNON LEE), writer, was born in England, in 1857; has resided chiefly in Italy, where she has devoted herself to the study of the Italian arts, literature, and drama. Her writings are mainly critical essays on these subjects, contributed to current magazines, and collected in several volumes since 1880.

Pa'go-Pa'go. (*Geog.*) A harbor on the south of Tutuila in the Samoan Islands. Since 1872 it has been occupied as a coaling station, first by the United States and then by Great Britain, but in 1892 it was formally ceded to the United States. Also called PAUGO-PAUGO.

Pah'lavi, Peh'levi, n. The ancient form of speech preserved in the Avesta, the Zoroastrian Bible. It is occasionally called the Avestan or Avesta language. It is also sometimes styled Zend, but erroneously, since Zend means "interpretation" or "commentary." The Zoroastrian Scriptures are by some designated Zend-Avesta, but the designation should be Avesta and Zend, corresponding to the Pahlavi phrase *Avestak va Zand*, meaning the Avesta and commentary or explanation. The Pahlavi is preserved in the form of inscriptions and coins, and in an extensive written literature. The language, though Persian, presents a strange non-Iranian appearance. There is a curious admixture of Semitic (Aramæic) words and Iranian elements. The fundamental words, those of commonest usage, are Semitic, and Semitic words also stand beside Iranian equivalents; but they are often treated in a way which is quite un-Semitic, or, again, they assume an Iranian look by receiving Iranian endings. This Semitic preponderance, however, is superficial rather than real. Pahlavi,

MARINE LIFE.

- 1 PECTEN OPERCULARIS (SCALLOP).
- 2 MURÆNA HELENA (EEL).
- 3 CYNTHIA (SEA-SQUIRT).
- 4 CONGER VULGARIS (CONGER EEL).

- 36 CEREACTIS AURANTIACII (SEA-ANEMONE).
- 37 CEREANTHUS MEMBRANACEUS (SEA-ANEMONE).

when written, is indeed largely Semitic, but when read it becomes Iranian. The book-Pahlavi alphabet has only fourteen letters to discharge the duty of a complete alphabet. Owing to this paucity a single sign has to assume a number of offices. The separate signs, moreover, are further obscured by being combined into ligatures of which the elements are exceedingly difficult to decipher. The extent of Pahlavi literature may be estimated to be about the same as that of the Old Testament. In point of time the literature may be placed between the years A. D. 226 and A. D. 811. Nearly a hundred works have been preserved. These are in part translations of older Avesta texts, or they are works written on religious subjects, though some of them deal with legendary or miscellaneous topics. The most important of the Pahlavi texts have been translated by West in *Sacred Books of East* (Oxford, 1880), and translations of separate works have been contributed by other scholars.

Pah-Utes, or Pi-Utes. See UTE INDIANS.

Paidology, n. [Gr. *pais* (gen. *paidos*), child, and *logos*, treatise.] The scientific study of the life, growth, ideas, the very being of the child.

Paine, ELIJAH, jurist and politician, was born in Brooklyn, Conn., Jan. 21, 1757, and died April 28, 1842. He was U. S. Senator from Vermont (1795-1801).

Paine, ELIJAH, legal writer, son of the foregoing, was born at Williamstown, Vt., April 10, 1796; graduated at Harvard (1814); studied law at Litchfield, Conn.; assisted in preparing *Wheaton's Reports*; was judge of the New York superior court (1850-53); author of *Paine's Reports*, and joint author of *Paine and Duer's Practice in Civil Actions and Proceedings in the State of New York*. Died Oct. 6, 1853.

Paine, JOHN KNOWLES, organist and composer, was born in Portland, Me., Jan. 9, 1839; studied under the first masters in Berlin (1858-61); returned to America and gave organ recitals; was instructor in music at Harvard (1862), and full professor in 1876. His compositions are numerous, including a grand mass in D, an oratorio, *St. Peter*, and a wide range of vocal and instrumental works. He composed the Columbian Hymn for the opening of the World's Fair at Chicago, Oct. 21, 1892. Also published *Famous Composers and Their Works* (1892-94).

Paine, MARTYN, physician, was born at Williamstown, Vt., July 8, 1794; educated at Harvard; took his medical degree (1816); removed to New York (1822), and became a leader in his profession; was one of the founders of the University Medical College (1841), in which he subsequently held important professorships. He wrote *Cholera Asphyxia of New York* (1832); *Medical and Physiological Commentaries* (1840-44); *The Soul and Instinct* (1849), &c. Died Nov. 10, 1877.

Paine, ROBERT, clergyman, was born in North Carolina, Nov. 12, 1799; began to preach in the Methodist Episcopal Church (1818). From 1844-45 was prominent in the debates over the slavery question, which led to the division of that church. In 1846 he was made bishop of the M. E. Church, South. Died Oct. 20, 1882.

Paine, ROBERT TREAT, a signer of the Declaration of Independence, was born in Boston, Mass., March 11, 1731; educated at Harvard; admitted to the bar (1759); was a member of the Colonial Legislature (1773); the Provincial Congress (1774-75); the Continental Congress (1774-78). After the formation of the U. S. government he became attorney-general of Massachusetts (1780-90), and judge of the Supreme Court of the State (1790-1804). He was founder of the American Academy of Massachusetts. Died May 11, 1814.

Paine, ROBERT TREAT, son of the foregoing, was born in Taunton, Mass., Dec. 9, 1773; educated at Harvard, and entered upon the profession of journalism; became interested in the theater, and married an actress, Miss Baker; was consequently estranged from his father; dropped theatrical matters, studied law, and began to practice in Boston (1802); returned to his former interest in the drama, and wrote criticisms. He led an unsettled life, and passed his closing days in destitution, dying Nov. 13, 1811.

Paine, WILLIAM H., civil engineer, was born in Chester, N. H., May 27, 1828. On the outbreak of the Civil War he was appointed captain of engineers on the staff of General McDowell; promoted to colonel, serving throughout the war on the general staff of the Army of the Potomac. He was one of the engineers of the East River Bridge, in 1869, and engaged in numerous important engineering projects subsequently. Died Dec. 31, 1880.

Pajamas (*pa-jah-maz*), *n. pl.* Loose trousers worn by both sexes in India, a modification of which is used for chamber wear in America and Europe.

Pakenham, SIR EDWARD, soldier, was born at Pakenham Hall, Westmeath, Ireland, on March 19, 1778, the second son of the Earl of Longford, and a brother-in-law of the Duke of Wellington. He entered the British army (1794), and achieved honor at Salamanca. In 1814 he commanded the large force of British regulars which operated against New Orleans. Killed in that battle, Jan. 9, 1815.

Pale-face, n. A name given to a white person by the North American Indians. Used also adjectively.

Paleville, in New York, a post-village of Greene co. Pop. (1897) 650.

Paleolithic Age and Implements. See STONE AGE.

Paley, WILLIAM, divine and author, was born at Peterborough, England, in 1743. His most notable work, among many, was *A View of the Evidences of Christianity*. Died in 1805.

Palgrave, SIR FRANCIS, historian, was born in London, Eng., in 1788. He was the son of a Jew, Meyer Cohen, but changed his name by royal permission in 1823. Knighted in 1832, having been called to the bar in the Middle Temple and appointed deputy keeper of public records. Died in 1861.

Pali (*pal'i*), *n.* [Corrupted from Sanskrit *Prākṛit*.] The sacred language of the Buddhists. Its origin must be sought for in one or several of the popular dialects of ancient India, which are comprised under the general name of Prākṛit, and stand in a similar relation to Sanskrit as the Romance languages, in their earlier period, to Latin. It has been formerly assumed that Pali arose from the special Prākṛit dialect called *Māgadhī*, or the language spoken in Magadha; but, according to the view expressed by Lassen in his *Indische Alterthumskunde*, an hypothesis of this kind is not tenable, since the peculiarities of this dialect are not compatible with those of the Pali language. The same distinguished scholar holds that the Prākṛit dialects, called the *Sauraseni* and *Mihirāśtrī*, have a closer relation to the Pali than any other, and that the origin of the latter must therefore be traced to the country of Western Hindoostan, between the Jumna river and the Vindhya Mountain; though he observes, at the same time, that the Pali is older than these dialects, and that the latter are therefore more remote from Sanskrit than the former. Whether the oldest works of the Buddhist religion were written in Pali may be matter of doubt. It is more probable, on the contrary, that the language in which the founder of the Buddhist religion conveyed his doctrine to the people was not yet that special language, but a mixture of classical and popular Sanskrit, such as it still appears in the Buddhist *Sūtras*. At a later period, however, Pali became the classical language in which the Buddhists wrote their sacred, metaphysical, and profane works. The most important historical work written in this language is the *Mahāvamsa*; other Pali works, which have lately become known in Europe, and deserve special mention, are the *Dhammapadam*, on the Buddhist doctrine, and five *Jātakas*, containing a fairy tale, a comical story, and three fables—both works edited and translated by V. Faustöhl (Copenhagen, 1855 and 1861). Pali ceased to be a living language of India when Buddhism was rooted out of it; it was carried by the fugitive Buddhists to other countries, especially Ceylon, Burmah, and Siam; but in these countries, too, it had to give way before the native tongues, in which the later Buddhist literature was composed.

Pal'inal, n. [Gr. *palin*, again, backward.] Characterized by backward motion; moving backward.

Palladio, ANDREA, architect, was born at Vicenza, Italy, on Nov. 30, 1518. In early years he travelled over Italy and France, studying remains of Roman architecture, especially the works of Vitruvius and Leon Battista Alberti. It appears that Giovanni Fontana was, for a time, his master. In 1547 he completed the Castle Nanie, begun by Fontana in 1519. In 1546 he competed with Fontana, and again, in 1549, with Giulio Romano, for the renovation of the Palace of Reason, at Vicenza, and won the competition. Soon after he went to Rome, where he made the grand façade of the palace of the Grand Duke of Tuscany. He settled at Vicenza, which, together with the surrounding country, is full of palaces and monuments designed by him. In 1556 he began his great work of restoring the Palace of Reason, a labor that lasted all his life. About the year 1560 he executed his first work in Venice, the Monastery Della Carità. Other important works have included the churches of San Giorgio Maggiore, and Il Sanissimo Redemptore, the façade of San Francesco della Vigna, and some palaces. His style is known as the Palladian, and was long considered the most perfect. He published *Illustrations to Caesar's Commentaries* (1575), and *Treatise on Architecture* (1570), which has been reprinted and translated into all languages. This latter work he dedicated to the Duke Emmanuel Philibert of Savoy, for whom he had planned the royal park at Piedmont. Died August 19, 1580.

Pallas Iron. [Peter S. Pallas, the finder.] An iron meteorite, weighing 1,600 pounds, found in Siberia, now in St. Petersburg. It very frequently contains grains of olivine.

Palliser, WILLIAM, an English inventor, was born in 1830; became a major in the British army, from which he retired in 1871. He introduced valuable inventions into the military service, the most important being the system of conversion of the old smooth-bore cast-iron gun into the rifled compound pieces of ordnance known as the *Palliser Guns*. Died Feb. 4, 1882.

Palmelod'ion, n. [Gr. *pallo*, to vibrate, and *melodikon*.] A glass harmonicon; a set of musical glasses.

Palmer, ALICE FREEMAN, educator, was born in Colesville, N. Y., on Feb. 21, 1855; educated at Michigan University; taught in Wisconsin and Michigan until 1879, when she became professor of History in Wellesley College. In 1881 was acting president, and in 1872 was elected president of the college, and filled the office for five years; received the degree of Ph.D. from Michigan University (1882), and the degree of doctor of letters from Columbia College (1887). She resigned in 1887, and in December of that year was married to Professor George H. Palmer, of Harvard.

Palmer, BENJAMIN MORGAN, clergyman, was born in Charleston, S. C., Jan. 25, 1818; educated at the University of Georgia, and at the Columbia Theological School. He was a prominent clergyman of the Southern Presbyterian Church; was professor of Church History in the Columbia Theological School, and (1861) was moderator of the First Southern Assembly at Augusta, Georgia.

He founded and edited *The Southern Presbyterian Review*, and published some theological works.

Palmer, EDWARD HENRY, explorer and Orientalist, was born at Cambridge, Eng., Aug. 7, 1840; entered St. John's College, Cambridge, and was elected fellow in 1867; joined the Sinai Expedition (1870); explored the Wilderness of the Wandering with Drake; in the same year published the *Desert of Exodus*. In 1871 he was appointed professor of Arabic at Cambridge; and in 1876 published a Persian dictionary. In 1882 he accompanied the government expedition to the desert of Suze, where he was murdered by Bedouins on Aug. 11, 1882. His *Life*, by Walter Besant, was published in 1883.

Palmer, ERASTUS DOW, sculptor, was born at Pompey, N. Y., April 2, 1817. In early life he was a carpenter, then a cameo-cutter; in 1832 turned his attention to sculpture, and produced some fine mythological and allegorical groups. His more notable works include: *The Indian Captive*; *The White Slave*; *The Angel at the Sepulchre*; *The Infant Flora*; *The Emigrant's Children*, and *The Landing of the Pilgrims*. All of his training was received in New York, but in 1873, after his fame was established, he visited Italy and France. He received a medal of the first class at the Centennial Exhibition (1876) for his statue of Robert Livingstone, which was placed in the Hall of Representatives in Washington, in 1875.

Palmer, JOHN McCACLEY, soldier and politician, was born in Scott co., Kentucky, Sept. 13, 1817; removed to Illinois, and was admitted to the bar in 1840; was a member of the State Senate, and served as a Republican Presidential elector in 1860. In April of 1861 he was commissioned colonel of an Illinois volunteer regiment; served at Island No. 10, Stone River, and Chickamauga, and was promoted major-general of volunteers. He led the 14th Army Corps through the Atlanta campaign (1864). He was governor of Illinois from 1869 to 1873; later he became a Democrat, and in 1891 was elected to the U. S. Senate from Illinois. In 1896 he was the presidential candidate of the "Gold Democrats," who repudiated the Chicago Platform, but received no electoral votes. Died Sept. 25, 1900.

Palmer, RAY, clergyman and hymnologist, was born in Little Compton, R. I., Nov. 12, 1838; graduated at Yale (1839), and entered the Congregational ministry; was secretary of the Congregational Union in New York city (1866-78); wrote many sacred poems, among which is the hymn, *My Faith Looks up to Thee*, which is included in all church collections of hymns, and has been translated into more than twenty languages. Died March 29, 1887.

Palmer, ROUNDELL, EARL OF SELBORNE, jurist and hymnologist, was born at Mexbury, England, Nov. 27, 1812; was solicitor-general (1861-63); attorney-general (1863-66); British counsel at the Geneva court of Arbitration (1872); lord-chancellor in all the Liberal Ministries of 1872-74, and 1880-85; was created Baron Selborne in 1872, and Earl of Selborne in 1882. He published a *Book of Praise, from the Best English Hymn-writers*, in 1862.

Palmer, in Michigan, a post-village of Marquette co. Pop. (1894) 630.

Palmer-worm, n. A hairy caterpillar, wandering about like a palmer on his pilgrimage. The palmer-worm mentioned in Scripture is thought to have been a locust.

Palmetto, in Georgia, a post-village of Campbell co. Pop. (1897) 660.

Palmi. An initial compounding element, derived from the Lat. *palma*, palm of the hand.

Palmeri, LUIGI, meteorologist, was born in Taicchio, Benevento, Italy, April 22, 1807; was a professor of Mathematics and Physics, and (1854) became director of the Meteorological Observatory on Mt. Vesuvius, situated at an altitude of 1,970 feet above sea-level. There he lived for over 40 years, often incurring great risk, remaining at his post to make observations during the eruption of 1872. His ingenuity contrived many instruments for use in his observations; and his reports are of great value to science. Died Sept. 10, 1896.

Palmyra, in Illinois, a post-village of Macomb co., 33 m. S. W. of Springfield. Pop. (1897) 620.

Palouse, in Washington, a post-town of Whitman co., 18 m. E. of Colfax; has saw mills, planing and flour mills. Pop. (1897) 1,350.

Palsgrave, n. [Dut. *palsgraaf*.] A count or earl, who has the overseeing of a prince's palace; a count palatine.

Palsgrave, n. The wife or widow of a palsgrave.

Palud-, Paludi. An initial compounding element, derived from the Lat. *palus* (gen. *paludis*), marsh.

Pamlico, in North Carolina, an E. co.; area, 460 sq. m.; bounded E. by Pamlico Sound, and S. W. by the estuary of the Neuse river. Surface, low and swampy, with forests of cypress, pine, poplar, beech, oak, and holly; soil, sandy black loam. Products, Corn, sweet potatoes, rice, and pork. Cap. Bayboro. Pop. (1890) 7,146.

Pan-, Pant-, Panta-, Panto. An initial compounding element, derived from the Gr. *pas* (gen. *pantos*), all; used to combine with words from the Greek. The form *Pan* is also used before English words, principally proper adjectives; as, *Pan-American*, *Pan-Hellenism*.

Panama, in Iowa, a post-town of Shelby co. Pop. (1895) 257.

Panama Canal. (*Eng.*) As early as 1843 surveys for a canal across the Isthmus of Panama were made by M. Garella, a French engineer; by George M. Totten, chief engineer of the Panama Railroad, and by Commander E. P. Lull, U. S. N. In 1852 Frederick M.

Kelley, of New York, obtained a concession for a canal from the Colombian government; and he met in London, in 1875, the Count Ferdinand de Lesseps, then famous for his success in the Suez Canal. De Lesseps organized an expedition to explore the Isthmus of Panama, and proposed the International Canal Congress, which was attended in Paris, in May, 1879, by representatives of twenty-four countries. Of the several proposals made, the congress chose, nearly unanimously, a canal 46 miles long, from Panama, on the Pacific, to near the mouth of the Chagres river, following closely the route of the Panama Railroad; breadth at bottom, 22 to 24 meters; at the water surface, 28 to 50; depth $8\frac{1}{2}$ to 9; curves to have a minimum radius of 2,000 meters; deepest cutting, 330 feet. It was proposed to dam back the Chagres river and carry its floods to the sea by a canal, and at Panama, where the tides rise 18 feet, to build a tide-lock. The excavation required was 143,000,000 yards, and the cost, \$120,000,000. A construction company was organized in 1880, and work was begun with a capital of \$60,000,000, and loans of \$60,000,000. The work was wastefully carried on, and much money was spent in buying the influence of important persons. In 1886 Count de Lesseps went personally to the Isthmus, accompanied by the Hon. John Bigelow as a representative of the New York Chamber of Commerce. At the close of 1888, \$200,000,000 had been expended, and a year later this was increased to \$265,000,000, though it was said only \$80,000,000 was honestly put into the work, which was not more than one-third, or even, by some reports, one-fifth done. In 1889 the company suspended, its failure bringing immense loss to French investors. The officers of the company were tried for fraud, and Count de Lesseps and his son convicted, and sentenced to five years imprisonment. The sentence was not enforced, but the aged and depressed Count died in 1894. A new company continued the work until 1902 when its rights were offered to the United States for \$40,000,000. This offer was accepted and a treaty negotiated with Colombia for the construction of the canal. In August, 1903, the Senate of Colombia rejected this treaty, and in November Panama broke out in rebellion and a new republic was established, with which a satisfactory treaty was made, under which Panama was to receive \$10,000,000. These sums were paid and the United States took control May 4, 1904, having acquired by treaty with the republic of Panama the perpetual grant of a zone of land five miles in width on each side of the proposed canal. There were important things to be done preliminary to active work on canal excavation, chief among them being the sanitation of the canal zone, which was so admirably accomplished that the scourge of yellow fever, from which the French workmen had suffered severely, was practically eliminated. As work progressed an important question arose, as to whether the canal should be excavated to sea level or should be elevated by means of locks. The latter was finally decided upon, the summit level in the canal being fixed at 85 feet. This was to be reached by means of a great dam, with three locks, at Gatun, on the Atlantic side, and by one lock at Pedro Miguel and two at Miraflores, on the Pacific side, each lock to have a useable length of 1,000 feet and a width of 110 feet. The Gatun dam would make a great lake of 164.23 square miles area, and the Pacific dams a small one. The total length between deep water on the two sides was about 50 miles, and that from shore to shore $40\frac{1}{2}$ miles, the minimum depth to be 41 feet, and the bottom width in the Culebra cut 300 feet, widening elsewhere to from 500 to 1,000 feet. The great part of the excavation was at Culebra, a low place in the mountain range traversing the isthmus, where 89,794,493 cubic yards remained to be excavated, this being about half the total cut required. More than two years passed before work on the canal grew very effective, but by June 1, 1909, 76,020,944 cubic yards were excavated, of which 38,141,438 had been done in the previous twelve months. At this rate the remaining 98,645,651 cubic yards could be excavated within less than three years from that date, but the building of the Gatun dam and locks was an uncertain quantity and it was conservatively estimated that ships would be passing through the canal on January 1, 1915. The estimated time for the passage of a ship of medium size was 10 hours. In conclusion it is of interest to state that 101 great steam shovels and a force of about 41,000 men were employed upon the work and the rate of excavation seemed steadily increasing.

Pan-American Congress. (*Am. Hist.*) A congress of representatives of the nations of the Western Hemisphere, held at Washington, D. C., from Oct., 1889, to April, 1890, to discuss matters relating to the commercial intercourse and international relations of these nations. It was followed by the formation at Washington of a Bureau of American Republics, and by subsequent congresses at Mexico in 1901 and Rio de Janeiro in 1906, provision being made for others every five years.

Pan-American Exposition. An international exposition, participated in by all the nations of North and South America, was held at Buffalo, New York, in 1901, its purpose being to show the progress made by these nations during the nineteenth century. The site embraced 350 acres, which were largely occupied by attractive buildings, while the vicinity of Niagara Falls, with its immense electric plant, gave an opportunity for an unprecedented display of electrical effects. A tragic feature of the occasion was the assassination of President McKinley while visiting the exposition.

Panchatantra. *n.* A Sanskrit word meaning "having five books or sections." It is an ancient Sanskrit collection of fables and tales of ethics, didactic in purpose. The form of the teaching bears much resemblance to that of the Buddhists, as set forth in the Jataka. The substance of the work, however, is neither specifically Brahmanic nor Buddhist, but rather, in general, Indic. The date of the extant form of the work is uncertain. Of this there was an earlier but now lost original which has had a remarkable history, and been transmitted through translations and translations of translations, sometimes under the name of the *Fables of Pilpay*, to almost all the peoples of Europe. The first English version, a translation from the Italian, was by Sir Thomas North (London, 1570), and has been lately reprinted by Joseph Jacobs (London, 1888), under the title *The Fables of Pilpay*.

Pancoast, JOSEPH, surgeon, was born in Burlington co., New Jersey, in 1805; graduated from the medical department of the University of Pennsylvania 1828, and in 1831 was instructor in practical surgery in the same institution. Beginning in 1834, he was for 11 years connected with Blockley Hospital, and was also for the greater part of this period professor of Surgery in the Jefferson Medical College, exchanging this position for that of professor of Anatomy in 1847, retaining this latter professorship until 1874. He was the author of many innovations in surgery, having succeeded in the formation of a nose, by plastic sutures, in 1841; the formation of eyebrows with strips of scalp; treatment of soft cataract with a fine bent needle; and of restoring the voice by operating on the soft palate. He was a well-known contributor to medical journals, and published *Treatise on the Structure, Functions, and Diseases of the Human Sympathetic Nerve* (1831), and *Treatise on Operative Surgery* (1844). Died March 7, 1882.

Pancoast, WILLIAM HENRY, surgeon, son of Dr. Joseph Pancoast, was born in Philadelphia, October 16, 1835; graduated at the Jefferson Medical College (1856), and studied three years in Paris, Vienna, and London. He became famous for the unfailing success and the swiftness of his surgical operations. During the Civil War he was a surgeon in the army; in 1874 he took his father's place as professor of Anatomy in Jefferson Medical College. In 1886 he became professor in the Medico-Chirurgical College; and for years occupied a place of unusual eminence and repute among surgeons. Died January 5, 1897.

Pan/ean Pipes. A primitive wind instrument, in which the notes of the scale are produced by blowing across the open tops of a graduated series of hollow tubes, originally reeds, but afterward made of cane, wood, or even stone. The Greeks supposed it to have been invented by the god Pan, and that, in playing it, he originated pastoral music. Its tones are often sweet, and it has been used among primitive people in many parts of the world. Also called *Lyrinx*, in memory of a nymph beloved by Pan, and *Pan's pipes*.

Pangenesis. *n.* (*Biol.*) A theory of reproduction put forth by Darwin in his *Animals and Plants under Domestication*, and which can be best explained in his own words: "It is universally admitted that the cells or units of the body increase by self-division or proliferation, retaining the same nature, and that they ultimately become converted into the various tissues and substances of the body. But besides this means of increase, I assume that the units throw off minute granules which are dispersed throughout the whole system; that these, when supplied with proper nutriment, multiply by self-division, and are ultimately developed into units like those from which they were originally derived. These granules may be called gemmules. They are collected from all parts of the system to constitute the sexual elements, and their development in the next generation forms a new being; but they are likewise capable of transmission in a dormant state to future generations, and may then be developed. Their development depends on their union with other partially developed or nascent cells which precede them in the regular course of growth. . . . Gemmules are supposed to be thrown off by every unit, not only during the adult state, but during each stage of development of every organism; but not necessarily during the continued existence of the same unit. Lastly I assume that the gemmules in their dormant state have a mutual affinity for each other, leading to their aggregation into buds or into sexual elements. Hence, it is not the reproductive organs or buds which generate new organisms, but the units of which each individual is composed."

Paniz/zi, SIR ANTHONY, was born at Brescello, Italy, Sept. 16, 1717; took his degree at the University of Parma and became an advocate; was implicated in the revolutionary plot of 1821; fled to England in 1823; became professor of Italian in University College, London (1828); was appointed assistant librarian in the British Museum (1831); in 1837 became keeper of the printed books, and devised the catalogue; was made chief librarian (1856), succeeding Sir Henry Ellis; the construction of the great reading-room from his designs was completed in 1857; resigned in 1866. He published critical editions of *Orlando Innamorata* (1830-34), and *Orlando Furioso* (1851); was always active in the interests of the revolution in Italy. Died April 8, 1879.

Pantheon. *n.* The famous Pantheon at Rome was always supposed, until quite recently, to have been erected by Marcus Agrippa, the son-in-law of Augustus, in 27 B. C., as an inscription on the portico attests. At the same time, the edifice has always been a puzzle to historians and architects, since the portico does not fit,

either in design or execution, the building behind it, which is a rotunda. Many archaeologists contended that the structure was originally designed for a warm bath (*caldarium*), in connection with the adjacent baths of Agrippa, and that its use as a temple was an afterthought, whereupon the portico was added. In the year 1892, the Department of Antiquities raised a scaffold to repair the dome, which had become leaky. The rain-water had filtered in and damaged the stucco. While the scaffold was in existence, a French architect, Chedanne, got permission to examine the bricks laid bare by the repairs in progress, and found that all the bricks were stamped with the year in which they were made, which was of the time of Hadrian. This discovery led to further investigations, the result of which established beyond question that the whole structure, except the portico, dates from the reign of Hadrian, and probably from 120-124 A. D. The columns, capitals, and entablature inscribed with the name of Agrippa may be original and date from 27-25 B. C., but they were first removed and then put together again by Hadrian. The original portico had ten columns (decastyle), the present portico has but eight. The original structure of Agrippa may have been rectangular, although there is no decisive proof that it was. These discoveries have pretty nearly solved the perplexing problems about the building, which will now lose the title it bore through centuries—the Sphinx of the Campus Martius.

THE PANTHEON AT PARIS. This structure was erected by Madame de Pompadour, in 1764, as a church, to be dedicated to Ste. Genevieve. The architect, Soufflot, was ambitious of giving the building a dome which should outvie other great domes, so he placed on the church a dome reaching 190 feet above the pavement. It has been spoken of as rivaling St. Peter's at Rome, and St. Paul's in London. The Constituent Assembly converted the building into a temple dedicated to the great men of France. Napoleon III. restored the edifice to the Church, and had it rededicated to Ste. Genevieve. On the occasion of the funeral of Victor Hugo, however, in 1885, the church was reconverted, with a monument with the old inscription, "Aux grands hommes la patrie reconnaissante." In the crypt are the tombs of Voltaire, Rousseau, and Victor Hugo.

Pantometer. *n.* An instrument for measuring angles for the determination of distances, elevations, &c.

Pan/toscope. *n.* A photographic lens with a very wide angle.—A panoramic camera.

Papias, a Christian father, of the second century, bishop of Hieropolis in Phrygia; according to Irenæus, a disciple of St. John the Apostle and a companion of Polycarp. He suffered martyrdom during the persecutions of Marcus Aurelius, about A. D. 163. He left a work entitled *Expositions of the Oracles of the Lord*, which was still in existence in the thirteenth century, but now is lost, except in fragments.

Papilion, in Nebraska, a post-village, cap. of Sarpy co., 15 m. S. W. of Omaha; has flour mills and elevators. Pop. (1897) 820.

Papineau, LOUIS JOSEPH, statesman, was born in Montreal, Canada, in Oct., 1789; was a spirited leader of the radical, or French-Canadian, party; was spokesman of his party in opposing the union of Upper and Lower Canada. Upon the outbreak of rebellion in 1837, he was charged with high treason; escaped to Paris; afterward returned to Canada, and was pardoned in 1847. Died Sept. 23, 1871.

Par Excellence (*ik-se-lings'*). [*Fr.*] By virtue of the highest excellence; beyond comparison; preeminently.

Paragould, in Arkansas, a post-town, cap. of Greene co., 160 m. N. E. of Little Rock. An important lumber-shipping point. Pop. (1897) 3,000.

Parakite. *n.* See KITE.

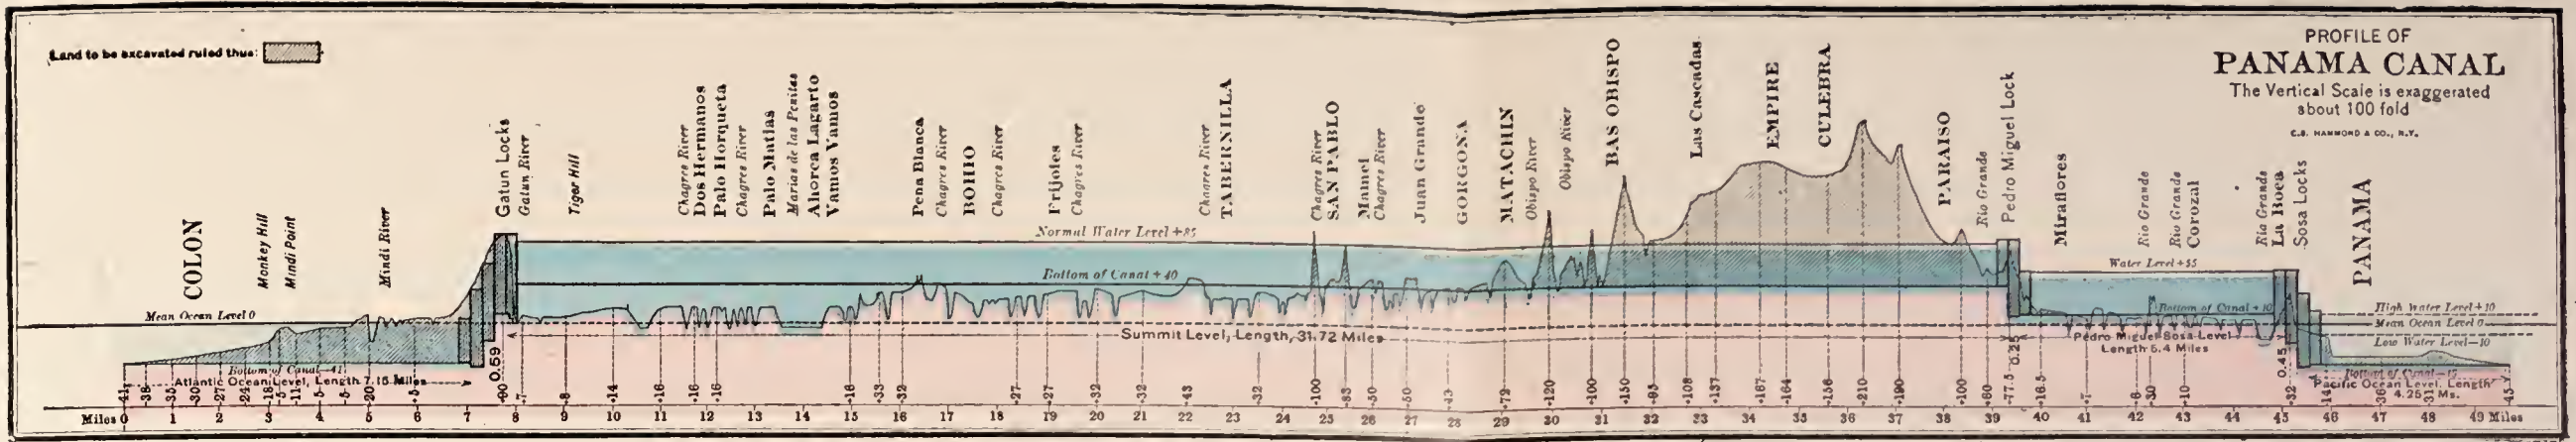

Parallax. *n.* [*Gr. parallaxis, aberration.*] (*Astron.*) The apparent change in the direction of an object when seen from two different points. *Lunar parallax* is a change in the direction of the moon when observed from two widely distant stations on the earth's surface. *Diurnal parallax* is the apparent change in the direction of a heavenly body when simultaneously seen from the earth's center and from its surface. *Solar parallax* is the angular semi-diameter of the earth as observed from the sun. *Annual or stellar parallax* is the angular semi-diameter of the earth's orbit as seen from the stars; or it is the amount of displacement of a star as observed from opposite sides of the earth's orbit, at an interval of half a year. As the sun's distance is, in round numbers, 93,000,000 miles, it follows as a natural sequence that the second observation will be made 186,000,000 miles from the first. The most difficult problem man ever attempted to grapple with is to determine the exact value of the solar parallax—or, in other words, the sun's distance from the earth. The difficulty lies in its excessive minuteness. It is certainly less than 9", and greater than 8.75". If we call the parallax 8.80", the sun's distance will be 92,885,000 miles. A change of only $\frac{1}{2}$ of a second will cause a difference of half a million miles in the sun's distance. The question may be asked: Why is it necessary to get his distance so exact? The answer is: It is, as it were, the yardstick which determines the mass, distance, volume, and orbital velocity of every heavenly body except the moon. The moon is so near us that it is an easy matter to obtain her parallax; but the sun is 400 times more distant. Various indirect processes, seven in all, are resorted to by astronomers to obtain the solar parallax. The following rule will give his distance if the parallax be known: The circumference of every circle, great or small, is supposed to be divided into 360°, 21,600', and

PANAMA.

1,296,000". Now, if 206,265 of these seconds be cut out and laid on the radius, they would just equal it. The sun's distance equals 206,265 multiplied by the earth's radius, and divided by the parallax in seconds of arc. The same rule applies to the computation of the distance of a star, only the semi-diameter of the earth's orbit is to be used—a problem, if possible, more difficult than to obtain the sun's distance. If the parallax of a star be assumed to be equal to 1", then its distance amounts to 206,265 times that of the sun, whatever that may be. In the effort to obtain the solar parallax by the transit of Venus, it is really that of Venus and not the sun; for Kepler's third law gives not only the distance of the sun, but that of every planet also when the distance of one is known. The parallax of Venus is desired instead of the sun itself, because while the sun is 93,000,000 miles distant, Venus at her transits is only 35,000,000. Among all the seven processes for solving the problem, that obtained by using some of the asteroids when in perigee is undoubtedly the most reliable, as they are points in the telescope, instead of a disk, as in the case of Venus.

Parallelometer, *n.* Any instrument for determining whether two surfaces are parallel; specifically, one for determining the parallelism of plate glass.

Paramnesia, *n.* [*Para*, and *Gr. amnesia*.] False memory, fancied remembrance of things that did not occur.

Paramorphism, *n.* (*Min. and Chem.*) The change produced in a chemical compound by the rearrangement of its atoms under the influence of light, changes of temperature, &c., by which the interior crystal structure is completely changed.

Paranoia, *n.* (*Path.*) Chronic mental unsoundness, whether hereditary or acquired.

Parasynesis, *n.* [*Gr.*] (*Philol.*) Misconception of a word, resulting in a faulty form.

Pard, *n.* (*Slang.*) An associate; a chum; corruption of partner.

Par'do, MANUEL, statesman, was born at Lima, Peru, August 12, 1834; was a banker and minister of the treasury under Balta (1866-68). From August 2, 1872, to August 2, 1876, he was President of Peru, the first civilian to fill the office, and one of the best presidents the country ever had; was subsequently president of the Senate. He was assassinated by an obscure fanatic, who attacked him in front of the Senate-house in Lima, November 11, 1878.

Par'doe, JULIA, historical and miscellaneous writer, was born at Beverly, Yorkshire, Eng., in 1806. She wrote poems, letters of travel, tourist's descriptions, &c. Died Nov. 26, 1862.

Par'esis, *n.* [*Gr.* want of strength.] (*Pathol.*) A partial paralysis, or loss of voluntary or reflex muscular motion, but not of sensation; a loss of power less marked than that to which the term paralysis is applied, but having similar causes and manifestations. The loss of motor power is progressive, and the patient rarely lives more than from one to three years after the disease begins.

Paris (*pä-rä'*), COMTE DE, son of the Duc d'Orleans, and grandson of Louis Philippe, was born in Paris in 1838; was educated in England, having left France after the overthrow of the monarchy in 1848; during part of the American Civil War served with his brother, the Duc de Chartres, on the staff of General McClellan; married, in 1864, the eldest daughter of the Duc de Montpensier. After the death, in 1885, of the Comte de Chambord, the heir of the royal house of France, Comte de Paris was acknowledged by nearly all the Legitimists as his successor. In 1886, on the passing of the Expulsion Bill, the Comte de Paris once more went to England. After his return from the United States he allied himself with the Liberals and the Republicans against the Empire, and subsequently with the Legitimists against M. Thiers. He was the author of a comprehensive work, in six volumes, on English trade unions. He visited Lisbon in 1889, on the occasion of the christening of his grandson, the infant Prince of Portugal. Several years ago the Comte de Paris waived his claim to the title of Duc d'Orleans in favor of his eldest son and heir, Louis Philippe Robert, the present Duc d'Orleans. Died in England, Sept. 8, 1894.

Par'is, in Arkansas, a post-town, cap. of Logan co., 18 m. S. by E. of Ozark. Pop. (1897) 680.

Paris, in Idaho, a post-village, cap. of Bear Lake co., 10 m. from Montpelier. Pop. (1897) 1,200.

Paritium (*pa-rish'yim*), *n.* (*Bot.*) A genus of plants, order Malvaceæ, now included under *Hibiscus*, and having a false partition across the center of each one of the five cells of the fruit, through which they split open when ripe. The ten or twelve known species are tall trees or high shrubs, widely distributed throughout the tropics of both hemispheres. Their leaves are large, entire, or lobed, with prominent radiating nerves, one or three of which bear glands at the base. All species of *Paritium*, and particularly *P. tiliaceum*, found in tropical countries generally, contain more or less fiber, which is used by the natives for various weaving purposes, and *P. elatum* is the source of "Cuba bast," formerly much used in tying bundles of cigars. It is a beautiful lace-like inner bark. This latter tree, which is found only in Cuba and Jamaica, grows fifty or sixty feet high, and yields a peculiar greenish-blue timber, highly valued by the Jamaica cabinet-makers.

Park, in Montana, a S. co.; area, 5,558 sq. m.; intersected by the Yellowstone river. Surface, mountainous, with fertile valleys, well watered; building stone, lime and marble, fire clay, coal, lead, iron, copper, nickel, gold and silver in abundance. Cap. Livingston. Pop. (1890) 6,881.

Park City, in Utah, a city of Summit co., 30 m. E. of Salt Lake City; in a silver-mining region; has quartz mills. Pop. (1895) 4,491.

Park Ridge, in Illinois, a post-village of Cook co., 12 m. N.W. of, and a suburb of, Chicago. Pop. (1897) 1,400.

Park Riv'er, in North Dakota, a post-town of Walsh co., 50 m. N.W. of Grand Forks. A wheat-shipping point. Pop. (1900) 1,088.

Parker, ALTON BROOKS, jurist and presidential nominee, was born in Cortland, N. Y., May 14, 1852. He studied law at the Albany Law School; practiced in Kingston, N. Y.; was surrogate of Ulster Co., 1877-85; became judge of the State Supreme Court, 1885; member of the Court of Appeals, 1889; and chief judge of the Court of Appeals of N. Y., Jan. 1, 1898. A Democrat in politics, he was tendered the office of First Assistant Postmaster-general in 1885. In 1904, he was the Democratic candidate for President, but was defeated.

Parker, JOEL, jurist and soldier, was born near Freehold, N. J., November 24, 1816; admitted to the bar (1842); was State legislator (1847); major-general of volunteers (1861); was governor of New Jersey from 1862 to 1866, doing much to aid the national government during the Civil War; was re-elected (1870); was the National Labor Party's candidate for vice-president (1872); was appointed a justice of the New Jersey Supreme Court (1880). Died in 1888.

Parker, JOSEPH, clergyman, was born in Hexham, Eng., April 9, 1839; began to preach in early youth; was ordained to the ministry of the Congregational Church (1858); is now (1897) minister at the City Temple, London; visited the United States (1888); has published several theological works, including *City Temple Sermons* (1869).

Parker, WILLARD, surgeon, was born in Lyndehoro, N. H., Sept. 2, 1809; graduated at Harvard (1826); studied medicine with Dr. John C. Warren, of Boston; filled several professorships; in 1839 became professor of Surgery in the New York College of Physicians and Surgeons, holding this position for thirty years, when (1869) he took the chair of Clinical Surgery; established the first college clinic in the U. S.; made many valuable discoveries in practical surgery, including the cure of abscess of the vermiform appendix. He became president of the New York State Inebriate Asylum in 1865; was a member of many professional societies, and author of numerous papers on practical surgery. Died April 25, 1884.

Parker, in South Dakota, a city, cap. of Turner co., 23 m. S.W. of Sioux Falls. Trade center of a grain and stock-raising region. Pop. (1895) 856.

Parkhurst, CHARLES H., clergyman and social reformer, was born in Framingham, Mass., April 17, 1842; graduated at Amherst (1866); studied theology at Halle (1869), and at Leipzig (1872-73), teaching during the interval in Massachusetts. In 1874 he became pastor of the Congregational Church at Lenox, Mass.; six years later he was called to the pulpit of the Madison Square Presbyterian Church, in New York. He succeeded Dr. Howard Crosby as president of the Society for the Prevention of Crime, and in that capacity made a vigorous campaign against evil-doers by having them prosecuted and punished, in spite of police indifference. In 1892 his exposure and denunciation of those in control of the city made him famous as the leading municipal reformer of the age in America. He opposed party politics in city affairs. His vigorous campaign resulted in the defeat (1894) of the Tammany organization, and the election of the Strong-Goff reform ticket. In theology, Dr. Parkhurst is an earnest advocate of a revised confession of faith, and is one of the foremost defenders of Dr. Charles A. Briggs. He has published sermons and essays in periodicals, religious and social; in 1895 he organized the City Vigilance League in the interests of good government.

Parks and Forest Reserves. Of the public lands of the United States, large portions have been reserved from sale or settlement because of remarkable natural beauty, making them suitable for parks of public resort and recreation, or because their forests shelter game which it is desired to preserve, or contain the sources of streams essential to the water supply of the lands below.

The *Yosemite Valley Park* was granted by an act of Congress to the State of California, June 30, 1864. It includes the famous cleft in the Sierra Nevada Mountains after which it is named, and is situated at the headwaters of the Merced river, in Mariposa co. The valley is 15 m. long, and about 1 m. wide between the main edge of the precipices on both sides. The park also includes, by like act of Congress, the famous Mariposa grove of Big Trees (*Sequoia gigantea*). These tracts have been surveyed and mapped out by the State of California, which maintains a system of care of the park and the guiding of visitors.

The *Yellowstone National Park* is in the northwestern corner of Wyoming. It extends 65 m. N. and S., and 55 m. E. and W., and has an area of 3,575 sq. m. It contains wonderfully picturesque cañons and waterfalls, and, it is said, more hot springs and wonderful geysers than all the rest of the world. It was set apart as a national park and preserve by act of Congress, March 1, 1872. For the care of the park and the preservation of the game a detachment of troops of the regular army is detailed.

The *Pacific Forest Reservation* is in the State of Washington, and has an extent of 967,680 acres. It includes Mt. Tacoma and a great variety of beautiful scenery, and is accessible from the city of Tacoma. A bill was introduced into Congress in 1894 to set this reservation apart under the name of Washington National Park.

The *Grand Cañon Reservation* is in the northwestern quarter of Arizona. It is a square plot of 1,851,520 acres, and includes a picturesque portion of the cañon of the Colorado. This will probably be set apart as a national park.

The *Adirondack Park*, in Clinton, Essex, and Hamilton counties, N. Y., was made a State park by act of the New York Legislature in 1892. That act created a State Forest Commission which laid out the bounds of the proposed park in 1893. In 1894, they reported a plan including 2,800,000 acres. Of this 880,000 acres were held as private preserves, and 1,250,000 acres were owned by lumbermen, while the State owned 550,000 acres. The Constitution adopted by the State in 1894 prohibited the sale or lease of any of these State lands; and, though earnest efforts were made to amend this prohibition in 1896, they were unsuccessful. The legislature in 1895 appropriated \$30,000 for more perfect surveys, and in April, 1897, a law was enacted directing the appointing from the Fisheries, Game, and Forest Commission a Forest Preserve Board to acquire for the State by purchase, or otherwise, land, structures, or waters, embraced within the Adirondack Park as defined by law, and appropriating for the purpose \$600,000, and authorizing the borrowing of \$400,000 more, the intent being to increase the State forest reserve to 3,000,000 acres. In May, 1897, the superintendent of the State Land Survey, in his annual report, declared that the land owned by the State included 796,809 acres.

The national government has also established a series of *military parks* in the preservation of famous battlefields.

The *Gettysburg Battlefield*, in Pennsylvania, was set apart soon after the battle as a national cemetery, where were buried 3,580 Union soldiers who fell in the battle. This cemetery was dedicated Nov. 19, 1863, and on this occasion President Lincoln delivered his short but immortal address. A large number of monuments have been erected there by various memorial associations, and in 1895, according to act of Congress, the tract of 800 acres was received by the national government from the Memorial Association. A commission was appointed to mark out the line of battle and survey roads, and \$80,000 was appropriated for the improvement of the grounds. The act of Congress provides that adjacent lands occupied by the army during the battle shall be acquired by condemnation or purchase.

The *Chickamauga and Chattanooga Park* includes the battlefield of Chickamauga and its approaches, with an area of about 15 sq. m. The government secured by purchase the site of Bragg's headquarters on Missionary Ridge, and Orchard Knob, the headquarters of Grant, Thomas, and Granger. The road along Missionary Ridge, following Bragg's line of battle, is laid out as a wide boulevard, offering grand views of mountain, valley, and river. The park was dedicated on the thirty-second anniversary of the battle of Chickamauga, Sept. 18-20, 1895.

The *Shiloh Park*, Tenn., was established at the field of the battle of Shiloh, by act of Congress in 1895. It embraces an area of 4,000 acres, and Congress appropriated \$150,000 for the purposes of the work.

The Dominion of Canada has made a similar disposition of certain parts of its domain. It joined with the State of New York in establishing the freedom to the public of the banks and islands commanding a view of Niagara Falls (*q. v.*) on both sides of the Niagara river.

The *Rocky Mountain Park* is an area 26 miles long by 16 miles wide, on the eastern slope of the Rocky Mountains, in the valley of Bow river, about 250 miles north of the international boundary line. It includes the extraordinary hot sulphur springs of Banff, Devil's Lake, and many snow-covered peaks. The government maintains a superintendent and police force here, has built roads, paths, shelters, &c., and the Canadian Pacific Railway, which traverses the park, has a large modern hotel at the springs, where also are sanatoria. "No part of the Rockies," says Ingersoll, "exhibits a greater variety of sublime and pleasing scenery; and nowhere can good sport be obtained to better advantage." Rogers' Pass, by which the Canadian Pacific Railway crosses the Selkirk Mountains (*q. v.*), is also reserved as a national park, including the valley of the Great Glacier. See NATIONAL PARKS. For FOREST PRESERVES, see FORESTRY.

Parkville, in Missouri, a city of Platte co., 10 m. N.W. of Kansas City; has saw mills, brick yards, and machine shops. Seat of Park College. Pop. (1897) 265.

Park'way, *n.* A wide street or thoroughfare, adorned on the sides with grass and trees, and sometimes with a row of trees through the middle.

Parliamentary Law. All deliberative assemblies need imperatively some rules to govern their proceedings. These rules, among English-speaking nations, are called parliamentary law, because derived from the practice of the English Parliament, which, gradually and by slow degrees, solved the problem of how to conduct its business so as to obtain the deliberate sense of the assembly with the least possible restraint and inconvenience to its members. Parliamentary law is not absolute, but is based upon well-defined principles, from which it varies for good reasons only. In the U. S. the old English parliamentary law has been gradually modified in practice. New motions have been introduced and others so changed as to preserve their old name only. In Great Britain the previous question is demanded by those who intend to vote against it, while in the U. S. it is demanded by those who intend to vote for it. The previous question has not the same

effect all over the U. S., in certain parts of which many still hold to the ruling that ordering the previous question cuts off pending amendments, and brings the assembly to an immediate vote on the pending question. This was once sound parliamentary law, but is so no longer, the previous question being considered by the best parliamentarians merely a motion to stop debate and proceed to vote on the pending question, even though it be an amendment. A large political convention, a small debating society, and a city council need different rules to supplement ordinary parliamentary law. The practice of the House of Representatives would determine the parliamentary law of the Republic in all matters common to all deliberative bodies, if the House had continued to be essentially a deliberative assembly, like the British House of Commons, with its presiding officer abstaining from partisanship so as to retain the chair notwithstanding the change in the party in power. The House of Representatives, however, has almost ceased to be a deliberative assembly, its business being done by committees, to which are referred the bills presented, without reading.

Parmer, in Texas, a N.W. co.; area, 850 sq. m. Unorganized.

Parnell, CHARLES STEWART, Irish politician, was born in Avondale, co. Wicklow, June 28, 1846. His family, which belonged in Cheshire, England, were for nearly a century associated with Irish Parliamentary life. He was educated at Magdalen College, Cambridge; travelled in the United States; returned to Ireland, and became high sheriff of his county (1874); entered Parliament (1875) for the county of Meath; in 1876 became prominent for stubborn opposition to certain government measures; introduced a bill (1877) to facilitate the purchase of their holdings by the tenantry of the disestablished Irish Church. The bill was defeated by a vote of 150 to 110. The history of the Home Rule party after that date was the history of Parnell, who retained the leadership of the Irish Parliamentary party until 1890, when the Parnell-O'Shea scandal caused a division of the party into Parnellites and anti-Parnellites; the latter believing that Parnell's usefulness was ended, chose for their leader Justin McCarthy, who later became the recognized head of the Nationalists. P. still tried to lead his faction; dissension was wide and furious, and in the midst of the tumult he died, Oct. 6, 1891.

Parrott, ROBERT PARKER, U. S. A., inventor, was born in Lee, N. H., Oct. 5, 1804; graduated at West Point (1824); was assistant professor there for five years; filled several military posts, and became superintendent of the West Point cannon foundry at Cold Spring, N. Y. (1836). Here he invented the rifled cannon since known as the Parrott gun; resigned in 1867, and thereafter engaged in various business enterprises. Died Dec. 24, 1877.

Parry Islands. (*Geog.*) An American arctic archipelago, north of Melville Sound, including Melville, Bathurst, Prince Patrick, and other lesser islands, the northernmost point of which is Cape McClintock. They were first noted by Parry, and were given his name.

Parsons, SAMUEL HOLDEN, soldier and jurist, was born in Lynn, Connecticut, May 14, 1737; graduated at Harvard (1756); admitted to the bar (1759); from 1762 representative in the legislature for many years; was King's attorney in 1774; soldier of the Revolution, with rank of major-general in 1780; member of the convention for the ratification of the Constitution of the United States (1788); first judge of the Northwest Territory; and Connecticut's commissioner to purchase from the Wyandotte Indians the tract known as the Western Reserve, in Ohio; published a valuable paper on the antiquities of the Western States. He was drowned Nov. 17, 1789.

Parsons, THEOPHILUS, jurist, born in Byfield, Mass., Feb. 24, 1750; educated at Harvard; admitted to the bar (1774), and settled at Newburyport, Mass.; his practice extended throughout New England; was one of the framers of the State Constitution, and a member of the ratification convention of 1788; removed to Boston (1800), and became chief justice of the Supreme Court of the State. He was famous for scholarship, wit, and judicial ability. Died Oct. 30, 1813.

Parsons, THEOPHILUS, legal and religious writer, son of Judge Theophilus Parsons, was born at Newburyport, Mass., May 17, 1797; published *Law of Contracts* (1853); *Mercantile Law* (1856); *Maritime Law* (1859); *Deus Homo* (1867); *The Infinite and the Finite* (1872), &c. Died January 26, 1882.

Parsons, in Kansas, a city of Labette co., 32 m. N.E. of Independence; has railroad, machine, car and bridge-building shops and other manufactures. Pop. (1895) 7,573.

Parsons, in Pennsylvania, a post-borough of Luzerne co. Pop. (1897) 2,630.

Parsons College. (*Educ.*) A co-educational institution founded by the Presbyterians, in 1876, at Fairfield, Iowa. It has productive funds, and, in 1896, had 12 instructors, 178 students, and 25,000 volumes in its library.

Parthenon, *n.* [*Lat.*] Although a large library of books has been written about the old Greek temple, and each of its minutest details commented on and not unfrequently disputed over, there has remained one thing in the ruins of the venerable pile which no one has been able to explain satisfactorily, until quite recently. On the east front still stands complete the architrave, a smooth surface of marble, 100 feet long and 4 feet wide, stretching across the whole front just above the tops of the 8 columns. It is the surface of

the great marble beams which span from pillar to pillar. Above this architrave runs a marble belt of about the same width composed of 15 three-barred triglyphs, alternating with 15 sculptured metopes. There is a triglyph over each column, and one in the middle of each of the intervening spaces. Under each metope there is a hole, 4 inches by 2, cut in the marble of the architrave, and under each of 12 of the triglyphs is a close group of smaller holes arranged with no apparent system. It has been long agreed that the large holes once served to hold great metal shields in place against the marble, and that into the smaller holes were inserted nails which served to fasten groups of metal letters. What these letters were, or what they spelled, was a riddle which had for a great while puzzled archaeologists. Attempts were made to solve the riddle, and finally it was assumed that the letters spelled the message that Alexander the Great sent to Athens, 100 years after the Parthenon was completed, together with 300 suits of armor from the booty of his first Asiatic victory at the Granikos. Upon this assumption, the inscription read: "Alexander, son of Philip, and the Greeks, except the Lacedæmonians, from the Barbarians who inhabit Asia." An insuperable difficulty about this assumption is that the Alexander message contains in Greek 94 letters only, while the Parthenon inscription has evidently contained not less than 250 letters, arranged in three lines. The makers of the great model of the Parthenon in the Metropolitan Museum of Art, New York, recognized this difficulty. When they attempted to reproduce the inscription, they found that the Alexander message would fill but one-third of the space. They therefore introduced matter of their own invention, reference for the most part to other victories of Alexander, sufficient to bring the number of letters up to 335. Inscriptions long ago torn from temples at Assisi, Pergamon, Troy, and other places have been reconstructed by determining from the relative positions of the holes what the letters were. Knowledge of this fact stimulated the ambition of Eugene P. Andrews, a student from Cornell University, in the American Classical School at Athens. By an ingenious arrangement of ropes, pulleys, and a rope ladder, which he describes in a paper in the *Century* magazine, he raised himself to the level of the architrave of the Parthenon, 45 feet from the ground. He then took "squeezes" from the nail-holes. By studying these "squeezes" carefully, it was found that the inscription commemorated the erection of a statue to the Emperor Nero, probably at the entrance of the Parthenon, and ran thus: "The Council of the Areopagus and the Council of the Six Hundred and the Athenian people erect a statue of Emperor Greatest Nero Caesar Claudius Augustus Germanicus, son of God, while Tiberius Claudius Novius, son of Philinos, is acting as General over the Hoplites for the eighth time, and while he is overseer and lawgiver." Nero was expected at Athens in 61 A.D., but did not come, and was never there after that date, so never saw the servile inscription intended to flatter him. After he committed suicide in 68 A.D., the letters were torn from their sockets.

Par'ticeps Crim'inis. [*Lat.* a sharer in the crime.] (*Law.*) One who is participator in another's guilt; an accomplice.

Parti'tion Lines. (*Her.*) Lines dividing the shield in directions corresponding to the ordinaries. According to the direction of the partition lines, a shield is said to be party or parted per fess (1), per pale (2), per

Fig. 3018.—PARTITION LINES.

bend (3), per chevron (4), per saltire (5); a shield divided by lines in the direction of a cross is said to be quartered (6); and a shield parted at once per cross and per saltire is said to be Gironné of eight (7).

Par'ton, JAMES, author, was born in Canterbury, England, February 9, 1822; removed to the U. S. at the age of five years; was educated in New York, and became a teacher; wrote extensively for current journals, and published volumes from time to time, chiefly biographical sketches, among which are *Life and Times of Aaron Burr* (1857); *Life of Andrew Jackson* (1860) *Life and Times of Benjamin Franklin* (1864); *The People's Book of Biography* (1868); *Life of Thomas Jefferson* (1874); *Life of Voltaire* (1881); *Captains of Industry* (1884 and 1891). Died Dec. 17, 1891.

Pasadena, in California, a city of Los Angeles co. In a rich fruit-growing district, and a famous health resort. Seat of Throop University. Pop. (1897) 5,150.

Pas'co, in Florida, a W. co.; area, 800 sq. m.; formed from Hernando co. Cap. Dade City. Pop. (1895) 4,697.

Paso Robles, in California, a post-town of San Luis Obispo co., 29 m. N. of San Luis Obispo; has hot sulphur springs. Pop. (1897) 1,000.

Pass Chris'tian, in Mississippi, a post-village of Harrison co., 58 m. E.N.E. of New Orleans. A watering place. Pop. (1897) 1,760.

Passavant, WILLIAM ALFRED, clergyman and philanthropist, was born in Pennsylvania, Oct. 9, 1821. He was an eminent preacher, but his chief work was in organizing benevolent and Christian institutions. He founded hospitals in Pittsburg, Milwaukee, Chicago, and Jacksonville, Ill., and orphanages in Rochester, Pa.; Zelenople, Pa., and Mt. Vernon, N. Y. He was an influential organizer in the Lutheran Church in the U. S., and edited several denominational papers. Died June 3, 1894.

Passavant, WILLIAM ALFRED, JR., clergyman, was born in Pittsburg, Pa., Jan. 23, 1857; succeeded his father in the care of the established benevolent institutions.

Passé (with feminine nouns, *PASSÉE*), *a.* [*Fr.*] Worn out; past prime; old-fashioned.

Passion Play. A mystery or miracle play, founded on the passion, or suffering, of Jesus Christ; a dramatic representation of the crucifixion and attendant scenes. (*See MORALITIES.*) The only play of this kind that has come down from medieval times is the one still celebrated every ten years at Ober-Ammergau, in Bavaria. The performance takes about six hours and is given three times a week, from May to September. It requires over 500 actors, including many children, who are chosen from the inhabitants of the village.

Pasteur, LOUIS, chemist and biologist, was born in Dole, in the department of Jura, France, Dec. 27, 1822; received the degree of D.Sc. from the École Normale

Fig. 3019.—LOUIS PASTEUR.

(1847); was professor of Physics in the Faculty of Sciences, Strasburg, (1849); dean of the Faculty of Sciences in Lille (1854); scientific director of the École Normale, Paris (1857); professor of Geology, Physics, and Chemistry, at the École des Beaux Arts (1863); professor of Chemistry at the Sorbonne (1867). He was noted chiefly for his discoveries in the chemistry of fermentation, and in mycology. He ascertained the causes of certain deteriorations in wine, and found a preventive. His investigation of the disease of the silk-worm resulted in finding both the cause and the cure. He discovered the bacilli which cause anthrax in cattle, and a cure by inoculation; found the cause of hydrophobia to be a microbe in the nerve-centers, and its preventive and cure in the employment of an attenuated or "cultured" form of the same microbe. In 1888 he established the Pasteur Institute, in Paris, for the treatment of rabies, which was opened in the presence of President Carnot. In 1890 a hospital for the treatment of rabies by the Pasteur method was founded in New York city. In recognition of his services to science and industry he received (1872) a prize of 10,000 florins from the Austrian Ministry of Agriculture; in 1873, one of 12,000 francs from the Société d'Encouragement; and in 1874, a life-pension of 12,000 francs from the French government. He was elected a member of the London Royal Society in 1869, and of the French Academy of the Institute of France in 1881. His seventieth birthday was celebrated before a brilliant official assembly at the Sorbonne (1892). He contributed many articles to scientific periodicals, and published several volumes embodying the results of his labors. Died Sept. 28, 1895.

Patas'kala, in Ohio, a post-village of Licking co., 18 m. E. of Columbus. Pop. (1897) 700.

Pa'ter, WALTER HORATIO, literary and art critic, was born in London, Aug. 4, 1839; educated at Queen's College, Oxford; elected a fellow of Brasenose College, and was for a time dean and lecturer there; travelled on the Continent, particularly in Italy, studying the scenes of classic and mediæval history; in 1873 published a series of essays entitled, *Studies in the History of the Renaissance*. Then followed *Marius the Epicurean*; *His Sensations and Ideas* (1885); *Imaginary Portraits* (1887); *Appreciations* (1889); *Plato and Platonism* (1893); and after his death, appeared *Greek Studies* (1894); and

an unfinished romance, *Gaston de Latour* (1896). Died July 30, 1894.

Pater'nalism, *n.* In general, the character of being fatherly. In particular, a term applied to that kind of government which deals with its subjects after the manner of a father with his children; the exercise of governmental control over the social and personal affairs of the people; or the public conduct of business that might otherwise be a matter of private enterprise.

Patho-. An initial compounding element, derived from the Gr. *pathos*, suffering; used in combination with words of Greek origin relating to disease.

Pat'more, COVENTRY KEARSEY DEIGHTON, poet, was born in Woodford, England, July 23, 1823; published a volume of *Poems* in 1844; from 1847 till 1868 was one of the staff of librarians in the British Museum. He was a voluminous writer; his greatest work is the poem, *The Angel in the House*.

Patriotic Societies. See AMERICAN HEREDITARY SOCIETIES; GRAND ARMY OF THE REPUBLIC, &c.

Pattern Moulding. (*Mech.*) Articles designed to be cast or moulded in metal, as iron or brass, are first shaped in wood, these being used to form the sand mould of the founder. The patterns are cut a little larger than the finished article is to be, to allow for the shrinkage of the metal in cooling. If the wood pattern is to be replaced by an iron pattern, double shrinkage must be allowed for. In the case of iron the shrinkage is one-eighth of an inch per foot, and pattern makers use measuring rules which are graduated that much too long, to save the trouble of making the calculation with every measurement. The shrinkage for brass or other metal differs slightly from that of iron, so that the pattern maker requires to know in advance in what metal the article is to be cast. In forming patterns, it is necessary to consider first whether a certain shape can be drawn from the sand mould, and whether it will have to be made in two or more parts, so that these can be removed, and leave the mould intact for pouring in the molten metal. Those sides of a pattern which must bear against the sides of the sand mould in removal are not made of the usual square angle, which would be desirable, but have to be slightly tapered or bevelled, so that the pattern can be removed without disturbing the sand. Pattern makers commonly use a special form of wood-lathe, a blocking-saw mounted on a table, and various small wood-working tools, and often a steam glue-heater. Many of the parts of a pattern are most conveniently made separately, and glued on. When hollow castings are required, as for cylinders, pipes, faucets &c., it is necessary to form a core to shape the internal sides. A core usually must have projecting pieces called core-prints, to support it in the core-box in forming the mould. It is properly the business of the draughtsman who designs machinery so to draw all the parts that are to be cast that the pattern maker has only to follow the drawing. To do this the draughtsman must understand all the necessities of moulding and pattern making, so as not to draw forms which it is not practical to mould.

Pat'terson, in Louisiana, a post-town of St. Mary parish, 87 m. from New Orleans. Pop. (1897) 1,520.

Paulist Fathers. (*Eccles. Hist.*) Members of the American Roman Catholic missionary order of St. Paul the Apostle, which was founded in New York city in 1858 by the Rev. Isaac Thomas Hecker (*q. v.*), a convert from Protestantism, and was approved by Pius IX. Like its founder, many of the members are men who have abandoned Protestantism; they take no vows, and can leave the order at will; their aim is to adapt themselves to the needs of modern American life in parochial, missionary, and educative work. They own substantial gray-stone buildings on West 51st Street, New York city, and the Church of St. Paul the Apostle, at Ninth Avenue and 60th Street. Their dress somewhat resembles that of the Jesuits, consisting of a long black cassock and biretta.—Same as PAULITES.

Pauncefote, SIR JULIAN, diplomatist, was born in Munich, Bavaria, Sept. 13, 1828; educated at Paris, Geneva, and at Marlborough College; called to the bar of the Inner Temple (1852); was appointed attorney-general of Hongkong (May, 1865); since that date has been constantly in official and diplomatic service. In 1888 he was appointed ambassador at Washington; in 1892 received the grand cross of the Bath for his diplomatic services, and in 1893 was raised to the rank of ambassador extraordinary and plenipotentiary to the United States. Died May 24, 1902.

Pawnbroking, *n.* The Jews first in Europe made a business of money-lending, and in England, after the Norman conquest, made many loans, and are said to have charged from 45 to 65 per cent. interest. They were forbidden to take interest by a law of 1235, and in 1290 were expelled from the kingdom. The business then fell to Italians, popularly called "Lombards." The Italian family of Medici were famous money-lenders, and their armorial bearing of three golden balls (pills) came to be the common sign of the money-lender. The Lombard Street bankers are the successors of the Italian money-lenders. Later the business of private loans was mainly in the hands of the goldsmiths. In 1757 the business was regulated by law of Parliament; and in the Act of 1872 all earlier laws were repealed, and the business of pawnbroking, or lending small sums upon pledges, was put under the regulations which are now in force. This law allows 2½ per cent. a month interest on loans under £2, and 1½ on loans from £2 to £10. The system in the United States has followed that of England. The legal rate in New York is 3 per cent. per month for the first six months on sums of \$100 or less, and 2 per cent. per

month for the remaining six months; but pawnbrokers are allowed to exact other charges, such as special care of a garment, or fees for affidavits where tickets are lost; and there have been instances where the 3 per cent. has been swollen to 18.

The hardships of poor debtors oppressed by money-lenders early led to charitable relief, and in many cities individual and state charity have established the *Mont de Piété*, as it is called, where loans may be secured easily by the poor. The earliest was established in Padua, Italy, in 1491, and others have been founded in France, Spain, Austria, Russia, and other countries. They are often endowed by private or state charity, and are supervised carefully, and lend upon the smallest interest practicable, the *Mont de Piété* of the city of Mexico lending to the very poor without any interest at all. The *Mont de Piété* in Paris made loans in 1891 amounting to \$7,600,000, and renewed loans of \$4,400,000, the number of pledges given being 2,300,000, and the average loan \$6. That in Milan had, in 1883, a capital of over \$150,000. That in Vienna had, in 1893, a capital of \$1,575,000, and made 866,015 loans, the average loan being under \$5. While making nothing from most of the borrowers, from others they have a profit which amounted, in 1893, to about \$31,060.

No government institution like those above described has been established in the United States, either by the National or State authorities, the business being left largely in private hands, it being conducted under State laws or municipal regulation and frequently with little regard to law. During the panic times of 1893 and 1894 charges of extortion against the pawnbrokers of New York led to the incorporation of the Provident Loan Society, and to the enactment of a general law, for the incorporation of such societies. This society accepts only articles of small bulk and considerable value, the interest charges being 1 per cent. a month. Similar societies have been established elsewhere, such as the Pawnier's Bank of Boston and the State Pawnier's Bank of Chicago and some others elsewhere of the same type. All these charge 1 per cent. a month, but the charges of pawnbrokers range from 2½ to 25 per cent. a month.

Pawnee, in Kansas, a S.W. central co.; area, 756 sq. m. Rivers. Arkansas and Pawnee. Surface, chiefly rolling prairie; soil, fertile. Cattle raising is one of the chief industries. Cap. Larned. Pop. (1895) 4,797.

Pawnee, in Oklahoma, a N.E. co. It is bounded on the N. and E. by the Arkansas river. Cap. Pawnee. Pop. (1897) 5,000.

A post-village, cap. of Pawnee co. Pop. (1897) 1,000.

Paxton, SIR JOSEPH, architect, landscape gardener, and horticulturist, was born at Milton-Bryant, Bedfordshire, England, Aug. 3, 1803; educated at the free school at Woburn; was employed as a gardener in the service of the Duke of Devonshire, where he displayed such genius for landscape-gardening that the duke made him manager of the Derbyshire estates, and commissioned him to remodel the grounds at Chatsworth. Under his care the mansion became the most renowned country seat in Great Britain, and the great conservatory proved to be the germ of an idea that culminated in the designs for the great Crystal Palace for the Exposition of 1851. For this service he was knighted, and received honors from several European sovereigns. He built the Crystal Palace at Sydenham, removing the materials from the exhibition building. He also designed the mansion of Baron Rothschild, at Ferrières, France. In 1854, he was elected a member of Parliament for Coventry. He published several works on horticulture, botany, and floriculture. Died June 8, 1865.

Payn, JAMES, novelist, was born at Cheltenham, England, in 1830; educated at Eton, Woolwich Academy, and Trinity College, Cambridge, graduating in 1854. In 1858, became editor of *Chambers' Journal*, and in 1882, of the *Cornhill Magazine*. His first novel, *A Family Scapegrace*, was published in *Chambers' Journal*, and a few years later was followed by *Lost Sir Massingberd*. He has written more than 100 novels.

Payne, HENRY B., lawyer and politician, was born in Madison co., N. Y., Nov. 30, 1810; educated at Hamilton College; studied law; was admitted to the bar, and began practice at Cleveland, O. (1834); 12 years after, he retired from the profession, and became interested in railroads and manufacturing; was a member of the Ohio State Senate (1849); Democratic candidate for the U. S. Senatorship (1851), and for governor (1857); a prominent member of several Democratic conventions. He was elected to Congress in 1875, and was U. S. Senator, from 1885 to 1891. Died Sept. 9, 1896.

Payne, HENRY C., cabinet officer, was born at Ashfield, Mass., November 23, 1843. Removing to Milwaukee in 1863, he became active in Republican politics, was postmaster 1876-86, street railway president, and in 1893-95 receiver of the Northern Pacific Railroad. He became a member of the National Republican Convention in 1880, was a delegate to the Conventions of 1888 and 1892, and in 1902 was appointed to succeed Charles Emory Smith as Postmaster-General of the United States. Died October 4, 1904.

Payne, in Oklahoma, a N. central co.; area, 600 sq. m.; intersected by the Cimarron river. Surface, undulating prairie; soil, fertile clay loam; timbered along streams. Products. Wheat, corn, cotton, oats, root crops, cane. Cap. Stillwater. Pop. (1897) 14,000.

Payson, EDWARD, clergyman, was born at Rindge, N. H., July 25, 1783; was pastor of a church in Portland, Me. His sermons, with memoirs, by Cummings, were published in 1846, and are said to be more read than those of any other New England divine, except Dwight. He was a man of great zeal and saintly devotion; and his personal popularity is attested by the

number of his namesakes in the Eastern States. Died Oct. 22, 1827.

Pea'body, ANDREW PRESTON, clergyman and author, was born in Beverly, Mass., March 19, 1811; graduated at Harvard (1826); studied divinity at Cambridge; was pastor of the South Parish (Unitarian) Church in Portsmouth, N. H., from 1833 to 1860; preacher to Harvard University and professor of Christian Morals from 1861 to 1881, when he resigned to devote his time to literary work, and retired as emeritus professor. He was acting president in 1862, and again in 1868-69. For eleven years, from 1852, he was editor of the *North American Review*, to which and to other periodicals he contributed largely. He published several volumes of sermons, lectures, and didactic essays: a *Manual of Moral Philosophy* (1874); *Harvard Reminiscences* (1888); and *Harvard Graduates Whom I Have Known* (1890). Died March 10, 1893.

Peabody, ELIZABETH PALMER, educator, was born in Billerica, Mass., May 16, 1804; a sister of Mrs. Horace Mann and Mrs. Nathaniel Hawthorne; she taught in Bronson Alcott's school; was one of the first to introduce the kindergarten system into the U. S., and published several works relative to the subject; also published *Chronological History of the United States* (1856); and edited Mrs. Mann's *Guide to the Kindergarten* (1877). Died Jan. 3, 1894.

Peabody, in Kansas, a city of Marion co., 18 m. N. E. of Newton; a shipping point for cattle and hogs. The Kansas silk station is located here. Pop. (1895) 1,361.

Peabody, in Massachusetts, a post-town of Essex co. This town, formerly South Danvers, was named in honor of George Peabody, who was born here. Pop. (1895) 10,510.

Peale, CHARLES WILSON, painter, was born in Chester-town, Maryland, April 16, 1741; studied art under J. S. Copley, in Boston, and Benjamin West, in London; is remembered especially for his portraits of Washington, John Hancock, Robert Morris, Alexander Hamilton, and several of the principal army officers of the Revolution. He was also active in science and manufacturing, and a clever inventor and popular lecturer. Died Feb. 22, 1827.

Peale, REMBRANDT, portrait painter, son of C. W. Peale, was born in Pennsylvania, Feb. 22, 1778. He painted a portrait of Washington in 1795; afterward studied with Benjamin West, and spent the greater part of his time in Europe; painted portraits of Baron, Chivier, Thomas Jefferson, Commodore Perry, and Stephen Decatur. His portrait of Washington painted in 1823, and purchased by Congress for \$2,000, is the one commonly referred to as the "Peale Portrait." Besides his portraits from life, his figure-painting included groups, historical and mythological. He wrote *Reminiscences of Art and Artists* (1845), &c. Died Oct. 3, 1860.

Peale, in Pennsylvania, a post-village of Clearfield co. Pop. (1897) 575.

Pear, *n.* (*Bot.*) *Pyrus communis*; the name is also applied, generically, to species of *Pyrus* of the group *Pyrophorum*, consisting of the Pears proper.—*P.* ALLIGATOR, or AVOCADO. *Persea gratissima*.—*P.* ANCHOVY. *Grius cauliflora*.—*P.* GARLIC. *Crotalaria gynandra*.—*P.* GRAPE. *Amelanchier Botryopium*.—*P.* PRICKLY. *Opuntia vulgaris*, and *O. Tuna*.—*P.* STRAWBERRY. *Cereus triangularis*. *P.* SWALLOW. *Pyrus terminalis*.—*P.* WILD. A West Indian name for *Clethra tinifolia*.

Pear'y, ROBERT EDWIN, U. S. N., arctic explorer, was born in Pennsylvania, in 1854; removed to Maine, and graduated at Bowdoin College; in 1885 became a civil engineer in the U. S. N., with rank of lieutenant; in 1886, 1891, and 1893 made expeditions to the Polar regions. From the last expedition he returned with the "Peary Relief Expedition," in the steamer *Kite*, to St. John's, Newfoundland, Sept. 21, 1895; this expedition was in charge of Emil DiBITSCH, brother of Mrs. Josephine Peary, who accompanied her husband on his expeditions, and published an account of the first in *My Arctic Journey* (1893). In May, 1896, Lieut. P. made a successful expedition to Greenland for the purpose of collecting specimens in natural history, returning to Cape Breton, Sept. 27. In 1897 Lieut. P. was given leave of absence by the government for the purpose of continuing his explorations in the northern seas, in pursuance of a plan which would require five or more years to carry out successfully. He proposed to establish a station, well provisioned and supplied, in the far north, and make it the basis of annual sledge journeys toward the pole. In his preliminary voyage for this purpose in 1897, he brought back an immense meteorite from Cape York, Greenland. Going north again in 1898, he remained until 1902, reaching in the latter year the latitude of 84° 17' N. In 1904 he began preparations for another expedition, and set out in 1905 in the specially built Arctic steamer "Roosevelt." In the spring of 1906 he set out on a sledge journey northward, and, despite numerous difficulties, reached the latitude of 87° 6' N., the highest attained to that time. He sought the Arctic region again in 1908 and in Feb., 1909, made a final effort to reach the pole, this time successfully. The ice proved favorable, rapid progress was made, and on April 6, 1909, the latitude of 90° was reached and the long-sought goal attained. See POLAR RESEARCH.

Peat'-bog, *n.* A bed of peat is the accumulation of remains of plants grown *in situ*, deposited each year, one layer upon another, until the accumulation becomes sometimes of great thickness, and covering a wide surface of land. Two conditions are necessary for the origin and the growth of peat—water, either stagnant in basins, lakes, pools, &c., or water abundantly supplied by a boggy atmosphere, increased by dense forest

growth. Pools of stagnant water, when not exposed to periodical drying up, are invaded by a peculiar vegetation, first mostly composed of confervæ, simple thread-like plants of prodigious activity of growth, mixed with a mass of infusoria and microscopic plants, which partly decomposed, partly continuing the floating vegetation, soon fill the basins and cover the bottom with a floating of clay-like mould. So rapid is the work of these minute beings that in some cases from six to ten inches of this mud is deposited in one year. When left undisturbed this mud becomes gradually thick and solid, affording a soil for the growth of marsh plants, whose substance, more or less woody, drops annually to the bottom. When at last the basin has become filled, its surface, exposed to sunshine and air, becomes a true loam, and is gradually overgrown with meadow or forest. In this way many deposits of peat are buried underground and remain unknown until discovered by diggings or borings. Such are the immense peat deposits in the Dismal Swamp, and all along the shores of the Atlantic from Norfolk to New Orleans. In other cases, when basins of stagnant water are too deep for the vegetation of the aquatic plants, nature attains the same result by a different special process, namely, by the prolonged vegetation of certain kinds of floating mosses, especially the species known as sphagna. These floating masses grow with prodigious speed, and expanding their branches in every direction over the surface of ponds or small lakes, soon cover it entirely. Thus they form a thin floating carpet, which as it gradually increases in thickness serves as a solid soil for another kind of vegetation—that of the rushes, the sedges, and some kinds of grasses, which grow abundantly mixed with the mosses, which by their water-absorbing structure furnish a persistent humidity sufficient for the preservation of their remains against aerial decay. The floating carpet of moss becomes still more solid, and is then overspread by many species of larger swamp plants, and small arborescent shrubs, especially those of the heath family; and so in the lapse of years, by the continual vegetation of the mosses, which is never interrupted, and by the yearly deposits of plant remains, the carpet at last becomes strong enough to support trees, and is changed into a floating forest, until, becoming too heavy, it either breaks and sinks suddenly to the bottom of the basin or is slowly and gradually lowered into it and covered with water. That the breaking down of the surface vegetation of lakes is not fanciful, but a real explanation of the deep peat deposits of Denmark, is proved by a remarkable adventure of the people of the Jura Mountains in Switzerland, where a peat-bog forest once sank suddenly and now lies at the bottom of a lake, over which a fresh carpet of peat has since then grown. Lac d'Etallieres, six or seven miles from Fleurier in the Val des Ponts, is a piece of open water in one of the extensive series of peat-bogs stretching along the parallel valley of the Brevine. Previous to the year 1500 A. D., a forest occupied the site of the present lake, and covered the flat floor of the valley. Already, however, a new carpet of moss, &c., is beginning to creep onward from the shores toward the center of the lake, and another cycle of its history is beginning. This has frequently happened, and the superimposed layers observed in peat and coal beds may thus be accounted for. In the southern part of the U. S. the results of the process are differently exhibited. The bottom of Drummond Lake, of the Dismal Swamp, for example, is formed of a forest, once growing at the surface, but now prostrate and buried beneath fifteen or twenty feet of water. Beneath it probably lies a deposit of the detritus of plants, or a bed of peat; while the moss vegetation is now advancing into the lake from all around its edge, so that it is not possible to reach the open water without sinking deeply at every step into the floating carpet. In New Jersey, near the seashore, very large tree trunks are dug out from beneath a covering matter of muddy peat, from 10 to 20 feet thick. Around New Orleans borings for water have traversed, at various depths, a succession of beds of peat and forest, separated by deposits of sand. In northern countries, where a colder climate is particularly favorable to the growth of the mosses, the process is still more plainly exhibited, either as a work completed in the past, or still actively carried on and open to observation of the present generation. This subject is more extensively discussed and illustrated in the *Report of the Geological Survey of Pennsylvania for 1885*.

Pecos, in Texas, a W. co.; area, 6,700 sq. m.; bounded N.E. by Pecos river. Surface, hilly; very dry; said to contain silver ore; soil, in valleys adapted to grazing. Cap. Fort Stockton. Pop. (1897) 1,550.

Pedar'ian, n. [Lat., *pedarius*.] A Roman senator not entitled to vote, but who could express his approval of a measure by walking over to the side occupied by the party with whom he concurred.

Peel, ARTHUR WELLESLEY, VISCOUNT, statesman, was born in 1829, the youngest son of Sir Robert Peel; was educated at Eton and Balliol College, Oxford; entered Parliament (1865); was secretary to the Poor-Law Board (1868-71); secretary to the Board of Trade (1871-73); patronage-secretary of the Treasury (1873-74); under-secretary for the Home Department (1880). He was elected Speaker of the House in 1884, and re-elected in 1886 and 1892. He was member for Warwick from 1865 to 1885; after that date for Warwick and Leamington; retired in 1895; received the thanks of the House, a peerage, and a pension of \$20,000; and was presented with the freedom of the city of London in July, 1895.

Peel, SIR ROBERT (Junior), statesman and diplomatist, was born in London, May 4, 1822; educated at Harrow

and at Christ Church, Oxford; was attaché at Madrid (1844-46); secretary of legation (1846); and *chargé d'affaires* at Berne (1846-50); a lord of the admiralty (1855-57); chief secretary for Ireland (1861-65); a Liberal member of Parliament for Tamworth (1850-80); was sworn of the Privy Council (1861); made a G. C. B. (1868); married (1856) the eighth daughter of the Marquis of Tweeddale.

Peixoto (*pê-shô'to*), FLORIANO, statesman, was born in Alagoas, Brazil, in 1842; received a military education; served with distinction in the war with Paraguay (1865-70); was severely wounded at the battle of Aquidaban (March 1, 1870); resigned, but returned to the army after the liberation of his slaves had impoverished him. He supported the republic; was nominated a senator; was minister of war (1890); Vice-President (1891); opposed President Fonseca, who resigned Nov. 23, 1891, when P. succeeded to the Presidency. He retired at the expiration of his term of office, and died June 29, 1895.

Pel'ican Rapids, in Minnesota, a post-village of Ottertail co. Pop. (1895) 831.

Pellestrina, a town of Italy, near the center of an island of the same name, 12 m. S. from Venice. Pop. (1897) about 6,000.

Pelly River. (*Geog.*) A large river of Northwestern Canada, whose confluence with Lewis river (*q. v.*) forms the Yukon. It rises in Pelly lakes, on the continental divide, at the crossing of the 129th meridian with the 62d parallel of latitude, and follows a general northwesterly course for about 400 miles, measured along its windings. It was discovered by Hudson's Bay officers in 1846, who soon built trading-posts upon it—one near its source (where a trail crossed to the head of the Liard river), called Pelly Banks, and another at its mouth, called Fort Selkirk. (See YUKON.) The river is navigable for light-draft boats, and its sands yield gold in fine particles.

Pemberton, JOHN CLIFFORD, soldier, was born in Philadelphia, Pa., August 10, 1814; graduated at West Point (1837); served at various points in the regular army, until 1861, when he resigned to join the Confederate forces; became a colonel of cavalry, under Gen. J. E. Johnston; was promoted to be lieutenant-general of Confederate troops; was officer in command at Vicksburg, and surrendered to Gen. Grant, July 4, 1863; after the war was inspector of artillery; after 1876, resided in Philadelphia and vicinity. Died July 13, 1881.

Pemberville, in Ohio, a post-village of Wood co., 18 m. S. of Toledo. Pop. (1897) 920.

Pembroke, in Kentucky, a post-village of Christian co. Pop. (1897) 510.

Pen Argyll, in Pennsylvania, a post-borough of Northampton co., 27 m. N. of Bethlehem; in the heart of the great slate region. Pop. (1897) 2,420.

Pence, in Wisconsin, a post-village of Iron co. Pop. (1897) 500.

Pender, SIR JOHN, was born in Scotland, in 1816. He was one of the first financial supporters of the Atlantic cable project, and was conspicuous for his unswerving faith in the scheme, and his loyal sustaining of Cyrus W. Field during the period of relaxed confidence that followed the first failure of the experiment. After the final success of the Atlantic cable, P. engaged extensively in gigantic cable enterprises, receiving distinguished honors from Turkey, Greece, and Portugal, as well as Great Britain. He was a member of Parliament for Totness from 1862-1866, and for Wick from 1872 to the end of his life. Died July 7, 1896.—His oldest son, J. Pender, was elected Conservative member for Northamptonshire, England, in 1895.

Pender, in Nebraska, a post-village, cap. of Thurston co., 40 m. W. of Sioux City. Pop. (1897) 600.

Pender, in North Carolina, a S.E. co.; area, 800 sq. m.; drained by the N. E. Cape Fear river. Surface, level, with large pine forests; soil, sandy. Products, corn, sweet potatoes, wool, pork, lumber, tar, and turpentine. Cap. Burgaw. Pop. (1890) 12,514.

Pen'dleton, GEORGE H., lawyer and politician, was born in Cincinnati, Ohio, July 25, 1825; was State senator (1854-1855); member of Congress (1856-1865); nominee for Vice-President on the Democratic ticket (1864); U. S. Senator from Ohio (1879-1885); minister to Germany (1885). Died in Belgium, Nov. 24, 1889.

Pendleton, in Arkansas, a post-town of Desha co. Pop. (1897) 556.

Pendleton, in Oregon, a post-town, cap. of Umatilla co., 231 m. E. of Portland; has ample water power, and two large flour mills, a paper mill, foundry, &c. Pop. (1897) 3,500.

Pendleton, in South Carolina, a post-village of Anderson co. Pop. (1897) 564.

Pen'ikese, a small island of the Elizabeth group, about 16 m. S. of New Bedford, Massachusetts. It was given to Prof. Louis Agassiz, in 1873, by John Anderson, a merchant of New York, together with \$50,000, as a site for a summer school of natural history, which was maintained there for two seasons.

Pen'nington, in South Dakota, a S.W. co.; area, 1,521 sq. m.; bounded E. by the South Fork of Cheyenne river. Surface, mountains, with broad and fertile valleys; heavily timbered and well watered. Min. Gold, silver, mica, and tin. Farming and stock-raising. Cap. Rapid City. Pop. (1895) 5,163.

Penns'borough, in West Virginia, a post-town of Ritchie co., 42 m. E. of Parkersburg. Pop. (1897) 650.

Penns'burg, in Pennsylvania, a post-borough of Montgomery co., 25 m. N.W. of Norristown; has several cigar factories and other industries. Pop. (1897) 680.

Pennsylvania College. (*Educ.*) A co-educational institution, located at Gettysburg, Pa., and

founded in 1832 under Lutheran auspices. It was started without endowment, but in 1834 the State appropriated \$18,000 for its support, besides furnishing it for a number of years an annual grant of \$1,000. By an act of the legislature in 1830, one-third, in value, of the funds of Franklin College at Lancaster was transferred to Pennsylvania College, to enable it to found a Franklin professorship. The productive funds of the institution amount to \$210,000, and its total yearly income to about \$16,000. In 1897 it had 16 instructors and 236 students, with 24,000 volumes in its library.

Pennsylvania State College. (*Educ.*) This co-educational institution, at State College, Center co., Pa., was organized in 1859 as the Farmers' High School, its name being changed in 1862 to the Agricultural College of Pennsylvania. The legislature having appropriated to the college the income from the proceeds of the national land-grant, and the scope of the institution having been enlarged, the name of the institution was again changed to the Pennsylvania State College. The State holds the proceeds of the national land-grant in trust, for which it has given its bond for \$500,000, on which it pays interest to the college at the rate of 6 per cent. per annum. It is especially an industrial school, paying particular attention to practical and scientific agriculture. The agricultural experimental station, in connection with the college, receives from the U. S. government a yearly appropriation of \$15,000. In 1890 Congress passed a law appropriating to agricultural colleges \$15,000 a year, to be increased annually \$1,000 until it reaches \$25,000. From all these sources its income in 1896 was \$120,248. In that year the college had 43 instructors and 310 students, with about 10,000 volumes in its library.

Pennsylvania, University of. (*Educ.*) This institution originated as a charity school in 1740. Through the efforts of Benjamin Franklin it was founded in 1749 as an academy, and in 1755 incorporated as a college. In 1765 the medical school was opened. Upon the outbreak of the revolution, the provost of the college, William Smith, being a loyalist, was imprisoned, but heard recitations in his cell. The charter of the college was revoked in 1779, and its franchises conferred upon a new organization called "The University of the State of Pennsylvania," being the first university created in North America. Ten years later the faculty and trustees of the college were reinstated, and in 1791 the two institutions were united under the style of the University of Pennsylvania. In 1872 the institution was removed to its present site in West Philadelphia, Pa., where it has above 52 acres, the twelve departments of the University occupying numerous buildings. It has a law department, founded 1789, a dental school, a veterinary department, a department of hygiene and bacteriology, and a graduate department for women. Its entire plant is of great value and it has a productive fund of about \$5,000,000. Its annual revenue is nearly \$600,000. The University museums are very large, and the University libraries contain 285,000 bound volumes and a very large number of unbound volumes and pamphlets. In 1908 it had 45 instructors and 4500 students.

Penn'ville, in Indiana, a post-village of Jay co., 12 m. N. W. of Portland. Pop. (1897) 750.

Pensions, n. pl. In England pensions are given not only to military veterans, but by a regular system to civil officers after long service, and also to distinguished authors and artists in recognition of their eminence. But in the U. S. pensions have been mostly confined to veterans of the military and naval service, and their dependents. Pensions have been granted by special law to the widows of presidents, and the judges of the Supreme Court may retire from duty at 70 years of age with \$10,000 pay, but these are exceptions to the rule. A military pension act was passed by Congress, Aug. 26, 1776, granting half their regular pay to retired and disabled soldiers of the army of Independence. According to present law, a commissioned officer of the army or navy who has served forty years, or a non-commissioned officer or private who has served 30 years, may apply and receive place on the retired list with three-fourths pay; and officers 62 years of age, or younger if disabled from the most active service, are by law retired on three-fourths pay. Soldiers, sailors, and marines who served in the War of 1812, or in the Mexican War, are also entitled to pensions; and all dependent widows are entitled to the same pension to which their husbands would be entitled if living. Besides her own pension of \$12 a month, a widow has \$2 for each of her husband's children under 16 years of age, and should she marry again this is paid to the children till 16 years old. The dependent parents of such soldiers may receive \$12 a month, and the widows and dependent parents of commissioned officers receive a larger pension according to rank. In its pensions to the veterans of the Federal army of the Civil War the U. S. has been liberal beyond all precedent, its pension bill, 30 years after the close of the war, equalling the cost of the greatest armies of Europe. The law now regulating pensions was passed June 27, 1890. Under it every person who served 90 days in the war for the Union and was honorably discharged, and then or thereafter by reason of wounds or other disability incurred in that service, became unable to earn his own support, shall be counted an invalid pensioner, and receive from \$6 to \$12 per month, according to the degree of disability. This pension is to all ranks alike, and anyone already receiving a lower pension may, if entitled to it, receive its increase, though no person shall draw two pensions. Pension attorneys are limited in fee to \$10, and greater charge may be punished by

Johann Heinrich Pestalozzi

1746-1827

\$500 fine or two years' imprisonment or both. The passage of the law was immediately followed by the filing of 363,797 new pension claims, and the requirement of disability was very largely disregarded, so that a great increase of pensions was made, and, although the list of pensions is heavily depleted each year by death, the number has increased year by year. This increase within recent years has been due to pensioners of the Spanish war of 1898 and of the Philippine insurrection, and there is reason to hope that from this time forward there will be a somewhat rapid decrease, since the death-list of civil war pensioners is likely henceforward to be great. The numbers of pensioners on the roll at successive periods, with the amount paid, was as follows:

Years.	Pensioners.	Amount.
1892	876,068	\$141,086,948
1897	976,614	140,845,772
1902	999,446	138,491,822

Pe'ony, n. (Bot.) See **PÆONIA**.

Peo'ple's Pal'ace. An institution suggested in 1882 by Walter Besant in his novel, *All Sorts and Conditions of Men*. The idea gained popularity at once, and the buildings were begun on the Mile End Road, in the East End of London, under the Queen's special patronage, in 1887. They provide ample rooms and facilities for all kinds of recreation, music, reading, gymnastics, &c., and for trade schools and technical training. Over 250,000 people took advantage of the privileges of the People's Palace from October, 1887, to 1889, while in 1890 the technical and handicraft schools alone were attended by 5,000 pupils.

Peo'ple's Par'ty, or Pop'ulists. A political party in the United States, which first met in national convention at Omaha, Neb., July 4, 1892. It there adopted a platform demanding a national legal-tender currency issued by the government directly, without banks; direct distribution to the people at a tax not to exceed 2 per cent. per annum, and by payments for public improvements; free coinage of gold and silver at a ratio of 16 to 1; increase of the circulating medium to \$50 per capita; a graduated income tax; government ownership and operation of railroads, telegraphs, and telephones; and that land shall not be monopolized nor held by aliens, and railroad lands shall be reclaimed and held for settlers. This organization had been preceded by the Farmers' Alliance (*q. v.*), holding similar principles, and by a number of kindred movements more or less local, and the name People's Party had been given to the Greenback Party, which nominated Benjamin F. Butler for President, in 1884. The Farmers' Alliance had carried Kansas in 1890 against the Republicans, and in some Southern States the People's Party was the effective opponent of the Democrats. The Omaha convention nominated for President James B. Weaver, of Iowa, and for Vice-President James G. Field, of Virginia. In the popular election they received 1,041,028 votes, and carried the States of Colorado, Idaho, Kansas, Nevada, and North Dakota, and one elector in Oregon, securing 22 electoral votes; while 5 senators and 11 representatives were elected to Congress. The second national convention of the People's Party met in St. Louis, Mo., July 22, 1896. It reaffirmed the principles of the platform of 1892, and declared "natural money issued by the government to be a full legal tender for all debts public and private;" and denounced the sale of bonds to replenish the treasury, except by specific act of Congress. It declared also that senators should be elected by the people directly. This convention contained 1,200 delegates, including representatives of the American Railway Union and of the Knights of Labor. There was a sharp contest between the radical Populists and those favoring fusion with the Democratic and Free Silver Parties. A test vote, July 23, on conferring with the Free Silver convention then in session in St. Louis, showed 200 majority for fusion; but, July 25, the radicals nominated Thomas E. Watson, of Georgia, for Vice-President by 721 to 699 votes. Later the convention endorsed the Democratic nomination of William J. Bryan for President. In the election following, the Populists secured 114 electors in 26 States, their straight Populist vote being 150,643. In the choice of members of Congress they secured 4 senators and 16 members of the House of Representatives.

Pep'per, WILLIAM, physician, educator, and author, was born in Philadelphia, Aug. 21, 1843; graduated at the University of Pennsylvania (1862); the medical department (1864); was lecturer in the latter department from 1868-1876; professor of Clinical Medicine (1876-1887); of the Theory and Practice of Medicine (1887); became provost of the University in 1881, resigning in 1894. He was influential in extending the scope of the university; during his office many departments were added: the Wharton School of Finance and Economy; the School of Philosophy; the School of Biology; the School of American History; the department of Veterinary Medicine; the department of Archaeology and Palæontology, and that of Hygiene. He was medical director of the Centennial Exposition; president of the American Association of American Physicians (1891), and of the Pan-American Medical Congress at Washington, D. C. (1893). He contributed valuable papers to current journals, and published several books, the most important being *System of Medicine by American Authors*, which he edited and published in five volumes. Died June 28, 1898.

Pep'perrell, SIR WILLIAM, colonial soldier, was born in Kittery, Me., June 27, 1696; entered the army; in 1745 was commander of the New England expedition against Louisville, Cape Breton Island, and, aided by the fleet under Commander Warren, captured it. He was created a baronet in 1746; by successive promotions became lieutenant-general (1759); was acting governor of the colony (1756-58). Meanwhile, in civil life he was chief justice of the court of common pleas, having been appointed by Governor Belcher in 1730. Died July 6, 1759.

Pe'quot In'dians and the Pequot War.

(*Anthrop. and Hist.*) An Algonkin tribe of Indians identified with the early history of New England. They dwelt along the shore of Long Island Sound between the Hudson river and Narragansett Bay, and were numerous and locally powerful at the time of the settlement of New England by the English, controlling 26 subtribes or sections, including the natives of Long Island. Their "emperor" was Sassacus, who, jealous of the predominant influence likely to be gained by his neighbors, the Mohegans on the west and the Narragansetts on the east, on account of friendship with the whites, tried to institute an allied war against the white settlements. Failing in this, the Pequots alone began raiding the feeble English villages in the Connecticut Valley. In 1637 the whites organized a retaliatory expedition, which was joined by a force of Narragansetts and other eastern tribesmen, the whole under command of Capt. John Mason. By a roundabout route they approached and attacked the principal Pequot stronghold—a palisaded fort near the Nupric river, Connecticut—surprising the garrison just before dawn, and destroying nearly the whole band, many of the 600 killed perishing in the flames of the burning houses. Sassacus himself happened to be at another fort on Groton Heights, where, a few days later, the Pequots were again defeated, destroying their power as a ruling tribe and causing the disintegration of the loose confederacy where they had been supreme. Sassacus fled to the Mohawks, by whom he was arrested and put to death at the request of the Narragansetts. See also **UNCAS**.

Per Se. [Lat.] By itself; in itself considered; essentially. A thing right or wrong *per se* is so, regarded independently of its relations to anything else.

Peral'ta. in *California*, a post-town of Alameda co. Pop. (1897) 920.

Per'cival, JAMES GALIS, poet and geologist, was born in Kensington, Conn., Sept. 15, 1795; graduated at Yale (1815); studied medicine, but gave only desultory attention to this profession; was known chiefly as a writer of dainty and picturesque verse. His poems, complete in two volumes, were issued in 1859. In 1834 he made a special study of geology; was associated with Prof. Shepherd in the geological survey of Connecticut. In 1853 he surveyed the lead region of the American Mining Company, in Wisconsin; in 1854 was appointed State geologist. Died May 2, 1856.

Pereda (per-á-da), JOSÉ MARIA DE, novelist, was born in Santander, Spain, in 1833. He has written many sketches expressive of the social life of Spain to-day, distinguished for the quality of local color. The first collection of these sketches was published in 1864, under the title, *Escenas Montañesas*; similar collections have been published at intervals since.

Per'f'ent, a. [Lat. *perfluens*, flowing through.] (*Elec.*) A term used to describe a battery operated by a liquid flowing through it.

Per'ham. in *Minnesota*, a post-village of Ottertail co., 67 m. E.S.E. of Moorhead. Pop. (1895) 846

Perianthoma'nia, n. (Bot.) An unnatural multiplication of sepals, bracts, &c. Examples are afforded by the curious *Dianthus* (Fig. 3020). In most cases the fertility of the plant is affected.

Per'iscope, n.

An improved form of altiscope, principally used for submarine boats, for enabling the steersman to observe the horizon. It is virtually an upright telescope, with a mirror placed angularly at the focus of the eyepiece so that the observer may look into it horizontally.

At the upper and outer end is a lenticular total-reflecting prism. The P. is made rotatable on its axis, although fixed as to upright position.

Perka'sie. in *Pennsylvania*, a post-borough of Bucks co., 12 m. N.E. of Doylestown. Pop. (1897) 510.

Per'kins, CHARLES, art critic, was born in Boston, March 21, 1823; graduated at Harvard (1844); studied art in Paris and in Rome; resided in America, but visited Europe frequently; was distinguished for the originality of his researches in biography and art history, his attention being given chiefly to Italian subjects. He published *Italian Sculptors* (1868); *Art in Education* (1870); *Raphael and Michaelangelo* (1878); *Sepulchral Monuments in Italy* (1883), &c. In collaboration with J. D. Champlin, Jr., he bought out an

Encyclopædia of Painters and Painting (4 vols., 1886-88). Died Aug. 25, 1886.

Per'kins, in Nebraska, a S.W. co.; area, 882 sq. m.; formed from Keith co. Surface, undulating. Cap. Grant. Pop. (1890) 4,364.

Perkins, in Oklahoma, a post-village of Payne co. Pop. (1887) 600.

Permis'sory, a. Of, or pertaining to, arising from, or based upon permission.

Pernet'ti, n. pl. [It.] (Ceram.) Pins or tripods to support an article in a kiln.—Marks left on a baked article of pottery by the supports.

Pernick'ety, a. Over-particular, or unduly precise in trifles; fastidious.

Per'pend, or Perpend'er, n. A stone going through from side to side of a wall, and acting as a binder; called also perpend-stone, through-stone, through-binder. A course of such is called a perpend-course.

Per'rotin, n. [*Perrot*, a French inventor.] An intermittent machine for printing calico, in three colors, from engraved blocks.

Per'ry, MATTHEW GALBRAITH, U. S. N., was born in Rhode Island in 1794; after seeing some service in the Mexican War, commanded the expedition which, in 1852, led to official and commercial intercourse between the U. S. and Japan. Of this expedition he published a history in 3 vols. (1856). Died in 1858.

Perry, NORA, poet, was born in Webster, Mass., in 1841; was one of the popular magazine contributors of her generation; published her first volume of verses in 1874; other published works are, *The Tragedy of the Unexpected* (1880); *Book of Love Stories* (1881); *For a Woman* (1885); *A Flock of Girls* (1887); and *Lyrics and Legends* (1891). Died May 13, 1896.

Perry, THOMAS SERGEANT, critic, was born at Newport, R. I., Jan. 23, 1845; graduated at Harvard (1866), and was for a time instructor there in English and German; has resided much of the time abroad, and has studied at French and German universities. His writings are mainly contributed to literary history and criticism. From 1872 to 1874 he edited the *North American Review*.

Perry, WILLIAM STEVENS, ecclesiastic, was born in Providence, R. I., Jan. 22, 1832; graduated at Harvard (1854), and took holy orders in the Protestant Episcopal Church (1857); began as an evangelical, but in later years became a recognized champion of the highest episcopal prerogative. He was consecrated bishop of Iowa in 1876; in 1891 was conspicuous for his refusal to consent to the consecration of Phillips Brooks as bishop of Massachusetts unless the latter would sustain the dogma of apostolic succession. He has written extensively on subjects relating to the ritual, &c.

Perry, in Oklahoma, a post-village, cap. of Noble co. Pop. (1897) 3,800.

Per'sia. in *New York*, a post-town of Cattaraugus co. Pop. (1897) 1,550.

Peru', in Nebraska, a post-village of Nemaha co., 10 m. from Auburn. Pop. (1897) 725.

Pestalozzi (pes-ta-lot'see), JOHANN HEINRICH, teacher and educational reformer, was born at Zurich, Switzerland, in 1746. In 1798 he opened a school for orphans at Stanz, where he adopted a system of mutual instruction. He was driven from Stanz by the Austrians in 1799, and removed to Burgdorf, where his school acquired a wide reputation. In 1804 he removed to Yverdon, where he died in 1827. His two best known works are: *Leinhardt and Gertrud*, a popular novel designed to promote the better education of the poor; and *Inquiries into the Process of Nature for the Development of the Human Race* (1797).

Pe'ter, v. n. In mining, to thin out; to disappear, as a vein; used with *out*; hence, in general, to become exhausted; to fail, or disappear.

Petermann (pā'tr-mān), AUGUST HEINRICH, a German geographer, was born at Bleicherode in 1822; early devoted his attention to geographical science, and became an associate of Baron Humboldt. Taking great interest in African exploration, the British government, at his instance, despatched Drs. Barth, Overweg, and Vogel to Africa, and their discoveries opened out vast regions to foreign enterprise. In 1865 he edited at Götting the well-known geographical *Mittheilungen*. Died in 1878.

Petermann, JULIUS HEINRICH, Orientalist, was born at Glauchau in 1801; was a member of the principal learned societies of Europe and the United States, and as a philologist acquired a world-wide renown. He was long engaged on a voluminous edition of the Samaritan Pentateuch. Died in 1876.

Pe'termannland. (Geog.) An island in the Arctic Ocean, lying directly north of Nova Zembla and Franz Josef Land, in about 83° N. Lat., 70° E. Lon. It was named for the German geographer August Heinrich Petermann.

Pe'tersham, n. [Lord *Petersham*.] A heavy, fine cloth for men's overcoats, the face being rolled so as to present the appearance of little tufts.—A heavy overcoat made from such cloth.

Petion (pā-ti-ōng'), ALEXANDRE, soldier and politician, was born at Port-au-Prince, Haiti, April 2, 1770; a quadroon, the son of a wealthy planter. He was educated in Paris; served with the French army in Haiti; joined the revolt of 1791, and was commandant of artillery under Toussaint L'Ouverture, but went over to Régand in 1799, and was forced to leave the island with him (1800); went to France, and was attached to Leclerc's expedition (1801-02). In 1802 he joined the revolt of those who feared that slavery was to be reestablished; served under Dessalines, and, after his death, became President of Haiti (March 10, 1807). Christophe, leader

DIANTHUS BARBATUS IN A STATE OF PERIANTHOMANIA.

of the black party, had already revolted in the north, and the island was divided into two parts, between which there was almost constant war, in which the black party were the aggressors; their malice and ignorance defeated many of P.'s most enlightened measures. He protected white residents, and opened the ports to all flags. Besides the war with Christophe, there were many internal dissensions, but P. continued to rule until his death, March 29, 1818.

Petit (*pé-ti'* or *pé-ti'*), the latter only in the legal sense), *a.* [Fr.] Small, inconsiderable, inferior.

Petite (*pe-té'*), *a.* [Fr.] Small and delicate, diminutive.

Petition of Right. (*Law.*) One of the most important of English statutes. It has been called "one of the chief documents of the English Constitution." In 1628, in the third parliament of Charles I., the Commons stated their grievances in the form of a petition, refusing to vote supplies until its prayer was granted. The petition professes to be a simple corroboration and explanation of the ancient Constitution of the kingdom, and after reciting various statutes that recognize the rights contended for, and the various acts done by the king or in his name which violate these statutes, prays that these violations may cease, and "that no man be compelled to make or yield any gift, loan, benevolence, tax, or such like charge, without common consent by act of Parliament; that none be called upon to make answer for refusal so to do; that freemen be imprisoned or detained only by the law of the land, or by due process of law, and not by the king's special command, without any charge; that persons be not compelled to receive soldiers and mariners into their houses against the laws and customs of the realm; that commissions for proceeding by martial law be revoked." The king at first eluded the petition, expressing in general terms his wish that right should be done according to the laws, and that his subjects should have no reason to complain of wrongs or oppressions. At length, however, on both Houses of Parliament insisting on a fuller answer, he gave, in full Parliament, on the 26th of June, his assent to the petition, indicated by the formula, *Soit droit fait comme est désiré*—"Let right be done as prayed." The text of the petition is in Gardiner's *Constitutional Documents of the Puritan Revolution, 1628-60* (1889).

Petitory, *a.* [Lat. *petitorius*.] Petitioning, begging, supplicating, petitioner.

Petrie, W. M. FLINDERS, Egyptologist, was born in England, June 9, 1853. From 1875 to 1880 he was employed in exploring and measuring British earthworks, and, in 1880 published *Stonehenge*. Since 1881 he has been engaged in similar investigations among the pyramids and temples of Egypt; in this research has made many important discoveries, and within the last ten years has published extended reports of his several expeditions. In 1890 and 1891 he worked for the Palestine Exploration Fund.

Petro-. An initial compounding element, derived from the Gr. *petros*, rock.

Petrogale, *n.* (Zool.) A genus of kangaroos containing the agile rock kangaroos of the mountainous districts of Australia.

Petroglyph, *n.* A rock-carving.

Petrolatum, *n.* (Phar.) A fatty, semi-solid mixture of the paraffine hydrocarbons, obtained by distilling off the volatile parts of petroleum and purifying the residue. Used in the preparation of ointments, &c. Called, also, vaseline, cosmoline, petroline, &c.

Petrovia, in *Pennsylvania*, a post-town of Butler co. Pop. (1897) 670.

Pet'enkofer, MAX, chemist and sanitarian, was born at Lichtenheim, Germany, Dec. 3, 1818; became professor of Chemistry at Munich (1847), and professor of Hygiene in a Bavarian university (1865). He discovered the process of obtaining illuminating gas from wood; also discovered the characteristics of oil-colors. Among sanitarians he has been conspicuous for his researches into the nature and spread of the cholera epidemic; his theories on this subject were published in 1877, and have been sustained by later experience.

Pfen'ing, or **Pfenn'ing**, *n.* [Ger.] A small copper coin of Germany, of the value of $\frac{1}{4}$ of a cent U. S. money.

Phalange (*fa-lânzh'*), *n.* [Fr.] In the system of Fourier, a socialistic community of 400 families, or about 1,800 people. The edifice they would occupy he called a *phalanstere*, or *phalanstery*.

Phal'ism, *n.* (Compar. Relig.) The worship of the fertilizing power of nature under the symbol of the phallus (*q. v.*). Such worship was practiced by the Phœnicians, Egyptians, Phrygians, Greeks, and even to some extent by the Jews.

Phal'us, *n.* [Gr. *phallos*.] A figure of the male organ of generation, used, in many systems of religion, as a symbol of the fertilizing power of nature.

Phantasmogen'esis, *n.* The causes or conditions of the occurrence of phantasms, or spectral illusions.

Phare, *n.* [Fr.] A lighthouse.

Pharology, *n.* [Gr. *pharos* and *logos*.] The scientific theory and management of signal-lights, lighthouses, night and fog signals.

Phelps, AUSTIN, clergyman and author, was born in West Brookfield, Mass., Jan. 7, 1820; studied at New Haven and Andover; pastor of Pine Street Congregational Church, Boston (1842-48); Bartlett professor of Sacred Rhetoric in Andover Theological Seminary (1848-69), and its president from 1869 to 1879; received the degree of D. D. from Amherst College in 1856. He published: *New Birth* (1867); *Solitude of Christ* (1868); *Theory of Preaching* (1881); *English Style in Public*

Discourse (1883); *My Study* (1885), &c. Died Oct. 13, 1890.

Phelps, EDWARD JOHN, lawyer and statesman, was born in Middleburg, Vt., June 11, 1822; graduated at Middleburg College (1840); admitted to the bar (1843); was second comptroller of the U. S. Treasury (1851); professor of Law at Yale (1881); minister to Great Britain (1885); one of the counsel on the Behring Sea question (1893). During 1888 he contributed to the *Nineteenth Century* a series of articles on *The Constitution of the United States*.

Phelps, ELIZABETH STUART, author, was born in Andover, Mass., Aug. 13, 1815; daughter of Professor Moses Stuart, of Andover; married Rev. Austin Phelps in 1842. She wrote *Sunny-Side* (1851), and subsequently published other sketches of home-life. Died Nov. 30, 1852.

Phelps, ELIZABETH STUART. See WARD.

Phelps, WILLIAM WALTER, lawyer and diplomatist, was born in New York city, Aug. 24, 1839; a graduate of Yale and of Columbia Law School. In 1872 he was elected to Congress from New Jersey; voted against the Civil Rights Bill, and lost the reelection; in 1881 was sent as minister to Austria; resigned in 1882, and was at once reelected to Congress; was appointed minister to Germany in 1889, which post he held until 1893. Died June 16, 1894.

Phelps, in *Nebraska*, a S. co.; area, 576 sq. m.; bounded N. by the Platte river. Surface, nearly level; soil, a rich, sandy loam; timber scarce. Products, wheat, corn, barley, oats, rye, broom-corn, and potatoes; live stock. Cap. Holdrege. Pop. (1890) 9,809.

Phenakiscope, *n.* A philosophical toy for so presenting to the vision a series of pictures representing continuous phases of motion that an impression of actual motion of the figures in the pictures is conveyed to the spectator. The pictures representing successive phases of motion are mounted concentrically on the outer portions of a disk. A larger disk is provided with radial slits. When held between the observer and a mirror, so that he can see the pictures through the slits, an impression of continuous motion is obtained by rotating the disks so that the eye catches each succeeding figure as a change of position in one stationary figure. The series of pictures is limited to the number which can be drawn on the circumference of the disk, and the representation is far more clumsy than that of the kinetoscope.

Phenol, *n.* [Fr. *phénol*.] Carboic acid.

Phenology, *n.* [Contr. of *phenomenology*.] The branch of science that treats of animal or plant life and development as affected by climate.

Philatelist, *n.* A collector of stamps; one versed in the knowledge of stamps.

Philat'ely, *n.* [Ety. in doubt. From Gr. *philos*, fond of, and possibly *telos*, a tax, impost; regarding the stamp as a tax, and, conversely, the tax as a stamp, we have *philately*, love of stamps. Others derive it from *philos* and *ateleia*, exemption from tax, perhaps regarding the stamp as a symbol of exemption.] The collection, study, and arrangement of stamps, especially postage-stamps.

Philesia (*fi-lé-zhah*), *n.* (Bot.) The Pepino of Valdivia, *P. buxifolia*, is a small evergreen box-leaved, erect shrub, native of the extreme southern part of South America, bearing an abundance of large beautiful drooping, somewhat bell-shaped, bright rose-red, rather waxy flowers.

Philidor, FRANÇOIS ANDRÉ DANICAN, chess-player and musical composer, was born at Dreux, France, Sept. 7, 1726. He wrote an *Analysis of the Game of Chess*, which was first published in 1777. Died Aug. 31, 1795.

Philippoteaux, FELIX EMANUEL HENRI, artist, was born in Paris, April 3, 1815; was famous for his historical and battle paintings, including *The Last Banquet of the Girondins*, now at the Museum of Marseilles; *Louis XV. Visiting the Battlefield of Fontenoy*, in the Luxembourg Gallery; and *The Siege of Paris*, a cyclorama. He was also known as an illustrator. Died Nov. 8, 1884.

Philippoteaux, PAUL, son of Felix E. H. Philippoteaux, historical painter, was born in Paris in 1846; assisted his father in arranging *The Siege of Paris*, and made a similar representation of the *Battle of Gettysburg*, which was exhibited in New York, Chicago, Philadelphia, and other cities. In 1888 he exhibited a series of thirty large paintings illustrating the career of General Grant.

Phil'ips, in *Florida*, a post-town of Duval co. Pop. (1897) 610.

Phil'ips, ANELAINZ, contralto vocalist, was born in Stratford-on-Avon, England, Oct. 28, 1833; made her debut in *Semiramide* in 1853. She held first place among contralto singers of her day. Her last appearance on the public stage was in Cincinnati, in 1881. Died Oct. 2, 1882.

Phil'ips, PHILIP, composer and singer, was born in Chautauque co., N. Y., Aug. 13, 1834, and was for many years an extremely popular singer at religious revival services in America and abroad. He published *Musical Leaves* (1862); *Song Pilgrimage Around and Throughout the World* (1880), &c. Died in 1895.

Phillips, in *Colorado*, a N.E. co.; area, 570 sq. m., intersected by Frenshman's creek. Surface, undulating; soil, dark sandy loam, very fertile. Products, wheat, corn, oats, barley, sorghum, and sugar beets; stock raising, especially sheep. Cap. Holyoke. Pop. (1890) 2,642.

Phillips, in *Kansas*, a N. co., adjoining Nebraska; area, 900 sq. m.; intersected by the North Fork of Solomon river and by Prairie Dog creek. Surface, chiefly rolling prairie; soil, fertile. Produces much wheat and corn. Cap. Phillipsburg. Pop. (1895) 11,712.

Phillipsburg, in *Kansas*, a post-village, cap. of Phillips co., 200 m. W. N. W. of Topeka. Pop. (1895) 916.

Phillipsburg, in *Montana*, a post-town, cap. of Granite co., about 101 m. W. S. W. of Helena; has gold and silver mines and quartz mills. Pop. (1897) 1,360.

Phil'mont, in *New York*, a post-village of Columbia co., 9 m. E. of Hudson; underwear factories, paper mills, machine shops, &c. Pop. (1897) 2,170.

Phocis (*fo-sis*), a province of Greece proper or Hellas, bounded on the W. by the Ozalian Loeri, on the N. by the ridge of Mount Cnemis and the territory of the Epicnemidian and Opuntian Loeri, and on the S. by the Gulf of Corinth. It was about 792 sq. m. in extent. The greater part of the country is occupied by the famous mountain range of Parnassus.

Phoe'be-bird, **Pe'wit**, or **Pe'wee**, *n.* A bird (*Sayornis phoebe*), common in the eastern part of North America; so called because his note resembles these names.

Phoenix, in *Arizona*, a city, cap. of Maricopa co., 226 m. N. E. of Yuma. It is the Territorial capital. Pop. (1897) 8,250.

Phoenix City, or **Phoenix**, in *Alabama*, a post-village of Lee co., 1 m. from Columbus, Georgia. Pop. (1897) 3,700.

Phon, **Phono-**. An initial compounding element, derived from the Gr. *phonē*, voice.

Phonantograph (*fōn-ān'to-grāf*), *n.* [From Gr. *phonē*, a sound; *autos*, self; *graphō*, I write.] (*Acoustics*.) This apparatus, invented by Leon Scott, is the predecessor of the phonograph, and registers sounds by means of a vibrating diaphragm, holding a stylus against a rotating smoked cylinder. It consists (Fig. 3022) of

Fig. 3022.—PHONANTOGRAPH.

an ellipsoidal cask, A B, about a foot and a half long. It is made of some non-vibrating substance, as plaster of Paris. The end A is open, but the end B is closed by a solid bottom, to the middle of which is fitted a brass tube, *a*, bent at an elbow and terminated by a ring on which is fixed a flexible membrane. A second ring serves to stretch the membrane to the required length. The tube can be turned so as to be inclined at different angles to the membrane. Near the center of the membrane, fixed by sealing-wax, is a very light stylus, which records on the cylinder, C, the latter being operated by a handle, *m*, and receiving endwise motion from an internal screw. The cylinder being covered with a smoked paper and rotated, receives a record or tracing of the sounds recorded in the ellipsoidal cask.

Phone, *n.* An abbreviation of telephone; much used by business men.

Phonei'doscope, *n.* An instrument for exhibiting certain phenomena of sound-vibrations by means of soap films, invented by Sedley Taylor. The sound being directed into a tube whose other end is closed by a film of soapy water, various color-lands are observed, whose arrangement varies more or less with the changes of sound.

Phonet'icism, *n.* The principle and practice of representing language phonetically; the use of written characters as symbols of articulate sounds.

Phon'ic, *a.* Pertaining or relating to sound.

Pho'nogram, *n.* A written letter, or character, representing a sound, or a modification of a sound.—The record made by the stylus of a phonograph, from which the sounds are reproduced.

Pho'nograph, *n.* In 1877 Thos. A. Edison brought out his first phonograph, or talking-machine. It con-

stated of a cylinder, mounted on an axle, which could be turned by a hand-crank or by a pulley. The cylinder had lateral motion by means of a screw-thread, and was covered with tinfoil. Above the cylinder was placed a mouthpiece, in which was an iron diaphragm about the one-hundredth of an inch in thickness. Under the diaphragm was a point, or stylus. When the cylinder was turned, and the mouthpiece talked into, the varying pressures of air on the diaphragm were recorded by scratches of varying depth on the tinfoil. To reproduce the sounds uttered it was only necessary to bring the cylinder back to the starting point, and place a cone of tin or paper in the mouthpiece to spread the vibrations of the diaphragm, which

Fig. 3023.—EDISON'S IMPROVED PHONOGRAPH.

d, diaphragm; c, wax-coated cylinder; s, screw-thread on which cylinder travels; g, governor, electric motor being below; h, bifurcated hearing-tube; t, talking-tube that is put in place of the hearing-tube when it is desired to make a record on the wax cylinder.

were repeated by the travel of the stylus over the punctured path on the tinfoil. The arrangement of parts has since been materially improved. An electric motor is used to drive the cylinder; wax cylinder-covers replace the tinfoil to receive the record; bifurcated ear-tubes are used for listening, in place of the cone; and other minor improvements are added. Though the phonograph is now a satisfactory instrument for recording and repeating sounds, as dictation, music, &c., its use is somewhat limited, owing probably to competing mechanisms, such as the gramophone, which sell at a low price.

Pho-no-kin'e'tograph, n. The combination of Edison's phonographic and kinetographic mechanisms for reproducing synchronously both sounds and sights on a screen for public exhibition. See KINETO-PHONOGRAPH.

Pho-no-kin'e'toscope, n. The combination of Edison's phonographic and kinetoscopic mechanisms for reproducing sounds, as vocal music, &c., in conjunction with the action of the singer, as viewed in the kinetoscope.

Phonon'eter, n. A nautical instrument, having a dial arranged like that of a ship's compass and a pointer driven by clockwork, there being circumferential marks to indicate to a signalman the instants at which he should sound a whistle to send signals according to his code. The name is also applied to an instrument for making a record of musical vibrations with a stylus on a rotating and advancing cylinder.

Phonono'tor, n. An instrument to illustrate the motive power of sound; a motophone.

Phonophone, n. A proposed name for the phonograph.

Pho'nophore, n. An attachment, or appendage, to a telegraph circuit, permitting the use of vibrations for harmonic multiple telegraphy. Two wires being insulated, and wound closely together, serve as a condenser, and constitute the principal feature of the appliance. The pho'nophore transmitter has a metal vibrating reed, and the receiver a similar reed, both of which are tuned to the same note. As the current passes through the coils of these harmonic instruments only the notes to which they are tuned affect their armatures, so that they may be used to send and receive messages by the Morse alphabet, without interfering with other messages on the wires. This mechanism was invented by Mr. Langdon-Davies, of London, who has succeeded, in private use, in sending a telegraphic message over a wire which was used for two pho'nophoric messages at the same time. The pho'nophore is in regular use on the line between London and Leicester, being shunted past six telegraphic instruments within a distance of 30 miles.

Phonor'ganon, n. An instrument designed to imitate vocal sounds of speech; a speaking-machine.

Pho'noscope, n. Several instruments have received this name. That of Henry Edwards is a philosophical toy, producing illuminated figures by means of sound-vibrations. A rotating vacuum-tube is combined with an induction-coil and an interrupter. The diaphragm of the interrupter is placed in the primary circuit of the induction-coil, so as to constitute a contact-breaker. When sounds are uttered against the diaphragm, the vibrations break the current and cause radial flashes in the vacuum-tube, which arrange themselves according to the number of vibrations during a rotation of the tube. G. Demeny's pho'noscope is a form of phenakistoscope, designed to instruct deaf-mutes in reading by observation of the lip-motions. The lips and surrounding features are pictured in the continuous positions required to utter a word, and this is exhibited for the observation of the pupil. Koenig's pho'noscope is a device for testing the quality of the strings of musical

instruments, and also serves to record music as performed. The name pho'noscope has also been applied to the microphone.

Phonote'l'emeter, n. An instrument for calculating distances, especially designed for use in warfare. It is a watch provided with a curve-measuring device, a compass, and a telemeter-counter. When the flash of a gun is seen the watch is started with a spring, and stopped when the sound reaches the ears of the observer, when the telemeter-counter shows the distance in meters, avoiding the necessity of a calculation. The curve-measuring device is for use in determining distances on maps.

Phormium (fôr'me-um), n. (Bot.) A genus of *Liliacee*, the only species of which, *P. tenax*, is confined to New Zealand and Norfolk Island. This plant forms large tufts, and has sword-shaped leaves growing in opposite rows and clasping each other at the base, those of one variety being from 5 to 6 feet long, of a bright green above and glaucous underneath, and those of another only half as long and paler in color. Its flower-spikes, which are large and alternately branched, rise up out of the center of the leaves, those of the large-leaved variety reaching the height of 16 feet and bearing deep orange-red flowers, while those of the other are not more than 6 feet high, and have yellow flowers tinged with red. The leaves contain

Fig. 3024.—PHORMIUM TENAX.

a large quantity of strong useful fiber, to which the name of *New Zealand flax* has been given. When Captain Cook first landed in New Zealand he found this flax in common use among the natives for making various articles of clothing, string, nets, &c.; and since the colonization of that country various attempts have from time to time been made to render it an article of export, but hitherto without much success.

Phosphate-rock, n. Called also marl-rock and bone-phosphate. In South Carolina and Florida have been developed within the past fifty years a large number of phosphate-mines, from which phosphate-rock is obtained and ground up for use as a fertilizer. Though there are other mines of the sort in different parts of the globe, these are much the richest, yielding in 1890 a million and a quarter tons, against a production of about three-quarters of a million tons from other mines. The phosphate-rock belongs to the Eocene formation, though found in Post-pliocene basins. The largest deposits are found on the west or Gulf coast of the Florida Peninsula, extending to Leon and Gadsden counties, in the middle of the State. The rock is commonly divided into hard rock, plate rock, and composite or mixed rock. Quantities of phosphate gravel and sand are found in the same mines and utilized. Since 1892 the business of phosphate-mining has somewhat deteriorated. In 1892 Florida and the Carolinas had 137 mines in all, of which 25 were river mines, and 112 land mines. Florida contained 106 of these, South Carolina 30, and North Carolina 1. The river rock is gray to blue-black, and is preferred for exportation. The land rock is light yellow to deep brown, and is in greater demand for the home market. The method of land-mining is to lay off the ground in trenches, from which the surface-soil is removed and the rock dug out mostly by hand labor, negroes being employed. In river mining, if the water is less than three feet deep, the rock is removed by hand and shovel. If the water is deep, dredgers are employed, and the rock loaded on flat-boats and towed to a wharf. Here it is loaded on cars and transferred to drying-bins, where exposure to the air on perforated iron-pipes effects the drying. The washers have one or more long wooden shafts, bearing spiral plates. These shafts are set in a long box at a slight incline. Some form of rock-crusher is placed above the washer and breaks up the rock, which is then agitated in water in the washer, and worked up the incline by the spiral blades until it is discharged on screens at the upper end. The capital invested in the industry in the U. S. is about \$20,000,000.

Phos'phene, n. [Gr. *phôs*, light; *phainô*, to show.] The spectrum or luminous image produced, in darkness, by pressure on the eyeball, by severe conghing or from other sources; due to mechanical excitement of the retina.

Phos'phor-bronze, n. (Metall.) An alloy much valued in the manufacture of cannon, and for wire-drawing and in machine-bearings. It is made by fusing phosphor-tin (tin, 94; phosphorus, 6) with copper or with phosphor-copper, the latter being an alloy of bone-ash and charcoal with copper. It usually contains about one per cent of phosphorus, and is of finer grain and color than ordinary bronze. It was brought into notice about 1870 by Belgian metallurgists, and is highly valued because of its ductility, combined with extreme toughness. It possesses great homogeneity.

Phosphor'ograph, n. An impression obtained by throwing a luminous image, as of a spectrum, on a phosphorescent surface; used especially to obtain a representation of the non-luminous rays below the red.

Phosphor'oscope, n. (Physics.) An instrument devised by E. Becquerel for detecting slight phosphorescence in bodies. It consists of a closed cylindrical box A B (Fig. 3025), of blackened metal. Opposite sector shaped apertures are placed on the ends. The box is fixed, but has a movable axis, to which are two circular screens, M M and P P, of blackened metal (Fig. 3026).

Fig. 3025.—BECQUEREL'S PHOSPHOROSCOPE.

Each of these screens is perforated so that the open parts of the one correspond to the closed parts of the other. The box and screens are rotated by multiplying wheels and handle, m. Observations with the phosphoscope are made in a dark chamber, the observer being on that side on which is the wheel-work. A ray of solar or electric light is allowed to fall upon the substance a, and the screens being made to rotate more or

Fig. 3026.—PHOSPHOROSCOPE SCREENS.

less rapidly, the body a appears luminous by transparencies in a continuous manner, when the interval between insolation and observation is less than the duration of the phosphorescence of the body. By means of this instrument M. Becquerel found that many substances not previously considered phosphorescent were really so in a slight degree.

Pho'tic, a. [Gr. *phôs* (gen. *phôtos*), light.] Relating to light or its production.

Pho'tics, n. (Physics.) The science of light; a broader term than *optics*, which, in its strictest sense, treats of light as related to the eye. In the U. S. Patent Office, where the term originated, it is applied to the class of inventions embracing illuminating apparatus generally.

Pho'to, n. An abbreviation of *photograph*; used colloquially and in business parlance.

Photo- An initial compounding element, derived from the Gr. *phôs* (gen. *phôtos*), light.

Photochromog'raphy, n. The reproduction on a printing-press of photographic images in several colors.

Photochro'moscope, n. An optical device in which a triple photograph reproduces the colors of nature with light and shade.

Photochron'ograph, n. Several forms of chronograph supplied with photographic apparatus are known by this name. The instrument designed by George A. Fargis and Frank H. Bigelow is of the astronomical type, for recording the time of transit of stars across

the reticle of a telescope. The photographic attachment serves to reduce the errors resulting from the uncertainty of visual observation, and makes its record without injury to the star-trails. In another form photography is used to make the chronographic record by means of a pencil of light, which is allowed to reach a sensitized surface during the period of the action timed. A third form is utilized to record the time of photographic exposures. In this a blackened disk is rotated by clockwork during the time of the exposure, and measurement of the tracing made on the disk with a spring affords an accurate means of calculating the period of the exposure.

Photocray'on, n. A photograph resembling a crayon sketch, or a picture finished in crayons on a photographic ground-work.

Photodrome, n. [*Photo*, and *Gr. dromos*, running.] (*Physics*.) An apparatus for regulating flashes of light so as to make a rotating wheel, or figured disk, appear either to be stationary, or to rotate at a different rate, or in the opposite direction.

Photographer, n. One who makes a business of taking photographs; one skilled in photography.

Photographs, Mo'tor. The study of animal motions has been placed on a new footing by Mr. Muybridge, an American photographer. By means of special apparatus he was enabled to take pictures of moving objects in rapid succession, each being instantaneous, so that, for instance, every phase of the motion of the limbs in a trotting horse could be observed. The result was to prove that the ideas entertained concerning the motions of animals were incorrect. The eye cannot appreciate a movement which is quicker than about $\frac{1}{25}$ of a second, on account of the retention of images by the retina. The photographic lens, on the contrary, can record a movement occurring in less than $\frac{1}{25}$ of a second, thus very greatly exceeding the eye in its powers. The Muybridge process has been applied to many animals, even to the movements of microscopic creatures, the camera replacing the eye at the microscope. The rapidity of movement of projectiles is a frequent subject for photography. A late application of the successive photographic method has been to reproduce, on a screen or otherwise, a series of photographs of motions taken with great rapidity, the result being an apparent reproduction of the motion in all its minute details, yielding a surprisingly close simulation of life. See KINEMATOSCOPE.

Photography, Astronom'ical. The application of photography to astronomy has yielded results of the highest scientific importance, and taught us a multitude of new lessons concerning the conditions of the celestial spheres. Until recently celestial photography was confined to the moon, whose size and brightness rendered it an easy object to photograph, excellent results being obtained by the old processes. Photographs of the sun have also been obtained which distinctly show the markings on its surface, and progress of some importance has been made in photographing the corona during an eclipse. But the most valuable achievements in this direction are in obtaining images of the distant stars and nebulae, the results being such as would have been impossible but for the use of the highly sensitive dry plates now at the service of the photographer. In photographing the stars the plates are often exposed to the faint light from these distant bodies for three or four hours, the clockwork train keeping the camera steadily directed to the same point in the heavens. Thus each faint point of light has a long time in which to impress its image upon the sensitive surface of the plate, the result being that many stars make their appearance in the photograph which no telescope has yet revealed. Among the many interesting results has been the appearance of a nebulous haze around a known star in the Pleiades in which no such appearance had ever been seen. The astronomers of Paris attempted to detect this nebula with their most powerful telescopes, but failed, and the appearance was doubted until another photograph, made in America, revealed it again. Further search with the telescope showed the nebula very faintly. It thus appears that the photographic film is more sensitive to faint light than is the retina of the eye. As regards the known nebulae, their size and appearance have been considerably changed by photography, some proving much more expanded than had been supposed. Another important result has been the detection of minute motions in some stars, a fact which has led to the discovery of a large number of planetary asteroids. Steps have been taken for photographing the entire heavens, the sky being charted out into squares, and each observatory undertaking to photograph a number of these squares. Such a complete photograph will be of the highest value to future astronomers, in enabling them to detect motions and other changes among the stars. Photographs of the spectra of the stars are also of importance, as making valuable records for future reference, and as revealing the lines in their absolutely exact location. Celestial photography, however, is not free from defects, the chief of which is that disks of light are shown, instead of the mere points that appear to the eye. This is a difficulty which may hereafter be overcome.

Photography, Col'or. For many years past efforts have been made to photograph the colors of nature, or to reproduce landscapes and objects in the hues which they present to the eye, but without effect, the camera persisting in yielding only light and shade. Many solutions of the problem have been announced, yet it remains still unsolved, except in an indirect manner. Of the several indirect solutions, one of the most satisfactory

is that made by Frederic E. Ives, of Philadelphia. In this process three negatives of the object are taken, each through a glass of different color. The results are in black and white, as in ordinary photographs, but by placing lantern slides made from them in a camera so that the three images may be thrown superimposed on a screen, the result is a very close approximation to the colors of nature. The same result may be seen in an ingeniously devised stereoscopic instrument called a photochromoscope, which shows pictures of vases of flowers, fruit, and other objects with all the varied hues of the originals, and which has been adapted to commercial use to display the colors and designs of textile fabrics, to take the place of actual samples of the goods. Dr. Sells, of Brandenburg, Prussia, employs a similar process, the colors used by him being crimson, pale-yellow, and a peculiar blue-green. From the photographs taken through these shades of color positives are made on exceedingly thin film, which, when cemented or pasted together, show the colors of nature. A different process has been devised by Dr. Joly, of Dublin, and by J. W. McDonough, of Chicago. In this process parallel lines, 200 or 300 to the inch, are drawn on a glass plate in alternate colors of orange, green, yellow, and blue-violet. Through this transparent screen a photograph is taken, which, when developed, is colorless, but presents a ribbed appearance, due to the selective influence of the colored lines on the rays of light. To reproduce the colors a glass positive is made, and a second color-screen prepared, ruled now alternately with deep-red, bright-green, and blue-violet. When the two plates are placed so as to bring the lines into exact juxtaposition a colored picture is seen, which, like the above, can be shown on a screen, displaying the colors of flowers, clothing, and other objects. In 1896 another method of color photograph was announced, the invention of Villedieu Chassagne, of Paris, which attracted much attention, since it approached more nearly to true color photography than the other methods mentioned. In this process a negative is taken on a gelatin plate, which has been prepared by treatment with a solution whose ingredients are kept secret. This, when developed and fixed in the ordinary manner, shows no trace of color. A print is now taken on glass or paper which has been treated with the same solution. Still no color appears. It is next washed over with three colored solutions—blue, green, and red—in succession, the plate taking up these tints, those parts of the picture which were blue in the object taking up the blue, and the same with the other colors, the result being a picture in the colors of the original. It must be said, however, that this result is far from satisfactory, the colors being dull, and the effect far less brilliant than that presented by the Ives photochromoscope pictures. To the above processes may be added the Lippmann, in which a ruled screen yields interference results. But it must suffice to state, in conclusion, that true color photography seems as far from discovery as ever, though the methods mentioned yield practical results of considerable interest and value. In former efforts to produce color photography some results worthy of mention have been attained, as they have given rise to practical processes. If one, for instance, seeks to photograph, in the ordinary method, a blue vase containing yellow flowers, he will obtain a picture of a white vase with black flowers. But by using what is known as an isochromatic plate he will obtain a gray vase with flowers almost white, a result which is more in accordance with the true shade relations of the original. Such a plate is prepared by adding to the gelatin emulsion with which the plate is treated a minute quantity of certain dyes, such as an ammoniacal solution of eosin. Plates prepared in this manner are now supplied commercially, and are much used in copying oil-paintings and other colored objects. They will probably play an important part in sidereal photography in the registry of colored stars.

Photograv'ure, n. See ENGRAVING, PHOTO.

Photoheliograph, n. A telescopic photographic instrument, for taking pictures of the sun during an eclipse, a transit of Venus, or other celestial phenomena.

Photomicrograph, n. A photograph of an object as seen under a microscope.

Photoneph'ograph, n. An apparatus for taking simultaneously photographs of a cloud from two different points on the earth, for determining its height and motion.

Photophone, n. An instrument for reproducing sounds through the medium of a beam of light and vibrating diaphragms. It is virtually a telephone, making use of a beam of light instead of a wire. The form devised by Alexander Graham Bell and Sumner Tainter attracted much attention about 1880. They used a thin plate of silvered mica as a vibrating mirror, and by speaking against the back of this mirror its vibrations caused a beam of light falling on the mirror to be vibrated in its reflection. At the receiving point was placed a parabolic reflector, which gathered the vibrating light of varying intensity into its focus, where was placed a selenium cell. As selenium possesses the quality of varying in its electrical resistance with the quantity of light it receives, this variation is made to operate a receiving telephone, which reproduces the original sounds. The apparatus cannot be used for long distances. Prof. Bell obtained his beam of light by interposing two thin metal plates as a screen in the path of a sunbeam. These plates were perforated with fine slits, one of them being fixed and the other attached to the diaphragm-mirror. As the light fell through opposite slits, it was partially cut off by the vibrations which agitated one of the slitted

screens, so that the beam of light reflected was made to vary in intensity exactly in accordance with the vibrations of the voice against the diaphragm. Compare RADIOPHONE.

Photoculpt'ure, n. A process of modelling by the aid of photography. The model, standing in the center of a circle of 24 cameras, is photographed by them all at the same moment. The negatives are projected in succession upon a screen, and the artist goes over the outline of each with the tracer of a pantograph, a cutting tool instead of the usual pencil acting upon a lump of clay mounted upon a turntable. After each photograph is gone over, the clay is turned through 15°, and when a complete revolution has been effected it is removed and finished by hand.

Phrenograph, n. An instrument for marking the movements of the diaphragm of a person breathing.

Phthong'al, a. [*Gr. phthongos*, voice.] Employing the voice; vocal; sonant.

Phyllox'era, n. See GRAPEVINE DISEASE.

Phylog'eny, n. [*Gr. phylon*, tribe, and *gennao*, to bring forth.] Tribal history, or the palaeontological history of evolution; distinguished from *ontogeny*, or the history of the evolution of the individual.

Phys'ick, PHILIP SYNG, was born in Philadelphia, in 1768; became house surgeon at St. George's Hospital, London, and fellow of the Royal College of Surgeons, and in 1792 graduated in medicine at Edinburgh. He afterward practiced with signal success in his native city, becoming professor of Surgery and Anatomy in the University of Pennsylvania, and a member of the French Royal Academy of Medicine. Sometimes called "The Father of American Surgery." Died in 1837.

Phys'ics, n. Under this name are classed the sciences which were formerly known as natural philosophy. Physical science treats of the properties of matter, of the phenomena associated with matter, and its laws. Its divisions may be summarized as: (1) The forms assumed by matter—solid, liquid, and gaseous; the divisibility of matter into molecules and elements; the kinetic theory, showing that the smallest particles of matter are in motion. (2) Mechanics—embracing kinematics, or the science of motion and its laws; dynamics, or the laws of force and motion, including rotation, harmonic motion, equilibrium, the mechanical movements, &c. (3) Acoustics—including sound-waves, vibrations, musical notes, velocity of sound, &c. Heat—its effects and energy, resultant changes of volume, molecular volume, evaporation, transfer and flow of heat-energy, &c. (4) Thermodynamics—the application of mechanical principles and equation to the physical properties of heat-energy. (5) Electricity and magnetism—properties of electric charges, laws of electrostatic force, lines of force, potential induction, nature of conductors, electrolysis, currents, polarity, electro-magnetic force, motors, theory of the telephone, &c. (6) Light—science of optics, ether-waves, reflection and refraction, lenses, dispersion and spectra, fluorescence, color sensations, interference and diffraction, prisms, polarization, &c. Physical science has been developed from the combined knowledge of investigators into natural laws. There are some sciences, as mathematics, which, from their very nature, are fixed and exact; but physics, because of our imperfect knowledge of nature's laws, is a constantly progressing science, growing with every added fact throwing new light upon the laws that govern matter, and affording new proof of some accepted theory, or disproof of some disputed point. As human intelligence discovers the underlying truths—the laws that are fixed in the world of matter—the science of physics advances toward exactness.

Sir Isaac Newton and Herschel were among the early physicists, who laid the basis of systematic study and application of the laws governing matter. Mayer and Joule, in giving the world a determination of the mechanical equivalent of heat, made a long stride toward a correct understanding of basic laws. The development of mathematically correct theories for fixing the relations of force, work, and energy had much to do with the present advancement of the science of physics. The victory of the undulatory theory of light over the corpuscular theory and Clerk Maxwell's development of the electro-magnetic theory of light were the next marked steps in advance. Then came Fizeau's determination of the velocity of light, increased knowledge of the luminiferous ether, and the similarity of light, heat, electricity, &c. Then Helmholtz and Koenig made marked advancement in acoustic apparatus. More recently Faraday, Edison, Thompson, and others have systematized and expanded our knowledge of electricity. Spectrum analysis has given us within a few years knowledge of new elements and further information as to distant stars. The Roentgen rays and fluorescent light are among the most recent conquests in the domain of physics. The systematization of knowledge has now advanced to a point where new discoveries are made with greater frequency and certainty than ever before, and put to practical uses with a promptness consequent upon the swift distribution of information. Educated engineers and mechanics of to-day, having a proper understanding of physical science, by making their designs in strict accordance with accepted theories are able to give us improvements in machinery with a certainty of success that was impossible a half century ago. Thus the world's progress in industrial enterprises is largely the result of systematic advancement in physics.

Physiocrasy, n. [*Physio* and *Gr. krateo*, to be strong.] The theory of a natural order or constitution in society, advocated by François Quesnay (1694-1774).

and his followers. They held that land and its products are the only true wealth, gold and silver being a false standard; that the proper source of revenue is the direct taxation of land; and they asserted the right of person, opinion, trade, and property. They are regarded as founders of the science of political economy.

Physiol'atry, *n.* [Gr. *physis*, nature, and *latreia*, worship.] The worship of nature, or of natural forces and phenomena.

Piassa'ba, Piassa'va, Piaca'ba, or Par'agress, *n.* This fiber has become an article of large export from Brazil, and is used for making coarse brushes, such as street-sweeping brooms, &c. See LEOPOLDINA.

Pick'ering, EDWARD CHARLES, astronomer, was born in Boston, July 19, 1846; graduated at the Lawrence Scientific School of Harvard (1865); was assistant instructor in physics at the Massachusetts Institute of Technology (1866); full professor (1868-77). In 1869 he made observations of the eclipse of the sun for the *U. S. Nautical Almanac*; in 1870 had charge of the U. S. Coast Survey Expedition to Xeres, Spain, to observe the eclipse of December 22; became professor of Astronomy and Geology and director of the observatory at Harvard University (1876). Under the auspices of Harvard he established an auxiliary observatory at Arequipa, in Peru, altitude 16,275 ft. He has received distinguished recognition among practical astronomers of the day, and has contributed largely to the current literature of his profession.

Pickering, TIMOTHY, was born in Salem, Mass., 1745; after graduating at Harvard and studying law, became a judge of the Common Pleas in 1775. In the War of the Revolution he was appointed adjutant-general, and participated in the battles of Germantown and Brandywine. Elected a member of Congress in 1777, he succeeded Gen. Greene as quartermaster-general in 1780, and in 1794 was appointed secretary of war, and next year secretary of state, from which he was removed in 1800. Federalist U. S. Senator from Massachusetts, 1803-11, and member of Congress, 1813-17. Died in 1829.

Pick'ett, in Tennessee, a N. E. co.; area, 240 sq. m.; drained by the Obey river. Surface, undulating; soil, very fertile on the rivers and creeks, at the base of the mountains, and in the valleys. Has building-stone of fine quality. Products, Corn, wheat, hay, and live stock. Cap. Byrdstown. Pop. (1890) 4,736.

Pick'thank, *n.* An officious person, who does what he is not asked to do for the sake of currying favor; a flatterer; a toady.

Pickwick'ian, *a.* Pertaining to Mr. Pickwick, the principal character in Dickens' *Pickwick Papers*, a stout, good-hearted, blundering sort of man. Used especially in the phrase, *a Pickwickian sense*; that is, a merely technical, constructive, or parliamentary sense.

Picro-. An initial compounding element, derived from the Gr. *pikros*, bitter.

Pic'toglyph, *n.* [Lat. *pictus*, painted, and Gr. *glyphē*, carving.] A picture carved on a hard surface, particularly on a rock, and painted, either as a work of art or as a pictograph.

Pic'tograph, *n.* [Lat. *pictus*, and *graph*.] A writing by picture, representing an idea or occurrence.

Picture Rocks, in Pennsylvania, a post-borough of Lycoming co. Pop. (1897) 550.

Pic'ture-writ'ing, *n.* (*Anthrop.*) By picture-writing, or pictography, is meant the communication of intelligence by means of pictures or symbols (not phonetic) carved upon stone, wood, bone, or some other hard surface, or painted or drawn upon these substances, or upon hides, bark, cloth, papyrus, paper, or the human skin. It is the primitive forerunner of writing, and, to some extent, survives among civilized as well as savage men; and nowhere did it reach a higher degree of primitive development than among the native Americans. American pictographs have been noted by explorers and students of all parts of the continent ever since its discovery, and the scattered information has been recently collected, classified, and studied by the Bureau of Ethnology, where the late Col. Garrick Mallery and Dr. W. J. Hoffman took the lead in this direction; and the latter has lately written a *resumé* of their studies in the form of a book entitled, *The Beginnings of Writing* (New York, 1895).

Pictographs on stone, or petroglyphs, remain from prehistoric as well as more modern times in all parts of the world. The Hittites, early inhabitants of Asia Minor, have left many; they have been found in China, Siberia, northern Europe, and the British Islands, South Africa, the Canary Islands (showing a remarkable resemblance to Californian examples); and, most prominently of all, in ancient Egypt, where they form the earliest monumental hieroglyphic records, dating back to 4000 B. C., yet showing that the graphic art had already been well developed toward the conventionalized hieroglyphic writing it afterward became. In South America designs carved on rocks occur in Brazil, British Guiana, and in Central America and Mexico a few are known. In North America many inscribed rocks are known, those in the Eastern States (Algonkin) being usually upon some boulder in or beside a river course, such as the famous Dighton Rock near Taunton, Mass.; but in the West, where they are especially numerous on the Pacific coast, they are cut into the faces of cliffs, as a rule. Some are of very recent workmanship, and only a few have much interest artistically or historically, although the most of them undoubtedly were of importance to their makers, since they involve more labor than would be expended out of mere idleness. Much of the apparently fanciful

stone-carving of the Northwest coast Indians also belongs here.

A higher order of workmanship is displayed by carvings upon wood (among the Polynesians, especially of Easter Island), upon bone or the surface of flat horns (as among our Western Indians and prehistoric cave-men of Europe), and upon walrus ivory (as is much practiced by the Alaskan Eskimo). These outline drawings represent names, scenes, historical or imaginary, drawings serving as messages, and they are scratched in with a sharp point, the line being then filled, in many cases, with pigment to make it more distinct. Hundreds of examples of Alaskan drawing and picture-writing thus drawn on strips of ivory used as the bows for their drills are possessed by the U. S. National Museum. The elaborate totem-posts of the Indians of the Northwest coast, and the crowded and carefully cut figures that decorate the walls of the ruined cities and temples in Honduras were undoubtedly meant for more than decoration, and hence must be included among graphic records of the people who made them.

Turning to picture-records made upon less enduring and more flexible materials—the precursors of civilized manuscripts and books—we find that in Egypt and Central America the fibers of plants, as the papyrus and maguey, were formed into sheets having a surface suitable for drawing or painting with a brush, and as these substances are remarkably durable, many scrolls and fragments bearing paintings by native artists have come down to us from antiquity. The larger part of our knowledge of the ancient Egyptians has been derived from an interpretation of the picture-writing upon papyrus found in tombs; and the linen mummy

more very important events being recorded by means of a picture for each year, reckoned from the end of one summer to the beginning of the next. At least six of these winter counts, says Hoffman, have been obtained from the Dakota Indians, and others are reported in existence. "The oldest counts are upon buffalo skin; the initial figure, representing the first winter, or year, being drawn in the middle, while each successive figure follows in close order spirally toward the border." In some cases an old Indian will make for himself, or with the help of more expert workmen among his acquaintances, a similar pictorial biography of himself by portraying the exploits of which he is proud. These are passed around and studied by the whole tribe. The Smithsonian Institution possesses and has published colored copies of several Dakota documents of this character.

Such, and similar to them, are the examples of picture-writing extant. Examining it as to character, we find the following distinctions: First, the pictographs of the Old World as represented by Egyptian and Oriental hieroglyphs, and the Chinese characters, had advanced into the phonetic stage long ago, and had become, to a certain extent, alphabetic; but in America this stage had only been approached in a few of the most advanced places, as in Mexico, and the representations are always ideograms rather than phonograms—that is, the figure that stands for an idea represents it by what, originally at least, is a picture of an object, and has no reference to the sound of the name as uttered. For example, our zodiacal signs are ideograms, that for Jupiter, for instance, being the picture of an arm holding a thunderbolt, conventionalized to ♃ ; we no longer think of it

wrappings themselves are often inscribed with pictures which, taken in succession, form a narrative that scholars may often read. The maguey furnished the Mexicans and Mayas, of Central America, with a similar material, upon which they painted extensive law-treatises, histories, religious rituals, &c., in pictures. Great quantities of these records, now so precious, were burned by the fanatics who came in with the Spanish conquerors, and very few have survived—only four of the Maya manuscripts. Next to these in interest, and more useful in aboriginal study, are the long birch-bark scrolls in possession of secret societies among the Ojibwa Indians of Minnesota, and declared by them to be hundreds of years old, going back to a time long before the tribe ever saw a white man. They are mostly the work and mystic records and songs of various occult societies, and can be wholly interpreted only by the shamans to whom the skill has been taught by their elders. People dwelling in skin tents, and having much to do with hides, would naturally choose their smooth surfaces for such pictography as they practiced, and we find that the nomads of Northern Europe and of the western interior of North America at least did so. The tents of all men of consequence in a tribe bear the representation of their totem, or name-animal, which answers the purpose of a civilized citizen's door-plate; and his robes and other property are likely to be adorned with illustrations of exploits in which he has acquired distinction. They are more than simply decorations, since they are really a record. More elaborate and more exactly records are the "winter counts" made and kept by the Indians of our Great Plains—painted chronological records of tribal interest, one or sometimes

as a picture, and read it "Jupiter," but it has no sound-significance, as has the word-picture Ju-pi-ter.

The pictography of the North American Indians (and originally of all men) consisted simply in the representation of the objects themselves. If a man's name was Red Buffalo, he had simply to draw a buffalo and paint it red to sign his name, understood of all men. If he wished to record the fact that he had killed two enemies, a picture of himself (recognizable by known marks) in the act of killing or standing over two men (recognizable by their well-known marks) told the story unmistakably. A combination or series of these story-pictures enlarged the simple incident into a history. A method of increasing and intensifying the narrative-power of such story-pictures at once suggested itself to the primitive artist-historian, namely, to place his persons and objects in such attitudes, or making such gestures, as would indicate additional ideas to observant readers. If the name of the man cited above was Red Running Buffalo, the animal in his signature was made in the attitude of running—the simplest case, for attitudes might be made to express far more than this, and gestures still more. Among our Indians, as among all uneducated people, gestures enter very largely into communication as an assistance to uttered speech, to some extent replacing it. An Indian is capable of relating a long and complicated story, involving many abstract ideas, by gesticulation alone; and it is perfectly natural that he should make his pictures represent the ideas thus conveyed by drawing them in the attitude of gestures suitable to what he wanted to express. The simplest of these, like common actions, would be understood by anybody; many others por-

trayed in pictographs require a more intimate acquaintance with the sign-language for their interpretation. In addition to this, certain symbols primarily suggested by the sign-language were adopted by the savage artists to represent ideas, or a connection of ideas, such as "speech," indicated by lines or broken lines issuing from the mouth, and leading toward the representation of the thing spoken.

But pictures and accepted symbols of the objects and the ideas to be represented, even when helped out by gesture-attitudes, were not all the resources at command of the pictographer. He soon began to hasten and broaden his work by certain substitutions and indirect means—a sort of shorthand—the beginning of that process which finally leads to a mere mark representing first an idea and later a sound. Thus our number-signs, I, II, III, &c. (originally pictures of fingers), and our alphabet were developed. One of these methods is *metonymic*—representing an instrument for the thing, as a bloody tomahawk to represent a fight or homicide. This may be carried into more abstract notions, as a crescent to signify month, attached to some other symbol, as a skunk—the month of March. The well-known Egyptian hieroglyph for "writing" is an example of this. Another indirect method is by *synecdoche*, the substitution of a part for the whole.

Fig. 3028.—ESKIMO PICTOGRAPH ON A WOODEN MASK.

Thus, in many pictographs, tracks mean men or animals, and in hieroglyphs of the Old as well as the New World legs or feet in the attitude of running mean to run, a headdress serves as a representation of nationality, &c., &c. *Metaphor* is taken advantage of in picture-writing of all nations. Thus, among the Egyptians the vulture represented the idea of motherhood, and among our Indians a picture of a buffalo's head in a *cache* signified abundance. Examples of this might be multiplied indefinitely, and would include a large part of the representations of gesture-signs, which are mainly metaphorical. A fourth method is by *enigma*—one object standing for another through some mystical or traditional connection commonly understood. This is less often exemplified in American pictographs than in those of the Old World, since it implies an advanced stage, designated by Dr. Brinton as the *ikonomatic* stage; but instances may be gathered from Mexican and Maya writings.

Such are the elements of picture-writing. It will be seen that frequent repetition and the gradual establishment of a connection between certain representations and a definite meaning would make less and less need-

Fig. 3029.—ESKIMO HUNTING HISTORY.
Engraved on opposite side of a piece of ivory.

ful the detailed drawing of these representations in full, until finally only the essential outlines would serve the purpose. These would vary with the ability or care of the artist, and finally only a part would be necessary to the understanding of the reader, and thus a series of (in and by themselves) meaningless forms and symbols would take the place of finished pictures. Thus pictography as an art would degenerate into mere ideograms, out of which would arise a newly organized system of writing in ideograms like the Chinese, or syllabic characters like the Japanese, or purely phonetic symbols like our alphabet. American pictography had never reached this stage of development, but among the Mayas and Mexicans it was approaching it, and there is little doubt that had it not been interfered with, and practically ended, by the coming of Europeans to this continent, it would have steadily developed toward that outcome.

Pied'mont, in *Alabama*, a post-village of Calhoun co.; tin and iron mining; lumbering region. Pop. (1897) 920.

Piedmont, in *Missouri*, a post-village of Wayne co., 39 m. S. of Ironton. Pop. (1897) 900.

Pie'-plant, *n.* The garden rhubarb. See **RHEUM**.

Pierce, in *Nebraska*, a N. E. co.; area, 576 sq. m.; drained by tributaries of the Elkhorn river. Surface, undulating, soil, fertile; timber scarce. Good water-

power. Stock-raising is the chief industry. Cap. Pierce. Pop. (1890) 4,864.

—A post-village, cap. of above co., 15 m. N. by W. of Norfolk. Pop. (1897) 700.

Pierce, in *North Dakota*, a N. co.; area, 936 sq. m. Has many small lakes. Surface, rolling; soil, rich black loam. No timber. Products, wheat, oats, barley, potatoes. Cap. Rugby. Pop. (1890) 905.

Pierce City, in *Missouri*, a city of Lawrence co., 50 m. S.W. of Springfield. Pop. (1897) 2,750.

Pier'-glass, *n.* A tall mirror between windows.

Pierre (*për*), in *South Dakota*, a city, cap. of Hughes co., and the State capital. An active business place; headquarters of the Black Hills trade; seat of Pierre University (Presbyterian). Pop. (1895) 1,776.

Pierre University is a Presbyterian co-educational institution at Pierre, the capital of South Dakota. In 1896, it had 8 instructors, 76 students, and 1,600 volumes.

Pierre'pont, EDWARDS, lawyer, was born in North Haven, Conn., March 4, 1817; graduated at Yale (1837), and at the law school (1840); removed to New York (1845), and became eminent at the bar; was judge of the superior court of the city of New York (1857-60); counsel in important cases for the government (1862-66); attorney-general of the northern district of New York (1869-70); was offered, but declined, the ministry to Russia (1873); attorney-general for the U. S. (1875-76), and minister to Great Britain (1876-77); received, among other honorary degrees, that of D.C.L. from Oxford, England. Died Sept. 23, 1892.

Piers Plow'man. See **LANGLAND**.

Pietermar'itzburg, the capital of Natal, South Africa, is a handsome town, noted for the beauty of its churches, residences, and gardens. It is built at an altitude of 2,000 feet above the sea, on a fertile plain watered by the Umgeni. It is connected by railway, owned by the government, with Durban, 73 miles distant, the only port of Natal, and also with the Orange Free State and the Transvaal. It has a military camp which is occupied by the principal division of the British troops stationed in the colony. In 1897, its population was 21,250, two-thirds white and the remaining third natives and coolies. It gets its name from its Boer founders, Pieter Retief and Gert Maritz.

Piezom'eter, *n.* An instrument for measuring the compressibility of liquids, made in several different forms. That of Oersted has a thermometer-like apparatus set in a liquid, within a closed vessel. Pressure being applied to the water by means of a piston in the neck of the vessel, the mercury in the graduated tube of the thermometer-like apparatus descends, and its movement serves as a measure of the amount of pressure applied. A manometer may also be used in the closed vessel. Another form has an air-tube, with registering device, for use in attaching to a sounding-line and ascertaining the pressure in ocean depths. The name is also applied to a surgeon's instrument for measuring the sense of pressure on the different parts of the body. This consists of a graduated tube containing a spring-pushed disk, which is pressed against the flesh. M. Sebert's piezometer is designed for measuring the pressure within a gun after firing the charge. It consists of a movable part set in the axis of a projectile, having prongs which leave marks on the interior surface of the projectile, showing the extent of movement of the parts subjected to pressure.

Pig'-eon-hole, *n.* A hole in a dove-cote for the birds to pass through.—One of a series of holes or openings.—A small compartment in a desk for filing papers.

(Print.) Extra wide space between letters.

(Pl.) An old game in which balls were rolled through little arches resembling the holes in a pigeon-house.

Pig'-eon-wing, *n.* A fancy dance-step, or a curl in skating.—A fashion of dressing the side hair, in the shape of a pigeon's wing, adopted by men in the latter part of the 18th century.

Pike, ZEBULON MONTGOMERY, soldier and explorer, was born in Lambert, N. J., Jan. 5, 1779; in the service of the government he explored the headwaters of the Mississippi river, and the interior of the Louisiana Territory; discovered Pike's Peak, and reached the Rio Grande; was for a time held prisoner by the Spanish authorities; served in the War of 1812; commanded the expedition against Toronto (then called York), and was killed in the assault upon that place, April 27, 1813.

Pilot Grove, in *Missouri*, a post-village of Cooper co., 14 m. W. S. W. of Booneville. Pop. (1897) 650.

Pilot Point, in *Texas*, a post-village of Denton co., 18 m. N. E. of Denton. Pop. (1897) 1,175.

Piloty (*pê-lô'tê*), CARL THEODOR VON, painter, founder of the modern realistic school, was born in Munich, Bavaria, Oct. 1, 1826. He has painted many intensely impressive historical scenes, and his canvases are conspicuous in the principal galleries in Germany. His *Elizabeth and Frederick Receiving News of the Loss of the Battle of Prague* (1868) is owned in Cincinnati, Ohio; his *Wise and Foolish Virgins* (1881) was exhibited in the United States (1887-88). He died July 21, 1886.

Pil'pay, Pel'pai, or Bid'pai, Oriental fabulist; lived several centuries B. C.; the reputed author of a collection of fables not now extant, but contained partially in the *Panchatantra*, and to a less extent in *Mahâbhârata* and the *Histopadesa*. The name Pelpay, or bidpai, is not a proper noun, but an appellative, meaning "master of sciences," and applied to the chief pundit or court scholar of an Indian prince. La Fontaine states that he owes much of his new material to Pilpay, the Indian sage. Regnier's edition of *La Fontaine* gives references to the Indian sources.

Pinal, in *Arizona*, a S. co.; area, 5,300 sq. m.; intersected by the Gila river. Surface, broad plains or mesas, broken by irregular chains of mountains abounding in precious metals; soil, fertile when irrigated. Extensive mining is carried on. Cap. Florence. Pop. (1897) 4,300.

Pink'ney, CHARLES COTESWORTH, statesman, was born at Charleston, S. C., in 1746; graduated at Oxford University, England. He served as aid-de-camp to Gen. Washington during the opening campaigns of the Revolutionary War, and was taken prisoner by the British at Charleston in 1780. Later, he held a seat in the convention which met to frame the National Constitution, and declined the secretaryship of state in 1795. He was (1796) appointed minister to France, from which country he was dismissed by the Directory after a short stay. In 1798 he became a major-general; and in 1804-8, as a Federalist candidate, unsuccessfully competed for the Presidency of the U. S. Died in 1825.

Pinkney, THOMAS, brother of the above, soldier and diplomatist, was born at Charleston, in 1750. He distinguished himself in the War of Independence, became governor of South Carolina (1787), and minister to London (1792). Later, he filled the office of U. S. minister to Madrid, where he negotiated the treaty of Ildefonso; was Federalist candidate for the Presidency (1796); member of Congress from South Carolina (1797-1801).

Pincon'ning, in *Michigan*, a post-village of Bay co., 21 m. N. of Bay City. Pop. (1894) 1,008.

Ping Pong, *n.* An indoor game which became very popular in England in 1901 and afterwards in the United States. It resembles lawn tennis, from which it differs in being played upon a table (9 x 5 ft.) instead of a lawn. The net is set up across the center of the table, small raquets and small celluloid balls being employed.—See **LAWN TENNIS**.

Pin'gree, HAZEN S., reformer, was born in Denmark, Me., Aug. 30, 1842. He began work in a cotton factory at 14, afterward worked in a shoe factory, and joined the army in 1862, fighting in the principal battles of the Army of the Potomac and being for some months a prisoner at Andersonville and elsewhere. After the war he engaged in the shoe business at Detroit, and in time built up the largest shoe factory in the west. Elected Mayor of Detroit in 1889 on a reform ticket, he began an active war on monopolies and corporations, and established in that city an electric railway system with 3 cent fares. He instituted the "potato patch" system for the useful employment of applicants for charity, an enterprise adopted in many other towns. In 1896 he was elected Governor of Michigan, retaining still his mayoralty until obliged to relinquish it by a Supreme Court decision. He died in London, England, June 19, 1901.

Pink'erton, ALLAN G., detective, was born in Glasgow, Scotland, August 25, 1819; removed to Canada (1840); was appointed to the detective department of the Chicago police (1850), and there originated the detective agency since associated with his name. Throughout his life he published from time to time accounts of his experiences, his last work, summing up the others, being *Thirty Years a Detective* (1884). Died July 1, 1884.

Pinkerton, *n.* A police detective; first so called from Allan Pinkerton (*q. v.*).

Pin'ocle, Pin'ochle, Pe'nuchle. A card game resembling the French game of Bezique, and now very popular in this country. This game is usually played with parts of two packs of cards, from the nines to the aces, or from the sevens, as in the more recent pinocle decks. In the ordinary two-handed game twelve cards are dealt each player and a card turned for trump, which can be lifted by the player holding the nine of the suit after making a trick. As they play, new cards are drawn from the top of the pack until it is exhausted, after which those who cannot follow suit must trump, and when trump is led must play one of higher value. The values range as follows: ace, ten, king, queen, knave, and nine. Game is counted by marriages (king and queen of a suit), by fours (aces, kings, &c.), by "pinocle" (queen of spades and knave of diamonds), and by trump sequence (knave to ace), each of these having its special value. While an ordinary marriage counts twenty points, a royal marriage (consisting of trumps) counts forty. Game is counted also from tricks taken, each ten, king, and ace counting ten points, and the last trick counting the same. P. can be played by three or more persons; in this case the count by marriages, &c., being made before the play begins. 1200 points constitutes the game.

Pi'nos Al'tos, in *New Mexico*, a post-village in Grant co. Pop. (1897) 960.

Pin-wheel, *n.* A wheel with pins instead of cogs.—A firework which, when placed on a pin or pivot and ignited, revolves rapidly, forming a wheel of flame.—A toy windmill of paper.—In tanning, a circular box, with wooden pins on the inner surface, containing water and tallow, for soaking hides.

Pinx'it, *r. a.* [Lat. (he) painted.] A word, sometimes abbreviated *pinx.*, or *pnt.*, placed at the corner of a painting with the artist's name, to show whose work it is. Thus, *Hovenden pinxit*, Hovenden painted (this).

Pioche', in *Nevada*, a post-village, cap. of Lincoln co., 125 m. S.S.E. of Hamilton. Pop. (1897) 550.

Pioneer', in *Ohio*, a post-village of Williams co., 14 m. N. of Bryan. Pop. (1897) 628.

Pipe'-mak'ing, *n.* Pipes are made of cement, iron, brass, copper, lead, &c. The methods of manufacture differ with the material and the size. Cast-iron pipe is made by moulding in sand; wrought-iron, by drawing a skelp through rollers or dies, or by bending heliacally.

and welding. Lead and copper pipes are drawn through dies. Cement pipe is moulded. The cast-iron pipe used in water-mains, gas-mains, and for soil-pipes, &c., is moulded from wooden patterns, which are set upright in a flask. The moulding-sand being forced in all around solidly, the pattern is withdrawn, leaving a circular hole the size of the outer diameter of the pipe. A core of iron covered with clay is commonly employed to occupy the center of the mould. The clay must be baked hard and dry, as no moisture is admissible in a mould. A number of these flasks being prepared, and set in a pit, a ladle of molten iron from the cupola is swung over them, and the moulds filled. The iron shrinks in cooling, so that the cores have to be driven out. Cast-iron pipe is only suitable for large sizes, the smaller diameters of three or four inches and under being usually of wrought-iron. The Ts, Ys, and bends for small iron pipe are cast, however. Common wrought-iron pipe is formed from a skelp, or flat strip of metal, of the desired thickness, and of a width equal or exceeding the circumference of the pipe to be formed. This skelp is heated and drawn through formers and pressure-rolls that curve it into tubular form. If the edges are simply brought together, it is butt-welded; if overlaid, it is lap-welded. Electric welding has made it possible to make large sizes of wrought-iron pipe of quite thin material. In the electric welder, only a small portion of the pipe has to be heated at once, which is a considerable economy. Seamless pipes, as for bicycle tubing, are drawn through dies. Several new methods are coming into use. The Mannesmann process forms the tube from the solid bar, by working a pointed cone into the center, and rolling the exteriors as it is formed. This is suitable only for soft metals, as copper. Spirally welded pipes are made at Orange, N. J., from commercial sheet-iron, from skelps of 6, 12, 18, and 24 inches width, from which all the sizes from one to six inches may be formed. The iron or steel being twisted in a former until the edges lap about half an inch, heat is applied by means of gas furnaces within and without, along the spiral path of the weld, and the hot edges are welded between an anvil and reciprocating hammer of light weight, working very fast. A smooth weld results, which is not objectionable, notwithstanding its extra thickness. The Cartwright welder, for large sizes of steel pipe, makes use of two compound-air-and-gas furnaces, which apply the heat inside and outside, along the line of junction, in advance of pressure-rolls, which complete the weld. Lead pipe is formed by forcing the molten lead through a die by means of hydraulic pressure, the lead being chilled and solidified as it passes out. It is coiled on a large drum for marketing. Steel, brass, and copper pipes are coiled by special machines, which pass them about circular dies. Elaborate tools are manufactured for cutting and fitting pipe. The screw-threads in pipe are usually cut on a taper, so that when screwed together with force the joints are perfectly tight.

Piper City, in Illinois, a post-village of Ford co., 76 m. E. of Peoria. Pop. (1897) 550.

Pipestone, in Minnesota, a post-village, cap. of Pipestone co., 50 m. W. by N. of Heron Lake. Pop. (1895) 1,668.

Piqué (*pēk'ā*), *n.* [Fr.] (*Fabrics.*) A kind of heavy cotton goods, made of two cotton threads, one thicker than the other, which are woven and united at certain points, and there made an extra thickness. The pattern is usually of a lozenge shape.—*Piqué work.* A minute kind of burl work; usually inlaying metals in metals.

Pithecanthropus, *n.* (*Zoöl.*) The ape-man, *Pithecanthropus erectus*, is the name given by Dr. Eugene Dubois to the fossil remains of an anthropoid animal which may prove one of the "missing links" in the chain of human physical development. Dr. Dubois is a surgeon in the Netherlands army in Java, where the remains were discovered in 1891 and 1892 near Trinil, Madiun Province, in the central part of the island, imbedded in a stratum of volcanic tufa of Tertiary age; they consist of the upper half of a skull, a femur, and a single tooth, perhaps all belonging to the same individual, as the pieces lay within a few yards of one another. Dr. Dubois published a full description of them in 1894, and great interest was excited among scientific men everywhere. Prof. O. C. Marsh, the celebrated paleontologist of Yale College, commented extensively upon the subject in the *American Journal of Science* for Feb., 1895, pronouncing it the most important addition to the department of fossil anthropology within recent years. He agreed with their discoverer that the differentiation of these relics was sufficient to entitle the animal to family rank, under the name *Pithecanthropidae*. While the capacity of the skull is about two-thirds less than that of the average man, it is far more capacious, proportionately, than that of any existing ape. In shape the skull is dolichocephalic, and remarkably high in the coronal region; its index is 70, and it lacks all trace of the crests characteristic of the gorilla's skull, being smooth and more like that of a gibbon's. The dentition appears to be decidedly simian, the single tooth (a last right upper molar, in good preservation) being in shape much like that of a chimpanzee, but having the grinding surface of the crown less rugose. The femur (of the left side) so closely resembles a human thigh-bone of average size as hardly to be distinguishable; it is 455 millimeters (17.83 inches) in length, slender, and nearly straight. Its shape, form of the articulating joint at the head, and other characteristics show indubitably (as the shape of the skull would suggest) that the animal maintained habitually an erect position. Prof. Marsh concludes that Dr. Dubois "has proved the exist-

ence of a new prehistoric anthropoid form, not human, indeed, but in size, brain-power, and erect posture, much nearer man than any animal hitherto discovered, living or extinct;" and he calls attention to the fact that in the time when it lived Java was not an island, but, with all the neighboring present islands, was a part of the Asiatic-European continent (Eurasia), divided from the Africa of that epoch by the Saharan Sea. "Further, there was a land connection, by England, Iceland, and Greenland, with America. We have thus a valuable aid to our understanding of the possibility of the 'new man' having been in the line of evolution or descent of with later man himself. If these conclusions are correct, the antiquity of man must be extended back into the Tertiary, and his affinities with the higher apes become much closer than hitherto supposed."

Pitkin, in Colorado, a W. central co.; area, 950 sq. m. Surface, mountainous. Mining, stock-raising, lumbering, and agriculture. Cap. Aspen. Pop. (1897) 9,500.

Pitman, SIR ISAAC, educator, was born in Wiltshire, England, Jan. 4, 1813. He was the inventor of the Pitman system of shorthand; his complete work on the subject was issued in 1846, under the title, *The Phonographic Reporter's Companion*. In recognition of his services two gold medals were presented to him, one by the phonographers of the U. S., and one by those of Great Britain and the Colonies. He was knighted in 1894; died Jan. 22, 1897.

Pittsburg, in Kansas, a city of Crawford co., 10 m. S. E. of Girard; has coal mines and large brick works; zinc is smelted. Pop. (1895) 8,982.

Pittsburg, in Kentucky, a post-town of Laurel co. Pop. (1897) 620.

Pittsburg, in Texas, a post-town, cap. of Camp co., 293 m. N. E. of Austin. Pop. (1897) 1,315.

Pitts'ville, in Wisconsin, a city of Wood co., 20 m. W. of Grand Rapids. Pop. (1895) 648.

Platte, in Utah, a S. central co.; area, 3,695 sq. m.; intersected by Sevier river. Surface, mountainous; Wah-satch Mountains in western part; has also treeless plains; soil, mostly sterile; only fertile when irrigated. Cap. Junction. Pop. (1895) 1,727.

Plain City, in Ohio, a post-village of Madison co., 18 m. W. N. W. of Columbus. Pop. (1897) 1,362.

Plaisance (*plā-zāns'*), *n.* Part of a park, or a pleasure-ground. Generally obsolete except in the phrase Midway Plaisance, a portion of the Columbian Exposition at Chicago, 1892-3. Same as *Pleasance*, or *Pleasance*.

Planigraph, *n.* A form of draughting-rule for copying drawings on a different scale. It has a central pivot, and a scale much larger on one end than the other. By placing a drawing at the smaller end, its measurements may be easily read therefrom, while they are copied off on another sheet from the larger end.

Plankinton, in South Dakota, a city, cap. of Aurora co., 23 m. W. of Mitchell. Here is a State Reform School. Pop. (1895) 494.

Plano, in Illinois, a city of Kendall co., 14 m. W. S. W. of Aurora; has an agricultural implement factory. Pop. (1897) 2,005.

Plano, in Texas, a post-town of Collin co., 18 m. N. of Dallas. Pop. (1897) 965.

Plaque (*plāk*), *n.* [Fr. plate.] A plate, disk, or slab of metal, china, or other ware, upon which pictures are painted, and which is used for wall decoration.—A brooch; the plate of a clasp.

(*Anat.*) A small, plate-like structure.

Platt, ORVILLE HITCHCOCK, lawyer, was born in Washington, Conn., July 9, 1827; filled various political offices in his State—representative, senator, secretary of state, &c.; has been U. S. Senator from Connecticut since 1879.

Platt, THOMAS C., politician, was born in Oswego, N. Y., July 15, 1833; elected to Congress in 1872; re-elected in 1874; became U. S. senator, Jan. 18, 1881, but resigned in May following, with his colleague, Mr. Conkling, and retired to private life. In 1896 he was prominent as manager of Republican affairs in New York State, and succeeded David B. Hill in the U. S. Senate on March 4, 1897, having been elected for the full term of 6 years. Mr. P. is president of the U. S. Express Co.

Playfair, LORD LYON, chemist and statesman, was born in Meerut, India, May 21, 1819; studied chemistry under Graham and Liebig; held many important professorships and public appointments; was in Parliament 17 years (from 1868), and postmaster-general in 1873-4; raised to the peerage, as Baron Playfair, in 1892. He has contributed largely to the literature of chemistry, and is regarded as one of the greatest experts of that profession.

Plaza (*plā'za* or *plā'tha*), *n.* [Sp.] An open square or market-place, or a broad space about a building; especially common in Spanish or Spanish-American cities.

Pleasant Grove, in Utah, a city of Utah co. Pop. (1895) 2,301.

Pleasant Hill, in Ohio, a post-village of Miami co. Pop. (1897) 600.

Pleasant Lake, in Indiana, a post-town of Stenben co. Pop. (1897) 562.

Pleasant Plains, in Illinois, a post-village of Sangamon co., 15 m. N. W. of Springfield. Pop. (1897) 550.

Pleasant Ridge, in Ohio, a post-village of Hamilton co. Pop. (1897) 1,150.

Pleasanton, ALFRED, soldier, was born in the District of Columbia in 1824; graduated at West Point; served in the Mexican War, and was commissioned a major of cavalry in 1862; became brigadier-general of volunteers in July, 1862; served efficiently throughout the war as a cavalry commander, and in 1865 was hre-

veted brigadier-general, and major-general in the regular army; was mustered out of the volunteer army in 1866, and resigned his commission in the regular army in 1868. Retired with the rank of colonel, U. S. A., in 1888, and died Feb. 17, 1897.

Pleasanton, in Kansas, a city of Linn co., 7 m. E. of Mound City; has coal mines, nurseries, flour mills, and large shipments of grain, cattle, and canned fruit. Pop. (1895) 990.

Plebe, *n.* [Lat. *plebs* (gen. *plebis*), the people.] The common people collectively, the populace, the mob.

(*Collog.*) At the U. S. Military Academy, West Point, N. Y., or the U. S. Naval Academy, Annapolis, Md., a member of the lowest class, a freshman.

Pleroma, *n.* [Gr. *plērōma*, fullness, perfection.] A condition of fullness or abundance, especially the plenitude of the divine perfections.

(*Gnostic.*) The boundless space through which God, viewed as the purest light, is diffused; the divine being, including all eons that emanate from it.

Plethysmograph, *n.* An apparatus for studying the variations in size of some portion of the body, especially as caused by the circulation of the blood. Prof. J. M. Dogiel's plethysmograph has a horizontal glass cylinder, in which the arm of a man—the leg of a dog, &c., may be inserted, the end toward the body being made water-tight with a rubber sleeve. The cylinder is filled with water through a connecting vessel, so as to create a slight pressure, which is made to act upon a sensitive drum. Every change in the circulation of the blood in the enclosed limb in the water-filled glass cylinder has an effect on the drum, and is recorded by means of a connecting stylus on a rotating smoked cylinder. With this apparatus it has been proved that music has a marked influence on the circulation of the blood, in both man and animals.

Plevna. A town of Bulgaria, 19 m. S. of the Danube, and near the river Vial, a tributary of the Danube. Here Osman Pasha, with a large force of Turks, defeated the Russians on July 31, 1877. Foreseeing that the Russians would return with reinforcements, Osman shut himself in Plevna, which he strongly entrenched. The Russians came back, as was expected, greatly increased in number, and early in September endeavored to take the place by storm. Unsuccessful in this, they regularly invested the city and the siege lasted until December. The Turkish commander made a desperate effort to cut his way through the investing force, but in vain. On Dec. 10, 1877, therefore, as he was running short of provisions and ammunition, he capitulated with 42,000 men and 77 guns. This was the critical event of the Russo-Turkish War. Pop. (1897) 15,490.

Plumbing, *Sanitary*. As the name implies, the first plumbers were workers in lead. The fitting and adjusting of pipes in dwellings became their principal work, and as iron pipes came to supersede lead in many uses, the name plumbing was used to cover the fitting of pipes of all kinds. Lead being soft and easily worked, was the first metal extensively employed in fitting buildings with pipes. When machinery for making iron pipe was simplified so that such pipe became cheap and common, it supplanted lead, which is a more costly metal. The only reason why lead has continued in use at all is that it is smoother inside, and more easily and quickly adjusted to irregular shapes. Interior smoothness is of considerable importance in drain-pipes, as roughness causes the accumulation of filthy matter; hence, in Europe lead pipe is used almost wholly for such purposes. In the United States iron pipes have of late years been made so smooth inside that they are largely employed for this purpose. Plumbing in modern dwellings includes the systems of water-pipes, waste or drain-pipes, and soil-pipes. The system of steam-pipes is sometimes included, but this is more properly steam-fitting. The intelligent arrangement of the waste and soil systems in a building has a great influence upon the health of the inmates, and has been the subject of extensive municipal legislation and inspection. Zymotic and germ diseases are frequently propagated by the insanitary conditions resultant from improper plumbing. As a consequence, the contagious diseases of children, consumption, cholera, typhus and typhoid fever, cancer, &c., are disseminated. Degeneration of the liver, kidneys, and brain are other ailments which follow as the result of living in an atmosphere impregnated with sewer-gas. In planning the plumbing for a building, it is necessary to work from the ground up, as no pipes should be laid on the level, but must have an incline, so that a flow is always possible. Waste-pipes in a building should have an incline of not less than one foot in fifty, and soil-pipes considerably more. The arrangement must be such that no accidents can cause a possible impregnation of the water supply from any leaking of waste or soil-pipes. In laying out the water-supply pipes of a building, it is necessary to provide a stop-cock at the lowest point, so that all the water can be drawn off in case the building is untenanted in winter, when freezing in the pipes and bursting would result if the supply were not drawn off. Soil-pipes should be laid as directly as possible, with no sharp angles, and with an extension through the roof to carry out gases, and its top should be protected with a wire screen, to prevent choking. Soil-pipes being made of iron, the joints should be packed with oakum, molten lead being poured in, and calked. Substantial iron hangers are best for keeping the pipe in position, so that there may be no sagging of the more horizontal portions. The inside diameter of soil-pipe should not be less than 4 inches. Waste-pipes from sinks and drains are better arranged so as not to connect directly with near-by soil-pipes, but

should be carried to the main house-sewer. Traps, being the only protection against the introduction of sewer-gas into a building, should be fitted with the utmost care, and be made subject to frequent inspection. A trap is formed by a crook or bend, very often in S form, in which water is allowed to collect as a seal against the upflow of sewer-gas. To prevent siphonage it is necessary to equalize the atmospheric pressure on both sides of the trap. Air is therefore commonly admitted at the crown (back-venting); if the circulation of air is not maintained, a pressure of sewer-gas is likely to occur, and force itself through the water-seal. The trap in the main house-sewer connecting with the street-sewer

Fig. 3030.—DEHN'S SEWER-GAS TRAP.

should be provided with a hand-hole for cleaning out, and a vent-hole leading to the ground, so as to maintain an air-circulation in the drainage system. The traps of house-closets and sinks should be placed so as to be easily accessible. In fact, all plumbing is best exposed, and the old notion that such pipes and traps should be hid away in walls, or covered by woodwork, is giving way to the much more sensible plan of providing exposed plumbing, and rendering it sightly. The bases of baths and closets are much better unenclosed, and so with all the smaller pipes, since leaks are then more quickly observed and more easily repaired. A further protection from defective or leaking pipes is obtained by arranging the ventilation of a building so that the air from the vicinity of pipes tends to pass out, the fresh air being admitted from some opposite point. The water-supply pipes are made to withstand much greater pressures than formerly, 200 pounds to the inch being applied in some cases, while pressures of 100 pounds are common. Consumers in the United States receive an average supply of 100 gallons per day per capita, an excessive amount resulting from the custom of leaving open faucets to obtain cooler water in summer, and to wasteful use in closets and baths. In European cities but 34 to 40 gallons per day is the usual allowance. When a system of house-pipes has been installed, a good method of testing them is to fill with water, closing up the lower exits. If the water-level at the top be marked, any leakage is easily observed, and may be hunted up and remedied.

Plume'-bird, n. (Ornith.) The common name of

Fig. 3031.—PLUME-BIRD (*Seleucidés alba*).

Epimachus, a genus typical of the Epimachine, or sickle-billed, group of birds-of-paradise. (See PARADISEIDÆ.)

It contains many long-billed species rivaling in splendor those of other genera. Perhaps the most beautiful among them is the twelve-wired plume-bird (Fig. 3031). The softness of the feathers of its back makes it very delicate to the touch, like black velvet; and in a strong light the color of the shield-like feathers on the breast changes from green to bronze and a splendid purple. The long feathers which cover the lower part of its body are of a very delicate yellow color, shading off into white. But as though this gorgeous plumage, which some have thought made it the most beautiful of all birds, were not enough, it is further adorned by a tuft of six snowy feathers on each side of the breast which diminish into twelve very thin, long, curly, black threads, or "wires," with white tips. These birds and their congeners are natives of New Guinea and New Holland. They are variously adorned with enormously long tail-feathers, great shoulder-tufts of broad feathers, loose downy plumes, &c. They are mainly fruit-eaters, and breed in hollow trees.

Plur'ative, a. [Lat. *plurativus*.] (Logic.) Applicable to the majority of a class.

Plu'tarchy, n. [Gr. *ploutos*, riches; *archō*, to rule.] The rule of wealth; plutocracy.

Plutoc'raey, n. [Gr. *ploutos*, wealth; *kratoō*, to be strong.] An aristocracy of wealth; a class controlling the government by means of their riches; colloquially, the wealthy classes.

Plu'tocrat, n. One who belongs to the plutocracy; one who exercises political power by reason of his riches.

Plu'viograph, n. A recording rain-gauge, also named *hyetometer*, *ombrometer*, and *udometer*. (Compare RAIN-GAUGE.) The most approved form has a broad-mouthed funnel at the top, resting within an open-topped perpendicular cylinder, within which it is free to rise and fall. This funnel is stopped at the lower end, and as it fills with rain, the weight of the water causes it to descend, operating a pointer, which leaves a tracing on a recording-device. It may be made to hold a half inch of water of the capacity of the cylinder, and when full to empty itself automatically.

Plu'viometer, or Plu'vioscope, n. A rain-gauge; the name given to some of the simpler forms, as a cylindrical cup, with a graduated glass tube outside connected with the interior, so as to show the depth of water within.

Plym'outh, in California, a post-town of Amador co. Pop. (1897) 880.

Pocahon'tas, in Virginia, a post-town of Tazewell co., 172 m. W. of Lynchburg. Here is located one of the largest mines of bituminous coal in the State, employing several hundred miners, and large capital. Pop. (1897) 3,330.

Pocomoke City, in Maryland, a post-town of Worcester co., 24 m. S. of Salisbury. Pop. (1897) 2,050.

Pol'a, a town near the southern extremity of the peninsula of Istria, in Austria, and 105 m. by rail S. of Trieste. It is the most important naval station in Austria-Hungary, having a harbor, deep, spacious, and almost landlocked. The town is protected by forts, and overlooked by the citadel. There is a large arsenal, which employs about 2,400 men. Pola is also a shipping port, exporting wood, fish, sand, and building stones, and importing provisions, coal, and bricks. The cathedral dates from the 15th century, and the Franciscan convent from the 13th century. There is a naval observatory, founded in 1871, where 28 asteroids were discovered (1874-80) by I. Palisa. In the suburb of San Policarpo there is a fine monument to the Emperor Maximilian, of Mexico. Pola, destroyed by Augustus, was rebuilt at the request of his daughter, Julia, and hence named Pietas Julia. That it became an important town is shown by the Roman remains still existing, a well-preserved amphitheater, capable of holding 20,000 spectators, a triumphal arch, a temple, and several ancient gates. The Venetians conquered Pola in 1148, and destroyed it in 1267. In 1379, the Genoese, after routing the Venetians in a sea-fight off the town, ravaged it. Still the Venetians kept possession of the place until 1797, when it was transferred to Austria. The population in 1890 was 39,273, of whom 10,000 belonged to the garrison.

Polar Research'. This subject has been already treated from a historical point of view under the heading of ARCTIC EXPLORATION (q. v.). In that article all attempts previous to 1900 to solve the mystery of the pole were described. It is our purpose here to speak of attempts in 1900 and later and to refer to various projects devised to attain the desired end by novel means. Within recent years the old method of penetrating the polar regions by means of ships has been in a measure abandoned and new methods put in operation, of which notable results were Peary's journey across the inland ice of northern Greenland, and Jackson's long residence in Franz Josef Land, with a similar purpose in view. The intrepid explorer Jackson, after spending three years in that inhospitable arctic island, during which he had the good fortune to rescue his daring fellow-explorer, Nansen, returned to England in the ship *Windward* at the end of the summer of 1897. The results of his enterprise were mainly the exploration and mapping of Franz Josef Land, which he found to be bounded by ocean waters on the north, thus checking his ulterior purpose of proceeding north overland. A somewhat similar purpose was entertained by Lieutenant Peary, who proposed to attack the problem again by way of North Greenland and persist in it for several years. In 1897 he was granted 5 years' leave of absence by the Navy Department, and made a preparatory voyage north to obtain the assistance of the Eskimos in his projected expedition. In 1898 he

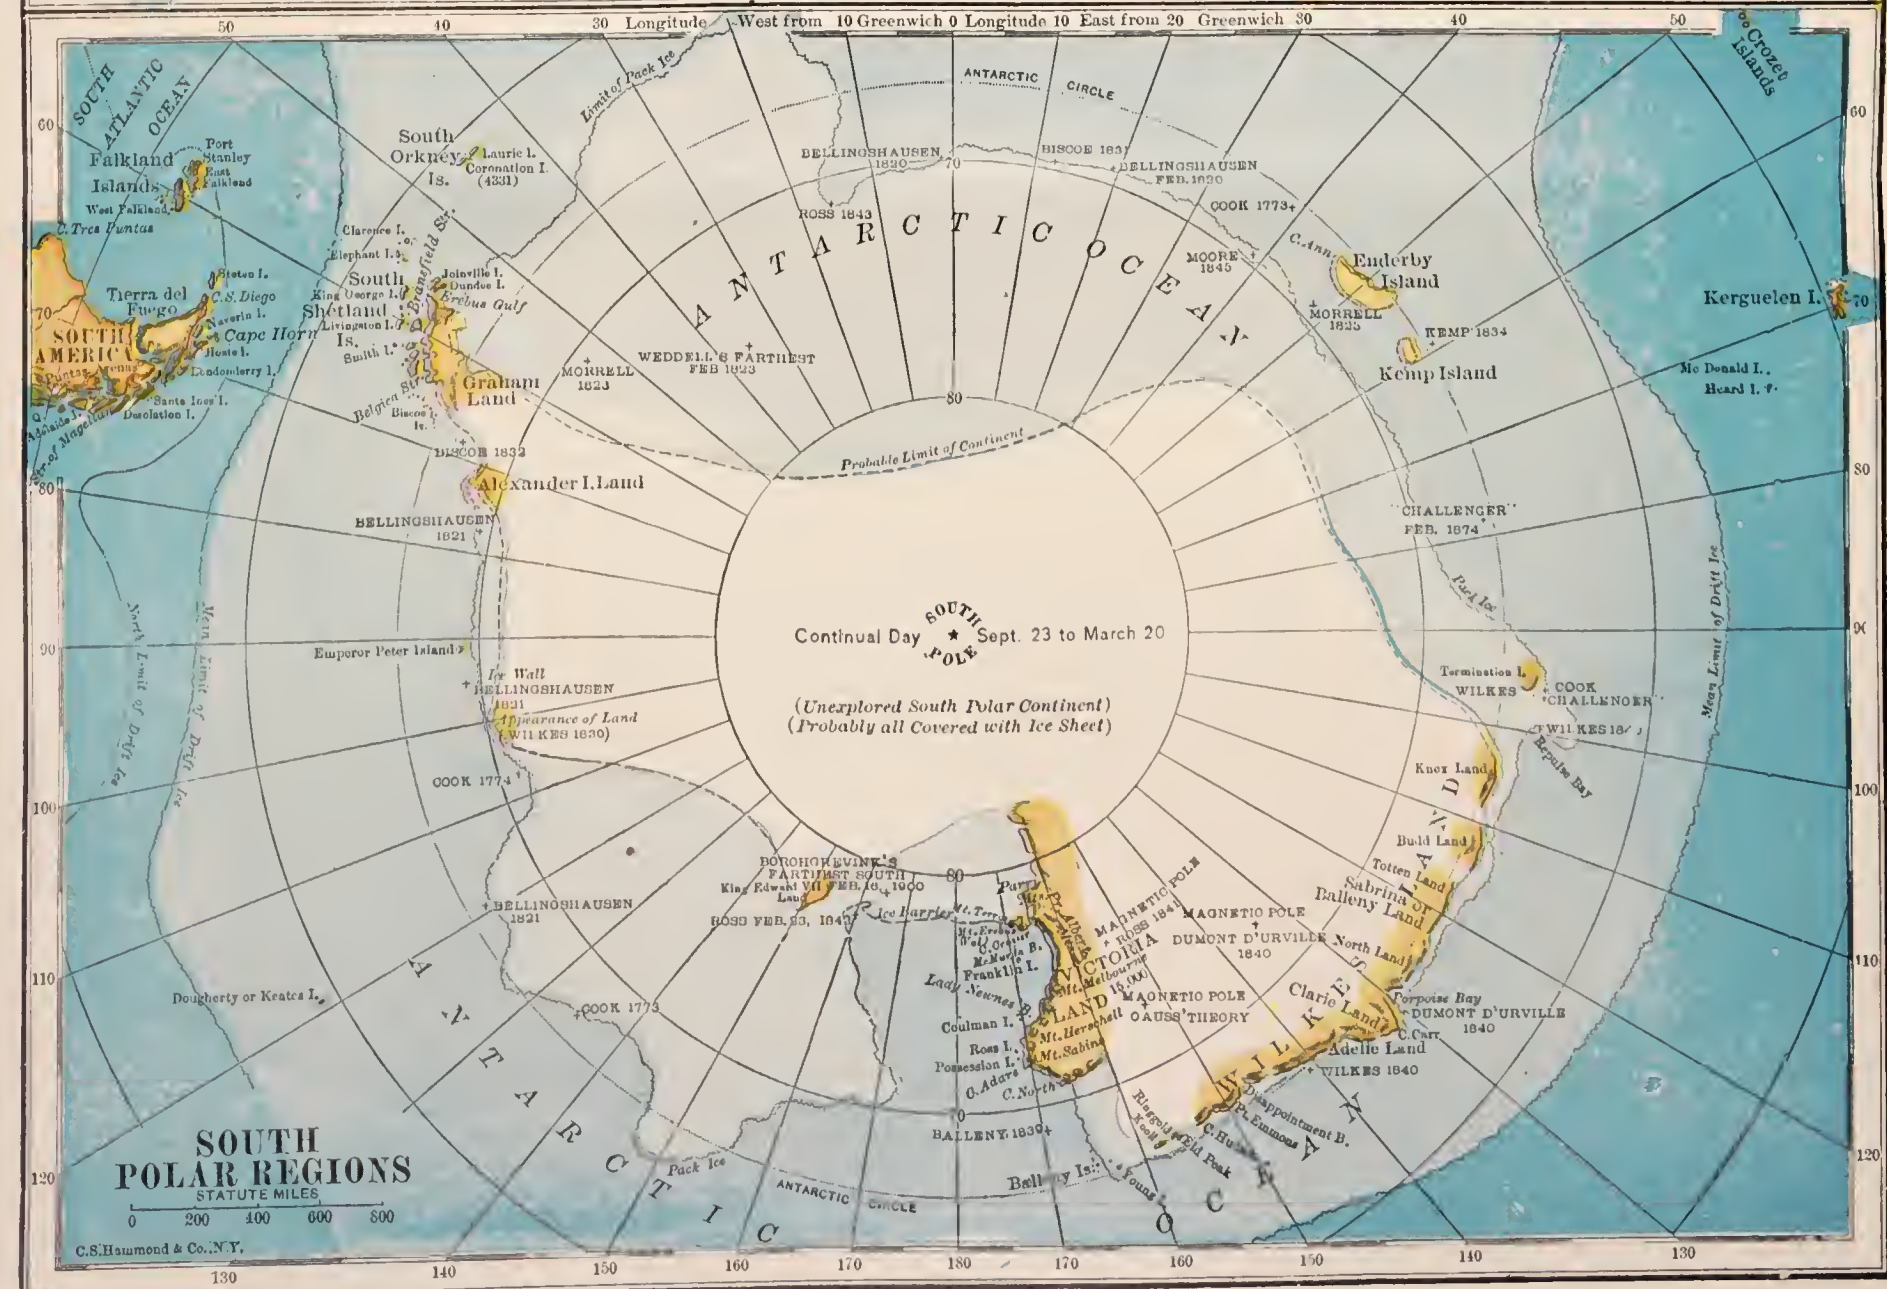

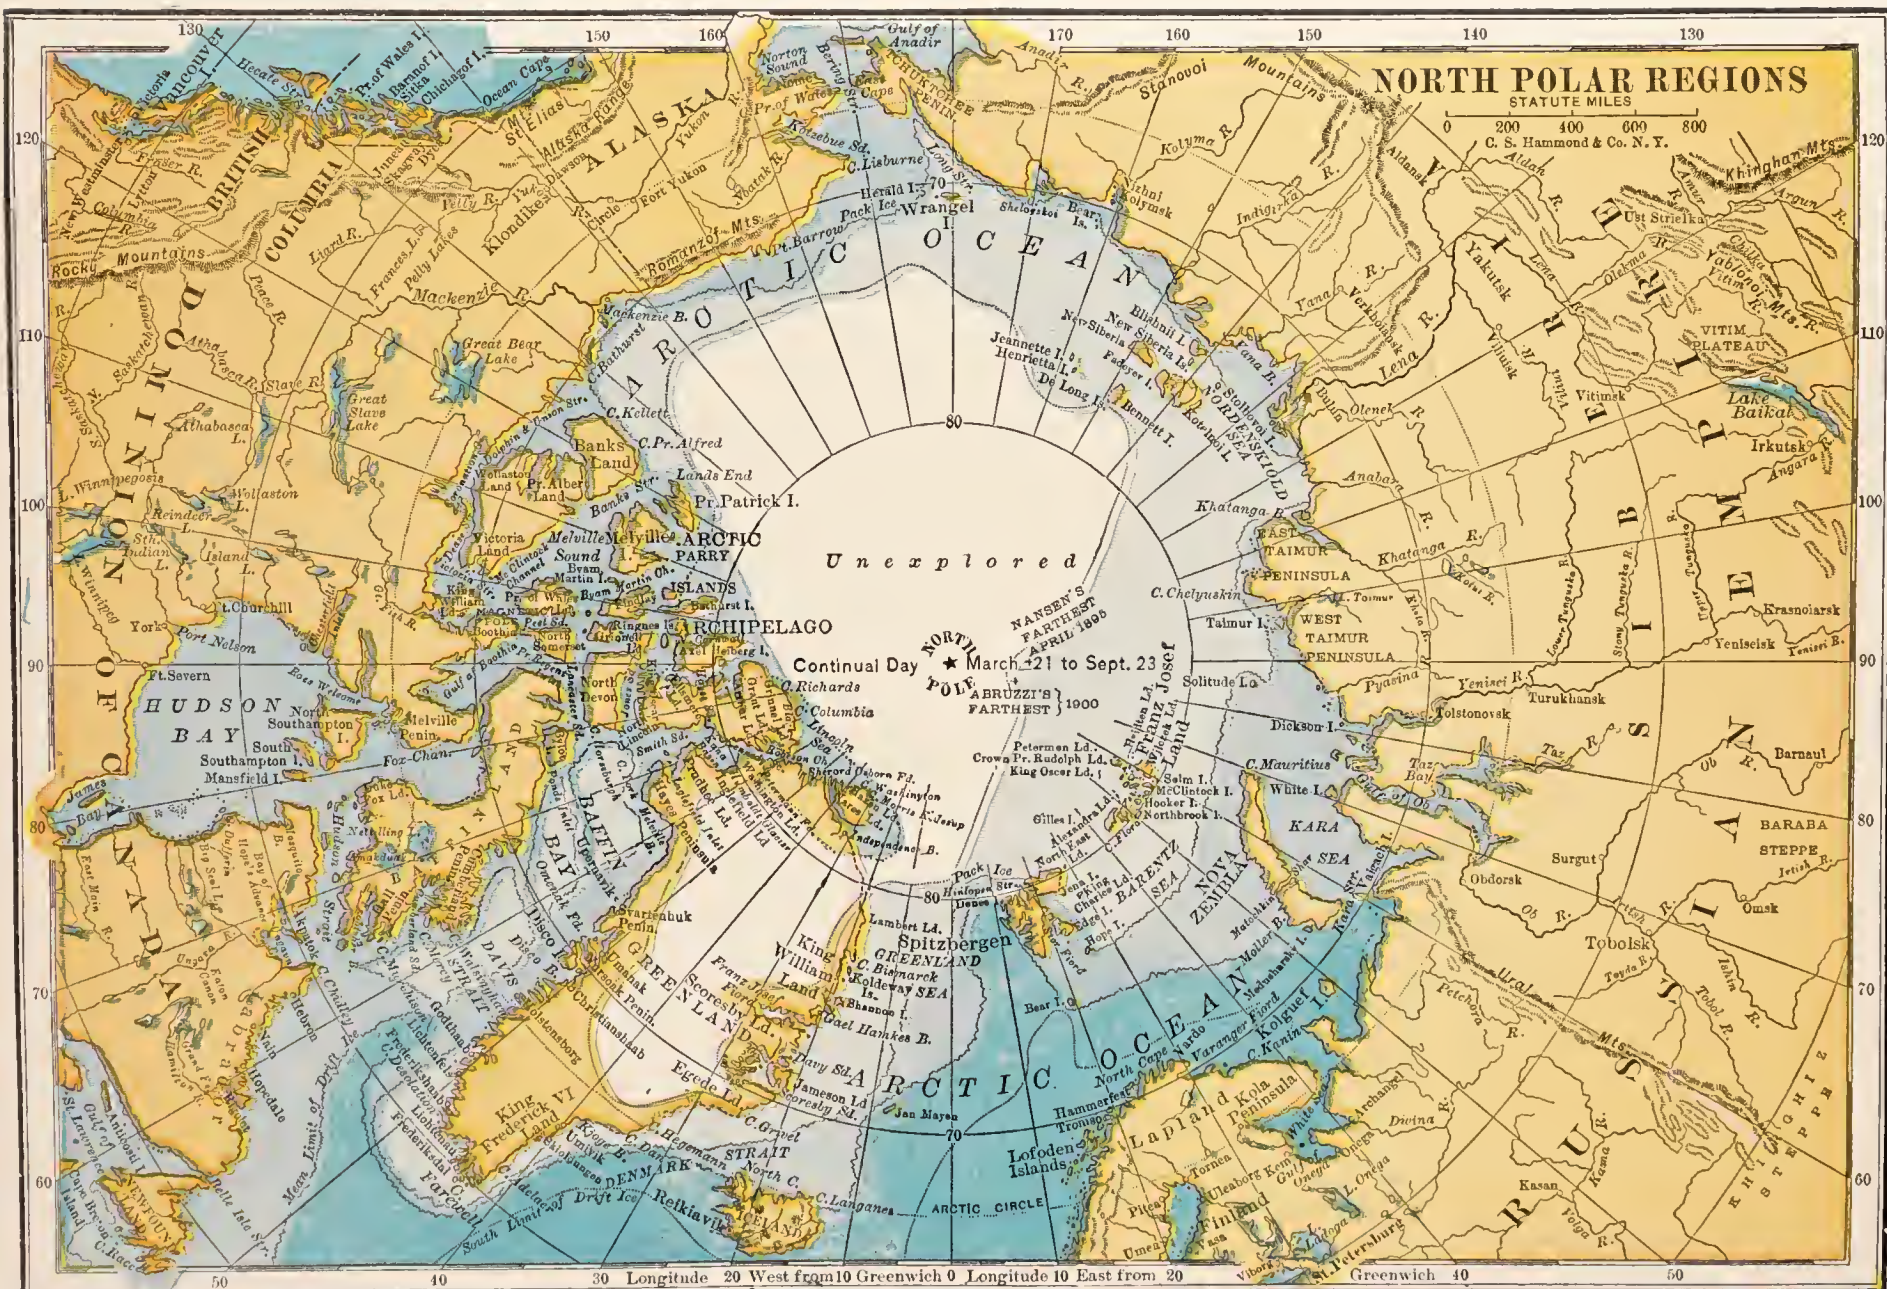

set out again and remained in the Arctic region until 1902, engaged in daring efforts to reach the pole by means of sledge journeys over the ice. His plan was to establish food caches by means of supporting parties, upon which he might retire in case of necessity. In the excursions northward from his base of operations he took the lightest available equipment, teams of picked dogs, and a few of the most experienced of the Eskimos. In 1900 he reached the latitude of 83° 50' N. and in 1902 that of 84° 17', the highest point reached in American waters to that date. During Peary's absence on this expedition a higher latitude was attained in European waters, one surpassing that of Nansen, but an account of it must be left for a later portion of this article. Undeterred by his comparative failure, the indefatigable Peary obtained further leave of absence from the Government in 1903, and in 1904 began preparations for a return to the polar seas. For this purpose he had a new vessel built, especially adapted to force its way through the ice and to overcome the difficulties of Arctic navigation, it being considered the most powerful and best suited craft ever built for that purpose. It was a large, three-masted steamer, with auxiliary sail power, the bow being backed by 12 feet of solid wood. With this he proposed to force his way northward to a point on the north coast of Grant Land within 500 miles of the pole and from there dash northward with a small pioneer party, to be followed by reserve parties to establish caches of provisions at suitable locations. Setting out in 1905, the desired point in Grant Land was attained, and the dash for the pole began in the spring of 1906. A succession of obstacles were encountered, including ice hummocks difficult to cross, violent gales, blinding snow-storms, and finally open water and drifting ice. At noon on April 21 the unprecedented latitude of 87° 6', less than 200 miles from the pole, was attained. Return was now absolutely necessary and the party narrowly escaped starvation before reaching the ship. They had surpassed all previous records in the polar seas. This success did not satisfy Peary, and he prepared for a return to the polar seas in 1907.

—Andrée's Balloon. But the most original of the

Fig. 3032.—PROF. S. A. ANDRÉE.

newly-devised methods of reaching the pole was that of S. A. Andrée (q. v.), a Swedish engineer, who set out in the summer of 1897 on a most singular and daring enterprise, one which, while full of hopeful and promising elements, was at the same time rendered perilous by many unknown but threatening dangers. M. Andrée was an engineer in the Patent Office of Sweden, and an aeronaut of much experience, he having made many striking ascents, in one of which he crossed the Baltic in a small balloon. The balloon intended for this purpose was constructed at Paris under the constant superintendence of M. Andrée, the expense of the enterprise—about \$36,000—being defrayed by a public subscription, headed by the King of Sweden with \$8,000. The plans of the aeronaut were endorsed by the Royal Swedish Academy, the French Geographical Society, Baron Nordenskjöld, the famous arctic explorer, and Dr. Nils Ekholm, one of the ablest meteorologists of Europe. On the other hand, they were decried by others of experience in arctic affairs, who predicted certain failure and the inevitable death of the explorer. Undeterred by these dismal prognostications, Andrée proceeded with the construction of his balloon, which was made of double silk, so as to prevent as much as possible the escape of gas, of which it had a capacity for 6,000 cubic meters. It was intended to transport a weight of 3 tons, to be made up of the aeronaut and 2 companions, provisions for a year or more, scientific and other apparatus, and the requisite mechanism and chemical materials to manufacture a new supply of gas in the polar regions, if necessary. The balloon was enclosed with heavy cordage, so as to enable it to resist the action of the sun. An ingenious contrivance for directing the motion of the balloon was added. This consisted of a rubber sail secured to the apex of the balloon, with a rope leading to the car. In addition was a guide rope, which was intended to drag on the ground or in the water, arrangements being made to adjust it to different positions for 180° of the circumference of a ring attached to the car. This was

m

experimented with in July, 1895, and it was found that when the hook of the guide rope was attached to the central eyelet, the balloon moved in the line of the wind, but when attached to one or the other side its course was changed by a considerable number of degrees. The sail could be adjusted to aid materially in this result. The month of July, 1896, was fixed for the date of starting, the locality being one of the northwestern islands of the archipelago of Spitzbergen. The winds proving adverse in 1896 the ascent was delayed till the following year, when the balloon set out on July 11 at a promising rate of speed. From the time of its disappearance from view nothing was ever learned of the fate of Andrée and his companions, and they doubtless perished in the northern seas. A similar enterprise was projected in 1905 by Walter Wellman, an enterprising American journalist, who had made a polar expedition by the Franz Josef route in 1899. He proposed to take advantage of all the progress made in ballooning and air-ship experiment since the date of Andrée's unfortunate journey, and was hopeful of success. The air-ship planned by him, the largest ever constructed, was built in Paris and taken to Spitzbergen in 1906 as the most available starting point. It was 50 metres long, and was equipped with two motors and two propellers, and also with a complete sledging outfit and a combined boat and car, these to be used in case of accident to the balloon. It was supplied with fuel and food for 5 persons. He proposed to make the journey in the summer of 1906, hoping to reach the pole in a few days, but mechanical defects were discovered in the air-ship that threatened to render the expedition hazardous. It was therefore returned to Paris to be reconstructed, and the enterprise was deferred. The year 1900 was made notable by an expedition which established a new highest record, surpassing that of Nansen. This was led by the Duke of the Abruzzi, son of the Prince Amadens, once King of Spain, and brother to King Humbert of Italy. Setting out in 1899 with a crew of twenty men, in the old Norwegian sealer *Jason*, which he refitted and renamed the *Polar Star*, he wintered on the coast of Crown Prince Rudolph Land. In the following summer a party of ten men was sent north with dogs and sledges. After some severe experiences, in which three of the party perished, Captain Cagni with three men continued to sledge northward over the rough ice, finally reaching the latitude of $86^{\circ} 34'$, about 22 miles farther north than Nansen had gone. Provisions running short they returned, reaching the ship after an absence of 104 days. The northing reached remained unsurpassed until 1906, when Peary, as above described, made the higher record of $87^{\circ} 6'$. To the story of these successful expeditions must be added that of the unfortunate and unsuccessful one of Fiala, the failure of which became known in 1905. This expedition spent two years in the north, wintering in Teplitz Bay, Crown Prince Rudolph Land, where the Duke of Abruzzi had wintered a few years earlier. Here the ship was partly injured by the ice, and finally drifted away and was crushed and lost, with many tons of coal and a considerable store of provisions on board. The expeditionary party of 40 men, with 218 dogs and 30 Siberian ponies, encamped on the island shore, and from that point Fiala made a resolute endeavor to reach the pole or to establish a high record. Misfortune attended his efforts, the weather being so warm for an arctic winter that the ice opened and channels of open water blocked the way. Attempts to rescue the mariners were made by Mr. Ziegler, the backer of the expedition, but that of 1904 failed, and it was not until 1905 that they were reached and rescued. The party, though short of provisions, was in good health, only one man having died. —*The Northwest Passage.* While the pole was not reached during the period under discussion, a notable success was made in another field of arctic effort, a vessel being taken for the first time through the Northwest Passage, the goal of adventurers during three centuries of the past. The passage had been made by McClure in 1850-51, but this was accomplished by sledges, and it was not until 1906 that a vessel was taken through this long-sought passage. The successful navigator was Capt. Roald Amundsen, a Norwegian, who left Christiania in June, 1903, in the sloop *Gjøa*, with a crew of seven men. He spent two years in the north in an effort to locate the magnetic pole, which he finally located in King William Land, near where Ross had placed it in 1831. From this point he made his way westward through the ice until the open water near Bering Strait was attained. Cape Nome, Alaska, was reached by the *Gjøa* in October, 1906. Thus was completed a feat which had occupied men's minds since the early days of American discovery—*Antarctic Research.* While the attempts above mentioned were being made in the seas of the north, the antarctic seas, after years of neglect, began again to be visited. Nothing of importance had been discovered in that region for over 50 years. For a number of years past the Royal Geographical Society of London has been endeavoring to have an antarctic expedition organized, either by the government or private persons. In 1894, the *Antarctic*, a Norwegian whaler, reached Cape Adair, in Victoria Land, an interesting report of the voyage being made by C. E. Borchgrevink, a young Norwegian who accompanied the voyage. A proposition to send him south again, at the head of a small scientific party, was made, they to be provided with ski-runners, for an expedition inland. Dr. F. A. Cook, a companion of Lieutenant Peary in 1892, proposed a similar expedition in 1894, hoping, from the

experience gained in the north in the art of resisting the cold, to be able by the aid of sledges and Eskimo dogs to reach a high southern latitude. A Belgian antarctic expedition left Antwerp in the *Belgica* in 1897, under the command of Lieutenant de Gerlache, with Dr. Cook, the explorer above mentioned, for one of its members. But a more important exploration in this field was that of Captain Borchgrevink, which left England in 1898. In 1900, it reached Ross' Bay, $78^{\circ} 35'$ south latitude, from which the captain made a sledging expedition over the icy land surface. The high and steep mountains prevented him from going more than 17 miles south, to lat. $78^{\circ} 50'$, the farthest south to that time attained. In 1901 an expedition was sent out by the Royal Geographical Society and the Royal Society of England, which gained a higher southing and made a new world's record in this field of effort. This achievement was performed by Captain Scott, in the *Discovery*. The expedition wintered 400 miles farther south than had ever been done before, a fact which gives great value to its meteorological and other scientific observations. It also coasted along the ice barrier 150 miles beyond the point where Sir James Ross stopped 60 years before. On September 2, 1902, sledging parties were sent out in several directions, Captain Scott traveling 94 miles to the south and reaching land in latitude $80^{\circ} 17'$, a point within 670 statute miles of the South Pole. The conditions were trying, the dogs all died, and the three men of the party had to drag the boats back to the ship. The *Discovery* returned to England in 1904. An expedition under Lieut. Ernest H. Shackleton, of the British navy, which went South in 1907, taking with it six Siberian ponies and a motor car, had unprecedented success, reaching on Jan. 9, 1909, a point 111 miles from the South Pole, which appeared to be situated upon a mountainous plateau 10,000 to 11,000 feet high. The south magnetic pole was also located, in lat. $72^{\circ} 25' S.$, lon. $154^{\circ} E.$, and Mt. Erebus was ascended. Still greater success was attained in north polar research in 1908 and 1909, two explorers claiming to have reached the pole. Dr. Frederick A. Cook, who went north over Ellsmere Land and the polar ice, claimed to have reached the pole on April 21, 1908, and Robert E. Peary, who went north in the *Roosevelt* in the summer of 1908, claimed to have performed the same feat on April 6, 1909. A controversy arose in consequence, Cook's discovery of the pole being strongly questioned.

Polarization, n. (Physics.) Light, radiant heat, electro-magnetic radiation, and all the rays subject to undulatory wave-motion are capable of being polarized; that is to say, their properties are different in different directions when the rays pass through certain media or are reflected. In the case of light, under ordinary conditions the vibrations of the ether may take place in any plane about the line of propagation, but when reflected, as from the surface of a mirror or a sheet of water, or when passed at certain angles through transparent substances, as a series of glass plates, or Iceland spar, &c., the transverse vibrations of the ether are caused to move in a single plane, producing what is termed polarization. It is assumed that the molecular construction of polarizing substances is the cause of this change of plane of vibration, as different substances cause different kinds of polarization. Quartz, cinnabar, or saccharine solution have the effect of rotating the plane of polarization of the light passing through them. This rotary polarization also occurs when the light is passed through a magnetic field. Reflection from metal surfaces produces what is known as circular or elliptic polarization, the vibrations being in closed curves rather than straight lines. If polarized light be subjected to a second transmission or reflection, it is found that in some positions the light will traverse a crystal or reflect from a surface easily, in other positions partially, and in other positions not at all, being wholly extinguished. Some substances, as tourmaline and Iceland spar, are double-refracting, and may be arranged to polarize one ray of light and extinguish another ray. (See REFRACTION.)

The polariscope is designed to exhibit the polarization of light, and for examining substances, as saccharine solutions. These usually have polarizing prisms of Iceland spar, mounted in a tube on a stand; one prism serves to polarize the light, and the other to analyze it. The simplest form is the tourmaline-tongs, consisting of two transparent plates of tourmaline, cut parallel to the axis, and set in a cork mounting in a wire frame shaped like a spring-tongs. Solutions of sugar cause rotary polarization, some rotating the plane to the right, when it is dextro-rotary, and some to the left, when it is levo-rotary. These qualities are of value in making quantitative estimates of the sugar in solution, as of some fruit sugar, to determine its value, and the principle of the polariscope is therefore used in the saccharimeter. The polariscope is also of utility in the examination of crystals and many organic substances, and in discovering strained conditions in glass plates, &c.

Electric polarization is of two kinds. The first is common to every magnetic field, which has two poles—a south pole, where the lines of force enter, and a north pole, where they have their exit. The cause of this is not definitely known. Ampere has suggested that it is the result of closed electric circuits in the ultimate particles of matter, while Hughes refers to it as a property inherent in all matter. This condition is most commonly named polarity, the word polarization being preferred in electricity for the second kind, which refers to certain molecular conditions. Dielectric polarization signifies a molecular strain undergone by a substance subjected to the action of two adjacent charges

of positive and negative electricity. *Electrolytic polarization* is a condition produced when a film of gas, as hydrogen, is deposited upon a plate in a voltaic cell, or upon an electrode, thus decreasing the current.

Polk, LEONIDAS, prelate and soldier, was born at Raleigh, N. C., 1806; graduated at West Point in 1827. Taking holy orders in 1831, he became, ten years later, bishop of Louisiana. On the breaking out of the Civil War, in 1861, he abandoned the pastoral staff for the sword, by becoming a major-general in the Confederate army. In Sept. of same year he took Columbus, Ohio; commanded a division at the battle of Shiloh, 1862; held a lieutenant-general's command at that of Stone river, 1863, and commanded a corps at Chickamauga in Sept. following. In Dec. he succeeded Gen. J. E. Johnston in command of the department of Alabama, Mississippi, and East Louisiana. His command was afterward joined to that of Gen. Johnston. Killed in action at Pine Mountain, Georgia, June 14, 1864.

Polk, in Florida, a S. central co.; area, 2,060 sq. m.; bounded E. by Kissimmee river and Lake, and contains several lakes. *Surface*, generally level, with many rolling wooded ridges; *soil*, moderately fertile. *Products*, Rice, cotton, sweet potatoes, corn, fruits, &c. *Cap.* Bartow. *Pop.* (1897) 11,600.

Polk, in Nebraska, a S.E. central co.; area, 439 sq. m.; bounded N.W. by the Platte river and drained by the Blue river. *Surface*, nearly level; timber scarce; *soil*, fertile. *Products*, Wheat, corn, oats, and hay; live stock. *Cap.* Osceola. *Pop.* (1890) 10,817.

Polka-dot, n. One of a series of spots, uniform in size and equidistant, on a textile fabric, or a piece of such fabric.

Polo, n. [E. Ind.] A game resembling "hockey," or "shinny," but played on horseback, consisting in knocking a light, wooden ball, with a mallet, from goal to goal, the goals being about 8 yards wide and 250 yards apart, at opposite sides of a level field. In the U. S., the horses used are ponies, and there are four players on a side. By the rules of the New York Club, the ponies must not be more than 14 hands high, and the mallets must be 4 ft. 4 in. in length. The game is an old one in the East, and may be the same as the "tennis" in the *Arabian Nights*. It was introduced into Europe by Anglo-Indian soldiers about 1865, and into the U. S. by James Gordon Bennett in 1876.

Roller-polo, or *Rink-polo*, is a game played on roller-skates, with a rubber-ball and with wire cages for goals.

Polo, in Missouri, a post-village of Caldwell co., 15 m. S. of Hamilton. *Pop.* (1897) 510.

Polyclin'ic, n. [Gr. polis, city, and klinikos, of a bed, attending the sick.] A general city hospital; a dispensary.

Polycrates (Grecian Hist.), known as the "tyrant" of Samos. He ruled jointly with his two brothers. Pantagnotas he put to death, and Syloson he banished, and then made himself despot. He made successful war into Asia. His fleet was perhaps the most powerful of all Greece. He had such continued good fortune that Amasis, King of Egypt, advised him to propitiate the gods by parting with something which he valued. Accordingly Polycrates threw a beautiful emerald ring into the sea, but after a few days a fish was given to him, and in its stomach he found the ring. Amasis refused further alliance with him, believing him to be doomed. A little later, Orates, a Persian satrap of Sardis, enticed P. to visit him, had him seized and crucified, B. C. 522. He was a patron of literature and the fine arts, and the poet Anacreon was his friend.

Polym'eter, n. An instrument for measuring any angle, as a triangular or semicircular graduated frame, bearing a pointer, and sometimes a plumb-bob. The name is also given to a form of hair-hygrometer, provided with scales.

Pom'eroy, MARCUS MILLS, was born at Elmira, New York, Dec. 25, 1833; a journalist of some notoriety during the Civil War and the decade immediately following; popularly known by the sobriquet of "Brick Pomeroy." He published several books, principally on economic subjects, among others: *Gold Dust* (1872), *Brick Dust* (1872), and *Perpetual Money* (1878). Died May 30, 1896.

Pomeroy, in Iowa, a post-town of Calhoun co., 26 m. W. of Fort Dodge. *Pop.* (1895) 753.

Pomeroy, in Washington, a post-town, cap. of Garfield co., 55 m. from Walla Walla. *Pop.* (1897) 850.

Pomo'na, in California, a city of Los Angeles co., 33 m. E. of Los Angeles. Center of trade for an agricultural and fruit-growing district. *Pop.* (1897) 4,250.

Pomona, in Kansas, a post-village of Franklin co., 12 m. W. of Ottawa. *Pop.* (1895) 561.

Pompano, n. (Ichth.) One of several excellent food-fishes of the U. S. They belong to the family *Carangidae*, and are related to the crevallis on one side and to the bluefish on the other. They are of small size, and somewhat perch-like form, and are esteemed among the most delicate of American table-fishes. The best known is that of Florida, the Gulf Coast, and West Indies (*Trachynotus carolinus*), which is about 18 inches long, uniformly bluish above and golden or silvery on the sides. Two or three other species of this genus are also eaten. Another fish (*Gerres olisthostoma*), greenish-silvery in color, of the West Indies and northward to the west coast of Southern Florida, is called Irish pompano. (A common name on this coast for the wedge-shaped mollusks of the genus *Donax* is "pompano-shells," because the pompanos feed upon them). In California *pompano*, or *pompino*, is the name of a stromateid fish (*Stromateus simillimus*), one of the harvest-fishes, which is also highly esteemed by epicures. It is numerous in summer, and is about 1 foot long.

Pon'ca City, in *Oklahoma*, a village of Kay co. Its post-office is New PONCA.

Ponchiel'li, AMILCARE, opera composer, was born in Cremona, Italy, Aug. 31, 1834; studied at the Conservatory of Milan (1843-54). His first opera, *I Promessi Sposi*, was produced in 1856; his latest, *Marion Delorme*, in 1885; composed many other operas, besides a cantata performed at the reception of the remains of Donizetti and Simone Mayr, at Bergamo, in 1875; was esteemed next in rank to Verdi, among Italian composers of this century. Died Jan. 16, 1886.

Pond'creek, in *Oklahoma*, a post-village, cap. of Grant co. Pop. (1897) 1,000.

Pon'doland, a district of Cape Colony, Africa, 65 miles long by 30 wide. It is the most easterly coast region of Cape Colony, and bounded on the north by Natal. Its native inhabitants are the Ama-Pondo, a branch of the Kaffir family. In 1884 a portion of the country was annexed to Cape Colony, and in 1887 another portion. The remainder, known as East Pondoland (with a population of 200,000), was annexed in 1894. On the St. John's river, by which the country is chiefly watered, the British maintain a military post, and there resides a commissioner appointed by the Cape.

Poole, WILLIAM FREDERICK, librarian, was born Dec. 24, 1821, at Salem, Mass.; educated at Yale, and in his junior year published the first edition of his *Index to Periodical Literature*, which has been kept up ever since. He was chosen assistant librarian of the Boston Athenaeum (1851); chief librarian (1856); librarian of the Cincinnati Public Library (1869-74); of the Chicago Public Library (1874-87), and of the Newberry Library of Chicago from 1887 until his death, March 4, 1894.

Poore, BENJAMIN PERLEY, journalist and author, was born in Newburyport, Mass., Nov. 2, 1820; prominent as an editor, correspondent, annalist, and collector of historical data for his State and for the U. S. government. He became editor of the *Congressional Directory* in 1867; compiled, for the government, *Catalogue of Government Publications of the United States, 1774-1881*. Died May 30, 1887.

Pope, JOHN, U. S. A., was born in Louisville, Ky., March 16, 1822; graduated at West Point (1842); was in active service in Florida, Mexico, and the Western Territories; attained the rank of captain in 1856. In 1861 was made brigadier-general of volunteers; served throughout the war; afterward commanded several departments successively until 1886, when he resigned, having been promoted to the rank of major-general U. S. A. in 1882. Died Sept. 23, 1892.

Popocatepetl. A quiescent volcano of Mexico, on the confines of the States of Mexico and Puebla, and 43 miles S. E. of Mexico City. Although its Aztec name signifies "smoking mountain," and it still smokes occasionally, there is no certain record of an eruption within historical times. Its height is about 17,800 feet, or 380 feet less than Orizaba, the highest peak in Mexico. It is covered with snow from about 14,800 feet upward; below this is a broad zone of pine and oak forest. While the ascent is difficult, it has been often scaled. It has two principal craters, the upper and more recent one being nearly 1,000 feet deep and 5,165 feet in diameter. In this are large deposits of sulphur, which are regularly mined, and it is proposed to construct a railway, operated by stationary engines and cables, from the base to these mines. Such a railway would carry passengers, and facilities for the enjoyment of tourists at the summit would be provided.

Pop'ocrat, *n.* [From *Populist* and *Democrat*.] A slang term invented by the so-called "sound money" adherents in the Presidential campaign of 1896 to designate members of the allied forces of the Populists and "free-silver" Democrats.

Port Cos'ta, in *California*, a post-town of Contra Costa co. Pop. (1897) 725.

Port Discovery, in *Washington*, a post-borough of Jefferson co. Pop. (1897) 1,120.

Port Eliz'abeth, an important commercial seaport on the western shore of Algoa Bay, at the S. E. of Cape Colony, South Africa; it stands on a promontory overlooking the Indian Ocean, and has railway connection with Kimberley, 350 m. to the N., with Grahamstown, 85 m. to the N. E., and with Bathurst, the principal seaport of the colony. The imports of the eastern part of Cape Colony, and of the Orange River Free State, enter through this port; and its exports are valuable, consisting mainly of wool, ostrich feathers, Angora goats' hair, and diamonds.

Port Ew'en, in *New York*, a post-village of Ulster co. Pop. (1897) 1,235.

Port Perry, in *Pennsylvania*, a post-village of Allegheny co. Pop. (1897) 1,200.

Port Roy'al, in *South Carolina*, a post-town of Beaufort co., 4 m. S. of Beaufort, on Port Royal Island; has a fine harbor, and commerce in cotton, manganese ore, fertilizers, lumber, flour, and corn. Pop. (1897) 650.

Port Wash'ington, in *Wisconsin*, a city, cap. of Ozaukee co., on Lake Michigan, 26 m. N. of Milwaukee; has a large tannery, chair and wooden-ware factories, foundries, and breweries. Pop. (1895) 2,661.

Por'ta, GIACOMO DELLA, an Italian sculptor and architect, was born at Milan, 1525; constructed at Rome the gateway of St. John Lateran, and the College della Sapienza, and was employed in the completion of the basilica and dome of St. Peter's. Died about 1600.

Porta, GIANBATTISTA DELLA, an Italian scientist, was born at Naples, 1543; did much to advance the progress of natural philosophy, and invented the camera obscura. He founded the Academy *Secretorum Naturæ* at Naples, and was a member of the Academy *dei Lincei* at Rome. His principal work is *Magia Naturalis* (1569). Died 1615.

Port'age, in *Pennsylvania*, a post-village of Cambria co. Pop. (1897) 600.

Portage Creek, in *Pennsylvania*, a post-village of McKean co. Pop. (1897) 770.

Portelec'tric Sys'tem. (*Engin.*) A proposed system of transportation for mails and small packages, devised by J. T. Williams. A double-pointed cylindrical car 12 feet long, and 10 inches in diameter, is mounted within the rails of a track that surrounds it. A series of magnetizable advancing spiral cords are placed in the line, and the car is utilized to switch the current temporarily into each coil, so that it carries the magnetism ahead to draw itself forward. The mechanism is theoretically correct, and would transport such a car at a rate of probably 100 to 150 miles an hour, but owing to the cost it has never come into operation. It was calculated that a line between New York and Boston would involve an outlay of \$5,000,000 to \$7,000,000, though the cost of power, when the plant was installed, would be but 75 cents a trip.

Port'er, DAVIN DIXON, U. S. N., son of Commodore David Porter (1780-1843), was born in Chester, Pa., June 8, 1813; entered the U. S. Navy in 1829; in 1861 commanded the steam-frigate *Powhatan*; afterward commanded the mortar flotilla; joined Farragut (1862), and bombarded the New Orleans forts; in Sept., 1862, was given command of the Mississippi squadron, and did brilliant work at the fall of Vicksburg, for which he was promoted to the rank of rear-admiral. In 1864, in command of the North Atlantic Squadron, he bombarded Fort Fisher, and aided the land forces in capturing that stronghold. He was made vice-admiral in 1866, and appointed superintendent of the Naval Academy at Annapolis; in 1870 succeeded Farragut as admiral of the navy. He wrote several books, among them, *History of the Navy in the War of the Rebellion* (1887). Died Feb. 13, 1891.

Port'er, FITZ-JOHN, U. S. A., was born in Portsmouth, N. H., June 13, 1822; graduated at West Point (1845), and served throughout the Mexican War. In 1861 became colonel of a regiment of volunteers, and a few days later was made brigadier-general; took part in the peninsula campaign; in 1862 was major-general of volunteers, and attached to Gen. Pope's command in Virginia; was cashiered in 1863, on the charge of having disobeyed orders at the second battle of Bull Run. His frequent appeals for redress during many years resulted in a partial remission of the sentence; and in 1886 he was fully restored, and placed on the retired list of the army. From 1884 to 1888 he served as police commissioner in New York city. Died May 21, 1901.

Port'er, HORACE, soldier and diplomat, was born in Huntingdon, Pa., April 15, 1837; graduated at West Point (1860); served throughout the Civil War, gaining the brevet of brigadier-general in 1865; was assistant secretary of war while Gen. Grant was at the head of that department, and in Grant's first administration was his private secretary. He resigned from the army, and devoted his time to developing the West Shore Railroad, of which he became president. In 1897 he was appointed minister to France.

Port'er, NOAH, psychologist and lexicographer, was born at Farmington, Conn., 1811; became (1846) professor of Moral Philosophy and Metaphysics in Yale. He was editor-in-chief of the editions of Webster's *Unabridged Dictionary*, published in 1864 and 1880, and of the *International Dictionary* (1890). His work, *The Human Intellect, with an Introduction upon Psychology and the Soul*, reached a second edition in 1859, the year following its publication. Died 1892.

Port'er's Mills, in *Wisconsin*, a post-village of Eau Claire co. Pop. (1897) 1,320.

Port'ersville, in *California*, a post-town of Tulare co., 30 m. S. E. of Visalia. Pop. (1897) 750.

Port'ia, in *Arkansas*, a post-town of Lawrence co. Pop. (1897) 625.

Portiere (*por-tiär'*), *n.* A curtain in a doorway, either for use or for ornament.

Port'land, in *North Dakota*, a city of Traill co., 60 m. N. by W. of Fargo. Pop. (1897) 550.

Portland, in *Pennsylvania*, a post-borough of Northampton co., on Delaware river, 5 m. S. of the Water Gap; has slate works, lime kilns, &c.; shipping point for the product of the great Bangor slate quarries. Pop. (1897) 750.

Portland Univer'sity. A Methodist Episcopal co-educational institution, located at Portland, Oregon. It was founded in 1890, and in 1896 had 26 instructors and 339 students, with a library of 2,500 volumes.

Posi'tion-finder, *n.* See RANGE-FINDER.

Pos'tal Card. A card issued by a government, duly stamped on the address side, the other blank, and of convenient size for brief correspondence. In the U. S. the cost is one cent, or with a return-card attached two cents. The international card is sold at two cents, as is also a double card, the second one being intended for the reply.

Pos'tal Ser'vice. An historical account of the growth of postal systems will be found under Post-office, in SECTION I. Since 1826 the U. S. Post-office has been under the direction of a cabinet officer, the postmaster-general. There are 4 assistant postmasters-general, also appointed by the President, of whom the first is a general executive officer, the second has charge of the dead-letter office, the third the issue of stamps, classification of mail-matter, and bookkeeping, and the fourth of the inspection service, supervision of postmasters' bonds, and appointment of fourth-class postmasters. There are also a chief clerk and assistant, an inspector, and 4 superintendents in charge of subordinate branches of the service.

TRANSPORTATION.—The transportation of mails is performed by the railroads as far as practical, and by "star-route" service at places not reached by rail. The star routes derive their name from being marked with a star on the books of the department. The ocean steamers carry the foreign mails, and the transportation from stations and steamboat landings to post-offices is performed by messenger. The price paid the railways is prescribed by law, and includes delivery to post-offices within a fourth of a mile of stations. The railway mail service has been vastly improved within recent years by increasing the number of mail-cars, which are equipped for the distribution *en route* of all mail matter to the best advantage. These cars are fitted up with pouches for all through points, and also for local points along the line on which they run, and a mail agent and the necessary clerks are provided so that letters can be sorted promptly from station to station, as received.

Fig. 3035.—FLEMING MAIL CATCHER AND DELIVERER.

By this means small post-offices are served as promptly as large ones, as the mail collected for them is not carried on to the next distributing post-office, but made up and dropped off from every train having a mail-car that comes through. If the train does not stop, the letter mail-bag is swung off or on by a mail-catcher. (Fig. 3035.) This facilitates the transportation of mails between near-by small post-offices, the letters being thus carried direct, whereas, before the establishment of mail-cars, the letters went first to the nearest large town, where they were re-sorted, and returned in the next pouch made up for the office from which they came. This service has proved so satisfactory that it has been extended to a number of street railways in the U. S. within a few years. In 1895 this street-railway service covered 573 miles, and included 82 street-railway routes, carrying daily 1,850 pouches of mail matter. The cars are fitted up as travelling post-offices, and are built to suit the lines on which they run, for cable, trolley, or other system. The Third Avenue railroad post-office in New York city is the most important of this service. On this route cars are run from the general post-office every half hour, and exchange mails with all the branch offices as far north as 157th Street, keeping employed a force of 25 postal clerks. The service is so prompt that a letter mailed at the general post-office in time to catch an up-town mail-car may be received by a resident on 60th Street, distant 4 miles, in an hour and a quarter.

Fig. 3036.—LETTER CANCELLING MACHINE.
c, cancelling wheel; b, travelling belt.

The service of the Brooklyn street railway post-office is hourly, over 4 radiating lines. Compartment cars are used, only about one-third of the space in which is reserved for the mail service. On the New York lines the mail-cars do not carry any passengers, being devoted wholly to the postal service.

BRANCH POST-OFFICES.—In each of the large cities of the U. S. branch post-offices are maintained at convenient locations, under the charge of the local postmaster, who installs a superintendent, and is responsible for the business done there, the same as in the central post-office of which he has personal charge. All the railway and steamboat mail lines centering at a large city are required to make up the mail in pouches for each of the sub post-offices, so that there is no delay by transfer through the general office. Each man in charge of a railway mail route is supplied with information as to the territory covered by each branch post-office in the cities on his line, and must forward all mail bearing

a street address to the district in which it belongs. In New York city there are 24 such branch post-offices, some of which handle an enormous amount of mail-matter. Station D, for instance, reports more business annually than all the offices in St. Louis. Branch post-offices are universally equipped for money order and registry business, and are usually open for a few hours on Sunday.

OCEAN POST-OFFICES.—Regular post-offices are maintained on ocean steamers, usually under the joint control of two officials from the postal service of the countries at the termini of the route. They sort the entire mail received on starting, up to the very last letter handed in by the pilot boat, and make up the mail matter in pouches for shipment to principal points. The Transatlantic steamers, for instance, going east will make up mail-pouches for England, Germany, France, Asiatic routes, &c., while a west-bound steamer for New York will bear pouches made up en route for Boston, Chicago, Washington, &c. These mail-pouches are taken by the quarantine boat, and landed in New York often two hours before the steamship reaches her dock, and they are taken direct to the branch post-offices and the railway stations rather than to the New York general post-office, thus often saving 24 hours by catching a fast express for some distant point.

PNEUMATIC DISPATCH SYSTEM.—The dispatching of mail matter by blowing it through pneumatic tubes has been accomplished with success in several cities. The pneumatic transit plant connected with the Philadelphia post-office is in many respects the most complete plant of the sort in the world. It was constructed in 1892, and has been in use since Feb. 17, 1893. It connects the main post-office, at Ninth and Chestnut

mechanism for receiving and changing the carriers will be understood by reference to the accompanying drawing. Mail matter is transported several hundred times daily between the two stations without any hitches or delays; 150 to 200 letters may be enclosed in a single carrier. The saving of time in delivery is everything that could be expected. A similar pneumatic dispatch system has been proposed to connect the New York and Brooklyn post-offices. The London post-office has used a pneumatic dispatch system for more than 40 years, in connection with its telegraph department, and it has been extended, in radiating lines, until the system includes between 40 and 50 miles of tubes. These tubes are of lead, $2\frac{1}{4}$ inches internal diameter, and consequently the carriers are too small for ordinary letters, being but $1\frac{1}{4} \times 4\frac{3}{4}$ inches inside. They are designed to carry about a dozen telegraphic dispatches each. The tubes of this system are worked like a line of railway, on the block-signalling plan, so that carriers may not come in conflict. The leaden tubes are made in lengths of 29 feet, and laid inside of cast-iron pipe for extra security. The pressure maintained in the tubes is about 10 pounds for compression and 7 pounds vacuum, and the resultant speed of the carriers is a little more than a mile in 2 minutes. In 1872 a line of D-shaped tubes was laid from the London general post-office to Euston Station, for carrying bulky mail matter. This tube is 4 feet in diameter, and the carriers are little wheeled cars, driven by air pressure a distance of 14,214 feet. A carrier loaded with 10 tons of mail matter can be sent through the line in 12 minutes. (See PNEUMATIC DISPATCH, in SECTION I.)

In cities and large towns the mail is largely gathered

Fig. 3037.—PNEUMATIC POSTAL APPARATUS
At Philadelphia Bourse Sub-Station.

The carrier arrives through the main tube, *M*, entering the receiver, *R*, which is tilted at the trunnions, *TR*, allowing the carrier to fall out to the position *C*. The cylinder, *O*, operates the receiver, and the transmitter, *T*, is a straightway cock leading the compressed air to the return line.

Streets, with the sub-station on Chestnut Street, between Third and Fourth Streets, the distance being 2,928 feet. The diameter of the tubes is $6\frac{1}{8}$ inches, being very much larger than that of any similar plant in America. The line is double, providing for transmission in both directions without interference. The pipes are made of common cast-iron, specially bored to insure interior smoothness. The joints are accurately turned in the lathe, and calked with oakum and lead, like ordinary water-pipes. The curves are made of brass, the radius being not less than 6 feet. The line is sunk from 4 to 13 feet below the surface, according to obstructions encountered. An air-compressor in the main post-office is used to drive the carriers, a pressure of 4 to 7 pounds being maintained in the tubes. A single compressor serves to maintain the pressure in both the sending and returning tubes, a switch-mechanism being provided at the sub-station to deliver the carriers to a receiver, while the air passes through a branch to the return line. The same air is switched in again at the starting point, provision being made for a slight increase to offset the leakage. The carriers are steel cylinders, weighing $9\frac{1}{2}$ pounds, and being 18 inches long, by $5\frac{1}{4}$ inches diameter. They are provided with ring-packing at each end, of a diameter very slightly less than that of the tubes. When the rings wear down $\frac{3}{32}$ of an inch they have to be renewed. The carriers have buffers at the front end, and the doors are so locked that it is impossible for them to open during transit. The trip of a little more than half a mile between stations is accomplished in 55 to 60 seconds, and carriers may be despatched every 10 seconds, or even less, a time-lock being provided to prevent their following each other too closely. The

from boxes located at convenient points. Smaller boxes are often placed in dwellings for the reception of mail.

MAIL-BOXES.—The preferred form of mail-box for use on street doors is made with an open side, which is brought close against the door-jamb when the door is closed, and swings open with the door when it is opened, so that the box is always closed to those who have not entrance to the house, and the trouble of maintaining a lock for the box is avoided. The U. S. mail street letter-boxes introduced within recent years have an aperture on the broad side to permit the insertion of quite large mail matter by means of a lid of L section that provides a large opening for the letter or package, and at the same time closes the passage to the box further in, so that it is impossible to extract any of the contents by means of the large opening.

MAIL-CATCHER, &c.—Minor post-offices on railway lines in the United States often receive the mail from express trains which do not stop by means of the mail-catcher, which is a device having a movable arm, set upon a post so that the arm may catch the loop of a mail-bag projected from the side door of a mail-car. Many large buildings in cities are provided with a chute, running from the top story to a large mail-box on the ground floor. At each story are slits for the insertion of mail matter.

LETTER-CANCELLING MACHINES.—Most of the post-offices of the world make use of hand-stamps for cancelling the stamps and dating the letters that pass through them. The hand-stamp, when used by a skilful operator, can be made to cancel 3,000 letters in an hour, but this is too slow for the larger offices in cities, and what is known as the Boston machine is

used in that city, New York, and elsewhere. The illustration (Fig. 3036) will explain its operation. The letter is placed in the machine with the stamp downward, and is carried along by an endless belt (*b*), on which it rests, and is run between the cancelling-wheel (*c*) and the frame. After passing this it drops into a box, where it is held by a spring-follower. Other machines that have been more or less used are known as the Hey & Dolphin and Barry machines. For regular-sized mail, such as circulars, the Barry machine is superior, and will cancel 25,000 or more in an hour, if they can be supplied at that rate.

FREE AND SPECIAL DELIVERY.—The free delivery of mail was begun in the United States in 1863, but was confined to the larger cities at first, though now generally in operation in all towns of 10,000 or more population. The delivery is not, strictly speaking, free, but is so called because the bulk of matter is carried without extra charge, though in the case of drop letters there is an added charge of one cent. The special delivery of mail matter, for an extra fee of ten cents (paid by a special stamp), was authorized by Congress in 1885. The government pays the messengers 8 cents, and the remainder is profit. Great Britain has a similar service, styled an express delivery.

MONEY ORDERS AND REGISTRY.—The money-order system used in the U. S. post-office went into effect in 1864, being copied from the English system, which was begun in 1838. Only about one-fourth of the post-offices are money-order offices, and the postmasters of these issue orders on printed forms to other postmasters for sums under \$100. The orders are made in duplicate, one being given to the purchaser and the other sent direct to the postmaster to whom addressed, as a safeguard. The fee is 3 cents for \$2.50 or less, 5 cents for \$5, 8 cents for \$10, and so on up to 30 cents for \$75 to \$100. International orders, at a somewhat higher rate, are exchanged with foreign countries. The postal note system, payable to bearer, was authorized in 1883, but being regarded with little favor, was discontinued in 1894. The registering of letters and valuable packages as an additional safeguard was begun in the U. S. in 1855. For a fee of 8 cents the post-office undertakes to secure a receipt from every person handling the letter or package, so that in case of loss some one may be held responsible.

DEAD-LETTER OFFICE.—The U. S. mail service is remarkable for its accuracy, incorrectly and illegibly addressed letters being cared for with great skill. The dead-letter office department has the care of returning letters which fail of reaching their destination. All matter of any apparent value is returned, if the sender's address appears. If the sender's address is placed outside the envelope, the postmaster returns it direct, after advertising. About 5 per cent. of the dead-letter mail contains money or negotiable paper, the total value of which is from a million to a million and a half yearly. Almost all of it is restored to the senders. Nearly 400,000,000 pieces of mail matter are received annually at the dead-letter office, but only about 8 per cent. of them contain addresses which permit of the return to sender.

SAVINGS BANKS AND TELEGRAPHS.—The British post-office maintains both postal savings banks and a telegraph service. The former was established in 1861, and $2\frac{1}{2}$ per cent. interest is paid, deposits being limited to not less than one shilling, not over £30 in one year, or £150 in all. Nearly 11,000 post-offices now conduct a savings bank business, and hold deposits of about £80,000,000. France adopted the postal savings banks in 1881, and their adoption has been agitated in the United States, but never accepted. The entire telegraph service of Great Britain and Ireland is under the control of the post-office, and the system has cheapened and the service improved under government control.

POSTAL UNION. The international postal union, which went into effect July 1, 1875, is now extended to embrace all the civilized countries of the world. The rate charged by the union is 5 cents per ounce and 2 cents for postal cards, the charge for printed matter and merchandise being 1 cent for each 2 ounces. In 1908 the letter rate to Great Britain and Ireland was reduced to 2 cents an ounce, and the same was adopted on Jan. 1, 1909, for Germany, in the case of letters sent by German steamships. Rural free delivery was adopted in the United States in 1894, and began operations in 1897 with 44 stations. By 1902 these had increased to 8,466, at an annual cost of \$3,993,740. Since that date this system has become very widely extended and has proved a very popular and useful innovation. In 1908 there were 61,158 post-offices in the United States, 13,173,340,329 pieces of postal matter passing through these offices. 30,000,000,000 letters were estimated for all the world. Postal package delivery, which exists in most foreign nations, has never been adopted in the United States.

Pota'to, n. Next to the cereals, the Irish potato (*Solanum tuberosum*) is the most important field crop, and is universally cultivated in the temperate zones. It is supposed to have originated in the mountainous regions of South America, whence it was introduced into Spain. From the 16th to the beginning of the 18th century, it was spread through Europe more as a curiosity than as a valuable food plant. One writer speaks of it as scarcely as good as the radish, while others give recipes for cooking it with sack and sugar, marrow and spices; but these were probably intended for the sweet potato, with which the Irish potato was often confounded by the old herbalists. In 1663, the Royal Society of England advanced the idea that when the grain crop failed potatoes might be useful in saving the poorer people from famine, and that they would be

a good food for stock. The Irish were the first to cultivate the potato to any extent, and from Ireland its culture spread to England, where it became a staple field crop before the middle of the 18th century, at least 50 years earlier than it was generally grown on the continent. From that time until the present the area of its cultivation has increased, spreading from subtropical to arctic regions, and becoming so important that the failure of a potato crop has caused famines in Ireland and other countries. The failure of the potato crop in Ireland in 1846 and 1847, on account of the "potato disease," was due to long and exclusive cultivation of potatoes in the same fields, exhausting the resources of the soil and multiplying the fungoid diseases of the plant. But even under the modern system of rotation of crops there are several fungi which attack the potato. The potato disease is the result of a fungus (*Phytophthora infestans*) which first appears in the form of a delicate white network, accompanied by dark blotches on the leaves of the plant. In moist, calm weather it develops rapidly, spreading to the stems and the tubers, blighting the plant as it goes, and giving out an odor of decay. The germs are light and spread in the air from one potato field to another, until the disease is epidemic. In the tubers it not only produces a "black rot," but matures the spores, which live through the winter and reproduce the fungus in the following year. For a long time no remedy was known for this disease, and it was only combatted by cutting off the diseased tops before the infection spread, burning all parts of the plant which had been affected, and taking care to have the plants as hardy and well able to resist it as possible. For several years, however, the fungologists of the U. S. Agricultural Experimental Stations have been making a careful study of the life history and habits of this and other injurious fungi, and experimenting with preventives. They have found certain solutions of copper sulphate and other chemicals, used as a spray, to be useful remedies, and the results of their experiments, together with formulas for the mixtures which they recommend, have been issued in the form of bulletins which are sent out on application to the Agricultural Department. Other diseases which affect the potato crop (and which have received similar government attention) are *Dry Rot*, *Wet Rot*, *Curly Scab*, and a blight caused by a fungus called *Peziza postuma*. The most dreaded insect enemy of the potato is the Colorado beetle (*Doryphora decemlineata*), which at one time destroyed whole crops in the Western and Middle sections of the U. S. It was first discovered near the Upper Missouri in 1824, and worked its way eastward, reaching the Atlantic coast about fifty years later, but never becoming established in Great Britain, Ireland, or on the continent. It is now successfully destroyed by the use of "Paris Green," either as a powder or a spray upon the plants, and other insect pests are combatted by the same means. The potato is not only valuable as a food for men and animals, but large quantities of starch are made from it, and the starch may be converted into dextrine or into sugar. In the north of Europe and in Ireland liquor is distilled from potatoes. Humboldt made the statement that an area which would produce 30 pounds of wheat would produce 1,000 pounds of potatoes; they are not so good a food as wheat, however, and it has been estimated that 107 pounds of wheat are equal in real nutrition to 613 pounds of potatoes. In the United States the potato is widely grown, chiefly in the Northern States, and is much used as a food product. In 1907 the yield was 207,942,000 bushels, valued at \$183,880,000; yet the potato crop is not as important to the U. S. as it is to Europe, where it aggregates more than the entire wheat crop of the world. From 1881 to 1890 the crop in Germany alone averaged 891,732,040 bushels, or more than five times as much as the average of the U. S. during the same years; in France, it was 396,746,138 bushels; in Austria, 306,984,697 bushels; in Russia, 300,315,070 bushels; and in the United Kingdom, 228,093,397 bushels, against an average of 169,809,053 bushels in the U. S.

Potchefstroom. A province and town in the Transvaal. The province is the most thickly settled one in the republic, a fertile tract, 3,500 to 5,000 feet high, abundantly watered by the Mooi, Schoen, and other streams flowing to the Vaal, and well suited for tillage and pasturage. Its capital, of like name (derived from elements in the names of Potgieter, Schierf, and Stockenstrom, three popular Boer leaders during the early migrations), is the most settled and one of the largest towns in the Transvaal. It is 150 m. S.W. of Pretoria, with a population of about 2,000.

Potter, ALONZO, clergyman, was born in Dutchess co., N. Y., July 6, 1800; graduated at Union College (1818); studied theology; at the age of 21 became professor of Mathematics and Philosophy in Union College; in 1824 was ordained a priest of the Protestant Episcopal Church; in 1832 was again called to a professorship at Union College, that of Moral Philosophy; in 1838 was elected vice-president of the college, where he remained practically the head of the college until he was elected bishop of Pennsylvania (1845), in which office he displayed the same executive ability and faculty for organizing that had marked his college management. Died July 4, 1865.

Potter, ELIPHALET NOTT, clergyman, son of Bishop Alonzo Potter, was born in Schenectady, N. Y., Sept. 20, 1836; graduated at Union College (1861); was ordained in 1862; was rector, first at South Bethlehem, Pa., and then at Troy, N. Y., from 1862 to 1871; from 1866 to 1871 he was also professor of Ethics at Lehigh Univer-

sity. He became president of Union College (1871); of Hobart College (1884), and of the Cosmopolitan University in Sept., 1897.

Potter, HENRY CODMAN, clergyman, son of Bishop Alonzo Potter, was born in Schenectady, N. Y., May 25, 1835; graduated from Union College, and from the Theological Seminary of Alexandria, Va.; his first parish was in Pennsylvania; he then was rector of St. John's Church, Troy, N. Y., and later of Trinity Church, Boston, Mass. In 1868 he became rector of Grace Church, New York city. In 1883 he was consecrated assistant bishop of New York; in 1887, the death of his uncle left him the sole responsibility of the office. Besides many sermons and addresses, Bishop P. has published several volumes: *Sisterhoods and Deaconesses* (1872); *The Gates of the East* (1876); *Waymarks, 1870-1891* (1892), &c.

Potter, HORATIO, clergyman, brother of Alonzo Potter, was born at Beekman, N. Y., Feb. 9, 1802; graduated at Union College (1836); was ordained in 1827, and officiated as rector for a short time in Saco, Me.; became professor of Mathematics in Trinity College; was rector in Albany, N. Y. (1833-54); at the latter date was consecrated bishop of New York; remained in active service until his 81st year, when the appointment of his nephew as associate bishop released him of the heavier responsibilities. Died Jan. 2, 1887.

Potter, in South Dakota, a N. central co.; area, 900 sq. m.; bounded on the W. by the Missouri river. *Surface*, rolling; *soil*, very fertile. *Products*, Corn, wheat, barley, potatoes; stock raising. *Cap.* Gettysburg. *Pop.* (1895) 2,464.

Potter, in Texas, a N.W. co.; area, 900 sq. m.; intersected by the Canadian river. *Cap.* Amarillo. *Pop.* (1890) 849.

Potter Valley, in California, a post-village in Mendocino co.

Potterville, in Michigan, a post-village in Eaton co., 12 m. S.W. of Lansing. *Pop.* (1894) 486.

Pottery Industry. The pottery industry in the United States has largely developed in the value of annual production since 1861, but its advance as to methods, workmanship, and artistic quality dates from the years between the Centennial Exposition of 1876, which gave new ideas to the potters, and the tariff act of 1883, which made the production of a finer class of wares commercially possible. Before 1861, no white ware worth mentioning was produced in the United States, the manufacture being confined to yellow and Rockingham wares, cheap earthenwares, flower-pots, drain-pipes, and stoneware, but after that date the industry began to develop, and in 1880 the output of all manufactures of clay and pottery was three times as great as in 1861, and amounted to about \$8,000,000. Since 1880, in spite of many years of financial depression, the annual production has again been approximately tripled; the gain has not been in the ratio of American to foreign wares in use, for more than half the pottery sold in the United States is still imported, the proportion of foreign goods being only a few per cent. less than it was twenty years ago, although the amount of both American and foreign ware has vastly increased. The United States is very rich in fine pottery clays, but the amount of hand-labor required in the making of pottery is a permanent handicap to competition with other countries, the cost of labor being so much higher in the United States that only a very high tariff can protect it, and every tariff reduction is a serious blow to the industry. In spite of this condition, the American potteries have made such advances that their wares will now bear comparison with those of Europe in quality and design, even the Belleek, or egg-shell china, being successfully manufactured, while the Rookwood Pottery, Cincinnati, produces an artistic faience ware, with underglaze ornamentation, which has gained a name among art potteries all over the world. There are now about 700 manufactories of clay and pottery goods in the United States, the most important being at Trenton, N. J., East Liverpool, O., Wheeling, W. Va., Baltimore, New York, and Boston; and their competition with foreign potteries has in so far succeeded that it has improved the quality of the wares offered in our markets and reduced the price to a noticeable degree.

Poulard, n. [Fr. *poularde*.] A pullet from which the ovaries have been removed to facilitate growth and improve the quality of flesh; a fat pullet. Compare CAPON.

Poundal, n. (*Physics*.) The British unit of force; that force which, acting on a pound mass for one second, produces an acceleration of one foot per second.

Pourtales, LOUIS FRANÇOIS DE, COUNT, naturalist, was born in Neuchâtel, Switzerland, March 4, 1824; came to America with Louis Agassiz, with whom he was associated in the study of natural history. He made a special study of deep-sea zoölogy; served in the U. S. Coast Survey, and wrote important papers on the Gulf Stream and the Caribbean Sea. For a time he was director of the tidal division of the U. S. Geological Survey; succeeded Agassiz as custodian of the Museum of Comparative Zoölogy, Cambridge, Mass. Died July 19, 1880.

Powderly, TERENCE VINCENT, labor-organizer, was born in Carbondale, Pa., Jan. 22, 1849; became widely known in 1874, when he was elected secretary of the Knights of Labor (*q. v.*). In 1877 he was elected mayor of Scranton, and re-elected in 1878; was elected general master workman of the Knights of Labor, at the convention in Chicago in 1879; in 1893 he was succeeded in this office by James R. Sovereign. P. was influential in persuading the Knights of Labor to

abolish oaths and obligations of secrecy. He has contributed many articles to the *North American Review*, *The Arena*, and other magazines, and in 1897 was appointed Commissioner of Immigration by President McKinley.

Pow'elton, in West Virginia, a post-town of Fayette co. *Pop.* (1897) 620.

Poynter, EDWARD JOHN, artist, was born in Paris, March 20, 1836, son of Ambrose Poynter, architect, and grandson of Thomas Banks, R. A., sculptor. He began his serious work as an artist, in Rome (1854), in association with Frederick Leighton, afterward studying in Paris at the École des Beaux-Arts; was director for art and principal of the training-schools at South Kensington (1876-81). His *Diadumene*, exhibited at the Academy (1881), provoked a lively discussion as to the nude in art. In 1896 the death of Sir Frederick Leighton, and soon after of his successor, Sir John Millais, left vacant the presidency of the Academy, and early in October the honor was conferred on Mr. P., who was invested with the chain of office, and knighted at Windsor, Nov. 26, 1896.

Prākrit Lau'guages. Prākrit means common, vulgar, vernacular. In Sanskrit dramatic literature, the use of Sanskrit is confined to male characters of the higher classes, women and inferior male characters being invariably made to speak various local dialects. These dialects are called Prākrits, and may be looked upon as the modern vernaculars of northern India. The oldest existing plays can hardly be placed earlier than the 6th century of our era. The actual use of the Prākrits, as popularly spoken dialects, however, may go back some centuries before that time. These dialects are remotely connected with Sanskrit. Yet the source of the Prākrit languages is not the literary Sanskrit which has been cultivated by the Brahmins as their sacred language, but popular idioms of perhaps equal antiquity, which may be regarded as constituting, together with literary Sanskrit, the Aryan dialects of ancient India. The Prākrits are lineal descendants of these dialects, and developed under the continued influence of the Sanskrit. Many words used in the Prākrits cannot be derived from Sanskrit, or have a meaning different from their meaning in Sanskrit. These are probably derived from such Sanskrit prototypes as belonged to the vocabulary of the common people, and were therefore beyond the remodelling influence of learned authors. The oldest Prākrits are the Pāli (*q. v.*). Others are Bengali; Hindi (of the Upper Provinces), with the closely allied Panjabi and Nejali (the language of the ruling class of Nepal); Sindhi (on the lower Indus); Kashmiri, and Sinhalese, the language of the northern half (perhaps at one time of the whole) of the island of Ceylon. A dialect of the Hindi is Hindustani, which has become a kind of *lingua franca* for the whole of India.

Pratt, CHARLES, merchant and philanthropist, was born in Watertown, Mass., Oct. 2, 1830; founder of the Pratt Institute, of Brooklyn. Died May 4, 1891.

Pratt, ENOCH, philanthropist, was born in North Middleboro, Mass., Sept. 10, 1808. In 1831 he removed to Baltimore; founded the House of Reformation and Instruction for Colored Children, at Cheltenham; and the Maryland School for the Deaf and Dumb, at Frederick. He endowed an academy in his native town (1867); and in January, 1882, announced his most munificent gift to Baltimore—the public library that bears his name, which, in buildings and endowment, amounts to \$1,083,333. Died Sept. 17, 1896, leaving many philanthropic bequests, and \$2,000,000 to the Shepherd Asylum, with the proviso that the name should be changed to the Shepherd and Enoch Pratt Hospital.

Pratt Institute. (*Educ.*) An educational institution in Brooklyn, N. Y., founded in 1887 and endowed by Charles Pratt (1830-91), and administered by his sons, who constitute a board of trustees. The Institute combines academic, business, and manual training. Included in the industrial training are carpentry, blacksmithing, housekeeping, cooking, and training for skilled trades of all kinds. In its high-school department the work is educational, pure and simple. Its normal department is occupied with the preparation of teachers. Each of these and the other various departments is administered by a director. Besides its educational purposes, the Institute is designed to exert a pronounced influence on the community for industry, thrift, self-culture, and good citizenship, illustrated in free lecture courses on social science, and on art, in a savings bank, a free library, with a circulating department of 45,000 volumes, large reading and reference rooms, with branches, museums, art and industrial collections. There are classes for morning, afternoon, and evening. The average number of students is 4,000. There are 115 teachers connected with the Institute. The endowment received from Mr. Pratt was \$2,500,000.

Pratt, in Kansas, a S. co.; area, 720 sq. m.; drained by the Ninnescah river. *Surface*, nearly level prairie; scarcely any timber. *Products*, Corn, wheat, oats, broom corn, sorghum, castor bean; stock raising. *Cap.* Pratt. *Pop.* (1895) 6,583.

—A post-village, cap. of above co., 6 m. S. of Inka. *Pop.* (1895) 1,330.

Pratt, in South Dakota, a S. co.; area, 1,220 sq. m.; intersected by White river and drained by the South Fork of White river and several tributaries of the Bad river. Unorganized.

Pratt City, in Alabama, a post-town of Jefferson co., 8 m. N.W. of Birmingham; is in an iron and coal mining region. *Pop.* (1897) 2,120.

Praxinoscope, *n.* [Gr. *praxis* and *skopeō*.] An optical instrument so constructed that a series of figures on the inside of a rotating box are reflected from mirrors in such a manner as to give the appearance of a person or animal in motion.

Preble (*prēb'l*), EDWARD, U. S. N., was born in Maine in 1761; was sent in command of the naval expedition against Tripoli (1803), and received a gold medal from Congress in recognition of his valuable services. Died in 1807.

Preble, GEORGE H., U. S. N., was born in Maine in 1816, nephew of Edward Preble; he served with distinction during the Civil War, reaching the rank of commodore. Among his published works is *The History of the Flag*. Died in 1885.

Predestinate, *a.* (*Logic*.) Denoting a proposition that begins with a verbal or other sign or designation of quantity; opposed to *preindesignate*; *e. g.*, "some men are foolish" is *predestinate*; "men are foolish" is *preindesignate*.

Preresolve, *v. a.* and *v. n.* To resolve beforehand.

Prerogative, *n.* [Fr.; Lat. *prærogativus*, from *præ*, and *rogō*, to ask.] A prior claim or title; an exclusive or peculiar privilege or right.

(*Civil Law*.) The privilege, preëminence, or advantage which a person has over another; thus, a person vested with an office is entitled to all the rights, privileges, *prerogatives*, &c., which belong to it.

—*a.* Having peculiar privileges or rights.

Prerogatively, *adv.* By exclusive privilege.

Presage, *n.* [Fr.; Lat. *præsagium*, from *præsagīo*, from *præ*, and *sagīo*, to perceive keenly or quickly.] Something which foreshows a future event; a present fact indicating something to come.

—*v. a.* To forebode; to betoken; to indicate, as by some present fact, what is to follow or come to pass.—To foretell; to predict; to prophesy.

—*v. n.* To form or utter a prediction. (*R.*)

Presageful, *a.* Full of presages.

Presagement, *n.* Forebodement; foretoken. (*R.*)

—Prediction; that which is foretold.

Presager, *n.* One who foretells or presages.

Presburg, a town of Hungary, cap. of the co. of Presburg, on the Danube, 34 m. E.S.E. of Vienna. It was formerly cap. of Hungary, and the emperors of Austria still receive the crown of Hungary here. The principal public buildings are the hall of the Diet, the town-hall, and the cathedral. *Manuf.* Silks, woollens, tobacco, leather, rosoglio, and nitre.

Presbyope, **Presbyope**, *n.* (*Med.*) One who is long-sighted or affected by presbyopia. — *Dunlison*.

Presbyopia, **Presbyopy**, *n.* [Gr. *presbus*, old, and *ops*, *opos*, the eye.] (*Optics*.) An imperfection of vision commonly attendant upon the more advanced periods of life, in which near objects are seen less distinctly than those at a distance. It is usually caused by a change in the consistence of the crystalline lens, affected as age advances; changes also by flattening of either the lens or the cornea may produce this state of vision. The change in consistence by induration of the lens interferes with the action of those muscles which compress it in health in order to adapt it to varying distances. Convex glasses must be used to remedy the defect. It often happens that one eye is more affected than the other, and in this case glasses of different foci should be used.

Presbyopic, *a.* Affected with presbyopia.

Presho, in *South Dakota*, a S. co.; area, 1,185 sq. m.; intersected by the White river. Unorganized. *Pop.* (1895) 628.

Presidio, in *Texas*, a W. co., adjoining Mexico; area, 3,470 sq. m.; bounded W. by the Rio Grande del Norte. *Surface*, partly mountainous; *soil*, mostly unfit for cultivation; water is scarce. *Cap.* Marfa. *Pop.* (1890) 1,698.

Preston, MARGARET JUNKIN, author, daughter of Rev. George Junkin, and wife of Col. J. T. L. Preston, of the Virginia Military Institute, was born in Philadelphia in 1835. She has written many poems and sketches, chiefly on Civil War topics; among them *Beechenbrook, a Rhyme of the War* (1866). Her translation of *Dies Irae*, which appeared in 1855, has been highly commended.

Preston, in *Iowa*, a post-village of Jackson co., 18 m. E. of Maquoketa. *Pop.* (1895) 524.

Prestwich, SIR JOSEPH, geologist, was born near London, Eng., March 12, 1812; educated at Reading and at University College; was engaged for some years in business, but made geology an avocation, and, after a time, the vocation of his life. He made an exhaustive practical study of the geology of Great Britain, with relation to water-bearing strata and the extent of coal fields. In 1874 he accepted the chair of Geology at Oxford. During the period of his incumbency he published an extensive work entitled, *Geology, Chemical, Physical, and Stratigraphical*. In 1888 he resigned his chair at Oxford, though continuing his scientific researches. He was knighted in 1896, and died June 23 of the same year.

Pretoria, the capital of the South African Republic (or Transvaal); derives its name from Pretorius, a Boer leader. It is on the Apies, a headstream of the Limpopo, which forms the northern boundary of the Republic, and stands at an elevation of 4,500 feet on a plain surrounded by hills. Railways connect the town with Lorenzo Marques on Delagoa Bay in Portuguese East Africa, and also with Cape Town, 1,040 miles away. It has become important as a place of resort for the miners of the northern gold-fields. Its population is 12,000, of whom three-fourths are whites. The trials of the Uitlander reformers took place in the

Pretoria government building in 1896, and after their conclusion the Boers planned a series of fortifications to protect their capital. It was captured by the British in 1900.

Pretzel, *n.* [Ger.] A biscuit made of wheaten flour, the dough being dipped into hot lye made from straw ashes, sprinkled with salt, and baked crisp.

Previous Question. See PARLIAMENTARY LAW.

Price, BONAMY, economist, was born on the island of Guernsey, May 22, 1807; was professor of Political Economy at Oxford, and a voluminous writer on financial and economical subjects. He visited America in 1874, and lectured on free trade. Died Jan. 8, 1888.

Price, STERLING, soldier, was born in Virginia in 1809; removed to Missouri, and entered Congress from that State in 1845-47; was later elected governor of the State. He joined the Confederacy at the outbreak of the Civil War, and became major-general; captured Lexington, Mo., and commanded a division at Pea Ridge and at Corinth. In Sept., 1864, he conducted a raid through S. E. Missouri. Died in 1887.

Price, in *Wisconsin*, a N. co.; area, 1,160 sq. m.; drained by Big Elk river and the West and South Forks of Flambeau river. *Surface*, rolling, abounding in small lakes, and heavily timbered with pine and hard woods. *Products*. Potatoes and small fruits. Lumbering is the chief industry. *Cap.* Phillips. *Pop.* (1895) 7,257.

Prilifof Islands. (*Geog.*) A group of small volcanic islands in Bering Sea, about Lat. 57° N., Lon. 170° W., and about 200 miles from the mainland of Alaska, to which they belong. Their isolation makes them a favorite resort—and at present the only breeding-place—for the fur seals, and they have come into great notice through the recent disagreement between the United States and Great Britain over the seal fisheries. See ALASKA.

Primghar, in *Iowa*, a post-town, cap. of O'Brien co., about 50 m. N. E. of Sioux City. *Pop.* (1895) 839.

Primrose League. (*Eng. Polit.*) About two years and a half after the death of Lord Beaconsfield, on Nov. 17, 1883, four admirers of him—Lord Randolph Churchill, Sir John Gorst, Sir Alfred Slade, and Sir H. Drummond Wolff—founded a political organization, which they called the Primrose League, because they believed the primrose to be Beaconsfield's favorite flower, although that has been denied (*cf. Notes and Queries*, 1888, pp. 146, 416). The five-fold petal of that flower, it is claimed by the League, typifies the five principal divisions of the British Empire in Europe, Asia, Africa, America, and Australia. The professed principles of the League are conservative, but moderate and even liberal. The members are styled Knights, Dames, and Associates, and the branches are called Habitations. The first grand master of the League was the Marquis of Salisbury. It was originally intended to admit men only, but by admitting women, the numbers rose from 957 in 1884 to 963,943 in 1891, enrolled in 2,126 habitations. The League has attained great political influence. Its head office is at 64 Victoria Street, Westminster. In 1890 a branch was established at Winnipeg, Canada.

Princeton Theological Seminary. The oldest and best-endowed of the Presbyterian seminaries in the U. S. Founded at Princeton, N. J., in 1812, it is, and always has been, unconnected with the College of New Jersey, now Princeton University. Each of its professorships has an endowment of \$100,000, and it has besides an endowment of about \$1,500,000. In 1896 it had 11 instructors and 258 students, with 57,000 volumes in its library.

Princeton University. (*Educ.*) This institution, originally called the College of New Jersey, was chartered by that State in 1746, being the fourth in order of founding among colleges of the U. S. It was opened at Elizabethtown in May, 1747, under the auspices of the Presbyterian Synod of New York, which then included New Jersey. Indeed, the principal object of founding the college was to make ample provision "for the thorough training of such as were candidates for the ministry" of the Presbyterian Church. A second and more liberal charter, giving equal advantages and privileges to every denomination of Christians, was granted in 1748, when the college removed to Newark. Here its president was the Rev. Aaron Burr, father of Vice-President Aaron Burr. In 1757, on the college having secured the erection at Princeton of Nassau Hall—named in memory of William III., and the oldest college building—the college was removed to Princeton. In 1812 the Presbyterian General Synod established its Theological Seminary at Princeton. (See described.) Nassau Hall, during the Revolution, was occupied alternately by British and American troops as barracks, and also as a hospital. At the battle of Princeton, Jan. 3, 1777, Washington attacked the British in the Hall, and during the engagement a shot penetrated its walls and pierced a portrait of George III. In 1783 the Continental Congress met in the Hall, and the college commencement in that year was attended by Washington and the members of the Congress. The institution took a new start upon the election to its presidency of the Rev. Dr. James C. McCosh, an able Scotchman, who had won reputation while professor at Queen's College, Belfast, Ireland. During his presidency, which lasted for 20 years, the faculty was enlarged, the number of students increased, new studies introduced, 9 large buildings erected, and the funds greatly augmented. Altogether \$4,000,000 during those years were contributed to the college. Of this sum John Cleve Green and the trustees of his estate gave \$2,500,000, with which a school of science was founded, a library, Dickinson Hall, Witherspoon Hall, and Chemical Hall were erected, and a num-

ber of professorships endowed. N. Norris Halstead built an observatory, in which was placed by other friends of the college one of the largest telescopes ever constructed. Mr. Marquand erected in 1882 a handsome chapel costing \$125,000. William Libbey, Sr., founded a museum of geology and archaeology at a cost of \$100,000, and also erected the University Hotel at an expenditure of \$250,000. On Oct. 21, 1896, the college celebrated its sesquicentennial, or 150th anniversary, of its foundation, when the institution assumed the title of Princeton University. In 1909 it had 163 instructors and 1300 students, with 342,000 volumes in its libraries. Notable features of the university are the Cliosophic and American Whig societies, each of which has a fine marble building, patterned after a Grecian temple. The university athletic field is one of the best and most perfectly kept in the country, and in intercollegiate athletic contests Princeton ranks among the leaders.

Prineville, in *Oregon*, a post-village, cap. of Crook co., 202 m. S.E. of Portland. *Pop.* (1897) 560.

Pro Tempore (*tem'po-ry*). [Lat.] For the time being; temporary or temporarily; used especially of one who acts as a substitute; as, a secretary *pro tempore*, or, abbreviated, *pro tem*.

Processional, *n.* In the R. C. Church, a book containing the prayers and hymns to be used in a religious procession.—A hymn sung during a procession.

Proclitic, *a.* [Gr. *proklitō*, to lean forward.] (*Gram.*) Leaning forward; applied to a monosyllable which is so closely attached to a following word as to have no independent existence and no accent.

Procter, BRYAN WALLER, known as BARRY CORNWALL, was born in London, in 1787; educated at Harrow, commenced practice of law in Loudon (1831). As a writer he is much esteemed. Among his works are *Dramatic Scenes* (1819), *Marcella Colonna* (1820), several volumes of poems, *Life of Edmund Kean* (1835), *Life of Charles Lamb* (1866), his last work. Died in 1874.

Proctor, RICHARD ANTHONY, astronomer, was born in Chelsea, England, March 23, 1837; graduated at St. John's College, Cambridge (1860). He was one of the most popular writers and lecturers on astronomy; his talks, charts, and handbooks have done much to make astronomy measurably familiar to the general public, as well as more attractive to the special student. His published volumes are numerous, and are all written in a readable style. Died in New York, Sept. 12, 1888.—During the season of 1896-97, his daughter successfully lectured on astronomy in the U. S.

Proctor, in *Vermont*, a post-town of Rutland co. *Pop.* (1897) 1,740.

Proctorville, in *Ohio*, a post-village of Lawrence co. *Pop.* (1897) 550.

Profilograph, *n.* An instrument which records the profile of the ground that it traverses.

Prohibition Party. (*Am. Polit.*) A convention of temperance workers in favor of absolute prohibition of the liquor traffic met at Chicago, Sept. 1, 1869, and organized as the National Prohibition Reform Party. They held a national convention at Columbus, O., in 1872, and nominated James Black and John Russell for President and Vice-President. Their electors received 5,608 votes. In 1876 Green Clay Smith headed the ticket, and 9,522 votes were polled. In 1880 Neal Dow was nominated, and the vote was 10,305. In 1884 the party declared for woman suffrage, and nominated John P. St. John, of Kansas, and William Daniel, of Maryland. An aggressive campaign was entered into, and 150,369 votes obtained. With this campaign the party came to be recognized as holding the balance of power in many close districts, and its political efforts were commonly referred to as the "third party movement." In 1888 Gen. Clinton B. Fisk, of New Jersey, and John A. Brooks, of Missouri, were nominated, and 250,290 votes polled. In 1892, John Bidwell, of California, and James B. Cranfill, of Texas, were the nominees, and the vote increased to 279,191. The national convention in 1896 resulted in a split on the question of confining the party issue wholly to prohibition, or including other reforms. Joshua Levering, of Maryland, and Hale Johnson, of Illinois, were the regular candidates, in whose interests 130,560 votes were polled; while the bolters, under the name of National Party, and leadership of Charles E. Bentley, of Nebraska, and J. H. Southgate, of North Carolina, polled 14,392 votes.

Proof-reading, *n.* (*Print.*) The reading of printers' proofs; is a branch of the printing industry that is maintained to secure the accuracy of printed matter. The proof-reader, or corrector of the press, as he is sometimes called, is usually a practical compositor, and necessarily an expert in spelling, punctuation, and capitalization. When a first proof of reading matter is struck off, it is customary for the reader to go over it at the same time that a copy-holder reads aloud from the copy or manuscript from which it was set. The proof-reader must mark on the margin of the proof all typographical errors, erroneous spellings, mistakes in arrangement, etc. He should also note any errors in grammar or diction, and any statements of fact, &c., as dates or names, which he may happen to know to be wrong. It is also proper for him to attach queries for the author or editor concerning points which he suspects may be inaccurate, but which come more properly under their province to correct. In marking typographical errors he makes use of a code or set of special signs, as a Greek *d* for *dele*, or "take out"; a tangential spiral mark for "turn" or "reverse," indicating letters, &c., placed wrong side up; crossed lines for indicating a space; a caret, to mark a point of insertion; an upright stroke with a line under it to indicate that a space

must be pushed down, etc. If a letter or character is to be changed, a line is drawn through the erroneous character, and the correct character written on the margin opposite the line. After this first proof has been corrected by the compositor, a second or "revise" proof is brought to the proof-reader, who notes whether all the errors marked have been corrected. A third proof is then usually printed for the author, editor, or customer, as the case may be. If this comes back marked up, another revise is taken, and, if the work is of great importance, half a dozen or more subsequent proofs and revises may be taken, until the matter is satisfactory. In the case of book-work, the last proofs are taken in the form of pages ready to be cast, or a proof of a whole form of pages may be submitted, to have the reader pass upon any final corrections, the arrangement of the pages, margins, etc.

Propeller, *n.* (*Marine Eng.*) The screw-propeller, whose name is usually shortened for convenience to propeller, or in marine engineering use to screw, was suggested and considered as a means of propelling vessels in the water quite as early as the paddle-wheel. In fact, Colonel John Stevens, of Hoboken, N. J., built a steamboat, fitted it with a propeller, and ran it on the Hudson, in 1804, 2 years before Fulton created a sensation with his steamboat. The mechanism of the Stevens boat is now in the possession of the Stevens Institute of Technology, in Hoboken. Its advantages were not appreciated, however, and the paddle-wheels came into general use, and continued to be used until John Ericsson, in America, and Francis P. Smith, in England, urged the use of the propeller upon shipbuilders, and demonstrated its superiority. Within the last 30 years the use of the propeller in place of side-wheels

post, sometimes aft of the rudder. Twin screws have increased in favor within a few years, and are used by many of the Atlantic liners. In this case each screw has its appropriate shaft and set of cylinders and engines; hence they may be, and usually are, operated independently—a decided advantage in case one of the two sets of machinery becomes disabled. In a most recent form of torpedo-boat three sets of propeller-blades have been mounted on one axis with good results. Triple screws on separate shafts have also been constructed, but their utility remains to be proven.

Prosperity, in *South Carolina*, a post-town of Newberry co., 8 m. E. of Newberry; has cotton mill and gin, sash and door factory, and cannery. *Pop.* (1897) 680.

Protectory, *n.* An institution for the care of destitute or depraved children.

Provection, *n.* [*Lat. provecio*, a carrying forward.] The carrying of a final consonant of one word to the beginning of the next word; as in a nickname for an *ekename*.

Prowers, in *Colorado*, a S.W. co.; area, 1,650 sq. m.; intersected by the Arkansas river. *Cap. Lamar.* *Pop.* (1897) 3,130.

Pryor, ROGER A., soldier and jurist, was born in Virginia, July 19, 1828; graduated at the University of Virginia (1848); was admitted to the bar; engaged variously in editorial work until 1859; entered the Confederate army as colonel; was made a brigadier-general; taken prisoner in 1864, and detained for four months at Ft. Lafayette. In 1865 practiced law in New York city, attaining success as a criminal lawyer; was appointed judge of the Court of Common Pleas in 1890, and elected to the same office in 1891; became justice of the Supreme Court in 1896.

Pschutt (*pschüt*), *a.* (*Slang.*) Ultra fashionable; living and dressing in a style that is extravagant and not dictated by good taste or the demands of fashionable society.

Pseud, **Pseudo**. An initial compounding element, derived from the Gr. *pseudēs*, false; *pseudos*, falsehood.

Psychic, **Psychical**, *a.* [*Gr. psychikos*.] Pertaining to the soul or mind; mental, as distinguished from physical or physiological.—Pertaining to unusual mental operations, or to occult phenomena attributed to the mind.—Pertaining to the animal soul, or to the human passions; natural, as distinguished from spiritual.

Psycho. An initial compounding element, derived from the Gr. *psychē*, soul, mind.

Psychology, *n.* [*Gr. psyche*, soul, and *logos*, doctrine.] The science of the mind. It aims to find out all about the mind, just as the other sciences aim to find out all about the subjects of which they treat—astronomy, of the stars; geology, of the earth; physiology, of the body. And when we come to trace out the story of the mind as psychology is doing it, we find that there are certain general truths with which we must first acquaint ourselves; truths which the science has been a very long time finding out, but which we can now realize without a great deal of explanation. These general truths, we may say, are preliminary or introductory; they deal rather with the need of defining, first of all, the subject or topic with which the science deals.

(1) The first such truth is that *the mind is not alone the possession of man*. Other creatures have minds. Psychology no longer limits itself, as it formerly did, to the human soul, denying to the animals a place in this highest of all the sciences. It finds itself unable to find any test or touchstone of the presence of mind, or any place at which the history of the mind can begin, which does not go down to the very beginnings of life. For as soon as we ask how much mind is necessary to start with, we have to answer, any mind at all; and all the animals are possessed of some of the actions which we associate with mind. Of course the ascertainment of the truth of this belongs—as the ascertainment of all truth belongs—to scientific investigation itself. It is the scientist's rule not to assume anything except as he finds facts to support the assumption. So we find a great department of psychology devoted to just this question: *i. e.*, that of tracing mind in the animals and in the child, and noting the stages of what is called its "development," both in the ascending scale of animal life, and in the rapid development which every child goes through in the nursery. This gives us *one chapter* of the science of the mind; it is called *genetic psychology*, and it has two divisions—*animal* or *comparative psychology*, and *child psychology*.

(2) Another general truth to note at the outset is this: that we are able to get real knowledge about the mind. This may seem at first sight a useless question to raise, seeing that our minds are, in the thought of many, about the only things we are really sure of. But that sort of sureness is not what science has to have. Every science requires some means of investigation and some method of procedure which is more exact than the mere "say-so" of common sense; and which can be used over and over by different investigators and under different conditions, in order to give the required degree of control and verification to the results once obtained. The chemist has his acids, and reagents, and blow-pipe; they constitute his instruments, and by using them under certain constant rules he keeps to a consistent method. So with the physiologist; he has his microscope, his staining fluids, means of stimulating the tissues of the body, &c. And the physicist makes much of his lenses, and membranes, and electrical batteries, and X-ray apparatus. And it is necessary that the psychologist have a recognized

way of investigating the mind, which he can lay before anybody and say: "There you see my results; you can get them for yourself by the same method that I use."

In fulfilling this requirement, the psychologist resorts to two methods of investigation. He is able to experiment with the mind in two ways, which are of such general application that anybody of sufficient training to make scientific observations at all can repeat them and confirm the results. One of these is what is called *introspection*. It consists in experimenting with one's own mind, by producing in it changes, such as emotions, voluntary memories, recalling associations of events now gone, &c., &c., and describing what takes place in the mind when this or that particular thing is done. Others can then repeat the experiments with their own minds, and see that what the first investigator reports is true. This results in a body of knowledge which is put together and called *introspective psychology*.

Then the other way that we have of experimenting is to work on some one else's mind. We can act on our friends and neighbors in various ways, making them feel, think, accept, refuse, this and that, and then observe how they act. The difference in their action will show the difference in their feeling, &c., which we have produced. In pursuing this method the psychologist takes the person—called the "subject" or the "reagent"—into his laboratory, asks him to be willing to follow certain directions carefully—such as holding an electric handle, blowing into a tube, pushing a button, &c., when he feels, sees, or hears certain things; this done with sufficient care, the results are found recorded in the ways which the psychologist has arranged beforehand. This second way of proceeding gives results which are gathered together under the phrase *experimental or physiological psychology*.

(3) There is also another truth which the psychologist nowadays finds very fruitful for his knowledge of the mind; this is the fact that *minds vary much in different individuals, or classes of individuals*. First, there is the great difference between healthy minds and diseased minds. The differences are so great that we have to pursue practically different methods of treating the diseased, not only as a great class apart from the well minds—putting them into institutions—but also as differing from one another. Just as the different forms of bodily disease teach us a great deal about the body—its degree of strength, its forms of organization and function, its limitations, its heredity, the interconnection of its parts—so mental diseases teach us much about the normal mind. This then gives another great sphere of information, which constitutes *abnormal psychology or mental pathology*. A special division of this is *criminology*.

And there are variations between individuals which are very striking even within normal life; well people are very different from one another. All that is commonly meant by character, or temperament, as distinguishing one person from another, is evidence of such differences. But really to know all about the mind we should see what its variations are, and endeavor to find out why the variations exist. This gives, then, another great topic, *individual or variational psychology*. Here we have the interesting question of the *genius*.

(4) Besides all these great undertakings of the psychologist, there is one other department of fact which he must in the future find very fruitful, although as yet he has not been able to investigate it fully; that is the place of the mind in the world at large. If we ask what the mind has done in the world, what a wealth of story comes to us in reply, from the beginnings of history! Mind has done all that has been done. It has built human institutions, indited literature, made science, discovered the laws of nature, used the forces of the material world, embodied itself in all the monuments which stand to testify to the presence of man! What could tell us more of what mind is than this record of what mind has done? The ethnologists are patiently tracing the records left by early man in the utensils, weapons, clothing, religious rites, architectural remains, &c., and the anthropologists are seeking to distinguish the general and essential from the accidental and temporary in all the history of culture and civilization. They are making progress very slowly, and it is only here and there that principles are being discovered which reveal to the psychologist the necessary modes of action and development of the mind.

(5) And, besides all this, another great line of inquiry leads into the investigation of the action of many minds together in various forms of social organization. This is *social psychology*, or the psychological basis of *science of society*.

We now have, in all this, a fairly complete idea of what the *science of the mind* includes. Different men are spending their lives each at one or two of these great questions, but it is only as the results are all brought together in a consistent view of that wonderful thing, mind, that we find all that it is. We must think of it as a growing, developing thing, showing its stages of evolution in the ascending animal scale, and also in the unfolding of the child; as revealing its nature in every change of our daily lives which we experience or tell to one another, or find ourselves unable to tell; as allowing itself to be discovered in the laboratory, and as willing to leave the marks of activity on the scientist's blackened drum, and on the dial of the chronoscope; as subject to the limitations of health and disease, needing to be handled with all the resources of the asylum, the reformatory, the jail, as well

Fig. 3039.—FORMS OF PROPELLERS.

has steadily increased, and although river-boats have been slower to adopt it than ocean steamers, yet it is manifest that the propeller is considered superior, even in shallow and still water. The preferred material for propellers is bronze, steel being too subject to corrosion. Bronze blades and steel hubs are commonly used, however. The propeller is a screw in theory, rather than in form. It is made with either 2, 3 or 4 comparatively narrow blades, which are shaped on the lines of a screw-thread of a pitch varying from one to two and one-half times the diameter. The pitch is the distance a propeller would travel in one complete rotation, if there were no slip. There is always more or less slip, as is shown by the column of water driven back by the propeller. The thrust of a propeller is its pushing force on a line with its axis. Great difference exists among marine engineers as to the best forms of propeller, and the theory of their construction is yet a matter of experiment. The following, however, may be considered to be generally accepted. The slip of a propeller increases with resistance of the boat; also with the pitch; and also with the speed of rotation of the propeller. The slip decreases as the area of the blades with a fixed diameter increases. It has been lately demonstrated that great rotative speed of the propeller causes a vacuum in the water, which is of course a waste of power to maintain. A propeller must remain immersed in use, and some have contended that its axis should incline slightly downward toward the stern, so as to secure a more solid body of water to work against. The lines of a boat must be shaped so as to allow a free flow of water to the propeller. Sometimes the propeller is mounted between the stern-frame and the rudder-

as with the delicacy needed to rear the sensitive girl, or win the love of the bashful maid; and which has manifested itself in all the development of humanity, from the first rude contrivances for the use of fire, the first organizations for defence, and the first inscriptions of picture-writing, up to the modern inventions in electricity, the complex arrangements of industry, and the classic productions of literary art; and from the crude organizations of men for defence and conquest up to the refined social organization of our modern institutions of civilization.

Of all the sources now indicated from which the psychologist may draw, that of so-called *introspective psychology*—the actual reports of what we find going on in our own minds from time to time—is the most important. This is true for two great reasons, which make this science different from all others. The first claim which the introspective method has upon us arises from the fact that it is the only sphere in which we examine the mind directly and get its events in their purity. Each of us knows himself better than he knows any one else. So this department in which we deal each with his own consciousness at first hand is more reliable, if free from error, than any of those other spheres in which we examine other persons or inquire into the results which other persons have left us. The other reason that this method of procedure is more important is found in the fact that all the other departments of psychology—and with them all the other sciences—have to use introspection to make sure of the results which they get by other methods. For example, the natural scientist—the botanist, let us say—or the physical scientist—the electrician, say—cannot observe the plants or the electric sparks without really using his introspection to find out what is before him. The light or the plant stirs up his brain and has a certain effect in his mind, and then he has to use introspection, after all, to report this. The astronomer with bad eyes cannot observe the stars well, nor discover the facts about them, because his introspection, in reporting what he sees, proceeds on the imperfect and distorted images coming in through his defective eyesight. So a man given to exaggeration, who is not able to report what he remembers truthfully, cannot be a good botanist, say; since his defect in introspection renders his observation of the plants unreliable.

Practically, also, the use of the introspective method has been most important, and the development of psychology has been mainly, until in recent years, due to it. As a consequence, there are many general principles of mental action and many laws of mental growth already discovered which should, in the first instance, engage our attention.

The great results of "introspective," or as it is very often called, "general" psychology, may be stated in a few leading principles.

The facts of experience, the actual events which we find taking place in our minds, fall naturally into two great divisions, which are so evidently distinguished from each other that they are covered by the popular distinction between "thought" and "conduct." On the one hand, the mind is looked at as receiving, taking in, learning, and, on the other hand, as acting, willing, doing this or that. General psychology finds certain great laws on each of these two sides of the mental life.

On the side of reception, we have, first, differences according to the avenues through which we receive our experiences: these are the senses—a great number, not simply the five special senses of which we were taught in our childhood. Besides sight, hearing, taste, smell, and touch, we now know of certain others very definitely. There are muscle-sensations coming from the moving of our limbs, and organic sensations from the inner vital organs; heat and cold-sensations, which are distinct from each other, each having in the skin nerve-endings peculiar to it; pain-sensations, probably also having its own physical apparatus; sensations from the joints, sensations of pressure, of equilibrium of the body, and a host of peculiar sensational conditions which may be separate and distinct or may arise from combinations of these. Such, for example, as the sensations which are felt when a current of electricity is sent through the arm.

All these give the mind its material to work upon; and it gets no material from any other source, in the first instance. All the things we know, all our opinions, knowledges, beliefs, are absolutely dependent at the start upon this supply of material from our senses—although the mind gets a long way from its first subjection to this avalanche of sensations which come constantly pouring in upon it from the external world. But this is the essential and capital function of *sensation*—this supply of the material on which the mind does the work of all thought and action.

Then there is the process by which the mind holds its material for future use, the process of *memory*. And the way it combines its material together in various useful forms—whereby we get things and persons made up out of the material which has been received and remembered—known as *association of ideas*, *thinking*, *reasoning*, &c. All these processes were formerly considered as separate "faculties" of the mind and as doing different things. But that doctrine is now completely given up. Psychology now treats the activity of the mind in a much more simple way. It says: "Mind only does one thing; in all these so-called faculties we only have the mind doing this one thing on the different materials which come and go in it. This one thing is the combining, the holding together, of the elements which it first gets in the shape of sensations, so that it can act on a group of them as if they

were only one, and only represented one external thing." We may illustrate this one sort of process as it goes on in the mind.

Let us ask how the child knows an orange there on the table before him. It cannot be said that the orange gets note in the child's mind by any one of its senses. By sight it gets only the color and shape of the orange, by smell it gets only its odor, by taste its sweetness, and by touch its smoothness, roundness, &c. And then by none of these senses as such does it get the name of the orange or distinguish it from other things which involve the same sorts of sensation—say an apple. It is easy to see that when each of the senses has sent in its report something more is still necessary: the combining of them all together in the same place and at the same time, and then the bringing up of a name, and of a sort of relation or distinction of this group of sensations from those of the apple; only then is there the knowledge that "here is an orange." Now, this is the way the mind has of acting, this combining of all the sensations and groups of sensations into ever larger and more fruitful combinations. This is called *apperception*. The mind, we say, *apperceives* the orange when it is able to treat all these separate sensations together as standing for one thing. And the various circumstances under which the mind does this give occasion for the different names which the earlier psychology used to mark off different "faculties."

These names are still convenient, and it may serve to make the subject plainer, as well as to inform the reader of the meaning of these terms, to show how they all refer to this one kind of mental action.

The case of the orange illustrates what is usually called *perception*. It is the case in which the result is an *actual object* in the world outside. When the same process goes on *without any such actual object* it is *memory*. When it goes on in a way which *could not be controlled by reference to such an outside object*—usually it is a little fantastic, as in dreams, or fancy, but often is useful as being so valuable as to anticipate what is really true in the outside world—then it is *imagination*. If it is *actually untrue to reality*, it is *illusion*, or *hallucination*. When it *uses mere symbols*, such as words, or gestures, writing, &c., to stand for whole groups of things, it is *thinking* or *reasoning*. And what the mind arrives at through this way of acting, no matter which of these forms it takes, provided it be *true in its results to realities*, is *knowledge*. So we see that all the terms and faculties of the "old psychology" can be arranged under this doctrine of *apperception*, without the necessity of thinking of the mind as doing more than one thing—grouping and combining its material in different combinations, and at different stages.

So we may put down *apperception* as the one great principle of mental activity on the side of its reception and treatment of its materials.

There is, however, another great term current in psychology by which the same process is sometimes represented, and that is *association of ideas*. This means that when two things have been perceived, or thought of together, they tend to come up together in the mind in the future; and when a thing has been perceived which resembles another—or is contrasted with it—then they tend to recall each other in the same way. It is plain, however, that this phrase is applied to the different thoughts or sensations, or other mental materials as regards their behavior with reference to one another. They are said to be "associated" with one another. This way of speaking of the mental materials, instead of speaking of the mind's activity, is convenient; and it is quite right to do so, since it is no contradiction to say that the thoughts, &c., which the mind *apperceives* remain then associated together. From this explanation it is evident that the "association of ideas" also comes under the one sort of mental process of which we have been speaking.

There is one further tendency of the mind in its treatment of its material; a tendency which shows us the activity of which we have now become familiar in actual operation. When we come to look at any particular case of "apperception," or "association," we find that the process must go on from the platform of attainment which the mind has already reached. The course of our mental states has been likened to a stream which flows on from moment to moment, with no breaks. It is so continuous that we can never say: "I will start afresh, forget the past, and be uninfluenced by my history." However we may say this, we can never do it; for the oncoming current of the stream is just what we speak of as ourselves, and we cannot avoid bringing the memories, imaginations, expectations, disappointments, &c., up to the present. So the effect which any new event or experience, happening for the first time, is to have upon us depends upon the way that it fits into the current of these onflowing influences. The man I see for the first time may be so neutral to me that I pass him unremarked. But once let him return after I have once remarked him, or let him resemble a man whom I know, or let him give me some reason to fear, revere, think of him in any way, then he becomes a very positive factor in my mental stream. He has then been taken up into the flow of my mental life, and he henceforth contributes something to it. For example, a little child, after learning to draw a man's face, putting into it two eyes, the nose, and mouth, and one ear on each side, when told to draw a profile will still put in two eyes, and affix an ear to each side. The new copy from which he draws is then said to be "assimilated" to the old customary figure. Now, this tendency is universal. The mind must *assimilate* its new material to the old as much as possible, making the

old stand for the new. Otherwise there would be no containing the fragmentary details which we should have to remember and describe. And it is the outcome of this tendency that we form great classes of objects, such as man, animal, virtue, &c., into which numbers of similar cases are made to go. We can, therefore, understand by "assimilation" the general tendency of new material to be treated in the ways in which similar material has been treated before, with the result that the mind proceeds from the particular case to the general class. This is, therefore, what was called "conception" by the old psychology, and that word is still used for certain special cases or processes of assimilation.

We may say therefore—as to our outcome so far—that general psychology has reached three great principles in its consideration of the receptive side of the mind's working. *First*, we have the great combining tendency of the mind, the grouping and relating together of mental states and the things which they denote, called *apperception*. Then, *second*, there are the links of the particular elements, states, &c., which are combined, called the *associations of ideas*. And, *third*, there is the tendency of the mind to use its old experiences as general patterns or nets for the sorting out and using of all the new details of experience: this is *assimilation*.

Now let us look at the other great aspect of the mind, as general or introspective psychology considers it; the aspect which presents itself when we find the person in action or conduct. The fact that we act is, of course, as important as the fact that we think or feel; and the distinction which separates thought and action should not be made too sharp. Yet there is a distinction which comes out as soon as we ask how we get our knowledge of the actions of others. Of course we say at once that we see them. And that is true; we do see them, while as to their thoughts, we only infer them from what we see of their action. But, on the other hand, we may ask, how do they come to infer this or that thought from this or that action of another. And the only reply is: because when *we* act in the same way, this is the way we feel. So we get back in any case to our own consciousness, and must ask how action is related to thought in our own mind. In answer to this question psychology has now a general answer: our action is always the result of our thought or of the elements of thought which are at the time present in the mind. Of course there are actions which we do from purely nervous reasons; but these we may neglect, as not being in any psychological sense "our" actions. Apart from these, therefore, the principle holds that whatever the action which issues in what we call conduct, there is something thought of, or some sensation then in mind, or some feeling swelling within our breast, which prompts to the action.

This general principle is called *suggestion*. It simply means that we are unable to have any thought or feeling whatever, whether it comes from the senses, from memory, from the words, conduct, or command of others, which does not have a direct influence upon our conduct. We are quite unable to avoid these influences of our own thoughts; and often the most trivial occurrences of our daily lives act as suggestion to deeds of very great importance to ourselves and to others. For example, the influence of the newspaper reports of crime stimulate other individuals to perform the same crimes just by this principle of suggestion; for the mere reading of the report causes them to entertain the thoughts, and these thoughts tend to arouse their corresponding trains of action.

The most interesting and striking sphere of operation of the principle of suggestion is that of *hypnotic suggestion*, or what is commonly known simply as *hypnotism* (q. v.).

We are able, however, to see a little more in detail how the principle of suggestion works by asking what sort of action is prompted in each case of thought or feeling at these different levels of the mind's activity which have been distinguished above as illustrating *apperception*; e. g., the stages known as perception, imagination, reasoning, &c.

We act, of course, on our perceptions constantly; most of our routine life is made up of such action on the perceptions of objects about us. The position of things in the house, in the streets, in the office or the store, are so well known that we carry out a series of actions with reference to these objects with very little supervision from consciousness. Here the principle of suggestion works along under the guidance of perception, memory, and the association of ideas. Then we find also in much of our action an element due to the exercise of the imagination. We fill in the gaps in the world of perception by imagining appropriate connections; and we act as if we knew that these imaginations were reality. This is especially true in our intercourse with our fellow-men. We really never know what they will do from time to time. Their action is still future and uncertain; but from our familiarity with their character we surmise or imagine what they expect or think, and then we act so as to make our conduct fit into theirs. Here there is suggestion of a personal kind with the appropriate action, all depending upon our reconstruction of the character of others. This is the sphere of the most important affairs of our lives, especially when we consider its connection with the great sort of action from suggestion, to be mentioned next in order.

This next and highest sphere is action from the general or abstract thoughts which we have been able to work up by the *apperceiving* activity of the mind. In this sphere we have a special name for the thoughts

which influence us directly and lead us out into action; we call such thoughts *motives*. And we also have a special name for the sort of action which is prompted by clearly thought-out motives—*will*. But in spite of this emphasis given to certain actions of ours as springing from what is called will, we must be careful to see that will is not a new faculty or capacity added to mind, and which is different from the ways of action which the mind had before this. Will is only a name for action upon the suggestions of conduct which are so clear in our minds that we can deliberate upon them, act after some reflection, and so have a sense that the action springs from our own choice. The reasons for action, however, in this case are thoughts, just as in the earlier cases; but in this case we distinguish them more closely as motives. But we cannot act without motives; nor can we fail to act on what motives we have; just as in the earlier cases we could not act without some sort of perceptions or imaginations or memories, and could not fail to act on the perceptions or other mental states which we had, except as this higher-type action interfered with the lower. So we may say that "voluntary action" or "will" is only a complex and very highly conscious case of the general-principle action from suggestion; the form which suggestion-stimulated action takes on when apperception is in the higher level of construction which is called *conception and reasoning*.

Finally, introspection finds another great class of elements in experience—elements which show us that the mind is not the mere theater of indifferent changes; but is the vitally interested and warmly intimate thing which the word "our" in each case denotes. This is the sphere of *feeling*. We may say, without more ado, that while we receive sensations and thoughts and suggestions, and act upon them in the variety of ways already pointed out, we ourselves are not indifferent spectators of this play of this come-and-go of processes. We are directly implicated, indeed the very sense of a self, an ego, a me and a mine, in each consciousness arises from the fact that all this come-and-go is a personal growth, not a mere machine doing what the laws of its nature prescribe. We find that nothing happens which does not affect the mind itself "for better or for worse, for richer or for poorer," for pleasure or for pain; and there springs up a series of attitudes of the mind itself, according as it is experiencing or expecting to experience the good or the bad. This is, then, the great meaning of feeling; that the mind is itself in some way influenced for good or for bad by what goes on within it; and that there is excitement, positive attitude, high pleasure or pain, richly toned emotion indicating the various phases of its fortune and growth.

And here, again, psychology distinguishes the stages which arise in feeling, as go from the lower to the higher, from the life of sensation and perception up to that of thought. This is our method, it will be remembered, in both of the other phases of mental life—that of apperception, and that of action. Doing this, therefore, also in the case of feeling, we find different terms applied to the different phases of feeling, as well as special differences at each stage. In the lowest sort of mental life, as we may suppose the new-born child to have it, and as we also think it exists in very low forms of animal life, feeling is not much more than pleasures and pains depending largely upon the physical conditions under which the life processes proceed. It is likely that these lower pleasures and pains have special nerves of their own. But with them there are also states of comfortable and uncomfortable, or pleasant and unpleasant, feeling, due to the way the mind is immediately affected, even by its own pains. Then, when we come up to the life of memory and imagination, we find the great classes of *emotions* testifying to the attitudes which the mind takes to word these experiences. These are remarkably rich and varied—these emotions. Hope gives place to its opposite, despair, joy to sorrow, and regret succeeds expectation. No one can enumerate the actual phases of the emotional life. The actual differences which are most pronounced—such as hope and fear, joy and sorrow, anger and love—have special names. And their stimulating causes are so constant that they have also certain fixed ways of showing themselves in the body: the so-called *emotional expressions*, which enable us to see and sympathize with the emotional states of other persons. The most that we have room here to say is that there is a constant ebb and flow, and that we rarely attain a state of relative freedom from the influence of emotion.

The final and highest manifestation of the life of feeling is seen in what is called *sentiment*. Sentiment is aroused in response to certain so-called ideal states of thought. The trend of mental growth toward constantly greater adequacy in its knowledge leads it to anticipate conditions when its attainments will be made complete. And there are certain sorts of reality whose ideal completeness arouses in us emotional states of the greatest power and value. The thought of God gives rise to the *religious sentiment*; that of the good, to the *ethical or moral sentiment*; that of the beautiful, to the *aesthetic sentiment*. These sentiments represent the most refined and noble fruitage of the life of feeling, as the thoughts which they accompany refer to the most elevated and ideal objects. And it is equally true that the conduct which is performed under the inspiration of sentiment is the noblest and most useful in which man can engage.

For details over the whole field of psychology, the reader may be referred to the following works of the present writer, in which exhaustive references to other authors will also be found: *Elements of Psychology*, 1 vol., elementary (Holt & Co., New York); *Handbook of Psychology*, 2 vols. (Holt & Co.); *Mental Development in the Child and the Race*, 1 vol., genetic (The Macmillan Co., New York, second edition); *Social Interpretations of the Principles of Mental Development*, 1 vol. (The Macmillan Co.); and a series of articles in the new edition of *Johnson's Cyclopædia* (Appleton & Co., New York).

Psycho'sis, *n.* [Gr. (*Psychol.*) Any state of consciousness or tendency to such state, as distinguished from *neurosis*, the corresponding change in its physical basis.

(*Pathol.*) Any form of mental derangement, especially that due to disorder of the nervous system without lesion of parts.

Pter-, Ptero-. An initial compounding element, derived from the Gr. *pteron*, wing, feather.

Pterylo'sis, *n.* (*Ornith.*) Plumage, considered with reference to its distribution in growth over the bird's body. In all but a few birds the feathers sprout only on certain restricted patches, as may be seen by examining the body of a plucked fowl. These tracts of plumage-growth are called *pterylae*, and the naked inter-spaces *apteria*. Their relative distribution is always the same in individuals of the same species, and approximately similar in races of the same group; but there is a wide difference in this respect between otherwise unrelated groups. The pterylosis, then, is one of the characters by which birds may be, and are, classified. The principal authorities on the subject are the German ornithologists Nitzsch and Fürbringer.

Pto'main, or -inc, *n.* [Gr. *ptōma*, a corpse.] An alkaloid, usually poisonous, derived from putrefying animal matter, or from disease germs in the living body.

Pud'gy, *a.* (*Colloq.*) Fat and short, thick, dumpy.

Pueblo (*pwa'-blo*), *n.* [Sp.] A large dwelling-house, sometimes accommodating a whole tribe, peculiar to the aborigines of New Mexico and vicinity. It is built of adobe or sun-dried bricks, having from two to five stories, arranged in terraces. Access is had to the interior by way of the roof, which is reached by ladders.—A town or settlement of Indians inhabiting *pueblos*; hence, a *Pueblo Indian*, as distinguished from a *nomadic Indian*.

Pue'blo, in *Colorado*, a city, cap. of Pueblo co., 45 m. S. of Colorado Springs; the commercial center and leading city of southern Colorado; is surrounded by abundant deposits of coal, iron ore, and limestone. Here are several silver smelting works, one of which is the largest in the world. *Pop.* (1897) 30,000.

Pulas'ki, or Pulas'ki City, in *Virginia*, a post-village, cap. of Pulaski co., located on the Norfolk & Western Railroad, 60 m. W. of Roanoke; in a coal, zinc, and iron mining region. The industries include several zinc and iron works, foundries, lumber mills, &c. *Pop.* (1897) 3,400.

Pu'ltizer, JOSEPH, journalist, was born in Budapest, Hungary, April 10, 1847; came to America in youth, and began his career as a reporter on the *Westliche Post*, St. Louis, of which he became managing editor and finally controlling proprietor. He figured in Missouri politics, as member of legislature, of various Democratic conventions, and as congressman. In 1878 he assumed control of the *St. Louis Post-Dispatch*, and in 1883 purchased the *New York World*, then on the verge of failure, and made of it one of the strongest daily papers in New York.

Pulsatil'la, *n.* [Lat., from *pulso*, to beat.] The pasque-flower, *Anemone pulsatilla*.—A medicinal preparation from several species of a former genus *Pulsatilla*, now included in *Anemone*. It is used as an emmenagogue, and also employed in the treatment of bronchitis, catarrhal troubles, &c.

Pulsim'eter, *n.* A physician's instrument for noting the frequency, force, and variations of the pulse.

Pulso'meter, *n.* (*Mech.*) A form of pumping-device operating by the causing of a partial vacuum by the sudden condensation of steam in twin chambers. The chambers are pear-shaped, and lie close together, with their necks, or inlets, at a common point, where there is a ball-valve. Steam is admitted to the first chamber, while the other is shut off by the ball-valve, and immediately begins to condense, owing to the cold water it meets in the chamber. The vacuum caused by condensation draws the ball-valve over to one side, closing the first chamber to the steam, and admitting it to the second. The continued condensation of steam in the first chamber opens a valve below and draws in a volume of water, which is forced upward, and held there by a valve. In the meantime the steam in the second chamber has caused a like action there, drawing up more water. And so the pumping goes on alternately between these chambers, with a pulse-like action that suggested the name for the pump. Called also *pulsometer-pump*.

Pupillom'eter, *n.* [Lat. *pupilla*, pupil of the eye, and *meter*.] An instrument for measuring the distance between the centers of the eye-pupils, or for measuring the dilatation of the pupil.

Purse'-crab, *n.* (*Zoöl.*) An East Indian land-crab (*Birgus latro*), and one of the largest of the crustaceans, sometimes growing two or three feet long. It lives near the sea, in the sand or under the roots of trees, in

holes which it lines with the fibrous husks of the coconut, its principal food. It inserts a claw into one of the eyes or holes in the end of the coconut, and, by working the claw back and forth, manages to scoop out the meat; or, according to other observers, it strikes the nut upon a stone until the shell breaks. It was once supposed to climb the coconut trees after the nuts and throw them down to break them on the stones, but this is no longer believed. The natives steal the fibrous lining from its burrows to use as junk.

Also called *palm-crab*, *cocoanut-crab*, and *robber-crab*.

Pu'seyism, *n.* See OXFORD MOVEMENT.

Put'nam Val'ley, in *New York*, a post-town of Putnam co. *Pop.* (1897) 1,225.

Puyall'up, in *Washington*, a post-village of Pierce co., 9 m. S.E. of Tacoma; has sawmills, shingle mill, &c. *Pop.* (1897) 2,500.

Py'lon, *n.* [Gr. *pylōn*, gateway.] A monumental structure constituting an entrance to a temple or other large edifice, consisting of a central gateway with two flanking towers.

Pyr-, Pyro-. An initial compounding element, derived from the Gr. *pyr*, fire.

Pyrol'eter, *n.* [Gr., *pyr*, fire, and *oleter*, destroyer.] An apparatus for extinguishing fire, particularly on shipboard. Hydrochloric acid and carbonate of soda, partly dissolved and partly suspended in water, are pumped into a cylinder, and the carbonic acid generated is projected into the fire.

Pyrom'eter, *n.* (*Physics*.) An instrument for measuring high temperatures. One of the earliest was Daniell's, which consists of two distinct parts, the *register* and the *scale*. The register is a solid bar of black-lead earthenware, 8 inches long, cut out of a common black-lead crucible. In the axis of this a hole is drilled, and in this cylindrical cavity a bar of metal (as of platinum or iron) is placed. A cylindrical piece of porcelain, sufficiently long to project beyond the extremity of the black-lead bar, is placed on the top of the metallic bar. This is termed the *index*, and it is kept firmly in its position by a ring of platinum, which is tightened by a wedge of porcelain. When the register is exposed to a high temperature, the expansion of the metallic rod forces the index forward; and when the register has afterward cooled, the tension of the strap will retain the index at the furthest point to which it has been protruded. The scale consists of a frame composed of two rectangular plates of brass, joined together by their edges at a right angle, and fitting square upon two sides of the register. Near the end of this frame is a small brass plate which projects at a right angle. To the extremity of the frame nearest the brass plate is attached a movable arm, turning round a fixed center, and at its free end carrying the arc of a circle, the radius of which is 5 inches, and which is accurately graduated into degrees and thirds of a degree. Upon this arm, at the center, another lighter arm is made to turn, carrying at its longer part a vernier, which moves on the face of the arc, and divides it into minutes, together with an eye-glass to assist the reading, while the shorter part terminates in the knife-edge, turned inward at a right angle. To use the instrument, two readings are taken to determine the expansion of the metallic bar above that of the black-lead. The pyrometer of M. Lamy is based on the fact that carbonate of lime, when heated in a vacuo to 860° C., decomposes itself, the disengaged carbonic acid having a tension of 85 mm., and when heated to 1040° a pressure of 520 mm. He encloses pure marble in a tube of porcelain, attached to a glass tube containing mercury. When exposed to fire, dissociation takes place, and the temperature is indicated by the pressure; removed from the fire, the carbonic acid is again absorbed, and the instrument is again ready for use. Other pyrometers have been built operating by a change of color in metal, by a change in the velocity of sound, by the reduction of certain chemical compounds, by variation in electric resistance, and by the generation of thermo-electric currents.

Pyroso'ma, *n.* (*Zoöl.*) A singular genus of composite tunicated mollusks, characteristic of a family and sub-order. The individuals are very small, but are closely aggregated, and so combined as to form transparent cylinders from an inch to 4 feet or more in length, and hollowed out at one extremity (Fig. 3040). Such a colony may be compared to the detached finger of a glove, the external surface being, however, covered with minute tubercles. Each of these tubercles represents the anterior end of an individual animal (*ascidioid*), and each receives its nourishment from the water which circulates through the interior of the colony-cylinder (*ascidiarium*), but breathes through the outward end. The colony increases by successive buddings. These beautiful creatures swim, by a pulsating movement of the whole, near the surface of tropical seas, and are extremely phosphorescent.

Pythogen'esis, *n.* [Gr., *pytho*, to rot, and *genesis*, (Hygiene.) Generation from, because of, or by means of filth.

Fig. 3040.—PYROSOMA

Q is the 17th letter and the 15th consonant of the English alphabet. *Q* is never sounded alone, but in conjunction with *u*, and most grammarians are disposed to regard it as a superfluous letter, whose place could be supplied by *k*. It corresponds with the Hebrew and Phœnician *koph*, but it has no place in the Greek, old Latin, or Saxon alphabets. *Q* is used as an abbreviation for *question*; *Qy.* for *query*; *Q. E. D.* for *quod erat demonstrandum*, i. e., which was to be demonstrated. By medical men, *Q. P.* are used for *quantum placet* (as much as you please), and *Q. S.* for *quantum sufficit*, (as much as is necessary.) As a numeral, *Q* stands for 500, and with a dash over it (thus, *Q̄*), for 500,000.

Quab', *n.* A young half-fledged bird;—hence, something crude or immature.

Quack, *v. n.* [*D. kwaken*; *Ger. quaken*; formed from the sound.] To cry like the common domestic duck. —To boast; to bounce; to talk noisily and ostentatiously. —To practise arts of quackery.

—*n.* The cry of the common domestic duck. —A boastful pretender to medical skill which he does not possess; an ignorant practitioner; an empiric; a mountebank. —Hence, one who pretends to skill or knowledge which he does not possess; a charlatan; a humbug; as, "*quacks in the art of teaching*." —*Felton*.

—*a.* Pertaining or relating to quackery; boastfully and falsely pretending to cure diseases; used by quacks; as, *quack medicines*, a *quack doctor*.

Quack'ered, *a.* Almost choked or stifled.

Quack'ery, *n.* Character and practices of a quack; the boastful pretensions or mean practice of an ignoramus, particularly in medicine; charlatanism; empiricism; mountebankery.

Quack'ish, *a.* Like a quack; trickish; boasting of skill not possessed.

Quack'ism, *n.* Practice of quackery; empiricism.

Quack'kle, *v. n.* To choke; to be nearly stifled.

Quack'salver, *n.* [*Du. kwakzalver*—*kwaken*, to quack, and *zalf*, salve, ointment.] A quack or charlatan who deals in salves and ointments.

Quad'ra, *n.*; *pl.* **QUADRE**. [*Lat.* a square.] (*Arch.*) A socle, used to support the pedestals of statues, vases, and other ornaments. —The base or fillet of the Ionic base. —The plinth, or lower member of the podium.

Quadragesima'rius, *a.* [*Lat.* from *quadragesima*, forty.] Consisting of forty; forty years old.

Quadragesima, (*jēs-*) *n.* [*L. Lat.*] (*Ecc.*) In the Roman Catholic Church, an indulgence granted for 40 days.

Quadragesima, (*jēs-*) *n.* [*Lat. quadragesimus*, the fortieth, *quadragesima*, the fortieth part.] (*Ecc.*) Lent; —so called because it consists of forty days.

Quadragesima Sunday, the first Sunday in Lent.

Quadragesimal, *a.* Belonging to Lent; used in Lent.

Quadragesimal, *n.* (*Ecc.*) An offering formerly made to the Church in Mid-Lent Sunday.

Quadrangle, (*kwōd-rāng-gl-*) *n.* [*Lat. quatuor*, four, *angulus*, angle.] (*Geom.*) A plane figure, having four corners or angles, and consequently four sides.

(*Arch.*) A four-cornered space inclosed by buildings; the inner square or rectangular court of a building.

Quadrangular, *a.* Four-cornered; having four angles, and consequently four sides.

Quadrangularly, *adv.* With four sides and four angles.

Quadrans, *n.* [*Lat.*] Among the ancient Romans, the fourth part of an as.

Quad'rant, *n.* [*Lat. quadrans*, from *quatuor*.] (*Geom.*) The fourth part of a circle; an arc of 90 degrees. —A mathematical instrument, formerly much used in astronomy and navigation. The instrument is variously contrived and fitted up, according to the purpose for which it is intended; but it consists essentially of a limb or arc of a circle equal to the fourth of the circumference, and divided into 90° with subdivisions. The mural quadrant is of considerable size (6 or 8 feet radius for example), the axis of which moves in a wall or solid piece of masonry. The *Q.* has, of late years, been superseded by the **MURAL CIRCLE**, *q. v.*

(*Gun.*) An instrument occasionally used for regulating the elevation of pieces of ordnance. It consists of two bars of wood or brass, at right angles to each other, with an arc between them divided into degrees. A plumb-line hangs from the angle at which the bars meet. One of the bars being placed in the bore of the piece, the degree on the arc intersected by the plumb-line shows the elevation.

Hadley's Quadrant. See **OCTANT**. —*Quadrant of altitude*, an appendix to an artificial globe, consisting of a thin pliable slip of brass, which is applied to the globe, and used as a scale for measuring the distances between points in degrees.

Quadrantal, *a.* [*Lat. quadrantal*.] Containing the fourth part of any measure; pertaining to a quadrant; included in the fourth part of a circle.

Quadrantal triangle. (*Trigon.*) A spherical triangle which has one side equal to a quarter of a circle, or 90°.

—*n.* A cube, (*R.*) —A cubical vessel used by the Romans.

Quad'rat, *a.* [*Fr.*] (*Print.*) A piece of metal of the depth of the body of the respective sizes of types, and lower than the types themselves, so that a blank space is left on the paper when printed. An *en* quadrat is in thickness half the depth, an *em* equal in thickness and depth, a *two-em* quadrat twice the width, &c. They are used to fill out short lines, form white lines, &c.

—A mathematical instrument chiefly used in taking heights or depths.

Quad'rate, *n.* [*Lat. quadratus*, from *quadro*, to make square, from *quatuor*.] Square; having four equal sides and four right-angles. —Divisible into four equal parts.

—Square, in a figurative sense; exact; even; equal. —Suited; agreeing; applicable; correspondent; as, a *quadrate* description.

—*n.* [*Lat. quadratum*.] A square; a surface having four equal and parallel sides.

(*Astrol.*) See **QUARTILE**.

—*v. n.* [*Lat. quadrare*, to make square.] To suit; to correspond; to agree; to be even; —preceding *with*.

"Rule, which cannot be supposed to *quadrate* exactly with heroic poems." —*Addison*.

Quadrat'ic, *a.* [*Lat. quadratus*.] Square; denoting a square, or pertaining to it.

(*Crystall.*) **Dimentric**.

Quadratic equation. (*Math.*) In algebra, an equation which involves the second, but no higher power of the unknown quantity.

Quad'ratrix, *n.* (*Geom.*) A transcendental curve, by means of which the quadrature of curvilinear spaces can be determined mechanically.

Quad'rature, *n.* [*Lat. quadratura*, from *quadro*.] Act of squaring; the reducing of a figure to a square. —A square; a quadrate.

(*Astron.*) A term denoting the position of the moon when she is 90° from the sun, or at one of the two points of her orbit equally distant from the conjunction and opposition.

Quadrature of the circle. (*Math.*) A speculative problem of great celebrity in the annals of mathematical science. As the whole area of a circle is equal to the rectangle contained by the radius and a straight line equal to half the circumference, the quadrature could be obtained if the length of the circumference were assigned. In attempting to square the circle, therefore, the particular object aimed at, is the determination of the ratio of the circumference to the diameter. From the earliest period this problem attracted the attention of philosophy, and at the present day, even, there are persons who spend their time and their energies in attempting to overcome the difficulty. The truth is that such persons do not comprehend the difficulty of the subject. Archimedes, in his book on the *Mensuration of the Circle*, is the first of the ancients who made any approach even to a practical determination of the question. By inscribing and circumscribing a polygon of 96 sides in and about a circle, he shows that the excess of the circumference over three times the diameter must be less than 10/70 parts, and greater than 10/71 parts. This statement is correct, and pretty accurate; for, according to his calculations, a circle of 4,970 feet diameter would have a circumference lying between 15,610 and 15,620 feet; the truth being, that such a circle would have a circumference of 15,613 3/4 feet, very nearly. Among the Hindoos, the calculation was made much more correctly than by Archimedes.

Quad'rel, *n.* [*L. Lat. quadrillus*.] (*Arch.*) A kind of artificial stone made of chalky earth and dried in the shade for two years; —so called from being square.

Quad'relle, *n.* A mace having a cross head of four serrated projections.

Quadrennial, **Quadrien'nal**, *a.* [*Lat. quadriennis*—*quatuor*, four, and *annus*, a year.] Comprising four years; occurring once in four years.

Quadrennially, *adv.* Once in four years.

Quadrifas'ic, *a.* [*Lat. quatuor*, four, and *Eug. base*.] (*Chem.*) With four parts of base to one of acid.

Quad'rible, *a.* [*From Lat. quadrare*.] That may be squared.

Quad'ric, *n.* See **QUANTIC**.

Quadraticap'sular, *a.* [*Lat. quatuor*, and *capsula*, a capsule.] (*Bot.*) Possessing four capsules.

Quadrifur'cous, *a.* [*Lat. quatuor*, and *cornu*, a horn.] Four-horned.

Quadrifacial, *a.* [*Lat. quatuor*, four, and *decem*, ten.] (*Crystallog.*) Having four faces on the prism; —said of certain crystals.

Quadrident'ate, *a.* [*Lat. quatuor*, and *dentis*, tooth.] (*Bot.*) Edged with four teeth.

Quadrien'nal, *a.* See **QUADRENNIAL**.

Quadrifarius, *a.* [*Lat. quadrifarius*, four-fold.] Set in four rows.

Quad'rid, *a.* [*Lat. quatuor*, and *findere*, *fidi*, to cleave.] Cleft into four deep parts.

(*Bot.*) Cleft into four parts; as, a *quadrid* leaf.

Quad'rifoil, **Quadrifo'liate**, *a.* [*Lat. quatuor*, and *folium*, leaf.] (*Bot.*) Four-leaved.

Quadrifur'cate, *a.* [*Lat. quatuor*, and *furca*, fork.] Four-forked.

Quadri'ga, *n.* [*Lat.*] Among the ancients, a car drawn by four horses abreast, used chiefly in triumphal processions.

Quadrigen'rious, *a.* Consisting of four hundred.

Quadriju'gate, **Quadrij'ngous**, *a.* [*Lat. quatuor*, and *jugum*, yoke.] (*Bot.*) Pinnate, with four pairs of leaflets, as a certain leaf.

Quadrilat'eral, *a.* [*Lat. quatuor*, and *latus*, *lateris*, a side.] Having four sides, and necessarily four angles.

—*n.* (*Geom.*) A plane figure contained by four straight lines. Such a figure has four angles or corners, and is consequently also a *quadrangle*.

Quadrilat'eralness, *n.* State or property of being quadrilateral.

Quadrilit'eral, *a.* [*Lat. quadra*, and *litera*.] Consisting of four letters.

Quadrille, (*ka-dril'*) *n.* [*Fr.* from *It. quadriglia*, a troop of men formed into a square, from *Lat. quadrula*, dimin. of *quadra*, a square.] (*Dancing.*) A kind of dance, resembling the cotillion, made up of sets of dancers, four in each set; —also, a piece of music composed as an accompaniment to such dance.

(*Games.*) A game at cards by four persons, having some resemblance to whist.

—*v. a.* To play at quadrille.

Quadrillion, (*-ril'yun*) *n.* According to English notation, the number represented by a unit with 24 ciphers attached; according to French notation, a unit with 15 ciphers attached.

Quadrilo'bate, **Quad'rilobed**, *a.* [*Lat. quatuor*, four, and *Gr. lobos*, to be.] Four-lobed, as a certain leaf.

Quadriloc'ular, *a.* [*Lat. quatuor*, and *loculus*, cell.] (*Bot.*) Four-celled.

Quadrinu'm'bral, *a.* [*Lat. quatuor*, and *membrum*, member.] With four members or parts.

Quadrino'mial, *a.* [*Lat. quadra*, or *quatuor*, and *nomen*, *nominis*, name.] Consisting of four terms, as an algebraic quantity.

—*n.* (*Math.*) An algebraic quantity consisting of four terms.

Quadrinom'ical, *a.* Consisting of four denominations.

Quadrinom'ial, *a.* Having four terms.

Quadri'partite, *a.* [*Lat. quatuor*, and *partite*, to divide.] Divided into four parts.

(*Bot.*) Divided into four parts to the base.

Quadri'partitely, *adv.* In four divisions.

Quadrupartition, (*-tish'un*) *n.* [*Lat. quadripartitis*.] A division into four equal parts.

Quadrifol'lious, (*-rif'il-lus*) *a.* [*Lat. quatuor*, and *Gr. phyllon*, leaf.] Quadrifoliate; four-leaved.

Quad'rime, *n.* [*Lat. quatuor*, and *remus*, oar.] Among the Romans, a war-galley propelled by four banks of oars on each of its sides.

Quadrisection, (*-sek'shun*) *n.* [*Lat. quatuor*, and *sectio*, cutting.] A subdivision into four parts.

Quadrissyllab'ic, **Quadrissyllab'ic'al**, *a.* Four-syllabled.

Quadrissyll'able, *n.* [*Lat. quatuor*, and *Eng. syllable*.] A word consisting of four syllables.

Quad'rivalve, *a.* [*Lat. quatuor*, and *valva*, valve.] (*Bot.*) Four-valved, as a pericarp.

—*n.* One of four valves serving for a door.

Quadrival'vular, *a.* Having four valves.

Quadriv'ial, *a.* [*Lat. quadrivium*—*quatuor*, and *via*, a way.] With four ways meeting in a point or focus.

—*n.* One of the four lesser arts forming the quadrivium.

Quadriv'ium, *n.* [*Lat.*] In the language of the schools; the four lesser arts—*arithmetic*, *music*, *geometry*, and *astronomy*.

Quadroon', *n.* [*Fr. quarteron*; *Sp. cuarteron*, from *Lat. quatuor*.] The offspring of a mulatto and a white; a person of quarter-blood. (Also written *quarteron*, *quarteroon*, and *quateron*.)

Quadox'ide, *n.* (*Chem.*) An oxide containing a combination of four equivalents of oxygen with one of some other element.

Quadru'mana, *n. pl.* [*Lat. quadra*, *quatuor*, four, *manus*, a hand.] (*Zool.*) In the zoological system of Cuvier, an order of mammalia which he placed next below *Bimana*, and which contained the animals anatomically nearest man, the monkey and lemur families. As divided by him the *Q.* comprised three families, namely: 1. *Simiade*, or monkeys of the Old World; 2. *Cebide*, or monkeys of the New World; 3. *Lemuride*, or the Lemur tribe. The zoological relation of man to the lower animals has been differently considered by various scientists. Linnaeus included man, the monkeys, the lemurs, and the bats in his order of *Primates*. Cuvier separated the bats and man as distinct orders, and Owen went farther in classing man as one of four primary divisions or subclasses of the mammalia. The tendency of later naturalists, on the other hand, is to revert toward the Linnaean classification, it being claimed by Huxley, for example, that man in his anatomical structure differs no more from the higher apes than the latter differ from other members of their order. The basis of classification accepted by Cuvier, which was the apparent four-handed characteristic of the apes, as contrasted with the two-handed characteristic of man, does not seem to be well founded structurally. It is established on the external fact that the apes have free or opposable thumbs on the hind feet. This character is also met with in the opossums, a widely separated animal, and is therefore looked upon as of secondary importance, while the anatomy of the foot in man and the apes shows no marked difference in position in the bone of the hallux, or great toe. The *Q.* of Cuvier display in some instances a strong resemblance to man in general conformation, in structure, gait, and aspect, while others differ widely and are but slightly removed from the ordinary mammalia. The opposable thumb, while of great advantage in their arboreal life, renders walking in an erect attitude difficult.

Quad'ruped, *a.* [*Lat. quadrupes*—*quatuor*, and *pes*, *pedis*, a foot.] Having four legs and feet.

—*n.* (*Zool.*) All vertebrate animals with four extremities fitted for terrestrial progression were formerly so called, the scaly reptiles being distinguished, as oviparous quadrupeds, from the hairy, warm-blooded viviparous four-footed mammals. But as there are both reptiles and mammalia which have only two legs, and as

those of both classes which agree in having four legs, differ essentially in the important characters on which classificatory distinctions are now founded, the term *quadruped* is no longer used in a strict zoölogical sense as indicative of a particular group of animals.

Quadrupedal, *a.* Four-footed; going on four feet.

Quadruple, *u.* [Lat. *quadruplus*—*quadra*, or *quat- uor*, and *plico*, to fold.] Fourfold; four times told.

—*n.* Four times the sum or number; the product of any quantity multiplied by 4.

—*v. a.* To make fourfold; to multiply by four.

—*v. n.* To become fourfold, or four times as many.

Quadruplicate, *v. a.* [Lat. *quadruplicare*, from *quadruplex*, fourfold.] To quadruple; to make fourfold.

Quadruplicatio, *n.* [Lat. *quadruplicatio*.] Act of making fourfold, or the taking four times the simple sum or amount.

Quadruply, *adv.* Fourfold; so as to be quadruple; as, to be quadruply paid.

Quare, (*kwæ're*), *v. n.* [Lat.] Inquire; question; look into;—employed only in the imperative sense as a memorandum implying a doubt, and suggestive of an investigation.

Questor, (*kwēs'tor*), *n.* (Roman Hist.) Two *questores parricidii*, who acted as public prosecutors in cases of murder, or any capital offence, existed in Rome during the period of the kings. Two *questores classici*, who had charge of the public money, were first appointed about B. C. 485. The number was doubled B. C. 421, and it was decided that they should be chosen from the patricians and the plebeians. It was not, however, till B. C. 409 that a plebeian was elected, and then the choice fell on three plebeians and one patrician. They also had charge of the funds of the army, to which they were paymasters. The number of questors was increased to eight, B. C. 265. Sylla raised the number to 20, and Julius Caesar to 40. During the time of the emperors their number varied; and from the reign of Claudius I. (41–54) it became customary for questors, on entering office, to give gladiatorial spectacles to the people; so that none but the wealthiest Romans could aspire to the office. (Also written *questor*.)

Quaff, (*kwaf*), *v. a.* (*imp.* and *pp.* **QUAFFED** (*kwaf't*), [Gael. *cuach*, a drinking-cup; Ger. *kauch*; Gr. *kyathos*, from *kuō*, to contain.] To drink in large quantities; to swallow in copious draughts; to imbibe deeply.—To drink largely, royally; to indulge in deep potations.

"We . . . quaff carouses to our mistress' health."—*Shaks.*

Quaffer, *n.* One who quaffs or drinks largely and luxuriously.

Quagga, (*kwäg'ga*), *n.* [Hottentot.] (Zööl.) The *Equus quagga*, an animal of the family *Equidae*, which inhabits the southern parts of Africa, and bears a great resemblance to the zebra. It is less, however, than the zebra, with the hinder parts higher, and the ears shorter. The head, neck, mane, and shoulders are blackish-brown, banded with white; the ground colors gradually becoming paler, and the bands less distinct and diffused, as we proceed along the back towards the rump, which is grayish; the hind parts being rather spotted than striped. The dorsal line is black, margined on each side with a white line; belly, tail, and legs whitish; ears with two irregular black bands and white tip. The quagga is a social animal, living in large troops, is much more tractable than the zebra, and is said to be occasionally used at the Cape of Good Hope for domestic purposes.

Fig. 2197. — QUAGGA.

Quaggy, (*kwäg'gy*), *a.* Quaking, like a quagmire; yielding to the feet, or trembling under the foot, as soft, wet earth.

Quagmire, *n.* Quakemire; soft, wet earth, possessing a surface firm enough to bear a person, but which quakes, or trembles, or yields under the feet.

Quaich, **Quaigh**, (*kwä*), *n.* [Scot.; Gael. *cuach*.] In Scotland, a drinking-cup.

Quail, (*kwäl*), *v. n.* [O. Ger. *quelan*, to languish.] To fail in spirits; to languish; to sink into dejection; to give way; to quake; to cower; to become cast down.

"At this the errant's courage quails."—*Cleveland.*

Quail, *n.* [It. *quaglia*; Fr. *caille*; L. Lat. *qualea*, probably from the sound it utters.] (Zööl.) See **QUATEX**.

Quail-call, **Quail-pipe**, *n.* A call or pipe for enticing quails into a net.

Quaint, (*kwänt*), *a.* [O. Fr. *coint*, from Lat. *comptus*, trim, from *como*, *comptus*, to comb.] Scrupulously and superfluously exact; having petty elegance; fine-spun; spruce; nice; subtle; recondite; as, a *quaint* phrase, a *quaint* orator.—Artfully framed; affected; far-fetched; odd; whimsical; as, a *quaint* answer, a *quaint* joke.—Fanciful; singular; old-fashioned; odd and antique; as, a *quaint* carving, a *quaint* costume.

Quaintly, *adv.* Nicely; exactly; with petty neatness or spruceness; oddly; fancifully; singularly.

Quaintness, *n.* Quality of being quaint; niceness; petty trimness or elegance; oddness; peculiarity; as, *quaintness* of wit.

Quak'ake Creek, in Pennsylvania, enters the Lehigh River in Carbon co.

Quake, (*kwäk*), *v. n.* [A. S. *cwacian*; Ger. *quackeln*, another form of *wackeln*.] To shake, tremble, shudder,

or quiver; to be agitated with quick, spasmodic motions, continually repeated; as, *quaking* with fear.—To shake with violent convulsions as well as with trembling; to move or be agitated, as the earth under the feet; as, a *quaking* bog.

—*n.* A shake; a shudder; a quivering; a trembling, or tremulous or spasmodic agitation.

Quaker, (*kwük'r*), *n.* One who quakes.—One of the religious sect called the *Society of Friends*. See **FRIENDS**.

Quak'er Hill, in New York, a post-village of Dutchess co., abt. 90 m. S. of Albany.

Quak'erish, *a.* Like a Quaker; puritanical; belonging or relating to a Quaker, or to the Society of Friends.

Quak'erism, *n.* The peculiar manners, tenets, or worship of the Society of Friends. See **FRIENDS**.

Quak'erly, *a.* Resembling Quakers.

Quak'er Springs, in Georgia, a village of Columbia co., abt. 80 m. N.E. by E. of Milledgeville.

Quak'ertown, or **FAIRVIEW**, in New Jersey, a post-village of Hunterdon co., abt. 7 m. W. by N. of Flemington.

Quak'ertown, in Pennsylvania, a post-borough of Bucks co., about 38 m. N. of Philadelphia.

Quak'iness, *n.* The state of quaking, shaking, or trembling; as, the *quakiness* of a quagmire.

Quak'ing-bog, *n.* Peat-bog in a growing state, and so saturated with water that a considerable extent of surface will quake or shake, when pressed on by the foot, or by any other body. Such bogs are unfit for any useful purpose until they are drained.

Quak'ing-grass, *n.* (Bot.) See **BRIZA**.

Quak'ingly, *adv.* In a quaking manner; tremulously.

Quaky, *a.* Shaky; tremulous.

Qualifiable, *a.* Modifiable; that may be qualified.

Qualification, *n.* [Fr., from L. Lat. *qualificatio*.] Act of qualifying, or state of being qualified; adaptation.—Any natural endowment, or any acquirement which fits a person for a place, office, or employment, or enables him to sustain any character with credit and success; legal power or requisite.—Act of limiting, or state or condition of being limited; limitation; restriction; modification; abatement; diminution; as, to speak one's mind without *qualification* of words.

Qualificative, *n.* That which qualifies, modifies, or limits; a qualifying phrase or condition.

Qualificator, *n.* [L. Lat.] (Eccl.) In the ecclesiastical courts of the Roman Catholic Church, an officer appointed to examine and prepare causes for trial.

Qualified, (*kwäl'i-fd*), *a.* Having qualification; fitted or adapted by accomplishments or endowments; competent; as, a *qualified* person;—also, limited; modified; as, a *qualified* statement.

Qualifiably, *adv.* In the way of qualification; with modification.

Qualifedness, *n.* State or quality of being qualified, or adapted.

Qualifier, *n.* The person who, or thing which, qualifies;—also, that which restricts, modifies, abates, or restrains.

Qualify, *v. a.* [Fr. *qualifier*; Lat. *qualis*, of what kind or sort, and *facio*, to make.] To give proper and suitable qualities to; to fit, equip, prepare, or adapt for anything; to furnish with the knowledge, skill, or other accomplishment, necessary for any place, character, or purpose; to make capable of any employment or privilege; to furnish with legal power or capacity; as, to *qualify* for the Church, a *qualified* lawyer, voter, &c.—To invest with individual quality; to modulate; to vary; as, to *qualify* the sound of the voice.—To abate; to soften; to diminish; to ease; to assuage; to make less strong, as, liquors; as, to *qualify* heat, to *qualify* pain.—To modify; to regulate; to limit by exceptions or restrictions; as, to *qualify* a statement or argument.

—*v. n.* To become qualified or fit; to be adapted, as for an office or employment.—To take the necessary steps for rendering one's self capable of holding any office or enjoying any privilege.—To establish a claim or right to exercise the elective franchise.

Qualitative, *a.* Relating to quality; estimable according to quality.

Qualitative analysis. (Chem.) See **ANALYSIS**.

Quality, *n.* [Fr. *qualité*; Lat. *qualitas*, from *qualis*, of such a kind, sort, or nature, such as.] Property; attribute; that which belongs to a body or substance, or can be predicated of it; peculiar power, capacity, or virtue; distinguishing trait; moral characteristic, good or bad; as, a man of noble or base *qualities*.—Comparative rank; condition in relation to others; character; as, a person of good *quality*.—Assumed or asserted rank, part, standing, or position.—Acquirement; accomplishment; acquisition; special qualification.—Superior rank or distinction; elevation of birth, station, or character; as, a man of *quality*.

"To quality belongs the highest place."—*Young.*

The *quality*. Persons of high rank or station, in a collective sense, as distinguished from the *commonalty*; as, the fashions were set by the *quality*.

"He entertained the *quality* with his surprising wit."—*Thackeray.*

Quality-binding, *n.* A kind of worsted tape used for binding carpets and the like.

Qual'ly, *n.* An iron pan used in the East Indies in the manufacture of sago.

Qualm, (*kwælm*), *n.* [A. S. *cwealm*, death, slaughter, from *cwellan*, to slay.] A sinking, as if in death; a sudden throes of suffering, pain, or agony; a sudden attack of illness, faintness, or distress.—Particularly, a rising in the stomach; a sudden fit of nausea, or a disposition or effort of the stomach to eject its contents.—A scruple of conscience, or uneasiness of mind.

"Some sudden qualm has struck me to the heart."—*Shaks.*

Qualm'ish, *a.* Sick at the stomach; having a disposition to vomit; affected with nausea or sickly languor.

Qualm'ishly, *adv.* In a qualmish or nauseating manner.

Qualm'ishness, *n.* Nausea; sickly languor.

Quam'ash, *n.* [Ind.] (Bot.) See **CAMASSIA**.

Quam'oolit, *n.* [From Gr. *kyamoo*, a beam.] (Bot.)

A genus of plants, order *Convolvulaceæ*. *Q. vulgaris*, the Jasmine, Bludweed, or Cyprus Vine, is an exceedingly delicate vine, found from Penna. down to the Gulf, and generally cultivated. Stems glabrous, very slender, twining and climbing to the height of 5–10 ft. Flowers much smaller than those of the common morning-glory, scarlet, varying to crimson and rose-color. Trained upon twine it forms a most delicate and beautiful awning.

Quau, *n.* A suppositious coin of Cochin China, worth abt. 85 cents.

Quandary, *n.* [A corruption from Fr. *qu'en dirai-je?* what shall I say of it?] A state of puzzle, perplexity, or bewilderment; mystification; doubt; uncertainty.

Quant, (*kwänt*), *n.* A bargeman's pole.

Quantie, *n.* [Lat. *quantitas*, quantity.] (Math.) In its widest sense, the term denotes a rational and integral algebraical function. As, however, all such functions may be supposed to have resulted from the substitution of unity in place of one of the variables of a homogeneous function, a *quantie* is usually understood to denote any rational, integral, homogeneous function.

Quantico, in Maryland, a post-village of Wicomico co., abt. 90 m. S.E. of Annapolis.

Quantification, *n.* [Lat. *quantus*, how much, and *facere*, to make.] The introduction of the element of quantity.

Quantify, *v. a.* To rate; to qualify with respect to quantity; to fix or determine the quantity of.

Quantitative, *a.* [Lat. *quantitativus*.] Relating to quantity.

Quantitative analysis. (Chem.) See **ANALYSIS**.

Quantitive, *a.* Estimable according to quantity.

Quantitively, *adv.* Measurably in relation to quantity.

Quantity, *n.* [Fr. *quantité*; Lat. *quantitas*, from *quantus*, how much, from *quam*, to what a degree.] Bulk, weight, or number; whatever admits of increase or diminution; whatever can be numbered or measured; that property of anything which may be increased or diminished; a mass or aggregate of matter of indeterminate dimensions or weight; size; measure.

(Logic.) The extent to which the predicate in a proposition is asserted of the subject. If it be asserted of the whole (all, none), the proposition is *universal*. If it be asserted of part only (some), the proposition is *particular*. A singular proposition is *universal*.

(Gram.) See **PROSODY**.

(Mus.) The relative duration of a tone.

(Math.) That to which mathematical processes are applicable. Quantity is distinguished into *continued* and *discrete*. It is *continued* when the parts are connected together, and is then called *magnitude*, which is the object of geometry. It is *discrete* when the parts have an unconnected and independent existence, forming *multitude* or *number*, which is the object of arithmetic. The quantity of matter in a body is termed its *mass*; the quantity of motion it possesses, its *momentum*.

A certain portion, amount, or part; a considerable bulk or sum; a determinate or estimated measure or number; as, a *quantity* of money, a *quantity* of facts.—A large portion; as, drink taken in *quantities*, that is to say, in large quantities.

Quantity of estate. (Law.) Its duration of continuance, occupation, or degree of interest, whether in fee or for life, or for years.

Unknown quantities. (Math.) Quantities whose values require seeking.—*Known quantities.* (Math.) Quantities whose values are demonstrated.

Quantum, *n.* [Lat., from *quantus*, how much.] Amount; quantity. (R.)

Quantum sufficit. (Abbreviated *quantum suff.*) [Lat., as much as will suffice.] (Med.) A quantity that will suffice.

Quaquaver'sal, *a.* [Lat. *quaqua*, whithersoever, and *versus*, from *vertere*, to turn.] Dipping in any direction.

(Geol.) Dipping in all directions round a common centre, said of strata.

Quarantine, (*kwor-an-teen*), *n.* [It. *quaranta*, forty.] A regulation to prevent the introduction of infectious diseases into a city or country, by obliging ships, goods, or persons leaving a place suffering from infectious diseases, to remain a certain time before entering another place. Quarantines are said to have been first adopted in Italy, in the 15th century; and the name is derived from the period of detention having been fixed at forty days. The period is now regulated according to circumstances, and special laws are prescribed regarding it. Ships ordered on quarantine must repair to the place appointed, and continue there during the time prescribed, carrying a yellow flag at the main, and having no intercourse with the shores, except for necessary provisions, which are conveyed with every possible precaution. When the time expires, and the goods have been opened and exposed to the air as directed, they are admitted to port. A ship arriving in port, and suspected of being infected with a malignant contagious disease, is obliged to forbear all intercourse with the land.

(Law.) The period of forty days permitted to the widow to retain residence in the dwelling-house of which her husband died seized.

—*v. a.* To cause to perform quarantine; to compel to remain at a distance from shore for some limited period.

on account of real or supposed infection; to prohibit from intercourse with a city or its inhabitants.

Quarles, in *Wisconsin*, a village of Racine co., abt. 90 m. S.E. of Madison.

Quarrel, (*kwär'rl*), *n.* [*W. cwarel*.] A dart discharged by a cross-bow; — so called from the heads, which were square pyramids of iron.

"Twang'd the string, out flew the quarrel long." — *Fairfax*.

—A diamond-shaped pane of glass, or a square pane placed diagonally. — A paving-brick, or stone of similar shape. — A glazier's diamond.

—*n.* [*Fr. querelle*, from *L. Lat. querelator*, from *Lat. querēlo*, a complaint, from *queror*, to complain.] A brawl; an affray; a contest; an altercation; a feud; a contentious or disputed cause; breach of friendship or concord; open variance between parties; cause of dispute; ground of ill-will or objection.

"Thrice is he armed that hath his quarrel just." — *Shaks.*

To pick a quarrel, to force an altercation or contest; to seek wilfully to bring about contention or ill-will.

—*v. n.* [*Fr. quereller*.] To complain; to cavil; to carp; to find fault. — To dispute violently, or with loud and angry words; to wrangle; to altercation; to scold; to fight; to scuffle; to contend; to squabble; to fall into variance; — said of two, or a small number of persons. — To be at variance; to disagree; not to be in accordance with in form or essence.

—*v. a.* To quarrel with. — To enforce by a quarrel; as, to quarrel one out of one's rights.

Quarreller, *n.* One who quarrels, wrangles, or squabbles.

Quarrellet, *n.* A small diamond-shaped square or lozenge; as, "quarrellets of pearl." — *Herrick*.

Quarrellingly, *adv.* Contentiously; wranglingly.

Quarrelsome, (*kwär'rel-sum*), *a.* Apt or disposed to quarrel or wrangle; given to brawls and contention; inclined to squabbling or petty fighting; easily irritated or provoked to contest; contentious; irascible; choleric; hot-tempered; as, a quarrelsome woman, a quarrelsome disposition or mood.

Quarrelsome, *adv.* In a quarrelsome manner; contentiously.

Quarrelsomeness, *n.* Quality of being quarrelsome; petulance; disposition to engage in squabbling, contention, or brawls.

Quarrier, *n.* A quarry-man; a worker in a quarry.

Quarry, (*kwär'ry*), *n.* [*O. Fr. quarre*.] A square-headed arrow. — A lozenge-shaped pane of glass. — A glazier's diamond.

— [*Fr. querir*, from *Lat. quæro*, to search after.] The game which a hawk is seeking, pursuing, or has killed; a part of the entrails of the beast taken in hunting given to the hounds; also, a heap of killed game.

—*v. n.* To prey upon, as a vulture or harpy.

Quarry, *n.* [*O. Fr. quarryere*, from *L. Lat. quadraria*, a place where stones are excavated and cut, from *Lat. quadro*, to square.] A place, hole, cavern, or pit where stones are dug from the earth, or separated from a large mass of rocks, and hewed or squared; an excavation; a stoue pit.

—*v. a.* To dig or take from a quarry; to excavate; as, to quarry slate.

Quarry-man, *n.* A quarrier; one who works in a quarry.

Quart, (*kwört*), *n.* [*It. quarta*; *Fr. quarte*; *Lat. quartus*, the fourth, from *quatuor*, four.] Two pints, or the fourth of a gallon; as, a quart of ale. — A vessel holding the fourth of a gallon.

Quart, (*kürt*), *n.* (*Games*.) Four sequent cards of the same suit in the game of piquet.

Quartan, *a.* [*It. and Lat. quartana*; *Fr. quartain*.] Pertaining or relating to the fourth day; happening every fourth day; as, a quartan ague.

—*n.* A measure containing the fourth part of some other measure.

(*Med.*) An ague, or intermittent fever, whose paroxysms occur every fourth day, or after an interval of seventy-two hours. A double quartan ague is a fever that returns twice in succession, — first on the fourth or proper day, and again on the fifth day also, thus making a double quartan return on every third day.

Quartation, *n.* [*Fr.* from *Lat. quartus* — *quatuor*, four.] (*Chem. and Metall.*) A term formerly applied to the separation of silver from gold by means of nitric acid. To extract the whole of the silver from gold by means of nitric acid, it is necessary that there should be at least three parts of silver to one of gold, otherwise the gold protects the silver from the action of the acid; so that, in thus separating these metals, it was customary where gold greatly predominated, to add silver till it constituted at least three-fourths of the alloy. This separation of gold from silver is now effected by sulphuric acid.

Quarter, *n.* [*Fr. quart, quartier*; *Ger. quartier*; *Lat. quartus*.] The fourth part of anything; — hence, specifically, the fourth part of 112 lbs. avoirdupois, that is 28 or 25 lbs., according as the hundred-weight is reckoned at 112 or 100 lbs. The fourth part of a ton in weight, or 8 bushels of grain; as, a quarter of wheat; also, the fourth part of a chaldron of coal. — In cloth-measure, the fourth part of a yard. — A particular region or division of a city, town, or country; as, the fashionable quarter of London. — A term of scholastic or collegiate study, properly, the fourth part of a year; as, he leaves school next quarter. — That part of a shoe which forms the side, from the heel to the vamp.

— One limb of a quadruped with the adjoining parts; one-fourth part of the carcass of an animal, including a limb; as, a quarter of an ox; — often used in composition; as, a fore-quarter of lamb. — (*Far.*) That part of a horse's foot

between the toe and the heel. — A fourth part of the year, or three months; as, a quarter's salary. — (*Naut.*) The afterpart of a ship's top-sides, comprising about one-fourth of her total length; as, the starboard quarter. — (*Building*.) Slight upright pieces of timber placed between the puccheons and posts, used to lathe upon. These are of two sorts, *single* and *double*: the single quarters are sawn to 2 inches thick and 4 inches broad; the double quarters are sawn to 4 inches square. — *pl.* (*Mil.*) The encampment on one of the principal passages round a place besieged, to prevent relief and intercept convoys. — (*Nav.*) The fourth part of the distance from one point to another, being the fourth part of 11° 15', or, otherwise, about 2° 49'; — called also *quarter-point*. — Proper station or assigned location or position; specific place or situation; — specifically, place of lodging or temporary residence; as, bachelor quarters. — Shelter; entertainment; as, to live at free quarters. — *pl.* (*Naut.*) Stations assigned to officers and men in a naval action; as, to beat to quarters. — (*Mil.*) Military stations, lodgings, or cantonments; as, officers' quarters. — Hence, the remission or sparing of the life of a captive or an enemy when in one's power; mercy granted by a conqueror to his foe or opponent, when no longer able to defend himself.

"He offered them quarter for their lives, if they gave up the castle." — *Clarendon*.

(*Astron.*) The fourth part of the moon's period, or monthly revolution; as, the first quarter after the full. A region in the hemisphere or great circle; one of the large divisions of the globe. — A point of the compass; primarily, one of the four cardinal points.

(*Her.*) An ordinary of quadrangular form, resembling a banner, and laid as a charge upon the field, of which it contains one-fourth part, as the term implies (Fig. 2198). In the corrupt Latin of ancient times it was rendered *quartera*, and by Uredus *pars*, which might apply to any other part; but the latter author also uses the word *quadrans*. The quarter is formed by two lines, one drawn from the side of the shield in traverse, to the centre, and the other perpendicularly from the chief to meet it in the same place.

Fig. 2198.
QUARTER.

Head-quarters, (*Mil.*) See HEAD-QUARTERS. — *On the quarter*, (*Naut.*) The bearing or position of an object seen between aft and abeam; as, a sail on the port quarter. — *Quarter-aspect*, (*Astron.*) See ASPECT. — *Quarter-badge*, (*Naut.*) An ornamental part of a ship's stern-frame, generally presenting the appearance of a window. — *Quarter-bill*. A list of the stations to which officers and men are told off, preparatory to a ship-of-war going into action. — *Quarter-block*. A block fitted under a yard, on each side of the slings, to reeve the clew-lines and sheets through. — *Quarter-cloths*. Long cloths of painted canvas, extending on the exterior side of the quarter-netting from the upper part of the galley of a ship to the gangway. — *Quarter-face*. A face turned sideways, so that one quarter only is visible. — *Quarter-gallery*, (*Naut.*) The projecting convenience and ornament of the top-side, which is connected with the stern of a ship. — *Quarter-pieces*. The carved figures at the after part of the quarter-gallery adjoining the taffrail, and forming the boundary of the stern. — *Quarter-rails*. Narrow rails or planks, reaching from the taffrail to the ship's gangway, serving as a fence to the quarter-deck. — *To give or show quarter to*, (*Mil.*) To forbear to kill, or to admit to surrender, as a conquered enemy.

Quarter, *v. a.* To divide into four equal parts. — To divide; to separate into parts or partitions; to parcel into distinct regions or compartments. — To lodge; to fix on a temporary dwelling; — especially, to station soldiers for lodging. — To deal out; to apportion; to allot.

"This isle . . . he quarters to his blue-haired deities." — *Milton*. — To punish by tearing in pieces by four horses, one attached to each limb of a criminal; — also, to slay by cutting the body into four quarters.

(*Her.*) To bear as an adjunct to the hereditary achievement. — See QUARTERING.

To quarter arms, (*Her.*) To place the armorial bearings of other families in the compartments of a shield or escutcheon. — See QUARTERING.

—*v. n.* To place one's self in quarters; to lodge; to have a temporary shelter or residence; as, he is comfortably quartered on a rich aunt. — To drive a carriage along a road in a manner to evade the ruts.

Quarterage, *n.* A quarterly payment or allowance.

Quarter-boat, *n.* (*Naut.*) A large boat suspended from the davits on a ship's quarter.

Quarter-day, *n.* A day considered as ending a quarter of the year; — hence, usually one on which rent falls due. — The days most generally regarded as quarter-days are (1) *Lady-day* (March 25), (2) *Midsummer-day* (June 24), (3) *Michaelmas-day* (Sept. 29), and (4) *Christmas-day* (Dec. 25).

Quarter-deck, *n.* (*Naut.*) That portion of the uppermost deck of a ship between the main- and mizzen-masts, when there is a poop; but when there is no poop, extending from the mainmast to the stern. On ships-of-war, this forms the *parade*.

Quarter-evil, or **BLACK-QUARTER**, *n.* (*Far.*) An apoplectic disease peculiar to cattle, being a form of carbuncular disease, or anthrax. It is not spread by contagion, but is attended, especially in warm climates, with the development of a blood-poison destructive to man and the lower animals.

Quarter-foil, *n.* (*Arch.*) See FOIL, and Fig. 1042.

Quarter-gun, *n.* (*Naval*.) An assistant gunner.

Quartering, *a.* (*Naut.*) Sailing large, but not before the wind. — Being on the quarter; as, a quartering breeze.

—*n.* Act of dividing into quarters.

(*Mil.*) Assignment of quarters or billets for soldiers.

(*Arch.*) An assemblage of quarters. — See QUARTER.

(*Her.*) The marshalling, or regular arrangement or disposal of various coats in one shield, thereby to denote the several alliances of one family with the heiresses of others. The earliest instance of quartering in England is found in the paternal arms of Eleanor, daughter of Frederick III., king of Castile and Leon, and first wife of Edward I., as represented on her tomb in Westminster Abbey (Fig. 2199), — the castle of Castile occupying the first and fourth quarters, and the lion of Leon the second and third.

Fig. 2199.

Quartering-block, *n.* A block on which the body of a person condemned to be quartered was cut into pieces.

Quarterly, *a.* Containing, or consisting of, a fourth part; as, the moon's quarterly seasons. — Recurring at the end of each quarter of the year; as, quarterly payments.

—*n.* A periodical magazine or review published four times a year; as, the *London Quarterly*.

—*adv.* By quarters; once every quarter of a year; as, his dividends are paid quarterly.

Quartermaster, *n.* (*Mil.*) An officer whose duty is to provide quarters, provisions, forage, and ammunition for the troops, and superintend the supplies and means of transportation.

(*Naut.*) A petty officer in a ship-of-war, who attends to the helm, binnacle, signals, &c., under the directions of the sailing-master. He has also superintendence of the storage of provisions, ballast, &c.

Quartermaster-general, (*Mil.*) One of the chief staff-officers of an army. His department is charged with all orders relating to the marching, embarking, disembarking, quartering, billeting, and cantoning of troops, encampments, and camp-equipage.

Quartern, *n.* [*Fr. quarteron*.] A gill, the fourth part of a pint; as, a quartern of gin. — The fourth part of a peck. — A loaf of bread weighing about 4 lbs; — usually termed *quartern-loaf*.

Quarteron, *n.* [*Fr.*] A quarter of a pound. — A tale of goods. — A quadron. See QUADRON.

Quarter-round, *n.* (*Arch.*) Same as ECHINUS, or OVULO, *q. v.*

Quarter-sessions, (*sësh'unz*), *n. pl.* (*Eng. Law.*) A court, or meeting of justices of the peace, who assemble every quarter of the year, for judicial as well as miscellaneous business. They are mostly connected with the trial of criminals.

Quarter-sight, *n.* (*Ord.*) In gunnery, one of a series of sights on the side of a smooth-bore gun, consisting of notches on the base-ring, the lowest of which forms, with a notch on the side of the swell of the muzzle, a line parallel to the axis; the others forming lines inclined to the first at angles of from 15' to 30°.

Quarter-staff, *n.* A weapon of defence, so called from the manner of using it. It is a stout pole, of heavy wood, about 6½ feet long, shod with iron at both ends. It is grasped in the middle by one hand, and the attack is made by giving it a rapid circular motion, which brings the loaded ends on the adversary at unexpected points. It was formerly a favorite weapon with the English for hand-to-hand encounters.

Quartet, **Quartette**, *n.* [*It. quartetto*, from *Lat. quartus* — *quatuor*, four.] (*Mus.*) A musical composition of four parts, for either four voices, with or without an accompaniment, or instruments, generally of the stringed kind; *i. e.*, two violins, one viola, and one violoncello. Some splendid specimens of instrumental *Q.* may be seen in the works of Haydn, Mozart, Beethoven, the two Rombergs, Spohr, Ries, Onslow, Feska, and Mendelssohn.

(*Poet.*) A stanza containing four lines.

— A small lounge, sofa, or ottoman.

Quartie, *n.* (*Math.*) See QUANTIC.

Quarterile, *n.* [*Fr.* from *Lat. quartus*, the fourth.] (*Astron.*) The aspect or appearance of two planets, whose positions are at a distance of 90° on the zodiac.

Quarterine, *n.* [*Fr.* from *Lat. quartus*.] (*Bot.*) The fourth envelope of the vegetable ovule, beginning to count from the outside.

Quarto, *n.*; *pl.* QUARTOS. [*Lat. quartus*.] A book of the size of a fourth of a sheet; a size made by twice folding a sheet, which then makes four leaves. (Abbreviated *4to*.)

—*a.* Denoting the size of a book in which a sheet makes four leaves.

Quarto, (*kwär'to*), a town of the island of Sardinia, 4 m. E.N.E. of Cagliari; *pop.* 5,406.

Quartz, (*kwörtz*), *n.* [*Ger.*] (*Min.*) Crystallized silica. As a mineral, it is properly colorless; but it occurs also in various shades of color, forming the amethyst when purple, topaz when yellow, cairngorm when smoke-color, and passing, by mixture with other silicious minerals, into jasper, hornstone, chert, flint, chalcedony, agate, and numerous others. *Q.* crystallizes in hexagonal prisms with pyramidal summits.

Quartzburg, in *California*, a village of Mariposa co., abt. 40 m. S.E. of Sonora.

Quartziferous, *a.* [*Eng. quar'z*, and *Lat. ferre*, to

bear.] (*Min.*) Quartz-bearing; consisting chiefly of quartz, as certain ores.

Quartzite, Quartz-rock, n. (*Min.*) An aggregated rock consisting of quartz not absolutely crystalline. It sometimes appears in strata, and differs from sandstone in being more closely compacted, and having a finer grain. It passes into sandstone on one hand, and crystalline quartz on the other.

Quartzoid, n. [*Eng. quartz, and Gr. cidōs, form.*] (*Crystallog.*) A double six-sided pyramid.

Quartzose, Quartzous, Quartz'y, a. Containing or resembling quartz; partaking of the nature or characteristics of quartz.

Quas, n. See QUASS.

Quash, (kwōsh'), v. a. [*A. S. cwysan; Fr. casser; Lat. quasso, frequent. of quatō, to shake.*] To crush; to batter; to break down or in pieces.

—Hence, by implication, to subdue suddenly or completely; to quell; to suppress; as, to quash a revolt.

(*Law.*) To abate, annul, overthrow, or make void; as, to quash an indictment.

—v. n. To be shaken with a noise.

Quash, n. Same as SQUASH, *q. v.*

Quash'ee, n. A cant appellation for a negro.

Quasi, [*Lat.*] As if; in a certain sense or degree; having the appearance or resemblance of something; — used as a prefix or first member of a compound; as, a quasi-agreement, or an agreement obliging a party in favor of another, without any real obligation between them; a quasi-government, a government that has some, but not all the peculiar attributes of a government; quasi-historical, seemingly or apparently historical.

Quasimodo, n. [*Lat. quasi modo.*] (*Ecc.*) In the Roman Catholic Church, the first Sunday after Easter; so called because the Introit for that day begins with the words *Quasi modo geniti infantes*. (1 Pet. ii. 1.)

Quasqueton, in Iowa, a beautifully situated and thriving town of Buchanan co., 10 m. S.E. of Independence, on the E. bank of Wapsipinicon River.

Quass, Quas, n. [*Pol. kwass.*] A thin, sour beer drunk by the Russians, made by pouring hot water on rye meal.

Quassation, n. [*Lat. quassatio, from quassare, to shake.*] Act of shaking; also, state of being shaken.

Quassia, (kwōsh'ya), n. [*From Quassi, a slave who first used it as a remedy for malignant fever at Surinam.*] (*Bot.*) A gen. of plants, ord. *Simarubaceæ*. The wood of *Q. amara*, a native of Surinam, is intensely bitter, and was formerly much used as a febrifuge and tonic. It is the original quassia of the shops; but it is no longer imported, having been replaced by the wood of *Picrasma excelsa*, a native of Jamaica. The two products are sometimes distinguished as *Surinam quassia* and *Jamaica quassia*. The flowers of *Q. amara* are stomachic. See PICRASMA.

Quat, n. [*D. quetsen; A. S. cwysan, to crush.*] A pustule or pimple.

Quaternary, a. [*Lat. quaternarius, from quaterni, by fours.*] Consisting of fours; by fours.

(*Geol.*) Previous to the tertiary; — a term applied to strata supposed to be more ancient than the upper tertiary.

—n. The number four.

Quaternate, a. Arranged in sets of four.

(*Bot.*) Having the verticillate appendages arranged by fours.

Quaternate-pinnate, a. (*Bot.*) Pinnate, with the pinnæ disposed in fours; as, a quaternate-pinnate leaf.

Quaternion, n. [*Lat. quaternio.*] The number four; — used poetically.

—A file of four soldiers. — Four things taken collectively; a set of four parts, objects, or individuals; as, quaternions of consonants. (*Holder.*) — A quadrisyllable.

(*Math.*) The metrographic relation which exists between any two right lines having definite lengths and directions in space.

—v. a. To divide into files or companies.

Quateron, n. See QUADROON.

Quatorze, (ka-tōrz'), n. [*Fr., fourteen.*] (*Games.*) In piquet, the four aces, kings, queens, and tens; — so called because each quatorze counts fourteen points.

Quatrain, (kāt'run), n. [*Fr., from quatre, from Lat. quatrion.*] (*Poet.*) A piece consisting of four verses, the rhymes being usually alternate, but sometimes, especially in French poetry, intermixed, the first and fourth, second and third, rhyming together.

Quatre Bras, (kāt'bra'), a village of Belgium, prov. of S. Brabant, 3 m. S.S.E. of Genappe, and 7 m. from Ligny, where four roads meet, a place celebrated in history as the spot where the English and French armies first met in the campaign of 1815, the day previous to the battle of Waterloo, and where fell the Duke of Brunswick.

Quatre-feuille, Quatre-foil, n. (*Arch.*) Same as quarterfoil. See FOIL.

Quattrocentismo, n. [*It. quattrocento.*] (*Fine Arts.*) A term expressing the peculiar or characteristic taste or so-called *purism* in art, prevailing in Italy in the 15th century. Hard and rigid in its manner, positive in its coloring, but predominating in sentiment; yet æsthetically very imperfect, it is the triumph of the Cinque-cento to have supplied the æsthetic qualities wanting in the art of this period, and to have reformed its technical deficiencies, the sensuous being made coordinate with the sentimental. See CINQUE-CENTO.

Quatuor, n. [*Lat., four.*] (*Mus.*) A quartette for instruments.

Quaver, (kwā'vēr), v. a. [*Sp. quiebro, a quaver; allied to quiver, waver, and vibrate.*] To tremble; to vibrate; as, a quavering motion. — To cause one's voice to move or shake; to sing with tremulous modulations of voice; to produce a shake on a musical instrument.

—n. A shake or rapid vibration of the voice, or a shake on a musical instrument.

(*Mus.*) A character, , whose measure is equal to

half a crotchet, or $\frac{1}{8}$ of a semibreve.

Quaverer, n. A warbler.

Quay, (kē), n. [*D. kaai; Fr. quai, from Armor. kae, a fence; W. cae, from cau, to shut up.*] A mole or bank formed on the side of a river; an artificial bank or pier for the purpose of loading and unloading vessels; a wharf; a jetty.

—v. a. To furnish with quays.

Quayage, (kē'āj), n. Money paid for the use of a quay; wharfage.

Quay-berth, n. A berth for loading and unloading ships in a public dock.

Queachy, (kwē'che), a. Shaking; trembling or yielding under the pressure of the feet; as, queachy sands.

Quean, (kwēn), n. [*A. S. cwēne, harlot.*] A young woman; a girl.

"Oh, the fickle, faithless quean." — Scott.

—A worthless woman; a strumpet; as, "a scolding quean." — Shaks.

Queasiness, n. State of being queasy; qualmishness; nausea; inclination to vomit; sickness of the stomach.

Queasy, (kwē'zy), a. [*A. S. cwysan, to crush, bruise; Goth. quaisu, pain.*] Sick at the stomach; affected with nausea; inclined to nausea; — hence, squeamish; fastidious; over-nice. — Causing nausea; producing discomfort of mind; as, a queasy question.

Quebec, a prov. of the Domiu. of Canada, q. v., formerly called Lower Canada.

Quebec, (que-bek'), a city of N. America, and cap. of prov. of Quebec, on a promontory of the St. Lawrence, formed by that river and the St. Charles, 400 m. from the Gulf of St. Lawrence; Lat. 46° 49' 1" N., Lon. 71° 13' W. The ridge of land on which it stands is from one to two miles broad. It has Cape Diamond, a bold promontory, on the N.; and across it, at the N.E. or lower end, the town of Quebec is built. The fortifications, extending across the breadth of the peninsula, have a circuit of abt. 2 $\frac{3}{4}$ m., and are divided into two parts, namely, the Upper and Lower. The upper town may be said to stand on Cape Diamond, at least upon the side of it which slopes towards the St. Charles; the lower is situated immediately under Cape Diamond. The peculiar situation of the city occasions great irregularity and unevenness in the streets. The principal public buildings are the castle of St. Louis, on the summit of the rock (Fig. 494), the court-house, the Protestant cathedral, the Catholic cathedral, a lofty, spacious, plain, stone edifice; the Ursuline convent,

Fig. 2200. — QUEBEC.

the jail, the barrack, which has an ordnance office, armory, storehouses, and workshop; a reading-room, royal institution, French grammar-school, medical school, mechanics' institute, city library, and several benevolent institutions. There are two market-places, a place d'armes, a parade, and an esplanade. *Manuf.* Soap, candles, tobacco; and there are distilleries, breweries, and shipbuilding-yards. Its harbor admits ships of the line, and it is the great entrepôt for the trade of Canada with Great Britain, the U. States, &c. *Q.* was founded by the French in 1608. In 1629 it was taken by the English, but afterwards restored. It was again taken in 1759, by the English, under the command of Gen. Wolfe, who, together with the French commander, fell in the engagement; and by the peace in 1763 it was ceded with the rest of Canada, to Great Britain. *Pop.* (1901) 68,840.

Quebrobo, or CABROBO, (ka-brō'bo), a village of Brazil, abt. 275 m. W.N.W. of Porto Seguro; pop. 2,000.

Quechee, ORTA QUECHEE, or WATER QUECHEE, in Vermont, a small river flowing into the Connecticut from Windsor. — A post-village of Windsor co., abt. 50 m. S. by E. of Montpelier.

Que'dah, or Que'da, a state of the Malay Peninsula, between Lat. 5° 40' and 7° N., Lon. 99° 40' and 101° E.; area, 4,500 sq. m. It is densely wooded, well-watered, and produces tin, gold, tortoise-shells, rice, rattans, damar, and hides. *Cap.* Quedah. *Pop.* Estimated at 70,000.

Quedlinburg, a town of Prussian Saxony, on the Bode, 30 m. S.W. of Magdeburg. *Manuf.* Woollen fabrics. *Pop.* 14,200.

Queen, (kwēn), n. [*A. S. cwon, a woman; O. Ger. quena; Gr. gūnē; Celt. coinore.*] The wife or consort of a king.

A female sovereign reigning alone; as, Victoria, *Queen*

of Great Britain. — A female who is chief or preëminent among others; as, a queen of May. — The sovereign of a swarm of bees, or the female of the hive; — called also queen-bee.

(*Games.*) In chess, one of the pieces ranking next after the king in importance. — A card bearing the effigy of a queen; as, the queen of diamonds.

Queen-consort, the wife of a reigning king. — Queen-dowager, the widow of a king. — Queen of May. See MAY-QUEEN. — Queen of the meadows. (*Bot.*) See SPIRÆA.

Queen-regent, Queen-regnant, a queen reigning in her own right. — Queen's Bench. (*Eng.*) See BENCH.

Queen's-metal, an alloy intermediate between Britannia-metal and pewter, used for the manufacture of common spoons, tea-pots, &c. It consists of nine parts of tin, one of lead, one of antimony, and one of bismuth.

Queen's-ware, a fine description of earthenware of a cream color, manufactured in the Staffordshire Potteries, England.

Queen's-yellow, a color formed from the subsulphate of mercury.

Queen, v. n. To play the queen; to act the part, or assume the character, of queen.

—v. a. In chess, to make a queen or other piece of, as a pawn when moved to the eighth square.

Queen Anne, (ann), in Maryland, an E. co., having Delaware on the E., and Chesapeake Bay on the W.; area, abt. 400 sq. m. *Rivers.* Chester, Tuckahoe, and Choptank rivers. *Surface,* slightly undulating; soil, fertile. *Cap.* Centerville. *Pop.* (1897) 18,960.

—A village of Prince George co.

Queen-apple, n. A particular kind of apple, so called.

Queen Charlotte Islands, a group in the N. Pacific Ocean, off the W. coast of British Columbia. The principal island is about 165 miles long.

Queen Charlotte's Islands, a group in the S. Pacific Ocean, between Lat. 9° 50' and 11° 20' S., Lon. 163° 30' and 165° 10' E. It was discovered in 1767 by Capt. Carteret.

Queen Charlotte Sound, an arm of the Pacific Ocean, forming the N. portion of the sound which separates Vancouver's Island from the mainland.

Queen Charlotte's Sound, a bay at the N. end of the S. island of New Zealand.

Queen City, in Iowa, a post-village and township of Adams co., abt. 26 m. N. of Bedford.

Queen-craft, n. Skill in state-craft on the part of a queen.

Queen-gold, n. A royal donation formerly accruing to every English queen during her marriage to the king.

Queenly, a. Like a queen; becoming a queen; suitable to a queen; as, queenly dignity.

Queen-mother, n. A queen-dowager who is also mother of the reigning sovereign.

Queen-post, n. (*Arch.*) A post rising from the tie-beam which passes across the room of a house, and supports the ornamental, open timber roof; it is similar to the king-post in form and use, but differs from that in never being placed in the centre, or rising to the point of the gable, but midway between the centre of the wall and the gable. Thus queen-posts are always in couples, and at their junction with the sloping roof are braced together by a transverse beam, termed a collar.

Queen's, a S.W. co. of Nova Scotia, bordering on the Atlantic Ocean; area, abt. 1,000 sq. m. *River.* Mersey. Lake Rossignol is in the central part of the co. *Surface,* finely diversified in the interior, but rugged along the coast; soil, very fertile. *Cap.* Liverpool.

Queen's, a S. central co. of New Brunswick; area, abt. 1,500 sq. m. *Rivers.* Salmon, St. John, and Washademoak rivers. *Cap.* Gagetown.

Queen's, a central co. of Prince Edward Island. *Cap.* Charlotte Town.

Queen's, in New York, a S.E. co., forming the extreme W. portion of Long Island, and having Long Island Sound on the N., and the Atlantic Ocean on the S.; area, about 250 sq. m. *Rivers.* Hudson and East rivers. The coasts are indented with numerous bays and inlets, some of them affording good harbors. *Surface,* somewhat uneven; soil, very fertile, producing large quantities of fruits and vegetables. *Cap.* Jamaica. *Pop.* (1890) 128,059.

Queensborough, in South Carolina, a village of Anderson district, about 110 m. W.N.W. of Columbus.

Queensbury, in New York, a post-township of Warren co.

Queen's County, an inland county of Ireland, prov. of Leinster, having N. King's co., E. Kildare and Carlow, S. Kilkenny, and W. Tipperary and King's cos.; area, 664 sq. m. The soil is fertile. *Rivers.* The Barrow and Nore. *Products.* Wheat, oats, and potatoes. *Min.* Coal and limestone. *Manuf.* Woollen, linen, and cotton stuffs. This co. and its chief town were named for Queen Mary. *Cap.* Maryborough. *Pop.* (1897) 63,800.

Queen'ship, n. State, dignity, or condition of a queen.

Queen's River, in Rhode Island, enters Charles river from Washington co.

Queen's River, in Penna., a village of Clinton co.

Queens town, a town of Ireland. See COVE or CORK.

Queencstown, a town of Niagara co., prov. of Ontario, about 5 m. N. of Clifton. Here, Oct. 13, 1812, a body of Americans were defeated by the English. The town was occupied by an U. S. force, May, 1813, and taken a second time by the Americans, June, 1814.

Queenstown, in Maryland, a post-village of Queen Anne co., about 30 m. E. of Annapolis.

Queenstown, in Pennsylvania, a post-borough of Armstrong co., about 18 miles N.N.W. of Kittanning.

Queensville, in Indiana, a post-village of Jennings co., about 28 m. N.W. of Madison.

Queen-truss, n. (*Arch.*) A truss framed with queen-posts.

Queer, (*kweer*), *a.* [A. S. *thweor*; Ger. *zwerch*, *quer*, across, thwart.] Odd; singular; cross-grained; perverse; whimsical; as, he is a *queer* fellow, she gave me a *queer* look, &c.

Queerish, *a.* Oddish; rather queer; somewhat singular or whimsical.

Queerly, *adv.* In an odd or singular manner.

Queerness, *n.* State or quality of being queer; oddity; singularity; whimsicalness; particularity.

Queima'da, two islands of Brazil, abt. 40 m. S.W. of Santos; Lat. 24° 28' S., Lon. 46° 40' W.

Quell, *v. a.* [A. S. *cwellum*, to kill, slay; Ger. *quälen*.] To subdue; to crush; to suppress; as, to *quell* an insurrection. — To calm; to quiet; to allay; to check; to abate, reduce, or bring down; as, to *quell* pride, to *quell* sorrow.

Quell'or, *n.* One who crushes or subdues.

Quelpaerts, (*quel-parts'*) an island at the entrance of the Yellow Sea, 60 m. S. of the Corea; Lat. 33° 9' N., Lon. 126° 56' E. Ext. 45 m. long, and 12 m. broad.

Quelque-chose, (*kèlk-chôz*), *n.* [Fr., something.] A trifle; a bagatelle; a kickshaw; a thing of no moment or value.

Queluz, a town of Brazil, abt. 20 m. S.S.W. of Ouro Preto.

Quemahon'ing, in *Pennsylvania*, a creek flowing into Stony Creek from Somerset co. — A township of Somerset co.

Quench, *v. a.* [A. S. *cwencan*, *acwencan*.] To put out; to extinguish; as, to *quench* fire. — To allay or extinguish; to destroy; to repress; to check; to stifle; as, to *quench* thirst.

— *v. n.* To cool; to become extinguished. (*R.*)

Quench'able, *a.* That may be quenched, allayed, or extinguished.

Quench'er, *n.* One who, or that which quenches; an extinguisher.

Quench'less, *a.* That cannot be quenched or repressed; inextinguishable.

"He fills a burning throne of quenchless fire." — *Crashaw*.

Quench'lessly, *adv.* In a quenchless or irrepressible manner.

Quench'lessness, *n.* State or quality of being quenchless.

Quenonille-training, (*ke-nōō'y-*) *n.* (*Arboriculture*.) A method of training trees in a distaff-like shape, with the boughs bent downward.

Quen'tin, (*St.*) a town of France, dept. of Aisne, on the Somme, 80 m. N.E. of Paris. *Manuf.* Thread, linen, and cotton fabrics, lace, leather, soap, and sulphuric acid. *Pop.* 32,690.

Quenn, (*ka-nōō'*) an island of Chili, N.E. of Chiloe; Lat. 41° 46' S., Lon. 73° 10' W.

Que'qua, a river of Uruguay, flowing into the Uruguay River, abt. 26 m. N. of Concepcion de la China; *length*, abt. 100 m.

Quercetine, *n.* (*Chem.*) A yellow crystalline body obtained when *quercitrine* is decomposed by boiling with acids. *Form.* C₂₄H₃₀O₁₀.

Quercitrin, *n.* (*Chem.*) The yellow coloring matter which is extracted by alcohol from the bark of the *quercitron*.

Quercitron, *n.* [From Lat. *quercus*, and *citrus*, citron.] See **QUERCUS**.

Quercus, (*kwer'kus*), *n.* [Lat., the oak.] (*Bot.*) A genus of trees, order *Corylaceæ*, having male flowers in a long pendulous catkin, with 5-10 stamens, and peri-

played for tanning purposes, and to some extent in medicine: that of *Q. pedunculata* is most esteemed. The outer bark of *Q. suber*, the Cork-oak (Fig. 686), constitutes the cork of commerce, an invaluable article, for which there is no fitting substitute. The bark obtained from the younger branches of the same tree is exported from Spain, and employed in tanning, under the name of *European alcornoque bark*. The inner bark of older stems is also exported as *cork-tree bark*, and employed for similar purposes. The acorn-cups of *Quercus Aggylops* are called *valonia*; the dried, half-matured acorns, *camata*; and the very young ones, *camatina*. These three articles are very valuable for their tanning properties, and are imported in large quantities from the Levant. The bark of *Q. tinctoria*, the Black-oak, is called *quercitron bark*, and is much used for tanning; its inner portion is also extensively employed for dyeing yellow. *Q. coccifera*, the Kermes oak, has its young branches attacked by a species of *coccus*, which forms little reddish balls upon their surface. These were formerly much used as a crimson dye. Oak-trees are especially liable to be attacked by insects, and the excrescences which are produced are commonly called *galls*. The more important galls are the *nut-galls* of commerce, and the large *Mecca* or *Bussora* galls, called also *Dead-Sea apples*, *Mad apples*, and *apples of Sodom*. The latter are produced by the *Cynips insana* on the *Q. tinctoria*. The former are also produced on the branches of the same tree by the *Cynips gallæ tinctoriæ*, or gall-insect. They are extensively employed in tanning, for making ink, and for other purposes in the arts. Two kinds are specially distinguished — the *blue* and the *white*. The dark-colored imperforate galls are the most valuable. The acorns of some species of *Quercus*, as *Q. ballota*, *esculenta*, and *Hindsii*, are edible.

Quereta'ro, an E. central state of Mexico; *area*, abt. 3,556 sq. m. *River*, Tula river. *Surface*, elevated tableland, in some places 8,000 feet above sea-level; *soil*, fertile, producing corn, cotton, with most European grains and fruits. *Min.* Silver, copper, lead, and iron. *Pop.* (1897) 232,230.

QUERETARO, cap. of the above state, abt. 110 m. N.W. of Mexico; Lat. 20° 36' 39" N., Lon. 100° 10' 15" W. It is generally well-built, and contains some elegant edifices. In 1848 the peace between the U. States and Mexico was here ratified by the Mexican Congress. In 1867 the Emperor Maximilian was shot at this place.

Querim'ba, a group of islands extending along the E. coast of Africa, S. of Delgado, and comprised in the Portuguese territory of Mozambique. The principal island, in Lat. 12° 20' S., Lon. 40° 58' E., is abt. 5 m. long.

Querim'onious, *a.* [From Lat. *querimonia*, from *queror*, to complain.] Apt to grumble; complaining; querulous.

Querim'oniously, *adv.* In a querimonious manner; querulously; with complaining or grumbling.

Querim'oniousness, *n.* Inclination to grumble; querulousness.

Quer'ist, *n.* [Lat. *quæro*, to search for.] One who inquires or asks questions; an interrogator.

Quer'k, *n.* See **QUIRK**.

Quer'ken, *v. a.* [Icel. *querk*.] To cboke; — used as provincial English.

Querl, *v. a.* [N. H. Ger. *querlen*, to twirl.] To coil, twirl, or wind around; as, to *querl* a rope. (Used as a local Americanism.)

Quern, *n.* [A. S. *cwecorn*; D. *kweern*; Dan. *qvern*; Sans. *cwrm*, to grind.] A hand-mill (Fig. 1790) for grinding grain; a mill, the stone of which was turned by hand, used before the invention of wind-mills and water-mills.

Quer'nales, *n. pl.* (*Bot.*) An alliance of plants, subclass *Declinous exogens*. *DIAG.* Amentaceous monochlamydeous flowers, an inferior fruit, and an amygdaloid embryo without albumen. The alliance is divided into 2 orders, — *CORYLACEÆ*, and *JUGLANDACEÆ*, *q. r.*

Quer'quedule, *n.* [Lat. *querquedula*, from Gr. *kerkolous*, a boat.] (*Zoöl.*) The Teal, a species of duck, *Anas crecca*.

Quer'ulous, *a.* [Lat. *querulus*.] Disposed to murmur or grumble; much given to uttering complaint; as, a *querulous* person. — Grumbling; murmuring; expressing complaint; as, a *querulous* utterance.

Quer'ulously, *adv.* In a complaining manner; grumblingly.

Quer'ulousness, *n.* State or quality of being querulous; disposition to complain, or the habit or practice of murmuring or grumbling.

Query, (*kwer'ry*), *n.* [Lat. *quære*, imper. of *quæro*, to search for.] A question; an interrogatory; an inquiry to be answered or resolved.

— *v. n.* To interrogate; to ask a question or questions.

"Each prompt to query, answer, and debate." — *Pope*.

— *v. a.* To inquire; to examine by questions; as, to *query* a person's motives. — To doubt of; — abbreviated *qu.* or *qy.* — To elicit by questioning.

Quesada, (*kai-sa'da*), a town of Spain, prov. of Jaen, 40 m. N.E. of Jaen; *pop.* 4,500.

Quesaltepeque, (*ka-sal-ta-pa'ka*), a town of Guatemala, abt. 83 m. E.N.E. of the city of Guatemala; *pop.* 5,000.

Quest, (*kwest*), *n.* [Fr. *quête*, for *queste*; Lat. *quæstus*, from *quæro*.] Act of seeking; search; pursuit.

"We see them active and vigilant in quest of delight." — *Spectator*.

— Request; desire; solicitation.

"Gad not abroad at every quest and call." — *Herbert*.

Question, (*kwest'yun*), *n.* [Fr.; Lat. *questio*, from *quæro*, *quæstus*, to seek.] Act of asking; inquiry; examination; interrogation; as, the matter was put to *question*. — That which is asked; something proposed

which is to be solved by answer; an interrogatory; an inquiry; a query.

"Ask me no questions, and I'll tell you no fibs." — *Goldsmith*.

— Subject of discussion; dispute or theme of investigation or inquiry.

"To be, or not to be, that is the question." — *Shaks*.

— Judicial trial or inquiry; formal or official investigation with reference to a decisive result; as, to be in *question*. — Disquisition; discussion; debate; — hence, verbal dispute or controversy; as, his integrity was called in *question*. — Examination by torture. See **TORTURE**.

In *question*, in the course of argument, debate, discussion, or examination; as, the matter in *question*. — *Leading question*, a question suggestive to the person asked of the answer he should make. — *Out of the question*, inadmissible; quite impossible; not to be noticed or entertained; as, affinity between us is *out of the question*. — *Past question*, unquestionably; certainly; beyond doubt or question. — *Previous question*. (*Pol.*) The question put to a legislative assembly before the putting of the principal question. Moving the *previous question* stops further debate till, and unless it be, negatived.

— *v. n.* To ask a question; to make a query; to inquire by interrogatory or proposition to be answered.

"He that questioneth much shall learn much." — *Bacon*.

— To debate by interrogatories.

"I pray you think you question with a Jew." — *Shaks*.

— *v. a.* To inquire of by asking questions; to interrogate; to examine for eliciting answers; as, to *question* a witness. — To doubt; to be uncertain of; to query. — To have no confidence in; to treat as doubtful, or unworthy of implicit confidence; to call in question; as, his veracity is *questioned*. — *To fence a question*, to evade giving a prompt or direct answer.

Questionable, (*kwest'yun-a-bl*), *a.* That may be questioned; admitting or inviting inquiry. (*R.*) — Liable to be doubted or disputed; open to suspicion; controversial; uncertain; apt to be called in question; as, it is *questionable* whether it be a fact or not.

Questionableness, *n.* The quality or state of being questionable, doubtful, or suspicious.

Questionably, *adv.* Doubtfully; in a questionable manner.

Questionary, *a.* Inquiring; putting questions; as, a *questionary* letter.

— *n.* A relic-hunter, who collects and sells curiosities.

Question'er, *n.* One who asks questions; an inquirer; an interrogator.

Questionist, *n.* A term given in the English universities, to a student who is in the last term of his college course, and is shortly to be examined for honours or degrees.

Questionless, *a.* Not admitting of doubt or question; certainly. (*R.*)

Quest'mau, *Quest'monger*, (*-mång-*) *n.* One who makes it his business to lay informations, and so encourage petty law-suits.

Quest'or, *n.* See **QUESTOR**.

Quest'uary, *a.* Studious of profit. (*R.*)

— *n.* A person employed to collect profits.

Qnene, (*kū*), *n.* [Fr.] The tail or twisted pendant of a wig.

Quevedo Y Villegas, FRANCISCO GOMEZ DE, (*ka-vā'-do e vil-lā'gas*), an eminent Spanish author, b. at Madrid, 1570. He cultivated both poetry and prose, and his works were much esteemed; but some of them gave such offence, that the author was thrown into prison, where he remained. His works were published at Madrid in 1772, under the title of *Parnasso Español*. His *Visions of Hell* have been translated into English. D. 1647.

Quey, (*kwa*), *n.* In Scotland, a young heifer.

Quezaltenan'go, a city of Guatemala, abt. 115 m. W.N.W. of the city of Guatemala; *pop.* 1,600.

Quib, *n.* A quip; a gibe; a bitter sarcasm.

Quibble, (*kwi'b'l*), *n.* [Probably from Lat. *quilibet*, *quodlibet*, a subtlety, a nicety, used in scholastic philosophy.] A slight or contemptible cavil; an unworthy evasion; a pretence; a quirk; a start or turn from the point in question, or from plain truth. — A pun; a low conceit.

— *v. n.* To evade the point in question, or plain truth, by artifice, play upon words, cavilling, or any conceit; to trifle in argument or conversation. — To pun; to play upon words.

Quib'bler, *n.* One who quibbles; one who evades plain truth, or the point in question, by trifling artifices, play upon words, or cavils. — A punster.

Quib'blingly, *adv.* In a quibbling manner; evasively; triflingly.

Quiberon, (*ke'be-rawng*), a town of France, dept. of Morbihan, on a long and narrow peninsula of the same name, which, with some islands, forms one of the largest bays in Europe, 24 miles from L'Orient. In 1795 a body of French emigrants landed here, and were overpowered by the republican troops, and dispersed. Those who were taken were shot. *Pop.* 4,000.

Quibo, (*kee'bo*), sometimes written **QUIBDO**, an island of the Republic of Colombia at the entrance of Montije Bay; Lat. 7° 25' N., Lon. 81° 54' W.

Quicama'ô, a town of Brazil, about 21 m. S. of Campos. *Pop.* 2,800.

Quicara, or **HICARA** (*ke-ka'ra*), a group of islands of the Republic of Colombia, in the Pacific Ocean, S. of Quibo; Lat. 7° 10' 50" N., Lon. 81° 46' 18" W.

Quicat'lan, a town of Mexico, abt. 45 m. N. of Oajaca.

Quiche (*kè'che*), a town of Guatemala, about 25 m. N.W. of the city of Guatemala. *Pop.* 3,000.

Quick (*kwik*), *a.* [A. S. *cwic*, D. *kwik*; Ger. *queck*.]

Fig. 2201. — BRANCHLET AND ACORN OF THE QUERCITRON, (*Quercus tinctoria*.)

anth 5-7-cleft; female flowers solitary, with a cup-shaped scaly involucre, 3 stigmas, and a 3-celled ovary. Nut 1-celled, 1-seeded, surrounded at the base by the enlarged cup-shaped involucre. The timber of *Q. alba*, the White-oak, found in woods throughout the U. S., is extensively employed for ship-building and for other important purposes. Besides the White-oak, there are the important timber-yielding trees *Q. cerris*, the Turkey or Adriatic oak; *Q. robur*, the European oak; *Q. ilex*, the holm; *Q. virens*, the Live-oak, common in the Southern States; *Q. rubra*, the Red-oak, the most common species in the Northern States; *Q. tinctoria*, the Black-oak, or Yellow-bark oak (Fig. 2201), one of the loftiest trees of our forests; and *Q. virens*, the Live-oak. The bark of several species is astringent and largely em-

Alive; animate; having life and motion; — opposed to **dead**.

"Glory and pow'r to judge both *quick* and *dead*."—Milton.

—Characterized by activity, promptitude, intelligence, or readiness; nimble; sprightly; agile; brisk; as, a *quick* scholar, a *quick* sense of humor. — Moving with rapidity or celerity; expeditious; — opposed to *slow*; as, a *quick* runner, a *quick* writer. — Hasty; sharp; without softness or ceremony; as, he acted *quick* by me.

Quick with child, with a living child in the womb.

—*adv.* In a quick manner; nimbly; with celerity or dispatch; with haste or expedition; speedily; without delay; as, be *quick*, go *quick*. — Soon; in a short space of time; promptly; as, come home *quick*.

—*n.* The living flesh, the sensible part or point of anything; as, his answer cut me to the *quick*. — The Hawthorn; as, a hedge planted with *quicks*.

Quick-beam, *n.* (Bot.) Same as QUICKEN-TREE.

Quicken, (*kwik'n*), *v. a.* [A. S. *cwican*.] Primarily; to make alive; to vivify; to revive or resuscitate, as from death or a state of inanimation; to reinvigorate. — To accelerate; to increase the speed or velocity of; to hasten; to give rapidity to; as, the engine *quickened* its speed. — To sharpen; to give keener perception or appreciation to; to stimulate; to incite; to refresh; to impart increased activity, energy, or vivacity to; to cheer; as, to *quicken* the appetite, he *quickened* his wit with wine.

—*v. n.* To become quick, alive, or reinvigorated; as, a woman *quickens* with child. — To move with celerity, rapidity, or activity; as, to *quicken* one's pace.

Quickener, *n.* One who vivifies, revives, and communicates life; that which reinvigorates; that which accelerates motion or increases activity.

Quickening, *n.* Act or process of making or becoming quick.

(Physiol.) The first motion of the fetus in the womb felt by the mother.

Quickens, *n.* (Bot.) The dog's cough-grass. See TRITICUM.

Quicklime, *n.* (Chem.) Lime unslaked; any carbonate of lime deprived of its carbonic acid.

Quickly, *adv.* Speedily; soon; with haste or celerity; without delay.

Quick-match, *n.* (Gun.) See MATCH.

Quickness, *n.* Quality of being quick; speed, or the state of being rapid; celerity; velocity; swiftness; briskness; as, *quickness* of motion. — Activity or readiness of intellect; activity of mind; promptness; as, *quickness* of wit, or of the imagination. — Acuteness of perception; keen sensibility; penetration; shrewdness; as, *quickness* of feeling or sensation. — Pungency of taste; sharpness.

"Thy generous fruits still shewed a *quickness*."—Dryden.

Quicksand, *n.* Sand easily moved or readily yielding to pressure; loose sand abounding with water; unsolid ground.

Quickset, *n.* A living plant set to grow, particularly for a hedge; — a term applied particularly to the Hawthorn.

—*a.* Composed of living or young plants; as, a *quickset* hedge.

—*v. a.* To plant with living shrubs or trees for a hedge or fence.

Quick-sighted, *a.* Having quick sight or acute discernment; penetrating; shrewd; keen to observe.

Quick-sightedness, *n.* Quality of being quick-sighted; readiness to discern.

Quicksilver, *n.* (Min.) See MERCURY.

Quicksilvered, (*-verd*), *a.* Overlaid with an amalgam of quicksilver and tin-foil.

Quicksilvering, *n.* The mercury and foil covering the back of a mirror or looking-glass.

Quickstep, *n.* (Mus.) A quick, spirited march, generally played by military bands.

Quick-witted, *a.* Having a lively and ready wit.

Quick-wittedness, *n.* Liveliness and promptitude of wit.

Quid, (*kwid*), *n.* A cud; a morsel for chewing; as, a *quid* of tobacco.

—*v. a.* (Man.) To allow to drop from the mouth, as hay when partially masticated; — said of horses.

Quidam, [Lat.] Somebody.

Quid dany, *n.* [Lat. *quid dany*, the juice of a quince.] A syrupy confection of quinces.

Quid dative, **Quidditative**, *a.* Constituting the essence of a thing.

Quiddity, *n.* [Fr. *quiddité*, from Lat. *quid*, what.] A term used in scholastic philosophy for *essence*; the nature or essence ascribed to anything when the question is put, "What is it?" (*quid est?*) — A trifling nicety; a cavil; a captious question.

Quiddle, *v. n.* [From Lat. *quid*, what.] To dawdle; to waste time unprofitably.

Quiddle, **Quid dler**, *n.* A dawdler.

Quid nunc, *n.* [Lat., what now?] A sarcastic term applied to one who is curious to know everything that passes; one who knows, or pretends to know, all things.

Quieppe, (*ke-ep'pa*), a fortified island of Brazil, at the entrance of the Bay of Camamu, abt. 70 m. S.S.W. of Bahia.

Quiesce, (*kwes'es*), *v. n.* To have no sound, as a letter.

Quiescence, **Quiescency**, (*-es'sens*), *n.* [Lat. *quiescentia*, from *quiesco*, to rest.] State of being quiescent; rest; repose; state of a thing without motion. — A state of the mind free from agitation or emotion.

(Gram.) Absence of sound, as of a letter.

Quiescent, *a.* [Fr.] Resting; being in a state or condition of rest or repose; still; not moving; as, a *quies-*

cent object. — Not ruffled with passion or emotion; unagitated; quiet; dormant; as, *quiescent* patriotism.

(Gram.) Mute; not sounded; having no sound; as, *p* is *quiescent* in *psalm*.

n. (Gram.) A mute letter.

Quiescently, *adv.* In a calm or quiescent manner, silently.

Quiet, (*kwī'et*), *a.* [Fr.; Lat. *quietus*, from *quiesco* — *quies*, *quietis*, rest.] At rest; quiescent; calm; still; being in a state of rest; not moving; without stir, motion, or agitation; as, *quiet* as the dead of night. — Tranquil; free from alarm or disturbance; unruffled; unmolested; as, a *quiet* life. — Placid; mild; meek; peaceable; not exciting controversy, disorder, or trouble; not turbulent or offensive; as, a *quiet* spirit, his wife's tongue is *quiet* for once. — Not agitated by wind; characterized by smoothness; as, a *quiet* sea.

—*n.* State of being quiet; rest; repose; stillness; calm; absence of motion or agitation. — Tranquillity; freedom from disorder or alarm; civil or political repose; peace; security.

"*Quiet* to quick bosoms is a hell." — Byron.

At *quiet*. Still; peaceful; in repose.

In *quiet*. Quietly; peaceably; as, rest in *quiet*.

—*v. a.* (From the noun.) To still; to stop the motion of; to bring or reduce to a state of rest; as, "*quieting* corporeal motion." — Locke.

—To calm; to hush; to pacify; to appease; to tranquillize; to allay; to suppress; as, to *quiet* the public; to *quiet* grief; to *quiet* the mind.

Quieter, *n.* The person who, or thing which, quiets.

Quietism, *n.* [Fr. *quétisme*.] Peace or tranquillity of mind; apathy; inaction; freedom from agitation or disturbance.

(Ecc. Hist.) A term applied to certain religious sects, who held the doctrine that the essence of religion consisted in the devout contemplation of the being and attributes of God, so as to absorb all human passions and sentiments. A sect of this class existed under the name of Hesychasts, among the religions of Mount Athos, in the 14th century; but the term is more generally applied to the doctrines advocated by the Spanish priest, M. Molinos, 1675, in his work entitled *The Spiritual Guide*. See MOLINISM.

Quietist, *n.* [Fr. *quétiste*.] (Ecc. Hist.) One of a sect of mystics who inducted the principles of Quietism.

Quietistic, *a.* Pertaining to Quietism; having reference to Quietists.

Quietly, *adv.* In a quiet state or manner; in a state of rest or repose; without motion; as, to sit *quietly*. — Without tumult, disorder, alarm, dispute, disquiet, or disturbance; tranquilly; peaceably; as, to live *quietly*. — Calmly; patiently; placable; without agitation or violent emotion; as, to speak *quietly*. — Noiselessly; silently; without violent speech or movement; as, he went *quietly* about his business.

Quietness, *n.* State or quality of being quiet; state of rest or repose; stillness; calm; tranquillity; freedom from agitation or emotion; absence of disturbance, disorder, or commotion; peace.

"I would have peace and *quietness*." — Milton.

Quiétude, *n.* [Fr., from L. Lat. *quietudo*, from Lat. *quies*.] Rest; repose; quiet; tranquillity.

Quietus, *n.* [Lat.] Rest; repose; — hence, death; that which acts as a final discharge of all claims.

"He might his *quies* make with a bare bodkin." — Shaks.

Quillmane, (*ke-le-ma'nai*), a seaport-town of Mozambique, in E. Africa, at the mouth of the river Quillmane; Lat. 17° 51' 8" N., Lon. 37° 51' E. It has a trade in gold and ivory. Pop. Estimated at 15,000.

Quill, (*kwil*), *n.* [Ger. *kiel*; Dan. *kiol*; Lat. *culmus*; Gr. *kalamos*, a reed.] The large, strong feather of a goose, or other large bird; — used for writing-pens, &c. Hence, the instrument of writing; a pen. — The spine or prickle of a porcupine. — A piece of small reed or other hollow plant, on which weavers wind the thread which forms the woof of cloth.

(Mus.) The implement with which musicians strike the strings of certain instruments.

"His flying fingers and harmonious *quill*." — Dryden.

—Something formed like a quill, as the plait of a ruffle.

To carry a good *quill*, to write well.

—*v. a.* To plait, or to form with small ridges; as, to *quill* a ruff. — To wind on a quill, as yarn.

Quillala, (*kwil-lai-yä*), a genus of plants, order Rosaceæ. The bark of *Q. saponaria* and other species contains a large proportion of *Saponine*, and is sometimes employed as a substitute for soap. It has lately been used as a detergent in cases of scurfiness and baldness of the head.

Quill-bit, *n.* (Carp.) Same as GOUGE-BIT, *q. v.*

Quill-driver, *n.* A cant term for one who habitually uses a pen, particularly a clerk.

Quilled, (*kwild*), *a.* Having quills; — used in composition.

Quillet, *n.* [Lat. *quodlibet*, what you please.] A quibble; a subtle distinction; as, "nice, sharp *quilllets* of the law." — Shaks.

Quilling, *n.* A narrow border of lace or edging, plaited in a manner to resemble a row of quills; as, the *quilling* of a woman's cap.

Quill-wort, (*-wurt*), *n.* (Bot.) See ISOETES.

Qui'loa, a seaport of E. Africa, formerly cap. of the Portuguese settlements in that country; Lat. 8° 41' S., Lon. 39° 47' E.

Quilon, (*ke-lon'*), a seaport-town of S. India, on the Malabar coast, 37 m. N.W. of Tivandrum. It has an active trade in cotton and pepper. Pop. 20,000.

Quilt, (*kwilt*), *n.* [It. *coltre*; Lat. *culcita*, from *calco*, to press close together.] A bed-cover made by stitch-

ing one cloth over another with some soft substance between them; a counterpane; a cover made by putting wool, cotton, or other substance, between two cloths, and sewing them together.

—*v. a.* To form into a quilt; to stitch together two pieces of cloth, with some soft and warm substance between them; as, a *quilted* coat. — To sew in the manner of a quilt. — *Quilted doublet*. See POURPOINT.

Quilter, *n.* One who quilts.

Quilting, *n.* The act of forming a quilt. — In the U. States, the act or operation of making a quilt or quilts by a party of ladies, especially for some charitable purpose. (Webster.) — The material used in making quilts; a figured stuff used for bed-covers, and the like.

Quemper, (*kan-per'*), a town of France, cap. of the dept. of Finistère, on the Odet, 35 m. S.E. of Brest. Manuf. Porcelain, linen, hemp, and hats. Pop. 11,000.

Quimperlé, (*kan-per'l'*), a town of France, dept. of Finistère, 27 m. S.E. of Quimper. Manuf. Paper. Pop. 6,500.

Qui'na, **Qui'nia**, *n.* See QUININE.

Qui'nary, *a.* [Lat. *quinarius*, from *quinque*, five.] Consisting of fives; arranged by fives; as, a *quinary* number.

Qui'nate, *a.* [Fr. *quiné*, from Lat. *quinque*.] (Bot.) With five leaflets on the petiole.

Quince, **Quince-tree**, (*kwins'*), *n.* [Fr. *coing*.] (Bot.) See CYDONIA.

Quincuncial, (*kwink-shal'*), *a.* [Lat. *quincuncialis*, from *quincunx*.] Possessing the form of a quincunx. (Bot.) Arranged in a quincunx, as the parts of a flower.

Quincuncially, *adv.* In the manner or order of a quincunx.

Quincunx, (*kwinkunks*), *n.* [Lat., from *quinque*, five, and *uncia*, an ounce.] The Latin term properly for that disposition of five objects in which they are made to occupy the four corners and point of intersection of the diagonals of a square; but the word is extended to any number of things so arranged in lines that the members of each succeeding line stand behind the spaces between those of the preceding one. Troops were frequently drawn up in this order, which was also a favorite arrangement for plantations of vines.

(Bot.) A term applied to parts of the flower in aestivation, or of the foliage in veneration when the pieces are five in number, of which two are exterior, two interior, and the fifth covers the interior with one margin and has its other margin covered by the exterior, as in the genus *Rosa*.

Quincy, JOSIAH, an American author and orator, b. at Boston, 1772, was a son of Josiah Quincy, himself a distinguished orator and political writer of the period just preceding the Revolution. He graduated at Harvard College, 1790, studied the profession of law, and entered Congress in 1805, where he distinguished himself as a favorite orator in opposition to the policy of Jefferson and Madison, and was one of the earliest to denounce slavery, declaring that the purchase of Louisiana was a sufficient cause for the dissolution of the Union. In 1813 he declined a reelection, and devoted his attention to scientific agriculture. He became, however, a member of the senate of Massachusetts, and in 1822, judge of the Municipal Court of Boston. In 1823, he was elected Mayor of Boston; and in 1829 accepted the post of President of Harvard College, which he held until 1845. Among his published works are a *Memoir of his Father*, 1825; *History of Harvard University*, 1840; *History of the Boston Athenæum*, 1851; *The Municipal History of the Town and City of Boston*, 1852; *Life of John Quincy Adams*, 1858; *Essays on the Sowing of Cattle*, 1859. D. 1864.

Quincy, in California, a post-town, cap. of Plumas co., about 250 m. N.N.E. of San Francisco.

Quincy, in Florida, a post-town, cap. of Gadsden co., about 22 m. N.N.W. of Tallahassee.

Quincy, in Illinois, a city, cap. of Adams co., on the Mississippi River, abt. 109 m. W. of Springfield, 269 m. S.W. of Chicago, and 160 m. N. of St. Louis. It is situated on a beautiful elevation, abt. 125 feet above the

Fig. 2202. — QUINCY.

river, and commands a fine view for many miles in each direction. The streets cross at right angles, and the city, which is well lighted with gas, and has a line of street-cars, contains many costly and handsome edifices, and a large public square. Quincy has several

banks, numerous extensive flouring and other mills, manufactories of various kinds, and iron-foundries. Flour is exported to a large extent, and great quantities of provisions are packed. The bluffs in front of the city are one vast limestone quarry. Here is the termini of the *Chicago and Burlington*, and *Quincy*; the *Toledo, Wabash, and Western*; the *Hannibal and St. Joseph*; the *La Fayette, Bloomington, and Mississippi*; the *Carthage, Warsaw, and Quincy*; the *Mississippi and Missouri Air Line*; and the *Quincy, Missouri, and Pacific Railroads*.—The river at this point is spanned by a magnificent railroad bridge, over one mile long. Quincy was laid out in 1825 by John Wood, and named in honor of John Quincy Adams. Pop. (1897) 33,850.

Quincy, in *Indiana*, a post-village of Owen co., about 25 m. N.N.W. of Bloomington.

Quincy, in *Iowa*, a post-village and township, former cap. of Adams co., about 90 m. S.W. of Des Moines.

Quincy, in *Kentucky*, a post-village of Lewis co., about 10 m. W. of Portsmouth, Ohio.

Quincy, in *Massachusetts*, an important city of Norfolk co., about 8 m. S. by E. of Boston. In this vicinity are the celebrated Quincy granite quarries. The first railroad in the U. S. was here constructed. This township is also celebrated as being the birthplace of John Hancock, Josiah Quincy, Jr., the two Adamses, and many other eminent American statesmen. Pop. (1895) 29,712.

Quincy, in *Michigan*, a post-township and village of Branch co., on the Lake Shore and Michigan S. R. R. Manuf. Staves, sash doors, &c.

Quincy, in *Minnesota*, a post-village and township of Olmstead co., abt. 20 m. E. of Rochester.

Quincy, in *Mississippi*, a village of Monroe co., abt. 12 m. N.E. of Aberdeen.

Quincy, in *Missouri*, a post-village of Hickory co., abt. 20 m. S.W. of Warsaw.

Quincy, in *Ohio*, a post-village of Logan co., abt. 68 m. W.N.W. of Columbus.

Quincy, in *Pennsylvania*, a post-village and township of Franklin county, about 12 miles south-east of Chambersburg.

Quincy, in *Tennessee*, a post-village of Gibson co., abt. 145 m. W.S.W. of Nashville.

Quincy, in *Wisconsin*, a post-village of Adams co., abt. 70 m. N.N.W. of Madison.

Quincy Point, in *Massachusetts*, a post-village of Norfolk co., abt. 2 m. E. of Quincy.

Quindaro, in *Kansas*, a post-village and township of Wyandot co., abt. 6 m. N.W. of Kansas City; pop. abt. 800.

Quindecagon, *n.* [Lat. *quinque*, five; *gon*, *deka*, ten, and *gonia*, an angle.] (*Geom.*) A plane figure bounded by fifteen sides.—The regular quindecagon is inscribable in a circle by elementary geometry.

Quindecemvir, *n.*; *pl.* QUINDECENVIRI. [Lat. *quinque*, *decem*, and *vir*, a man.] (*Rom. Hist.*) One of a body of Roman magistrates, whose duty it was to take care of and to consult the Sibylline books.

Quindecemvirate, *n.* The body or office of the quindecenviri.

Quinebaug, in *Connecticut*, a village of Windham co., abt. 45 m. N.E. by E. of Hartford.

Quinebaug River, rises in Tolland co., Connecticut, and flowing N into Massachusetts, returns again into Connecticut, and joins the Shetucket River in New London co., to form the Thames River.

Quinepiack, in *Connecticut*, a river which rises in Hartford co., and flows S. into Long Island Sound from New Haven co.

Quinine Acid, *n.* (*Chem.*) See KINIC ACID.

Quinidine, *Quinoidine*, *n.* (*Chem.*) One of the cinchona alkaloids. It is an isomer of quinine, which it much resembles; but it more readily crystallizes. A much larger quantity of it is required to be taken into the system before an effect is produced equal to that obtained by a given amount of quinine; and, finally, its solutions have an opposite action on a ray of polarized light.

Quinine, QUINIA, QUININA, (*kwī'nīn*.) *n.* [Fr., from Sp. *quinaquina*, Peruvian bark.] (*Chem.*) An alkaloid found in the bark of trees belonging to the Cinchona or Peruvian-bark family. Besides quinine, these barks yield five other similar alkaloids; but as they are not used to any extent either in medicine or manufactures, it will be necessary only to enumerate them. They are cinchonine, cinchonidine, cinchonidine, quinidine, and quinoine. Besides these, the bark of the *Cinchona ovata* yields *aricine*, or *cinchovatine*. Quinine occurs most in the yellow bark, or *Cinchona cordifolia*, in which it occurs with cinchonine, in combination with kinic and kinotannic acid. The quantity varies, in different specimens of bark, from 3 to 5 per cent. The bases are extracted by boiling the pulverized bark in 8 or 10 parts of water, acidulated with 1 part of oil of vitriol, and 1 of hydrochloric acid. The liquor is strained through a cloth, and again treated with acidulated water. As soon as the liquors are cold, milk of lime, or carbonate of soda, is added, the precipitates formed being submitted to pressure, and treated with hot alcohol. If cinchonine be present in any quantity, it crystallizes as the liquid cools; and the two alkaloids are further separated by the addition of dilute sulphuric acid and crystallization, the sulphate of quinine crystallizing out first. The alkaloid is thrown down by the addition of ammonia, and may be formed into the different salts at will. Quinine being very insoluble in water, it is generally used in medicine in the form of disulphate, which dissolves readily in alcohol and water. Q. is a valuable febrifuge and anti-periodic. The sulphates of cinchonidine and cinchonine are also used in medicine. They produce results similar to those of Q., but are very much less used. See CINCHONA.

Quintinism, *n.* (*Med.*) The aggregate of encephalic or neuropathic phenomena induced by over-doses of quinine.

Quinoa, *n.* See CHENOPODIUM.

Quinquagesima, (*jēs'*.) *a.* [Lat., from *quinquaginta*, fifty.] Fiftieth.

Quinquagesima-Sunday. Shrove-Sunday; the Sunday which is about the fiftieth day before Easter.

Quinquangular, (*kwīn-kwāng'gular*.) *a.* [Lat. *quinque*, five, and *angulus*, an angle.] With five angles or corners.

Quinquangled, *a.* Quinquangular.

Quinqueden'tate, **Quinqueden'tated**, *a.* [Lat. *quinque*, five, and *dens*, *dentis*, tooth.] (*Bot.*) Five-toothed.

Quinquedent'rons, *a.* [From Lat. *quinque*.] (*Bot.*) Opening into five parts.

Quinquedid, *a.* [Lat. *quinque*, and *findere*, *fidi*, to cleave.] (*Bot.*) Five-cleft, as a leaf.

Quinquedolate, **Quinquedoliated**, *a.* [Lat. *quinque*, and *folium*, leaf.] (*Bot.*) Bearing five leaves, or leaflets.

Quinqueliteral, *a.* [Lat. *quinque*, and *litera*, letter.] Consisting of five letters.

Quinquelobate, **Quinquelobed**, *a.* [Lat. *quinque*, and *Gr. lobos*, lobe.] (*Bot.*) Five-lobed.

Quinqueloc'ular, *a.* [Lat. *quinque*, five, and *loculus*, cell.] (*Bot.*) Five-celled, as a pericarp.

Quinquenerved, (*-nervd*.) *a.* [Lat. *quinque*, and *nervus*, nerve.] (*Bot.*) Having five nerves;—said of certain leaves.

Quinquennial, *a.* [Lat. *quinquennalis*—*quinque*, five, and *annus*, year.] Occurring once in five years; continuing for five years.

Quinquennialm, *n.* [Lat.] A period of five years.

Quinquenpartite, *a.* [Lat. *quinque*, and *partitis*, from *pars*, *partis*, part.] Consisting of five parts.

(*Bot.*) Separated into five parts almost to the base.

Quinquere, *n.* [Lat. *quinque*, and *remus*, oar.] Among the ancients, a galley with five sets of oars.

Quinquesyllable, *n.* [Lat. *quinque*, and *Gr. syllabē*.] A word of five syllables.

Quinquivalve, **Quinquivalvular**, *a.* [Lat. *quinque*, and *valva*, valve.] (*Bot.*) Five-valved, as a pericarp.

Quinquvir, *n.*; *pl.* QUINQUEVIRI. [Lat., from *quinque*, and *vir*, man.] Among the ancient Romans, one of five commissioners frequently appointed under the republic as extraordinary magistrates to carry any measure into effect.

Quinquina, *n.* See CINCHONA.

Quinsy, **Quinsey**, (*kwīnz'y*.) *n.* [Fr. *esquinancie*; Lat. *cynanche*; *Gr. kyanagche*—*kyōn*, a dog, *angchē*, from *angchō*, to throttle.] (*Med.*) An inflammation of the throat. Medical men distinguish it into different kinds, according to the nature of the inflammation, or the part chiefly affected, as *croup*, *diphtheria*, *pharyngitis*, *tonsillitis*, &c. The two former are noticed under their proper heads, the latter are those that commonly come under the head of *quinsy*. They do not differ materially from each other in character, or in the mode of treatment, but in the one case the *pharynx* is the principal or sole seat of the disease, in the other, the *tonsils*. The inflammation is brought on by cold, and it usually commences with cold chills and other febrile symptoms. There is fulness, heat, and dryness of the throat, with a hoarse voice, difficulty of swallowing, and shooting pains towards the ear. The inflammation may be confined to the pharynx, or it may spread from it over the soft palate and the tonsils, and into the cavities of the nose. On examination, the back of the mouth and fauces will be found unnaturally red and swollen, and often covered with a tough mucus. In general, a common sore throat does not require much treatment, the inhaling of the vapor of hot water, or a large poultice round the throat, with gentle purgatives, and the avoidance of stimulating food, being usually all that is necessary for its removal. Frequently, however, the swelling continues for some time, and occasionally the disease takes the form of relaxed sore throat, which requires to be treated with stimulating gargles, as hot wine, very diluted mineral acids, &c., and tonics, if the general health be not good. In more severe cases, the difficulty of swallowing is much increased, and to avoid the pain the patient usually allows the saliva to flow from his mouth, and liquids attempted to be swallowed return through the nose. The inflammation may also extend to the eustachian tube, producing deafness, and to the parts around the larynx, occasioning difficulty of breathing. With these symptoms there is usually a considerable degree of fever, with headache, loss of appetite, &c. In such cases, strong purgatives are required, with a blister outside the throat, and warm poultices, the inhaling the steam of hot water, stimulating gargles, and, if the throat be much swollen, leeches applied to the sides. Sometimes an abscess is formed in one or both tonsils, from which the patient suffers greatly. This will in time burst; but it will materially shorten the patient's sufferings if it be opened as soon as the matter is distinctly formed. After the inflammatory symptoms have subsided, a generous diet and tonic medicines are necessary. When the tonsils have become permanently enlarged, or where other means fail, it is sometimes necessary to reduce them by cutting to their natural dimensions. In malignant or putrid sore throat, there is great prostration of strength, accompanied with a low typhoid state, requiring the remedies used in low typhus, with astringent gargles, leeches, and nutritive diet, &c.

Quint', *n.* [Fr. *quinte*, from Lat. *quintus*, from *quinque*, five.] A sequence of five, as in piquet.

Quintain, *n.* [Fr. *quintaine*; Lat. *quintana*.] A wooden post formerly set up for military exercises; it sometimes was a mere rough block, which the soldier used in sword practice; at other times it took the form of a man, and turned on a pivot, striking the assailant who planted a blow badly by the rapidity with which it revolved when struck out of its centre. Mounted soldiers practised on a *quintain* formed of an upright post with a transverse bar above, to one end of which a broad, flat board was affixed, and to the other a bag of sand or heavy piece of wood, which knocked the rider off his horse if he was not careful in avoiding the blow, or did not strike the board properly, as it turned on its pivot. (Also written *quintel* and *quintin*.)

Quintal, *n.* The French denomination for a weight of 100 kilogrammes. See METRIC SYSTEM.

Quintan, *a.* [Lat. *quintanus*, from *quinque*.] Happening as the fifth, after four others; also, occurring every fifth day; as, a *quintan* fever.

—*n.* (*Med.*) A fever the paroxysms of which return every fifth day.

Quintanar de la Orden, (*keen-ta'nar*.) a town of Spain, prov. of Toledo, 17 m. from Belmonte. Manuf. Woollen stuffs. Pop. 6,000.

Quintel, *n.* Same as QUINTAIN, *q. v.*

Quinteron, *n.* See QUINTROON.

Quintessence, *n.* [Lat. *quinta essentia*, the fifth essence.] According to the old alchemists, the fifth, or last and highest essence, of power in a natural body;—hence, an extract from anything, containing its virtues or most essential part in a small quantity; the pure, essential part of a thing.

Quintessential, (*-sen'shal*.) *a.* Consisting of quintessence.

Quintet, **Quintette**, **Quintet'to**, *n.* [It. *quinto*, dimin. of *quinto*, from Lat. *quintus*.] (*Mus.*) A musical piece adapted to five voices or instruments, each of which is *obligato*. The most remarkable quintets for stringed instruments are those of Boccherini, Mozart, Beethoven, and Onslow; and for wind instruments (the flute, oboe, clarinet, horn, and bassoon), those of Reicha.

Quintic, *n.* (*Math.*) Same as QUANTIC, *q. v.*

Quintile, *n.* [From Lat. *quintus*.] (*Astron.*) An aspect of two planets distant from each other the fifth of the zodiac, or 72°.

Quintilian, (QUINTILIANUS MARCUS FABIUS.) a celebrated Roman rhetorician, was a native of Spain. In his early youth he was at Rome, and heard the lectures of Domitius Afer, who died A. D. 59. He accompanied Gabba to Rome, in the year 68, became an eminent pleader, and still more eminent as a teacher of rhetoric. He taught at Rome for 20 years, was named preceptor to the grand-nephews of Domitian, had also Pliny the younger among his scholars, and had a salary from the public exchequer. He retired from his public duties in 89, and is supposed to have lived about 30 years longer. His great work is entitled, *De Institutione Oratoria*, and was written after his retirement, but during the reign of Domitian. It is the most complete course of rhetoric handed down from ancient times, and is distinguished for its elegance of style, as well as for sound judgment, cultivated taste, and various knowledge. The first complete copy of this work was discovered by Poggio, in the abbey of St. Gall, about 1419, and the first printed edition appeared at Rome, in 1470.

Quintilius, AURELIUS CLAUDIUS, brother to Claudius II., was, on his death, invested with the purple by the army in Aquitaine, A. D. 270, but, being deserted by his troops on the approach of the rival Emperor Aurelian, who had been proclaimed by the Italian army, he bled himself to death in a bath seventeen days after assuming the sceptre.

Quintillion, (*kwīn-til'yūn*.) *n.* [Lat. *quintus*.] According to English notation, a unit with 30 ciphers attached; according to French notation, a unit with 18 ciphers attached.

Quintin, *n.* Same as QUINTAIN, *q. v.*

Quintin, (*kan'ta*.) a town of France, dept. of Côtes-du-Nord, on the Gouet, 9 m. S. of St. Brienc. Manuf. Linens and cambrics. Pop. 4,000.

Quintine, *n.* [Fr., from Lat. *quintus*.] (*Bot.*) The fifth coat (when there are so many) of the nucleus of a seed.

Quintroon, **Quinteron**, *n.* [Sp. *quinteron*, from Lat. *quintus*.] In the W. Indies, the child of a woman having one-sixteenth part of negro blood, and a white father.

Quintuple, *n.* [Lat. *quintuplex*—*quintus*, and *plico*, to fold.] Fivefold; containing five times the number or amount; multiplied by five.

(*Mus.*) Having five crotchets, &c., in a bar.

(*Bot.*) With arrangement as a multiple of five.

—*v. a.* To make fivefold.

Quintuple-nerved, **Quintuple-ribbed**, (*-ribd*.) *n.* (*Bot.*) Said of leaves, the midrib of which gives off two strong primary veins or branches on each side above the base.

Quintus Curtius Rufus. See CURTIUS RUFUS.

Quinzaine, **Quinzain**, *n.* [Fr., from *quinze*, fifteen.] (*Chron.*) The fourteenth day after a festival, or the fifteenth, if the day of the feast be included.

Quio'tepec, or CERRO DE LAS JUNTAS, a village of Mexico, abt. 90 m. N. of Oajaca.

Quip, (*kwīp*.) *n.* [From *whip*.] A smart cut, as with a whip;—hence, by analogy, a smart, sarcastic turn; a taunt; a bitter gibe; a severe, scathing retort; a jeer.

—*v. n.* To taunt; to administer a biting retort or gibe; to treat with pungent sarcasm.

—*v. n.* To scoff; to revile.

Quipo, **Quipoo**, (*kī'po*, *ke'pōō*.) *n.*; *pl.* QUIPOS, QUIRUS. [Peruv., a knot.] A cord about two feet long, com-

posed of different-colored threads tightly twisted together, from which a quantity of smaller threads were suspended in the manner of a fringe; — used for recording events and the like, among the ancient Peruvians, Mexicans, &c.

Quire, (*kwir*), *n.* [Fr. *choeur*; Gr. *choros*.] A chorus; a choir; a body of singers. — That part of a church where the service is sung; the choir.
—*v. n.* To sing in concert. (R.)

"Still quiring to the young-eyed cherubim." — *Shaks*

Quire, *n.* [Fr. *cahier*, a copy-book; O. Fr. *cuyer*; O. Eng. *quayre*, a book.] A collection of paper consisting of 24 sheets, each having a single fold.

Quiriquina, (*ke-re-kee-na*), an island of Chili, abt. 10 m. N. of Concepcion.

Quirites, *n. pl.* (*Roman Hist.*) A name which occurs in the expression *Populus Romanus Quirites*. It is supposed the name *Roman* denoted the people in its relation to foreign nations, while by *Quirites* were signified the citizens as individuals, and in their social relations.

Quirk, (*kwirk*), *n.* [A. S. *thveor*; Ger. *zwerch*.] A twist or turn from the right or straight course; — hence, an artful turn for evasion or subterfuge; a shift. — A smart taunt; a pungent retort; a quibble; a slight conceit or fancy; as, "odd quirks and remnants of wit." (*Shaks*). — An irregular melody; as, "quirks of music." — *Pope*.

(*Building*.) A piece of ground taken out of any regular ground-plot or floor; — thus, if the ground-plot be oblong or square, a piece taken out of a corner to make a court or yard, &c., is called a quirk.

(*Arch.*) A small acute channel or recess, much used between mouldings in Gothic architecture.

Quirked, (*kwérkt*), *a.* Possessing a quirk.

Quirk'ish, *a.* Consisting of quirks, turns, quibbles, or artful evasions; resembling a quirk.

Quir'pon, an island of British N. America, at the entrance of Belleisle Strait, Newfoundland; Lat. 52° 40' N., Lon. 55° 16' W.

Quiscalus, *a.* (*Zool.*) A genus of birds, family *Corvidæ*, indigenous to America, and distinguished by having the bill as long as the head; the tail long, graduated; color, lustrous-black. The most common and most beautiful species, *Q. versicolor*, the Crow Blackbird, is described under its common name. *Q. major*, the Boat-tailed Grackle or Jackdaw, of the Southern Atlantic and Gulf States, is 15 inches long, and the wing 7 inches; the general color lustrous-black, head and forward parts glazed with purple.

Quish, *n.* See *CUSH*.

Quit, (*kwit*), *v. a.* (*imp. and pp. QUIT, or QUITTED.*) [Fr. *quitter*; It. *quitare*; Lat. *quiescere*, to send away, to dismiss, from *quies* — *etio*, rest, quiet, repose.] To set free; to release, to relieve. — To discharge from; to acquit; to absolve.

"Guiltless I quit; guilty I set them free." — *Fairfax*.

—To repay; to requite; to make payment for, or of; to discharge, as an obligation or duty; as, to quit a debt. —To meet the claims upon, or expectations entertained of; to acquit; — employed reflexively. — To give up; to resign; to relinquish; to forsake; to leave or depart from; as, to quit work. — To carry through; to discharge or perform completely.

To quit cost, to reimburse. — To quit scores, to make even; to cause to balance; to be tantamount.

"Still I shall bear, and never quit the score." — *Dryden*.

—*a.* Discharged from; free; clear; even; absolved; as, I am quit of obligation. (Frequently used in the form *quits*, colloquially; as, to be quits with a person, *i. e.*, to be even with him; — hence, in an exclamatory sense, Let us cry quits!)

Qui tam, *n.* [Lat., who as well.] (*Law.*) An action under a statute which imposes a penalty for the doing or not doing an act, and gives that penalty in part to whosoever will sue for the same, and the other part to the commonwealth, or some charitable, literary, or other institution, and makes it recoverable by action. The plaintiff describes himself as suing as well for the commonwealth, for example, as for himself.

Quitclaim, *v. a.* [Eng. *quit*, and *claim*.] (*Law.*) To release or yield up by quitclaim.

Quitclaim, *n.* [L. Lat. *quiti clamentia*.] (*Law.*) A form of deed of the nature of a release, containing words of grant as well as release. The term is in constant and general use in American law, to denote a deed substantially the same as a release in English law. It presupposes a previous or precedent conveyance, or a subsisting estate and possession. It is a conveyance at common law, but differs from a release in that it is regarded as an original conveyance in American law, at least in some States.

Quite, (*kwit*), *adv.* [Fr. *quitté*, discharged.] Clean; completely; wholly; entirely; totally; perfectly; as, the work is quite finished. — Very; to a great extent or degree; as, he looks quite young again.

Quitman, JOHN ANTHONY, an American general and politician, b. in Dutchess co., New York, in 1799. He began his career by teaching school from his 16th to his 19th year, when he commenced the study of law. Removing to Mississippi in 1821, he entered the political arena, filling successively the offices of member of the legislature, State chancellor, member of the convention for revising the State constitution, State senator, and governor, which latter he entered upon through a vacancy in 1836. He soon after withdrew from political life, and joined the Texans in their struggle for independence. In 1846, he was appointed brigadier-general of the U. S. army in the war with Mexico, distinguishing himself at Monterey, Vera Cruz, and Cerro Gordo, after which latter engagement he was brevetted major-

general, and was voted a sword by Congress for gallantry. He participated in the attack on Chapultepec, and was foremost in the assault on the City of Mexico, which city he governed until order was established. He was elected governor of Mississippi soon afterwards, but resigned in consequence of accusations of complicity with the Lopez-Cuban expedition, of which charge, however, he was acquitted. In 1855 and 1857, he was elected to Congress by large majorities. D. in Natchez, Miss., in 1858.

Quitman, in Georgia, a S.W. co., adjoining Alabama; area, abt. 175 sq. m. Rivers, Chattahoochee River, and Pataula Creek. Surface, mostly level; soil, not very fertile. Cap. Georgetown.

Quitman, in Mississippi, a post-village, cap. of Clarke co., abt. 140 m. E. by S. of Jackson.

Quitman, in Missouri, a post-village of Nodaway co., abt. 46 m. N.W. of St. Joseph.

Quitman, in Texas, a post-village, cap. of Wood co., abt. 275 m. N.E. of Austin.

Quitquic, in Wisconsin, a village of Sheboygan co., abt. 85 m. N.E. of Madison.

Quito, (*ke'to*), the capital of the republic of Ecuador, stands on the eastern slope of the western branch of the equatorial Andes, 150 m. from Guayaquil; Lat. 0° 13' 27" S., Lon. 78° 50' W. The volcanic mountain of Pichincha is the basis on which it rests; and owing to the inequalities of the ground, the streets are very irregular and uneven. On one side of the principal square stands the cathedral, and on the opposite the episcopal palace; the third side is taken up with the town-house, and the fourth by the palace of the Audience. It is very spacious, and has in the centre an elegant fountain. In these the greatest part of the convents are situate, and make a handsome appearance. *Manuf.* Coarse cotton and woollen goods, hosiery, lace, jewelry, and confectionery. It has a trade in agricultural produce, and exports iron, steel, and indigo. The great danger of Quito is from earthquakes, and from the vicinity of burning mountains, which often break out into the most tremendous eruptions. On the 4th of February, 1797, the country was shaken by a most dreadful concussion, and, in the space of a second, 40,000 persons were hurled into eternity. Since this period violent shocks of earthquake have been frequently experienced. The height of Quito above the level of the sea is 9,534 ft. Eleven summits of mountains capped with snow are to be seen from it. Pop. abt. 60,000.

Quit-rent, *n.* [Lat. *quiritus redditus*.] (*Law.*) A rent, reserved in grants of land, by the payment of which the tenant is quit from all other service.

Quits. See *QUIT*.

Quit-table, *a.* That may be quitted or vacated.

Quit-tance, *n.* [Fr.] Act of quitting; acquittance; discharged from a debt or other obligation. — Return; repayment; recompense.

Quitter, *n.* One who quits.

Quittor, *n.* (*Ferriery*.) An ulcer formed between the hair and hoof, on the inside quarter of a horse's foot.

Quittor-bone, *n.* (*Ferriery*.) A hard, round swelling on the coronet of a horse's foot, between the heel and the quarter.

Quiver, (*kwiv'r*), *n.* [Fr. *couverir*, to cover.] A cover, case, or sheath for arrows.

—*v. n.* [A. S. *cwiferlice*, anxiously; D. *kuiveren*, to tremble; W. *chwylf*, motion, action.] To shake or tremble; to be in motion or agitation; to quake; to shudder; to shiver; to dither; as, a quivering voice, quivering leaves.

Quivered, *a.* Furnished with a quiver; as, quivered nymph. (*Milton*). — Sheathed, as in a quiver.

Quivering, *n.* Act of trembling or shaking; agitation.

Quiveringly, *adv.* With quivering.

Qui vive, (*ké vèr*). [Fr., from *qui*, who, and *vivre* — *vivre*, to live.] The challenge of a French sentinel — equivalent to, Who goes there? — Hence, to be on the qui vive, to be on the alert, by a sentinel or vidette.

Quixotic, *a.* Like Don Quixote; romantically extravagant; as, a quixotic enterprise.

Quixotically, *adv.* In a mad, or absurdly romantic manner.

Quixotism, **Quix'otry**, *n.* Absurd and romantic notions; knight-errantry; enterprises, designs, or actions resembling those of Don Quixote in the novel of *Cervantes*; visionary scheme.

Quiz, (*kwiz*), *n.* A conundrum; an enigma; a puzzling question. — A person who quizzes others. — An odd or singular fellow; an eccentric.

—*v. a.* To puzzle; to ridicule or make sport of; to banter; to chaff; as, the ladies quizzed him severely. — Also, applied to the preparation of students for passing degrees; as, a medical quiz.

Quizzer, *n.* One who quizzes or puzzles others.

Quiz'zically, *a.* Funny; ludicrous; comical. (*Colloq.*)

Quiz'zism, *n.* Act or practice of quizzing.

Quob, **Quab**, *v. n.* [Icel. *quapa*, to shake with loose fat.] To throb; to quiver. (*Vulgar*.)

Quod, (*kwód*), *n.* A slang term for a jail or place of confinement.

Quoddy, *n.* A kind of scaled herrings cured in North America by smoking or salting.

Quodlibet, *n.* [Lat., what you please.] A nice point or distinction; a quiblet; a quibble; a subtlety.

(*Mus.*) An improvised melody performed by several persons.

Quogue, in New York, a post-village of Suffolk co., abt. 75 m. E. of New York city.

Quoif, (*koif*), *n.* [Fr. *coiffe*.] A coif; a cap or hood.

—*v. a.* To cover or dress with a coif.

Quoiffure, *n.* Same as *COIFFURE*, *q. v.*

Quoin, *n.* [Fr. *coin*; Gr. *gonia*.] (*Arch.*) The corner,

or the internal and external angle of a building, or of

any part of a building. It is generally applied to the stones that form the angles. These are spoken of as the quoin stones, to distinguish them from the rest of the ashlar.

(*Gun.*) A wedge of wood put below the breech of a cannon, for the purpose of adjusting its elevation.

(*Printing*.) One of the wooden wedges used for fastening the types in the forms.

Quoit, (*koit*), *n.* [Etymol. uncertain. See *Koit*.] A circular ring or piece of iron, or a plain flat stone to be pitched or thrown at a fixed object in play, as a trial of dexterity.

(*Games*.) An out-door game somewhat resembling the ancient pastime of throwing the discus. The game is played with quoits, which are round flat metal rings, varying in internal diameter from two or three inches to a foot. Two iron pins, or hobs, as they are called, are placed in the ground, which is generally puddled with clay, at a distance of about fifteen or twenty yards. The game is usually played by two or four persons, who choose sides, and play in regular succession. The endeavor of the player is to throw his quoits from one hob over the other, or as near to it as possible. The quoits nearest to the hob score to the player, and the game is won by the side which makes a given score first.

—*v. n.* To throw quoits; to play at quoits.

—*v. a.* To drive away by throwing stones at.

Quon'dam, *a.* [Lat., formerly.] Former; having been formerly.

"My quondam barber, but his worship now." — *Dryden*.

—*n.* A person once holding an office or position. (R.)

Quorum, *n.* [Lat. *gon*, pl. of *qui*, "of whom," with reference to a complete body of persons, of whom those who are assembled are legally sufficient to the business of the whole.] Used substantively, *quorum* signifies the number of persons belonging to a legislative assembly, a corporation society, or other body, required to transact business. There is a difference between an act done by a definite number of persons, and one performed by an indefinite number; in the first case a majority is required to constitute a quorum, unless the law expressly directs that another number may make one; in the latter case any number who may be present may act, the majority of those present having, as in other cases, the right to act. Sometimes the law requires a greater number than a bare majority to form a quorum; in such case no quorum is present until such a number convene. When an authority is confided to several persons for a private purpose, all must join in the act unless otherwise authorized.

Quota, *n.* [Lat. *quotas*, which number in the series? from *quot*, how many?] A proportional part or share, or the share, part, or proportion assigned to each; as, each pays his quota of money.

Quotable, *a.* That may be quoted or cited.

Quotation, (*-ta'shun*), *n.* Act of quoting or citing. The passage quoted or cited; the part or sentence of a book or writing named, repeated, or adduced as evidence or illustration.

(*Com.*) The current price of an article specified; as, at last quotations.

(*Printing*.) A piece of hollow type-metal, lower than type, employed in the blank spaces at the beginning and end of chapters, &c.

Quotation marks. See *GUILLEMET*.

Quotationist, *n.* One who cites, or makes frequent quotations.

Quote, (*kwót*), *v. a.* [O. Fr. *quoter*, now *coter*, to mark according to the order of the letters or numbers; L. Lat. *quotare*, from *quotus*.] To mark the number of a chapter, of an article, of a verse, &c.; to mark on the margin; to cite, as a passage from some author; to name, repeat, or adduce a passage from an author or speaker by way of authority, evidence, or illustration; as, to quote some lines from Byron.

(*Com.*) To name, as the current price of an article; as, to quote the market-value of palm-oil.

Quoter, *n.* One who quotes or cites the words of an author or speaker.

Quoth, (*kwóth*), *v. n.* [A. S. *cwæthan*, to say, to speak.] To say; to speak. This verb is defective, being used only in the first and third persons in the present and past tenses, as *quoth I*, *quoth he*; and the nominative always follows the verb.

Quotha', *interj.* [For *quoth'a*, said he, 'a being an old barbarism for *he*.] Indeed!

Quotidian, *a.* [Lat. *quotidianus* — *quotus*, and *dies*, a day.] Daily; occurring or returning daily; as, a quotidian fever.

—*n.* Anything occurring or returning daily.

(*Med.*) A fever whose paroxysms return every day.

Quotient, (*kwót'shent*), *n.* [Fr. Lat. *quoties*, and *quotiens*, how often, from *quot*, how many.] (*Arith.*) The number resulting from the division of one number by another, and showing how often a less number is contained in a greater; thus the quotient of twenty divided by four is five; applied also to a fraction used to denote division; as, $\frac{3}{4}$, $\frac{2}{3}$, &c.

Quotless, *a.* That may not be, or is not worthy of being, quoted.

Quotum, *n.* [Lat. *quotus*, how many.] Share; part; quota. (R.)

Quo Warranto. [Lat. *quo*, abl. of *qui*, who, which, and L. Lat. *warrantus*, a guarantee.] (*Law.*) The name of a writ by which the government commences an action to recover an office or franchise from the person or corporation in possession of it. This writ has given place to an information in the nature of *quo warranto*. This, though in form a criminal, is in substance a civil proceeding, to try the mere right to the franchise or office.

Q.—SECTION II.

QUAR

Quad-, Quadri-. An initial compounding element, derived from the Lat. *quattuor*, four.

Quadrilateral, The. That territory in Italy at whose angles are the four towns, Legnago, Mantua, Peschiera, and Verona. The Mincio forms its western and most important defensive line, the Adige its eastern. From Legnago to Mantua is 21 miles, and from Peschiera to Verona 15 miles. For nearly a thousand years, this "quadrilateral" has been the base of all military operations against Italy. The possessor of it has been supposed to have the control of Italy. Austria's possession of it was a constant menace to the unification of Italy, especially inasmuch as Austria spent enormous sums on the fortifications of the territory. When, however, Italy became the ally of Prussia, in the war between that power and Austria, which ended in the disastrous defeat of Sadowa (1866), Austria was obliged to withdraw from the Quadrilateral, with the result that Venetia became a part of the kingdom of Italy.—Another quadrilateral, formed by Rustchuk, Silistria, Shumla, and Varna, was considered the main defence of Constantinople and the Turkish possessions in Europe until the Russo-Turkish war of 1877, when the quadrilateral was flanked and the Ottoman Empire conquered, although the Russians had been unable to reduce either of the four strongholds.—The four towns, Ardahan, Baiezd, Batoum, and Kars, at the northeast of the Ottoman possessions in Asia, are sometimes spoken of as a quadrilateral, but they are, in fact, a defensive line of fortresses. In the war of 1877 the Russians took all but Batoum. By the Treaty of Berlin, Ardahan, Batoum, and Kars were ceded to the Russians, leaving to the Turks Baiezd only.

Quadrivalent, a. Having a valence or combining power of four.

Quahog, n. [Am. Ind. *poquahock*.] (*Zoöl.*) The common round or hard clam (*Venus mercenaria*); a bivalve having its inside tipped with purple, found along the Atlantic coast of North America, and highly esteemed as food.

Quahk, v. n. (*Bee-keeping.*) To make a sound as a young queen-bee in her cell.

Quain, Sir Richard, physician, was born at Mallow, Ireland, Oct. 30, 1816; graduated with honors at the University of London (1842); became a member of the Royal College of Physicians of London (1846), and (1871) a fellow of the Royal Society. In 1885 he was made physician-extraordinary to the Queen; in 1889 received the degree of LL.D. from Edinburgh; in 1891 was created a baronet, and elected president of the General Medical Council. He has contributed largely to the *Transactions* of learned societies.

Quaker City, in Ohio, a post-village of Guernsey co., 17 m. E. by S. of Cambridge. Pop. (1897) 920.

Quannah, in Texas, a post-town, cap. of Hardeman co., 191 m. N.W. of Ft. Worth. Pop. (1897) 1,860.

Quang-nam (*koo-ang'nam*), a seaport of Anam, S.E. Asia, at the head of a gulf of same name, 75 m. S.E. of Hué, the cap. of the empire. It carries on an extensive trade.

Quarl, n. A fire-brick used in making supports for melting-pots for use in zinc desilverization, for retort-covers, &c.

Quarrying Machinery. The channelling method of getting out the stone in quarries has come into very wide use within a dozen years. The rock is cut out in a series of great steps or benches, each about 6 feet high, a channelling-machine being used to separate the blocks. The cutting mechanism of a channelling-machine consists of a gang of drills or chisel-pointed bits, shaped according to the nature of the stone. Three drills in a gang are sufficient for very soft stone, and 4 or 5 drills are used in channelling harder stone. An efficient channeller will cut 100 feet of marble in a working day, and three or four times as great a quantity of soft stone. The design of the bar form of channeller is borrowed from the rock-drill. One, or more commonly two, stout tubular bars are supported on spreading legs, the latter being weighted to prevent them from jumping. A traversing-saddle is mounted on the bars in such manner as to carry a gang of reciprocating drills, and feed them along either for horizontal or perpendicular cutting. The power is supplied by a tube leading to a source of compressed air. The track channelling-machine resembles a little locomotive. It is usually a frame mounted on 4 wheels, and bearing an upright boiler and engine. Connected with the piston-mechanism, and overhauling the rails, is a gang

of cutters, so arranged that they may be fed down for deeper and deeper cutting until the channel reaches the desired depth. As the grades of the quarry are often steep, friction-clutches are provided to prevent the car from rolling away from its work. The track-channeller is run on a track on one shelf, while the channelling is done on the adjoining shelves. The Sullivan, Bryant, and Wardwell are well-known machines of this type. Another form of track-channeller is made to work along a toothed rail, so that the machine may be advanced the exact distance of one tooth at each cut. This machine makes use of diamond bits, and bores a series of holes on the line of the cut. The Saunders track-channeller is driven by compressed air, instead of a portable steam-engine. The cutting-stroke of the gang of drills is delivered by the direct thrust of the piston, as with a rock-drill, and the car is fed along with the up-stroke of the piston. This machine is particularly suited for side-hill work.

The rock-drill is also used for quarrying, drilling a series of holes on set lines, the work being finished by means of plugs and feathers. When mounted on a quarry-bar, or bars, the rock-drill is called a gadder; and when operated from a car it is a gadding-machine, or gadding-car. In getting out rock by this means there is some loss, because the rock may not fracture evenly between the holes when wedged out. This is largely overcome by the Knox method of reaming, which consists in driving a reamer down the holes and cutting a groove on either side toward the adjoining holes, in order to start the fractures in a true line. Another method of getting out dimension stone in the quarry is used to some extent in Belgium. It consists in sawing out the stone with a reciprocating steel wire. The surface operated upon is so small that the work is said to be done quite rapidly. Broken stone is produced at quarries as desired from the refuse. For this purpose any good rock-breaker may be used, but the rotary type is commonly preferred, in which the stones are worked down against the corrugated sides of an upright, rotating cone, and fall out at the base reduced to the size to which the breaker has been set. Conveyors, or buckets mounted on a pair of endless chains, are usually provided for carrying away the stone to the screens, and thence to storage bins, or pockets, or to cars for transportation. In hoisting stone blocks from the quarry a system of telpherage is often used, the stone being first raised by a hoist, and then slung on the ropeway, and carried to its destination. Where the stone in a quarry is mixed with dirt, hydraulic washing is sometimes resorted to, after a method similar to that used in hydraulic mining. Heavy streams of water, thrown from great nozzles forcibly against a bank of earth and stone, speedily drive out the earth, leaving the stone uncovered, and easy to work.

Quarter Section. In the system of surveying adopted by the United States and Canada, a tract of land half a mile square, containing one-quarter of a square mile, or 160 acres.

Quarter-back, n. See FOOT-BALL.

Quarter-pierced, a. (*Her.*) A charge perforated with a square opening so as to show the center of the

Fig. 3041.

field. A cross quarter-pierced is a common charge or bearing.

Quartley, ARTHUR, painter, was born in Paris, France, May 24, 1839. In 1851 he came to the U. S.; was apprenticed to a sign-painter, and followed his trade until 1862. For the next ten years he lived in Baltimore, attending to business, but giving his leisure to artistic study. In 1873 he opened a studio in New York city, and soon became known as one of the leading American marine painters. Died May 19, 1886.

Quartz-mill, n. See ORE-CRUSHING AND DRESSING MACHINERY.

QUEE

Quay, MATTHEW STANLEY, politician, was born at Dillsburg, Pennsylvania, Sept. 30, 1833; graduated at Jefferson College (1850); studied law and was admitted to the bar (1854); immediately gave his attention to politics, and became prothonotary of Beaver co. in 1856, to which office he was re-elected in 1859; during the Civil War period was colonel of the 134th Penna. Vols., and military secretary to the governor of his State (1861-65); member of the legislature (1865-67); secretary of state (1872-78, and 1879-82); state treasurer (1885); U. S. Senator since 1885. He became a member of the Republican National Committee in 1885, and as chairman in 1888 took a prominent part in the election of Harrison and Morton. He was tried in 1898 for misappropriation of public funds, but was acquitted. He has for years been the controlling figure in Pennsylvania politics. Failing of election to the Senate in 1899, after a long and exciting contest in the legislature he was appointed by the Governor *ad interim* for the term of 1899-1905. Died May 28, 1904.

Quebro'cho, n. (*Bot.*) Any one of several trees of which the bark is used medicinally, especially the *White Q.*, of Chile, belonging to the dogbane family (see APOCYNUM). The bark is used as a substitute for cinchona. *Red Q.* is a tree of the cashew family (see ANACARDIACEÆ), found in Mexico, the bark of which is thought to have similar properties.

Queen City, in Texas, a post-town of Cass co. Pop. (1897) 775.

Queen's College and University. (*Educ.*) This institution was founded by royal charter in 1841, at Kingston, Ontario, Can., in the interest of the Presbyterian Church in Canada, in connection with the Church of Scotland. The early development of Queen's was greatly hindered by the separation which took place in the Presbyterian Church in Canada, consequent on the disruption of 1844 in Scotland. On the reunion of the Presbyterian bodies in Canada in 1874, however, an improvement took place, and it has become, under Principal George M. Grant, one of the most successful and well-conducted institutions of learning in Canada. The University has faculties of Theology, of Medicine, of Law, and of Practical Science. During the year ending April 28, 1897, the institution had 567 students, not including those in the affiliated "School of Mining and Agriculture," or in the Veterinary School, or in the Dairy School, now controlled by the Provincial government; nor are there included those in classes connected with the various forms of University Extension. There is also a post-graduate course. During the year above mentioned the University had 65 instructors, besides those officiating in the School of Mining, and its revenues were in excess of \$52,000. The library contains about 35,000 volumes. The buildings of Queen's are the chief architectural ornament of Kingston. The city is also the seat of the Women's Medical College, which is affiliated with the University.

Queensland. (*Geog.*) The territory which now constitutes Queenslaud was scarcely known until 1823, when Brisbane river was discovered, named, and taken possession of by the British. The land through which it flowed seemed to be habitable, and accordingly a penal settlement was established in 1824, on Moreton Bay, near the present dividing line between Queensland and New South Wales. Four years later, the Darling Downs, a fine pasture region lying inland from Moreton Bay, was discovered by Alan Cunningham, the explorer, and soon attracted farmers, who came in great numbers, bringing police guards with them to protect them from the convicts. These squatters, the convicts, and the aborigines made up an ill-assorted population, in which there was constant violence and lawlessness until 1842, when the territory was formally opened to colonization. This step, though bitterly opposed by the squatters, brought in a better class of settlers in such numbers that in 1859 the new colony was separated from New South Wales and received a government of its own, consisting of a governor appointed by the crown, and two houses of parliament. The first governor was Sir George Bowen, during whose rule, from 1859 to 1868, a broad and practical government policy was established, which has been followed by succeeding governors. Queensland has an area of 670,000 sq. m., five and a half times the area of the United Kingdom; it extends from New South Wales on the South, at about the 29° S. latitude, to the 10° S. latitude, and includes the Torres Straits Islands; its length is 1,300 m. from N. to S.; its greatest breadth is

800 m.; and it has a coast line of 2,250 m. in extent. Its most settled region is the fertile, well-watered, agricultural belt lying between the eastern coast and the Great Dividing Range of mountains, which run in a general way parallel to the coast and are of the same system as the Australian Alps in Victoria and the Blue Mountains of New South Wales. To the west of the Dividing Range is a region of dry inland plateaus, known as the "Never Never Country," where the soil is rich, but too poorly watered to produce much except low, open, forest growth and grasses; but as these grasses, even when dry, are very nutritious, this is one of the finest stock countries in the world, and is occupied by shepherds with herds of sheep and cattle. Much of this country is still under the control of the crown, which leases it for grazing purposes in large tracts at a low rental. In a similar way, smaller farms in agricultural districts may be rented from the government and finally purchased at prices fixed by the Land Board. As two-thirds of Queensland lies within the tropics, the colony as a whole has a wide range of climate, products, and resources; the low-lying coast lands are suited to tropical and semi-tropical agriculture, while the higher inland country, by the aid of irrigation, is available for most of the crops of the temperate zones. Indian corn is the staple grain, but there is much good wheat land, especially on Darling Downs. Jute and other fiber-producing plants are cultivated, and potatoes grow well. The staple garden crops of the lower countries are sweet potatoes and pumpkins. Arrowroot, tobacco, cotton, rice, sugar, coffee, ginger, pepper, nutmeg, and all sorts of tropical fruits find themselves at home. The sugar industry was very important at one time, but has somewhat declined owing to the stringent laws regulating the importation of cheap Chinese and South Sea Island labor. Naturally the chief exports of the colony are raw products, the most important being wool, meat, skins, tallow, gold, silver, copper, lead, pearl, tortoise-shell, arrowroot, and timber; manufactures are developing, however, and metal foundries, tanneries, sugar refineries, flour-mills, distilleries, saw-mills, establishments for canning meats, and tweed factories may be numbered among them. The mineral resources are rich; from 1868 to 1895 the gold mines yielded 9,926,923 ounces of gold, and new gold fields have been recently discovered. Copper probably stands next to gold in importance, although the fall of prices has lessened the amount of copper-mining in the last decade. The deposits of tin are also valuable, and silver, mercury, cobalt, bismuth, zinc, antimony, and manganese are found; extensive coal mines are also worked; there are valuable quarries of many building-stones, and various precious stones occur, particularly in the tin-streams. The climate of Queensland for most of the year is dry and warm, but free from the hot winds so common in other parts of Australia. The temperature does not exceed 108° nor fall below 34°, and the air has a tonic quality which is recommended for all lung troubles. The population is increasing rapidly, partly owing to the government policy of assisting immigration. The total population in 1891 had reached 393,718, of whom there are about 22,000 aborigines, mostly in the wilder regions. The transportation facilities of the colony are very good; there is a direct line of steamers between Brisbane, the capital, and London; there are coast lines to the other colonies, and a rapidly extending railway system exists, which, like the telegraphic and postal services, is under government control. Besides Brisbane, the principal towns are Rockhampton, Ipswich, Lonsville, Cooktown, Maryborough, Gympie, Gladstone, Toowoomba, Dalby, Roma, and Bowen. The schools are free, and attendance is compulsory. There is a very small standing army, but all men between 18 and 60 years old are liable for military service in case of need.

Que'zal, or **Que'sal**, *n.* (*Ornith.*) The most splendid of American trogons, adopted as the national bird of Guatemala. The name is from the Maya language, and refers to the glittering metallic green that predominates in the plumage of the male. It is also called hoatzin, in reference to its place as the bird of royalty; and its book-name is the queen trogon—*Pharomacrus mocino*. This trogon is about the size of a dove. "The whole upper surface, breast, neck, and head, including the curious rounded and compressed crest, are rich golden green, and so are the smaller wing-coverts, some of which are lengthened into gracefully drooping plumes overhanging the wing; four upper tail-coverts, of a similarly brilliant green, are enormously lengthened, especially the two central ones, which, in perfect specimens, may reach a length of nearly three feet; the true tail-feathers are black and white, and the posterior part of the under side is rich vermilion, inclining to crimson. Only the males are adorned with the long, floating train; the females, as in most trogons, being much plainer." These gorgeous tail-plumes, which the living bird moves back and forth, like scissor blades, and vibrates in the sunshine, were so highly prized by the natives of Central America, at the time of the Spanish conquest, that no one was allowed to kill the bird when taken, but only to divest it of its feathers, which were worn by the chiefs alone. That this was an ancient custom appears from representations in ancient carvings, as well as prehistoric pictographic manuscripts. It was this tradition that caused it to become the representative bird of Guatemala, and find a place in its national coat of arms, on its postage-stamps, &c. It dwells in the forests, feeds chiefly upon fruit, which it snatches on the wing "with a degree of elegance that defies description." The bird's feet are small, weak, and useful only in perching; but its wing-power is good. "Its flight," says Oebert Salvin, who has written most fully about this species, "is rapid and straight; the long tail-feathers, which never seem to be in his way, stream after him. . . . The cries of the quezal are various. They consist principally of a low, double note, 'whe-oo, whe-oo,' which the bird repeats, whistling it softly at first, and then gradually swelling it into a loud but not unmelodious cry. . . . The bird's other cries are harsh and discordant." It breeds in accidental cranies in tree-trunks, abandoned woodpeckers' holes, and lays pure white eggs. This bird is not found outside of Costa Rica and Guatemala, but several allied species occur in South America and the West Indies, and one other throughout Mexico. See TROGONIDÆ.

Quezaltenango (*ka-sāl-ta-nāng'go*), a thriving town of Guatemala, capital of a department of same name, and ranking next after Guatemala, the capital, as a trading center. It is near the site of the aboriginal city of Xelahu, and was founded by the Spanish conqueror Alvarado in 1524. Pop. about 24,000.

Quid pro quo (*kwid pro kwō*). [L., one thing for another.] An equivalent, or the mutual consideration and reciprocal performance of both parties to a contract or agreement.

Quien Sabe (*kē'en-sū'be*). [Sp. Who knows?] An expression used in the southwestern part of the United States, in replying to a question, implying, "I do not know," or "I do not care to say."

Quil'ler-Couch, ARTHUR T., writer, was born in England, Nov. 21, 1863; graduated at Trinity College, Oxford; began a literary career in London on the staff of *The Speaker*, in which many of his stories and criticisms have appeared. He has written many sketches; and among his latest volumes are: *Ia, a Love Story* (1895); *Wandering Heath* (1896); and a series of articles entitled *Adventures in Criticism* (1896).

Quillota (*kēl-lo'tah*), a town of Chile, province and 22 m. N. E. of the city of Valparaiso, on the Aconcagua

river. Rich copper mines in its vicinity give it a considerable importance. Pop. 10,000.

Quincen'tenary, *a.* Pertaining to five hundred; coming at the end of five hundred years; pertaining to a five-hundredth anniversary.

n. A five-hundredth anniversary or its celebration.

Quincy Meth'ods. A system of primary education, especially developed by Colonel Parker, which lays particular stress upon the development of the natural activities of the child.

Quine'mo, in *Kansas*, a post-village of Osage co., 30 m. S. S. W. of Lawrence. Pop. (1895) 608.

Quinet (*ke-nā'*), EDGARD, a French philologist, was born at Bourg, in 1803; became a member of the scientific commission sent in 1828 by the French government to the Morea, where he collected the materials for his *Modern Greece in Relation to Ancient Greece*, published in 1830. He wrote from time to time for the *Revue des Deux Mondes* valuable articles on historical and philosophical subjects; and produced several works strongly marked by liberalism; among them *La Génie des Religions* (1842). In 1846 he was removed from his chair on account of his extreme political opinions; became a deputy in 1847; took an active part in the revolution of 1848; and was expelled from France in 1852. In Nov., 1870, he was restored to his professorship in the College of France. Collected editions of his works appeared in 1856 and 1859. Died in 1875.

Quinqu, **Quinquā**, **Quinquē**. An initial compounding element, derived from Lat. *quinque*, five.

Quinquennial'ia, *n.* [From L., *quinquennium*, a term of 5 years.] (*Roman Antig.*) Public games celebrated every five years, instituted by the emperors to commemorate notable events in their respective reigns.

Quinta'na, in *Texas*, a post-town of Brazoria co. Pop. (1897) 666.

Quit'mau, in *Mississippi*, a N. W. co.; area, 400 sq. m.; drained by Coldwater river and its affluents. Surface, nearly level; soil, fertile; well suited for stock raising. Cap. Belen. Pop. (1897) 4,150.

Quorum, *n.* (*Par. Law.*) The number of members in a deliberative body that must be present for the legal transaction of business. When this number is not specified by rule, common usage has made it a majority of the members; but a body may, by its rules, make a larger or smaller number constitute a Q. In the British House of Lords 3 is a Q., though the members number 450. In the House of Commons 40 is a Q. In the Congress of the U. S., in the absence of specific rule, a majority has constituted a Q., and the same usage has obtained in the committees, including the "Committee of the Whole of the House," until 1890, when the House adopted a rule that 100 should be a Q. in Committee of the Whole. In a contested election case in the U. S. House of Representatives, Jan. 29, 1890, objection was made that no Q. was present. But the Speaker of the House, Hon. Thomas B. Reed, decided that a Q. was present, although a Q. did not vote, as he could see members present who refused to vote; and he therefore directed their names to be counted to make the Q. full. This decision was hotly contested as being without precedent and unconstitutional; but the House sustained the ruling of the Speaker, who continued to "count a quorum" whether members refused to vote or not. On Feb. 14, 1890, the House adopted new rules, of which Section 3 of Rule XV. is as follows: "On the demand of any member, or at the suggestion of the Speaker, the names of members sufficient to make a quorum in the hall of the House who do not vote shall be noted by the clerk and recorded in the journal, and reported to the Speaker with the names of the members voting, and be counted and announced in determining the presence of a quorum to do business." In 1892 these rules were modified, but they were substantially restored in 1894.

François Rabelais

1483-1553

RABB

R is the 18th letter in the English and other Western alphabets, and of the group of liquids or semi-vowels. Of all the consonants, *R* approaches most nearly to the vowels. The normal orthoëpy of *r* in English and the Romanic tongues (also in Latin) is a trill sound produced by applying the tip of the tongue near the roots of the upper fore-teeth. *R* is one of the most difficult articulation, and is sometimes called the *canine letter*, from some supposed resemblance in sound to the growl of a snarling dog. This letter is susceptible of numerous interchanges, the most common of which is with *l*. The Chinese, who cannot pronounce *r*, use *l* in lieu of it, as do also some of the Polyesian tribes. At the beginning of English words derived from the Greek through the medium of the Latin, *r* is usually followed by *h* to represent the force of *ρ*, as in *rhetoric*, *rhapsody*, as also when it occurs in the middle of an English word derived from a Greek compound, as in *diarrhœa*, from *διά* and *ῥέω*. In modern English, an affectation largely prevails which, as it were, emasculates the force of *r*, and tones down its vibratory "burr" into something like a nondescript vowel, as in *very*, *bore*, into *vewy*, *boww*. As an abbreviation, *R* stands for *rex* or *regina*; *R. P.* for *respublica*, &c. In medical prescriptions *r* (thus *R*) stands for *recipe* or *take*. As a Roman numeral *R* stands for 80, and with a dash over it (thus *R̄*) for 80,000.

R. A. Abbreviation of *Royal Academy*, *Royal Academician*, *Rear-admiral*, and *Royal Artillery*.

Ra. An inseparable prefix, from the Lat. *re* and *ad* in combination, introduced into English through the French and Italian.

Raab, a navigable river of Hungary, rising in Styria, and after a N.E. course of 180 m. falling into the Danube near the town of Raab.

Raab, (*rab*), a town of Hungary, cap. of a district of same name, at the junction of the Raab and Little Danube, 67 m. W.N.W. of Buda. *Manuf.* Cutlery and tobacco.

Raalte, (*rall*), a town of Holland, prov. of Overijssel, 11 m. N.N.E. of Deventer; *pop.* 6,000.

Raam'ses. (*Script.*) A city built by the Hebrews during their servitude in Egypt, abt. 35 m. N.W. of Luz.

Rab, *n.* A stick used by masons in mixing hair with mortar.

Rabagh, (*El*), (*ra'ba*), a town of Arabia, in Hêjaz, on the Red Sea, 100 m. N.W. of Mecca, where pilgrims perform their ablutions.

Ra'hastens, a town of France, dept. of Tarn, on the Tarn, 21 m. E. of Toulouse; *pop.* 6,000.

Rabat, a fortified seaport-town of Morocco, in Fez, at the mouth of the Bu-Regreb, 135 m. S.S.W. of the entrance of the Straits of Gibraltar. *Manuf.* Carpets, silk, linen, and woollen fabrics, saddlery, &c. It has a considerable export trade.

Rab'ba, an important town of Central Africa, in Nigritia, on the Niger, Lat. 9° 15' N., Lon. 5° 20' E. It has an extensive trade in ivory, and goods of both foreign and native manufacture.

Rab'bet, *v. a.* [Perhaps from Fr. *raboter*, to plane.] To cut, as the edge of a board, in a sloping manner, in order that it may form a joint, by lapping with another board similarly cut; — also, to cut a rectangular groove, longitudinally, in the edge of a board, &c., to fit a corresponding projection upon the edge of another board, &c., so as to compose a joint.

—To lap, and join the edges of, as boards, timber, &c., by a *rabbet*.

—*n.* A cut made aslope upon the edge of a board, to form a joint with another board similarly cut, by lapping; also, a rectangular groove cut in the edge of a board longitudinally to admit a corresponding projection made upon the edge of another board, &c., adapted to fit into it.

Rabbet of the keel. (*Ship-building.*) That part of the keel, stern, and stern-post of a ship which is cut for the plank of the bottom to fit into.

Rab'betting, *n.* (*Joinery.*) Forming or cutting rabbets.

Rab'bet-joint, *n.* A rabbet.

Rab'bet-point, *n.* A particular kind of plane used by joiners for cutting a rabbet.

Rabb'i, **Rabb'in**, *n.* [Heb., my teacher, lord, or master.] A title of respect given by the Jews to the teachers of their law, and which seems to have been introduced only shortly before the time of Christ by his disciples. It was originally used in three forms. — *rab*, or master; *rabbî*, or my master; and *rabbun*, great master, or *rabboni*, my great master. *Rab* is still used by the Jews of eastern Europe and others, both in conversation and writing, in the sense of *Mr.*; and the title *rabbî*, or *rabb-in*, is given to the modern religious heads of Jewish communities or congregations. The term *rabbînical* is applied to all the Jewish writings composed after the Christian era. (See HEBREW LANGUAGE AND LITERATURE.)

Rabbîn'ic, **Rabbîn'ical**, *a.* [Fr. *rabbînique*.] Pertaining or having reference to the Jewish rabbins, or to their opinions, learning, and language.

Rabbîn'ic, *n.* The later Hebrew language.

Rabbînism, *n.* [Fr. *rabbînisme*.] A particularity or peculiarity of the language of the rabbins.

Rabbînist, **Rabbînite**, *n.* Among the Jews, one who adhered to the Talmud and the traditions of the rabbins, in opposition to the *Caraites*, *q. v.*

Rab'bit, *n.* [Formerly *rabbet*, most probably corrupted from *rough-foot*, the foot of the animal being adapted to

scratching and burrowing.] (*Zoöl.*) An animal of the same genus with the hare. The *Lepus cuniculus*, the Common Rabbit of Europe, very much resembles the hare in structure, but may be readily distinguished from it by its smaller size, its shorter ears and hind legs, and the absence of the black tip to the ears. In its habits it is extremely different from that animal; being unable to outstrip its enemies in the chase, it seeks its safety and finds shelter by burrowing in the ground; and instead of leading a solitary life, its manners are eminently social. The fecundity of *R.* is truly astonishing: they will breed seven times in one year, and perhaps bring forth eight each time; and, on a supposition that this happens regularly for four years, a

Fig. 2203. — TAME RABBITS

single pair would in that time multiply to 1,274,840. We should, however, add that although this is possible, such extraordinary fertility is not very probable. When the time of parturition draws near, the female forms a separate burrow, more intricate than the ordinary one, and lines it at the bottom with a part of her own fur; the young are born blind, and very scantily covered with hair; and for nearly six weeks she continues to suckle them. During this period the female is seldom visited by the male; but as soon as the little progeny are capable of going abroad, he seems anxious to acknowledge and caress them. The Gray *R.*, *Lepus sylvaticus* of the United States, is the most plentiful species of the genus *Lepus* in New Jersey, Pennsylvania, and the more southern States; but although it somewhat resembles the common *R.* in color, and is rather inferior to it in size, its habits are intermediate between those of the *R.* and the hare. It does not burrow, although when hard pressed by a pursuer, it retreats into any accessible hole, and sometimes digs, in order to escape from or enter an enclosure.

Angora rabbit, a variety of rabbit having long, soft fur. *Rabbit-burrow*, a hole for habitation, made in the earth by rabbits. — *Rabbit-hutch*, a box or pen for confining rabbits. — *Rabbit-warren*, a tract of land set apart for the propagation and preservation of rabbits.

Rab'bit River, in Michigan, enters the Kalamazoo River from Allegan co.

Rab'bitry, *n.* A collection of hutches for keeping tame rabbits.

Rabble, (*rab'l*), *n.* [A. S. *reaf*, greedy, mad, from *reafian*, to spoil; Lat. *rapio*, to seize and carry off; W. *rhai*, a ravening.] A mob; a tumultuous crowd of vulgar, noisy people; a confused, disorderly crowd. — The mob; the canaille; the dregs of the people; the lowest class of the populace, without reference to an assembly; as, "the low and ignorant *rabble*." — *Addison*. — A rake-shaped tool used in metallurgy.

—*v. a.* To mob; to coerce or expel by a mob or tumultuous crowd; as, to *rabble* an unpopular minister.

—*a.* Belonging to, or befitting, a *rabble*; tumultuous; noisy; low; vulgar; as, *rabble* proceedings.

Rabboid'al, **Rhabdoid'al**, *a.* [Gr. *rabdos*, a rod, and *eidos*, shape.] (*Anat.*) Belonging or relating to the sagittal suture.

Rabbology, **Rhabdology**, *n.* [Fr. *râddologie*, from Gr. *rabdos*, stick, and *logos*, doctrine.] The method of operating in arithmetic by means of NAPIER'S-BONES, *q. v.*

Rabdoman'cy, **Rhabdoman'cy**, *n.* [Gr. *râbdos*, and *manteia*, prophecy.] Divination by means of wands, practised by the ancients.

Rab'elais, FRANÇOIS, a celebrated French wit and satirist, was b. at Chinon, in Touraine, about 1483. He was at first a monk, but in consequence of having been punished for some indecorous behavior, he quitted the Benedictine order, studied medicine at Montpellier, and for a time practised as a physician. He subsequently obtained, through the influence of his patron, Cardinal du Bellay, whom he accompanied to the court of Rome, the rectory of Meudon; and d. in 1553. He was author of several books; but the only one by which he is known is the romance called *The Lives, Heroic Deeds, and Sayings of Gargantua and Pantagruel*, an extravagant satire upon monks, priests, popes, and pedants, in which much obscenity and absurdity are blended with learning, wit, and humor. *R.* was a conscientious teacher of his flock, and it was his pleasure to instruct the children of his parish in sacred music. His house was the resort of the learned, his purse always open to the needy, and his medical skill was employed in the service of his parish.

Rab'id, *a.* [Lat. *ravidus*, from *rabies*, madness, from *rabo*, to rave.] Raging mad; furious; as, a *rabid* dog.

— Pertaining or relating to *rabies* or hydrophobia; as, *rabid* virus.

Rab'idly, *adv.* In a *rabid* manner; furiously.

Rab'idness, *n.* State or quality of being *rabid*; rage; madness; furiousness.

Rabies, *n.* [Lat.] Madness, as that of dogs; hydrophobia.

Rab'inal, a town of Guatemala, Central America, abt. 50 m. S.W. of Vera Paz.

Rab'inet, **Rab'anet**, *n.* A kind of smaller ordnance.

Rab'un, in Georgia, an extreme N.E. co., adjoining N. Carolina and S. Carolina; area, abt. 330 sq. m. *Rivers*. Chattooga, Little Tennessee, and Tugaloo rivers. *Surface*, mountainous, the Blue Ridge traversing the N. part; *soil*, in some parts fertile. *Min.* Iron in abundance, and some gold. *Cop.* Clayton.

Rab'utin, ROGER, COUNT DE BUS'SY-, a French wit and satirist, was b. in 1618, at Epiry, in Nivernois. He entered the army at the age of 12, under his father, and would probably have obtained a high rank but for the offence he gave to persons in power by his scandalous lampoons. In 1665 he was sent to the Bastille for writing a libel, entitled *Histoire Amoureuse des Gaules*; and on his release he was banished to his estate, where he remained till 1681, when he returned to court. His other works are, *Mémoires*, 2 vols.; and *Lettres*, 7 vols. D. 1693.

Ra'ca, *a.* [Heb. *râkâ*.] An ancient Syriac word, signifying vain, worthless, or foolish. As pronounced by the Jews it included a stronger idea of contempt. Christ says, (*Matt.* v. 22,) "Whoever shall say to his brother, *raca*, shall be condemned by the council, or Sanhedrim."

Rac'ca, or **Rak'ka**, a town of Asiatic Turkey, on the Euphrates, Lat. 30° 5' N., Lon. 38° 50' E.; *pop.* 8,000.

Racconigi, (*rak-kone'je*), a town of Italy, prov. of Turin, on the Maira, 20 m. S. of Turin. *Manuf.* Silk and woollen fabrics. *Pop.* 11,000.

Raccoon', *n.* (*Zoöl.*) The common name of the genus *Procyon*, family *Ursidæ*, characterized by a stout body, pointed muzzle, and moderately long tail. The common Raccoon, *P. lotor*, of the United States, is less than two feet long to the tail, which is about a foot; the general color light-gray, tinged with pale-rusty across the shoulders, and much overlaid with black-tipped hairs. The under parts are of a similar gray, but without the black tips; and over the whole body the dull-sooty under-fur shows through. The tail has five distinct black rings, and a tip of the same color, the interspaces being grayish-white. The end of the muzzle is whitish, and there is a black patch upon the cheek and another behind the ear. The *R.* is nocturnal in its habits, and feeds upon roots, birds, and other small animals. It is easily tamed, and is said to dip its food in water before eating it.

Race, (*rās*), *n.* [Fr.; It. *razza*, from Lat. *radix*, *radix*, the root.] The continued series of descendants from a parent, who is called the *stock*; a breed; a lineage; an extraction; a kindred family, tribe, people, or nation. — A particular breed, sort, or variety; as, the *races* of mankind. — Company; herd.

"A race of youthful and unhandled colts." — *Shaks.*

(*Bot.*) A marked variety which may be propagated by seed.

—A root; as, a *race* of ginger. — *Shaks.*

—A particular strength, flavor, or taste of wine, indicating its race, stock, origin, &c.; — hence, characteristic flavor; bouquet; smack; as, "Canary of the right *race*."

Massinger.

—Peculiarity of disposition; characteristic quality; salient feature; as, "a generous *race*." — *Savage.*

Race, *n.* [A. S. *ras*, a rush, *resan*, to rush; Icel. *rása*, to run; Swed. Gotl. *resa*, a way.] A progress; a course or career; a movement or progression of any kind.

"My race of glory run, and race of shame." — *Milton.*

—A rapid course or motion, whether on the feet, on horseback, or in a carriage, &c.; a running; swift progress. — Particularly, a contest in running; a running in competition for a stake or prize; any running with speed; — plurally, a meeting for contests in the running of horses. See HORSE-RACING.

—A strong or rapid current of water, or the channel or passage for such a current; as, the *Race* of Alderney.

—A small artificial canal or water-course, leading from the dam of a stream to the machinery which it drives; a mill race.

—*v. a.* (*imp.* and *pp.* *RACED*, (*râst*.) To run, as in a *race*; to run swiftly; to run or contend in running for; as, the horses *raced* at their best speed.

—*v. a.* To drive swiftly; to cause to run with speed, as a horse in a *race*.

Race-course, *n.* The ground or path on which *races* are run; as, Epsom *race-course*. — A cut or course for water.

Race-cup, *n.* A gold cup to be run for in a *race*.

Race-ginger, (*jîn'jŕ*), *n.* Ginger in the root.

Race-horse, *n.* A horse bred or kept for running in contest or competition; a racer; a thoroughbred horse, trained to speed. — See HORSE-RACING.

Race'land, in Louisiana, a post-village of La Fourche parish, abt. 40 m. W.S.W. of New Orleans.

Racemic Acid, *n.* [Lat. *racemus*, a bunch or cluster.] (*Chem.*) A peculiar modification of tartaric acid, found in certain species of grapes growing in the Vosges moun-

tains, and in one or two other localities. It differs from tartaric acid in certain minor particulars, although its composition is precisely similar.

Racemose, (-rās-,) *a.* (*Bot.*) Resembling a raceme; racemous.

Racemous, (-sēmūs-,) *a.* [*Lat., racemosus.*] (*Bot.*) Growing in the form of racemes; racemose.

Racemulose, (-sēm'ulōz-,) *a.* (*Bot.*) Having very small racemes.

Racer, (rā'ser-,) *n.* One who races, or competes in a race. — A race-horse; as, a crack racer.

Rachel, (rai'chel-,) (*Script.*) The second daughter of Laban, the dearly beloved of Jacob, who, to obtain her, devoted seven years to the flocks and herds of her father. But, at the end of that period, he found in his veiled bride not Rachel, but Leah, her elder sister, whom he did not love, and was obliged to labor during seven more years in order to gain her. She was the mother of Joseph and Benjamin.

Rachel, (ELIZA RACHEL FELIX,) (rā'shel-,) a celebrated French actress, who was the daughter of a Jew pedlar. The family gained a livelihood by periodically visiting various towns in Germany and Switzerland, and at length settled at Lyons, and in 1830 went to reside at Paris. Sarah, her elder sister, used to sing at the various cafés, to the accompaniment of an old guitar, while Rachel went from table to table to collect the offerings of the spectators. In 1832, the voices of the two sisters having attracted notice, they were placed, by the kindness of some connoisseurs, under Choron, a celebrated singing-master; and in 1833, the elder sister Rachel, having shown great tragic power, entered the *Conservatoire* at Paris, where she was carefully trained by Saint-Aulaire and Samson, and in 1838 made her first appearance at the *Theatre Français*, in the character of "Camille," in *Les Horaces*, where her début was not auspicious. But the coldness of her reception was not of long duration. The sharp critical eye of M. Jules Janin soon discovered in her a worthy interpreter of the *chefs-d'œuvre* of Racine and Corneille; and his brilliant criticisms on her performances soon roused the public sentiment in her favor, which was fully justified by the result. In the course of a few months Mademoiselle Rachel completely revived the classic school of tragedy which had fallen into decay, though her crowning triumph was gained in 1843, in her representation of *Phédre*. Soon after this she made a provincial tour, visited the chief European cities, and at last came to London, in 1846, reaping large harvests both of fame and wealth wherever she appeared. In 1855 she made a professional visit to the U. States, but she was interrupted in the middle of great success by the failure of her health, returned to France, and died of consumption at Cannes, near Toulon, 1858.

Rachilla, *n.* [*Gr.*] (*Bot.*) A branch of inflorescence; the zigzag centre upon which the florets are arranged in the spikelets of grasses.

Rachis, (rā'kis-,) *n.* [*Gr., the spine*] (*Anat.*) The vertebral column of mammals and birds.

(*Bot.*) The axis of several varieties of inflorescence.

Rachitic, (rā-kī'tik-,) *a.* [*Fr. rachitique.*] (*Med.*) Belonging to, or affected by, rachitis; rickety.

Rachitis, (-kī'tis-,) *n.* [*Fr. and Gr., from rachis, the spine.*] (*Med.*) The RICKETS, *q. v.*

(*Bot.*) A disease in fruit producing abortion.

Racily, (-rā'si'ly-,) *adv.* In a racy or piquant manner.

Racine, JEAN, (rā'sen-,) an eminent French dramatic poet, was b. at La Ferté Milon in 1639, and was educated at Port Royal. He commenced his poetical career in 1660, by an ode on the king's marriage, for which he was handsomely rewarded. In 1664 he produced his tragedy of *la Thébaïde*, which was followed in 1666 by *Alexandre*. In 1688 appeared his *Andromaque*, which placed him far above all his contemporaries except Corneille; and his fame was still further increased

to a base cabal that was formed against him, he was induced to desist from writing for the stage. After a lapse of 12 years he wrote, by desire of Louis XIV. and Madame de Maintenon, the sacred dramas of *Esther* and *Athalie*, which were performed by the young ladies of the institution of St. Cyr. Besides his dramatic works, he wrote *Canticles and Hymns for the use of St. Cyr*, the *History of Port Royal*, &c. In 1673 he was received into the Academy, and continued to enjoy the highest favor at court; but having offended the king by a too free use of his pen in drawing up a memorial on the distresses of the people, he died of chagrin, in 1699. Submitting implicitly to the code of laws laid down by the critics of his time, he did much towards making the regular or classical school of the drama acceptable and permanent, by imparting to his tragedies all the perfection which it is possible to conceive genius as giving to works constructed on so narrow a model. He is not equal to Corneille in vigor and genius, but his grace and melody of diction are exquisite; and his refined tenderness of feeling, often melting into profound pathos, breaks out through all the barriers imposed by the unities, and the simple plots, and the monotony of the rhymed Alexandrine verses.

Racine, (ras'sen-,) in *Minnesota*, a township of Mower co.

Racine, in *Ohio*, a post-village of Meigs co., abt. 8 m. S.E. of Pomeroy.

Racine, in *Pennsylvania*, a township of Beaver co.

Racine, in *Wisconsin*, a S.E. county, bordering on Lake Michigan; area, about 350 square miles. *Rivers.* Root and Pishtaka rivers. *Surface*, nearly level; *soil*, very fertile, producing large crops of wheat, corn, oats and hay. *Pop.* (1895) 41,110.—A handsome and thriving city, cap. of the above county, on Lake Michigan, about 25 miles S. by E. of Milwaukee. It has numerous manufactures, and a large trade is conducted on the Lakes. In May, 1882, *R.* suffered terrible loss by fire, but has since been rebuilt more handsomely than before. *Pop.* (1895) 24,889.

Raciness, *n.* State or quality of being racy; peculiar flavor; piquancy; pungency; as, *raciness* of wit or literary style.

Rack, *v. a.* [*A. S. ræcan, to extend; Ger. recken.*] To stretch or strain with effort or violence; to extend by force;—hence, to wrest; to submit to harsh or violent treatment.—Specifically, to stretch on the rack or wheel for the infliction of torture by straining the limbs and dislocating the joints.—To affect with extreme pain or anguish; to torture; to torment.—To distress by exaction; to exhaust; to screw.—To strain or draw off from the lees; as, to rack wine; to cleanse from dross or impurities; as, to rack ores.

(*Naut.*) To seize two ropes together with cross turns.

—*n.* [*D. rek.*] Something used for stretching, extending, or straining.—Specifically, an instrument of torture for stretching, extending, or bending in an arch direction the body of the victim. The rack consisted of a large

Fig. 2205. — THE RACK.

frame furnished with pulleys, cords, and other appliances, upon which the body of the person under examination, or "question," as it was called, was first extended, and then gradually stretched, until all the joints of the body and the extremities were dragged from their sockets, and kept in that position for several minutes, often to the laceration of the capsules and ligaments, and then, by a sudden removal of the strain, allowed to retract in their sockets, causing an amount of agony often beyond the endurance of human patience.

—Any instrument used for stretching anything; as, a rack for bending a bow. — A grate on which bacon is laid. — A wooden framework in which hay is placed for horses and cattle in feeding. — A framework or stand of wood, metal, or earthenware on which articles are put, placed, spread out, or deposited; as, a hat-rack, a clothes-rack, a toast-rack, a card-rack, a bottle-rack, &c. — A distaff.

(*Mining.*) An inclined plane on which the ore and slime are washed and separated.

(*Naut.*) A strong wooden frame-work, supplied with several shears for receiving the running rigging; a rack-block.

(*Man.*) The quick amble of a horse.

(*Mech.*) A flat bar with teeth on one side, to work into those of a pinion.

To put to the rack, to put to the torture; to torment.

"A fit of the stone puts a king to the rack." — *Temple.*

—*v. n.* [*Ger. recken.*] To move with a quick, ambling motion, as a horse.

Rack, *n.* [*A. S. recreccan.*] Thin, flying, broken clouds, or any portions of floating vapor in the sky.

—[*A. S. hracca, wahac; Scot. craig.*] The neck and spine of a fore-quarter of veal or mutton.

—Same as ARRACK, *q. v.*

—Ruin; wreck; destruction. (*Colloq.*)

To go to rack, to perish. (*Colloq.*) — *Rack and ruin*, utter destruction; total ruin. (*Colloq.*)

Rack'block, *n.* (*Naut.*) See RACK.

Rack'er, *n.* One who racks or tortures; that which torments. — A horse that moves with a racking pace.

Rack'et, *n.* [*Fr. raquette; Icel. hreckia, to propel.*] The instrument with which players at tennis strike the ball; also, the game itself. — An irregular, chattering noise; din; clamor; confused or noisy talk. — In Canada, a kind of snow-shoe. — A broad, wooden patten for a horse, to enable him to step on soft or oozy ground.

—*v. n.* To frolic; to make a shindy; to kick up a row to make a confused noise or clamor.

—*v. a.* To strike, as with a racket.

Rack'eting, *n.* Noisy or tumultuous mirth or frolic.

Rack'et River, in *New York*, rises in Long Lake in Hamilton co., and flowing an irregular N. course, enters the St. Lawrence River from St. Lawrence co.

Rack'etville, or NORTH POTSDAM, in *New York*, a post-village of St. Lawrence co., abt. 5 m. N. by E. of Potsdam.

Rack'ety, *a.* Frolicsome; making a clattering, clamorous noise.

Rack'ing, *a.* Excruciating; torturing; as, a racking tooth-ache.

—*n.* (*Mining.*) A process of separating small ores from the earthy particles, by means of an inclined wooden frame; the impurities being washed off, the ore remaining near the head of the rack is taken from thence, and undergoes tossing.

Rack'ing-can, *n.* A vessel for clearing wine from the lees. — A utensil for holding sour beer, in which iron-wire is steeped for drawing.

Rack'ashing, *n.* (*Mil.*) A lashing tightened by means of a stick of wood twisted around.

Rack'punch, *n.* Punch made with arrack, lemons, and sugar.

Rack'rent, *n.* (*Law.*) An annual rent raised to the utmost, or to the full annual value of the premises, or near it.

Rack'rented, *a.* Subjected to the payment of rack-rent.

Rack'renter, *n.* One who is obliged to pay rack-rent.

Rack'saw, *n.* A wide-toothed saw.

Rack'stick, *n.* (*Mil.*) The stick used in a rack-lashing.

Racoon', *n.* (*Zool.*) See RACCOON.

Racoon', in *Indiana*, a township of Parke county.

Racoon, in *Ohio*, a twp. of Gallia co.

Racoon' Creek, or **Racoon' River**, in *Indiana*, formed by the union of the Big Racoon and Little Racoon creeks, and enters the Wabash River.

Racoon Creek, in *New Jersey*, enters the Delaware River from Gloucester co.

Racoon Creek, in *Ohio*, enters the Ohio River from Gallia co.

Racoon Creek, in *Pennsylvania*, enters the Ohio River from Beaver co.

Racoon Creek, in *Wisconsin*, enters the Mississippi River from La Crosse co.

Racoon' Ford, in *Virginia*, a post-village of Culpepper co., abt. 90 m. N.W. of Richmond.

Racoon' River, in *Iowa*, rises in Buena Vista co., and flowing S.E. enters the Des Moines River from Polk co.

Racoon River, in *Wisconsin*, enters the Mississippi River from Vernon co.

Racy, (rā'sy-,) *a.* [*Sp. raiz, root.* See RACE.] Having a race or strong flavor indicating its origin; tasting of the soil;—hence, fresh; rich; toothsome; as, *racy* cider. — Hence, by implication, exciting to the mental taste by a strong distinctive character of thought or expression; peculiar; piquant; as, *racy* language, a *racy* anecdote, *racy* humor.

Radcliffe, ANN, an English novelist, whose maiden name was Ward, was b. in London, 1764; and in her 23d year was married to Mr. W. Radcliffe, proprietor and editor of the "English Chronicle." Her first performance was a romantic tale, entitled *The Castles of Athlin and Dunbayne*; which was succeeded by *The Sicilian Romance* and *The Romance of the Forest*; but that which made her reputation was the *Mysteries of Udolpho*, in 4 vols. Mrs. Radcliffe possessed the art of exciting a high degree of interest in her narrative; her descriptive powers were of a superior order, especially in the delineation of scenes of terror, and in those aspects of nature which excite sentiment, and suggest melancholy associations. D. 1823.

Rad'dle, *v. a.* [*L. Ger. reiten.*] To twist together.

—*n.* A long pole used in hedging. — A hedge formed by twisting together the boughs of trees and shrubs.

—In New England, an instrument consisting of a wooden bar, with a row of upright pegs set in it, employed by domestic weavers to keep the warp of a proper width, and prevent it from becoming entangled, when it is wound upon the beam of the loom.

Radean, (rā-dō-,) *n.* [*Fr., from Lat. ratis, a raft.*]

(*Naut.*) A raft; a float.

Radetz'ky, JOSEPH WENZEL, COUNT, an Austrian general, b. at the castle of Frebnitz, in Bohemia, 1766. Called to participate in the long struggle against Napoleon, and having won his way to the rank of major-general, he fought at Agram and Erlingen; distinguished himself in the battles of 1813, '14, and '15; and at Kulm, Leipsic, and Brienne, exhibited great skill and bravery; but afterwards he became nothing more than the able executioner of a despotic government. Having been successively governor of Ofen in Hungary, and Lemberg in Poland, he was, in 1822, appointed commander-general of the Lombardo-Venetian kingdom. In 1848 the people of Milan rose against their Austrian oppressors, and after a gallant struggle drove them out

Fig. 2204. — JEAN RACINE.

by the production of *Britannicus*, *Bérénice*, and other tragedies. In 1677 appeared his tragedy of *Phédre*, which was opposed by one on the same subject written by Pradon which gave him great uneasiness; and owing

of the city. *R.* retreated upon Verona, to await the arrival of reinforcements. Shortly afterward, Charles Albert, king of Sardinia, joined the popular cause, and crossing the Adige, placed his army between the Austrian commander and the troops which were marching to his aid. In the end, however, the old marshal proved too skilful a strategist for the Piedmontese king, and after many severely contested battles, Charles Albert was signally defeated at Novara. This battle decided the fate of the Italian cause, and Austrian tyranny was again triumphant in Lombardo-Venetia. After 73 years of service in the Austrian armies, he was permitted to resign at the commencement of the year 1857. D. 1858.

Ra'dial, *a.* [From Lat. *radius*.] Relating or pertaining to a radius, or ray; shooting out from a centre, as rays; having rays. — Pertaining or having reference to the radius of the fore-arm of the human body; as, the *radial* nerve.

Ra'dially, *adv.* In the manner of a radius, or of rays. **Ra'diance**, **Ra'diancy**, *n.* [Formed from *radiant*.] State or quality of being radiant; brilliant, sparkling, or vivid brightness; effulgence; splendor.

"Life . . . stains the white radiance of eternity." — *Shelley*.

Ra'diant, *a.* [Fr., from Lat. *radians*, from *radio*, to emit rays.] Radiate; radiating; proceeding from a centre. — Emitting rays or beams of light or heat; issuing in rays or beams; with vivid or effulgent brightness; with lustrous splendor; as, *radiant* light.

Radiant heat. (*Physics*.) When a hot body is freely suspended in air, it cools down to the temperature of surrounding objects; when suspended in a space void of air, it cools down. The chilling—in part in the former case, entirely in the latter—is caused by a process termed *radiation*: the investigation of the phenomena which attend the emission, transference, and stoppage of these rays forms the science of *radiant heat*.

n. The point of meeting, in the heavens, of the apparent paths of shooting-stars, or from whence they seem to radiate.

(*Geom.*) A straight line of unlimited length proceeding from a point.

(*Opt.*) The luminous point of issue of rays of light. — That which radiates.

Ra'diantly, *adv.* In a radiant manner; with radiance or beaming brightness; with effulgence or lustrous splendor.

Ra'diary, *n.* (*Zoöl.*) One of the *RADIATA*, *q. v.*

Ra'dia'ta, *RA'DIATES*, *n. pl.* [From Lat. *radius*, a ray.] (*Zoöl.*) The name given by Cuvier to the lowest organized of the primary division of the animal kingdom, because certain of the animals therein included have a radiated form of a part or the whole of their body. The *R.* are all aquatic, mainly marine. There are at least 10,000 living species distributed among 3 classes. — *Echinodermata*, or Echinodermis, *Acalephs*, or Jelly-fishes, and *Polypi*, or Polyps.

Ra'diate, *v. n.* [Lat. *radiatus*, from *radius*, ray.] To emit rays or beams of light; to beam; to be radiant. — To shine; to issue or emanate in rays, as light; to dart, as flashes or beams of brightness. — To issue and proceed in direct lines or pencils from a point or surface, as heat.

v. a. To irradiate; to send forth or emit beams or rays of light upon; to illuminate; to enlighten. (*r.*) — To emit or send out in direct lines from a point or surface, as heat.

a. Composed of rays diverging from a focus or centre; as, a *radiate* mineral. — With the structural members arranged radiately about a centre; as, a *radiate* animal. (*Bot.*) Possessing large ray-florets in a flower distinct from disc-florets, as in the daisy.

(*Zoöl.*) Pertaining to the *Radiata*.

Ra'diated, *a.* (*Min.*) With crystals diverging from a centre.

(*Zoöl.*) Belonging to the sub-kingdom *Radiata*.

Ra'diated-veined, (*vänd.*) *a.* (*Bot.*) With the chief veins diverging from the apex of the petiole, as certain reticulate leaves.

Ra'diately, *adv.* With radiation or divergence from a centre.

Ra'dia'tion, *n.* [Lat. *radiatio*.] (*Physics*.) The emission of light or heat from a luminous or heated body. The principal laws of radiation are given under *HEAT*, and *LIGHT*, *q. v.*

Ra'diator, *n.* That which radiates; — especially, that part of a heating apparatus the use of which is to radiate heat. — A body from which rays emanate.

Ra'dical, *a.* [Fr.; Lat. *radicalis*, from *radix*, a root.] Pertaining to the root; issuing directly from the root. — Original; fundamental; native; primitive; constitutional; — hence, thorough-going; uncompromising; extreme; as, a *radical* truth.

(*Bot.*) Proceeding immediately from the root, as a leaf. — Pertaining to the root of a plant; as, *radical* hairs.

(*Gram.*) Having reference, or belonging, to the etymological root.

R. pitch. The tone with which the utterance of a syllable commences. — *R. quantity*. (*Math.*) An algebraic quantity which is not a perfect power of the degree indicated by the radical sign. — *R. sign*. (*Math.*) In algebra, the symbol ($\sqrt{}$) denoting the extraction of a root. It is a modification of the letter *r*, the initial letter of *radix*, or root. To distinguish the particular root which is to be extracted, a number is prefixed to the symbol. Thus $\sqrt[2]{}$, $\sqrt[3]{}$, $\sqrt[4]{}$, &c., denote respectively the square root, cube root, fourth root, &c. But as the square root, or second, was the first considered, the number is usually omitted, and merely the symbol ($\sqrt{}$) written. Fractional exponents are frequently used instead of the radical sign. — *R. stress*. In elocution,

forceful utterance falling on the initial part of a sound or syllable.

n. One who advocates a radical reform, or extreme measures in reformation.

(*Eng. Pol.*) One of a political party in England that desires to have the abuses, which from lapse of time or other cause may have crept into the government, completely *rooted out* (as the term implies), and a larger portion of the democratic spirit infused into the constitution; an ultra-liberal.

(*Philol.*) A *radix*; a root; a primitive word; a simple, undervived, uncompounded word. — A primitive letter; a letter that belongs to the root of a word.

(*Chem.*) An element, or a simple constituent part of a chemical substance, which is incapable of decomposition.

Ra'dicalism, *n.* Advocacy of radical reform; the principles of radicals in politics; ultra-liberalism.

Ra'dicality, *n.* State or quality of being a radical; relation to a root in essential nature.

Ra'dically, *adv.* In a radical manner; originally; essentially; primarily; without derivation. (*r.*) — Fundamentally; at the origin or root; as, that system is *radically* wrong.

Ra'dicalness, *n.* State or quality of being a radical; radicality.

Ra'dical The'ory. (*Chem.*) The theory of compound radicals in organic chemistry, first proposed by Liebig, may be best illustrated and explained by considering the composition of the alcohols. Thus, in the case of ordinary vinic alcohol, C_2H_6O , Liebig assumed that it was a derivative of a radical C_2H_5 , which he named *ethyl*. In like manner, he considered ether, $2(C_2H_5)O$, also to be derived from the same radical. Upon this theory, which, as soon as it was started, received the fullest confirmation from thousands of experiments, the compound group ethyl, C_2H_5 , performed a similar function to potassium, silver, or any of the other elements. Taking potassium as an example, the compounds of the two radicals would run as follows:

Potassium, oxide of K_2O	Ethyl, oxide of $(C_2H_5)_2O$
Chloride of KCl	Chloride of $(C_2H_5)Cl$
Iodide of KI	Iodide of $(C_2H_5)I$
Sulphide of K_2S	Sulphide of $(C_2H_5)_2S$
Hydrated oxide of, $K_2O.H_2O$	Hydrated oxide of, $(C_2H_5)_2O.H_2O$

The theory was at first strongly objected to by many eminent chemists, from the circumstance of the assumed radicals being hypothetical; but as experiment went on, first one and then another of these radicals was isolated, until at last a very respectable list was shown. Similarly, the theory was extended to the organic acids, acetic acid having been shown to be a hydrated oxide of the radical, thus assimilating them to the inorganic acids, as shown below:

Formic acid, $H_2O(CH)O_3$, or hydrated teroxide of formyl (C_2H).
Acetic acid, $H_2O(C_2H_3)O_3$, or hydrated teroxide of acetyl.
Sulphuric acid, $H_2O.S_2O_3$, is hydrated teroxide of sulphur.

Ra'dicant, *a.* [Lat. *radicans*.] (*Bot.*) Rooting from the stem.

Ra'dicate, *v. a.* [Lat. *radicatus*, from *radix*, *radicis*.] To root; to plant or establish deeply and firmly; as, to *radicate* a belief.

a. Radicated; deeply and firmly rooted; profoundly fixed or established; as, *radicate* prejudice.

Radica'tion, *n.* [Fr.] Act or process of becoming firmly or deeply rooted or implanted; as, the *radication* of habits.

(*Bot.*) The tendency of the root of a plant in so far as affects the ascending and descending caudex.

Rad'icel (*-sel*), *n.* A rootlet.

Rad'icle, **Rad'icule**, *n.* [Lat. *radicula*, dimin. of *radix*.] (*Bot.*) That part of the seed of a plant which upon vegetation becomes the root; the stem of the embryo.

Ra'diolite, *n.* [Lat. *radius*, ray, and Gr. *lithos*, stone.] (*Zoöl.*) A genus of fossil shells, the inferior valve of which is in the shape of a reversed cone, the superior valve being convex.

(*Min.*) A variety of natrolite, especially that which comes from southern Norway.

Ra'dions, *a.* Consisting of rays, as of light. (*r.*)

Ra'dish, *n.* [A. S. *radic*; Lat. *radix*.] (*Bot.*) See *RAPHANUS*.

Ra'dius, *n.*; *Eng. pl.* *RADIUSES*; Lat. *pl.* *RADI*. [Lat. : Gr. *radōs*, from *radō*; Sans. *radh*, to smite.] (*Geom.*) The semi-diameter of a circle, or a right line drawn from the centre to the line of circumference.

(*Anat.*) A bone of the fore-arm, which accompanies the ulna from the elbow to the wrist.

(*Fortif.*) A line drawn from the centre of the polygon to the extremity of the exterior side—in other words, an *oblique radius*; a line drawn from the same centre perpendicular to the exterior side; — or, *right radius*.

(*Bot.*) The ray of a compound radiate flower.

Radius of curvature. (*Geom.*) See *CURVATURE*.

Ra'dius-rods, *n. pl.* (*Mach.*) The guiding-rods in a parallel motion joined to the connecting-links, to counteract the vibratory motion communicated by the beam, by guiding the links so that there is no point.

Ra'dius-vec'tor, *n.* [Lat. *radius*, and *vector*, a bearer.] (*Geom.*) The line joining a fixed point or pole to any other point in space. The length of the *radius-vector* is one of the polar coordinates of the point.

(*Astron.*) The imaginary line joining the centre of the sun and the centre of a planet or a comet, or the centre of a planet and that of its satellite.

Ra'dix, *n.* [Lat.; Gr. *radix*, root.] A root.

(*Philol.*) A primitive word from which springs other words; a radical; an etymon.

(*Bot.*) The root of a plant.

(*Math.*) The fundamental member of any system, a base; — thus 10 is the *radix* of the decimal system of numeration.

Ra'dnor, an inland co. of England, in S. Wales, having N. the cos. of Montgomery and Salop, E. Hereford, S. Brecknock, and W. Cardigan; area, 426 sq. m. The surface is mountainous, except in the S.E., which is level and fertile. *Rivers*, Wye, Ithon, Elan, Teme, and Lug. *Chief towns*, Presteign, New Radnor, and Knighton. Pop. (1897) 22,355.

Radnor, in *Illinois*, a twp. of Peoria co.

Radnor, in *Ohio*, a post-township of Delaware county.

Radnor, in *Pennsylvania*, a post-township of Delaware co.

Radon, a town of Russian Poland, on the Radomka, 56 m. S.S.E. of Warsaw; pop. 10,231.

Rad'zivil, or **RADZIWILL**, the name of an ancient Polish family of Lithuania, which commenced to figure in history in the 14th century. Nicholas Radzivil, the first of the name, was created by Jagellon, grand-duke of Lithuania, palatine of Wilna. The most celebrated of his descendants were, — *NICHOLAS*, palatine of Wilna and governor of Livonia, under Sigismund Augustus, king of Poland. He signalized himself by his valor against the Tenthonic order in 1557, and against the Russians, whom, in 1565, he completely defeated. He abjured the Catholic for the Protestant religion, which he propagated zealously, and at his own expense produced a Polish translation of the Bible, which was condemned at Rome. B. about 1500; d. 1567. His descendants reverted to the Roman Catholic faith. — *CHARLES RADZIVIL*, palatine of Wilna, distinguished himself by his opposition to the Russians, and was the great rival of the powerful Czartoryski family. Nominated, in 1762, governor of Lithuania, by Augustus III., king of Poland, he energetically combated Russian influence; but, not succeeding in preventing the dismemberment of his native country, he went into exile, but returned to Poland shortly before his death, which took place in 1790.

Raff, *n.* A confused heap; a jumble; as, a *raff* of errors. (*Barrow*). — Rags; refuse.

Raffler, *n.* One engaged in a raffle; the promoter of a raffle.

Raffish, *a.* Low; vulgar; slangy; as, a *raffish* fellow.

Raffle, (*raf'l*), *n.* [Fr. *rafle*.] A game of chance or lottery, in which the winner sweeps all the stakes away.

v. n. [Fr. *rofler*; Icel. *hroflo*, to sweep with the hand; Ger. *raffen*.] To cast dice for a prize, in which each person concerned in the game lays down a stake, or hazards a part of the value, while the winner sweeps all the stakes away; as, to *raffle* for a watch.

Raffle-net, *n.* A sort of fishing-net.

Raffael'lo Sanzio. See *RAPHAEL*.

Rafflesia'ceæ, *n. pl.* (*Bot.*) A small order of plants, class *Rhizophyta*. *DIAC.* Stemless and stalkless; flowers 5-parted, sessile on the branches of trees, solitary, with anthers opening by pores, and innumerable ovules growing over parietal placentæ. — They are parasitic plants, which consist merely of a flower, and are natives partly of the Indian Islands and partly of South America. The plants of the typical genus *Rafflesia* have neither stalk nor leaves, but are mere flowers seated upon the roots of species of *Cissus*, making their appearance at first as a hemispherical swelling of the

Fig. 2206. — *RAFFLESIA ARNOLDI*.

bark of the root, and, after the bark has broken, rising up in the form of a head of cabbage, while the perianth is covered with imbricated bractæ, which are more or less recurved after it has opened. The largest and first-discovered species, *R. Arnoldi*, was discovered in 1818 in Sumatra, by Dr. Arnold, and was sent to the eminent botanist, Robert Brown, by Sir Thomas Stamford Raffles, the British governor of Sumatra. Its flower measures fully three feet in diameter, is capable of containing almost two gallons of fluid, sometimes weighs ten pounds, and is the largest of all known flowers.

Raff-merchant, *n.* A local Anglicism for a lumber-dealer.

Raft, *n.* [Dan.] An assemblage of logs, boards, planks, or pieces of timber, fastened together horizontally and floated down a stream; a float.

v. a. To carry on, or in, a raft.

Raft-bridge, *n.* A bridge supported on rafts.

Rafter, *n.* [A. S. *ræfter*; Ger. *raff*, *rafen*.] A beam; a log; especially, a roof-timber. See *ROOF*.

Rafter, *v. a.* To form into rafters; to furnish with rafters, as a building.

(*Agric.*) In England, to ridge a furrow.

Rafting, *n.* Act or business of floating a raft, or rafts.

Raftsman, *n.*; *pl.* RAFTSMEN. One who manages or steers a raft.

Rafty, *n.* Damp; musty; fusty; mouldy. (Eng. Prov.)

Rag, *n.* [A. S. *hræcod*, ragged.] Any piece of cloth torn, or rent from the rest; a tattered cloth, torn or worn till its texture is destroyed; a shired; a tatter;—hence, a bit; a patch; a fragment; as, he has not a *rag* of generosity in his nature.

—*pl.* Hence, worn-out garments; mean dress or attire. (*Geol.*) A stone of coarse texture; applied indifferently to aqueous and igneous rocks.

—*v. a.* To scold; to rail at; to rate; to revile. (Used as an English provincialism.)

Ragabash, **Ragabash**, *n.* A vagrant; an idle, ragged person.

Ragamuffin, *n.* [Eng. *rag*, and Prov. Ger. *muffin*, to smell fusty.] A paltry, mean fellow; a low, degraded wretch.

Rag and Famish, *n.* A slang appellation given to the Junior United Service Club, London, in burlesque allusion to the brilliant uniforms of its habitués, and the excellence of its cellar and cuisine;—abbreviated, simply the *Rag*.

Rag-bolt, *n.* An iron pin with a barbed shank.

Rag-dust, *n.* Triturated particles of rags, used in the manufacture of papier-mâché.

Rage, (*rāj*), *n.* [Fr.; It. *rabbio*; Lat. *rabies*, from *rabo*, to rave.] Extreme violence of excitement; vehemence of passion or emotion.

—Particularly, anger; fury; violent wrath accompanied with furious words, gestures, or agitation; vehement cholera; as, he flew into a *rage*.

—Vehemence or violent exacerbation of anything painful or injurious; uncontrollable violence or fury.

"On me let Death wreak all his *rage*."—*Milton*.

—Enthusiasm; prestige; extreme passion or eagerness directed to some object; that which is sought after as a novelty; as, her beauty became the *rage* among men.

—*v. n.* To be exasperated to fury; to be overpowered with anger; to be violently moved with passion; as, he *raged* like a madman.

—To be violently driven or agitated; to act or move with violence or tumultuous action; to be driven with impetuosity; as, the *raging* sea.

—To ravage; to exercise fury without restraint, or with fatal effect; as, the yellow-fever *raged* in New Orleans.

Rag-fair, *n.* In London, a market for old clothes, rags, and the like;—applied to a locality in the Jewish quarter of the city.

Ragged, *a.* [From *rag*.] Rent or worn into shreds or tatters, or till its texture is broken; as, a *ragged* coat.

—Uneven; broken with rough edges.—Having the appearance of being broken or torn.—Jagged; rough with sharp, projecting, or irregular points.—Dissonant; harsh in sound. (*R.*)—Dressed in rags; wearing clothes in shreds and tatters; as, a *ragged* beggar.—Rough; rugged.

"What shepherd owns those *ragged* sheep?"—*Dryden*.

Ragged-school, in England, a free school for poor children, city arabs, &c., where they are taught, and in part clothed and fed;—so called, at first, because they came in their common clothing.

Raggedly, *adv.* In a ragged or tattered condition.

Ragged Mountain, in New Hampshire, a ridge dividing Merrimaek and Grafton cos.; height, abt. 2,000 ft.

Raggedness, *n.* State of being ragged, or dressed in tattered clothes.

—State of being rough or broken irregularly; as, the *raggedness* of a precipice.

Rag'ingly, *adv.* With vehement fury or violent impetuosity.

Rag'lan, *n.* [Called from Lord *Raglan*, commander-in-chief of the British army in the Crimean war.] A loose overcoat with large sleeves.

Raglan, in Iowa, a township of Harrison co.

Raglan, FITZROY SOMERSET, LORD, a British field-marshal, b. 1758, was the son of the 5th Duke of Beaufort. He joined the 4th Light Dragoons at the age of sixteen, went with the troops to Portugal, and fought in all the great Peninsular battles, winning the notice and strong regard of the Duke of Wellington, who made him first his aide-de-camp, and then his military secretary—a singular honor for a man under two-and-twenty. At Waterloo he lost his right arm. Upon the death of the Duke of Wellington, R. was appointed Master-General of the Ordnance, and, at the outbreak of the war between France, England, and Russia, he was selected to take the command of the forces ordered to proceed to the Crimea, commanded at the battles of the Alma, Balaklava, and Inkermann, was promoted to the rank of field-marshal, and during the protracted siege of Sebastopol which followed, in the midst of winter, in a severe climate, and surrounded by difficulties, maintained a calmness, dignity, and fortitude, which nothing could surpass. Grief at the unsuccessful attack on the Malakoff and the Redan upon the fatal 18th of June, and the loss of life which it entailed, preyed upon his mind, and he succumbed to an attack of diarrhoea, June 28, 1855.

Rag'land, or **RAGLAN**, the name of a magnificent baronial castle in the co. of Monmouth, Eng., now in ruins, and memorable for the long and desperate siege it sustained in the Civil War, when it was defended by its owner, the Marquis of Worcester, against the forces of the Parliament. The subject of the preceding article,

a descendant of the marquis, took his title from this place.

Fig. 2207. — RAGLAN CASTLE, (from a photograph.)

Rag'man, *n.*; *pl.* RAGMEN. A dealer in rags.

Rago, one of the Cape de Verd Islands, lying S. of Branco, in the Atlantic.

Ragout, (*ra-gōō'*), *n.* [Fr.; Lat. *re*, again, and *gustus*, a tasting.] (*Cookery.*) A sauce, seasoning, or relish for exciting a languid appetite; or, a high seasoned dish, or *plat*, prepared with fish, flesh, vegetables, and the like, stewed with spices and other condiments; a stew; a hash; an olla-podrida.

Raguled, *a.* (*Her.*) Applied to an ordinary whose boundary lines are furnished with serrated projections.

Ragusa, AUGUSTE FRÉDÉRIC LOUIS VIESSE DE MARMONT, DUKE OF, (*ra-gōō'sa*), a marshal of France, b. at Châtillon sur Seine, 1774. He entered the army at an early age, and attracted, at Toulon, the favorable notice of Bonaparte, who made him his aide-de-camp. He accompanied that general to Italy in 1796, and fought in almost every subsequent engagement, winning high honor for his great skill, bravery, and readiness of resource, till, at length, he was selected by Bonaparte to carry to Paris the twenty-two colors captured from the enemy. In the Egyptian campaign he was a general of brigade, and, in 1799, he was one of the officers that accompanied Bonaparte in his perilous flight from Egypt. Between the years 1805–1814 he was one of the most conspicuously skilful and courageous of all Napoleon's subordinates. At Ulm, during the conquest of the province of Styria; at Wagram; as the successor to Massena in Portugal; and at Bautzen, Dresden, and Leipsic, he bore a distinguished part. Against an allied force of Austrians, Russians, and Prussians, numerically four times greater than his own, he obstinately defended Paris, in 1814. But when the enemy's artillery began to sweep the city from the heights of Montmartre, he received instructions from Joseph Bonaparte which permitted him to evacuate the French capital. He then went over to the allies with his entire force, thus deserting the cause of the Emperor forever. He was subsequently employed by Louis XVIII. and Charles X., the latter of whom commanded him to repress the revolt of 1830; he was, however, defeated by the people, and became an object of odium with his countrymen. His name was struck off the rolls of the French army, and he was banished from his native country. He spent the remainder of his life away from France, and devoted his leisure to the composition of some excellent treatises upon military science. His *Memoirs* appeared at Paris in 1856. D. at Venice, 1852.

Ragu'sa, a fortified seaport-town of Austria, in Dalmatia, formerly an independent republic, on a peninsula in the Adriatic, 38 m. W.N.W. of Cattaro; Lat. 42° 38' 9" N., Lon. 18° 7' E. *Manuf.* Silk, leather, tobacco, and wine. R., said to be founded in 656, by refugees from old Ragusa, the anc. *Epidaurus*, became independent in 1414. It was seized by Napoleon in 1806, and came into the possession of Austria in 1814. *Pop.* 9,000.

Ragu'sa, a town of Sicily, in the Val di Noto, on the Ragusa, 3 m. from Modica. *Manuf.* Woollens and silks. In its vicinity, vines, olives, and other fruit are produced. It is noted, also, for its breed of horses and mules.

Rag-wheel, *n.* (*Mech.*) Same as SPROCKET-WHEEL, *q. v.*

Rag-work, *n.* A kind of rubble-work formed of rag-stones.

Rag'-wort, *n.* (*Bot.*) See *SENECIO*.

Rahdunpore, (*rad-un-por'*), a town of Hindostan, prov. of Guzerat, 150 m. N.W. of Baroda; Lat. 24° N., Lon. 71° 45' E. *Manuf.* Woollen cloth. *Pop.* 15,000.

Rahmanie, (*ra-ma-ne'*), a town of Lower Egypt, prov. of Bahari, at the junction of the Nile and the Alexandria Canal, 25 m. S.S.E. of Rosetta.

Rahoon, a town of Hindostan, prov. of Lahore, 12 m. N.E. of Loodianah. *Manuf.* Cotton goods.

Rah-way, in New Jersey, a small river flowing into Staten Island Sound between Union and Middlesex cos. —A city of Union co., about 10 m. S.S.W. of Newark. It contains several extensive manufacturing, and is a place of much business activity. *Pop.* (1895) 7,945.

Raiatea, (*ri-a-ta'a*), one of the Society Islands, in the Pacific, 130 m. N.W. of Tahiti; Lat. 16° 50' S., Lon. 151° 24' W. It is 40 m. in circumference, and its surface is mountainous. *Prod.* Arrowroot and cocoa-nuts.

Raid, (*rād*), *n.* [A. S. *rād*, a riding; Ger. *ritt*] A foray; a hostile or predatory incursion;—specifically, an incursion made by mounted men, with intent to pillage or ravage; a sudden and rapid invasion by a force of cavalry; as, "the moonlight *raid*."—*Sir W. Scott*.

Rail-road, *n.* (*Civil Engin.*) The tramroad or tramway was the forerunner of the railroad. These were at first constructed of wood, often from oak scantling, with cross-ties at short distances, and side strips to guide the wheels. This form was in common use about English collieries from 1700 to 1800. The first iron rails are believed to have been laid in England by the Coalbrookdale Iron Company, in 1767. They were of cast-iron, in 5-foot lengths, and 4 x 1½ section. Later, iron rails were cast with flanges to keep the wheels on the track, and a few years later the flanges were transferred to the wheels, the rails being made flat and raised above the surface of the ground. In 1814, George Stephenson constructed, for the Killingworth Colliery, in Northumberland, a steam-engine having two cylinders seated on a boiler mounted on wheels, and arranged to drive them by means of chains connected with the axles. This first locomotive, made upon Stephenson's principles, was not held in much estimation, and a considerable time elapsed before they came into general use. The first railroad opened for conveying passengers was the Stockton & Darlington road, in 1825, and this was worked with horse-power. A French engineer, M. Seguin, in 1826, successfully introduced locomotives upon the railways from Roanne to St. Etienne, and from St. Etienne to Lyons. In these he first introduced small tubes passing from the fire-box to the chimney. He also increased the draught of the fire by means of a ventilator, an effect which Robert Stephenson better accomplished in 1829 by the action of steam. The Liverpool & Manchester road was commenced in 1825, and the intention of the projectors being to run the carriages upon it at high rates of speed, they offered a premium for the best engine which should fulfil certain conditions; which premium was won in 1829 by the *Rocket* engine of Messrs. Stephenson and Booth. The next year steam-carriages were in regular operation upon this road. The weight of the *Rocket* was only 4 tons, 5 cwt.; it had 4 wheels, not coupled. With a gross load of 17 tons it attained an average speed of 14 miles, and in some instances of 17 miles. In the U. S., before the application of steam to railway purposes was established, a horse-railroad was completed in 1827, from the granite quarries of Quincy, Mass., a distance of 3 miles, to the Neponset river. A second road was laid out in January, 1827, from the coal mines of Mauch Chunk, Penna., to the Lehigh river, a distance of 9 miles, and with various ramifications, the whole length exceeded 13 miles.

The Baltimore & Ohio Railway was the first passenger railway built in America. It was begun July 4, 1828, and was completed as far as Ellicott's Mills, 44 miles, in 1830. Horses were at first made use of for motive power, but an engine, built in York, Pa., was placed in service in 1830. The Delaware & Hudson Canal Co. built a short line of railway at Honesdale, Pa., in 1828–9, and in the latter year imported the *Stourbridge Lion*, which made its first trip August 8, 1829, but proved too heavy for the track, and was discarded. The Charleston & Hamburg road, now a part of the South Carolina & Georgia system, was begun in Jan., 1830, and used the *Best Friend* locomotive, built at the West Point foundry, and which made its trial trip Nov. 2, 1830, and went into regular service the following January. This road had 137 miles of track laid by Oct. 1, 1833, making it the longest road in the world at that date. The Mohawk & Hudson Railway, from Albany to Schenectady, came next, in 1830–31, with 15 miles of road, and used the *DeWitt Clinton* locomotive, built at West Point. The first permanent railroad constructed in each of the States follows: Alabama, Tusculumbia & Decatur, 1843; Arizona, Southern Pacific of Arizona, 1879; Arkansas, Memphis & Little Rock, 1857; California, Sacramento Valley, 1856; Colorado, Kansas Pacific, 1870; Connecticut, New York, Providence & Boston, 1837; Delaware, Newcastle & Frenchtown, 1832; District of Columbia, Washington Branch, 1835; Florida, St. Joseph & Iola, 1836; Georgia, Central, 1837; Idaho, Utah Northern, 1874; Indian Territory, Atlantic & Pacific, 1870; Iowa, Mississippi & Missouri, 1855; Indiana, Madison & Indianapolis, 1842; Illinois, Northern Cross, 1839; Kansas, Union Pacific, 1864; Kentucky, Lexington & Kentucky, 1835; Louisiana, Lake Pontchartrain, 1831; Maine, Bangor & Piscataquia, 1836; Maryland, Baltimore & Ohio, 1830; Michigan, Erie & Kalamazoo, 1836; Massachusetts, Boston & Lowell, 1835; Minnesota, St. Paul & Pacific, 1862; Mississippi, Vicksburg &

Jackson, 1841; Missouri, Pacific, 1852; Montana, Utah & Northern, 1869; Nebraska, Union Pacific, 1864; New Hampshire, Nashua & Lowell, 1838; New Jersey, Camden & Amboy, 1832; New Mexico, New Mexico & Southern Pacific, 1878; New York, Mohawk & Hudson, 1831; North Carolina, Petersburg, 1833; North Dakota, Northern Pacific, 1873; Ohio, Mad River & Lake Erie, 1838; Oklahoma, Atchison, Topeka & Santa Fe, 1886; Oregon, Oregon & California, 1870; Pennsylvania, Mauch Chunk & Summit Hill, 1827; Rhode Island, New York, Providence & Boston, 1837; South Carolina, South Carolina Canal & Railroad, 1830; South Dakota, Dakota & Northwestern, 1873; Tennessee, Nashville & Chattanooga, 1851; Texas, Buffalo Bayou, Brazos & Colorado, 1854; Utah, Union Pacific, 1869; Vermont, Vermont Central, 1848; Virginia, Chesterfield, 1831; Washington, Dalles & Des Chutes, 1862; West Virginia, Baltimore & Ohio, 1842; Wisconsin, Milwaukee & Waukesha, 1852; Wyoming, Denver Pacific, 1870.

The Monksland Railway was the first opened in Scotland, in 1826. A number of tramways were built in France prior to 1833. In that year the government began a survey, and organized a scheme of railways for the whole country. The Belgian government also inaugurated a system in 1831-33. The first German railway was opened in 1835, and a number of private lines were built between that date and 1848, when the Prussian government began building railways and obtaining control of those under private ownership. The first railway of Holland was built by private enterprise, in 1840. In Austria the first tramway was opened in 1828, and in 1838 the government took up the matter of railways, building and granting charters to private companies. The first railway in Spain was opened in 1848, and the government assisted the construction of others by granting subsidies. The first Portuguese line was built in 1853-54. Italy did not build any railways worthy of the name until 1860. In Russia, an experimental line was built in 1835-37, but it was not until 1851 that the first line of importance, St. Petersburg & Moscow, was completed. The first Turkish railway was built in 1860.

The railway development of the United States, as measured by the extent of trackage, in 1840 was 3,049 miles, and by 1846 this had grown to 4,930 miles, and in 1850 to 9,021 miles. The next decade more than tripled the construction, running the total to 29,739 miles. The Civil War nearly stopped railway-building during the next five years, so that the advance was but a trifle over 3,000 miles, bringing the total to 32,996. In 1873 the figures swelled to 70,268, and in 1880 to 90,296, and in 1890 to 163,420 miles, while in 1900 the total was 194,321 miles. These figures include the elevated steam railways, but do not include the street and suburban electric railways, which have a mileage of 22,000 miles, giving a total of about 216,000 miles of railway tracks operated in the U. S. in 1900. If to this be added the side tracks and switches, the total trackage is over 265,000 miles.

The following figures regarding United States railways are from the latest sources, the totals being usually those of 1901.

Mileage of Railroads.....	195,886.90
Second Tracks and Sidings.....	70,105.45

-------------------	----------

The street railway statistics of the U. S. show that there were at the end of 1901, 22,300 miles in existence. Of recent years there has been a marked tendency towards the consolidation of trolley lines, so that some of them operate many miles of rail. For example the Massachusetts Electric Company, of Boston, has 820 miles under its control; the General Electric Railway, of Chicago, nearly 500 miles; the Rapid Transit Company, of Philadelphia, 900 miles, and numerous others in diminishing proportion. Electric railways worked on the principle of the street railways are by no means confined to city streets, but of late years have extended widely through rural districts, so that long journeys may be made in this manner. New York and Philadelphia are thus connected, and much longer routes may be covered, with few breaks.

The history of railroad financing in the U. S. is not a matter of national pride. It is rather a story of wild and reckless management, dishonest watering of stocks, and numerous receiverships and demoralization. As told in figures, the capitalization of all the roads foots up to the enormous total of \$5,978,796,249, on which dividends were declared in 1901 of only \$132,162,935 or 2.20 per cent. The bonded indebtedness of the roads was over \$10,000,000,000, on which the average interest paid was 4¼ per cent. The amount of water in the stock can only be guessed at, but it is generally conceded that the amounts raised on bonds commonly much more than paid for the actual cost of construction, equipment, &c. Between 1879 and 1885 there was an enormous swelling of stocks and bonds, over \$3,000,000,000 being listed on the New York Stock Exchange during those years. Railroad wrecking became a pop-

ular term for the system which resulted in the wiping out of the smaller holdings in a railway, and the diversion of its real profits into the hands of a few, until the road was so depressed that a receivership became necessary. In 1899 about two-thirds of the railway stocks in the market were classed as non-productive, and 8 per cent. of the bonds were also non-earning. Legislation has made it more difficult within recent years to carry on fraudulent watering of stock, or to misdirect the earnings of a railway, yet demoralizing financial operations continue to a reduced extent, and the general business prosperity suffers from the results of bygone defalcations. Many roads which are really very profitable if the earnings were based on the actual investment are dragged down by having to carry a load of interest on mortgages which never could have existed with honest management. (See RECEIVERSHIP.)

The more important railway systems of the U. S. are:

Name of Road.	Miles Operated	Net Earnings
Atchison, Topeka & Santa Fe.....	8,680	\$23,000,000

For a complete description of various forms of railways, motive power, construction, &c., see RAILWAY CONSTRUCTION in SECTION II. See also AIR-BRAKE, ELECTRIC RAILWAY, INCLINED PLANE, and LOCOMOTIVE. **Railroad**, in Indiana, a twp. of Stark co.

Railway, n. The term which in England corresponds to the American railroad.

Railway plant. In England, the term used to designate the tools, machinery, locomotives, cars, trucks, &c., for constructing and working railways. (Called in the U. States *rolling-stock*.)

Railway slide, a turn-table.

Raiment, (rā'ment.) n. [Fr. *arrayment*.] Clothing in general; garments; vestments; vesture; attire.

Rain, (rān,) v. n. [A. S. *rainan*, *regnan*, to rain; Ger. *regnen*; allied to Gr. *rainō*, to sprinkle.] To run down, flow, or fall in drops from the clouds, as water (used mostly with it for a nominative); as, it rains, it threatens to rain.—To fall or drop like rain; as, tears rained from her eyes.

v. a. To pour or shower down from the upper regions, like rain from the clouds.

"It rain'd down fortune, show'ring on your head."—Shaks.

n. [A. S. *regn*, *regn*, ren.] Water running down or falling in drops from the sky; the descent of water in drops from the atmosphere.

(*Meteorology*.) When the air can no longer retain the moisture blended with its particles, the water descends in drops upon the earth, purifying the atmosphere, through which it falls. The vapor thus condensed is called *rain*. The moisture in the atmosphere is derived from the evaporation of water, partly from land, but principally from the surface of the ocean. Continual evaporation goes on from the surface of the lakes, pastures, corn-fields, and forests; and as much moisture will be supplied to the air by a ploughed field as by a sheet of water of equal dimensions. Through this surface-evaporation the air becomes quite damp; but in being transported to a warmer situation it may afterwards become dry. This is the case with a sea-breeze in summer. When it touches the shore, it is cold and moist; but as it proceeds inland, it grows colder and drier. When moisture is deposited by a body of air in minute globules, which remain suspended or subside gradually in the air, it is termed a *cloud*; when it comes near us, and hovers on hill-tops and hangs in valleys, it is called a *mist* or *fog*. The true theory of the production of rain was first discovered by Dr. James Hutton, of Edinburgh, in 1787. Rain-water or melted snow is the purest of all natural waters, though, in consequence of its solvent powers, it generally contains some extraneous ingredient. The amount of rain which falls upon the earth is greatest in the tropics, and decreases as we approach the poles. The quantity of rain falling at a certain place, however, is considerably influenced by the physical features of the locality. On account of this fact, together with the action of prevailing winds and seasonal peculiarities, the surface of the globe has been divided by meteorologists into *hyetographic* regions. Thus between the tropics of Cancer and Capricorn there is a zone of *periodic rains*, and external on either side zones of *constant precipitations*. Within the

tropics, also, there is the striking peculiarity of dry and rainy seasons, depending on the position of the sun and the direction of the wind.

Rain'bow, n. [Ger. *regenbogen*.] (*Meteor.*) A luminous meteor which appears in the clouds, opposite the sun, when they are resolved into rain. It consists of seven concentric arcs, presenting successively the colors of the solar spectrum. Sometimes only a single bow is perceived, but there are usually two; a lower one, the colors of which are very bright, and an external or *secondary* one, which is paler, and in which the order of the colors is reversed. In the interior rainbow the red is the highest color; in the other rainbow the violet is. It is seldom that three bows are seen; theoretically a greater number may exist, but their colors are so feeble that they are not perceptible. The phenomenon of the rainbow is produced by the decomposition of the white light of the sun when it passes into the drops, and by its reflection from their inside face. In fact, the same phenomenon is witnessed in dew-drops and in jets of water; in short, wherever solar light passes into drops of water under a certain angle. The appearance and the extent of the rainbow depend on the position of the observer, and on the height of the sun above the horizon; hence only some of the rays refracted by the rain-drops, and reflected in their concavity to the eye of the spectator, are adapted to produce the phenomenon. Those which do so are called *effective rays*. To explain this, let *n* (Fig. 2209) be a drop of water, into which a solar ray, *Sa*, penetrates. At the point of incidence, *a*, part of the light is reflected from the surface of the liquid; another, entering it, is decomposed and traverses the drop in the direction *ab*. Arrived at *b*, part of the light emerges from the rain-drop, the other part is reflected from the concave surface, and tends to emerge at *g*. At this point the light is again partially reflected, the remainder emerges in a direction, *gO*, which forms with the incident ray *Sa*, an angle, called the *angle of deviation*. It is such rays as *gO*, proceeding from the side next the observer, which produce on the retina the sensation of colors, provided the light is sufficiently intense. As the different colors which compose white light are unequally refrangible, the maximum angle of deviation is not the same for all. For red rays the angle of deviation corresponding to the active rays is $42^{\circ} 2'$, and for violet rays it is $40^{\circ} 17'$. Hence, for all drops placed so that rays proceeding from the sun to the drop make, with those proceeding from the drop to the eye, an angle of $42^{\circ} 2'$, this organ will receive the sensation of red light; this will be the case with all drops situated on the circumference of the base of a cone, the summit of which is the spectator's eye; the axis of this cone is

Fig. 2209. — RAINBOW.

parallel to the sun's rays, and the angle formed by the two opposed generating lines is $84^{\circ} 4'$. This explains the formation of the red band in the rainbow; the angle of the cone in the case of the violet band is $80^{\circ} 34'$. The cones corresponding to each band have a common axis, called the *visual axis*. As this right line is parallel to the rays of the sun, it follows that when this axis is on the horizon, the visual axis is itself horizontal, and the rainbow appears as a semicircle. If the sun rises, the visual axis sinks, and with it the rainbow. Lastly, when the sun is at a height of $42^{\circ} 2'$, the arc disappears entirely below the horizon. Hence, the phenomenon of the rainbow never takes place except in the morning and evening. What has been said refers to the interior arc. The secondary bow is formed by rays which have undergone two reflections, as shown by the ray *S'i dfeO*, in the drop *p*. The angle *S'IO* formed by the emergent and incident ray is called the *angle of deviation*. This angle is no longer susceptible of a maximum, but of a minimum, which varies for each kind of rays, and to which also efficient rays correspond. It is calculated that the minimum angle for violet rays is $54^{\circ} 7'$, and for red rays only $50^{\circ} 57'$; hence it is that the red bow is here on the inside, and the violet arc on the outside. There is a loss of light for every internal reflection in the drop of rain, and therefore, the colors of the secondary bow are always feebler than those of the internal one. The secondary bow ceases to be visible when the sun is 54° above the horizon. The moon sometimes produces rainbows like the sun, but they are very pale.

Rainbowed, (rān'bōd.) a. Formed after the manner of, or resembling, a rainbow.

Rain'bow-tinted, a. With tints like those of a rainbow.

Rain'deer, n. (*Zool.*) See REINDEER.

Rain'fall, n. A fall, descent, or downpour of rain; as, an average rainfall.

Rain'-gauge, (gāj.) PLUVIOMETER, OMBROMETER, UDOMETER, n. (*Meteorol.*) An instrument for measuring the quantity of rain which falls at a given place. It is con-

structed in various ways. The *R. G.* used in the Pennsylvania Hospital at Philadelphia consists of a metal cone about eight inches in diameter at the top, set so as to receive the rain, and the amount which has fallen during a storm is determined by pouring it from this vessel into a graduated measuring-glass. The rain-gauge used at the Smithsonian Institute at Washington is made of sheet-tin, and is only $20\frac{1}{2}$ inches in diameter, and but one foot deep. The only information which these instruments afford is the depth of water which has fallen during each rain-storm, but the meteorologist desires to know the exact time at which each rain-fall commences, the moment at which it ended, the total amount of rain which had fallen, and the rate at which it fell. The objects are perfectly fulfilled by Draper's self-registering

Fig. 2210. — DRAPER'S SELF-REGISTERING RAIN-GAUGE.

R. G. (Fig. 2210). The instrument consists of a cylindrical vessel, A, eight inches in diameter, set so as to receive the rain. C, D, a pipe emptying into a glass vessel, E, which is sustained by a spiral spring, F, to the lower end of which is attached a pencil, G, its point resting against a sheet of paper fastened to a board, H, I, which is drawn forward 12 inches every 24 hours by means of the weight, J, of the clock, K. At L is a syphon which empties the contents of the receiving vessel, E, into the pail, M, when a half inch depth of rain has fallen.

Rain'ier, in Oregon, a post-village of Columbia co., abt. 20 m. N.W. of St. Helen.

Rain'iness, n. State or condition of being rainy.

Rain'less, a. Without rain; parched; as, a rainless tract of country.

Rain'-line, n. (*Naut.*) A small rope, or line, sometimes used to form the sheer of a ship, and to set the beams of the deck fair.

Rains'borough, in Ohio, a post-village of Highland co., abt. 69 m. E. of Cincinnati.

Rains'burg, in Pennsylvania, a post-borough of Bedford co., about 8 m. S. of Bedford.

Rains'ville, in Indiana, a post-village of Warren co., abt. 87 m. N.W. of Indianapolis.

Rain'-water, n. Water that has fallen from the clouds in the form of rain.

Rain'y, a. Abounding with rain; disposed to rain; wet; showery; as, a rainy day, the rainy season.

Rainy Lake, or LAC DE LA PLUIE, a considerable body of water forming part of the boundary between Minnesota and British N. America, abt. 160 m. W. of Lake Superior. It discharges its surplus water through Rainy River into Lake of the Woods.

Rais'able, a. That may be raised.

Raise, (rāz,) v. a. (*imp.* and *pp.* RAISED.) [Causative of RISE, *q. v.*] To cause to rise; to lift or elevate in a literal or in a figurative sense; to lift upward; to heave; as, to raise a weight;—hence, used in derivatives; as, to elevate in rank, dignity, and the like; to place in a higher condition, position, or situation; to exalt; to promote; to enhance the value or estimation of; as, to raise to the peerage, to raise the price of an article. — To increase or augment the strength, vigor, or force of; to intensify; to heighten; to invigorate; as, to raise the voice, to raise one's courage. — To bring back into being; to recall from death or inanimation; or give life to; as, to raise a ghost or spectre. — To set or make upright; to cause to assume an erect position, pose, or posture;—hence, to awaken; to cause to arise from a recumbent state or position, or from an attitude of quiet, and the like; to make erect. — To excite to action; to put in motion; to stir up; to incite to tumult, strife, or war; as, to raise the people. — To give rise to; to originate, produce, cause, effect, &c.; to cause to come into being or to appear;—hence, used specifically, or derivatively, to erect; to build up; to construct by the accumulation or conjunction of constituent parts; as, to raise a wall. — To levy; collect; to assemble; to bring together for use or service; as, to raise troops, he found it difficult to raise money. — To cause to grow or expand; to enable to be produced, bred, or propagated; as, to raise horses, cattle, or negroes. — To produce; to cause to come into being, or appear;—sometimes with *up*.

"I will raise them up a prophet from among their brethren."

Deut. xviii. 18.

—To give rise or occasion to; to start; to set afoot; to originate; as, to raise a rumor, report, or scandal. — To give vent, utterance, or expression to; as, to raise a cry, to raise a dispute. — To cause to become light and spongy, as bread or pie-crust.

(*Naut.*) To cause to seem elevated, as an object by a gradual approach to it; as, to raise the land.

(*Law.*) To create, form, or constitute; as, to raise a plea.

To raise a purchase. (*Naut.*) To dispose of instrumental or mechanical agency in such a manner as to employ any operative force required. — To raise a siege. To abandon an attempt to take a place by besieging it; to retire from beleaguering a position. — To raise the wind. A figurative expression, used colloquially, in the sense of to gather, collect, or acquire money.

Rais'er, n. The person who, or thing which, raises; a builder; a collector. — A riser; one of the upright boards on the front of the steps of a flight of stairs.

Raisin, (rā'zē,) n. [Fr.; Ger. *rosine*.] A dried grape. **Rai'sin, in Michigan,** a river which rises in Lenawee co., and flows E. into Lake Erie from Monroe co. — A township of Lenawee co.

Raisiné, n. [Fr.] (*Confectionery.*) A rob, or syrup, made by boiling new wine, and skimming until only half the quantity of wine remains, after which it is strained. Apples, pared and cut into quarters, are added to it; and it is allowed to simmer gently till the apples are thoroughly mixed with the wine, when it has a very pleasant, sweetish, acid taste. Cider may be used instead of wine.

Rais'ing, n. Act of causing to rise or to become erect, setting up, elevating, producing, or restoring to life. — In the United States, the operation of setting up the frame of a building or any structure composed of timber.

Raising-plate, (Arch.) The plate or longitudinal timber on which a roof stands when in its place, or pitched.

Rai'sinville, in Michigan, a village of Lenawee co., about 5 miles north-east of Adrian. — A township of Monroe co.

Raisonné, (rā'zō-nā,) a. [Fr., from *raisonner*, to reason.] Arranged systematically or analytically; as, a catalogue raisonné.

Rajah, (rāj'jah,) n. [Hind. *rāja*.] In Hindostan, a native prince or sovereign; as, the Rajah of Coorg.

Rajahmundry, (ra-ja-moon'dre,) a town of British India, cap. of dist. of the same name, on the Godavary, 73 m. N.E. of Masulipatam; Lat. $16^{\circ} 25'$ N., Lon. $81^{\circ} 54'$ E.; pop. 17,000.

Rajmahal, or Rajmahal, (ra-ja-ma-hal') ["the royal residence,"] a city of British India, presidency of Bengal, on the Ganges, 65 m. N.W. of Moorshedabad; Lat. $25^{\circ} 2'$ N., Lon. $87^{\circ} 43'$ E.; pop. 30,000.

Rajpootana, the largest prov. of Hindostan, towards its N.W. quarter, between 24° and 31° N. Lat., and 70° and 77° E. Lon.; area, abt. 70,000 sq. m. It comprises a large extent of sandy desert; but in the S. and E. are many fertile tracts. This prov., which is wholly subject to the British, consists of a number of principalities, the chief of which are Jndpoor, Jessesmeer, Jeypoor, Odeypoor, and Bicanere. A large force of British troops are quartered at Ajmeer, to keep the turbulent princes in order.

Rajpoots', n. pl. [From Sans. *rājan*, king, and *putra*, son — *i. e.*, "sons of kings."] The name of various tribes in India, which are of Aryau origin, and either descended from the old royal races of the Hindoos, or from their Kshattriya or warrior caste. At all periods, they seem to have played a conspicuous part in the history of India; and all over Hindostan there are many families who, rightly or wrongly, claim the title of rajpoots. At present, they occupy chiefly the country known as Rajpootana.

Rake, n. [A. S. *raca*; D. *rakel*; O. Ger. *recho*.] An instrument with teeth and a handle, by which light bodies are gathered up, or the earth divided. — See HORSE-RAKE.

[Ger. *räkel*, a rakehell.] A man of loose, vicious, or disorderly habits; a man addicted to lewdness; a rōué; a debauchee; a rakehell; a man who plays the devil among women. — *Macaulay*.

(*Mining.*) An oblique vein; a rake-vein.

(*Ship-building.*) An obtuse angle, such as the stem and stern-posts make with the keel of a ship.

(*Naut.*) All that part of the hull of a ship which hangs over both ends of the keel;—also, the inclination of a mast from a perpendicular direction.

—The pitch of a roof. — The forward inclination of a mill-saw.

—*v. a.* [A. S. *racian*; Ger. *rechen*.] To draw or gather together, as with a rake; to clear or smooth with a rake; as, to rake soil, to rake hay;—hence, to collect or draw together, as something scattered; to scrape together; as, to rake together money, to rake together scandalous stories, to rake together the mob of a town. — To gather by violence; to scour; to search with eagerness, as all corners of a place. — To pass over with force or speed.

(*Mil.*) To enfilade; to fire in a direction with the length of anything;—particularly, to cannonade, as a ship, on the stern or head, so that the balls range the whole length of the deck; as, to rake a vessel fore and aft.

To rake up. In application to fire, to cover the fire with ashes;—in a figurative sense, to reproduce, to revive; as, to rake up past scandals.

—*v. n.* To use a rake; to scratch into for seeking something; to search with minuteness and meanness — *Te*

Sir Walter Raleigh

1552-1618

pass with violence or celerity of motion. — To lead a debauched, dissolute, vicious life. — To incline from the perpendicular; as, a mast *rakes* aft. — To fly wide of the quarry, as a hawk.

Rakee', Raki', n. A spirituous liquor used in Russia, resembling the worst kind of brandy.

Rake'hell, n. A rake; a roué; a debauchee; a wild, dissolute, harum-scarum fellow. (Low.)

Rake'hell, Rake'helly, adv. Wild; rakish; dissolute; harum-scarum.

Rak'er, n. The person who, or thing which, rakes or scrapes together; — specifically, a machine for raking grain, &c., by horse- or steam-power. — A gun so placed as to rake an enemy's ship. — An apparatus annexed to a locomotive-engine for cleaning its grate by automatic action.

Rake'stale, n. The helve or handle of a rake.

Raking, n. Act or operation of collecting with a rake, or of cleaning and smoothing with a rake. — The space of ground raked at one time, or the quantity of hay, &c., collected by once passing the rake. — Libertinism; habits of a rake or debauchee.

Rak'ish, a. Exhibiting the character and conduct of a rake; given to a debauched, dissipated, or dissolute life; as, a *rakish* young fellow.

(Naut.) Having a backward inclination; as, *rakish* masts.

Rak'ishly, adv. In a rakish course or manner.

Rak'ishness, n. Debauchery; dissolute practices.

Raleigh, Sir Walter, (ra'le), an accomplished English gentleman, soldier, scholar, statesman, courtier, sailor, colonist, and philosopher, who shone in the reigns of Elizabeth and James I., the lustre of whose name is yet unfaded, was born at Bndleigh, Devonshire, 1552. After receiving the rudiments of his education at home, he was, about 1568, sent to Oriel College, Oxford, where "he was worthily esteemed a proficient in oratory and philosophy." He did not long remain there; for, having an enterprising spirit, he entered into the troop of gentlemen volunteers who went to the assistance of the Protestants in France, where he continued about five or six years. He subsequently joined the expedition of General Norris to the Netherlands, in aid of the cause of the Prince of Orange. Soon after his return he engaged with his brother-in-law, Sir Humphrey Gilbert, in a voyage to America, whence they returned in 1579. The next year he was in Ireland, where he distinguished himself against the rebels of Munster. On his return to

They got into difficulties, however, when Grenville left them to return home, and they might have been starved, or murdered by the savages, had not Sir Francis Drake come in time to relieve them. *R.* himself never visited his settlement in Virginia, but he sent thither, in 1587, a fresh party of settlers, governed by Mr. John White, with twelve assistants, who founded the city of Raleigh, now capital of North Carolina. The introduction of tobacco into England, if due to *R.*, must be referred to the date of Ralph Lane's coming home. The pleasant anecdotes upon this occasion are well known: how Sir Walter's servant, alarmed to see the smoke issuing out of his master's mouth, thought he was on fire, and emptied a tankard of ale on his face to quench the flame; how also the Queen lost a wager to *R.*, who had made her a bet that he could weigh the smoke of a given quantity of tobacco, which he did by weighing its ashes, and deducting this weight from that of the tobacco before he smoked it. In the defeat of the Spanish Armada, in 1588, Sir Walter bore a glorious part, for which he received distinguishing marks of favor from the Queen. In 1591 he sailed on an expedition against the Spanish fleet, but without success. About the same time he incurred the Queen's displeasure by an intrigue with one of her maids of honor, whom he afterwards married. In 1595 he sailed to Guiana, and destroyed the capital of Trinidad. The year following he took a distinguished part in the taking of Cadiz. Honors were lavished in abundance upon him, and he obtained the lordship of St. German's, in Cornwall. *R.* was one of those who brought about the fall of Essex, and remained in the favor of the Queen till her death; but, in the succeeding reign, his fortunes changed. He was stripped of his preferments, tried, and condemned for high treason, on a charge the most frivolous, and without the least evidence. He remained in the Tower of London 13 years, during which time he wrote several works on various subjects of great importance, the best of which was the *History of the World*, which was published in 1614. The year following he was released, occasioned by the flattering account which he had given of some rich mines in Guiana. On gaining his liberty, he sailed to that country in search of those pretended mines, instead of discovering which, he burned the Spanish town of St. Thomas, and returned to England, where, in consequence of the complaint of Gondemar, the Spanish ambassador, he was apprehended, and, in a most unprecedented manner, beheaded, on his former sentence. His works are historical, philosophical, poetical, and political. As an author, Hume declares him to be the "best model of the ancient English style." The appearance and character of this poet, courtier, navigator, statesman, and military and naval commander, are thus sketched by Aubrey: — "He was a tall, handsome, and bold man; but his naeve was that he was damnable proud. He had a most remarkable aspect, an exceeding high forehead, and long-faced." Altogether, he was one of the most remarkable men of a remarkable age. Beheaded at Westminster, 1618.

Ral'cigh, n. in *Illinois*, a post-village and township, former cap. of Saline co., about 75 m. S.E. of Springfield.

Raleigh, n. in *Indiana*, a post-village of Rush co., about 10 m. N.N.E. of Rushville.

Raleigh, n. in *Tennessee*, a post-town, former cap. of Shelby co., about 200 m. W.S.W. of Nashville.

Raleigh, n. in *Kentucky*, a post-village of Union co., abt. 215 m. W. by S. of Frankfort.

Raleigh, n. in *Mississippi*, a post-village, cap. of Smith co., abt. 50 m. E. by S. of Jackson.

Raleigh, n. in *N. Carolina*, a city, seat of justice of Wake co., and cap. of the State, abt. 148 m. N. by W. of Wilmington, and 286 m. S. by W. of Washington, D. C.; Lat. 35° 47' N., Lon. 78° 48' W. It is finely located on an elevated tract, regularly laid out, handsomely built, and, among many other fine edifices, contains one of the largest and most elegant State capitols in the Union. The city has an active trade, and several extensive manufactories. Pop. (1897) 13,350.

Raleigh, n. in *West Virginia*, a S. co.; area, about 570 sq. m. *Rivers.* Kanawha and Coal rivers. *Surface,* diversified, and in the S.E. mountains; *soil,* generally fertile. *Cap. Beckley.* Pop. (1897) 10,190.

Rallentando, a. (Mus.) Slackening in time and force.

Ral'tiance, n. Act of rallying.

Ral'tide, n. pl. (Zool.) A family of birds, order *Natantes*, comprising the Rails, Coots (see *Fulica*), Gallinules, Water-hens, Crakes, *q. v.*, &c., chiefly distinguished by their long and slender toes, often with a membranous margin along their sides; by means of which, and their generally compressed bodies, they are not only enabled to support themselves on the aquatic herbage which is seen floating on the surface of the water, but to move with great facility through high grass, bulrushes, and other closely-set herbage. They are for the most part solitary and timid birds, hiding themselves at the least approach of danger, but quitting their semi-aquatic retreats in the morning and evening, to feed in more open spots: their flight, from the shortness of their wings, is very feeble, but they run with swiftness; and by the peculiarly compressed form of their body, are able to make their way through dense masses of reeds and high grass with

so much facility as to escape even after being desperately wounded. The flesh of all these birds is delicate. The genus *Rallus*, the Rails, is distinguished by having the bill rather longer than the head, wings and tail very short. The Virginia Rail, *R. virginianus* (Fig. 2212), is 7½ inches long, and the wing 4 inches; upper parts olive-brown, with longitudinal stripes of brownish-black; throat white; neck before, and breast, bright rufous; abdomen and under tail-coverts with transverse bands of black and white. The genus *Porzana* has the bill shorter than the head, and straight. It is represented by the Sora, or Common Rail, *P. Carolina*, of temperate N. America, that is somewhat larger than the Virginia Rail. The genus *Gallinula*, the Gallinules, is distinguished from *Fulica* by the absence of lobes on the toes. It is represented by the Florida Gallinule, *G. galeata*, and the Purple Gallinule, *G. martinica*, of the Southern States and northward, which are abt. 12½ inches long.

Ral'tier, n. One who rallies.

Ralls, n. in *Missouri*, an E.N.E. co., adjoining Illinois; area, about 490 sq. m. *Rivers.* Mississippi and Salt rivers, and Spencer's and Lick creeks. *Surface,* diversified; *soil,* fertile. *Min.* Iron and coal. *Cap.* New London. *Pop.* (1897) 14,000.

Ral'tus, n. [Lat.] (Zool.) See RALLIDÆ.

Rally, v. a. [Fr. rallier, to reunite, perhaps from Lat. re-alligare, to bind together anew.] To collect and reduce to order, as troops dispersed or thrown into confusion; to reunite.

— *v. n.* To reassemble; to come back to order, as troops. — To recover strength and vigor; to recuperate; as, he found his patient had *rallied*.

Ral'ty, v. a. [Fr. rallier, frequent. of rire.] To attack with railery, either in good humor and pleasantry, or with slight contempt or satire, according to the nature of the case; to joke, banter, ridicule, chaff.

— *v. n.* To use satirical pleasantry; to employ banter or persiflage.

— *n.* Reunion; act of bringing disordered troops to their ranks. — Employment or exercise of banter or railery. — Act or process of recuperating, or of regaining former strength and vigor.

Ralph, JAMES, an American writer, was originally a schoolmaster at Philadelphia, and went thence, in 1725, to London, where he published a poem entitled *Night*. He also wrote a *History of England*, and several political pamphlets. D. in England, 1762. Pope has given him a place in his *Dunciad*, where he exclaims, —

"Silence, ye wolves, while *Ralph* to Cynthia howls,
And makes night hideous; answer him, ye owls."

Rals'ton, n. in *Pennsylvania*, a post-village of Lycoming co., abt. 25 m. N. of Williamsport.

Ram, n. [A. S.; Ger. ramme.] The perfect male of the sheep which butts or pushes with his horns; — the castrate male is termed *wether*. — The loose hammer of a pile-driving machine. — The piston of a hydraulic press. (Astron.) See *ARIES*.

(Hydraul.) See *HYDRAULIC PRESS*.

(Mil.) An engine of war, used formerly for battering and demolishing the walls of cities; a *battering-ram*, *q. v.*

(Naval.) An instrument of modern warfare, reproducing, on a vastly more powerful scale, the beaked vessels of the ancients. The ram is a ship of extraordinary solidity and strength, propelled by engines of great power, and armed at the prow, below the water-line, with a sharp heavy beak, nearly pointed, and diminishing to a sloping edge on the upper side. This beak is nearly solid, or at least of the strongest possible formation; and it is usually built as an independent adjunct to the ship, so that in the event of any very serious collision it may be buried in its victim, or carried away, leaving the vessel itself intact. Irrespective of this beak, the ram is constructed like any other iron-clad vessel. The first practical use of the modern iron-clad ram was in 1862, in Hampton Roads, where the Confederate ram *Merrimac* destroyed several Federal wooden vessels with the greatest ease.

— *v. a.* [Ger. *rammen*.] To drive down or together; to batter or force in; to drive, as with a *battering-ram*; to stuff; to cram; as, a charge of powder *rammed* into a gun. — To fill or make to cohere by pounding, battering, or driving.

"A ditch . . . *rammed* to make the foundation solid." — *Archæthnot.*

Ramadan', Rhamadan', n. [Ar. ramazan.] The ninth month among the Mohammedans. — The name given to the great fast or Lent of the Mohammedans. It commences with the new moon of the ninth month of the Mohammedan year; and while it continues, the day is spent uninterruptedly in prayers and other devotional exercises. Even the night is passed by the more rigid of the faithful in the mosques, which are splendidly illuminated on this occasion; but, generally speaking, the arrival of sunset is the signal for a more than usual indulgence; and, on the third evening of the fast, the grand-vizier commences a series of official banquets. The Ramadan ends on the day preceding the only other great festival of the Mohammedans, the *Bairam* (*q. v.*), equivalent to our Easter.

Ramapo', n. in *New York*, a township of Rockland co., containing the post-village of Ramapo Works, abt. 44 m. N. by W. of New York city.

Ramapo River, rises in Orange co., New York, and flowing S. into New Jersey, enters Pompton River from Passaic co.

Ramayana, n. [Sans., the career or travels of Rama.] (Lit.) The oldest of the two great Sanskrit epic poems, describing the life and actions of the hero Rama and his wife Sita, and, especially, Rama's expedition to Ceylon, to rescue Sita from the tyrant Rawana.

Ram'berge, n. A kind of galley.

Fig. 2211. — SIR WALTER RALEIGH, (after Zuccherro.)

England he introduced himself to the notice of Queen Elizabeth by a romantic piece of gallantry. Her majesty, while taking a walk, stopped at a muddy place, hesitating whether to proceed or not; on which *R.* took off his new plush cloak, and spread it on the ground. The queen trod gently over the foot-cloth, and soon rewarded the sacrifice of a cloak with a handsome suit to the owner. His reputation for soldiership, his learning, which was varied and profound, his eloquence and ready wit, and the personal advantages and accomplishments, in which he was preëminent, all combined in raising him high in his sovereign's favor. *R.* continued meanwhile to cherish his hopes of transatlantic adventure. Having obtained from Elizabeth an ample patent and the title of Lord-Proprietary over an extensive region, he sent forth two ships, under Captains Amadas and Barlow, which reached the shores of North Carolina in July 1584, and proceeded north to Virginia. The name last mentioned was given to the new country in honor of the "Virgin Queen," upon the return of the successful explorers. *R.*'s patent was confirmed by Act of Parliament. He was elected, along with Sir William Courtenay, M. P. for his native shire, and received the honor of knighthood, with a more lucrative gift, that of a monopoly for the sale of wines, by which he acquired considerable wealth. A joint-stock company was now formed by Sanderson, a merchant of London, *R.*, and Sir Adrian Gilbert, another of his half-brothers, to find the Northwest Passage. The voyages of Davis to the Arctic Seas were made under their auspices. But *R.* and his partners sent a fleet to Virginia, under his relative, Sir Richard Grenville. A party of intending colonists, with Ralph Lane at their head, were landed at Roanoke.

Fig. 2212. — AMERICAN RAIL, (*Rallus virginianus*.)

Ramberghiers, (*ram-ber-ri-lai*), a town of France, dept. of Voeges, on the Mortagne, 16 m. N.E. of Epinal; pop. 5,000.

Ram'bla, a town of Spain, prov. of Cordova, 23 m. S. of Cordova; pop. 6,500.

Ramble, (*ram'bl*), *v. n.* [Either from D. *rammelen*, to rove loosely in unbridled desire, or from Lat. *re-ambulare*, to go repeatedly backwards and forwards.] To walk, ride, or sail from place to place, without any specific or determinate object in view; to rove loosely and irregularly; to stroll; to wander; to go about carelessly or desultorily; to go at large without restraint and without direction; as, to *ramble* over the country. — To move, expand, or grow without constraint or direction. — *n.* A wandering; a roving loosely or irregularly; a going or moving from place to place, without any determinate business or object; an irregular excursion.

Ram'bler, *n.* One who rambles; a wanderer; a rover.

Ram'blingly, *adv.* In a rambling, desultory manner.

Rambouillet, (*ram-bo'o'e-yai*), a town of France, dept. of Seine-et-Oise, 17 m. S.W. of Versailles. It is chiefly remarkable for its beautiful park and grounds, and its old castle, in which Francis I. died, 1547, and Charles X. abdicated, 1830. Pop. 4,200.

Ram'butan, *n.* (Bot.) See NEPHELIUM.

Ra'meal, *a.* [From Lat. *ramus*, branch.] (Bot.) Pertaining, or having reference to a branch.

Rameau, JEAN PHILIPPE, (*ra'mo*), a French musician, b. at Dijon, 1683. In 1733 he produced his opera of *Hippolytus*, which was followed by several others, and greatly admired. But it was as a theorist in music that Rameau excelled; and on account of his two works the *Demonstration of the Principles of Harmony*, and the *Code of Music*, he was called the "Newton" of that science. Louis XV., to whom he was composer, conferred on him the rank of nobility and the order of St. Michael. D. 1764.

Ramentaceous, (*-tā'shus*), *a.* [Fr. *ramentacé*, from Lat. *ramenta*, scrapings.] (Bot.) Covered with scale-like processes, as the leaves of certain ferns.

Ra'ments, **Ramen'ta**, *n. pl.* [Lat. *ramenta*.] (Bot.) Scale-like processes formed on the petioles and leaves of ferns.

Ra'meous, *a.* [Lat. *rameus*, from *ramus*, branch.] (Bot.) Pertaining to, growing on, or shooting from a branch.

Ramequin, (*ram'e-kin*), *n.* [Fr.] (Cookery.) A slice of bread spread with toasted cheese and eggs.

Rames'sa, in Iowa, a post-village of Clinton co., abt. 24 m. N. by E. of Davenport.

Rameswaram, (*rams-wa'ram*), an island in the Gulf of Manaar, off the S. extremity of Hindostan; Lat. 9° 18' N., Lon. 79° 22' E. Ext. 11 m. long, with an average breadth of 6 m. Pop. 4,300.

Ramghur, (*ram-goor'*), a town of British India, cap. of a dist. of same name, on the Dnmmoda River, 200 m. N.W. of Calcutta; Lat. 23° 28' N., Lon. 85° 43' E.

Ram'ghur, a town of British India, in the Rajpoot territory of Alwur, 95 m. S. of Delhi; pop. 10,000.

Ramification, (*-kā'shun*), *n.* [Fr. See RAMIFY.] The process of ramifying, or of branching or shooting branches from a stem; also, the manner of their arrangement. — A branch; a small division proceeding from a main stock or channel; as, the *ramifications* of a family genealogy. — A division into chief and subordinate heads, classes, or departments; as, the *ramifications* of a scheme. — The production of figures resembling branches.

(Bot.) The manner in which a tree produces its branches or boughs. See BRANCH, and BUD.

Ram'iform, *a.* [Lat. *ramus*, branch, and *forma*, form.] Formed like a branch.

Ram'ify, *v. a.* [Fr. *ramifier*, from Lat. *ramus*, a branch, and *facio*, to make.] To divide or separate into branches; as, a *ramified* subject.

— *v. n.* To shoot into branches, as the stem of a plant; to be divided or subdivided, as a main scheme.

Ramillies, a village of Belgium, prov. of S. Brabant, 10 m. N. of Namur, memorable on account of the victory won by the allies under Marlborough over the French under Villeroy, May 23, 1706.

Ra'mist, **Ra'mean**, *n.* (Phil.) A partisan of Pierre Ramé, better known by his Latin name of *Ramus*, royal professor of rhetoric and philosophy at Paris in the reign of Henry II. He perished in the massacre of St. Bartholomew. Ramé's system of logic was opposed to that of the Aristotelian party; and during the latter half of the 16th century a vehement contest was maintained between their respective adherents in France, Germany, and other parts of Europe.

Ram'teh, a town of Palestine, in Lat. 3° 59' N., and Lon. 35° 23' E., 8 m. S.E. from Joppa, and 24 m. N.W. from Jerusalem. It has been identified by some with *Arimathea*, the birthplace of the wealthy Joseph, in whose sepulchre Christ was laid. (Matt. xxvii. 57; John xix. 38.)

Ram'line, *n.* In mast-making, or laying a ship's deck, a long line of cord so fastened as to designate the exact central line.

Ram'mer, *n.* He who, or that which, rams or drives; — specifically, an instrument for driving anything with force; as, a pavior's *rammer*; a gun-stick; a ramrod.

Ram'mish, *a.* [Dan. *ram*.] Like a ram, particularly in regard to odor; — hence, rank; strong-scented.

Ram'mishness, *n.* Quality of being ramish; rankness; a strong scent.

Ram'my, *a.* Ramish.

Ramolescence, (*-es'sens*), *n.* [From Lat. *mollire*, to soften.] A softening or mollifying. (R.)

Ramollis'sement, *n.* [Fr.] (Med.) A softening of the brain; a chronic affection, the result of a previous

inflammation, or some injury to the head, resulting in the more or less complete loss of memory and nervous power, the brain in many cases becoming entirely disorganized, and appearing, on dissection, like soft putty. When ramollissement is partial, it generally induces paralysis.

Ramose, **Ra'mons**, *a.* [Lat. *ramosus*, from *ramus*, a branch.] (Bot.) Branched, as a stem or root; branchy; having lateral divisions; consisting or full of branches; as, a *ramous* efflorescence.

Ra'moth, (*Script.*) a city in the mountains of Gilead, often called *Ramoth-Gilead*, and sometimes *Ramath-Mizpeh*, or the "Watch-tower." It was famous during the reigns of the later kings of Israel, and was the occasion of several wars between these princes and the kings of Damascus, who had conquered it, and from whom the kings of Israel endeavored to regain it. Here Ahab died, Joram was wounded, and Jehu anointed as king of Israel.

Ramp, *v. n.* [Fr. *ramper*, to creep, to crawl, from Lat. *repi*; Ger. *herpō*, to crawl.] To climb, as a plant; to creep up. — To leap; to bound; to spring; to prance; to romp; to frolic; as, a *ramping* lion.

— *n.* A bound; a leap; a spring. — A highwayman; a footpad. (Prov. Eng.) — A ramping woman; — hence, a prostitute. (Vulgar.)

(Arch.) A concave band, or slope, in the cap or upper member of any piece of ascending or descending workmanship. Thus, the *ramp* of a staircase railing is the inclined rail along which the hand of a person going up or down the staircase is led. The word *ramp* is, however, understood in this case to apply to the straight part exclusively.

(Fortif.) A road cut obliquely in the interior slope of a rampart, leading from the interior of the work to the terreplein.

Rampage, (*-aj*), *n.* A state of disorder, violence, or passion; as, a jealous woman on the *rampage*.

Ram'pency, *n.* [From *rampant*.] State or quality of being rampant; exuberance; extravagance; prevalence; as, *rampancy* of vice.

Ram'pant, *a.* [See RAMP.] Creeping and climbing without check or restraint; overgrowing the usual limits; exuberant; rank in growth; as, *rampant* sin, *rampant* weeds.

— Overmastering restraint; as, a lion *rampant*.

(Her.) A term used to describe lions, tigers, bears, &c., when represented as standing erect on their hind legs, and pawing the air with their fore feet (1, Fig. 2213).

Fig. 2213.

It is *R. gardant*, when it stands erect on the hind legs, with the face turned to the front (2, Fig. 2213), and *R. regardant*, when standing upright and looking backward (3, Fig. 2213).

Rampant arch, (*Arch.*) One whose abutments spring from an inclined plane.

Ram'pantly, *adv.* In a rampant manner.

Ram'part, *n.* [Fr. *rempart*, from *rampe*, a slope; W. *rhanim*, to rise over or beyond.] That which secures safety; that which protects from assault.

(Fort.) The mass of earth thrown up from the ditch inwards in order to give the defenders a commanding position over the ground in front. The term *rampart*, though strictly meaning the mound on which the parapet stands, generally includes the parapet itself. If it be of less height than thirty feet, it is liable to be taken by escalade.

— *v. n.* To fortify with ramparts.

Ramphas'tide, *n. pl.* (Zool.) The Toucan family, order *Scansores*, including birds which are distinguished from all others by their enormous bill, which is almost as thick and long as their body, and which is light and cellular internally, arcuated near the end, and irregularly indented along its edges. Their tongue is long, and fringed with barbs on both sides. They inhabit the warm regions of South America.

Contrary to what might be supposed, they are graceful in their movements, and in obtaining their food show a use for their long bills. They dip them down into the deep and hanging nests of other birds, and extract the eggs and young for food. They also feed upon fish, insects, and fruit. They throw their food into the air, and catch it as it descends, and thus swallow it with great facility. About twenty species are known.

Ramphorhynchus, *n.* [Gr. *ramphos*, a beak, and *rynchos*, a snout.] (Pal.) A genus of Pterosaurian reptiles, in which the fore part of the jaw is without teeth, and may have been encased in a horny beak, but behind the edentulous production there are four or five large

Fig. 2214.—TOUCAN.

and long teeth, followed by several smaller ones. The tail is long, stiff, and slender. All are from the lithographic (middle oolitic) slates of Bavaria.

Ram'pion, *n.* [Fr. *raiponce*, from Lat. *rapum*, turnip.] (Bot.) The garden name for *Campanula rapunculus*, the fleshy root of which resembles a little turnip, and is edible.

Ram'pire, *n.* A poetical rendering of RAMPART, *q. v.*

Ram'rod, *n.* A rod of iron, &c., used in ramming down the charge in a musket, pistol, &c.

Ram'say, ALLAN, a Scottish poet, and excepting Burns, the most thoroughly national bard his country has produced, was b. in 1685, at Leadhills, in the county of Lanark. In early youth, he was sent to Edinburgh, and there bound apprentice to a wig-maker, then a profession of a higher grade than it is now esteemed. In 1712, he produced his first poetic effusion, and in 1716, commenced business as a bookseller in Edinburgh, a more fitting and congenial occupation for the poet and literary man. In 1720, he published a collection of his fugitive poems, which realized a considerable sum; and, in 1724, *R.* issued the first vol. of his well-known *Tea-Table Miscellany*. His fame, however, reached its acme on the production of *The Gentle Shepherd*, one of the finest dramatic pastorals ever penned. In soft and gentle sweetness of expression, and in a rich exhibition of old Scottish manners and habits, interspersed with dramatic touches of nature and character, no Scottish poem has maintained a more permanent or a higher place in the national mind and affections. Some of the higher class poems of Burns can alone compete with it in this respect. *R.* died at Edinburgh in 1758, full of years, affluence, and honor.

Ram'say, DAVID, an eminent American physician and historian, was b. in 1749, studied medicine in Philadelphia, and practised at Charleston, South Carolina, where he soon acquired celebrity. From 1776 to 1785 he distinguished himself in a political capacity, first as a member of the legislature of South Carolina, and afterwards as a member of Congress. He labored zealously with his pen to promote the cause of independence of his country; and among his publications are *The History of the American Revolution*; *The Life of Washington*; and *The History of South Carolina*. But his most important work appeared after his death, and consisted of a series of historical volumes, entitled, *Universal History Americanized, or an Historical View of the World, from the earliest Record to the Nineteenth Century*, &c., 12 vols. 8vo. He died May 8, 1815, in consequence of wounds received two days previous from the pistol of a maniac.

Ram'say, now ALMONTE, a village and twp. of Lanark co., Ontario, about 66 m. N.N.W. of Kingston. Pop. 4,000.

Rams'burg, in New Jersey, a village of Warren co., abt. 5 m. N. of Belvidere.

Ram'ses, **RAMESES**, or **RAMESSSES**, a name common to several kings of Egypt, of the 19th dynasty, who resided at Thebes. They reigned from the 15th to the 12th centuries B.C. Ramses II. (Fig. 2215), called the Great, who has been by some identified with Sesos-tris, and reigned 68 years, mounted the throne at a very early age, conquered the Khita or Hittites, and other confederate nations of Central Asia, in his 7th year, and concluded an extraordinary treaty with the Khita in his 21st year. Other nations, European and African, fell under his sway, and his empire extended far south into Nubia, the ancient Ethiopia, which he governed by viceroys. He erected fortresses and temples in foreign

lands, and embellished all Egypt with his edifices. He had two wives, twenty-three sons, and seven daughters, and was buried in the Biban-El-Me-look, where the ruins of his sepulchre still exist. His remains were removed, for in 1881 his and other mummies were found concealed in a cave (see EGYPT), and that of *R. II.* (supposed to be identical with that Pharaoh named in Exodus) and *R. III.* were unbandaged, June, 1886, in presence of the Khedive, and subsequently deposited in the museum at Boulak, near Cairo.

Ram'sey, a seaport of the Isle of Man, on the Bay of Ramsey.—A town of England, co. of Huntingdon.—In Ill., a p. v. and twp. of Fayette co.—In Minn., an E. by S. co., area, about 162 sq. m. River, Mississippi. Surface, mostly level; soil, mostly fertile. Cap. St. Paul. Pop. (1895) 147,537.—A township of Anoka co.

Ramsey, in Minnesota, a village of Isanti co.

Ramsey Isle, off the coast of S. Wales, co. of Pembroke, 4 m. W. of St. David's. Length, about 2 m.

Rams'gate, a seaport-town of England, Kent co., on the E. coast of the Isle of Thanet, 15 m. E.N.E. of Canterbury, and 67 m. E.S.E. of London. A favorite watering place. Pop. (1897) 25,260.

Ramshackle (*-shāk'l*), *a.* Rickety; loose; falling to pieces; as, a *ramshackle* house.

— *v. a.* To ransack; to search; to turn over pryingly; — used as an English provincialism.

Fig. 2215. — RAMSES II. (Figured from his tomb at Thebes.)

Ram'sheg, a seaport-town of Cumberland co., Nova Scotia, abt. 83 m. N. of Halifax.

Ramstadt, (**Upper and Lower**), (*ram'stat*), two contiguous towns of the grand-duchy of Hesse-Darmstadt, on the Modau, 5 m. S.E. of Darmstadt; *pop.*, united, 4,000.

Ramteak, (*ram-teek'*), a town of British India, territory of Nagpore; Lat. 21° 24' N., Lon. 79° 22' E. It is a place of pilgrimage.

Ramulose, **Ramulous**, *a.* [Lat. *ramulosus*, from *ramulus*, dim. of *ramus*, a branch.] (*Bot.*) With many small branches.

Ramus, or **La Ramé**, **PIERRE**, a celebrated French philosopher, mathematician, grammarian, and philologist, killed on St. Bartholomew's day, 1572. See **RAMIST**.

Ran, *imp.* of **RUN**, *q. v.*

Ran, *n.* In rope-making, a reel of twenty yarns.

Rana, *n.* [Lat., a frog.] (*Zoöl.*) See **RANIDÆ**.

Ranai, or **ORANAI**, one of the Sandwich Islands in the N. Pacific Ocean; Lat. 20° 51' N., Lon. 156° 23' E. *Ext.* 20 m. long, and 10 m. broad.

Ranalis, *n. pl.* (*Bot.*) An alliance of plants, sub-class *Hypogynous Exogens*.—**DIAG.** Monodichlamydeous flowers, sutural or axile placentæ, indefinite stamens, and minute embryo, inclosed in a large quantity of fleshy or horny albumen. The alliance includes 6 orders,—**MAGNOLIACEÆ**, **ANONACEÆ**, **DILLENIACEÆ**, **RANUNCULACEÆ**, **SARRACENIACEÆ**, and **PAPAVERACEÆ**, *q. v.*

Rancé, **ARMAND JEAN LE BOUTILLIER DE**, B. in Paris, 1626, an eminent ascetic writer, chiefly celebrated as the reformer of the monks of La Trappe. D. 1700.

Ranchedo, *n.* (*Med.*) A chronic thickening of the mucous membrane of the mouth and pharynx, causing partial loss of voice and hoarseness, and requiring counter-irritation and stimulants, such as embrocations of camphorated oil and hartshorn, or even blisters, with hot poultices or fomentations.

Ranescens, (*-sēs'sent*), *a.* [Lat. *ranescens*, from *ranere*, to be rancid.] Becoming rancid; turning sour.

Ranch, *v. a.* To sprain; to wrench; to injure by violent contortion. (*R.*)

Rancho, (*ran-tshā'ro*), *n.* [*Sp.*] A Mexican name for a husbandman or peasant employed on a *ranch*, or stock-farm. The *rancheros* are a wild, lawless class, a progeny sprung from Spaniards and Indians, and often little better than banditti. The name is also applied to a very different class of people, employed on a cultivated farm, called *hacienda*.

Rancid, (*-sid*), *a.* [Lat. *rancidus*, from obsol. *ranceo*, *ranceus*, stinking.] Having a rank or stinking smell; strong-scented; sour; musty; fusty; as, *rancid butter*.

Rancidity, *n.* [*Fr. rancidité*.] Quality of being rancid or musty; a strong, sour, fusty scent; as, *rancidity of oil*.

Rancidly, *adv.* Mustily; with a strong, sour scent.

Rancidness, *n.* Rancidity.

Ranco, *cas*, or **RANCOCUS**, in *New Jersey*, enters the Delaware River from Burlington co.—A post-village of Burlington co., abt. 12 m. N.E. of Camden.

Rancor, (*rānk'ur*), *n.* [*O. Fr. rancœur*; *Fr. rancure*.] Deep-seated and implacable enmity; inveterate hatred; malignity; spite; bitterness.

Rancorous, *a.* Characterized by rancor, or by deep and implacable malice; malignant; malicious; spiteful; virulent; bitter; as, *rancorous hate*.

Rancorously, *adv.* In a rancorous, malignant, or malicious manner.

Rand, *n.* [*A. S.*] A border; edge; verge; margin.—A thin inner sole for a shoe.

Randall, in *Iowa*, a post-village of Hamilton co., abt. 50 m. N. of Des Moines.

Randall, in *Wisconsin*, a township of Kenosha co.; *pop.* abt. 1,100.

Randallstown, in *Maryland*, a post-village of Baltimore co., abt. 15 m. W.N.W. of Baltimore.

Randau, *n.* In some parts of England the finest part of the bran of meal.

Randazzo, (*ran-dat'so*), a town of Italy, in Sicily, prov. of Catania, at the N.W. base of Mount Ætna; *pop.* 4,500.

Randers, a town of Denmark, in N. Jutland, on the Guden, 20 m. N.N.W. of Aarhus. *Manuf.* Gloves; also, shipbuilding. *Pop.* 8,500.

Randolph, **JOHN**, of Roanoke, an American statesman, B. at Cawsons, Chesterfield co., Va., in 1773. He was of wealthy parentage, claiming descent from Pocahontas, the Indian princess. He was educated for the legal profession, which, however, he never followed, devoting his attention to politics. In 1799, he was elected to Congress, where he soon became conspicuous, his fluency, wit, and sharpness of retort making him the acknowledged leader of the administration party. His opposition to the war of 1812 caused his defeat in the following election; but he was reelected to Congress in 1814, where he remained for several years. Visiting England in 1822 and 1824, he attracted considerable attention by his singularity of manners and costume. From 1825 to 1827, he was a senator of the U. States. In 1829, he was a member of the convention for revising the constitution of Virginia, and the year following was appointed U. States minister to Russia, remaining, however, most of the time in England, owing to ill health. On his return, he was again elected to Congress, but was unable to occupy his seat.—“*R.* was tall, and very slender and cadaverous, with long, skinny fingers, which he was in the habit of pointing and shaking expressively at those against whom he spoke. His voice was shrill and piping, but under perfect command, and musical in its lower tones. His favorite weapons in debate were invective and sarcasm; and for many years his sharp and reckless wit made him a terror to his opponents in the house.” “For more than 30 years,” says Mr. Benton,

“he was the political meteor of Congress, blazing with undiminished splendor during the whole time, and often appearing as the ‘planetary plague,’ which shed, not war and pestilence on nations, but agony and fear on members.” “Wit and genius, all allowed him. Sagacity was a quality of his mind visible to all observers, and which gave him an intuitive insight into the effect of measures.” Died at Philadelphia in 1833.

Randolph, **PEYTON**, an American patriot, president of the first Congress; born in Virginia in 1723; died at Philadelphia in 1775.

Randolph, in *Alabama*, an E. co., adjoining Georgia; area, about 599 sq. m. *Rivers*. Tallapoosa and Little Tallapoosa rivers. *Surface*, uneven; *soil*, fertile. *Cap.* Weedlowee. *Pop.* (1897) 19,150.

—A post-village of Bibb co., about 40 m. N. of Selma.

Randolph, in *Arkansas*, a N.N.E. co., adjoining Missouri; area, about 622 sq. m. *Rivers*. Big Black, Eleven Points, and Current rivers. *Surface*, undulating; *soil*, in some parts very fertile. *Cap.* Pocahontas. *Pop.* (1897) 15,670.

Randolph, in *Georgia*, a S.W. co.; area, about 449 sq. m. *Rivers*. Patowla, Hodchodkee, and Pachitla creeks. *Surface*, nearly level; *soil*, fertile. *Cap.* Cutlbert. *Pop.* (1897) 16,360.

Randolph, in *Illinois*, a S.S.W. co., adjoining Missouri, settled by La Salle in 1673; area, about 560 sq. m. *Rivers*. Mississippi and Kaskaskia rivers. *Surface*, diversified; *soil*, very fertile. *Min.* Bituminous coal, limestone. *Cap.* Chester. *Pop.* (1897) 26,950.

—A post-village and township of McLean co.

Randolph, in *Indiana*, an E. co., adjoining Ohio; area, about 460 sq. m. *Rivers*. Whitewater, Mississinewa, and White rivers. *Surface*, nearly level; *soil*, fertile. The co. is traversed by 3 railroads. *Cap.* Winchester. *Pop.* (1897) 31,140.

—A township of Ohio co.—A post-village of Randolph co., about 85 m. E.N.E. of Indianapolis.—A township of Tippecanoe co.

Randolph, in *Kansas*, a post-village of Riley co., about 22 m. N.N.W. of Manhattan.

Randolph, in *Kentucky*, a post-village of Metcalf co., about 44 m. E. of Bowling Green.

Randolph, in *Massachusetts*, a post-township of Norfolk co., containing the villages of East and West Randolph.

Randolph, in *Missouri*, a N. central co.; area, about 470 sq. m. *Rivers*. East Fork of Chariton river, Elk Fork of Salt river, Bonne Femme river, and Silver creek. *Surface*, undulating; *soil*, exceedingly fertile. *Cap.* Huntsville. *Pop.* (1897) 25,640.

—A post-village of Clay co., about 30 m. S.E. of Weston.

Randolph, in *North Carolina*, a central co.; area, about 750 sq. m. *Rivers*. Deep and Uharie rivers. *Surface*, diversified; *soil*, generally fertile, and well adapted to corn and tobacco, and to grazing. *Min.* Slate. *Cap.* Ashborough. *Pop.* (1897) 26,450.

Randolph, in *New Hampshire*, a post-township of Coos co.

Randolph, in *New Jersey*, a township of Morris county.

Randolph, in *New York*, a post-village and township of Cattaraugus county, about 160 miles W. of Elmira.

Randolph, in *Ohio*, a township of Montgomery county.—A thriving post-township of Portage county.

Randolph, in *Oregon*, a post-village and precinct of Coos county, about 15 miles south by west of Empire City.

Randolph, in *Pennsylvania*, a post-township of Crawford co.

Randolph, in *Tennessee*, a post-village of Tipton co., abt. 33 m. N. of Memphis.

Randolph, in *Texas*, a village of Houston co., abt. 120 m. N. of Houston.

Randolph, in *Vermont*, a post-village and township of Orange co., abt. 25 m. S. of Montpelier.

Randolph, in *W. Virginia*, an E. co.; area, abt. 1,000 sq. m. *Rivers*. Buchanan, Elk, Cheat, and Tygart's Valley rivers. *Surface*, hilly or mountainous; *soil*, generally fertile. *Min.* Coal, iron, limestone, sandstone, and slate in abundance. *Cap.* Beverly.

Randolph, in *Wisconsin*, a village and township of Columbia co., abt. 45 m. N.W. of Madison.

Rand, *om*, *n.* [*O. Fr. randon*; *A. S. randun*—*rennan*, to flow, and *dun*, down.] A roving motion or course without direction; absence of direction, plan, rule, or method; hap-hazard;—used, principally, in the phrase *at random*, that is, without a settled point or course.—Distance of a missile or projectile thrown; range. (*Mining.*) Depth below a given plane.

—*a.* Done at hazard, or without settled aim or purpose; uttered or done without previous forethought or calculation; left to chance; as, a *random blow*, a *random guess*, a *random truth*.

Random shot, a shot not aimed toward any specific object; a chance shot.

Randy, *a.* Tumultuous; disorderly; riotous; as, a *randy gypsy*;—also, lascivious; as, a *randy woman*.

Ranee, *n.* [*Hind. rajiri*.] In Hindostan, the wife of a rajah or prince; as, the *Ranee of Sattara*.

Raneengunge, (*ra-ne-goongj*), a town of British India, presidency of Bengal; Lat. 23° 35' N., Lon. 87° 10' E.

Raneepoor, (*ra-ne-por'*), a town of British India, in Scinde, 45 m. S.W. of Hyderabad; *pop.* 5,000.

Rang, *imp.* of **RING**, (*R.*)

Range, (*rānj*), *v. a.* [*Fr. ranger*.] To set in a row or in ranks; to place in a regular line, lines, or ranks; to rank; to dispose or arrange in the proper order; as, to *range troops*, to *range one's ideas*.—To dispose in proper classes or divisions; to place in regular method; to ar-

range systematically; as, to *range plants* in genera and species.—To rove over; to pass over.—To sail in a direction parallel to or near; as, to *range the coast*.

—*v. a.* [*A. S. rennan*, to run.] To go at large; to rove; to roam; to travel without restraint or direction; to wander desultorily.

“I saw him in the battle *range* about.”—*Shaks*

—To sail or pass near, or in the direction of; as, to *range along the coast*.—To have range or projection; as, the shot *ranges* three miles.—To have a particular bent or direction; to be in a line with.—To be placed in rank or order; to be arranged or classified.

“And *range* with humble rivers in content.”—*Shaks*.

—*n.* [*Fr. rangée*.] A rank; a row; a series of things arranged in a line; as, a *range of houses*, a *range of hills*.—A class; an order; an aggregate of individuals of equal degree; as, a *range of beings*. (*Hale*).—The rung of a ladder.—A sieve for bolting meal.—A kitchen grate; particularly, in modern usage, an improved cooking apparatus of cast-iron, set in brick-work.—A going at large; a roaming; a wandering; an excursion; a ramble; a trip.—Compass or extent of travel or wandering;—hence, scope; command; compass taken in by anything extensive, extended, or ranked in order; as, a wide *range of thought*.

“Far as creation's ample *range* extends.”—*Pope*.

—Place, room, or region for excursion;—particularly, a tract of land in which cattle may roam and pasture; as, the prairie is the *range* of the buffalo.

—In the land system of the U. States, a row or line of townships lying between two successive meridian lines six miles apart, and numbered in order east and west from the “principal meridian” of each great survey, the townships in the range being numbered north or south from the “base line,” which runs east and west; as, township No. 6, N., *range* 7, W., for the fifth principal meridian.

(*Gun.*) The distance from the muzzle of a gun to the second intersection of the trajectory with the line of sight. The range is not exactly the distance to the point at which the shot impinges on the plane, unless that is also the point aimed at; but the difference is practically of importance only at short distances. In practice, the *range* is usually measured from the muzzle of the gun to the point of impact on the object, or to the first graze of the projectile. The range depends on the initial velocity, the form and density of the projectile, the angle of elevation of the gun, and the difference of level between the planes upon which the gun and object respectively stand.

(*Naut.*) A large cleat in a ship's waist for belaying the sheets and tacks of the courses.—A length of cable equal to, or slightly in excess of, the supposed depth of water into which the anchor is about to be cast. It is lightly coiled on the deck, that it may run freely through the hawse-hole as the anchor falls.

Rangeley, or **RANGELY**, in *Maine*, a post-township of Franklin co.

Ranger, (*rānj'jer*), *n.* One who ranges; a rover;—hence, a marauder. (*R.*)—A dog that beats the ground in quest of game.

—*pl.* Mounted troops armed with carbines, or with rifles, who range the country, and often fight on foot; as, the Texan *Rangers*.

Rangership, *n.* The office of a ranger, or keeper of a park or forest.

Rangoon, a fortified city of British Burmah, prov. of Pegu, on the Irrawaddy River, 30 m. from the sea, and 58 m. S.S.W. of Pegu; Lat. 16° 48' N., Lon. 96° 10' E.; *pop.* 15,000.

Ranidae, *n. pl.* (*Zoöl.*) The Frog family, comprising tailless batrachians which have the fingers and toes free, and never dilated into a disk, tympanum visible, upper jaw and palate provided with teeth, and the throat of the males with vocal vesicles, which communicate internally with the mouth. The typical genus *Rana* comprises the frogs proper. It is represented in N. America by several species, the most remarkable of which is *R. catesbeiana*, the Bull-frog of the United States, which attains a total length of 21 inches in some instances. It is mainly solitary, and is the most aquatic of all the frogs. The deep croakings of the male may be heard a mile.

Ranine, *a.* Pertaining, or relating, to frogs.

(*Anat.*) Pertaining, or belonging, to the lingual artery, and to a vein following the same course as the artery.

Rank, (*rānk*), *n.* [*A. S. hring*, a ring; *Fr. rang*.] A row, or a line of things, or things in a line; a range; a tier; an order.—Grade; degree of elevation in civil life or station; degree of dignity, eminence, or excellence; relative quality or position; as, a writer of the first *rank*.—An order; a division; a permanent social class; as, the highest and lowest *ranks* of men.—Dignity; high place or degree in the order of men; elevated rank or social position; eminence; distinction; as, a man of *rank*.

(*Mil.*) A line of men standing abreast, or side by side;—opposed to *file*, a line running from front to rear of a company, battalion, &c.

(*Mil. and Nav.*) Degree; grade; as, the *rank* of general or admiral, post-rank, brevet-rank, &c.

Rank and file. (*Mil.*) All soldiers and non-commissioned officers bearing arms.—*The ranks*. The class of common soldiers; as, to reduce an officer to the *ranks*.—To fill the *ranks*, to supply a competent number of men for a company, regiment, or battalion.—To take *rank* of, to go before in point of precedence.

Rank, *v. a.* To class; to place in a particular class, order, or division.—To arrange; to place abreast or in

line. — To place in proper or suitable order; to dispose methodically or systematically.

—*v. n.* To be ranged; to be placed in a rank, or ranks; to be set or disposed, as in a particular class, order, or division; to place in suitable order, or systematically.

"Let that one article *rank* with the rest." — *Shaks.*

—To possess a certain grade or degree of elevation or eminence in the classes of civil or military life; as, he *rank*s high in public estimation.

Rank, a. [A. S. *ranc*, high-grown.] High-growing; of luxuriant or vigorous growth; exuberant; as, *rank* herbage. — Fruitful; very fertile; causing luxuriant or vigorous growth or development; as, a *rank* soil. — Strong; excessive; raised to a high degree; rampant; as, *rank* pride; a *rank* error. — Rancid; strong-scented; musty; as, a *rank* smell. — Strong; steadfast; clinching; as, to take a *rank* hold. — High-flavored; strong to the taste.

"Sea-fowl taste *rank* of the fish on which they feed." — *Boyle.*

To set *rank*, to set the cutting-iron of a plane in such a manner as to take off a thick shaving.

Rank, adv. Rankly; stoutly; vehemently.

Rank, Leopold, an eminent German historian, b. near Naumberg, 1795, was appointed Professor of History in the University of Berlin, in 1824, and historiographer of Russia in 1841. His principal works are: *History of the Roman and German Peoples* from 1494 to 1535; *Princes and Nations of South Europe in the 16th and 17th centuries*; *The Conspiracy against Venice in 1688*; *The Popes of Rome, their Church and State*; *Memoirs of the House of Brandenburg*; *History of Prussia during the 17th and 18th centuries*; *History of England* (6 vols. 1875), and *Friedrich der Grosse* (1878). D. 1886.

Rank'er, n. One who ranks, or places in ranks; one who arranges.

Ran'kin, in Mississippi, a S. central co.; area, about 755 sq. m. Rivers. Pearl river. Surface, generally level; soil, fertile. Cap. Brandon. Pop. (1897) 18,920.

Rankle, (*rānk'l*), *v. n.* [Probably from O. Lat. *ranco*, to become rancid.] To fester; to suppurate; to breed corruption; to become putrid; to be inflamed in body or mind; as, a *rankling* malady. — To become painfully diseased or distempered in body or in mind; as, *rankling* envy or hatred, a *rankling* wound.

—*v. a.* To cause to fester; to inflame. (R.)

Rank'ly, adv. In a rank manner; with vigorous growth; grossly; coarsely; as, vegetation grows *rankly*.

Rank'ness, n. State or quality of being rank; vigorous or exuberant growth; luxuriance; excess; extravagance; extraordinary strength or abundance; as, *rankness* of weeds. — Rank or rancid smell; rancidness; strong taste or high flavor; as, the *rankness* of the flesh of sea-birds.

Ran'ny, n. [Lat. *araneus mus*.] The shrew-mouse.

Ran'sack, v. a. [A. S. *ran*, plunder, and *secan*, to seek.] To seek through or search, as for plunder or booty. — To pillage; to plunder completely; as, to *ransack* a city. — To investigate thoroughly; to enter and search every part or place of; as, to *ransack* one's memory.

—*n.* Pillage; ravage; devastation. (R.)

Ransom, (*ran'sum*), *n.* [Ger. *ranzion*; Fr. *rançon*, from Lat. *redemptio*.] Redemption or release from captivity, bondage, or the possession of an enemy.

"Tell me what province they demand for *ransom*." — *Denham.*

—The money or price paid for the redemption of a prisoner or slave, or for property captured by an enemy.

R.-bill. (*Maritime Law*.) A contract for payment of ransom for a captured vessel, with stipulations of safe-conduct if they pursue a certain course, and arrive in a certain time. The payment cannot be enforced in England, during war, by an action on the contract, but it can in this country.

—*v. a.* [Fr. *rançonner*.] To redeem or free from captivity or punishment, by paying an equivalent for; to rescue from the possession of an enemy by paying a price deemed equivalent; as, to *ransom* prisoners of war. — To demand a ransom for; to exact payment for. (R.)

Ran'som, in Michigan, a post-village and township of Hillsdale co., about 30 m. W.S.W. of Adrian.

Ransom, in Pennsylvania, a post-township of Lackawanna co.

Ran'somer, n. One who ransoms or redeems.

Ran'somless, a. That may not be ransomed; lacking ransom.

Ran'somville, in New York, a post-village of Niagara co., abt. 25 m. N.N.W. of Buffalo.

Rant, v. n. [Probably from O. Ger. *ranjan*, to rage; Gael. *ran*, to roar; Heb. *ranan*, to give forth a strident sound.] To rave in violent, strident, inflated, or extravagant language, without corresponding loftiness of thought; to mouth words in a stilted, puritanical manner; to be noisy and boisterous in words or declamation; as, a *ranting* preacher.

—*n.* Stilted or high-sounding words, without appropriate dignity of thought or solid sense; boisterous, turgid, empty declamation; as, the *rant* of a puritanical fanatic.

Rant'er, n. One who rants; a noisy talker or declaimer; a boisterous, empty-minded preacher.

(*Ecol. Hist.*) One of a sect which originated in a secession from the Wesleyan Connexion, on the ground that the Wesleyans paid too much attention to the externals of public worship, and were deficient in zeal in open preaching in the streets and fields. They admit of female preaching—a thing unknown to every other body of Methodists.

Rant'erism, Rant'ism, n. The practice or doctrines of Rauters.

Rant'pole, n. [Eng. *rant*, to make a loud noise, and Prov. Eng. *pole*, the plank used in the game of see-saw.]

A wild, harum-scarum, reckless fellow;—also, a romping child.

—*a.* Wild; roving; rakish; harum-scarum; as, *rantipole* tricks, *rantipole* habits.

—*v. n.* To run about in a reckless, harum-scarum manner. **Ran'toul**, in Illinois, a city of Champaign co., about 10 m. N. of Urbana. Pop. (1897) 1,175.

Rantoul, in Wisconsin, a township of Calumet county.

Rant'y, a. Rantipole; boisterous; noisy; rakish.

Ran'ula, n. [Lat., a little frog.] (*Med.*) A tumor under the tongue, generally supposed to arise from some obstruction of the ducts of the salivary glands; some recent observations, however, render it probable that the disease often consists in the development of a cyst in or about the salivary ducts under the tongue.

Ranuncula'cea, n. [Lat. *rana*, a frog, because it grows where frogs abound.] (*Bot.*) The Crow-foot, or Buttercup family, an order of plants, alliance *Ranales*. *DIAG.* Distinct carpels, no separate stipules, an imbricated corolla, homogeneous albumen, and seeds without an aril. They are herbs with alternate or radicle leaves, or, in one genus, climbing shrubs with opposite leaves, the leaf-stalk in both cases generally dilated at the base, without stipules, the leaf often much divided, and the flowers solitary, or in terminal racemes or panicles. Calyx of 3-6 (usually 5) carpels; corolla of 3-15 (usually 5) petals, generally regular, but sometimes irregular, very minute, or altogether wanting; stamens indefinite, usually numerous, inserted in the receptacle; carpels numerous, 1-celled, or united below, so as to form a compound, many-celled ovary; one or many ovules attached to the ventral suture; style simple. Fruit consisting of a number of achenia, or of several follicles, or a one or more seeded berry; seed containing copious horny albumen, with a minute embryo at base. The plants of this order are widely diffused over the globe, but more especially in temperate or cool climates. Within the tropics, they are, with the exception of the genus *Clematis*, almost confined to high mountain-ranges. An acrid principle is common to all the *R.*, and a narcotic principle is sometimes present in addition. When these principles are in excess, the plants containing them are poisonous. Many of these plants are conspicuous ornaments of our fields, and are cultivated in our gardens; as *Clematis*, *Anemone*, *Ranunculus*, *Eranthis* (Winter Aconite), *Helleborus* (Christmas rose), *Aquilegia* (Columbine), *Aconitum* (Monk's-hood), *Peonia* (Peony), &c. The *Mountain officinalis*, or Tree-peony of China, is especially remarkable for its very large, and numerous, showy flowers. From the *R.*, the important drugs, aconite, black hellebore, staves-acre seeds, and podophyllin, are derived. The order includes 47 genera, and 1,000 species.

Ranunc'ulus, n. (*Bot.*) The typical genus of the order *Ranunculaceae*, composed of annual or perennial herbs. Some of them adorn meadows with their yellow flowers, familiarly known as *Buttercups*, *Cuckoo-bud*, *King-cup*, &c.; others, known by the name of *Crow-foot*, or *Corn-crow-foot*, are troublesome weeds in gardens and pastures. Many, as the *Spear-worts*, are found chiefly in moist places, and some are altogether aquatic, covering the surface of ditches, ponds, and rivers, where the water is shallow, with a carpet of verdure exquisitely studded with beautiful white flowers. — The Showy *Ranunculus Asiaticus* of our gardens (Figure 2216), is a Levant species. From clusters of small tubers, it sends up several bipartite leaves, and an erect, branched stem, with terminal flowers, which, in the cultivated varieties, are often double or semi-double, yellow, white, red of various shades, or of mixed colors, very brilliant, and from 1½ to 2½ inches in diameter. The cultivated varieties are extremely numerous. The *Ranunculus* is propagated by seed, by offset tubers, or by dividing the clusters of tubers. Double-flowered varieties of several other species, especially of the common yellow buttercups, are known to gardeners under the name of *Bachelor's Buttons*. *R. sceleratus* (the Celery-leaved Buttercup), and *R. flammula* (the Spear-wort), are very acrid. *R. ficaria* (the lesser Celandine) has thickened roots, which contain a good deal of starch, and have, on this account, been used as food.

Ranz-des-vaches, (rōnz-dā-vāsh), n. [Fr.; Ger. *Kiurchen*, the call to the cows.] (*Mus.*) The name given to the melody which the Swiss herdsmen are in the habit of playing on the Alpine horn, and sometimes of singing, when they drive out their herds to the mountains. It consists of a few simple intervals, and has a beautiful effect when awaking the echoes of the Swiss mountains. The natives of Switzerland are said

Fig. 2216. — GARDEN RANUNCULUS.

to be seized with irrepressible longings to return to their native country when they hear it played in a foreign land.

Rap, v. n. (*imp.* and *pp.* RAPPED, usually written RAPT.) [O. Ger. *rap*.] To strike with a quick, smart, sharp blow; to knock; as, to *rap* with the knocker of a door.

To *rap out*. To utter vehemently; as, to *rap out* an oath. (In the U. States, *rip* is frequently colloquially used in the same sense.)

—*n.* A quick, smart blow; as, a *rap* on the head, or on the knuckles.

—*v. a.* [A. S. *rypan*; Goth. *raupjan*, to break in pieces.] To seize by violence; to snatch or hurry away.

"*Rapt* in a chariot drawn by fiery steeds." — *Milton.*

—To seize and bear away, as the mind or thoughts; to transport out of one's self; to affect with ecstasy or rapture.

"Transported and *rapt* in secret studies." — *Shaks.*

—To exchange; to truck (Vulgar.)

To *rap and rend*. To fall on and plunder; to seize by violence.

Rapacious, (-pā'shus), a. [Fr. *rapace*; Lat. *rapax*, *rapacis*, from *rapio*, to seize or carry off.] Grasping; greedy of plunder; greedy; ravenous; voracious; as, a *rapacious* spirit. — Given to plunder; disposed or accustomed to seize by violence; seizing by force; as, a *rapacious* soldier. — Accustomed to seize for food; subsisting on prey, or animals seized by violence; as, a *rapacious* beast.

Rapa'ciously, adv. In a rapacious or greedy manner; by violent seizure or robbery.

Rapa'ciousness, n. Quality or state of being rapacious; disposition to plunder or exact by force, or oppression.

Rapacity, (-pās'i-te), n. [Fr. *rapacité*; Lat. *rapacitas*.] Rapaciousness; quality of being addicted to plunder; exercise of plunder; act or practice of seizing by force; ravenousness; greediness; as, the *rapacity* of wild animals. — Act or practice of extorting or exacting by oppressive tyranny or injustice; exorbitant lust of wealth or power, or greediness of gain; as, the *rapacity* of the priesthood.

Raparee', n. Same as RAPPAREE, *q. v.*

Rape, n. [Fr. *rapt*; Lat. *raptus*, from *rapio*, to seize.] Act of rapping, or snatching, or seizing by force; robbery. (R.)

(*Crim. Law*.) The carnal knowledge of a woman forcibly and against her will. This detestable offence is punished by penal servitude or imprisonment.

—Fruit plucked from the bunch or cluster, as grapes. — The debris, or stalks and skins of raisins used in the making of wine. — In England, one of the intermediate divisions between a hundred and a shire; as, the *Rape* of Bramber, county of Sussex.

(*Bot.*) The Rape or Cole-seed (*Brassica napus*), (see *BRASSICA*), is a biennial plant much cultivated in Europe, both on account of its herbage and its oil-producing seeds. It is so nearly allied to *Brassica rapa* (Turnip), *B. campestris* (Swedish Turnip, Colza, &c.), *B. oleracea* (Kale, Cabbage, &c.), and *B. praeox* (Summer Rape), that botanical distinction is difficult, particularly as to some of the cultivated varieties. *R.* delights in a rich alluvial soil, and is particularly suitable for newly reclaimed bogs and fens, in which the turnip does not succeed well. The mode of cultivation does not differ much from that of turnip; and similar manures are used. In rich soils, *R.* sometimes attains a height of 3 or even 4 feet, so that the sheep turned in are hidden beneath the leaves, and seem to eat their way into the field. They eat the stalks even more greedily than the leaves. *Rape-oil* is extensively used for machinery and for lamps. But the oil and cake so called are not exclusively obtained from this plant; nor are the names *Colza oil* and *Rape oil* used to discriminate the produce of different plants, although in some parts of Europe the name *Colza* is given to varieties of *Brassica campestris* and *B. oleracea*, which are cultivated in the same way as *R.* *B. praeox* is also cultivated in some places, being sown in spring and reaped in autumn. The seeds of other cruciferous plants are also crushed indiscriminately with these, and the oil and cakes sold by the same names.

Fig. 2217. — RAPE, (*Brassica napus*.)

Rape'-cake, n. The waste matter remaining after the oil has been expressed from the rape-seed.

Rape'ful, a. Given to lust or carnal knowledge of a woman by force; as, the *rapeful* Hyæns.

Rape'-oil, n. Oil expressed from rape-seed.

Rape'-seed, n. The seed of the rape from which oil is obtained.

rape'-wine, *n.* A weak, thin wine obtained from the last lees of pressed raisins.

Raph'ael, (RAFFAELLO SANZIO or SANTI D'URBINO,) the greatest of modern painters, and head of the Roman school, was b. at Urbino, 1483. He received his earliest instructions from his father, Giovanni Santi, after whose death, in 1494, he became the pupil of Perugino, with whom he remained at Perugia and other places for several years. In 1504 he visited Florence, and chiefly lived there till 1508, when he was called to Rome by Pope Julius II., and employed to paint the *stanze* (chambers) of the Vatican. *R.* spent the rest of his short life at Rome, where he formed a numerous school of painters, among whom the most eminent were Giulio Romano, Gian Francesco Pennis, Pierino del Vaga, Polidoro da Caravaggio, and Garofalo. In the numerous works, frescoes, and oil-paintings of this unrivalled master, three styles are distinctly recognizable. The first is the *Peruginesque*, in which sentiment predominates, and was the pure imitation of his master's manner. The second is the *Florentine*, marked by a great advance in respect to form and dramatic composition; it was the result of his studies at Florence, where he was impressed by the cartoons of Leonardo da Vinci and Michael Angelo, and the works of Masaccio, Francia, and Fra Bartolomeo di San Marco. The last-named painter, who especially excelled in his coloring, and the treatment of light and shade, was the intimate friend of *R.* The third style is called the *Roman*, and is peculiarly *R.*'s own—that which constitutes him the greatest of painters. Its supreme excellence is the equable development of all the essential qualities of art, composition, expression, design, coloring; thus forming a truthful representation of nature, both in the grandest conceptions and in the minutest details. It is impossible here to name more than a very few of the works of *R.*, who is distinguished above other painters by the fact of having executed no merely common-place work. Of the paintings executed before his visit to Florence, must be named—*Coronation of the Virgin*, now in the Vatican, and the *Spasmodic*, or *Marriage of the Virgin*, in the Brera at Milan. Among those in his second

Fig. 2218. — RAPHAEL.

manner, are—the *Entombment of Christ*, in the Borghese gallery at Rome; the *Madonna del Baldacchino*, in the Pitti Palace at Florence; the *Madonna del Gran Duca*, in the same palace; and the grand fresco, *Theology*, or *Dispute on the Sacrament*, the first he executed in the Vatican. The *School of Athens*, or *Philosophy*, painted in 1511, first showed traces of his third and highest style. It was followed by the *Parnassus*, or *Poetry*, *Jurispudence*, *Expulsion of Heliodorus from the Temple of Jerusalem*, founded on a narrative in the book of the Maccabees; the *Mass of Bolsena*, *Attila*, and *Deliverance of St. Peter from Prison*. These frescoes are in the Stanza della Segnatura, and Stanza dell' Elidoro. The frescoes in the Stanza dell' Incendio, and de Constantino, though designed by *R.*, were chiefly painted by his scholars; to whom he was compelled, by the innumerable commissions given him, to intrust the execution of many of his later works. The *loggie* (colonnades) of the Vatican were decorated under his direction; the sublime works of Michael Angelo in the Sistine chapel stimulated him in the production of his *Isaiah* and *Sibyls*; and in 1515 he prepared the *Cartoons* for the tapestry of the Sistine chapel, three of which are lost, and the other seven, sent to Flanders, were bought by Charles I., and now form part of the National Collection in South Kensington Museum, London. Among *R.*'s oil-paintings are the *St. Cecilia*, at Bologna; the famous *Madonna di San Sisto*, now in the Dresden gallery; the *Spasmodic of Sicilia*, now at Madrid; and the *Transfiguration*, his last work, and perhaps at once the *chef-d'œuvre* of *R.* and of painting. It is now in the Vatican. His drawings are very numerous, and are to be found in most of the public and private museums of Europe. *R.*, who had occupied himself with architecture as well as painting, was charged, on the death of

his friend Bramante, in 1514, with the direction of the building of St. Peter's. *R.* died at Rome from the effects of a cold caught in the Vatican, and after an illness of a fortnight, on his 37th birthday, April 6, 1520. His body lay in state, and was interred with great pomp in the Pantheon. His school was dispersed at the sack of Rome, seven years after his death. There are *Lives of R.* by Vasari, Duppa, Quatremère de Quincy, and others. The most recent are those of Passavant and Baron von Woltzen. An English translation of the latter, by Miss Bennett, appeared in 1865. There is an important new work by W. Watkins Lloyd, entitled *Christianity in the Cartoons*. And, among the latest publications, is a series of twenty photographs of *The Great Works of Raphael*, with Vasari's *Life*, and a complete list of his works from Passavant.

Raphaelism, (ră-fă-el'izm,) *n.* (*Paint.*) The manner of painting in oils introduced by Raphael, or Raffaele.

Raph'aelite, *n.* A follower of the school of painting founded by Raphael, or Raffaele.

Raph'anus, *n.* [*Gr. raphanis*, a radish.] (*Bot.*) A genus of plants, order *Brassicaceæ*. The species *R. sat-*

Fig. 2219. — RADISHES.

ivus is the well-known salad root. Several varieties are in cultivation, some having spindle-shaped, and others globular roots. The latter are commonly distinguished by the name of *turnip-radishes*. Like the most of the salad plants derived from the order *Cruciferae*, radishes are antiscorbutic and pungent; owing to the excess of woody tissue, they are somewhat indigestible. To attain a large size they require a deep sandy soil.

Raphe, (ră'fē,) *n.* [*Gr.*, a seam or suture.] (*Anat.*) A term applied to parts which look as if they had been sewn or joined together.

(*Bot.*) The vascular cord communicating between the nucleus of an ovule and the placenta, when the base of the former is removed from the base of the ovulum.

Raph'ides, *n. pl.* [*Gr. raphis*, a needle.] (*Bot.*) Certain needle-like transparent bodies found lying in the tissue of plants. They were formerly thought to be peculiar organs, but are now known to be the crystals of various salts.

Raph'ilitite, *n.* [*Gr. raphis*, and *lithos*, stone.] (*Min.*) A variety of Asbestiform tremolite, occurring in groups of delicate acicular crystals (whence the name) of a white or bluish-green color. It is a silicate of magnesia and lime.

Raphoe, (rah'fō,) in Pennsylvania, a township of Lancaster co.

Rap'id, *a.* [*Fr. rapide*; *Lat. rapidus*, from *rapio*.] Very swift, fast, quick, or fleet; tearing or hurrying along; moving with speed or celerity; as, a *rapid* river, a *rapid* flight. — *Hasty*; *speedy*; *quick* in progression or sequence; as, *rapid* growth, *rapid* improvement, *rapid* succession. — Of quick speech or utterance of words; as, a *rapid* talker, a *rapid* delivery of language.

— *n.* That which has quickness of motion; — specifically, the part of a river where the current is very swift, or moves with more celerity than the ordinary current; sudden descent of the surface of a stream without actual cataract or cascade; — generally used in the plural; as, the *rapids* of the Mississippi.

Rapidan, or RAPID ANN, in Virginia, rises on the S.E. slope of the Blue Ridge in Green co., and flowing S.E., then N.E., enters the Rappahannock River between Spottsylvania and Culpepper cos. Length, abt. 80 m. — A village of Madison co., abt. 102 m. N.W. of Richmond.

Rapidan Station, or RAPID ANN, in Virginia, a post-village of Culpepper co.

Rapides (ra-peed'), in Louisiana, a central parish; area, about 1,495 sq. m. Rivers, Little Red and Calcasieu rivers. Surface, nearly level; soil, very fertile, especially near the streams. Cap. Alexandria. Pop. (1897) 30,130.

Rapid'ity, *n.* [*Fr. rapidité*; *Lat. rapiditas*.] State or quality of being rapid; celerity of motion; swiftness; velocity; speed; quickness of utterance; as, the *rapidity* of a current, *rapidity* of speech. — Quickness of progression, development, or advance; as, *rapidity* of growth.

Rap'idly, *adv.* With great speed, celerity, or swiftness; in a rapid manner; with velocity; with quick progression or advance; as, he improves *rapidly*, to move or speak *rapidly*.

Rap'idness, *n.* Rapidity; swiftness; quickness; speed; celerity; velocity.

Rap'ids, in Iowa, a township of Linn co.

Rap'ier, *n.* [*Fr. rapier*; *Ger. rappier*.] Formerly, a

long, straight, narrow-bladed sword, now a small sword generally.

Rap'il, Rapil'lo, *n.* [*It. rapillo*.] Pulverized volcanic scoriae.

Rapine, (răp'in,) *n.* [*Fr.*; *Lat. rapina*, from *rapio*.] Act of seizing and carrying off by force; act of plundering; pillage; ravage; spoliation. — Violence; force. — *v. a.* To plunder; to pillage; to devastate.

Rappahan'nock, in Virginia, a river formed by the Rapidan and North Fork, which unite abt. 10 m. N.W. of Fredericksburg, thence flowing an almost direct S.E. course it enters Chesapeake Bay between Lancaster and Middlesex cos. Length, about 125 m.

— *A N. co.*; area, about 270 sq. m. Rivers, North River, or North Fork of the Rappahannock river, and Hazel river. Surface, much diversified, the Blue Ridge forming the N. W. boundary; soil, generally fertile. Cap. Washington. Pop. (1897) 9,050.

Rapparee', Raparee', *n.* Formerly, a wild Irish plunderer or marauder; an outlaw; — the name is supposed to be derived from the *rapery*, or pike, carried by such persons.

Rappee', *n.* [From *Fr. râper*, to grate to powder.] A name used to denote those snuffs which are prepared by grinding the tobacco to powder in a moist state; as, black or brown *rappee*.

Rappel, *n.* (*Mil.*) The drum-beat calling troops to arms.

Rappen, *n.* A Swiss coin, being the tenth part of a franc, or equivalent to about two cents.

Rapper, *n.* [From *rap*.] One who, or that which, knocks or raps; — sometimes, the knocker of a door.

Rap'port, *n.* [*Fr.*, from *rapporter*, to refer.] Relation; reference; proportion. (*o.*)

En rapport. (*Mesmerism*.) That relation of sympathy which insures effective communication or affinity.

Rapscallion, (-skă'l'yun,) *n.* A low, mean vagabond; a rascal or rascalion; a base, paltry scoundrel; as, ragged *rapscallions*.

Rapt', *imp.* of *RAP*, *q. v.*

Rapt', *n.* [*Lat. raptus*, from *rapere*, to transport, to ravish.] A trance; an ecstasy.

Rap'tee, a river of British India, presidency of Bengal, which, after a S.E. course of 270 m., joins the Ganges in the dist. of Goruckpore.

Rap'tores, *n. pl.* [*Lat. plunderus*.] (*Zoöl.*) Same as ACCIPITRES, *q. v.*

Rap'torial, *a.* Rapacious, as a bird of prey; raptorious.

Rap'torious, *a.* [*Lat. raptorius*.] Raptorial. — Fitted for the seizure of prey, as the talons of vultures, falcons, &c.

Rapture, (rap'tyur,) *n.* [*Lat. raptura*, from *rapio*.] Violence of a pleasing passion; vehemence of joyful emotions or sensations; ecstasy; transport; enthusiasm; delirium of enjoyment; lively heat of the imagination.

"There is a rapture on the lonely shore." — Byron.

— *v. a.* To enrapture; to transport; to fill with ecstasy.

Rapt'nize, *v. n.* To become enraptured or smitten with ecstasy. (*R.*)

Rapt'nrous, *a.* Ecstatic; transporting; ravishing; as, *rapturous* delight.

Rapt'nrously, *adv.* In a rapturous manner; ecstatically; with transport.

Ra'ra A'vis, *n.* [*Lat.*] A rare bird; — hence, something strange or unique; a prodigy; a rarity; a wonder; as, a woman without jealousy is a *rara avis*.

Rare', *a.* (*Comp.* RARER; *superl.* RAREST.) [*Fr.*, from *Lat. rarus*.] Having wide interstices between its parts; of a loose texture; thin; porous; not dense or compact; as, a *rare*, attenuated substance. — Thinly scattered; dispersed here and there. — Seldom occurring; uncommon; not frequent; scarce; unusual; as, a *rare* occasion, a *rare* chance, a *rare* monster. — Incomparable; of a degree of excellence not usually found; valuable beyond what is common; unique; as, a woman of *rare* beauty, a *rare* work of art, &c.

— [*A. S. hrere*, raw.] Half-raw; imperfectly or partially cooked; underdone; retaining the natural juices; as, *rare* roast-beef.

Raree-show, *n.* [Contracted from *rarity-show*.] A puppet-show; a show carried about in a box by itinerant exhibitors.

Rarefaction, (rair-e-făk'shun,) *n.* [*Lat. rarus*, rare; *facio*, to make.] (*Physics*.) The process of expanding or distending bodies. By means of *R.* a body is made to possess more room, or to appear of larger bulk, without accession of any new matter. The rarefaction of the atmosphere is so enormous, that Newton considered it inconceivable on any other principle than an inherent repelling force in the air itself, in consequence of which its particles fly from each other mutually.

Rare'fiable, *a.* [*Fr.*] Susceptible of rarefaction.

Rare'fy, *v. a.* [*Fr. rarefier*; *Lat. rarefacio* — *rarus*, rare, and *facio*, to make.] To make rare; to make thin and porous, or less dense; to expand or enlarge a body without adding to it any new portion of its own matter; — in contradistinction to *condense*; as, *rarefy* air.

— *v. n.* To become thin, porous, or dispersed; as, "earth *rarefies* to dew." — Dryden.

Rare'ly, *adv.* Seldom; infrequent; not often; in a rare manner or degree; as, we *rarely* see him now. — Finely; nicely; accurately; harmoniously; as, a melody *rarely* played.

Rare'ness, *n.* State of being rare; rarity; thinness; tenuity; — opposed to *density*. — State of being uncommon or infrequent; quality of being scarce or unusual. — Value arising from dearth or scarcity.

Rare'ripe, *a.* Prematurely ripe, as fruit.

— *n.* An early, or prematurely ripened fruit.

Raritan, *n.* Illinois, a post-village of Henderson co., abt. 20 m. S.E. of Burlington, Iowa.

Raritan, or **Rariton**, in *New Jersey*, a river formed by the North and South Branches, which unite in Somerset co., and flowing a general E. course enters Raritan Bay from Middlesex county.—A township of Hunterdon county.—A township of Monmouth county.—A post-borough of Somerset co., about 1 mile W. of Somerville.

Raritan Bay, an arm of the Atlantic Ocean, between Middlesex and Monmouth cos., New Jersey, and Staten Island, New York. It is abt. 15 m. long, with a maximum breadth of 10 m.

Raritan Landing, in *New Jersey*, a village of Middlesex co., abt. 10 m. N.E. of Trenton.

Rarity, *n.* [Fr. *rareté*; Lat. *raritas*.] State or quality of being rare; rareness; tenuity; subtlety; thinness;—opposed to *density*; as, the *rarity* of air.—State of being scarce or unusual; infrequency; uncommonness; as, the *rarity* of a plant.—That which is rare or comparatively unique; something which is uncommon or strange, or valued for its scarcity; as, a disinterested politician is a *rarity* in this country.

Rascal, *n.* [A. S., a lean, worthless deer. Etymology unknown.] A lean deer.—Specifically, a mean fellow; a trickish, dishonest man; a knave; a rogue; a scoundrel;—particularly applied to men and boys guilty of the minor offences, and indicating less enormity or flagrancy than *villain*.

—*a.* Lean; scraggy;—hence, worthless; as, a *rascal* deer.

Rascality, *n.* Act or practices of a rascal; mean knavery, trickery, or dishonesty; base malpractice, roguery, or fraud; as, to be guilty of *rascality*.

Rascallion, (*-kāl'yun*), *n.* Same as **RAPSCALLION**, *q. v.*

Rascally, *a.* Meantly trickish or dishonest; after the manner of a rascal; vile; contemptibly mean, base, worthless, or fraudulent; as, a *rascally* swindler.

Raskolnik, **Raskolnik**, *n.* [Russ., heretic.] (*Ecll.*) One of a large body of Russian dissenters from the Greek Church.

Rase, (*rāz*), *v. a.* [Fr. *raser*; Lat. *rado*, *rasus*, to scrape, to scratch.] To scrape; to graze; to skim or rub along the surface of.—To blot out; to obliterate; to cancel; to erase; to expunge; to scratch or rub out.—To level with the ground.

—*v. n.* See **RAZE**.

Rase, *n.* A graze; a slight wound or abrasion.

Ras-el-Khy'ma, a fortified town of Arabia, on the Persian Gulf; Lat. 25° 49' N., Lon. 55° 30' E.

Rasgrad, a town of European Turkey, in Bulgaria, 33 m. S.E. of Rastchuk; pop. 6,000.

Rash, *a.* [D. and Ger. *rasch*, quick, speedy.] Precipitate; hasty; unduly quick; headlong;—especially, resolving or entering on a project, measure, or undertaking without due reflection, deliberation, and caution, and thus encountering unnecessary hazard; hasty in counsel or action;—applied to persons; as, a *rash* speaker, a *rash* leader.—Spoken or undertaken with too much haste or too little reflection; as, *rash* expressions, a *rash* step, a *rash* attempt.—Quick; sudden; ardent; as, *rash* gunpowder.—So dry as to fall out with a touch of the hand, as grain. (An English provincialism.)

Rash, *n.* [It. *rascia*; O. Fr. *rasche*.] (*Med.*) A rash is an eruption of red or purple spots on the skin, which may arise from a surfeit, or be the result of some crudity in the stomach and bowels, and may either take place in the form of a few minute pimples, or in a number of irregular blotches or patches, appearing on the face and neck most frequently, but sometimes extending over the entire body. All rashes are attended with heat, irritation, thirst, and sometimes pain. The best treatment for rashes, when they occur in adults from the eating of crude food, is to take an emetic of 15 grains of ipecacuanha, or a mild dose of aperient medicine, and, in severe cases, a warm bath. For children, according to their age, a little magnesia, or a few spoonfuls of senna and manna tea, will be, in general, enough to remove the exciting cause.

Rasher, *n.* A thin slice or cut; as, a *rasher* of bacon.

Rashly, *adv.* In a rash or precipitate manner; with hastiness or temerity; without due deliberation or consideration.

Rashness, *n.* State or quality of being rash; temerity; precipitancy; hastiness; recklessness; inconsiderate contempt of danger; quality of being entered or performed without due deliberation and caution.

Rasores, *n. pl.* [L. Lat., from Lat. *radere*, *rasum*, to scrape.] (*Zoöl.*) An order of birds (called also *Gallinaceæ*). They have strong feet, provided with obtuse claws for scratching up grains, seeds, &c., of which their food principally consists. Their bodies are for the most part bulky, and their legs strong; but their wings not being of a size proportionate to their bulk, their powers of flight are inconsiderable. The beak is usually arched, and surrounded at the base with a soft skin, in which the nostrils are pierced. They are polygamous, the male taking no part in the construction of the nest, or in the nurture of the young. Generally speaking, the birds of this order are easily domesticated; they multiply with great rapidity; and as they furnish man with a large quantity of wholesome and delicate food, they are justly entitled to his especial regard. Most of them fly badly, do not perch on trees, and seek their food on the ground.

Rasp, *n.* [Swed.; Dan. *raspe*; Ger. *raspel*.] A rough kind of file for rubbing off quickly the asperities of surfaces, whether of wood or of metal.—A round, oblong, crusty loaf of bread.

—*v. a.* [Ger. *raspeln*.] To rub or file with a rasp or rough file; as, to *rasp* wood to make it smooth of surface.—Hence, to grate harshly upon; as, a sharp, *rasping* voice.

Raspail, François Vincent, a French chemist and

writer, b. at Carpentras, 1794. From 1824 till 1830 he contributed many scientific articles, especially on chemistry, to the *Annales des Sciences Naturelles*, and other journals, and is by some considered the creator of organic chemistry. Raspail, notorious for his democratic opinions, was wounded in the Revolution of July, 1830. Although official employment was offered him, he kept aloof from the government of Louis Philippe, and in the newspaper called the *Friend of the People* proved himself so zealous a republican, that he became the object of a series of prosecutions, which, while augmenting his popularity, cost him six years' imprisonment. For one of his disloyal diatribes against the sovereign, he suffered fifteen months' imprisonment and a fine. Raspail did not, however, neglect his scientific studies; indeed, several of his works were composed in prison. Two of his works were as remarkable for their originality as for their general excellence. These were, the *Natural History of Health*, and the *Médecine et Pharmacie Domestique*. Having adopted the theory that disease is most frequently confined by internal or external parasites, he fixed upon camphor as the best general agent for destroying them, which he prepared and sold at first in the form of cigarettes, afterwards using it systematically in other modes, and combining with it other remedies according to circumstances. He took a prominent part in the revolution of 1848; was a member of the Constitutional Assembly, and, again offending was, in 1849, sentenced to five years' imprisonment. Twice during his incarceration he was elected a deputy, but of course could not sit in the chamber. On being liberated, in 1854, he took up his residence in Belgium, in order to devote himself to scientific pursuits. His *Annuaire de la Santé* had a large sale. In 1870, R. availed himself of the general amnesty, and was elected deputy for Paris. He entered zealously the Commune movement in 1871. Sentenced to two years' imprisonment in 1874 for political "objectionable publications," and in 1876 elected deputy for Marseilles. D. Jan., 1878.

Raspatory, *n.* A rasp used by surgeons.

Raspberry, (*rāz'ber-ry*), *n.* [Ger. *Kratzbeere*, from *kratzen*, to scratch.] (*Bot.*) See **RUBUS**.

Rasper, *n.* A scraper; one who, or that which, rasps or grates.

Rasse, (*rās*), *n.* (*Zoöl.*) A Javanese civet, *viverra rosse*.

Rastadt, a fortified town of S. Germany, in Baden, on the Murg, 20 miles N. of Strasburg. *Manuf.* Carriages, fire-arms, mathematical and philosophical instruments; also, silver and plated-ware. Pop. 6,500.

Rasure, (*rāz'hur*), *n.* [Lat. *rasura*, from *rado*, *rasus*, to scrape, scratch.] Act of scraping, rasing, shaving, or erasing; obliteration; an expunging.—An erasure; the mark by which a letter, word, or any part of a writing is effaced, expunged, or obliterated.

Rat, *n.* [Fr.; A. S. *rat*.] (*Zoöl.*) The popular name of all the larger species of the genus *Mus*, family *MURIDÆ*, *q. v.*, the most important of which are the Norway or Brown rat, *M. decumanus*, and the Black rat, *M. rattus*. The Brown rat is eight to ten inches long to the tail; the color above is grayish-brown, mixed with rusty, beneath, ashy-white. This rat is known all over the world, and is very destructive in its habits. It belonged originally to Central Asia; crossing the Volga in large troops in 1737, it stocked Russia, and subsequently overrun all Europe. It is often called Wharf-rat. The Black rat is readily distinguished from the Brown rat—its color being sooty-black above, passing into dark plumbeous or paler beneath. Its original locality is unknown. It has been the house-rat of Europe from earliest times, and was introduced into America in 1544. This species is rare, or wholly wanting, in localities where it was formerly very abundant; for it always disappears before its more formidable rival, the Brown rat. Both these species devour everything edible that they can secure, often capturing living prey. The name *rat* is often popularly given, not only to species nearly allied to these, but to other species of *Muridæ*, now ranked in different genera, some of which are noticed in other articles. For the Water-rat, see **VOLE**.

—A renegade; one who deserts his party or colleagues;—hence, by implication, a printer who works for less than the established scale of wages.—A chignon, or mass of artificial hair, used by ladies.

To *smell a rat*, to be suspicious; to be on the alert from suspicion, as the cat by the noise of a rat.

"Quoth Hudibras, 'I smell a rat.'"—Butler.

—*v. n.* (*Eng. Pol.*) To become a renegade to one's former party or associates from interested motives; as, he *ratted*, and went over to the Opposition.

(*Print.*) To work for less than the established rate of prices.

Rat, or **KRYCI**, in the Aleutian Archipelago, the common name of the five islands, Semisopochnoi, Kioka, Booldyr, Amchitka, and Kryci or Rat Island, the last and most important of which is in Lat. 51° 45' N., Lon. 180° 40' W.

Ratability, *n.* Quality of being ratable.

Ratable, (*rāt'a-bl*), *a.* That may be rated or set at a certain value.—Assessable; liable or subjected by law to taxation; as, *ratable* property.

Ratableness, *n.* Ratability.

Ratably, *adv.* Proportionally; by rate or proportion.

Ratafia, (*rāt-a-fē'ah*), *n.* A delicious cordial, made by macerating the bruised kernels of apricots, cherries, and peaches, with cinnamon, cloves, and other spices, for a certain number of days in brandy, and finally sweetening the whole with lump sugar. It is said to have signified originally a liquid drunk at the ratification of an agreement.

Rattan, *n.* Same as **RATTAN**, *q. v.*

Ratany, **Ratany**, **Rhatany**, *n.* [Peruv. *rat-āna*.] (*Bot.*) The astringent root of a Peruvian species

of the genus *polygala*, sometimes used as a tonic, but more frequently as a dentifrice in a scorbutic state of the gums.

Ratchet, *n.* (*Mech.*) A wheel, bar, sector or the like having teeth inclined or shaped so that the wheel, bar, &c., may be held in place or moved tooth by tooth. In the case of the ratchet-wheel, as shown in the cut, Fig. 2220, the pawl being perfectly free to move up and down, its own weight makes it drop into tooth after tooth as the wheel revolves. But the wheel can only revolve in the direction of the arrow, as shown in the illustration.

Fig. 2220.

RATCHET WHEEL AND PAWL.

Ratch-et-brace, **Ratch-et-drill**, *n.* A brace or brace and drill for forming a hole where there is not sufficient room to use the common brace; a ratchet-wheel is fixed in the drill-socket, and turned by a handle with a strong spring attached to force round the socket on the forward motion, and slip over the teeth on the backward motion.

Ratch-et-wheel, *n.* See **RATCHET**.

Rate, *n.* [O. Fr.; L. Lat. *rata*.] Price or amount fixed or stated of anything; settled allowance; established measure; as, interest at the *rate* of six per cent.—The proportion or standard by which quantity or value is adjusted; degree; comparative height, price, or value; degree of value; degree in which anything is done; price; as, to move at a *great rate*, a *high rate* of prices, a *man of the common rate*.—A tax or sum assessed by authority on property for public use, according to its income or value; as, parish *rates*, poor-*rates*, highway *rates*, &c.—The deviation in the error of a clock or time-piece in 24 hours.

(*Naut.*) The classification of a ship, according to its magnitude or force; as, a *first-rate*, *second-rate*, &c.

—*v. a.* To reckon; to calculate; to compute; to estimate; to value; to set a certain amount of value on; to put or rank at a certain price or degree of worth or excellence; as to *rate* goods, to *rate* a person by the company he keeps.—To rank or class in a certain order; to take the rate of; as, to *rate* a ship, to *rate* a seaman.—To ascertain the exact rate of gain or loss in time, compared with true time; as, to *rate* a chronometer.

—*v. n.* To make an estimate; to place a *rate* on.—To be ranked or classed in a certain order; as, he *rates* as an able-bodied seaman.

Rate, *v. a.* [A. S. *hræthan*, to rage; Swed. *rata*, to find fault with.] To chide or censure with vehemence; to reprove; to scold; to reproach violently.

"Many a time and oft, in the Rialto, you have *rated* me."—Shaks.

—*v. n.* To use censures or reproaches; to chide; to scold; to lecture by way of reproof.

Rat'el, (*rāt'el*), *n.* (*Zoöl.*) The common name of the genus *Mellivora*, including quadrupeds of the Bear family, *Ursidæ*, nearly allied to the Gluttons (*q. v.*), from which it differs in having one false molar less in each jaw, and the upper tubercular teeth slightly developed. The general aspect is similar to that of the badgers, but heavier and more clumsy. They inhabit S. Africa.

Rate-payer, *n.* One who is assessed for payment of rates or taxes.

Rat'er, *n.* One who sets a rate or value on, or makes an estimate of.

Rath, *n.* [Ir.] A hill or mountain; also, a fortalice;—used as a prefix to many names of places in Ireland.

Rathbone, in *New York*, a township of Steuben co., containing the post-village of Rathboneville, abt. 317 m. N.W. of New York city.

Rathbun, in *Wisconsin*, a post-village of Sheboygan co., abt. 86 m. N.E. of Madison.

Rathenau, (*rāt'e-nou*), a town of Prussia, prov. of Brandenburg, on the Havel, 42 m. W.N.W. of Berlin; pop. 6,638.

Rather, (*rāth'er*), *adv.* [A. S. *rathor*, *hrathor*; comp. of *rath*, early, quick, soon.] More readily and willingly; preferably; with better liking; with better choice or reason; as, I would *rather* go than not.—In a greater degree than otherwise; of two alternatives conceived of, this by preference to the other; moderately; tolerably.—With greater propriety; more correctly speaking; as, I speak of art, or, *rather*, the ideality of art.—The *rather*, the sooner; the more so; for particular cause;—especially; as, I forgave her, *the rather* because I loved her.—Would *rather*, or had *rather*, desire by choice or preference to; as, I would *rather* stay at home.

Rathkeale, (*rāt'h-keel*), a town of Ireland, prov. of Munster, co. of Limerick, 17 m. S.W. of Limerick; pop. 4,200.

Rathlin, an island on the N. coast of Ireland, co. of Antrim, 3 m. N.E. of Fair Head; Lat. 54° 36' N., Lon. 9° 15' W. Ext. 6 m. long, and 1 m. broad. Pop. 800.

Rathripe, *a.* Early ripe; rare ripe; as fruits.

Ratibor, a town of Prussian Silesia, on the Oder, 44 m. S.S.E. of Oppeln. *Manuf.* Woollen, and linen fabrics, hosiery, leather, and tobacco.

Ratification, (*-kāt'shun*), *n.* [Fr.] Act of ratifying; confirmation; act of giving sanction and validity to something done by another; as, the *ratification* of a treaty of peace.

Ratifier, *n.* The person who, or thing which, ratifies.

Ratify, *v. a.* [Fr. *ratifier*; from Lat. *reor*, to think,

and *facio*, to make.] To make or render valid; to confirm; to approve and sanction; to settle or establish; as, to *ratify* an agreement.

Ratio, (*rā'shī-o*), *n.*; *pl.* **RATIOS**. [Lat., from *reor*, *ratus*, to think.] (*Math.*) That relation of two quantities of the same kind which is expressed by the quotient of the one divided by the other;—divided into *arithmetical* and *geometrical*.

—Hence, analogically, proportion; rate; degree; as, the *ratio* of national wealth to the population of a country.

Ratio to a *geometrical proposition*. (*Math.*) The constant quantity by which each term is multiplied to form the succeeding one.

Ratiocinate, (*rāsh'i-ōs-i-nāt*), *v. n.* [Lat. *ratiocinatus*, from *ratio*, reason.] To reason by deduction from premises; to put forward reason or argument.

Ratiocination, *n.* [Fr.] The act or process of reasoning, or of deducing consequences or results from premises.

Ratiocinative, *a.* Having the characteristics of, being influenced by, or expressing ratiocination; consisting in the deduction of inferences or conclusions from premises or comparisons; argumentative; as, a *ratiocinative* process.

Ration, (*rā'shon* or *rāsh'un*), *n.* [Fr.; Lat. *ratio*.] A proportion, or fixed, specified allowance of provisions, drink, and forage, assigned to each soldier in the army, or sailor in the navy, for his daily subsistence, and for the sustenance of horses.—Hence, a certain portion dealt; an allowance.

Rational, (*rāsh'un-at*), *a.* [O. Fr.; Fr. *rationnel*; Lat. *rationalis*.] Having reference or relation to reason; not physical.—Possessing reason, or the ratiocinative faculty; endowed with reason;—correlative to *irrational*; as, man is a *rational* being.—Consonant to reason; agreeable to reason; acting in conformity with reason; wise; judicious; not extravagant, foolish, fanciful, absurd, or preposterous; as, *rational* conduct, a *rational* state of mind, a *rational* thinker.

(*Math.*) An algebraic or arithmetical quantity is said to be *rational* when it can be expressed in finite terms without the aid of symbols denoting the extraction of roots; when it cannot be thus expressed, the quantity is termed *irrational*.

R. horizon. (*Grog.*) The plane passing through the centre of the earth parallel to the sensible horizon of the place to which it is referred.

—*n.* A being endowed with reason.

Rationale, (*rāsh'un-ā'le*), *n.* [Fr., from Lat. *rationalis*.] A detail with reasons; a series or sequence of reasons assigned.—An account or solution of the principles of some action, opinion, hypothesis, phenomenon, &c.; as, the *rationale* of a code of laws, the *rationale* of the theory of odic force.

Rationalism, (*rāsh'un-al-izm*), *n.* [Fr. *rationalisme*.] (*Philos.*) A system of opinions deduced from reason, as distinct from *inspiration*, or opposed to it; main deference to, or dependence on, reason, in opposition to *revelation*.—The name has been applied especially to the school of Paulus and other German writers, who seek to convert the miraculous narratives of the New Testament into a relation of ordinary occurrences. Thus, the feeding of the multitudes with the loaves and fishes is explained by the statement that when at the bidding of Christ the disciples had produced their little store, others also brought out what they had with them, and thus a meal was provided for the whole crowd. Measured by the modern standard of likelihood, such explanations may perhaps be considered as involving difficulties scarcely less than those of the narratives for which they profess to account. The influence of such a school was not likely to be lasting, and it was succeeded by another, commonly known as the *mythical*, which regards the Gospel records as assertions of floating myth round a nucleus of historical fact.

Rationalist, *n.* [Fr. *rationaliste*.] One who, in his disquisitions and practice, bases his proceedings wholly upon reason.—One who considers the supernatural events recorded in the Old and New Testaments as happening in the ordinary course of nature, or in the common order of things; one who is governed by his reason in matters of religion; a freethinker.

Rationalist'ic, Rationalist'ical, *adv.* Belonging to, or in accordance with, the doctrines of Rationalism.

Rationalist'ically, *adv.* In a rationalistic manner.

Rationality, *n.* [Fr. *rationalité*.] The quality of being rational; power of reasoning; ratiocinative faculty; soundness or sanity of mind; reasonableness.

Rationalize, *v. a.* To convert to rationalistic opinions; to interpret in the manner of a rationalist.

—*v. n.* To place entire or undue dependence on reason; to bring in accordance with the principles of Rationalism; as, *rationalized* belief.

Rationally, *adv.* In a rational manner; reasonably; in consistency with reason; as, let us consider the question *rationally*.

Rationalness, *n.* Rationality; state or quality of being rational.

Rationary, *a.* Pertaining to accounts.

Ratisbon. [Ger. *Regensburg*.] A city of Bavaria, on the Danube, opposite the influx of the Regen, 67 m. from Regensburg. Though built of stone, it has all the defects of an old town, the streets being narrow and crooked, and the houses high and old-fashioned. The town-house is gloomy. The best edifices are the cathedral, and the palace of the Prince of Thüren and Taxis, formerly the abbey of St. Emmeran, containing many good paintings; the town-house, in which the diet of the empire was held from 1662 to 1806; the episcopal residence, the arsenal, and the Haidplatz, where tourna-

ments were given in the days of chivalry. Besides these, there are a public drawing-school, public libraries, an observatory, gymnasium, and several hospitals. *Manuf.* Tobacco, porcelain, leather, and steel-ware; also extensive dockyards for the building of boats and lighters. There is also a considerable trade on the Danube. The

Fig. 2221. — RATISBON CATHEDRAL.

river is crossed by a bridge of great length, connecting Ratisbon with its northern suburb, called Stadt-am-Hof. This place was long the capital of Bavaria. In 1524 the Roman Catholics here formed a league against the Protestants; and here, in 1809, Napoleon I. was wounded in a battle in which he forced the Austrians to retreat. *R.* was made a free port in 1853. *Pop.* 30,357.

Rat'lin, Rat'line, Ratt'lin, *n.* (Generally used in the plural.) (*Naut.*) In the rigging of a ship, small lines that traverse the shrouds horizontally, at regular distances, and forming ascending ladders to the mast-heads.

Ratoon', *n.* [Sp. *retoño*.] The young shoot of the sugar-cane, after being cut.

—*v. n.* To shoot up from the root, as in the sugar-cane, from the root planted in the previous year.

Ratsbane, *n.* [Rat and bane.] Arsenious acid, used as poison for rats.

Ratsbane, (*-bānd*), *a.* Poisoned by ratsbane.

Rat'-tail, *a.* Resembling the form of a rat's tail; as, a *rat'-tail* file.

—*n.* (*Far.*) An excrescence growing from the pastern to the middle of a horse's shank.

Rat'an, Rat'an, *n.* [Fr. *raton*; Malay. *rōtan*.] The long slender stem of a species of *Catunus Rotang*, and other allied species of palm, which are among the most useful plants of the Malay Peninsula and the Eastern Archipelago, whence they are largely exported for cane-work.

—A walking-stick made of *rattan*.

Rattazzi, (*rat-tads'se*), **URBANO**, an Italian statesman, b. at Alessandria, 1808. He studied law, and practised at the Turin bar, and afterwards at Casale. Remarkable both for the proper knowledge he exhibited of law and for his eloquence, *R.* was returned in 1848 as representative of the College of Alessandria, taking his seat on the ultra-Liberal benches of the Lower Chamber. He was a member of the ministry hastily formed by Charles Albert after the battle of Custoza, July 23, 1848, and which lasted but ten days. His services having been dispensed with, he sided with the Opposition to the new ministry, raising himself under the banners of the famous Gioberti, whom he overthrew on the question of a Piedmontese intervention on behalf of the Pope. The battle of Novara, March 23, 1849, and the abdication of Charles Albert having led to his retirement from the Ministry of the Interior and of Justice, he took up a position in the Sardinian Parliament as a democrat. His great knowledge of law, and his moderation as a politician, led to his being made President of the Chamber in 1852, and shortly afterwards Minister of Justice, under his former adversary, Count Cavour. From this period *R.* followed in Cavour's steps, whom, after the armistice of Villafranca, he succeeded. After the death of Cavour, he resumed office, but found himself in opposition to the views of Ricasoli, the new Premier; and in the great debate on Italian affairs at Turin, in December, 1861, he sunk his own claims to vote with that statesman. In March, 1862, *R.* was intrusted with the task of forming a new ministry. In his inaugural speech, March 7, he declared his policy to consist essentially in maintaining a friendly alliance with France and England, the "natural allies" of Italy. Finding that his ministry did not possess the confidence of parliament, *R.* resigned Dec. 1, 1862. He came again into power in 1867, succeeding to Ricasoli, and retired in October of that year. *D.* 1873.

Ratteen', *n.* [Fr. *ratino*; Sp. *ratina*.] A kind of thick, twilled, woollen stuff.

Rattinet', *n.* A woollen stuff of a more flimsy material than ratteen.

Rat'ing, *n.* The act of abandoning one's former party and associates, and going over to the opposite side or faction;—used in reference to English politics.—Among printers, the act of working for less than the established scale of prices.

Rattle, (*rāl'tt*), *v. n.* [*D. ratden, rentelen*; allied to Gr. *arassō*.] To make a quick, sharp noise, rapidly repeated, by the impact of bodies or substances not very sonorous; to clatter; as, the *rattling* of hail upon glass,

the *rattling* of wheels.—To jabber; to speak eagerly and noisily; to utter words in a vehement or clattering manner.

—*v. a.* To cause to make a rattling sound, or a rapid succession of quick, sharp, sounds; to move anything so as to make a clattering noise.—To stun with noise or clangor; to drive with sharp sounds rapidly repeated; as, *rattling* thunder.—To rail at clamorously; to scold; to express with the tongue loudly and vehemently.

"She would sometimes *rattle* off her servants sharply."

—*n.* A rapid repetition of sharp, clattering sounds; as, the *rattle* of musketry, the *rattle* of a drum.—Loud, rapid talk; clattering utterance of words; clamorous scolding or railing; a rapid succession of words sharply delivered, as by a woman's tongue.—A jabberer; a tattler; a gossip; a noisy, frivolous, inconsequential person, fond of hearing the sound of his, or her, own voice; a loquacious individual.—An instrument which, when agitated, makes a clattering sound; as, the *rattle* of a rattlesnake, a child's *rattle*, &c.

—*pl.* The noise produced by the air in passing through mucus of which the lungs are unable to free themselves;—chiefly observable at the approach of death. *Dunglison*.
To *spring a rattle*, to shake a rattle in order to produce a clattering sound.

Rat'tle-box, *n.* A rattle; a toy to produce a rattling sound.

(*Bot.*) See **CROTALARIA**.

Rat'tle-brained, *a.* Full of levity; harum-scarum; rantipole; rattle-headed; giddy; noisy; rompish; tomboyish; as, a *rattle-brained* youth.

Rat'tle-headed, Rat'tle-pated, *a.* Wild; unsteady; noisy; empty; giddy.

Rat'tlesnake, *n.* (*Zool.*) The common name of the serpents comprising the family *Crotalidae*, comprising some of the most deadly poisonous Ophidians, whose upper jaw contains but few teeth, but is armed with sharp-pointed, perforated or grooved, movable poison-fangs. These fangs are concealed in a fold of the gum, or raised, at the will of the animal. They connect with a gland situated near the eye, which furnishes the fluid poison. When the snake bites, the fangs are raised, and the pressure of the temporal muscles upon the gland

Fig. 2222.

RATTLESNAKE OF THE U. STATES, (*Crotalus durissus*), forces the poison along the fang into the wound. The genus *Crotalus* includes the *R.* proper (Fig. 2222), so called from the peculiar rattling instrument at the extremity of the tail, formed of several horny flattened rings, loosely attached together, which move and rattle whenever the animal shakes or alters the position of the tail. These rings increase in number with the age of the animal, and it is asserted that it acquires an additional one at each casting of the skin. The genus is peculiarly American. In common with the boa, the *R.* have simple, transverse plates beneath the body and tail. Their muzzle is hollowed by a little round depression behind each nostril. The habits of the *R.* are sluggish; they move slowly, and bite only when provoked, or for the purpose of killing their prey. They feed principally upon birds, rats, squirrels, &c., which it is believed they have the power of fascinating.

Rat'tlesnake Bar, in *California*, a post-village of Placer co., abt. 7 m. S. of Auburn.

Rat'tlesnake Creek, in *Indiana*, enters White River from Owen co.

Rat'tlesnake Fork, in *Ohio*, a branch of Paint Creek, which it joins in Ross co.

Rat'tlesnake Plan'tain, *n.* (*Bot.*) See **GOODYERA**.

Rat'tlesnake-root, *n.* Same as snake-root. See **POLYGALA**.

Rat'tlesnake-weed, *n.* (*Bot.*) See **ERYNGO**.

Ratt'lin, *n.* (*Naut.*) See **RATLIN**.

Ratzeburg, (*rat's-boorg*), a town of Prussia, duchy of Lauenburg, on a small island, in the lake of Ratzeburg, 11 m. S. of Lünebeck. *Pop.* 3,700. The lake is 6 m. long, and 1½ m. broad.

Rauch, CHRISTIAN DANIEL, (*rouk*), a German sculptor, b. in the principality of Waldeck, 1777, who was extensively employed by the various governments of Germany, and produced a large number of works, some of them of great excellence. The statues of Göthe, Schiller, and the monument to Frederick the Great of Prussia, are his best productions. *D.* 1857.

Raucity, (*rau'sity*), *n.* [Fr. *raucité*, from Lat. *raucitas*—*raucus* harsh, rough.] Hoarseness; roughness of sound; harshness of utterance; as, the *raucity* of a trumpet.

Raucous, (*rau'cūs*), *a.* [Lat. *raucus*, hoarse.] Harsh; hoarse; strident; as, a *raucous* voice.

Ravage, (*rav'aj*), *n.* [Fr.] Spoil; devastation; pillage; desolation or destruction by violence, either by men, beasts, or physical causes; havoc; waste; demolition by decay; as, the *ravages* of war, fire, tempests, &c., the *ravages* of time.

—*v. a.* [Fr. *ravager*.] To spoil; to devastate; to pillage; to plunder; to lay waste by various means of destruction, as war, fire, inundation, disease, drowning, &c.; to commit havoc or depredation upon; as, to *ravage* an enemy's country.

Ravager, *n.* A despoiler; a pillager; a destroyer; one who, or that which, devastates or lays waste.

Ravaille, FRANÇOIS, (*ra-vai'yah*), the assassin of Henri IV. of France, executed May 27, 1610.

Rave, *v. n.* [D. *revelin*, to dote; Fr. *rêver*, akin to Lat. *rabies*, madness.] To talk insanely; to move, act, or talk senselessly; to wander in mind or intellect; to be delirious; to talk irrationally; to be wild in words or gestures; to utter furious exclamations, as a madman. —To rush furiously, like a madman.

To *rave on*, upon, or of, to dote; to be unreasonably fond; to hanker after; to be excited about; as, he is continually *raving* of her charms.

—*v. a.* To utter wildly or irrationally; to express in delirium, madness, or frenzy.

—*n.* [From Prov. Eng. *rathles*.] A New England localism for the upper side-piece of timber forming the body of a cart.

Ravee', one of the "five rivers" of the Punjab, rising near Chumbla, and after a S.W. course of 380 m. joining the Chenab, 35 m. N.E. of Mooltau.

Ravel, *v. a.* (*imp.* and *pp.* *RAVELLED*.) (*rāv'eld*.) [D. *rafelen*, to ravel out.] To unravel; to free from an entangled state; to unweave or untwist; to unsew or unknit; as, to *ravel* out a stocking; — hence, to divest of intricacies; to disentangle. — To pull apart, as a texture, in a manner to cause the threads to fall in a tangled mass; — hence, to entwine; to entangle; to net; to make intricate; to involve; as, *ravelled* interests.

—*v. n.* To be untwisted, unweaved, or separated in texture; to be unweaved or disentangled; to be relieved of knots or intricacies.

Ravelin, (*rav'lin*), *n.* [Fr.; It. *ravellino*.] (*Fort.*) A detached out-work, consisting of two faces, which make a salient angle without any flanks. Ravelins are in general constructed beyond the *fosse* or ditch in front of the curtain, and between two bastions, so as to protect the more defenceless line of battlement known as the *curtain*. The *R.* is always placed before a level wall; as a half-moon is before an angle. In Fig. 2223 BB is the *ravelin*, A its *redoubt*, and CC its *ditch*. DD is the main ditch of the fortress, and E the passage giving access from the fortress to the ravelin.

Fig. 2223. — RAVELIN.

Raveller, *n.* One who raves.

Ravelling, *n.* Act of unweaving or untwisting. — That which is ravelled out; — particularly, a thread extricated from a texture.

Raven, (*rāv'm*), *n.* [A. S. *hræfen*, *ræfen*.] (*Zoöl.*) The largest of the *Corvidæ*, and the type of the Linnean genus *Corvus*. The North American *R.*, *C. carolinensis*, measures 24 inches in length, and the wing 17 inches. The plumage is black, with a blue gloss; it builds its nest in high trees or rocks, composed of sticks, lined with wool, and lays five pale-green eggs, with brown and gray

Fig. 2224. — AMERICAN RAVEN.

spots. The species feeds on carrion, birds, young lambs, and weakly sheep, which they first attack by picking out their eyes. His scent is remarkably acute, and he is by nature a glutton, and by habit a thief; yet, with all his mischievousness, he possesses many diverting qualities, and there is no bird that exemplifies more the necessities and advantage of a good education. He is easily tamed, and may be taught to fowl like a hawk, fetch and carry like a spaniel, speak like a parrot, and sing like a man. They are solitary birds, live in pairs, and in clear weather fly high. They were reckoned birds of ill omen by our forefathers. They are very long-lived, some, it is said, having attained to more than a hundred years of age.

—*Rapacity*, rapine, — Prey; booty; plunder or food procured by violence; — also written *ravin*.

—*a.* Black; resembling the raven in color; as, *raven* hair.

—*v. a.* To seize and carry off forcibly; to obtain by violence. — To devour with great eagerness or greediness; to eat with voracity.

—*v. n.* To prey rapaciously; to be greedy or voracious.

"The more they fed, they *raven'd* still for more." — Dryden.

Raven'ala, *n.* (*Bot.*) A genus of plants, order *Musaceæ*. *R. spectosa*, a fine species found in Madagascar (Fig. 2225), forms a noble tree, which the French call the Traveller's-tree, probably on account of the water which is stored up in the large cup-like sheaths of the leafstalks, and which is sought for by travellers to allay their thirst. The very large, broad, oblong leaves are used as a thatch to cover huts. The seeds are edible; and the blue pulpy aril surrounding them yields an essential oil.

Fig. 2225. — RAVENALA SPECIOSA.

Ra'vener, *n.* One who, or that which, ravens, plunders, or devours with voracity.

Rav'ening, *n.* Appetite for plunder.

Raven'na, a city of Italy, prov. of Ravenna, on the Montone, near its mouth in the Adriatic, 43 m. E.S.E. of Bologna; Lat. 44° 24' N., Lon. 12° 12' E. It is pleasantly situated, but unhealthy. The chief objects of interest are the cathedral, the churches of St. Vitale and Santa Maria, the tomb of Dante, and a pillar commemorating the death of Gaston de Foix. *Manuf.* Silk, linen, paper, and glass. *R.* is of Thessalian origin, became subject to Rome B. C. 234, and was an important naval station under Augustus. It was made the capital of the W. empire by Honorius, in 404. In 1218, *R.* became a republic, but passed into the power of the Polenta family in 1275. In 1441, it was seized by the Venetians, by whom it was ceded to the Pope in 1509. In 1512, the French defeated here the Spanish and Papal troops, but lost their general, Gaston de Foix. *R.* was annexed to the kingdom of Italy in 1860.

Raven'na, in California, a village of Los Angeles co., abt. 45 m. N. of Los Angeles.

Ravenna, in Michigan, a post-village and township of Muskegon co., located abt. 23 m. N.W. of Grand Rapids.

Ravenna, in Missouri, a post-village and township of Mercer co., about 95 m. N. E. of St. Joseph. *Pop.* (1897) 1,610.

Ravenna, in Nebraska, a village of Cass co., abt. 22 m. N.W. of Nebraska City.

Ravenna, in Ohio, a post-village and township, cap. of Portage co., abt. 38 m. S.E. of Cleveland. It has a considerable trade, and is a place of much business activity.

Ravenous, (*rāv'n-us*), *a.* [O. Fr. *ravineux*.] Eager for prey or plunder; ardent for gratification; as, *ravenous* appetite or lust. — Inordinately voracious; mad with hunger; greedy to excess; devouring with furious eagerness; as, a *ravenous* wolf.

Ravenously, *adv.* In a ravenous manner; with inordinate greediness or voracity; as, to be *ravenously* hungry.

Ravenousness, *n.* State or quality of being ravenous; excessive or uncontrollable greediness or voracity; inordinate rage for prey; as, the *ravenousness* of a lion or bear.

Ravensburg, a town of Germany, in Wurtemberg, circle of the Danube, on the Schussen, 21 m. E.N.E. of Constance; *pop.* 4,600.

Raven's-duck, *n.* [Ger. *ravenstuch*.] A particular kind of sail-cloth.

Raven'swood, in California, a village of San Mateo co., abt. 16 m. E. of Redwood.

Ravenswood, in New York, a former post-village of Queen's co.; since 1897 included in New York city.

Ravenswood, in West Virginia, a post-village of Jackson co., about 15 m. N. W. of Ripley.

Raver, *n.* One who raves or is delirious.

Ravignan, (*ra-vên'yan*), GUSTAVE FRANÇOIS XAVIER DE, a French preacher and author, and an illustrious member of the Society of Jesus, B. at Bayonne, 1795. He was selected in 1837 to replace Lacordaire at Notre Dame, in the duty of conducting the special "conferences" for men which had been opened in that church. For ten years, Père de R. occupied this pulpit with a success which has rarely been equalled; and his "conferences" are regarded as models of ecclesiastical eloquence. In 1842, he undertook, in addition, to preach each evening during the entire Lent; and it is to the excessive fatigue thus induced that the premature break-down of his strength is ascribed. To the labors of the pulpit he added those also of the press. He published an *Apology* of his order in 1844; and in 1854 a more lengthened work with the same view, *Clement XIII. et Clement XIV.* (2 vols. 8vo.), which was intended as a reply to the *Life of Clement XIV.* by the Oratorian, Father Theiner. These, with some occasional sermons and "conferences," constitute the sum of the publications issued during his life. In 1855, he was invited by the Emperor Napoleon III. to preach during Lent at the Tuileries. D. on the 26th of Feb., 1858. — The character of Father R. affords an illustration of constancy and unshaken virtue triumphant over all obstacles and temptations; of a deep sense of humility and self-abnegation only paralleled by some of the Fathers of the Desert, in whose lives are to be found the rules and maxims of religious conduct which he followed; and an earnest resolve to embrace poverty with the unshaken fidelity of those great exemplars. His talents might have made him proud; but he was as humble-minded as a child, — arguing without dogmatism, and convincing without triumph. Of all the features of his character, perhaps the most prominent was, that in him, self did not seem to be denied or mortified, but to be forgotten; there was no parade about the performance of his duty; it seemed to be his delight; his piety was an instinct; he breathed the atmosphere of religion; and it was the essential element of his existence. — His life, by Father de Ponlevoy, was published in New York, 1869.

Ravin, *n.* See RAVEN.

Ravine, (*ra-vên*), *n.* [Fr., a hollow in a road; *ravin*, a hollow way, from L. Lat. *larina*, from Lat. *labor*, *lappus*, to glide down.] A long, deep hollow formed by a mountain-torrent; a gulch; a long, deep, and narrow hollow gorge or pass through mountains, &c.; a cañon; a deep glen.

Rav'ingly, *adv.* In a raving manner; with furious wildness or frenzy; deliriously; with distraction.

Rav'ish, *v. a.* [Fr. *ravir*, *ravissant*, from Lat. *rapio*, to seize and carry off.] To seize and carry away forcibly or by violence; to snatch without leave or license. — To have carnal knowledge of by force, and against the woman's consent; to commit rape upon; to deflower by violence; to violate. — To transport; to entrance; to enrapture; to fill with ecstasy; to bear away with joy or delight; as, he was *ravished* with her charms.

Rav'isher, *n.* One who ravishes or takes by forcible means. — One who beguiles or enchants with joy or delight. — One who forcibly violates a woman's chastity; one who commits rape.

Rav'ishing, *n.* Carnal knowledge by force against consent. — Transport; ecstatic delight.

—*p. a.* Transporting; enrapturing; as, *ravishing* beauty.

Rav'ishingly, *adv.* With rapture or transport; in a ravishing or beguiling manner; as, she looked *ravishingly*.

Ravishment, *n.* [Fr. *ravissement*.] Act of ravishing or carrying away by violence; abduction; as, the *ravishment* of a child from its parents, or of a wife from her husband, &c. — Rape; forcible violation of chastity. — Rapture; transport of delight; ecstasy; pleasing violence on the mind or senses; as, "divine, enchanting *ravishment*." — Milton.

Ravissant, *a.* [Fr.] (*Her.*) In a semi-raised attitude, as if about to pounce on prey, as a hawk, &c.

Ravitz, **Rawiez**, (*ra-vitch*), a town of Prussia, prov. of Posen, 64 m. S. of Posen. *Manuf.* Woollen, leather, linen, tobacco, and salt. *Pop.* 10,200.

Raw, *a.* [A. S. *hrewu*, *reaw*; Ger. *roh*.] Imperfect; not altered from its natural state; not subdued by heat, or roasted, boiled, or otherwise cooked or dressed; not done; as, *raw* flesh; — hence, by analogy, unfinished; unprepared for use or enjoyment; crude; immature; unripe; — hence, not concocted; unseasoned; inexperienced; unpractised; unripe in skill; as, he is *raw* to the business, the *raw* judgment of the multitude, a *raw* trick, &c. — Not worked up; not manufactured or prepared for use; crass; in the natural state; unwrought; — specifically, not spun, wove, or twisted; as, *raw* silk. — Unmixed; unadulterated; not incorporated with water; as, *raw* spirits. — Not melted or strained; as, *raw* fat or tallow. — Not tanned; as, *raw* hides. — Bare; not covered with skin; galled; chafed; as, a *raw* excoriation or sore. — Sore, as being galled or chafed.

"Sinews... weak and *raw* through long imprisonment." — Spenser. — Black; chilly; sharp; cold, or rather, cold and damp; as, a *raw* air, *raw* weather, a *raw* climate.

—*n.* A raw, sore, or galled spot or place; as, to touch one on the *raw*.

Raw'bone, **Raw'boned**, *a.* With little flesh on the bone; skinny.

Raw'don, now STIRLING, a village and township of Hastings co., Ontario. *Pop.* (1897) 3,415.

Raw'head, *n.* The name of a spectre, mentioned to fright children; as, *rawhead* and bloody-bones.

Raw-hide, *n.* A cow-hide, or riding-whip of untanned leather twisted.

Raw'ish, *a.* Somewhat raw, as meat; cold and damp; as, a *rawish* day.

Rawles, in Iowa, a township of Mills co.

Rawly, *adv.* In a raw or inexperienced manner; unskillfully. — Newly; hastily.

Rawness, *n.* State or quality of being raw; state of being uncooked or unaltered by heat; as, the rawness of flesh. — Inexperience; unskillfulness; as, the rawness of troops or sailors. — Hastiness; sudden manner. — Chilliness accompanied with dampness.

Rawson, in Ohio, a post-village of Hancock co., abt. 10 m. S.W. of Findlay.

Ray, *n.* [Fr. *raie*, from L. Lat. *radia*, a line, *rayon*, from Lat. *radio* — *onis*, augmentative of *radius*, a staff or rod.] A line, or the right line supposed to be described by a particle of light diverging from a centre; as, a star of six rays.

(Bot.) Same as RADIUS, *q. v.*

(Zool.) One of the radiating bony spines forming the frame-work of the fins of fishes.

(Phys.) In optics, a beam of light propagated in a straight line from some luminous point; as, a solar ray. A ray of white light may be divided by refraction into a number of distinct rays of different colors. See REFRACTION.

(Geom.) A straight line, of unlimited length, drawn through a fixed point.

— A beam or gleam of intellectual light; sight; perception; vision; apprehension.

"The air sharpened his visual ray." — Milton.

— *v. a.* To shine forth; to emit beams or gleams of light.

Ray, *n.* [Fr. *raie*; Sp. *raya*.] (Zool.) The name popularly given to a large number of species of cartilaginous fishes, or Elasmobranchs, including the Skates, Thornbacks, Electric Rays, Sting Rays, and Eagle Rays. The true Rays, forming the family *Raidae*, include the very numerous species known as the Skates and Thornbacks. They are all carnivorous, and live on the sea bottom, moving sluggishly by the undulations of the pectoral fins, which form a large part of their flat bodies. Many of them are large, sometimes six feet in width. They are edible but have a strong and not pleasant flavor. There are about thirty species, mostly from the northern temperate seas.

Ray, in Missouri, a W.N.W. co.; area, abt. 560 sq. m. **Rivers**, Missouri River, and Fishing and Crooked Creeks. **Surface**, level or gently undulating; soil, very fertile. **Min.** Coal and limestone. **Cap.** Richmond.

Raymond, the name of seven Counts of Toulouse. **RAYMOND I.** reigned 852-865. — **RAYMOND VI.**, son of Raymond V., b. 1156, succeeded 1194, and, being a friend of the Albigenses, was twice excommunicated, 1208 and 1211, and despoiled of his estates by Simon de Montfort, 1218; d. 1222. — **RAYMOND VII.**, son of Raymond VI., and last Count of Toulouse, was b. 1197, and after struggling with his father for the recovery of his possessions, vanquished Simon de Montfort in 1224. He was so enfeebled by these continual wars, however, that he submitted to a humiliating peace with the Pope and the King of France in 1229. He d. 1242, leaving his estates to his only daughter, Jeanne, who had married Alphonse, Count of Poitiers, brother of Louis IX.

Raymond, HENRY JARVIS, an American journalist, founder and editor of the *New York Times*, b. in Lima, Livingston co., New York, 1820, graduated at the University of Vermont in 1840; soon afterwards removed to New York; and, while studying law, taught the classics and wrote for the *New Yorker*. In 1841 he became managing-editor of the *New York Tribune*, and afterwards leading editor of the *New York Courier and Enquirer*. In 1849 he was elected to the State Assembly; was reelected and made Speaker, but relinquished his position on the *Courier*, and travelled in Europe on account of ill-health. On his return to New York, in 1851, he established the *New York Times*. In 1852 he became a delegate to the Baltimore Convention, and in 1856 a leader of the Republican party, and was chosen Lieut.-Governor of New York. He was a delegate to the Chicago Convention of 1860; was again elected to the State Legislature, and, in 1864, was chosen as representative from New York to the 39th Congress. He, subsequently, in 1866, was the leading spirit of the Wigwam Convention in Philadelphia, the resolutions of which body were from his pen. D. June 18, 1869.

Raymond, in Maine, a post-village and twp. of Cumberland co., abt. 22 m. N.W. of Portland.

Raymond, in Mississippi, a post-village, cap. of Hinds co., abt. 16 m. S.W. of Jackson. At this town, on May 12th, 1863, a short, but severe, struggle took place between McPherson's corps of General Grant's army, and two Confederate brigades under Generals Gregg and Walker. The fight lasted 3 hours, when the Confederates were driven from the field. The Union loss was 69 killed, 341 wounded, and 32 missing. The loss of the Confederates was 103 killed, and 720 wounded and prisoners.

Raymond, in New Hampshire, a post-township of Rockingham co.

Ra'yah, *n.* [Ar. *ar'iyah*, a peasant.] In Turkey, a non-Mohammedan of the Porte who pays the capitation tax.

Rayless, *a.* Without rays; wanting light; not illumined.

Raynal, GUILLAUME THOMAS FRANÇOIS, known as the ABBÉ RAYNAL, a French historian and political writer, was b. at St. Geniez, in the Rouergue, 1711, and acquired a European reputation by his *Philosophical History of the Two Indies*. He was a great partizan of the encyclopédistes, and a man of remarkable benevolence. D. 1796.

Rayne, in Pennsylvania, a township of Indiana co.; pop. abt. 2,100.

Raynham, in Massachusetts, a post-township of Bristol co.

Ray'onnant, **Ray'onnce**, *a.* [Fr.] (*Her.*) A term applied to a zigzag line (Fig. 1591) supposed to represent the rays of the sun, or what is commonly called *vandyked*.

Cross-rayonnant. (*Her.*) A cross having rays of glory darting out from behind the centre to all parts of the shield.

Rays'ville, in Indiana, a post-village of Henry co., abt. 36 m. E. of Indianapolis.

Raysville, in Ohio, a village of Jackson co., abt. 19 m. S.E. of Chillicothe.

Ray'town, in Georgia, a village of Taliaferro co., abt. 52 m. N.N.E. of Milledgeville.

Ray'wick, in Kentucky, a post-village of Marion co., abt. 72 m. S.W. of Frankfort.

Raza, or GATO, (*ra'za*), an island of Brazil, off the entrance of the Bay of Rio de Janeiro.

Raze, *n.* A root; as, a raze of ginger. See RACE.

Raze, **Rase**, *v. a.* [Fr. *raser*; Lat. *rado*, *rasus*, to scrape, scratch.] To lay level or even with the ground; to prostrate; to demolish; to overthrow; to subvert; to destroy; to ruin utterly; as, to raze a city. — To erase; to efface; to obliterate; to cancel; to extirpate; to expunge.

"Raze out the written troubles of the brain." — Shaks.

Razec', *n.* [Fr. *rasé*, from Lat. *rasus*, shared or scraped down.] (*Naut.*) The term applied to any ship cut down to a less number of decks, as a two-decker to a frigate, &c. By razeing, the draught of water is diminished, while the centre of gravity is lowered, and the qualities of the vessel have generally, though not invariably, been improved.

— *v. a.* To cut down to an inferior class, as a ship; — hence, analogically, to prune or cut down by retrenchment of parts; as, to raze a magazine article.

Raz, (*Le*), a promontory of France, dept. of Finistère, 25 m. S. of Brest; Lat. 48° 2' N., Lon. 4° 44' W.

Ra'zor, *n.* [Fr. *rasoir*, from Lat. *rado*, *rasus*, to scrape.] A keen-edged knife or cutting instrument for shaving or removing the beard or hair.

Razors of a boar, the tusks of a boar.

Ra'zorable, *a.* That may be shaved; ready for the razor; as, a razorable chin.

Ra'zor-back, *n.* (Zool.) See BALÉNIDE.

Ra'zor-bill, *n.* (Zool.) See AUK.

Razored, (*rā'zurd*), *a.* Formed after the manner of a razor.

Ra'zor-fish, **Ra'zor-shell**, *n.* (Zool.) See SOLENIDE.

Ra'zor-stone, *n.* Same as NOVACULITE, *q. v.*

Ra'zor-strop, *n.* A leathern strop for giving an edge to razors.

Razure, (*razh'ur*), *n.* Same as RASURE, *q. v.*

Razzia, (*rā'zi-ah*), *n.* [It.] A raid; a marauding incursion; a foray; as, to make a razzia on gaming-houses.

Re, A prefix in the composition of certain words signifying return, iteration, repetition.

Re, (*rā*), (*Mus.*) The French and Italian name for the second tone of the diatonic scale, corresponding to the English *D*.

Ré, (*Isle de*), (*ill-de rai*), a small island on the W. coast of France, dept. of Charente-Inférieure, opposite the city of La Rochelle. Ext. 18 m. long, and 4 m. broad. **Cap.** St. Martin. **Pop.** 8,000.

Reabatement, **Rebate**, *n.* (*Com.*) Same as RABATE, *q. v.* — (*Her.*) A diminution or abatement in the bearings of a coat of arms.

Reabsorb', *v. a.* To absorb or imbibe again what has been effused or extravasated; to swallow a second time; — used of fluids; as, to reabsorb lymph.

Reabsorption, (*-shun*), *n.* Act or process of reabsorbing.

Reaburn's Creek, in S. Carolina, enters Reedy River from Lanrens dist., a short distance above the Saluda River.

Reaccess, (*-ak'sēs*), *n.* A second access, approach, or visit.

Reaccuse', *v. a.* To accuse anew.

Reach, (*rich*), *v. a.* [A. S. *ræcan*; Ger. *reichen*.] To extend; to stretch; to hold, thrust, or put forth; as, reaching with the hand. — Hence, to haul; to deliver with the hand by extending the arm; to pass to another; as, to reach one a glass. — To touch, strike, or grasp by extending, either the arm alone or with an instrument in the hand; to attain by stretching forth the hand; as, to reach an object with a stick, or the like. — Hence, by implication, to penetrate to; to extend to, so as to include or comprehend in fact or principle, as a case; to extend an action, exertion, or influence to; as, the matter did not reach his apprehension. — To extend or stretch from a distance; to spread out as far as; as, his estate reaches the boundary of the county. — To arrive at; to come to; to get as far as; as, my letter duly reached him, they reached home safely. — To attain to or arrive at by endeavor or effort, of whatsoever kind; to gain, obtain, or acquire; to be advanced to; as, the heir will reach his majority next month, to reach the summit of one's ambition.

— *v. n.* To stretch or hold out the hand. — To make efforts to attain; to strive after something; — preceding *after*.

"The mind, reaching after a positive idea of infinity." — Locke.

— To be extended, or extended far, so as to touch, attain to, or be equal with something; to penetrate; as, the law will not reach him, we reach forward into futurity, &c. — To reach; to make efforts to vomit. (*R.*)

— *n.* Act of extending or stretching; extension; the power of extending to, or of taking by the hand, or by any instrument managed by the hand; as, to place a thing out of a person's reach. — Power of attainment or management, or the limit of power, force, or capacity, whether physical or moral; effort of the mind in contrivance or research.

"And match a grace beyond the reach of art." — Pope.

— **Extent**; stretch; expanse; — hence, result; application, influence, or tendency to consequences.

"Hell, with long reach, interposed." — Milton.

— A contrivance; a fetch; an artifice to obtain an advantage.

"The Duke of Parma had particular reaches and ends of his own." Bacon.

— The straight course of a river between any two bendings; a stretch, or extended portion of land or water; an arm of the sea trending into the land. — An effort to vomit or eructate; aretch. (*R.*)

Reach'able, *a.* That may be reached; within reach.

Reach'er, *n.* One who reaches; one who delivers by stretching or holding forth the arm.

Reach'ing-post, *n.* In rope-making, a post placed at the lower end of a rope-walk or ropery.

Reach'less, *a.* Beyond reach.

React', *v. a.* To do over again; to act or perform a second time; as, to react a farce.

— *v. n.* To act again, or in opposition to action; to resist any power or influence; to return an impulse or impression; to resist the action of another body by an opposing force.

"The lungs, acting strongly upon the chyle... must be reacted upon as strongly." — Arbuthnot.

— To act mutually or reciprocally upon each other, as two or more chemical bodies.

Reaction, (*-ak'shun*), *n.* Action in opposition or antagonism to action; counter tendency; force or movement in a reverse or contrary direction.

(*Mech.*) The force which a body subjected to the action of a force from another body exerts upon that body in an opposite direction. Action and reaction are equal and in contrary directions; in other words, the mutual actions of two bodies are always equal and in opposite directions. Thus, when a pistol is fired, the reaction on the holder is equal to the action on the ball.

(*Chem.*) Mutual or reciprocal action of chemical agents or bodies.

— A secondary action, or the effect of a first cause. When a man on the verge of starvation is suddenly fed, if only with a few spoonfuls of food, a reaction from debility to strength and inflammation may succeed, rendering it necessary even to bleed the man who, an hour before, was unable to stand from exhaustion. As debility may be followed by a reaction of inflammation, so inflammatory action may be succeeded by a reaction of prostrating debility. It is on these accounts, that in fevers, inflammations, and diseases generally, the reaction is always regarded by medical men with so much anxiety, and demands such forethought and judgment, both in anticipating, and in treating when it sets in.

(*Polit.*) Retrogression or backward tendency from reform, progress, or revolution.

Reactionary, **Reactionist**, *a.* Implying reaction; as, a reactionary movement.

— *n.* One who supports reaction, or retrogression, in political progress or revolution.

Reactive, *a.* [Fr. *réactif*.] Tending to reaction; with power to react.

Reactively, *adv.* By reaction or retrogression.

React'iveness, *n.* State or quality of being reactive.

Read, (*reed*), *v. a.* (*imp.* and *pp.* *READ* (*red*). [A. S. *rædan*.] To speak what is written; to peruse, whether audibly or silently; to utter or pronounce, as written or printed words, letters, or characters, in the proper order; to repeat, as the names, or utter, as the sounds, customarily annexed to words, letters, or characters; as, to read a newspaper, to read hieroglyphics, to read music. — To know fully; to comprehend.

"Who is't can read a woman?" — Shaks.

— To learn by observation; to gather the meaning of by inspection; to discover or understand by characters, marks, or features.

"Those from her shall read the perfect ways of honour." — Shaks.

— *v. n.* To perform the act or function of reading; to peruse a book, or a written or printed document. — To practise much reading; to be studious or a book-worm; as, he is reading for the bar. — To learn or gain knowledge of by reading.

"'Tis an old tale, read in story old." — Scott.

— To be read; to appear in reading; as, the passage reads thus.

— *a.* Learned; versed in books or literary lore; instructed or knowing by reading; as, he is deeply read in the classics.

Read, NATHAN, an American inventor, who claims to have been the first to use steam-engines for propelling boats and carriages, born in Worcester co., Mass., 1759. *R.* entered Harvard College in 1777, graduated in 1781; studied medicine; and started the Salem Iron Factory in 1796. In 1807, he removed to Belfast, Me., where he d. in 1849. His claims, as announced by his biographer (*Nathan Read*, by David Read, New York, 1869), are substantially as follows: *R.* took out a patent for an improved steam-engine boiler in 1791 — the patent signed by Washington, and countersigned by Jefferson, at Philadelphia. The differences between this and Stephenson's "Rocket" boiler are minutely pointed out. The multi-tubular boiler is claimed for Read, through his patent and drawings. As a substitute for the old one, he converted the condensing-engine of Watt into a complete working, portable, high-pressure engine, twelve years before the high-pressure engine was known. Oliver Evans used it for grinding plaster and sawing marble in Philadelphia in 1801. In 1790, he petitioned Congress for a patent for land-carriages to be driven by steam. It created so much amusement that he withdrew it.

He built, in 1789, a small steambot, substantially identical with Fulton's of 1807; but he withdrew his request for a patent in 1790, under a misapprehension. It is alleged that his combinations amounted to the inland steamers now in use. He got a patent in Aug., 1791, for a portable-furnace boiler and other inventions, at the same time with Fitch, Runsey, and Stevens. These clash with one another, but not with Read's. The system of paddles, afterwards ascribed to Stevens, is also claimed for Read, who, it is stated, intended to assert his claims, but procrastinated the work, and died when he had only arranged a memorandum.

Read, in *Iowa*, a post-township of Clayton co.

Readable, (*rĕd'-a-bl*.) *a.* That may be read; fit, legible, or suitable to be perused; worth reading; as *readable* print, a *readable* book.

Read'ableness, *n.* State or quality of being readable.

Read'ably, *adv.* In a readable manner; so as to be legible.

Read'dress, *v. a.* To address, direct, or apply to again; — sometimes employed reflexively; as, she *readdressed* herself to me.

Reade, CHARLES, D.C.L., a popular English novelist, b. in London, 1814, and educated at Oxford University, where he highly distinguished himself, and became Fellow of Magdalen College. In 1843 he was called to the bar as a member of Lincoln's Inn, but speedily relinquished the practice of law for the profession of literature, to become, eventually, one of the most brilliant novelists of his day. Among his more celebrated works may be mentioned *Peg Woffington*, *Christie Johnstone*, *The Cloister and the Hearth*, *Love me Little, Love me Long*, *White Lies*, *Hard Cash*, *It is Never too Late to Mend*, *Foul Play*, *Griffith Gaunt*, and *Put Yourself in His Place* (1870). *R.*, whose fictions have obtained a high and deserved popularity in this country, is also distinguished as the writer, and adapter to the stage, of some of the best of our modern comedies. D. April 11th, 1884.

Reader, *n.* [*A. S. rēdere*.] One who reads, or peruses, or studies what is written; — especially, in Oxford University, Eng., one who reads lectures on scientific subjects; one whose distinctive vocation is to read prayers in a church. — One who reads or corrects for the press; as, a *proof-reader*. — A book containing lessons or exercises in reading; a collection or selection of extracts or excerpts for reading; a reading-book.

Reader'ship, *n.* The office of a reader of prayers in a church. — In Oxford University, Eng., the office of a reader or lecturer on scientific matters.

Readfield, in *Maine*, a post-village and township of Kennebec co., abt. 10 m. N.W. of Augusta. The township also contains the post-village of Readfield Depot, abt. 10 m. W.N.W. of Augusta.

Readfield, or **REDFIELD**, in *New York*, a township of Oswego co.

Readily, (*rĕd'i-lĭ*.) *a.* In a ready manner; quickly; promptly; easily. — Cheerfully; without delay, reluctance, or objection; as, he lent the money *readily*.

Readiness, *n.* State or quality of being ready; a state of being prepared; fitness of condition; as, everything was in *readiness*. — Quickness; expedition; promptitude; facility; freedom from hindrance, difficulty, or obstruction; as, *readiness* of speech, wit, remark, reply, thought, &c. — Freedom from reluctance; alacrity; willingness; cheerfulness; as, he offered his services with *readiness*.

Reading, *p. a.* Addicted to reading; studious of books or literary knowledge.

Reading man, in the English universities, a hard student, or one who diligently devotes himself to his curriculum of studies.

— *n.* Act of reading; perusal. — Study of books; literary scholarship; as, a man of varied *reading*.

— A lecture or prelection; a public or formal recital; as, to deliver a series of *readings* from the English poets. — The way in which a given word or passage reads in a manuscript, version, edition, &c.; a version or interpretation of a law, text, or passage, as conveying its meaning; lection.

R. of a bill, in legislative proceedings, the formal recital of a bill, by the appointed officer, before the house which is to take it into consideration.

Reading, (*rĕd'ing*.) a town of England, cap. of the co. of Berks, at the junction of the Kennet with the Thames, 38 m. W. of London. *Manuf.* Silks, velvets, ribbons, &c., also, iron-works. It has a considerable trade.

Reading, or **REDDING**, in *California*, a post-town of Shasta co., about 18 m. N. of Red Bluff.

Reading, now **REDDING**, in *Connecticut*, a village and township of Fairfield co., about 25 m. W. of New Haven.

Reading, in *Illinois*, a post-township of Livingston county.

Reading, or **REDDING**, in *Indiana*, a village of Lawrence co., about 82 m. S. by W. of Indianapolis.

Reading, in *Massachusetts*, a post-township of Middlesex co. *Manuf.* Furniture, boots, shoes, &c.

Reading, in *Michigan*, a post-village and township of Hillsdale co., abt. 43 m. W. by S. of Adrian. *Manuf.* Cheese, flour, pumps, &c.

Reading, in *New York*, a post-township of Schuyler co.

Reading, in *Ohio*, a village of Columbiana co., abt. 11 m. W.S.W. of Salem. — A post-village of Hamilton co., abt. 10 m. N.E. of Cincinnati. *Manuf.* Leather, beer, &c. — A township of Perry co.

Reading, in *Pennsylvania*, a township of Adams county.

— A city, cap. of Berks co., abt. 52 m. E. of Harrisburg, and the same distance N.W. of Philadelphia. *R.* is the fifth city of the State in point of population and manufacturing importance. It is finely located, and regularly and com-

pactly built, the streets being kept remarkably clean and neat. It contains many very elegant churches and other edifices, besides a handsome court-house. *R.* has numerous and extensive manufactories, chiefly of iron, flour, machinery, &c. It is reached by the Pennsylvania and the Phil. & Reading R.Rs., and carries on an active and increasing inland traffic. *Pop.* (1897) 62,750.

Read'ing, in *Vermont*, a post-town of Windsor co., 23 m. E. S. E. of Rutland.

Read'ing-book, *n.* A reader. See **READER**.

Read'ing-boy, *n.* A boy who reads copy to a proof-reader.

Read'ing-desk, *n.* A desk whereat the minister reads the service in a church.

Read'ing-room, *n.* A news-room; an apartment furnished with papers, periodicals, &c., to which persons resort for reading.

Read'ington, in *New Jersey*, a post-township of Hunterdon co.

Reading'ville, in *Michigan*, a village of Washtenaw co., abt. 35 m. S.W. of Detroit.

Readjourn, (*-jŭrn*.) *v. a.* [*Pref. re. and adjourn.*] To adjourn a second time; as, the meeting *readjourned*.

Readjust, *v. a.* [*Re and adjust.*] To adjust or settle again; to put in order again what had been discomposed.

Readjust'ment, *n.* A second adjustment

Readmission, (*-mĭsh'un*.) *n.* Act of admitting again what had been excluded; state of being admitted a second time.

Readmit, *v. a.* To admit again, or a second time.

Readmit'tance, *n.* Readmission; allowance to enter again.

Readopt, *v. a.* To adopt a second time.

Readorn, *v. a.* To adorn anew, or a second time.

Reads'borough, in *Vermont*, a post-township of Bennington co.

Read's Creek, in *Arkansas*, a township of Lawrence co.

Reads'town, or **REED'S TOWN**, in *Wisconsin*, a post-village of Vernon co., abt. 11 m. S.S.W. of Viroqua.

Reads'ville, or **REEDSVILLE**, in *Missouri*, a post-village of Callaway co., abt. 33 m. E.N.E. of Jefferson City.

Readsville, in *New York*, a village of Albany co., abt. 16 m. S.W. of Albany.

Readvance, *v. n.* To advance again, or a second time.

Readvert'ency, *n.* The act of adverting to anew.

Ready, (*rĕd'y*.) *a.* [*A. S. hræd, hræd.*] Present in hand; set in order; arranged; not behindhand or backward when called upon; not delayed; fitted; furnished with what is necessary, or arranged in a manner suited to the purpose. — Prompt; quick to receive or comprehend; not slow, dull, awkward, or hesitating; dexterous; keen; facile; as, a *ready* wit, a *ready* speaker, a *ready* writer, *ready* in devising expedients, &c. — Willing; disposed; prone; having a tendency or disposition; inclined; not reluctant; as, a *ready* consent. — Opportune; short; near, or most convenient; offering itself at once; easy; being nearest, or at hand; as, the *readiest* way, the *readiest* weapon. — Being at the point; near; not distant; on the brink or edge of; about to; — preceding an infinitive: as, my heart is *ready* to break.

Ready money, cash; funds in hand; means of immediate payment; as, to pay *ready money*. — *To make ready*, to make preparation; to place things in readiness; as, to *make ready* for action.

— *adv.* In a state of preparation, so as to occasion no delay; as, to be *ready* dressed.

— *n.* A colloquialism for cash or ready money.

Ready-made, *a.* Kept on hand, or provided to meet instant demands; not made to order; as, *ready-made* clothing.

Ready'ville, in *Tennessee*, a post-village of Rutherford co., abt. 42 m. E.N.E. of Nashville.

Ready-witted, *a.* Possessing ready or impromptu wit.

Reaffirm, *v. a.* [*re and affirm.*] To affirm over again.

Reaffirm'ance, *n.* A second affirmation.

Reaffor'ested, *a.* Made into a forest for the second time.

Rea'gansville, in *Pennsylvania*, a village of Westmoreland co., abt. 16 m. S. of Greensburg.

Rea'gent, (*-jent*.) *n.* (*Chem.*) A test; a substance used as a detector.

Reaggrava'tion, *n.* (*Ecol.*) In the Roman Catholic Church, the last monitory, published after three admonitions and previous to the last excommunication.

Reagree, *v. n.* To agree again.

Real, *a.* [*O. Fr.* from *l. Lat. realis*, from *Lat. res, rei*, a thing, an object.] Actually being or existing; not fictitious or imaginary; — opposed to *ideal*; as, a picture drawn from *real* life. — Genuine; true; not artificial, counterfeit, or factitious; as, this wine is *real* sherry. — True; veritable; not affected or assumed; as, her's is *real* sorrow.

(*Law.*) Pertaining or having reference to things fixed, permanent, or immovable; as, *real* estate, in contradistinction to *personal* or *movable* property.

Real action. (*Law.*) An action for the recovery of real estate.

Real assets. (*Law.*) Real estate in possession of the heir, chargeable with the debts of the ancestor.

Real presence. (*Theol.*) A doctrine forming an article in the belief of the Roman, the Greek, and other Eastern churches, and of some bodies or individuals in other Christian communions, according to which it is held that, under the appearance of the Eucharistic bread and wine, after consecration by the priest, Christ himself is really and substantially present, body and blood, soul and divinity.

Real property or *estate*. (*Law.*) Property in lands, tenements, or hereditaments. *Things real*, or *realty*,

consist of things substantial and immovable, and of the rights and profits annexed to or issuing out of these, as distinguished from *things personal*, or *personalty*, consisting of goods, money, and all other movables, and of such rights and profits as relate to these. *Lands* include any ground, soil, or earth whatsoever, as arable, pastures, woods, water, moors, &c.; *tenements* whatever may be holden, or the subject of tenure, as, besides land, houses, &c., rents, commons, and other rights and interests issuing out of or concerning land; and *hereditaments*, not only lands and tenements, but whatever may be inherited, be it corporeal or incorporeal, real, personal, or mixed.

Real servitude. (*Civ. Law.*) A burden imposed upon one estate in favor of another estate of another proprietor.

Real, *n.* [*Sp. and Pg. royal.*] A Spanish coin of 100 centimes, varying in equivalence from 13 to 10 cents; the *real vellon* is a money of account equal to 5 cents.

Real, a river of Brazil, flowing E. into the Atlantic Ocean, between the provinces of Bahia and Sergipe del Rey. *Length*, abt. 160 m.

Real del Monte, a town of Mexico, abt. 56 m. N.N.E. of the city of Mexico.

Realejo, or **Realexo**, (*re-a-la'ho*.) a seaport-town of Nicaragua, abt. 20 m. N.W. of Leon; Lat. 12° 27' N., Lon. 87° 9' W. It has an excellent harbor, and carries on a considerable trade in mahogany, cedar, raw sugar, Brazil-wood, indigo, &c. *Pop.* 4,000.

Realgar, *n.* [*Fr.*] (*Min. and Chem.*) Native tersulphide of arsenic; composed, when pure, of 70 per cent. of arsenic and 30 of sulphur. It occurs crystallized and massive, of various tints of aurora-red, chiefly in Hungary and Transylvania. Artificially prepared, realgar is used as a pigment.

Realism, *n.* [*Fr. réalisme.*] The doctrinal tenets held by the Realists.

Realists, *n. pl.* (*Philos.*) See **NOMINALISTS**.

Realist'ic, *a.* Belonging, or relating to, or after the manner of, the Realists.

Reality, *n.* [*Fr. réalité*, from *L. Lat. realitas*, from *Lat. res*, a thing.] State or quality of being real; actual being or existence of anything, in distinction from mere appearance; fact; truth. — Something intrinsically important; not merely matter of show; that which is real, or has an actual existence; that which is not imagination, fiction, or pretence.

(*Law.*) See **REALTY**.

Realizable, *a.* That may be realized.

Realization, (*-zā'shun*.) *n.* [*Fr. réalisation.*] Act of realizing or making real; also, state of being realized.

Realize, *v. a.* [*Fr. réaliser*; *Span. realizar*, from *L. Lat. realis* — *Lat. res.*] To make real; to bring into actual existence or possession; to make certain or substantial; to render tangible or effective; to accomplish; to effectuate; as, to *realize* a fact or project. — To impress on the mind as a reality; to believe, consider, or treat as real; to make one's own in apprehension or experience; as, to *realize* the force of circumstances, to *realize* the presence of God in creation. — To convert, as money into land, or personal into real estate. — To obtain as an actual possession; to gain as the result of enterprise and effort; as, to *realize* a fortune in business.

— *v. n.* To receive value or property, particularly in money; as, to *realize* on railroad shares.

Realizer, *n.* One who realizes.

Realizing, *a.* That makes real, or that brings home as a reality; as, a *realizing* circumstance.

Realizingly, *a.* In a manner serving to realize, or be realized.

Reallege, (*-al'lēj*.) *v. a.* To allege anew.

Realiance, *n.* An alliance entered into a second time.

Really, *v. a.* [*Prefix re, and ally.*] To bring together in alliance again; to compose or form anew.

Really, *adv.* With reality; with actual existence; in truth; in fact; not in appearance only; veritably; as, it is *really* opposed to his interests; — *really* is also frequently employed as a slight corroboration of an opinion, assertion, or declaration; as, you *I really* did not expect to see.

Realm, (*rĕlm*.) *n.* [*O. Fr. royaume*; *Fr. royaume*, from *Lat. regnum*, kingly government.] The dominions of a king, or reigning monarch; a kingdom; royal jurisdiction, or extent of regal sway; as a peer of the realm. — Hence, generally, region; province; territory; country; domain; department.

"The ant's republic, and the realm of bees." — *Pope*.

Realness, *n.* Reality; genuineness; state or quality of being real.

Realty, *n.* [*A contraction of reality.*] (*Law.*) Immobility, or the fixed, permanent nature of property; also, a part of real property.

Ream, *n.* [*A. S. Du. riem*; *Fr. rame*.] A quantity of paper, consisting of 20 quires of 24 sheets each. Printers, however, require 21 quires to be furnished for every 1000 impressions from a full form, counting 19 quires to each ream.

Ream, *v. a.* To enlarge by dressing, as a hole.

Ream, *v. n.* [*A. S.*] To cream; to foam; to mantle; as, *reaming* liquor.

Reamer, *n.* The person who, or thing which, reams; — specifically, an implement for enlarging a hole by bevelling.

Ream's Station, in *Virginia*, a locality of Dinwiddie co., a few m. W. by S. of Petersburg. Here, on Aug. 25, 1864, the national fortifications were assaulted, and after a desperate resistance, were taken by a division of Confederates under Gen. Heath. The Union loss was 2,400 men (of whom 1,700 were made prisoners), and 5 guns. That of the Confederates was also severe.

Reams'town, in Pennsylvania, a post-village of Lancaster co., abt. 42 m. E. by S. of Harrisburg.

Reanimate, *v. a.* To revive; to resuscitate; to restore to life, as a person apparently dead; to revive, as the spirits when dull or languid; to reinvigorate; to infuse new life or courage into; as, *reanimated* hopes, to *reanimate* troops.

Reanimation, *n.* Act, process, or operation of reanimating; state of being reanimated; revival; resuscitation.

Reannex, *v. a.* (*imp.* and *pp.* REANNEXED,) (*rē-an-nēkst'*) [*Re* and *annex*.] To annex anew; to reunite; as, to *reannex* a province.

Reannexation, *n.* Act of annexing a second time.

Reanoint, *v. a.* To anoint afresh.

Reanswer, (*-ān'ser*), *v. a.* or *n.* To answer back.

Reap, (*rēp*), *v. a.* [*A. S.* *ripan*; *O. Ger.* *runpjan*.] To cut with a sickle or reaping-hook, as grain; to gather, as a harvest, by cutting.—Hence, by analogy, to obtain; to gather; to receive as a reward, or as the fruit of labor or of works;—used either in a good or bad sense; as, to *reap* a profit.—To clear off, as a crop by reaping; as, to *reap* a field.

—*v. n.* To perform the act or operation of reaping, as a harvest.—To receive the fruit of labor or of works.

"Men the workers, ever reaping something new."—*Tennyson*.

—*n.* A bundle of grain; also, a body of reapers. (*Eng.*)

Reaper, *n.* One who reaps, or cuts grain with a sickle.

(*Agric.*) An instrument or machine for cutting grain.

Reaping, *n.* Act of cutting grain with a sickle. See *Mowing*.

Reaping-hook, *n.* A sickle; an instrument used in cutting grain.

Reappear, *v. a.* To clothe anew.

Reappear, *v. a.* To appear again, or a second time.

Reappear'ance, *n.* A second appearance.

Reapplication, *n.* Act of reapplying, or state of being reapplied.

Reapply, *v. a.* or *n.* To apply again, or a second time.

Reappoint, *v. a.* To appoint again.

Reappointment, *n.* An appointment for the second time.

Reapportion, (*-pōr'shun*), *v. a.* To apportion over again.

Reapportionment, *n.* A second apportionment.

Reapproach, *v. a.* or *n.* To approach anew.

Rear, *n.* [*Fr.* *arrière*, from *Lat.* *ad*, to, and *retro*, backward.] That part which is behind or backward;—opposed to *front*.—Specifically, that part of an army which is behind the other; also, that division of a fleet which follows last in order;—opposed to *van*.

—*a.* [*Icel.* *hrara*.] Rare; half-raw; underdone; partially cooked, as meat.

—*adv.* Early. (*Prov. Eng.*)

Rear, *v. a.* [*A. S.* *ræran*; *Ger.* *rühren*.] To raise or lift up; to elevate. (*R.*)

"Who now shall rear you to the sun?"—*Milton*.

—To lift or take up, as from a fall. (*R.*)

"He rear quickly rear'd up again."—*Spenser*.

—To stir or rouse up, as a boar.—To raise or breed, as cattle.

"He reared his frugal meat, but never bought."—*Harte*.

—To bring or raise to maturity; to educate; to instruct; as, to *rear* a numerous family of children.—To establish; to set up; to construct; as, to *rear* a building. (*R.*)

—*v. n.* To rise up on the hind legs, as a horse; as, the animal *reared* and threw his rider.

—*a.* Hindmost; being behind, or last of all; as, the *rear* rank of a company of soldiers.

Rear-admiral, *n.* (*Naval*.) See *ADMIRAL*.

Rear'er, *n.* One who, or that which, rears.

Rear-front, *n.* (*Mil.*) The rear rank of a body of troops when standing in a position face about.

Rear-guard, *n.* (*Mil.*) That body of an army which marches in the rear of the main body to protect it.

Rear'gue, *v. a.* [*re* and *argue*.] To argue over again.

Rear'line, *n.* (*Mil.*) The line in an army's rear.

Rear-rank, *n.* (*Mil.*) The hindermost rank of a column of troops.

Rearward, *n.* The rear-guard; the last troop or file.

—The end; the tail; the latter part, or train behind.

Reascend, (*-as-sēnd'*), *v. a.* To reach by ascending a second time.

—*v. n.* To rise, mount, or climb anew.

Reascension, (*-as-sēn'shun*), *n.* Act of reascending or remounting.

Reascend, (*-as-sēnt'*), *n.* A returning ascent or ascension.

Reason, (*rē'zon*), *n.* [*Lat.* *ratio*, from *reor*, to think.] (*Phil.*) In its most common sense, that highest faculty of the human mind which distinguishes man from the brutes, and constitutes his rational nature. According to Dugald Stewart, it "denotes that power by which we distinguish truth from falsehood and right from wrong, and by which we are enabled to combine means for the attainment of particular ends." More correctly, and apart from its use for cause, motive, argument, &c., it is employed in the five following senses:—1. As denoting an intellectual nature generally, and comprehending—(a) conception, or simple apprehension; (b) judgment; (c) reasoning, or the discursive faculty; (d) intellect, or intelligence proper.—2. In close connection with the preceding signification, from which perhaps it ought not to be separated, is the sense in which it is used to characterize the legitimate employment of our faculties in general.—3. It is also used to denote the third and fourth of the above-mentioned functions, viz., the reasoning faculty, and the intellect.—4. It has been used very generally for the third of the above special functions; reason and reasoning being thus confounded.—5. It signifies the reasoning, in contradistinction to the intellect or understanding, and is thus used by Kant and his followers, who separate reason (*vernunft*) dis-

tinctly and emphatically from understanding (*verstand*). See *METAPHYSICS*.

By reason of, on account of.

In reason, or in all reason, with just ground.

—*v. n.* To exercise the faculty of reason; to deduce inferences justly from premises.—To argue; to debate; to confer, or inquire by discussion or mutual communication of thoughts, arguments, or reasons.

—*v. a.* To examine or discuss by arguments; to debate or discuss.

—To persuade by reasoning or argument.

Reasonable, *a.* Having the faculty of reason; endowed with reason.—Governed by reason; being under the influence of reason; thinking, speaking, or acting rationally, or according to the dictates of reason; conformable or agreeable to reason.—Not immoderate; not excessive.—Tolerable; being in mediocrity.

Reasonableness, *n.* The faculty of reason. (*R.*)—Agreeableness to reason; that state or quality of a thing which reason supports or justifies; conformity to rational principles; moderation.

Reasonably, *adv.* In a manner or degree agreeable to reason; in consistency with reason; moderately; in a moderate degree; not fully; in a degree reaching to mediocrity.

Reasoner, *n.* One who reasons or argues.

Reasoning, *n.* The act of the mind by which new or unknown propositions are deduced from previous ones which are known and evident, or which are admitted or supposed for the sake of argument; argumentation; ratiocination.—Reasons or proofs offered in argument.

Reasonless, (*rē'zn-les*), *a.* Destitute of reason; void of reason; not warranted or supported by reason; irrational; foolish; absurd.

Reassemblage, *n.* Assemblage again, or a second time.

Reassemble, *v. a.* To assemble or collect together.

—*v. n.* To assemble or convene together.

Reassert, *v. a.* To assert again; to maintain after suspension or cessation.

Reassertion, *n.* A renewed assertion.

Reassessment, *n.* A second assessment.

Reassign, (*-sīn*), *v. n.* To assign again, or transfer what has been assigned.

Reassignment, *n.* A renewed assignment.

Reassimilate, *v. a.* To assimilate anew.

Reassimilation, *n.* A renewed assimilation.

Reassociate, (*-sō'shi-āt*), *v. n.* To associate anew.

Reassume, *v. a.* To resume; to take again.

Reassumption, (*-sum'shan*), *n.* A resuming; a renewed assumption.

Reassurance, (*-shur'āns*), *n.* A second or renewed assurance.

(*Law*.) A second assurance against loss, or the assurance of property by an underwriter, to relieve himself from a risk he has taken.

Reassure, *n.* To assure anew; to restore courage to; to free from fear or terror.—To assure a second time against loss, or rather to insure through another what one has already insured; to insure against loss that may be incurred by taking a risk.

Reassurer, (*-shur'er*), *n.* A person who reassures.

Reattach, *v. a.* To attach anew.

Reattachment, *n.* A second, or renewed, attachment.

Reattain, *v. a.* To attain anew, or a second time.

Reattempt, *v. a.* To attempt again; to make another attempt.

Reaumur, *RÉNE ANTOINE FERCHAULT DE*, (*rāi-aw'mur*), a French naturalist and natural philosopher, b. in 1683, at Rochelle; studied under the Jesuits at Poitiers, and afterwards went through a course of law at Bourges. But his tastes led him to the observation of nature; and, having made himself acquainted with the mathematical sciences, he was chosen a member of the Academy of Sciences, at Paris, to which he had presented some memoirs on geometry. He made valuable researches and discoveries on the arts of manufacturing porcelain, of converting iron into steel, of tinning iron plates, and of making artificial pearls; but he is principally celebrated as the inventor of the thermometer which bears his name. The most valuable work he has left is the *Mémoires pour servir à l'Histoire des Insectes*, in 6 vols. 4to. It is the fruit of his own acute and patient observation, and abounds in interesting and curious details. D. 1757.

Reaumuria'ceæ, *n.* [After the naturalist *Reaumur*, q. v.] (*Bot.*) An order of plants, alliance *Guttiferales*. *DIAG.* Oblique, glandular petals, a few shaggy seeds, and long distinct styles.—They are small shrubs, closely resembling *Hypericaceæ*, in most essential characters, and only distinguished from that order by the peculiar formation of the petals and seeds, and by the latter having small mealy albumen. The plants are natives of the Mediterranean coast, and the salt plains of N. Asia. They contain much saline matter. A decoction of the leaves of *Reaumaria bruniolata* is used as an internal medicine, and the bruised leaves as an external application for the cure of the itch. The order contains 3 genera and 4 species.

Reaumur's Porcelain, *n.* See *GLASS*.

Reave, (*rev*), *v. a.* [*A. S.* *reafian*; *Ger.* *rauben*.] To bereave; to deprive. (*R.*)

Reaver, *n.* A person who reaves or deprives.

Reavow, *v. a.* To avow again, or a second time.

Reawake, *v. n.* To awake again.

Rebanish, *v. a.* To banish again, or a second time.

Rebaptism, *n.* A renewed baptism.

Rebaptization, *n.* [*Fr.* *rebaptisation*.] Renewal of baptism.

Rebaptize, *v. a.* To baptize again, or a second time.

Rebaptizer, *n.* A person who rebaptizes.

Rebate, *v. a.* [*Fr.* *rebattre*, from *re*, again, back, and *lat.* *battere*, to beat.] To beat to obtuseness; to blunt; to deprive of keenness.—To abate or deduct from.

—*n.* A kind of chisel for dressing wood, &c.—A wooden tool for beating mortar.

(*Arch.*) A rectangular recess or groove (Fig. 2226) cut longitudinally in a piece of timber, to receive, the edge of a plank, or other work required to fit into it. The notch, or recess, in a door-post, into which the door fits, is a *rebate*.

(*Com.*) A discount or allowance for prompt payment.

Re'bee, *n.* [*Fr.* *ribeca*.] (*Mus.*) A stringed instrument somewhat similar to the violin, having three strings tuned in fifths, and played with a bow. It was introduced by the Moors into Spain.

Rebecca. See *ISAAC*.

Rebel, *n.* [*Fr.* *rebelle*; *Lat.* *rebellis*, from *re*, and *bellum*, war.] One who revolts from the government to which he owes allegiance, either by openly renouncing the authority of such government, or by taking arms and openly opposing it.

—*a.* Rebellious; acting in revolt.

—*v. n.* To revolt; to renounce the authority of the laws and government to which one owes allegiance; to rise in violent opposition to lawful authority.

Rebeller, *n.* One who rebels.

Rebellion, (*re-bel'yan*), *n.* [*Fr.* *rebelles*, *rebellio*.] Act of rebelling; an open and avowed renunciation of the authority of the government to which allegiance is due; revolt.—Violent resistance to lawful authority.

Rebellious, (*re-bel'yus*), *a.* Engaged in rebellion; renouncing the authority and dominion of the government to which allegiance is due; traitorously resisting governmental or lawful authority.

Reb'liously, *adv.* In a rebellious manner; with design to throw off the authority of legitimate government.

Reb'liousness, *n.* The quality of being rebellious.

Rebel'low, *v. n.* To bellow in return; to echo back a loud noise.

Re'bersburg, in Pennsylvania, a post-village of Centre co., abt. 18 m. E. of Bellefonte.

Rebit'ing, *n.* (*Engraving*.) The act or the operation of restoring worn lines in an engraved plate by the action of acid.

Reboil, *v. a.* and *v. n.* To boil a second time.

Rebound, *v. n.* [*Fr.* *rebondir*, from *re*, and *bondir*, to bound.] To spring; to start back; to reverberate.

—*v. a.* To drive back; to reverberate.

—*n.* Act of rebounding; act of flying back; resilience.

Rebrace, *v. a.* To brace anew.

Rebreathe, *v. n.* To breathe anew.

Rebuff, *n.* [*It.* *rebuffo*; *Fr.* *rebuffade*.] A sudden check; resistance; repulsion; opposition.—Refusal; rejection of solicitation.

—*v. a.* To beat back; to offer sudden resistance to; to check; to reject unceremoniously.

Rebuffet, *v. a.* To beat back; to buffet anew.

Rebuild, (*-bild*), *v. a.* To build again; to renew, as a structure; to build or construct, as what has been demolished.

Rebuilder, *n.* One who rebuilds.

Rebuk'able, *a.* Worthy of rebuke or reprehension.

Rebuke, *v. a.* [*Fr.* *reboucher*, from *re*, again, and *boucher*, to cork, to shut up.] To reprove; to reprehend or reprimand for a fault; to check by reproof; to check or chastise; to chasten; to punish; to silence; to restrain.

—*n.* A chiding into silence; reproof for faults; reprehension; chastisement; punishment.—A check; a rebuff.

Rebuk'er, *n.* One who rebukes; a chider; a reprehender.

Rebuk'ingly, *adv.* By way of rebuke.

Reb'ullition, (*-ish'un*), *n.* The act of reboiling, or of effervescing.

Rebuoy, *v. a.* To buoy anew; to support or raise anew.

Rebury, (*rē-bēr'ry*), *v. a.* To inter again.

Rebus, *n.*; *pl.* *REBUSES*. [*Lat.* from *res*.] A quaint mode of expressing words or phrases by things, or by pictures of objects whose names bear a resemblance to the words, or to the syllables, of which they are composed.

(*Her.*) An emblazonry suggestive of the name of the bearer (otherwise called *armes parlantes*); e. g., three trout for Troutbeck, three cups for Butler, &c.

Rebut, *v. a.* [*Fr.* *rebater*; *It.* *ributare*, to drive back.] To drive back; to repel.

(*Law*.) To oppose by argument, plea, or countervailing proof.

—*v. n.* (*Law*.) To contradict; to do away. Thus, every homicide is presumed to be murder, unless the contrary appears from evidence which proves the death; and this presumption lies on the defendant to *rebut*, by showing that it was justifiable or excusable.

Rebut'ter, *n.* (*Law*.) The defendant's answer to the plaintiff's surrejoinder. See *PLEADINGS*.

Reca'dency, *n.* A descending again, or a second time.

Recal'itrate, *a.* Kicking back; hence, unruly.

Recal'itrate, *v. a.* [*Lat.* *recalcitrare*, from *re*, and *calcitrare*, to kick.] To kick again; to kick or strike with the heel;—hence, to evince opposition or repugnance.

Recal'itration, *n.* The act of kicking in return; opposition; repugnance.

Recall, *v. a.* To call back; to take back; to call back from a place or mission.—To revoke; to annul by a subsequent act.—To revive in memory; to remember.

—*n.* A calling back; revocation.

Recall'able, *a.* That may be recalled.

Recanati, (*rai-ka'na-te*), a town of Italy, prov. of Macedonia, on the Mnsone, 4 m. S.W. of Loretto; pop. 4,500.

Recant', *v. a.* [Lat. *recanto*, to recall.] To take back or contradict, as a former declaration; to retract; to disavow.

—*v. n.* To unsay what has been said; to recall words; to revoke a declaration or proposition; to retract.

Recanta'tion, *n.* Act of recanting; act of recalling; retraction; a declaration that contradicts a former one.

Recant'er, *n.* One who recants.

Recapacitate, (*-pas'-*) *v. a.* To qualify again.

Recapit'ulate, *v. a.* [Lat. *recapitulare*.] To go over, as the principal things mentioned in a preceding discourse, argument, or essay; to give a summary, as of the principal facts, points, or arguments; to reiterate; to rehearse.

—*v. n.* To sum up whatever has been previously said.

Recapitula'tion, *n.* Act of recapitulating; a summary, or concise statement or enumeration of the principal points or facts in a preceding discourse, argument, or essay.

Recap'ulatory, *a.* Repeating again.

Recap'tion, *n.* (*Law.*) A species of remedy by the mere act of the party injured. This happens when any one has deprived another of his property, in goods or chattels personal, or wrongfully detains one's wife, or child, in which case the owner of the goods, and the husband, or parent, may lawfully claim and retake them wherever he happens to find them, so that it be not in a riotous manner, or attended with a breach of the peace.

Recap'tor, *n.* One who recaptures.

Recapture, (*-kap'tur*), *n.* Act of retaking; — particularly, the retaking of a prize or goods from a captor. — A prize retaken.

—*v. a.* To retake; — particularly, to retake, as a prize which had been previously taken.

Recar'ry, *v. a.* To carry back.

Recast', *v. a.* To throw again. — To mould anew. — To complete a second time.

Recede', *v. n.* [Lat. *recedo*.] To go or move back; to retreat; to withdraw; to retire; — followed by *from*.

—*v. a.* To desist; to relax any claim.

—*v. a.* To go or move back; to retreat; to retire.

Receipt, (*re-seet'*), *n.* Act of receiving; reception. — Place of receiving. — Recipe; prescription of ingredients for any composition, as of medicine, &c. — A written acknowledgment of having received a sum of money, a quantity of goods, &c.

—*v. a.* To give a receipt or written acknowledgment for.

—*v. n.* To give a receipt; as, a receipted bill.

Receipt'ment, *n.* (*Old Eng. Law.*) The unlawful harboring of a felon.

Receptor, (*re-seet'or*), *n.* (*Law.*) A name given in Massachusetts to the person who, on a trustee process being issued and goods attached, becomes surety to the sheriff to have them forthcoming on demand, or in time to respond the judgment, when the execution shall be issued.

Receivability, *n.* Receivableness.

Receiv'able, *a.* That may be received.

Receiv'ableness, *n.* Capability of being received.

Receive, (*re-seev'*), *v. a.* [Fr. *recevoir*; Lat. *recipio*, from *re*, and *capio*, to take.] To take, as a thing offered or sent; to accept; to take as due, or as a reward. — To take, as a thing communicated; to take or obtain intellectually; to embrace. — To allow; to hold; to retain; as, a custom or tradition. — To admit; to welcome; to entertain, as a guest. — To take in or on; to hold; to contain. — To suffer; to bear. — To take or obtain from another, whether good or evil.

Receiv'edness, *n.* General allowance.

Receiver, *n.* One who receives or takes back in any manner.

(*Law.*) One to whom anything is communicated by another. Also, an officer of the Court of Chancery appointed to collect rents, &c., pending a suit. Receivers are usually appointed in suits concerning the estates of infants, against executors, and between partners for the purpose of winding up the business.

(*Chem.*) A globular vessel applied to a retort, and in which the distillate, or product of distillation, is collected or received. — The bell-glass placed upon the plate of an air-pump is also called a receiver.

Receiv'ership, *n.* The state or position of a receiver.

Receiving, *n.* Act of receiving; that which is received.

Recelebrate, *v. a.* To celebrate anew.

Recelebra'tion, *n.* A renewed celebration.

Re'cency, *n.* [L. Lat. *recentia*, from *recens*, fresh, young.] State or quality of being recent; newness; new state; late origin; lateness in time; freshness.

Recense', *v. a.* [Lat. *recensere*.] To revise; to examine. (*R.*)

Recension, (*-sen'shun*), *n.* [Lat. *recensio*, *recensionis*, from *recensere*.] Review; enumeration; examination. — Examination of the text of an ancient author.

Recen'sionist, *n.* One who recenses; one who makes critical examination or review.

Re'cent, *a.* [Fr., from Lat. *recens*, recentis.] New; being of late origin or existence; late; modern; fresh; lately received; of new occurrence.

(*Geol.*) Relating to, or noting, the period coeval with the human race.

Re'cently, *adv.* Newly; lately; freshly; not long since.

Re'centness, *n.* State or quality of being recent; newness; freshness; lateness of origin or occurrence.

Receptacle, (*re-sep'ta-kl*), *n.* [Fr.; Lat. *receptaculum*, from *receptare*, from *recipio*, *recipere*, to receive.] A place or vessel into which something is received, or in which it is contained.

(*Bot.*) A term denoting, 1, that part of a flower upon which the carpels are situated, or, in other words, the apex of the peduncle, or summit of the floral branch, of which the carpels are the termination; 2, that part of the ovary from which the ovules arise, and which is commonly called the placenta; 3, that part of the axis of a plant which bears the flowers when it is depressed in its development, so that, instead of being elongated into a rachis, it forms a flattened area, over which the flowers are arranged, as in *Compositæ*. There is thus the *R.* of flowers, which is the *clinanthium*; the *R.* of fruits, which is the *torus*; and the *R.* of ovules, which is the *placenta*. The part of the vein to which the spore-cases of ferns are attached is also called a *R.*

Receptac'ular, *a.* [Fr. *receptaculaire*.] (*Bot.*) Belonging to a receptacle.

Receptibility, *n.* Possibility of receiving.

Recep'tible, *a.* [Lat. *receptibilis*.] Capable of being received.

Recep'tion, *n.* [Lat. *receptio*, from *recipere*, to receive.] Act of receiving; admission of anything sent or communicated. — State of being received. — A receiving, or manner of receiving, for entertainment; entertainment. — Admission, as an opinion.

Recep'tive, *a.* [Fr. *réceptif*; Sp. *receptivo*.] Having the quality of receiving or admitting what is communicated.

Receptiv'ity, *n.* [Fr. *réceptivité*.] State or quality of being receptive.

(*Philos.*) In the philosophical system of Kant, the power or capacity of receiving impressions, as those of the external senses.

Recess', *n.* [Sp. *receso*; It. *recesso*; Lat. *recessus*, from *recedo* — *re*, back, and *cedo*, to go, to move.] A going back, or receding; a moving back; as, the recess of the tides. — A withdrawing or retiring; a withdrawing from public business or notice; retreat; retirement.

"Sacred to soft recess and gentle love." — *Prior*.

— Privacy; seclusion from the world or from company; state of being withdrawn; as, "close recess and secret conclave." (*Milton*). — Remission or suspension of business or proceedings, as of a legislative assembly, court of justice, &c. — Part of a room formed by the receding of a wall, as an alcove, niche, &c.; as, the recess formed by a bay-window. — Place of retirement; private or secret abode. — Secret or abstruse part; as, "their most secret recesses of religion." — *Hammond*.

(*Hist.*) A decree of the Imperial Diet of the former German empire; — perhaps so called from being pronounced at the time when the Diet was about to recede or separate.

(*Bot.*) A sinus, or vacancy between the lobes of leaves.

—*v. a.* To form into a recess; as, to recess a grotto, or the wall of a room.

Recession, (*-sesh'un*), *n.* [Late Lat. *recessio*.] Act of receding or withdrawing; act of retiring or retreating; act of receding from a claim, or of relaxing a demand. — Accession, or restoring or granting back; as, the recession of a conquered province to its former ruler.

Recession of the equinoxes. (*Astron.*) See PRECESSION.

Recess'ive, *a.* Receding; withdrawing; going back.

Rechabite, (*re'kab-it*), *n.* (*Jewish Hist.*) One of the descendants of Jonadab, the son of Rechab, who followed the injunction of his ancestor in abstaining from all intoxicating drinks; — hence, a name assumed by members of certain temperance societies, who adopt the principle of total abstinence from alcoholic liquors; a teetotaler.

Recharge, (*-chānj'*), *v. a.* [Fr. *recharger*.] To change again or afresh.

—*v. n.* To make a second change.

Recharge', *v. a.* [Fr. *recharger*.] To charge or accuse in return. — To attack anew; as, to recharge the enemy.

—*v. n.* To charge a second time.

Rechar'ter, *n.* A renewal of a charter.

—*v. a.* To charter anew; to grant a second charter to.

Rechase', *v. a.* To chase a second time.

Rechasten, (*-chās'n*), *v. a.* To chasten afresh.

Recheat, *n.* [From *requête*, a near chase.] (*Sport.*) A note wind on the horn to recall dogs which have lost scent of the game.

—*v. n.* To wind or blow the recheat.

Rechere'hé, (*rūh-siēr-shā'*), *a.* [Fr.] Sought after with studious pains; — hence, unique; of rare or choice value or attraction; of singular rarity or elegance; peculiar and refined; rococo.

Rechoose', *v. a.* To choose anew, or a second time.

Recipe, (*rēs'i-pē*), *n.*; *pl.* RECIPES. [Lat. imp. *recipere*, to take in, to receive; Fr. *recipé*.] A medical prescription; a direction of medicines to be taken; — popularly, a receipt for almost any mixture; as, a recipe for mixing a salad.

Recipian'gle, *n.* [Lat. *recipere*, to take, and *angulus*, angle.] An instrument used in measuring angles, particularly in fortifications.

Recip'ient, *n.* State or quality of being recipient; a receiving; reception.

Recip'ient, *a.* Receiving.

—*n.* [Fr.; Lat. *recipiens* — *entis*, from *recipio*.] A receiver; the person who, or thing which, receives; he or that to which anything is communicated; — specifically, the receiver of a still.

Reciprocal, (*-sip-*), *a.* [Fr. *réproque*; Lat. *reciprocus* — *re*, and *capio*, to take.] Alternate; acting in vicissitude or return.

"Corruption is reciprocal to generation." — *Bacon*.

— Mutual; done by each to the other; given and received; interchanging or interchanged; as, reciprocal duties or obligations, reciprocal affection.

— Mutually interchangeable, as a definition.

(*Gram.*) Reflexive; applied to certain pronouns and verbs; — also, sometimes, confused to such as demonstrative mutual action.

R. equation. (*Math.*) An equation unchangeable in form, when the reciprocal of the unknown quantity is substituted for that quantity. — *R. lines.* (*Math.*) In statics, the lines of action, or any two forces mechanically equivalent to a given system of force. — *R. proportion.* (*Math.*) The relation which exists between four magnitudes, such that, taken in order, the first has to the second the same ratio which the fourth has to the third, or the first has to the second the same ratio which the reciprocal of the third has to the reciprocal of the fourth. — *R. quantities.* (*Math.*) Quantities which, multiplied together, give unity. — *R. terms.* (*Logic.*) Those terms which, having the same signification, are identical in force, and may, consequently, be used the one for the other.

Recip'rocal, *n.* That which is reciprocal to another thing.

(*Math.*) In algebra and arithmetic, the quotient resulting from the division of unity by any quantity; thus, $\frac{1}{8}$ is the reciprocal of 8. The *R. of a fraction* is the fraction in a state of inversion, or the denominator divided by the numerator.

Reciprocal'ity, *n.* Reciprocalness; state or quality of being reciprocal.

Recip'rocally, *adv.* Mutually; interchangeably; in such a manner that each affects the other, and is equally affected by it.

— In the manner of reciprocals.

R. proportional, proportional, as two variable quantities, so that the one shall be in constant ratio to the reciprocal of the other.

Recip'rocality, *n.* Reciprocalness; alternateness.

Reciprocate, (*-sip'ro-kāt*), *v. n.* [Fr. *réproquer*; Lat. *reciproco*, *reciprocatus*.] To go or move backward, or backward and forward; to alternate; to act or move interchangeably; as, reciprocating breath.

—*v. a.* To exchange; to interchange; to give and return mutually; as, to reciprocate compliments.

Reciprocating motion. (*Mech.*) The alternate up and down, or backward and forward, motion, as of a piston-rod.

Reciprocation, (*-kā'shun*), *n.* [Fr., from Lat. *reciprocatio* — *onis*.] Act of reciprocating; a mutual giving or returning; interchange of acts; as, the reciprocation of favors or courtesies. — Alternation; as, the reciprocation of the tides.

(*Med.*) Regular return or alternation of two symptoms, or diseases.

Reciprocity, (*rēs'i-prōs'i-tē*), *n.* [Fr. *reciprocité*.] State or quality of being reciprocal; reciprocation; interchange; reciprocal obligation or right; equal mutual rights or benefits to be yielded or enjoyed. — Mutual action and reaction.

Reciprocous, *a.* [Lat. *reciprocus*, reciprocal, and *cornu*, horn.] (*Zool.*) Having horns turning backward and forward, like those possessed by a ram.

Recision, (*-sish'un*), *n.* [Lat. *recisio*, from *re*, and *cadere*, to cut.] The act of cutting off.

Recital, (*re-sit'al*), *n.* [Fr. *récit*.] Act of reciting; recitation; rehearsal; the repetition of the words of another, or of a writing; as, the recital of a deed or agreement. — A telling of the particulars of an adventure, or of a series of events; account; narration; narrative. — That which is recited; a story; a narrative.

(*Law.*) The statement of matter in pleading, introductory to some positive allegation.

Recitation, (*rēs'i-tā'shun*), *n.* [Fr.; Lat. *recitatio* — *onis*.] Act of reciting; rehearsal; repetition of words. — The delivery before an audience of the composition of others, committed to memory; a public reading, or oratorical display, of something prepared beforehand, or reproduced from another. — In the United States scholastic system, the rehearsal of a lesson by pupils before their preceptor or preceptress; the repeating of some theme committed to memory.

Recit'ative, *n.* [It. *recitativo*.] (*Mus.*) A species of musical recitation; or, in other words, a kind of artificial declamation adapted to musical notes, forming a sort of medium between common recitation and measured air or song. It was first introduced at Rome, in the year 1660, by Emilio del Cavaliere, and was soon after adopted throughout Europe. Recitatives differ from airs in having no fixed time or measure, the singer regulating the length of the notes according to his own conception of the degree of emphasis and expression required. They are written in common time, of four crotchets in a bar, and have no fixed or permanent key; indeed, they generally begin in one key and end in another, modulating frequently *ad libitum*. In this species of composition, strict attention must be paid to all the rules of prosody, as to long and short syllables, accent, emphasis, punctuation, &c. The words are never repeated, and only one note is sung to each syllable; thus all grace notes are excluded, except in some *passionate* passages, where an occasional rapid flight of notes may be introduced to connect distant intervals. A *simple*, or *unaccompanied*, recitative is written with no other accompaniment than a bass part, consisting of a few occasional chords, generally played on the pianoforte. An *accompanied recitative*, on the other hand, has, besides the bass, parts for other instruments, as violins, hautboys, flutes, &c. The great use of recitative consists in its capabilities for passing quickly from subject to subject, serving for dialogues, and to prepare important changes in great musical pieces. Some of the most splendid specimens of recitative may be found in the works of Gluck, Haydn, Mozart, Beethoven, and Verdi.

—*a.* In the style or manner of recitative; rehearsing; pertaining to musical pronunciation or declamation.

Recita'tively, *adv.* In the manner of recitative.

Recitativ'o, *n.* [It.] (*Mus.*) See **RECITATIVE**.

Recite, (*re-sit'*), *v. a.* [Fr. *reciter*; Lat. *recito* — *re*, and *cito*, to rehearse.] To rehearse; to repeat, as the words of another, or of a writing; to deliver from a written or printed document, or from memory; as, to *recite* a passage from an author. — To tell over or relate, as occurrences or particulars; to narrate; to enumerate or go over in particulars; as, to *recite* the incidents of a journey. — To rehearse, as a lesson to a preceptor or tutor.

—*v. n.* To make a recital; to rehearse; to pronounce before an audience the composition of others, committed to memory; to repeat a lesson learned.

Recit'er, *n.* One who recites, rehearses, or narrates.

Reck, *v. n.* [A. S. *reccan*, *reccan*. See **RECKON**.] To heed; to regard; to care for; to make account;—with *of*, and seldom used, except in poetry.

Reck'less, *a.* [A. S. *roceleds*.] Having no care or concern; without heed or regard; careless; unmindful; rashly or indifferently negligent; as, a *reckless* man, *reckless* of danger, &c.

Reck'lessly, *adv.* In a reckless manner; heedlessly; negligently; rashly unmindful; carelessly.

Reck'lessness, *n.* State or quality of being reckless; heedlessness; carelessness; rash negligence.

Reck'lesstown, *n.* In *New Jersey*, a post-village of Burlington co., abt. 5 m. S. E. of Bordentown.

Reckon, (*rek'n*), *v. a.* [A. S. *reccan*, *reccan*; D. *rekenen*; Ger. *rechnen*; Icel. *reikna*.] To count; to number; to compute; to calculate; to estimate; to enumerate; as, to *reckon* figures. — To set in the number, series, or rank of; to esteem by condition or quality; to regard; to repute; to account.

—*v. n.* To count; to number; to compute; to estimate; to charge to, or take in, account or calculation.

"Before we *reckon* with your several loves." — *Shaks.*

—To settle, make up, or adjust accounts; to examine and strike the balance of debit and credit; to pay a penalty. — To reason with one's self, and conclude from arguments. — To think; to suppose; to imagine; to infer; to conclude; — (an English provincialism, but extensively employed in the Middle and S. States of the Union, in a corresponding sense to that of *guess* in the N. States; — both terms are essentially vulgar.)

To *reckon for*, to be answerable for; to pay the penalty for. — To *reckon on* or *upon*, to count, rely, or depend on; to adopt measures in confident expectation of; as, I *reckon upon* receiving the money from him. — To *reckon with*, to settle or adjust accounts or claims with; to exact the penalty of.

Reckoner, (*rek'n-er*), *n.* He who, or that which, reckons or computes; as, a ready *reckoner*.

Reck'oning, *n.* Act of counting or computing; calculation;—specifically, an account of time; a statement of accounts with another; statement and comparison of accounts mutually for adjustment;—hence, exaction of penalty; account; infliction of merited punishment.

"The way to make *reckonings* even, is to make them often." — *South.*

—The sum of money charged by a host; bill; statement of account, as for entertainment, &c. — Account of; esteem; estimation; as, "you make no further *reckoning* of beauty." — *Sidney.*

(*Navig.*) The computation of a ship's way, usually by the log; or, the act of estimating the distance run between one port, or place, and another. See **DEAD-RECKONING**.

Reck'oning-book, *n.* An account-book.

Reclaim, (*re-klām'*), *v. a.* [Fr. *réclamer*; Lat. *reclamo*, from *re*, and *clamo*, to call, to shout aloud.] To call back. (R.) — To call back from error, wandering, or transgression, to the observance of moral rectitude; to reform. — To reduce to the state desired; to correct. — To reduce from a wild to a tame or domestic state; to tame. — To recover; to regain.

(*Law.*) To demand again; to insist upon a right.

—*v. n.* To cry out; to exclaim.

Reclaim'able, *a.* That may be reclaimed, reformed, or tamed.

Reclaim'ant, *n.* One who contradicts or remonstrates. (R.)

Reclaim'ing, *n.* Reclamation.

Reclaim'less, *a.* That cannot be reclaimed.

Reclamation, *n.* [Fr.; It. *reclamazione*.] Act of reclaiming; state of being reclaimed; recovery.

Reclasp, *v. a.* To clasp again, or a second time.

Reclinate, *a.* (*Bot.*) Bent down on some other part. The term is applied to parts which fall gradually from the perpendicular, as the branches of many trees or shrubs.

Reclination, *n.* The act or state of reclining.

(*Dialling*.) The angle which the plane of the dial makes with a vertical plane, which it intersects in a horizontal line.

(*Surg.*) A mode of operating for the cataract, which consists in applying the needle in a certain manner to the anterior surface of the cataract, and depressing it into the vitreous humor, in such a way that the front surface of the cataract is the upper, and its back surface the lower one.

Recline, *v. a.* [It. *reclinare*, from Lat. *reclino*, to bend back.] To bend or lean back; to lean to one side, or sidewise.

—*v. n.* To lean; to be recumbent; to rest or repose.

—*a.* In a leaning posture. (R.)

Reclined, (*-klind*), *a.* (*Bot.*) Curved downward; nearly recumbent.

Reclin'er, *n.* A person who, or thing which, reclines.

Reclin'ing, *n.* (*Bot.*) Same as **RECLINATE**.

R. dial, (*Dialling*.) A dial whose plane is inclined to the vertical line which passes through its center.

R. chair. A chair with an adjustable back.

Recluse, (*re-klōz'*), *v. a.* To close again.

Reclude, *v. a.* [Lat. *recludo*, from *re*, and *cludo*, to shut.] To close again. (R.)

Recluse, (*re-klūs'*), *a.* [Fr. *reclus*; Lat. *reclusus*, from *re*, and *cludo*, to shut.] Shut up; secluded; sequestered; retired from the world or from public notice; solitary.

—*n.* A person who lives in retirement or seclusion from intercourse with the world.

(*Eccles.*) One of a class of religious persons who live in single cells, usually attached to monasteries.

Recluse'y, *adv.* In retirement.

Recluse'ness, *n.* State of living in reclusion; retirement.

Reclusion, (*re-klū'zhun*), *n.* [Fr.] Recluse'ness; the state of a recluse.

Recl'sive, *a.* Living or being secluded or retired.

Recl'sory, *n.* [L. Lat. *recluserium*.] A place of retirement; a hermitage.

Recoagulation, *n.* A second coagulation.

Recoat, *v. a.* To coat again.

Reco'tion, *n.* A second, or new coction or preparation.

Recognition, *n.* [Lat. *recognitio*, from *recognosco*.] The act of recognizing, or state of being recognized; renewed or revived knowledge. — Acknowledgment; formal avowal; confession; memorial.

(*Law.*) An acknowledgment that something which has been done by one man in the name of another was done by authority of the latter.

Recognitory, *a.* Relating to recognition.

Recognizable, (*rek-kog'nī-za-bl'*), *a.* That may be recognized, known, or acknowledged.

Recognizance, *n.* (Written also *recognisance*.) [From Lat. *recognosco*, to acknowledge.] Recognition; acknowledgment of a person or thing; avowal.

(*Law.*) An obligation of record entered into before some court of record, or magistrate, duly authorized to take it, with condition to do some particular act, — as to appear at the assizes, to keep the peace, to pay a debt, or the like, upon the performance of which condition the obligation becomes null and void; but upon failure, the amount of the recognizance is forfeited. It differs from a bond, in that the latter is the creation of a new debt, while a recognizance is an acknowledgment upon record of a former debt. The state or person to, or in whose favor the recognizance is made, is called the *cognizor*, and the person who enters into it the *cognizor*. A recognizance may be entered into either to the crown, as where a person enters into recognizances to appear to answer a criminal charge, or to subject, as where bail is given.

Recogniza'tion, *n.* Same as recognizance.

Recognize, or **Recognise**, (*rek-kog-nīz*), *v. a.* [It. *recognoscere*; Fr. *reconnaître*; Lat. *recognosco*, from *re*, and *cognosco*, to know.] To know again; to recall to mind; to recollect or recover the knowledge of, either with an open avowal of that knowledge or not. — To acknowledge; to avow; to confess; to admit with formal acknowledgment.

—*v. n.* (*Law.*) To try; to examine in order to determine the truth of a matter.

Recognizee, *n.* (*Law.*) He for whose use a recognizance has been taken.

Recognizor, *n.* (*Law.*) A person who enters a recognizance.

Recoil, *v. n.* [Fr. *reculer*, from Lat. *re*, again, back, and *culis*, the fundament.] To move or rush back in consequence of resistance; to fall back. — To retire; to retreat. — To shrink; to fail.

—*n.* A starting or falling back.

(*Gun.*) The motion of a piece of ordnance or small-arm in a direction opposite to that in which the projectile is thrown. It is caused by the pressure of the gas upon the bottom of the bore, in the direction of the axis, equal to that which acts upon the projectile. It exerts a very destructive effect upon the gun-carriage.

Recoil'er, *n.* One who, or that which, falls back, or recoils.

Recoiling, *n.* Act of starting or falling back; a shrinking.

Recoilingly, *adv.* With a recoil.

Recoil'ment, *n.* A recoiling; a rushing back. (R.)

Recoil, *v. a.* To coil over again.

Recoil'age, *n.* The act of coining anew.

Recoil'er, *n.* A person who recoins.

Recollect, *v. a.* [Lat. *recolligo*, from *re*, and *colligo*, to collect.] To recover or call back to the memory; to bring back to the mind or memory. — To recover resolution or composure of mind; (with reciprocal pronoun.) — To gather what is scattered; to gather again.

"Now that God hath made his light radiate in his word, men may *recollect* those scattered divine beams." — *Boyle.*

Recollects, **Recollects**, *n. pl.* (*Ecd. Hist.*) A name often applied to the order of the **OBSERVANTS**, *q. v.*

Recollect'ion, *n.* The act, operation, or power of recalling ideas to the mind, or the period within which things can be recollected; memory; reminiscence.

Recollect'ive, *a.* Possessing the faculty of remembering.

Recoloniza'tion, *n.* A renewed colonization.

Recolonize, *v. a.* To colonize again, or a second time.

Recombination, *n.* A renewed combination.

Recombine, *v. a.* To combine anew.

Recomfort, (*-kum'*), *v. a.* To comfort or console again.

— To give new strength to. (R.)

Recommence, *v. a.* To commence again; to begin anew.

—*v. n.* To make a new or fresh beginning.

Recommence'ment, *n.* A commencement anew.

Recommend, *v. a.* To commit or intrust into the hands of another; to commit to one for protection, aid, &c. — To praise to another; to offer or commend to another's notice, confidence, or kindness, by favorable representations. — To make acceptable; to mention or represent as worthy of something. — To commit with prayers.

Recommend'able, *a.* That may be recommended; worthy of recommendation or praise.

Recommend'ableness, *n.* State or quality of being recommendable; worthiness of being recommended.

Recommend'ably, *adv.* So as to deserve recommendation.

Recommend'a'tion, *n.* [Fr.] Act of representing in a favorable manner for the purpose of procuring the notice, confidence, or civilities of another. — Favor; esteem. (R.) — That which procures a kind or favorable reception.

Recommend'atory, *a.* That recommends; that commends to another.

Recommend'er, *n.* A person who recommends.

Recommit, *v. a.* To commit again; to refer again to a committee.

Recommit'ment, **Recommit'tal**, *n.* A second or renewed commitment; a renewed reference to a committee.

Recommu'nicate, *v. a.* To communicate a second time.

Recompact, *v. a.* To join anew; to compact afresh.

Recompense, *v. a.* [Fr. *récompenser*; L. Lat. *recompensatio*.] To weigh out to in return, or by way of amends; to compensate; to make an equivalent to, for service, loss, &c.; to reward; to requite; to remunerate. — To repay; to make return, as of an equivalent; to compensate or make up to any one.

—*n.* An equivalent returned for anything given, done, or suffered; repayment; compensation; amends; requital; reward; retribution; satisfaction.

Recompenser, *n.* He who, or that which, recompenses or requites.

Recompilation, *n.* A compilation rendered afresh.

Recompile, *v. a.* To compile a second time.

Recompile'ment, *n.* A recompilation; act of recompiling; a new digest or compilement; as, a *recompilement* of the laws.

Recompose, *v. a.* To form or adjust again or anew; to adjust together repeatedly; — said of things — To compose or quiet anew; to compose or tranquillize that which is ruffled or disturbed; as, to *recompose* the mind or spirit.

Recompos'er, *n.* One who, or that which, recomposes.

Recomposition, *n.* Act of recomposing; renewal of composition.

Reconcilable, *a.* [Fr. *réconciliable*.] That may be reconciled; capable of renewed or restored unity or friendship; susceptible of being reconciled or readjusted; as, *reconcilable* individuals. — That may be made to agree or be consistent; congruous; not obstinately at variance; as, *reconcilable* accounts.

Reconcilableness, *n.* State or quality of being reconcilable; consistency; as, the *reconcilableness* of two apparently incongruous theories. — Practicality of restoration to amity, harmony, or fellowship.

Reconcilably, *adv.* In a manner susceptible of reconciliation.

Reconcile, (*rek-on-sil'*), *v. a.* [Fr. *réconcilier*; Lat. *reconcilio* — *re*, and *concilio*, from *concilium*, from *con*, together, and *cilio*, to make to go, or move.] To reunite; to conciliate anew; to call back into union and friendship, as affections which have been alienated; to restore to friendship or favor, after estrangement; as, to *reconcile* parties who have been at variance. — To bring to acquiescence, content, or tranquil submission; to pacify; to appease. — To make congruous or consistent; to bring to agreement, accord, or suitableness; — preceding *with* or *to*. "Due distance *reconcile* to form and grace." — *Pope.*

— To adjust; to settle; to compose, as differences.

Reconcile'ment, *n.* Reconciliation; act of reconciliation, or state of being reconciled; renewal of concord or friendship.

Reconciler, *n.* One who reconciles; one who restores harmony and accord between parties at variance. — One who discovers the consistence of propositions seemingly incongruous.

Reconciliation, *n.* [Fr.; Lat. *reconciliatio*.] Act of reconciling parties at variance; renewal of friendship and accord after disagreement or enmity; reconciliation; reunion; restoration to harmony. — Pacification; appeasement; the means by which sinners are reconciled and brought into a state of favor with God, after natural estrangement or enmity; propitiation; atonement; expiation. — Agreement of things seemingly opposite, different, inconsistent, or incongruous; harmony.

Reconcili'atory, *a.* Having a tendency to reconcile.

Recondensa'tion, *n.* Act of recondensing; state of being recondensed.

Recondense, *v. a.* To condense anew.

Recondite, (*rek-on-dit'*), *a.* [Sp. *recondito*; Lat. *reconditus*.] Secret; abstruse; hidden from the view or intellectual faculty; as, *recondite* causes. — Profound; dealing in things mysterious or abstruse; as, *recondite* studies.

Reconduet, *v. a.* To conduct back, or again.

Reconfirm, *v. a.* To confirm afresh, or a second time.

Reconjoin, *v. a.* To conjoin anew.

Reconnaissance, **Recon'noissance**, *n.* [Fr.] Act of reconnoitring; preliminary survey; or examination; specifically,

(*Mil.*) The examination of the features of a country, or the positions of troops, with a view to military move-

ments, such as the march of troops from one station to another, without reference to an enemy; the advance upon ground occupied by an enemy whom it is intended to force; the retreat before an enemy; or the taking up a position for defence.

(*Geol.*) The survey of a region in reference to its general geological characteristics.

(*Civ. Engin.*) An examination of the general features of a tract of country, preparatory to a more particular or exact survey, for the purpose of deciding upon the location of a public work.

R. in force. (*Mil.*) A demonstration of attack in heavy force, for the purpose of feeling the enemy's strength or position.

Reconnoître, (*rêk'on-noi'tr.*) *v. a.* [*Fr. reconnaitre*, from *Lat. recognoscere*.] To view, survey, or examine by the eye; — particularly, to examine with a view to military, geological, or engineering operations; to make a preliminary survey of.

Reconquer, (*-kôn'kér.*) *v. a.* To conquer over again; to recover by conquest; — hence, to regain; to recover; to get back again.

Reconquest, (*-kôn'kwest.*) A second conquest.

Reconsecrate, *v. a.* To consecrate afresh, or anew.

Reconsecration, *n.* Consecration for the second time.

Reconsider, *v. a.* To consider again; to renew the consideration of; to turn over in the mind again; to review or reexamine; as, to *reconsider* a proposition. — In legislative proceedings, to take up for renewed consideration that which has been previously acted upon; as, to *reconsider* a motion, to *reconsider* a vote of supply, &c.

Reconsideration, *n.* A renewed consideration or review in the mind; the taking up for renewed consideration of that which has been previously acted upon; as, the *reconsideration* of a rider to a legislative bill.

Reconsolidation, *n.* The state of being consolidated anew.

Reconstruct, *v. a.* To rebuild; to construct a second time; as, to *reconstruct* a city, to *reconstruct* the preamble to a bill.

Reconstruction, (*-strûk'shun.*) *n.* Act of reconstructing; state of being reconstructed; as, the *reconstruction* of a government.

(*Amer. Pol.*) A term applied, since the Civil War, to the reorganization of the Southern States under the recent Acts of Congress.

Recontin'nance, *n.* The state of recontinuing.

Recontin'nc, *v. a. and n.* To continue again or afresh.

Reconvene, *v. a. and v. n.* To convene, or call together, anew.

Reconvention, *n.* (*Civ. Law.*) An action brought by the defendant against the plaintiff, before the same judge.

Reconversion, *n.* Conversion for the second time.

Reconvert, *v. a.* To convert again, or anew.

Reconvey, (*-kon-vû.*) *v. a.* To convey back, or to the former place; as, to *reconvey* merchandise. — To transfer back to a former owner; as, to *reconvey* lands.

Reconveyance, *n.* The act of reconveying or making a transfer of title back to a former possessor.

Recopy, *v. a.* To copy again or afresh.

Record, *v. a.* [*Fr. recorder*, from *Lat. recordor* — *re*, again, and *cor, cordis*, the heart.] To cause to be remembered; to imprint deeply on the mind or memory; to register; to enroll; to write or enter in a book or on parchment, for the purpose of preserving authentic or correct evidence of a thing; to make a note of; as, to *record* the proceedings of a court of law, or of a legislative body, to *record* historical events, to *record* a will, lease, or deed.

— *n.* An authentic memorial; a register; a verified or official copy of any writing, or account of any facts or proceedings, entered in a book, or in any collection of archives, for preservation and reference; also, the book or manuscript containing such copy or account. See **ARCHIVES**.

Court of Record, a court whose acts and judicial proceedings are inscribed on parchment, or in books of archives, for a permanent memorial.

Record'er, *n.* One who records or registers; — specifically, an officer who registers writings or transactions; one who enrolls or records; a registrar. — The chief judicial officer of some cities or boroughs, so called because his court is a court of record; the chief law officer of the municipality of the city of London; also, the chief justice of British colonies in the East Indies.

(*Mus.*) A musical instrument, somewhat resembling the flageolet, formerly in vogue.

Recordership, *n.* The office or jurisdiction of a recorder.

Recorporification, *n.* Act or state of investing, or being invested, anew with a body. (*R.*)

Reconch, *v. n.* To lie down again.

Recount, *v. a.* [*Fr. raconter*, — *re*, and *conter*, to tell, from *conte*, recital of imaginary adventures; *It. contare*; *Sp. contar*.] To recite, as imaginary adventures; to go over in detail; to repeat; to relate; to rehearse; to narrate; to detail; to enumerate.

"Recount our blessings and compare our woes." — *Dryden*.

— To count or reckon again or anew.

Recomp, Recoupe, (*re-kôop.*) *v. a.* [*Fr. recouper*.] To cut afresh; — hence, to redivide or redistribute.

(*Law.*) To hold back a part of, as due.

Recoupe, *n.* (*Law.*) See **RECOUPMENT**.

Reconper, *n.* One who reconps.

Recoupment, Recoupe, *n.* (*Law.*) Act of retaining something due; diminution of a plaintiff's damages, in an action on an agreement, for default in performance on his part.

Recourse, *n.* [*Fr. recourir*; *Lat. recursus*, from *recurro* — *re*, and *curro, cursum*, to run.] A return; recurrence; renewed attack; as, *recourse* of sickness. — A

going to with a request or application, as for aid or protection; resort; recurrence in embarrassment, difficulty, perplexity, &c.; application of efforts, art, or labor.

"Our last recourse is therefore to our art." — *Dryden*.

Without *recourse*, words sometimes used as a rider to the indorsement of a negotiable instrument, to protect the indorser from liability to the indorsee and subsequent holders.

Recov'er, *v. a.* To cover anew or again.

Recover, (*-kûv.*) *v. a.* [*Fr. recouvrer*; *It. ricoverare*; *Lat. recuperare*, *recuperare* = *recupio* — *re*, and *cupio*, to take.] To get or obtain again; to win back; to regain; to get renewed possession of. — To restore from sickness; to revive from faintness, or apparent death; to bring back to life and health; to cure; — used with the reciprocal pronoun. — To repair the loss of, or to repair an injury done by neglect; to retrieve; to make good to one's self by reparation; as, to *recover* lost ground or time. — To bring back to a former state by liberation from capture or possession; to regain by act or effort; to reach; to come to.

(*Law.*) To gain as a compensation; to obtain in return for injury or debt; as, to *recover* debt and costs, or damages, in a court of law.

— *v. n.* To regain health after sickness; to grow well; — preceding *of or from*; as, he has *recovered from* the gout. — To regain a former state or condition after evil or misfortune; as, to *recover* from depression of spirits.

(*Law.*) To obtain a judgment; to succeed in cause at law; as, the plaintiff *recovered* in the case, with costs.

Recov'erable, *a.* That may be recovered or regained; that may be restored from sickness; that may be brought back to a former condition; that may be obtained from a debtor or possessor; as, the amount is *recoverable*.

Recoverableness, *n.* State or quality of being recoverable; susceptibility of being recovered.

Recoveree, *n.* (*Law.*) The person against whom a judgment is obtained in common recovery; — correlative to *recoveror*.

Recover'er, *n.* One who makes recovery.

Recover'or, *n.* (*Law.*) The demandant in a common recovery after judgment; — opposed to *recoveree*.

Recovery, (*-kûv'er-y.*) *n.* Act of recovering, or of regaining, retaking, or obtaining possession of anything lost. — Restoration from sickness, faintness, or apparent death; restoration from any evil or misfortune; capacity of being restored to health or prosperity. — The obtaining of a right to something, by a judgment of a court, from an opposing party in a suit at law.

Recovery, in *Ohio*, a township of Mercer co.; *pop.* abt. 1,200.

Recreancy, (*rêk're-an-sy.*) *n.* State or quality of being recreant; a cowardly yielding; mean-spiritedness.

Recreant, *a.* [*O. Fr. faint-hearted*; *L. Lat. receditus* — *re*, and *credo*, to trust to one. In the Middle Ages, those who delivered themselves up to an enemy were called *recediti*, or *recreanti*, and were accounted infamous.] Renegade; apostate; craven; false; unfaithful. — Crying for mercy, as a combatant in the trial by battle; yielding; — hence, cowardly; mean-spirited; craven; as, a *recreant* knight.

— *n.* A renegade; an apostate. — One who yields in combat; one who begs for mercy; — hence, a craven; a mean-spirited, cowardly wretch.

Recreate, *v. a.* [*Lat. recreo*; *Fr. récréer*.] To revive; to reanimate; — particularly, to divert; to amuse; to enliven; to entertain; to cheer; to refresh after toil; to afford pleasurable occupation in weariness; to gratify; to delight; to relieve.

— *v. n.* To take recreation.

Recreate, *v. a.* To make or create anew; to renew; as, to *recreate* an army.

Recreation, *n.* [*Fr.*; *Lat. recreatio*.] Act of recreating, or state of being recreated; relief from toil or pain; refreshment of the strength or spirits after labor or exertion; pleasurable occupation in sorrow or distress; amusement; diversion; entertainment; sport; cheerful or invigorating exercise.

Recreative, *a.* [*Fr. récréatif*.] Serving to recreate; refreshing; giving new vigor or animation; infusing relief or abstraction after labor or pain; diverting; amusing; yielding pleasurable change; as, *recreative* exercises.

Recreatively, *adv.* In a manner to afford recreation.

Recreativeness, *n.* State or quality of being recreative.

Recrement, *n.* [*Fr.*; *Lat. recrementum*, from *recerno* — *re*, and *cerno*, to separate.] Superfluous matter separated from that which may be utilized; refuse; dross; scoria; spume; as, the *recrement* of ore.

Recremental, Recrementitial, Recrementitious, (*-tish'al, tish'us.*) *a.* [*Fr. recrementiel*.] Drossy; consisting of superfluous matter separated from that which is valuable and useful.

Recrimin'ate, *v. n.* [*Fr. récriminer*; *Lat. re*, and *criminor, criminator*, to accuse one of a crime.] To return one accusation with another; to retort a charge; to charge an accuser with the like offence.

— *v. a.* To accuse in return.

Recrimination, *n.* [*Fr.*] Act of recriminating; the return of one charge or accusation with another.

"The quarrel is carried on with mutual recriminations."

Govt. of the Tongue.

(*Law.*) An accusation brought by the accused against the accuser upon the same fact; a counter-charge.

Recrimin'ative, Recriminatory, *a.* [*Fr. recriminatoire*.] Retorting accusation.

Recriminator, *n.* One who recriminates or retorts a charge.

Recriminatory, *a.* See **RECRIMINATIVE**.

Recross, *v. a.* To cross again, or a second time.

Recrudescence, Recrudescence, Recrudescency, (*-dê's'sens, dê's'sen-sy.*) *n.* [*Fr. recrudescence*.] The state of becoming sore again.

(*Med.*) Increased acuteness of a disease after an intermission of ease.

Recrudescent, *a.* [*From Lat. recrudescere* — *re*, again, and *crudescere*, to become hard or raw.] Becoming raw, sore, or painful again, as a wound.

Recruit, (*re-krû't.*) *v. a.* [*Fr. recruter*; from *Lat. recresco* — *re*.] To cause to grow up or increase again; to repair; to recover; to regain; to recuperate; to gain new supplies of anything wasted or deficient; as, fresh air and exercise *recruit* one's strength. — Hence, to reinvigorate the fallen condition of; to restore the lack of tone or muscularity in; to revive in health or strength. — To furnish with new supplies of men, as an army; to fill up by enlisting new men, as the ranks of a regiment; to supply with new men any deficiency of troops.

— *v. n.* To gain new supplies of anything diminished or wasted; to gain renewed health, spirits, strength, and the like; as, pulmonary invalids often *recruit* in warmer climates. — To raise new men for military or other service; to gain new supplies of soldiers; to enlist raw troops.

— *n.* The rehabilitation of anything wasted or lacking. — A newly raised soldier to supply the deficiency of an army; a newly-enlisted man for the ranks.

Recruiter, *n.* One who recruits; — especially, a recruiting-officer.

Recruiting, *n.* The business of raising new soldiers to supply the loss of men in an army.

Recruiting-officer, a military officer charged with the gain of recruits for the ranks.

Recruitment, *n.* Recruiting.

Recrystallization, *n.* Act or process of crystallizing for the second time.

Recrystallize, *v. n.* To crystallize over again.

Rectal, *a.* (*Anat.*) Belonging, or relating, to the rectum.

Rectangle, *n.* [*Fr.*, from *Lat. rectangulus* — *rectus*, right, and *angulus*, an angle.] (*Geom.*) A right-angled parallelogram; a right angle made by the falling of one line perpendicularly upon another.

Rectangled, *a.* Having one or more right angles.

Rectangular, *a.* [*Fr. rectangulaire*.] Right-angled; having one or more angles of 90 degrees.

Rectangularity, *n.* State or quality of being right-angled.

Rectangularly, *adv.* With right angles.

Rectangularness, *n.* State or quality of being rectangular.

Rectifiable, *a.* Capable of being rectified; capable of being corrected or set right.

(*Math.*) Applied to curves such that straight lines can be constructed equal to any definite portion of them.

Rectification, *n.* [*Fr.*] Act or operation of rectifying, or of correcting, amending, or setting right that which is wrong or erroneous.

(*Chem.*) The process of refining or purifying any substance by repeated distillation. See **DISTILLATION**.

R. of a curve. (*Math.*) The operation of finding an expression for the length of a definite portion of a curve.

(*Astron.*) The adjusting of a celestial or a terrestrial globe for the solution of a given problem.

Rectifier, *n.* One who, or that which, rectifies, corrects, or amends.

Rectify, *v. a.* [*Fr. rectifier*; from *Lat. rectus*, right, and *facere*, to make.] To make right, as that which is wrong, erroneous, or false; to correct; to amend.

(*Chem.*) To refine by repeated distillation, separating the grosser parts.

Rectilinear, Rectilinear, *a.* [*From Lat. rectus*, right, and *linea*, a line.] Right- or straight-lined; consisting of a right line or of right lines; bounded by right lines; straight.

Rectilinear'ity, *n.* The state or quality of being right-lined.

Rectilinearly, *adv.* In a right line.

Rect'ion, *n.* [*Lat. rectio, rectionis*, from *regere*, to govern.] (*Gram.*) State or power of one word requiring another to be put in a certain case or mode; government.

Rectitude, *n.* [*Fr.*; *Lat. rectitudo*, from *rectus*, right, straight.] Straightness. (*R.*) — Rightness of principles or practice; exact conformity to truth or to the rules prescribed for moral conduct, either by divine or human laws; integrity; uprightness.

Rec'to, *n.* [*Lat. rectus*, right.] (*Law.*) A writ of right.

(*Priv't.*) A right-hand page; — opposed to *verso*.

Rec'toi, *n.* [*Lat.*, from *regere*, to govern.] A ruler or governor. (*R.*)

(*Ecdl.*) A clergyman who has the charge and care of a parish, and receives the tithes, &c.; or, the parson of an unappropriated parish.

— The head-master of a public school. — The superior officer, or chief, of a convent or religious house.

Rec'toral, *a.* Relating to government, or to a rector; rectorial.

Rec'torate, *n.* A rectorship.

Rec'toress, Rec'trix, *n.* A governess. (*R.*)

Rec'torial, *a.* Pertaining to a rector or rectory; rectoral.

Rec'torship, *n.* The office or rank of a rector.

Rec'tortown Station, in *Virginia*, a post-village of Fauquier co., abt. 130 m. N. by W. of Richmond.

Rec'torville, in *Illinois*, a post-village of Hamilton co., abt. 90 m. S.S.E. of Vandalia.

Rec'tory, *n.* A parish church, parsonage, or spiritual living, with all its rights, tithes, and glebes. — A rector's mansion; a parsonage-house.

Rectum, *n.* [Lat. *rectum*.] (*Anat.*) The third and last portion of the large intestines (Fig. 218), and so named from its running the greater part of its course in a straight line. The rectum is united above with, or rather is a continuation of, the colon, and terminates below, after a curve, at what is denominated the *anus*, where it is surrounded by the *sphincter* and *levator* muscles.

Recubation, *n.* [Lat. *recubo*.] The act of lying or leaning.

Recumbent, *v. a.* To cultivate anew.

Recumbency, **Recumbence**, *n.* Act or posture of leaning, reclining, or lying; rest.

Recumbent, *a.* [Lat. *recumbens*, from *recumbo*, — *re*, and *cumbo*, to lie.] Leaning; reclining. — *Reposing*; *inactive*; *idle*.

Recumbently, *adv.* In a recumbent posture.

Recuperable, *a.* [Fr. and Sp.] Capable of being recovered; recoverable. (*R.*)

Recuperate, *v. a.* [Lat. *recupero*, from *re*, again, and *capio*, to take.] To regain; to recover. (*R.*)

Recuperation, *n.* [Lat. *recuperatio*.] The recovery of a thing lost.

Recuperative, **Recuperatory**, *a.* Belonging to recovery. (*R.*)

Recur, *v. n.* [Lat. *recurro*, from *re*, and *curro*, to run.] To resort; to have recourse; to take refuge in. — To return to the thought or mind.

Recurrent, **Recurency**, *n.* Act of recurring; return; resort.

Recurrent, *a.* [Fr.; Lat. *recurrens*.] Recurring from time to time; recurring at intervals.

(*Anat.*) Noting several arterial and nervous branches, which seem to reascend towards the origin of the trunk whence they emanate.

(*Crystall.*) Applied to crystals whose faces, being counted in annular ranges from one extremity to the other, furnish two different numbers, which succeed each other several times, as 4, 8, 4, 8, 4.

Recurring, *a.* Returning regularly to the thought or mind; recurrent.

R. series. (*Math.*) A series in which each term is equal to the algebraic sum of the products obtained by multiplying one or more of the preceding terms by certain fixed quantities, which, taken in their order, are called the *scale of the series*.

Recurvate, *v. a.* [Lat. *recurvo*.] To bend back.

Recurvation, *n.* Flexure backward.

Recurve, *v. a.* [Lat. *recurvo*, from *re*, and *curvo*, to bend.] To bend, or curve, backwards or back.

Recurved, **Recurvuous**, *a.* (*Bot.*) Curved outwards or backwards.

Recurvirostridae, *n. pl.* [Lat. *recurvus*, bent backward, and *rostrum*, a beak.] (*Zool.*) The Avoset family, order *Grallatores*, comprising birds which are at once distinguished by their excessively elongated legs, long and slender neck, and long and slender bill. See AVOSET.

Recurvity, *n.* Flexure backwards; recurvation.

Recurvopent, *a.* (*Bot.*) Bent back and spreading.

Recusant, *n.* One who refuses to acknowledge a certain power or authority.

(*Ecl. Hist.*) A term in vogue in England in the 16th and 17th centuries, and used to express any one who refused to acknowledge the king's supremacy in matters of religion and accept him as head of the Church. In this sense the term came into use in the time of Henry VIII., when that monarch, abjuring the creed and supremacy of the Catholic Church, and the Pope as head of the faith, accepted the Reformation, and, to the horror of many of his pious subjects, usurped the Papal attribute of spiritual head of the Church. In the next century, when dissent began to creep into the established religion, the term of *recusant* was applied to any dissenter or person who, from motives of conscience, declined, or openly refused, to accept the communion as administered by the Church of England, and signified any Nonconformist, from a Covenanter to a Friend. The term at length became so odious and comprehensive that it embraced all those who, on the most trivial plea, absented themselves from church or public service, and all Catholics who firmly adhered to their faith were stigmatized as *Popish recusants*.

Recusation, *n.* [Lat. *recusatio*.] (*Civil and Canon Law*.) A plea or exception by which the defendant requires that the judge having jurisdiction of the cause should abstain from deciding, upon the ground of interest, or for a legal objection to his prejudice. — The refusal of a judge to sit for a like reason.

Recusative, *a.* Refusing; denying.

Recusation, (*re-kush'un*), *n.* [Lat. *recutio*, *recussus*, to cause to rebound.] Act of beating or forcing back.

Red, *a.* [A. S. *red*, *read*; Ger. *roth*; Lat. *ruber*, *rutilus*; Gr. *erythros*.] Of a color resembling that of arterial blood; crimson.

n. The second and intermediate of the primary colors, standing between yellow and blue, and in like intermediate relation also to white and black, or light and shade. — Hence, it is preëminent among colors, as well as the most positive of all, forming with yellow the secondary orange and its near relatives, scarlet, etc.; and with blue the secondary purple and its allies, crimson, etc. It gives some degree of warmth to all colors, but most so to those which partake of yellow.

pl. (Med.) The menses.

Redact, *v. a.* [Lat. *redigo*.] To force, bring, or reduce to form. (*R.*)

Redaction, *n.* The act of digesting or reducing to form, as literary materials.

Redan, *n.* [Fr.] (*Fort.*) A sort of rampart placed in

advance of the principal works, to defend the most exposed parts. The redan usually consists of a rampart of earth, and is generally looked upon as the simplest kind of field fortifications.

Red-ant, *n.* (*Zool.*) See ANT.

Red-antimony, *n.* (*Chem.*)

A red crystalline mineral, consisting of oxide of antimony and sulphate of antimony.

Fig. 2227.—REDAN.

Red-ash, *n.* (*Bot.*) The *Fraxinus pubescens*, a species of ash abundant in Pennsylvania. It rises 60 ft., with a straight trunk covered with bark of a deep-brown color. Leaves of about 7 leaflets, which become reddish underneath. The wood is similar to that of the white-ash, and is valuable for about the same diversified uses. See FRAXINUS.

Red Bank, in *New Jersey*, a village of Gloucester co., abt. 5 m. S.W. of Camden.

—A post-town of Monmouth co., about 26 m. S. of New York city, on Shrewsbury river, and on the N. J. Southern R. R. Pop. (1895) 4,888.

Red Bank, in *Pennsylvania*, a township of Armstrong co.—A township of Clarion co.

Red Bank Creek, in *Mississippi*, enters Coldwater river in De Soto co.

Red Bank Creek, in *Pennsylvania*, enters the Allegheny river between Armstrong and Clarion cos.

Red Bay, *n.* (*Bot.*) See LAURUS.

Red-bird, *n.* (*Ornith.*) A bird of the family *Sylvioidæ*, common in the Southern Atlantic and Gulf States. It is about 7 inches long; the bill rather straight, notched at the tip; the wings elongated. Its color is light-red, with the back more dusky.

Red Bluff, in *California*, a city, cap. of Tehama co., about 150 m. N. by W. of Sacramento, on the Sacramento river, at the head of its navigation. Pop. (1897) 2,880.

Red-breast, *n.* A bird so named from the color of its breast; the robin.

Redbreasted, *a.* Having a red breast.

Red-bred, *n.* (*Bot.*) See CERCIS.

Red-brown, *a.* Brown mixed with red.

Red Bud, in *Illinois*, a city of Randolph co., about 24 m. S. of Belleville. Pop. (1897) 1,420.

Red Bud, in *Missouri*, a village of Ozark co., abt. 35 m. E.S.E. of Springfield.

Red-burn, *n.* That has a fiery color.

Red-cap, *n.* (*Zool.*) A species of goldfinch with the top of the head red.

Red-cedar, *n.* (*Bot.*) See JUNIPERUS.

Red Cedar, in *Iowa*, a village of Cedar co., abt. 20 m. E. of Iowa City.

Red Cedar River, rises in Freeborn, Minnesota, and flowing S. enters Iowa in Mitchell co., thence pursuing an almost direct S.S.E. course to Muscatine co., it turns to the S.W. and enters the Iowa River in Louisa co. Length, abt. 300 m.

Red Cedar River, in *Michigan*, rises in Livingston co., and enters Grand River at Lansing, in Iugham co.

Red Cedar (or MEMONONEE) River, in *Wisconsin*, rises in Dallas co., and flowing S., enters the Chippewa River in Pepin co.

Red-chalk, (*-chawk*), *n.* (*Min.*) A red, argillaceous iron-ore, used as a drawing material.

Red-cheeked, (*-chékt'*), *a.* With red cheeks.

Red Clay, in *Georgia*, a post-village of Whitfield co., abt. 245 m. N.W. of Milledgeville.

Red-clay Creek, rises in Chester co., Pennsylvania, and flowing S.E. into Delaware, joins Whiteclay Creek in New Castle co. to form the Christiana.

Red-coat, *n.* A name given to an English soldier, in vulgar parlance;—derived from the color of his uniform.

Red Copper-ore, *n.* (*Min.*) Native dioxide of copper, or Cu_2O , containing 88.8 per cent. of copper and 11.2 per cent. of oxygen. It is of a deep-red color, which usually can only be seen by transmitted light. The variety crystallizing in the octahedral form is called *Chalcotrite*; a lighter red fibrous variety is called *Chalcotrichite*, or *Plush Copper-ore*; while the massive, or earthy kind, is known as *Brick* or *Tile-ore* (Ziegelerz).

Red Coral, *n.* See CORAL.

Red Creek, in *California*, enters the Sacramento River between Colusa and Shasta cos.

Red Creek, in *Mississippi*, enters Black Creek in Jackson co.

Red Creek, in *New York*, a post-village of Wayne co., abt. 160 m. N.W. by W. of Albany.

Red Currant, *n.* (*Bot.*) See RIBES.

Redden, (*red'dn*), *v. a.* To make red or roseate.

—*v. n.* To grow or become red or rosy; to blush; to flush, as with anger or confusion.

Red Deer, *n.* (*Zool.*) See DEER.

Red Deer, a river and small lake of British N. America, the former of which joins the Saskatchewan River abt. Lat. 50° 40' N., Lon. 110° 5' W.

Redden'dum, [Lat.] (*Law*.) That clause in a deed by which the grantor reserves something new to himself out of that which he granted before.

Redding, in *Indiana*, a township of Jackson co., containing the post-village of Reddington, abt. 16 m. N.E. of Brownstown.

Reddish, *a.* Somewhat red; moderately red; rosy.

Reddishness, *n.* Redness in a moderate degree.

Redditch, a town of England, co. of Worcester, 12 m. S.S.W. of Birmingham. *Manuf.* Needles, pins, fish-hooks, and fishing-tackle. Pop. 5,570.

Reddition, (*red-dish'un*), *n.* [Lat. *reditio*, from *reddo* — from *re*, and *do*, *dare*, to give.] Act of giving back or restoring; restitution.—Explanation; representation. (*R.*)

Redditive, *a.* [Lat. *redditivus*.] (*Gram.*) Answering to an interrogative.

Red Dog, in *California*, a post-village of Nevada co., abt. 40 m. E. of Marysville.

Rede, *v. a.* To advise; to counsel. (*Local Eng.*)

Redeem, *v. a.* [Lat. *redimo*, from *re*, and *emo*, to buy, to purchase.] To buy or purchase back; to repurchase. — To ransom; to liberate or rescue from captivity or bondage, or from any obligation or liability to suffer, or to be forfeited by paying an equivalent for. — To rescue; to recover; to deliver from. — To improve or employ to the best purpose, as time. — To recompense; to compensate; to make amends for. — To pay the penalty of; to suffer for.

Redeemable, *a.* That may be redeemed; capable of redemption; as, *redeemable* property. — Payable or purchasable in bullion, and capable of being thus brought into the possession of government, or the original promisor; as, *redeemable* capital.

Redeemableness, *n.* State or quality of being redeemable.

Redeemer, *n.* One who redeems or ransoms. — Specifically, the Saviour, Jesus Christ.

Redeliberate, *v. a.* To deliberate anew.

Redeliver, *v. a.* To deliver back. — To deliver anew; to set free a second time; as, to *redeliver* a captive.

Redeliverance, *n.* A second deliverance.

Redelivery, *n.* Act of delivering back; as, the *redelivery* of a letter. — A second delivery or liberation, as of a prisoner.

Redemand, *v. a.* [Fr. *redemander*.] To demand back again.

—*n.* A demanding back again.

Redemandable, *a.* That may be demanded back.

Redemise, (*-miz'*), *v. a.* To convey or transfer back, as an estate.

—*n.* (*Law*.) Reconveyance; as, the demise and *redemise* of an estate.

Redemptible, *a.* Redeemable; that may be redeemed.

Redemption, *n.* [Fr., from Lat. *redemptio*.] Act of redeeming, or state of being redeemed; repurchase; ransom; release; rescue; deliverance; as, the *redemption* of prisoners of war, the *redemption* of a ship and cargo; — hence, specifically

(*Com.*) Repurchase by the issuer of bills, notes, or other certificates of indebtedness, by making payment to the holder thereof.

(*Theol.*) Our recovery from sin and death by the obedience and sacrifice of Christ, who is on this account called the *Redeemer*.

(*Law*.) The deliverance of an estate from a mortgage; or the taking back of mortgaged property upon performance of the terms or conditions attending its conveyance; also the right of redeeming and of reentry upon an estate mortgaged.

Redemptionary, *n.* One who is, or may be, redeemed. (*R.*)

Redemptioner, *n.* One who effects self-redemption. — Formerly, an emigrant from the Old World to the New, whose services were mortgaged for a stipulated term, to defray the cost of his passage.

Redemptive, *a.* Serving to redeem; redeeming; as, the *redemptive* mission of the Saviour.

Redemptorists, *n. pl.* (*Ecl. Hist.*) A religious order among the Roman Catholics, founded by Alphonso de Liguori, *q. v.*, in the city of Scala, in 1732, and secured the approval of Pope Benedict XIV. in 1749. Besides the usual monastic vows, they bind themselves to labor for the propagation of the Catholic faith, and have for their principal system of action the conducting of *missions*, which last from one week to one month, during which time the missionaries endeavor to prevail upon all the members of a church for a thorough reformation of their life. They have 10 houses in the United States — at Annapolis, Baltimore, Buffalo, Cumberland, Detroit, New Orleans, New York, Philadelphia, Pittsburgh, and Rochester. An independent organization, called the *Paulists*, was founded some years ago for missionary purposes better suited for this country, by some American Redemptionists, who left the congregation with the authority of the Pope, and organized a first house in New York in 1858. A congregation of Redemptorist nuns, also, founded by St. Liguori, but which never extended itself widely, has a house in Third street, New York.

Redemptory, *a.* Serving to redeem; applied to ransom.

Redent'ed, *a.* Indented like the teeth of a saw.

Redescend, (*-de-sénd'*), *v. n.* [Fr. *redescendre*.] To descend again.

Redeye, (*red'i*), *n.* (*Zool.*) A European fish, *Leuciscus erythrophthalmus*, belonging to the family *Cyprinidæ*, so called from the color of its iris; — also called *Rudd*. — An American vulgarism for fiery new whisky.

Redfield, in *Iowa*, a post-town of Dallas co., about 33 m. W. of Des Moines.

Redfield, in *New York*, a post-township of Oswego county.

Red-fire, *n.* (*Pyrotech.*) A pyrotechnical compound which burns with a beautiful red or pink flame. It consists of nitrate of strontia, mixed with charcoal and a little sulphur and chlorate of potash.

Redford, in *Michigan*, a post-village and township of Wayne county, abt. 13 m. N.W. of Detroit. *Manuf.* Cheese and flour.

Redford, in *New York*, a post-village of Clinton co., abt. 140 m. N. of Albany.

Red Gour, *n.* (*Bot.*) See CUCURBITA.

Redgrave, RICHARD, R. A., an English painter, *z. in* Pimlico, Loudon, 1804. His best works are—*The Semp-*

stress; *The Solitary Pool*; *Little Red Riding-Hood*; *The Mid-wood Shade*; and *The Country Cousins*. He is also the author, in conjunction with his brother, S. Redgrave, of a history of British art, published in 1866, under the title of *A Century of Painters*.

Red Gum, *n.* (*Med.*) An eruptive disease to which children at the breast are very subject, particularly about the time when the gums first begin to get hard and painful. Though very often excited by irritation, it sometimes proceeds from some imperfection of the milk, or disordered state of the mother or nurse's system. The eruption commences with a crop of very small, hard pimples, of a pale-red or pinkish color, which, from the whiteness of the skin surrounding the patches, gives the rash a more positive appearance than it otherwise would have. The eruption is attended with considerable itching, causing the infant great irritation: it may continue from two to three days, and usually terminates by a slight desquamation. This is a very harmless affection, and merely requires a warm bath to allay the itching and relieve the breathing, which is sometimes affected when the eruption is full. A little mild aperient medicine, such as magnesia, with a small quantity of manna dissolved in water, may be given night and morning.

—A disease found in grain, being a kind of blight.

Red-hand, *adv.* In the very act (*flagrantē delicto*), as it were, with hands reddened with blood; — said of one caught in the act of homicide.

—*n.* (*Her.*) Same as BLOODY-HAND, *q. v.*

Red-head, *n.* A person having hair of a red or reddish hue.

(*Zoöl.*) See *ATHTYA*.

(*Bot.*) A plant (*Asclepias curassavica*). See *ASCLEPIAS*.

Red-heat, *n.* A degree of heat amounting to redness.

Red Hook, in *New York*, a post-township of Dutchess co.

Red-hot, *a.* Red with heat; heated to vivid redness.

Red House, in *New York*, a township of Cattaraugus co.

Red House, in *Virginia*, a post-village of Charlotte co., abt. 112 m. S.W. of Richmond.

Red-ient, *a.* [From *Lat. redire*, to return.] Returning; going back. (*R.*)

Redigest, (*jēst'*) *v. a.* To digest anew; to reduce to form a second time.

Redimin'ish, *v. a.* To diminish again, or anew.

Redin'tegrate, *v. a.* [*Lat. re*, again, and *integrare*, to renew; *Fr. réintégrer*.] To make whole again; to renew; to renovate; to restore to a state of integrity or soundness.

Redintegration, *n.* [*Lat. redintegratio* — *re*, and *integrare*, to make whole.] Renewal; renovation; restoration to a whole or sound state.

(*Chem.*) The restoration of any mixed body or compound to its integral constituent parts.

Red Iron-ore, *n.* (*Min.*) A name under which are included those varieties of Hematite which have a non-metallic or submetallic lustre.

Redisburse, *v. a.* To repay; to refund; to reimburse.

Rediscover, *v. a.* To discover afresh, or again.

Redispose, *v. a.* To dispose or adjust anew.

Redisseize, **Redisseize**, *v. a.* (*Law.*) To disseize a second time.

Redisseizin, *n.* (*Law.*) A disseizin by one who once before was adjudged to have disseized the same person of the same lands, &c.; also, a writ which lay in such a case.

Redisseizor, *n.* One who redisseizes.

Redissolve, (*-zolv*) *v. a.* To dissolve anew, or a second time.

Redistain'er, *n.* [*re* and *distrainer*.] One who distains again, or time after time.

Redistrib'ute, *v. a.* [*re* and *distribute*.] To distribute again.

Redistribution, *a.* A second distribution; a dealing back.

Redivide, *v. a.* To divide again, or anew.

Red Lake, in *Minnesota*, a lake of considerable extent, situated in Beltrami county. It consists of two large bodies of water connected by a narrow strait. It receives numerous streams, and has its outlet in Red Lake river, which flows west into the Red River of the North.

Red Land, in *Arkansas*, a township of Hempstead county.

Red Lead, *n.* (*Min.*) See *MINIUM*.

Red-letter, *n.* Having, or marked by, red letters.

Red-letter day, a fortunate or auspicious day; — so called because the holidays, or saints' days, were marked in the old calendar with red letters.

Red Lion, in *Delaware*, a post-village and hundred of New Castle co., about 12 miles S.W. of the city of Wilmington.

Red Lion, in *New Jersey*, a village of Burlington co., abt. 9 m. S.W. of Mount Holly.

Red-liquor, (*-lik'ur*) *n.* (*Chem.*) A crude acetate of alumina, employed as a mordant in calico-printing.

Red'ly, *adv.* With redness; so as to be, or make to be, red.

Red'man, in *Iowa*, a village of Tama co., abt. 37 m. W. of Cedar Rapids.

Red Mul'berry, *n.* (*Bot.*) See *MORACEÆ*.

Red'ness, *n.* [*Fr. rednesse*.] State or quality of being red; red hue or color.

Red Oak, in *Iowa*, a post-village and township of Cedar co., abt. 6 m. N. of Tipton; — a township of Montgomery co.

Red Oak Creek, in *Georgia*, enters Flint River from Merriwether co.

Red'olence, **Red'olency**, *n.* [From *redolent*.] State or quality of being redolent; fragrance; perfume; sweetness of scent or smell; as, the redolence of flowers.

Red'olent, *a.* [*Lat. redolens*, from *redoleo* — *re*, and *oleo*, to smell.] Having or diffusing fragrance, or a sweet scent; odorous; full of perfume; — often followed by *of*.

"Thy odours, O how redolent!" — *Sandys*.

Red'on, a town of France, dept. of Ille-et-Vilaine, on the Vilaine, 38 m. N.W. of Nantes. *Manuf.* Serges. Shipbuilding is extensively carried on. *Pop.* 6,000.

Redouble, (*-dūb'l*) *v. a.* [*Fr. redoubler*.] To double again; to repeat in return; to repeat often; to increase by repeated or continued efforts; as, he redoubled his attentions.

—*v. n.* To double again; to become twice as much; to suffer considerable augmentation.

Redoubt, **Redout**, (*re-dout'*) *n.* [*Fr. redoute*.] (*Fort.*) A term applied to nearly every kind of work intended to fortify military positions. It is also used to signify works constructed within others, so as to prolong their defence; and to detached works used to secure some portion of ground which would be of advantage to the besiegers.

—*v. a.* [*Fr. redoubter*.] To regard with favor; to stand in awe or dread of; as, "my most redoubled lord." *Shaks.*

Redoubtable, **Redoutable**, (*-dout'a-bl*) *a.* [*Fr. from redouter*; *Lat. re*, and *dubito*, to doubt.] Formidable; awe-inspiring; terrible to foes; as, a redoubtable warrior; — hence, valorous; — sometimes in contempt or burlesque; as, my redoubtable rival, the counter-jumper.

Redou'da, an island of Brazil, off the entrance of the Bay of Rio de Janeiro.

Redon'da, an islet of the British W. Indies, between the islands of Nevis and Montserrat; *Lat.* 16° 55' N., *Lon.* 62° 19' W. — An islet of the British W. Indies, off the N. extremity of the island of Grenada.

Redound, *v. a.* [*Fr. redonder*; *Lat. redundo* — *re*, and *undo*, to surge, swell.] To flow back, as waves; to be sent, rolled, or driven back.

"Driven back, redounded, as a flood." — *Milton*.

—To conduce to the consequence; to contribute; to result; to produce in the effect; as it redounds to his honor. — To overflow; to be in excess or abundance; to be over and above in quantity.

—*n.* Return, as of consequence or effect; result; requital; as, "redound of glory." (*Tennyson*). — Rebound; reversion; echo. (*R.*)

Redo'wa, *n.* A slow and graceful dance in triple time.

Red'-poll, **Red'-pole**, *n.* (*Zoöl.*) See *LINNET*.

Redraft, *v. a.* To draft, draw, or delineate anew; as, to redraft a sketch or document.

—*n.* A second draft or copy.

(*Com.*) A new bill of exchange which the holder of a protested bill draws on the drawer or indorsers, by which he effects reimbursement to himself the amount of the protested bill, with all incidental costs and charges.

Redraw, *v. a.* To draw anew; to draw a second draft or copy.

—*v. n.* (*Com.*) To draw a new bill of exchange, as the holder of a protested bill, on the drawer or indorsers.

Redress, *v. a.* [*Fr. redresser*, from *It. dirizzare*, from *Lat. re*, and *dirigo*, directed, to lay or make straight.] To set right or straight; to amend; to rectify. (*R.*) — To set right, or remedy, as a wrong; to repair, as an injury; to ease or relieve from; to make amends for; as, to redress grievances. — To make compensation or amends to; to relieve of something unjust, obnoxious, or oppressive; to grant relief to.

—*n.* A setting right or straight; reformation; amendment. (*R.*) — A rectifying; an adjusting; relief; remedy; reparation; deliverance from wrong, injury, or oppression; as, to seek redress from the law. — A redresser; one who administers relief.

Redress'al, *n.* Act of redressing; state of being redressed; redress.

Redress'er, *n.* One who makes or gives redress.

Redress'ible, *a.* That may be redressed or relieved; reparable; as, a redressible wrong.

Redress'ive, *a.* Giving redress, or affording relief or succor; as, redressive measures.

Redress'less, *a.* Without redress, relief, or amendment.

Redress'ment, *n.* Redress; redressal; act of redressing.

Redriv'en, *p. a.* Driven back, or again.

Red River, the most S. of the great tributaries of the Mississippi River, is formed by the confluence of several branches, in the N.W. part of Texas, and flowing generally E. by S., between that State and Indian Territory, into Arkansas, turns to the S., and enters Louisiana. Thence traversing the latter State in a S.E. direction, it joins the Mississippi River between Concordia and Avozelles parishes; *Lat.* 31° N., *Lon.* 91° 50' W. The sources of the *R. R.* rise in the deep fissures or cañons of a sterile table-land, known as *El Llano Estacado*; thence, for about 500 m., their course is through an arid, sandy plain, almost totally destitute of vegetation. The banks then begin to contract, and the bed to deepen, but the shores remain low, and are subject to frequent inundation. Immense forests now appear, and the adjoining land becomes as preëminently fertile as it was before sterile. At certain points, owing to the light, alluvial nature of the banks, the earth is washed down, carried along, and deposited at other points, so as to entirely change the channel of the river. Large quantities of drift-wood collect also, and by choking up the bed of the river, cause the country to be inundated for miles around. One of these great rafts, as they are called, was removed by the U. States government in 1834-5, at an expense of \$300,000. Length of main stream, abt. 1,200 m.; including longest fork, 2,100 m.; navigable abt. 500 m.

Red River, in *Arkansas*, a township of Stone county.

—A township of Van Buren county.

Red River, in *Kentucky*, enters the Kentucky River between Clark and Estill cos.

Red River, in *Michigan*, enters Clinton River from Macomb co.

Red River, in *Tennessee*, enters the Cumberland River in Montgomery co.

Red River, in *Texas*, a N.E. co., adjoining Indian Territory; area, abt. 1,100 sq. m. *Rivers.* Red River and its Sulphur Fork. *Surface*, mostly level; *soil*, exceedingly fertile, producing a great abundance of cotton, corn, and hay. *Cap.* Clarksville. *Pop.* (1897) 22,650.

Red River Country, or **PRINCE RUPERT'S LAND**. See *NORTHWESTERN TERRITORIES OF CANADA*.

Red River of the North, rises among the numerous lakes in Otter Tail co., Minnesota, and flows a circuitous S. and W. course to the W. boundary of the State. Thence pursuing an almost direct N. course between Minnesota and Dakota, it enters British N. America, and empties into Lake Winnipeg. *Length*, abt. 700 m.

Red Rock, in *Iowa*, a village and township of Marion co., about 95 m. W. S.W. of Iowa City.

Red Rock, in *Minnesota*, a township of Mower co.

—A former post-village of Ramsey co., about 6 m. S.E. of St. Paul.

Red-root, *n.* (*Bot.*) *Lacnathes tinctoria*, a plant of the ord. *Hamnecoraceæ*, found in swamps and on borders of ponds throughout the U. States. It is an interesting plant, with rush-like leaves. Stem erect, strict, 18-24" high, clothed with white wool above. Leaves mostly radical, fleshy, 3-4" wide and nearly as high as the stem. Corymb terminal, close, 15-30 flowered. Flowers densely clothed with white wool outside, glabrous and yellow within. Anthers bright-yellow. The root is said to be employed in dyeing. (*Wood.*) — Also a plant of the genus *CEANOTHUS*, *q. v.*

Red'ruth, a town of England, co. of Cornwall, 9 m. N. W. of Falmouth; *pop.* 8,000.

Red-san'dal, **Red San'ders**, *n.* (*Bot.*) See *PTEROCARPUS*.

Red Sea. An arm of the Indian Ocean, communicating with the Gulf of Aden by the Straits of Bab-el-Mandeb, 13½ m. in width, and running N.N.W. in a long, deep, and narrow channel between Arabia and Africa to the Isthmus of Suez, through which it has an artificial communication with the Mediterranean by way of the Suez Canal. Its length is about 1,200 m., and its greatest width about 205 m. Its central portion is from 100 to 200 m. wide, while it narrows in the S., and in the N. is divided by the peninsula of Sinai into two gulfs, the Gulf of Suez, 170 m. long by 30 wide, and the Gulf of Akaba, 100 m. long. It is remarkable for the desolateness of the regions which adjoin the bare volcanic rock on its shores and bottom, and the high temperature of its waters, which increases from Suez southward until it amounts to upward of 84°. This is but little below the tropic temperature of the Pacific, while the lack of cooling winds renders it difficult to endure. On the Arabian side the *R. S.* is bordered by narrow sandy plains, closed in by ranges of barren mountains. The African border lands are flat and sandy in the north, while to the south high tablelands rise inland, which in Abyssinia become lofty mountains. The navigation is rendered dangerous by coral reefs, which run parallel to both shores. A dangerous reef, named the Dædalus, lies in the path of steamers in *Lat.* 24½° N., on which a lighthouse has been placed. The principal harbors on the Arabian side are Mocha, Jeddah, Hodeida, Lokeyyah, and Yenbo; on the African side, Massowah, Suakin, and Khor Nowarat. The greatest depth in the *R. S.* is about 1,200 fathoms, and the mean depth about 375 fathoms. The evaporation is great and the air always very moist in summer, which adds greatly to the oppressiveness of the temperature. Owing to the absence of rivers, the bottom deposits resemble those of the open ocean, the marine flora and fauna being quite extensive. The *R. S.* was much used by the Phœnicians and other maritime peoples of ancient times, and has been revived to a large extent in modern times since the excavation of the Suez Canal. A very large steamer traffic now makes use of its waters. See *SUEZ, CANAL OF*.

Redsear, *v. n.* To crack when red-hot, as metal under the forge-hammer; — a term employed by forgers.

Red'shank, *n.* A bare-legged person; — a contemptuous epithet formerly applied to the Scots Highlanders, in allusion to their exposed legs.

Red'short, *a.* Breaking short when red-hot, as a metal; — a term in use among forgers.

Red'-silver,

n. (*Min.*) A mineral of a black color, sometimes approaching to cochineal-red, and consisting of sulphur, antimony, and silver.

Red'start,

RED TAIL, n. (*Zoöl.*) The *Setophaga ruticilla*, family *Sylviolidae*, a bird of the United

Fig. 2228. — REDSTART.

States, E. of the Missouri, is abt. 5 inches long, the wing $2\frac{1}{2}$ inches, the general color black, the sides of the breast and base of the quills and tail reddish-orange, and the abdomen white. This is one of the handsomest and liveliest birds of our forests. It is almost constantly hunting insects along the branches, and with every movement it opens and shuts its beautiful tail, then flirts it from side to side, and at the same time utters its pleasing *te-tee-wheel*. The nest is built upon a low bush, and appears to hang to the twigs; eggs four to six, white, sprinkled with ashen-gray and blackish dots.

Red Stone, in *Minnesota*, a post-village of Nicollet co., abt. 5 m. S.E. of New Ulm.

Red Stone, in *Pennsylvania*, a post-township of Fayette co.

Red Stone Creek, in *Pennsylvania*, enters the Monongahela River from Fayette co.

Red streak, *n.* A kind of apple covered with red streaks;—whence the name. —Cider made from the red-streak apples.

Red Sulphur Springs, in *West Virginia*, a post-village of Monroe co., about 240 m. W. of Richmond.

Red-tape, *a.* Pertaining or relating to official formality and routine.

Red-tapism, *n.* Official formality or routine; circumlocution.

Red-tap'ist, *n.* A routinist; a precisian in official etiquette and formalities.

Red-top, *n.* (*Bot.*) A species of plants, genus *Agrostis*, *A. vulgaris*. It is a common and very valuable grass, spread over hills, vales, and meadows, forming a soft, dense turf; flowers very numerous, purplish.

Reduce, *v. a.* [*Lat. reduco*—*re*, and *duco*, to lead; *Fr. reduire*.] To bring to any state or condition, good or bad, but generally one of diminution;—before *to*; as, to reduce a person to indigence; to reduce a mass to powder. —To bring down; to lower; to make less in length, breadth, thickness, size, quantity, or value; to bring down in dignity or excellence; to degrade; to impair; as, to reduce one's cost of living, to reduce a commissioned officer to the ranks, to reduce the amount of a bill, to reduce the strength of alcoholic liquors, a member of a reduced family, &c. —Hence, to bring into submission or subjection; to make subservient; as, to reduce a country. —To bring, as into a class, order, genus, species, arrangement, classification, &c.; to place within certain limits of description; as, to reduce language to rules, to reduce vegetables to a class or classes.

(*Arith.*) To change, as numbers, from one denomination to another, without altering their value; as, to reduce a dollar to a hundred cents, or conversely.

(*Metall.*) To separate, as a metal from other combined or associated substances.

(*Surg.*) To restore to its proper place or position, as a displaced organ, joint, or part; as, to reduce a dislocation.

To reduce a figure, design, or draught. To make a copy of such on a smaller scale than the original, but maintaining the form and proportion. —To reduce a fortified place. To take it by investment and capture.

—To reduce an equation. (*Math.*) In algebra, to bring the unknown quantity by itself on one side, and all the known quantities on the contrary side, without destroying the equation. —To reduce a square. (*Mil.*) To reform the column from the square. —To reduce to the ranks, to degrade, as a non-commissioned officer for misconduct or insubordination, to the inferior position of a private soldier.

Reduce'ment, *n.* Act of reducing; reduction; restoration; act of bringing back.

Redneent, (*-di'sent*), *a.* [*From Lat. reducere*.] Having a tendency to reduce.

—*n.* That which serves to reduce.

Redneer, (*-di'ser*), *n.* One who reduces or brings down; as, a reducer of the public taxes.

Redneible, (*-di'si-bl*), *a.* That may be reduced; convertible; as, reducible currency.

Redneibleness, *n.* State or quality of being reducible; as, the reducibleness of spirits of wine.

Rednet, *n.* [*L. Lat. redactus*, a refuge, an asylum.] (*Arch.*) A quirk, or small place, taken out of a layer to make it more regular and uniform, or for some other convenience.

Reduction, *n.* [*Fr.*, from *Lat. reductio*.] Act of reducing, or state of being reduced; act of making less, or state of being made less; abatement; diminution; curtailment; conquest; as, the reduction of chaos to order, the reduction of one's personal expenditure, the reduction of spirits to below proof, the reduction of an enemy's fortress, &c.

(*Metall.*) The process of separating a metal out of a metallic oxide, sulphide, &c. In some cases, this is effected simply by heat, but generally by the joint action of heat and deoxidizing agents. Upon the larger scale, coal, coke, or charcoal is almost always resorted to. See *SMELTING*.

(*Arith.*) The act or operation of changing numbers from one denomination to another without altering their value, or of changing numbers of one denomination into others of the same value; as, the reduction of pounds to grains, or *vice versa*, the reduction of fractions to a common denominator, &c.

(*Algeb.*) The act or operation of solving an equation by bringing the unknown quantity by itself on one side, and all the known quantities on the opposite side, without destroying the equation.

—The act or process of making a copy of a design, figure, or sketch on a smaller scale than the original, while maintaining the true form and proportion.

(*Astron.*) The correction of observations for manifest errors of instruments; the collection of observations to gain a general result.

(*Logic.*) The bringing of a syllogism in one of the so-called imperfect modes to a mode in the first figure.

(*Surg.*) Act or operation of replacing a dislocated or fractured organ, joint, &c., to its former position; as, reduction of hernia.

R. ascending. (*Arith.*) The operation of altering numbers of a lower into others of a higher denomination, as cents into dollars. — *R. descending* is the converse of the foregoing operation.

Reductive, *a.* [*Fr. reductif*.] Tending to reduce; having the power or property of reduction.

Reductively, *adv.* By reduction; consequentially.

Redundance, **Redundancy**, *n.* [*Fr. redundance*; *Lat. redundantia*.] State or quality of being redundant; excess, or superfluous quality or condition; superabundance; as, redundancy of flesh.—That which is redundant, superfluous, or in excess; as, redundancy of words to express a simple meaning.

Redundant, *a.* [*Fr.*; *Lat. redundans*, from *reundo*.] Overflowing; superfluous; excessive; superabundant; exceeding what is natural, usual, or necessary; as, a redundant quantity of fat or bile.

—Using more words or illustrations than are useful or necessary; diffuse; copious; verbose; as, a redundant author.

Redundantly, *adv.* In a redundant manner; with excess or superfluity; superfluously; exuberantly; superabundantly.

Reduplicate, *v. a.* [*Lat. reduplico*—*re*, and *duco*, to double.] To double again; to redouble; to multiply; to repeat.

(*Gram.*) To repeat the first letter, or letters, of—*a.* Double; reduplicative; as, reduplicate numbers.

(*Bot.*) Characterized, in aestivation, by a variation of the valvate form in which the margins of the leaves project outward, instead of inward.

Reduplication, *n.* [*Fr.*] Act of doubling; also, state of being doubled.

(*Pros.*) A figure wherein the first word of a verse is the same as the last word of a preceding verse.

(*Gr. Gram.*) A prefix to a verb, formed by a repeating of the labial consonant, generally followed by *E*.

Reduplicative, *a.* [*Fr. reduplicatif*.] Double; as, a reduplicative proposition.

Red Vermilion, in *Kansas*, a township of Nemaha co.

Red-water, *n.* (*Furriery*.) A disease in cattle, presenting an appearance resembling blood in the urine.

Red-wing, *n.* (*Zoöl.*) A European species of Thrush, *Turdus iliacus*.

Red-wing, in *Minnesota*, an important city, cap. of Goodhue co., 41 m. below St. Paul, on the Mississippi river, and the C., M. & St. Paul, and 2 other R. Rs. Has extensive manuf. and ships large quantities of wheat. Pop. (1895) 7,685.

Redwood, *n.* (*Bot.*) The name of an Indian dye-wood, obtained from *Pterocarpus santalinus*. The Redwood of the Turks is the wood *Cornus mascula*; that of the Bahamas comes from *Ceanothus ciliatissimus*; that of Jamaica, from *Gordonia hæmatoxylin*; and that of the timber trade from *Sequoia sempervirens*.

Redwood, in *Minnesota*, a S.W. co.; area, 870 sq. m.; drained by the Minnesota, Redwood, and Big Cottonwood rivers. Surface, level; soil, fertile. Cap. Redwood Falls. Pop. (1895) 13,533.

Redwood Falls, in *Minnesota*, a city, cap. of Redwood co., on Chic. & N. W. and Minn. & St. L. R. Rs., 40 m. N.W. of New Ulm. Pop. (1895) 1,589.

Redwood, in *New York*, a post-village of Jefferson co.

Redwood City, in *California*, a post-town, cap. of San Mateo co., about 26 m. S. of San Francisco. It contains many fine edifices, and is thriving rapidly. Pop. (1897) about 2,000.

Reecho, (*re-ek'o*), *v. a.* To echo back; to reverberate.

—*v. n.* To echo back; to return back or be reverberated, as an echo.

—*n.* The echo of an echo; a repeated echo.

Reechy, *a.* [*A modification of reeky, q. v.*] Smoky; sooty; tanned; as, a "reechy neck." —*Shaks.*

Reed, *n.* [*A. S. hreod*; *Du.riet*; *Ger. rohr*.] (*Bot.*) See *ARUNDO*.

(*Mus.*) An instrument originally made of a reed; a pastoral pipe. —A thin tongue of wood or metal (formerly made actually from a reed), which, being set in vibration by the action of wind, gives the sound to certain musical instruments, as the oboe, the clarinet, and the bassoon; as also in certain stops of the organ, in the harmonium, and the concertina. Sometimes the reed beats against its seat, and sometimes it is free, the latter variety being called the *free-reed*.

—An arrow, as made of a reed, and headed.

—Prepared straw for thatching a roof. (*Prov. Eng.*)

(*Weaving*.) A frame of parallel flat strips of wood, through which the warp-threads pass, set in the lathe or batten.

Reed-organ. (*Mus.*) A wind-instrument of music, in which the wind acts on a set of reeds, resembling the melodeon, &c. —**Reed-pipe**, a pipe of an organ furnished with reeds. —**Reed-stop**, a set of pipes in an organ supplied with reeds.

Reed, in *Illinois*, a township of Will co.

Reed, in *Ohio*, a township of Seneca co.

Reed, in *Pennsylvania*, a township of Dauphin county.

Reed-bird, *n.* (*Zoöl.*) The BOBOLINK, *q. v.*

Reed-buck, *n.* (*Zoöl.*) A species of South Africa antelope, *Eleotragus arundinaceus*.

Reed-bunt'ing, **Reed-spar'row**, *n.* (*Zoöl.*) A bird of the genus *PLECTROPHANES*, *q. v.*

Reed'ed, *a.* Covered with reeds. —Formed with ridges like reeds; as, reeded pipes.

Reed'er, in *Kansas*, a township of Anderson co.

—A village of Kiowa co.

Reed'-grass, *n.* (*Bot.*) See *SPARGANIUM*.

Re-edifica'tion, *n.* [*Fr.*] Act of rebuilding; state of being rebuilt.

Re-edify, *v. a.* [*Fr. réédifier*.] To rebuild. (*R.*)

Reed'ing, *n.* (*Arch.*) A small convex moulding.

Reed'-mace, *n.* (*Bot.*) The cat-tail. See *TYPHA*.

Reed River, or **Red River**, in *Wisconsin*, a township of Kewaunee co.

Reeds'burg, in *Ohio*, a post-village of Wayne co., about 10 m. W.N.W. of Wooster.

Reedsburg, in *Wisconsin*, a city and township of Sauk co., on the Chicago and Northwestern R.R., 45 m. N.W. of Madison; has some manufacturing industries. Pop. (1895) 2,116.

Reed's Corn'ers, in *Wisconsin*, a village of Fond du Lac co., abt. 26 m. N. by W. of Ilwaco.

Reeds'ville, in *Ohio*, a post-village of Meigs co., abt. 18 m. N.E. of Pomeroy.

Reedsville, in *Pennsylvania*, a post-village of Mifflin co., abt. 8 m. N. of Lewistown.

Reedsville, in *Wisconsin*, a post-village of Manitowoc co., abt. 16 m. N. by W. of Manitowoc.

Reed'y, *a.* Abounding with reeds. —Resembling a reed in quality of tone, *i. e.*, harsh and thick, as a voice.

Reed'y Island, an island and lighthouse in the Delaware River, at the head of Delaware Bay. It exhibits a fixed light 55 ft. high.

Reedy Island River, in *Virginia*, rises in the Blue Ridge, and enters Kanawha River from Carroll co.

Reedy River, in *S. Carolina*, enters the Saluda River between Laurens and Abbeville dists.

Reef, *n.* [*D.*; *Dan. rift*; probably akin to *A. S. reafian*; *Goth. raupjan*, to seize, to pluck.] (*Naut.*) That part of a sail, between the head and a reef-band, which is folded or rolled up to contract the sail, when the force of the wind renders it necessary.

Reef-band. (*Naut.*) A piece of canvas sewed across a sail, to strengthen it in the part where the eyelet-holes are formed for reefing. — **Reef-line**, a small rope formerly used to reef the courses, by being passed spirally round the yard and through the holes of the reef. — **Reef-points**, flat pieces of braided cordage tapering toward each end, and passed through the holes in the reef-band of a sail, used in reefing it. — **Reef-tackle**, a tackle by which the reef-cripples or rings of a sail are hauled up to the yard for reefing.

—*v. a.* (*imp.* and *pp.* REEFED.) (*Naut.*) To haul in or reduce the extent, as of a sail, by rolling or folding a certain portion of it and making it fast to the yard; as, to reef topsails.

Reef, *n.* [*D. rif*; *Ger. riff*; *Dan. rev*.] A chain or ridge of rocks lying at or near the surface of the water; a range of sandbanks becoming dry at certain states of the tide; as, the ship struck on a reef.

Reefer, *n.* (*Naut.*) One who reefs;—a term frequently given, in the navy, to midshipmen; as, Rattlin the Reefer.

Reefy, *a.* Abounding in reefs, rocks, or sandbanks.

Reek, *n.* [*A. S. ec, ræc*; *Ger. ranch*.] Smoke; vapor; steam; as, the reek of a lime-kiln. —A stack; a rick. —See *RICK*.

—*v. a.* To smoke; to steam; to exhale; to emit warm or moist vapor; as, reeking with the fumes of tobacco.

Reek'y, *a.* Smoky; foul; soiled with smoke or steam.

Reel, *n.* [*A. S. hreol*, *reol*; *Ger. rolle*.] An instrument that rolls or turns, as on an axis, and on which yarn, thread, lines, &c., are wound.

(*Dancing*.) A lively dance peculiar to Scotland, exhibiting a whirling or circular motion.

—*v. n.* To wind upon a reel, as thread or yarn from the spindle.

Reel, *v. a.* [*Swed. ragla*.] To stagger; to incline or move in walking, first to one side and then to the other; to move, as though under the influence of vertigo; to vacillate.

Reeling-ripe, inebriated so as to stagger in one's gait.

Reelect, *v. u.* To elect again, or for the second time.

Reelection, (*-lek'shun*), *n.* Election for the second time.

Reele'vate, *v. a.* To elevate anew.

Reeligibility, *n.* Power of being reelected to the same office.

Reeligible, (*-el'i-jib-l*), *a.* Capable of being elected a second time to the same office.

Reels'ville, in *Indiana*, a post-village of Putnam co., abt. 26 m. E.N.E. of Terre Haute.

Reem, *n.* [*Heb.*] An unknown animal, called, by the translators of the received version of Job, the unicorn. By some it is supposed to be the rhinoceros, by others a species of antelope.

Reembark, *v. a.* To embark or put on board again.

—*v. a.* To embark, or go on board again.

Reembarka'tion, *n.* A putting on board, or a going on board, again.

Reembat'tle, *v. a.* To arrange anew in the order of battle.

Reembod'y, *v. a.* To embody over again.

Reembrace, *v. a.* To embrace anew or afresh.

Reemerge, (*-nerj*), *v. a.* To emerge again, after being obscured, plunged, or overwhelmed.

Reemergence, *n.* Act of emerging a second time.

Reem'ing, *n.* (*Naut.*) The opening of a vessel's seams, with a caulking-iron, for the purpose of caulking or recaulking them with oakum.

Reem'ing-iron, *n.* (*Naut.*) A caulking-iron.

Reenact, *v. a.* To enact anew.

Reenaction, (*-æk'shun*), *n.* A new enactment; also, state of being reenacted.

Reenact'ment, *n.* The renewal of a law or enactment; the passing or enacting of a law a second time.

Reëncouragement, (-kur'aj-) *n.* Renewed or fresh encouragement.

Reëndow, *v. a.* To endow over again.

Reënforce, *v. a.* [Fr. *renforcer*.] Same as **REINFORCE**, *q. v.*

Reën, (*Ordnance*.) See **REINFORCE**.

Reënforcement, *n.* See **REINFORCEMENT**.

Reëngage, (-gaj') *v. a.* To engage anew, or a second time.

Reë, *v. n.* To engage or covenant afresh; to enlist again.

Reëngagement, *n.* A renewed engagement.

Reëngrave, *v. a.* To engrave anew.

Reënjoy, *v. a.* To enjoy afresh, or a second time.

Reënjoument, *n.* A second, or renewed enjoyment.

Reëkindle, *v. a.* To rekindle.

Reënlis, *v. a.* To enlist again, or a second time.

Reënlisment, *n.* A renewed enlistment.

Reënstamp, *v. a.* To enstamp anew.

Reënter, *v. a.* To enter again or anew.

(*Engraving*.) To repair an engraved line which has been worn in printing, or not bitten sufficiently deep, and which line is *reëntered* with a sharp graver, and cut to the proper depth.

Reë, *v. n.* To enter a second time.

Reëntering angle, (*Geom.*) A polygonal angle pointing inward — **Reëntering polygon**, a polygon presenting one or more reëntering angles.

Reënthrone, *v. a.* To enthrone again; to replace on a throne.

Reënthronement, *n.* Enthroning a second time.

Reëntrance, *n.* Act of entering again.

Reënt, *a.* Pointing or directed inwards; as, a *reënt* angle.

Reëntry, *n.* (*Law*.) The act of returning the possession of lands or tenements, in pursuance of a right which the party exercising it reserved to himself when he quit his former possession.

Reërect, *v. a.* To erect anew, or a second time.

Reër, *n.* Same as **REARMOUSE**, *q. v.*

Rees, ABRAHAM, D.D., an English author, divine, and scholar, b. in Wales, 1743; d. 1825. From 1802 to 1814 he edited, in 45 vols. 4to., the "Encyclopedia" known by his name, which is still valuable as representing the state of knowledge about the time of the commencement of modern progress.

Reese River, in *Nevada*, rises in Nye co., and flowing a general N. course along the W. base of the Tonjabe Mountains, becomes lost in the sandy desert of Lander co.; length, about 100 m.

Reeseville, or **REESVILLE**, in *Ohio*, a post-village of Clinton co., about 10 m. E.N.E. of Washington.

Reeseville, in *Pennsylvania*, a village of Chester co., about 18 m. W.N.W. of Philadelphia.

Reëstab'lish, *v. a.* To establish afresh; to fix or confirm again; as, to *reëstablish* a government, to *reëstablish* one's health.

Reëstab'lisher, *n.* One who, or that which, reëstablishes.

Reëstab'lishment, *n.* Act of reëstablishing; state of being reëstablished; renewed confirmation; restoration.

Reeve, *n.* (*Zoöl.*) The female of the **RUFF**, *q. v.*

Reeve, *v. a.* (*imp. and pp. ROVE*.) (*Naut.*) To pass, as the end of a rope, through any hole in a block, cleat, ring-bolt, &c.

Reeve, *n.* [O. Eng. *reve*.] A steward; — obsolete except in compounds, as *shire-reeve* (now written *sheriff*), *port-reeve*, &c.

Reeve, in *Indiana*, a township of Daviess co.; *pop.* abt. 3,000.

Reeve, in *Iowa*, a township of Franklin co.

Reevesville, in *S. Carolina*, a post-village of Colleton dist., abt. 52 m. N.W. of Charleston.

Reëxamina'tion, *n.* A renewed or repeated examination.

Reëxamine, *v. a.* To examine anew, or afresh.

Reëxchange, (-chānj') *v. a.* To exchange anew, or a second time.

Reë, *n.* A renewed, or second exchange.

(*Com.*) The expense chargeable on a bill of exchange, or draft, which has been dishonored in a foreign country, and returned to that country in which it was drawn up or indorsed, and then taken up.

Reëxhib'it, *v. a.* To exhibit afresh.

Reëxpel, *v. a.* To expel a second time.

Reëxperience, *n.* A renewed experience.

Reëxport, *v. a.* To export, as what has been previously imported.

Reë, *n.* Any commodity reëxported.

Reëxporta'tion, *n.* Act of exporting what has been previously imported.

Reëxpulsion, (-pūl'shun) *n.* Renewed expulsion.

Reëzed, (*reëz*.) *a.* Rancid; rusty; stale; as, *reëzed* bacon.

Refashion, (-fāsh'un) *v. a.* To fashion anew; to mould, form, or design afresh.

Refas'ten, *v. a.* To fasten over again.

Refec'tion, (-fēk'shun) *n.* [Fr., from Lat. *refectio*.] Refreshment after hunger or fatigue; a lunch; a slight repast. — In monastic discipline, a spare meal or repast.

Refec'tive, *a.* Repairing; refreshing; restoring.

Refe', *n.* That which refreshes or reinvigorates.

Refec'tory, *n.* [Fr. *refectoire*, from L. Lat. *refectorium*.] A room for refreshment or meals; — specifically, a hall or apartment in convents or monasteries, where a moderate repast is taken.

Refer, *v. a.* (*imp. and pp. REFERRED*.) (*re-ferd'*.) [Fr. *référer*, from Lat. *refero* — *re*, and *fero*, to bring or carry.] To give or send back; to pass or make over; to give in charge; to direct or deliver, as for information, decision, &c. — To direct, leave, or deliver over to

another person or tribunal for information or decision; as, to *refer* the matter to arbitration. — To reduce, as to the ultimate end; to assign, as an order, genus, or class; to ascribe; to impute; to attribute by references.

To *refer* one's self, to make application; to have recourse.

Refer, *v. n.* To apply; to appeal; to have recourse. — To point; to have reference or relation. — To have respect by intimation without naming; to make allusion. — To make inquiry for information or surety of any kind, as in respect to one's probity, capacity, pecuniary means, &c.

Referable, **Refer'ible**, *a.* That may be referred; capable of being considered in relation to something else; that may be assigned; that may be considered as belonging to, or related to.

Referee, *n.* One to whom a matter is referred for adjustment; an arbitrator; an umpire; a judge.

Reference, *n.* Act of referring; also, state of being referred; a sending, dismission, or direction to another for information, decision, treatment, &c. — Act of referring, or having regard or relation; respect; view toward; heed or concern taken; as, we ought to practise moderation in *reference* to our appetites. — Act of referring or alluding; allusion; intimation. — The person who, or thing which, is referred to; — specifically, one of whom information is sought as to the probity, ability, or pecuniary condition of another; — also, a passage in a work to which the reader is referred from another passage.

(*Law*.) The submitting of a matter in dispute to the judgment of a person or persons for decision and settlement; an arbitration; in equity, the act or process of sending any matter, for inquiry in a cause, to a master or other officer, in order that he may ascertain facts and report to the court.

Referendary, *n.* An officer formerly employed to deliver the royal answer to petitions; — also, a functionary who performed the duty of procuring and dispatching diplomas and decrees.

Referential, (-ēn'shal) *a.* Containing or conveying a reference to another thing.

Referentially, *adv.* By way, or in the manner, of reference.

Referment, *v. a.* To ferment afresh.

Refer'rer, *n.* One who makes reference.

Refer'ible, *a.* Same as **REFERABLE**, *q. v.*

Refigure, (-fig'yur) *v. a.* To figure again, or anew.

Refill, *v. a.* To fill over again.

Refind, *v. a.* To find again; to experience afresh.

Refine, *v. a.* [Fr. *raffiner*.] To increase the fineness of: to free from impurities; to purgo of extraneous matter; to purify; to clarify; to defecate; as, to *refine* liquors, sugar, &c.

— To purify, as manners, from what is gross, clownish, or vulgar; to make elegant; to polish, as taste or language; to give a nice and delicate perception of beauty and propriety in literature and the arts; to impart high culture to; to purify, as the mind or moral principles; as, *refined* wit.

(*Metall.*) To separate, as a metallic substance from drossy matter; as, to *refine* gold.

Refine, *v. n.* To improve in fineness; to increase in accuracy, delicacy, or anything that constitutes excellence. — To affect nicety or elaborateness in style of thought or language; as, "*refining* in controversy." (*Atterbury*.) — To become pure; to be cleared of feculent or drossy matter.

Refin'edly, *adv.* In a refined or polished manner; — also, with affected nicety, elaboration, or elegance.

Refined'ness, *n.* State or quality of being refined; refinement; purity; — also, affected purity.

Refinement, *n.* Act of refining, or state of being refined; act of purifying by separating from a substance all feculent or extraneous matter; purification; a clearing from dross, alloy, dregs, or recement; as, the *refinement* of metals, sugar, or liquors. — An improved or advanced state of language; elegance; lingual purity; polish or elegance of style or manners; nice sense or observance of the civilities of social intercourse and of graceful decorum; fineness or purity of taste; nice perception of beauty and propriety in literature and the arts; purity of mind and morals; nice perception and observance of rectitude in moral principles and practice. — That which is refined or elaborated beyond what is common, or to excess; an over-nicety; an artificial purism or practice; an affected subtilty or polished improvement; as, the *refinements* of philosophy.

Refin'er, *n.* One who refines, improves, or elaborates; as, a *refiner* of metals or liquors, a *refiner* of manners or language, &c.; one who is over-nice or subtle in argument, disquisition, reasoning, discrimination, &c.; a precisian; a purist; an inventor of superfluous subtilties.

Refinery, *n.* The place and apparatus for refining metals, sugar, liquors, &c.

Refin'ing, *n.* The process of purifying copper, gold, tin, lead, and some other metals. It is the last operation connected with smelting. The term is also applied to the purification, on a manufacturing scale, of nitre, common salt, sugar, and other bodies. See the names of the different metals, **SMELTING**, **SUGAR**, &c.

Refit, *v. a.* To fit or prepare again; to repair; to equip; to restore after damage or decay; as, to *refit* a vessel for sea. — To fit out or furnish a second time; to equip anew.

Refit, *v. n.* To repair losses or damages; as, the ship put into port to *refit*.

Refitment, *n.* A fitting out a second time.

Refix, *v. a.* To establish anew or afresh; to fix a second time.

Reflect, *v. a.* [Lat. *reflecto* — *re*, back, and *flecto*, to bend, curve, or turn round.] To bend or turn back or backward; to throw back, or cause to return after striking upon any surface, as light, heat, &c. — To mirror; to give an image, semblance, or likeness of.

"Nature is the glass reflecting God." — *Young*.

Refl', *v. n.* To throw back light, heat, &c.; to return rays or beams; as, "*reflecting* gems." (*Shaks.*) — To revert; to rebound or be sent back, as from a surface. — To throw or turn back the thoughts upon the past operations of the mind, or upon past events; to bestow attentive consideration; to weigh, turn over, or revolve in the mind; to ponder; to think; to meditate; to muse. — To bring or cast censure or reproach; — with *on* or *upon*.

"Errors of wives reflect on husbands still." — *Dryden*.

Reflect'ed, *p. a.* (*Bot.*) Bent or curved backward from the axis, as a petal.

Reflect'ent, *a.* [From Lat. *reflectere*.] Bending or flying back, as a ray. — Reflecting

Reflect'ible, *a.* That may be reflected or thrown back.

Reflect'ing, *p. a.* Throwing back light, heat, &c., as a mirror or other surface. — Given to reflection or serious thought; meditative; reflective; as, a *reflecting* man.

Reflecting Circle. An astronomical instrument for the measurement of angles by reflection. The term is also applied to a surveying instrument, invented by Sir Howard Douglas, which combines the advantages of Hadley's quadrant and the protractor. Its object is to protract, or lay down on the plan, the angles measured with the instrument itself, without any intermediate step, or even a register of their values. The advantages of such an instrument must be obvious in military surveys, where expedition is important, while accuracy is thereby far more efficiently insured than by the old and more tedious process. It is also advantageously used in forming general sketches of a country. — *Reflecting goniometer*. See **goniometer**.

Reflect'ingly, *adv.* With reflection; — also, with reproach or censure.

Reflection, (-flek'shun) *n.* [From *reflect*.] Act of reflecting, or state of being reflected; a turning back after striking upon any surface, as light, heat, sound, &c. (See below, *Physics*.) — That which is reflected or produced by reflection; as, an image given back from a mirror; a reflected counterpart. — That operation of the mind by which it turns its views back upon itself and its operations; thought thrown back on itself, on the past, or on the absent; attentive consideration; meditation; contemplation; cogitation. — Result of meditation; expression of thought; opinion brought about by attentive consideration or meditation; as *reflections* on the past. — Censure; reproach cast.

(*Mech.*) The rebound or regressive motion of a body from the surface of another body, against which it infringes.

(*Physics*.) When thermal rays fall upon a body they are, speaking generally, divided into two parts, one of which penetrates the body, while the other rebounds, as if repelled from the surface, like an elastic ball. This is said to be *reflected*. If *mn* be a plane reflecting surface (Fig. 2229), *CB* an incident ray, *BD* a line perpendicular to the surface called the *normal*, and *BA* the *reflected ray*. the angle *CBD* is called the *angle of incidence*, and *DBA* the *angle of reflection*. The reflection of heat, like that of light and of sound, is governed by the two following laws: 1. *The angle of reflection is equal to the angle of incidence.* 2. *Both the incident and the reflected ray are in the same plane with the normal to the reflecting surface.* The laws of reflection of heat have been experimentally demonstrated by means of the *conjugate mirrors*, for which, see **MIRROR**. Under this last article has also been demonstrated the reflection of heat from concave and parabolic mirrors, or *reflectors*. — *Reflection of light* may be very accurately demonstrated by the following experiment: In the

Fig. 2229.

Fig. 2230.

centre of a graduated circle, *M* (Fig. 2230), placed in a vertical position, there is a small telescope movable in a plane parallel to the limb; at a suitable distance there is a vessel full of mercury, which forms a perfectly horizontal plane mirror. Some particular star of the first or second magnitude is viewed through the telescope in the direction *AE*, and the telescope is then inclined so as to receive the ray *AD* coming from the star after being reflected from the brilliant surface of the mercury. In this way the two angles formed by the rays *EA* and *DA*, with the horizontal *AI*, are found to be equal, from which it may easily be shown that the angle of incidence, *E'DE*, is equal to the angle of reflection, *EDA*. For if *DE* is the normal to the surface of the

mercury, it is perpendicular to A H, and A E D, A D E are the complements of the equal angles E A H, D A H; therefore A E D, A D E are equal; but the two rays A E and D E' may be considered parallel, in consequence of the great distance of the star, and therefore the angles E D E' and D E A are equal, for they are alternate angles, and, consequently, the angle E D E' is equal to the angle E D A.—*Reflection of Sound.* So long as sonorous waves are not obstructed in their motion, they are propagated in the form of concentric spheres; but when they meet with an obstacle, they follow the general law of elastic bodies; that is, they return upon themselves, forming new concentric waves, which seem to emanate from a second centre on the other side of the obstacle. This phenomenon constitutes the reflection of sound. Fig. 2231 represents a series of incident waves reflected from an obstacle, P Q. Taking, for example, the incident wave M C D N, emitted from the centre A, the corre-

Fig. 2231.

sponding reflected wave is represented by the arc, C K D, of a circle, whose centre, A', is as far beyond the obstacle P Q as A is before it. If any point, C, of the reflecting surface be joined to the sonorous centre, and if the perpendicular, C H, be let fall on the surface of this body, the angle, A C H, is called the *angle of incidence*, and the angle B C H, formed by the prolongation of A C, is the *angle of reflection*. From the general laws of reflection, it follows that the wave which is in the figure propagated in the direction A C, takes the direction C B after reflection, so that an observer placed at B hears, besides the sound proceeding from the point A, a second sound, which appears to come from C. The laws of the reflection of sound may be demonstrated by means of the conjugate mirrors (Fig. 1808): if in the focus of one of these mirrors a watch is placed, the ear placed in the focus of the second mirror hears the ticking very distinctly, even when the mirrors are at a distance of 12 or 13 yards.

Reflective, *a.* Throwing back images; as, a *reflective* mirror, a *reflective* stream.—Able to exercise thought and judgment, or the consideration of the operations of the mind; meditative; as, *reflective* reason.

(Gram.) Same as REFLEXIVE, *q. v.*

Reflectively, *adv.* Reflexively; by reflection.

Reflectiveness, *n.* Quality, or state, of being reflective.

Reflector, *n.* The person who, or thing which, reflects.

(Optics.) See MIRROR and TELESCOPE.

Re'flex, *a.* [Lat. *reflexus*, from *reflecto*. See REFLECT.] Directed or turned back; retroactive; introspective; accompanied by reflection; as, a *reflex* act of the soul. {Hale.}—Occasioned by reaction, resistance, or return.

(Bot.) Reflected; bent back, as a petal.

Reflex action, (Physiol.) An action generally regarded as executed without consciousness, and consisting in the reflection by an afferent nerve of an impression conveyed to a nervous centre by an afferent nerve.

—*n.* (Painting.) The illumination of one body, or a part of it, by light reflected from another body. The foundation of the law of *reflexes* depends upon the knowledge that every body in light reflects that light, to a certain degree, in the same way that flame does. The stronger, therefore, the light on the body, the stronger will be the *reflex*, distances being equal. Again, the more directly the light falls on a body, the more influence it will have in imparting a *reflex*.

Reflected, (*flectst.*) *a.* (Bot.) Bent downward or backward, as a petal.

Reflexibility, *n.* Quality of being reflexible, or susceptible of being reflected; as, the *reflexibility* of rays of light.

Reflexible, *a.* [Fr.] That may be reflected or thrown back, as rays.

Reflexion, *n.* An old spelling of REFLECTION, *q. v.*

Reflexity, *n.* Capacity of being reflected.

Reflexive, *a.* [Fr. *reflexif*.] Reflective; bent backward; having reference to something past.

(Gram.) Having for its express object a pronoun which refers to the agent or subject as its antecedent;—denoting certain verbs; as, he *killed* himself, I *forgot* myself;—applied also to pronouns of this class; reflective; reciprocal.

Reflorescence, (*-res'sens.*) *n.* [re and *florescence*.] A flowering or blossoming afresh.

RefLOURish, (*-flur'ish.*) *v. a.* (imp. and pp. REFLOURISHED.) (*-flur'isht.*) To flourish again, or anew.

Reflow, *v. a.* To ebb; to flow back.

Refluxu'ation, *a.* A flowing back.

Re'fluence, **Re'fluency**, *n.* [From *refluent*.] A flowing back.

Re'fluent, *a.* [Lat. *refluens*—re, and *fluo*, to flow.] Ebbing; flowing back; returning; as, *refluent* blood.

Re'flux, *n.* [Fr.; Lat. *refluxus*, from *refluo*.] A flowing back; the returning of a fluid; ebb; as, the flux and *reflux* of the tides.

—*a.* Reflex; fluent; as, *reflux* movement.

Refold, *v. a.* To fold again, or a second time.

Reformant, *v. a.* To foment or excite afresh.

Reforge, (*-forj'*) *v. a.* [Fr. *reforger*.] To forge anew;—hence, to form or fabricate afresh; to do or make over again.

Reforge'r, *n.* One who reforges.

Reform, *v. u.* [Fr. *réformer*; Lat. *reformatio*—re, and *forma*, from *forma*, shape, form.] To form or shape anew; to remould; to transform.—Particularly, to change from worse to better; to bring back or restore to a former good state, or to bring or change from a bad to a good state; to amend; to correct; to repair; to improve; to reclaim; to remove, as that which is bad or corrupt; as, to *reform* vicious habits, to *reform* the constitution of a state.

—*v. n.* To be formed or shaped anew.—Especially, to change or return to a former good state; to abandon that which is evil, vicious, or corrupt; to be amended or corrected; as, a *reformed* rake makes the best husband.

—*n.* [Fr. *réforme*.] A forming anew.—A changing for the better; a reforming of what is defective, vicious, corrupt, or depraved; reformation; amendment; rectification; correction; as, *reform* of parliamentary representation, *reform* of character, habits of life, &c.

Reforma'do, *a.* [Sp., from *reformar*.] Penitent; contrite; disposed to reform.

Reformation, *n.* [Fr., from L. Lat. *reformatio*.] Act of changing for the better, life, manners, or anything defective, vicious, or corrupt; reform; amendment; correction; rectification.

(Eccles. Hist.) An important era in modern history, when the doctrines and usages of the Roman Catholic Church, then dominant throughout the western states of Christendom, were first successfully called in question. This event is commonly dated from the year 1517, when Luther began to oppose the Pope, and condemned the sale of indulgences. Mosheim assigns to it the date 1520, when Luther was excommunicated. For history of the *R.*, see LUTHER, CALVIN, ZWINGLIUS, CHRISTIANITY, PROTESTANT, AUGSBURG (CONFESSION OF), &c., and the names of the several reformed churches.

Reforma'tion, *n.* Act of reforming, or forming anew or a second time.

Reformative, *a.* [Sp. *reformativo*.] Forming again; having the quality of renewing form; reformatory.

Reformatory, *a.* Reformative; tending or calculated to produce reformation.

—*n.* A public institution established for promoting the reformation of minor offenders.

Reform'ed, *p. a.* Restored to a good state; amended; corrected; purified; denoting, specifically, all who separated from the Roman Catholic Church at the era of the Reformation;—also, in a restricted sense, denoting those who separated from Luther on the doctrine of transubstantiation, &c.; and, also, the churches founded by them in Switzerland, Holland, France, and part of Germany.

Reformed Epis'copal Church. See SECTION II.

Reformed Prot'estant Dutch Church. See

REFORMED CHURCH IN AMERICA, in SECTION II.

Reformed Church in the United States

(formerly GERMAN REFORMED CHURCH). (Eccles. Hist.)

This Church originated among those members of the

Reformed Church of Germany who began to settle in

Pennsylvania in 1684. Their first church was organized

in 1727, their first synod meeting in Philadelphia in

1747. The Dutch Reformed Church being already

established in the colonies, and being under the control

of the classis of the Reformed Church in Amsterdam,

Holland, the German mother church advised the

German Church in America to avail itself of the same

supervision; it did so in 1730, remaining in connection

with the Church of Holland until 1793. In 1869, the

word German was dropped from the name of the

church. In its government it is presbyterian; in its

worship liturgical, and in doctrine the Heidelberg

Catechism is the only standard. The Melancthonian

tendency is accepted rather than the Calvinistic. The

Church has 16 theological seminaries, among which

are the college and seminary at Mercersburg, Pa.,

founded at Carlisle in 1835; Franklin and Marshall

College at Lancaster, Pa.; Ursinus College and Seminary

at Collegeville, Pa.; Catawba College at Newton,

N. C.; Heidelberg University at Tiffin, O.; Calvin

Institute at Cleveland, and a theological seminary at

Howard's Grove, Wis. It publishes 29 periodicals, of

which 6 are in German, and supports various home and

foreign missions. On the occasion of the celebration

of the 150th anniversary of organization, held in

Philadelphia, Sept. 23, 1897, statistics were given showing

the existence of 8 synods, 56 classes, 1,665 churches,

and 229,300 members.

Reformer, *n.* One who reforms, or who effects a

reformation or amendment; as, a *reformer* of abuses.

(Eccles. Hist.) One of those who commenced the Reformation

in the sixteenth century.

(Pol.) One who favors, urges, or promotes political

reform.

Reform'ist, *n.* [Fr. *réformiste*.] An adherent to the

reformed religion.—A reformer; one who favors or

promotes political reform.

Refortification, *n.* A fortifying again, or a second

time.

Refor'tify, *v. a.* To fortify anew.

Refound'er, *n.* One who refounds.

Refract, *v. a.* [Fr. *réfracter*; Lat. *refractus*, broken up, from *refringo*—re, and *frango*, *fractum*, to break.] To break abruptly back; to break open, up, or off.

(Physics.) To break, as the natural course of the rays of light; to cause to deviate from a direct course; as, the *refracting* media.

Refract'ed, *p. a.* (Bot. and Conch.) Bent, and appearing as if broken at the bend; as, a *refracted* corolla.

(Optics.) Turned from a direct course; as, *refracted* rays of light.

Refract'ing, *p. a.* That refracts or turns rays from a direct course; bending, or turning from a straight direction; as, a *refracting* medium.

Refracting telescope. See TELESCOPE.—*Refracting dial*, one in which the hour is pointed out by means of some transparent refracting fluid.

Refraction, (*-fräl'shun.*) *n.* [Fr.] Act of refracting; state of being refracted.

(Physics.) The turning of a ray of heat, light, or other imponderable substance, from its direction, when it falls obliquely on the surface of a medium differing in density from that through which it had previously passed. When a luminous ray is refracted in passing from one medium into another of a different refractive power, the following laws prevail: 1. *Whatever the obliquity of the incident ray, the ratio which the sine of the incident angle bears to the sine of the angle of refraction is constant for the same two media, but varies with different media.* 2. *The incident and the refracted ray are in the same plane which is perpendicular to the surface separating the two media.* These are known as *Descartes laws*, and may be demonstrated by the apparatus in Fig. 2232. The plane mirror in the centre of the graduated circle is replaced by a semi-cylindrical glass vessel, filled with water to such a height that its level is exactly the height of the

Fig. 2232.

centre. If the mirror, M, be then so inclined that a reflected ray, M O, is directed towards the centre, it is refracted on passing into the water, but it passes out without refraction, because then its direction is at right angles to the curved sides of the vessel. In order to observe the course of the refracted ray, it is received on a screen, P, which is moved until the image of the aperture in the screen, N, is formed in its centre. In all positions of the screens, N and P, the sines of the angles of incidence and refraction are measured by means of two graduated rules, movable so as to be always horizontal, and hence perpendicular to the diameter, A D. On reading off the lengths of the sines of the angles M O A and D O P in the scales I and R, the numbers are found to vary with the positions of the screens, but their ratio is constant; that is, if the sine of incidence becomes twice or three times as large, the sine of refraction increases in the same ratio, which demonstrates the first law. The second law follows from the arrangement of the apparatus, for the plane of the graduated limb is perpendicular to the surface of the liquid in the semi-cylindrical vessel. For a further study of the *refraction of light*, the inquirer is referred to the article LIGHT.—*Double refraction.* In uncrystallized media, such as air, liquids, and ordinary glass, the luminous ray is singly refracted; but in certain crystallized bodies, such as Iceland spar, selenite, &c., a single incident ray in passing through any one of them is divided into two, or undergoes *bifurcation*. Whence it follows that, when an object is seen through one of these crystals, it appears double. The fact of the existence of double refraction in Iceland spar was first stated by Bartholin in 1669, but the law of double refraction was first enunciated exactly by Huyghens in his treatise on light, written in 1678, and published in 1690. Crystals which possess this peculiarity are said to be *double refracting*. It is found to a greater or less extent in all crystals which do not belong to the cubical system. Bodies which crystallize in this system, and those which, like glass, are destitute of crystallization, have no double refraction. The property can, however, be imparted to them when they are unequally compressed, or when they are cooled quickly after having been heated, in which state glass is said to be unannealed. Of all substances, that which possesses it most remarkably is Iceland spar, or carbonate of calcium. In many substances the power of double refraction can hardly be proved to exist directly by the bifurcation of an incident ray; but its existence is shown indirectly by their being able to "depolarize" light. Fresnel has explained double refraction by assuming that the ether in double

refracting bodies is not equally elastic in all directions; from which it follows that the vibrations in certain directions at right angles to each other are transmitted with unequal velocities, these directions being dependent on the constitution of the crystal. This hypothesis is confirmed by the property which glass acquires of becoming double-refracting by being unannealed, and by pressure.
